BHARATH INSTITUTE OF HIGHER EDUCATION AND RESEARCH

R-2018

CURRICULUM

School of Aeronautical Engineering

School of Aeronautical Engineering

- B.Tech - Aeronautical Engineering
- B.Tech - Aerospace Engineering

CURRICULUM AND SYLLABUS

(R2018)
B - FACT

(Bharath – **F**lexible **A**ccommodative **C**hoice based credit system for **T**echnology)

(Applicable to the batches admitted from July 2018)

B.Tech - AERONAUTICAL ENGINEERING

FULL TIME

I – VIII SEMESTERS

SEMESTER I								
Sl. No.	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**
THEORY								
1	U18HSEN101	HS	Communicative English	3	3	0	0	3
2	U18BSMA101	BS	Engineering Mathematics –I	4	3	1	0	4
3	U18BSPH101	BS	Waves and Optics	3	3	0	0	3
4	U18BSCH101	BS	Engineering Chemistry	3	3	0	0	3
5	U18ESCS101	ES	Problem Solving and Python Programming	3	3	0	0	3
6	U18ESME101	ES	Engineering Graphics & Design	3	3	0	0	3
PRACTICAL								
7	*U18BSPH2L1	BS	Wave Optics and Mechanics Lab	2	0	0	2	0
8	*U18BSCH2L4	BS	Chemistry Lab	2	0	0	2	0
9	U18ESCS1L1	ES	Problem Solving and Python Programming Laboratory	4	0	0	4	2
ACTIVITY BASED COURSES								
10	U18MCAB101	MC	Physical health – Sports & Games	2	0	0	2	0
11	U18MCAB102	MC	Gardening & Tree Plantation	2	0	0	2	0
TOTAL				**31**	**18**	**1**	**12**	**21**

***Laboratory Classes will be conducted on alternative weeks for Physics and Chemistry.**

The Lab Practical Examinations will be held only in the second semester (including the first semester experiments).

SEMESTER II								
Sl. No.	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**
THEORY								
1	U18HSEN201	HS	Technical English	3	3	0	0	3
2	U18BSMA201	BS	Engineering Mathematics-II	4	3	1	0	4
3	U18BSPH201	BS	Introduction to Mechanics	3	3	0	0	3
4	U18BSCH201	BS	Environmental Sciences	3	3	0	0	3
5	U18BSBT101	BS	Biology for Engineers	2	2	0	0	2
6	U18ESEE101	ES	Basic Electrical and Electronics Engineering	3	3	0	0	3
PRACTICAL								
7	*U18BSPH2L1	BS	Wave Optics and Mechanics Lab	4	0	0	4	2
8	*U18BSCH2L4	BS	Chemistry Lab	4	0	0	4	2
9	U18ESME1L2	ES	Workshop / Manufacturing Practices Laboratory	3	3	0	0	3
10	U18ESEE1L3	ES	Basic Electrical and Electronics Engineering Laboratory	4	0	0	4	2
ACTIVITY BASED COURSES								
11	18MCAB203	MC	Yoga	2	0	0	2	0
12	18MCAB204	MC	Physical health – NCC	2	0	0	2	0
TOTAL				**37**	**20**	**1**	**16**	**27**

***Laboratory Classes will be conducted on alternative weeks for Physics and Chemistry.**

The Lab Practical Examinations will be held only in the second semester (including the first semester experiments).

SEMESTER III								
Sl. No.	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**
THEORY								
1	U18BSMA302	BS	Partial Differential Equations and Probability & Statistics	4	3	1	0	4
2	U18PCAE301	PC	Fundamentals of Aeronautics and Astronautics	2	2	0	0	2
3	U18PCAE302	PC	Fundamentals of Mechanics and Machines	3	3	0	0	3
4	U18ESAE301	ES	Fundamentals of Fluid Mechanics	3	3	0	0	3
5	U18ESAE302	ES	Fundamentals of Aero – Thermodynamics	3	3	0	0	3
6	U18ESAE303	ES	Fundamentals of Structural Mechanics	3	3	0	0	3
PRACTICAL								
7	U18PCAE3L1	PC	Strength of Materials Laboratory	4	0	0	4	2
8	U18PCAE3L2	PC	Computer Aided Design and Drafting Laboratory	4	0	0	4	2
9	U18ESAE3L1	ES	Fluid Mechanics and Machinery Laboratory	4	0	0	4	2
ACTIVITY BASED COURSES								
10	U18MCAB305	MC	Culture- Learning an art form	2	0	0	2	0
11	U18MCAB306	MC	Culture – Intangible Cultural, heritage(festivals, Food ways, Local games)	2	0	0	2	0
TOTAL				**34**	**17**	**01**	**16**	**24**

SEMESTER IV								
Sl. No.	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**
THEORY								
1	U18BSMA401	BS	Numerical Methods	4	3	1	0	4
2	U18PCAE401	PC	Elements of Aerospace Structures	3	3	0	0	3
3	U18PCAE402	PC	Low Speed Aerodynamics	3	3	0	0	3
4	U18PCAE403	PC	Aircraft Propulsion	3	3	0	0	3
5	U18PCAE404	PC	Aircraft Systems and Instrumentation	2	2	0	0	2
6	U18PCAE405	PC	Manufacturing Technology	3	3	0	0	3
7	U18MCTH401	MC	Constitution of India	2	0	0	2	0
PRACTICAL								
8	U18PCAE4L1	PC	Aerodynamics Laboratory	4	0	0	4	2
9	U18PCAE4L2	PC	Manufacturing Technology Laboratory	4	0	0	4	2
10	U18PCAE4L3	PC	Aero Design and Modeling Laboratory	4	0	0	4	2
ACTIVITY BASED COURSES								
11	U18MCAB407	MC	Literature & Media –Literature, Cinema & Media	2	0	0	2	0
12	U18MCAB408	MC	Literature & Media – Group Reading of Classics	2	0	0	2	0
TOTAL				**35**	**17**	**1**	**18**	**24**

SEMESTER V								
Sl. No.	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**
THEORY								
1	U18PCAE501	PC	Aircraft Structural Mechanics	3	3	0	0	3
2	U18PCAE502	PC	Gas Dynamics	3	3	0	0	3
3	U18PCAE503	PC	Advanced Aerospace Propulsion	3	3	0	0	3
4	U18PCAE504	PC	Aircraft Performance	3	3	0	0	3
5	U18PCAE505	PC	Control Systems	3	3	1	0	4
6	U18PEAE5E1	PE	Professional Elective – I	3	3	0	0	3
7	U18MCTH502	MC	Universal Human Values	2	0	0	2	0
PRACTICAL								
8	U18PCAE5L1	PC	Aircraft Structures Laboratory	4	0	0	4	2
9	U18PCAE5L2	PC	Aircraft Maintenance Laboratory	4	0	0	4	2
10	U18PCAE5L3	PC	Flight Simulation Laboratory	4	0	0	4	2
11	U18PCAS5L4	PC	Simulation tool for Aerospace Applications	4	0	0	4	2
ACTIVITY BASED COURSES								
11	U18MCAB509	MC	Self Development – Spiritual, Mindfulness & Meditation	2	0	0	2	0
12	U18MCAB510	MC	Self Development - religion and Inter-faith	2	0	0	2	0
TOTAL				**40**	**18**	**1**	**22**	**27**

SEMESTER VI								
Sl. No.	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**
THEORY								
1	U18HSBA601	HS	Organizational Behavior	3	3	0	0	3
2	U18PCAE601	PC	Finite Element Analysis	3	3	0	0	3
3	U18PCAE602	PC	Aircraft Stability and Control	3	3	0	0	3
4	U18PEAE6E2	PE	Professional Elective – II	3	3	0	0	3
5	U18OEAE6E1	OE	Open Elective – I	3	3	0	0	3
6	U18MCTH603	MC	Essence of Indian Knowledge Tradition	2	0	0	2	0
PRACTICAL								
7	U18PCAE6L1	PC	Computer Aided Analysis Laboratory	4	0	0	4	2
8	U18PCAE6L2	PC	Propulsion Laboratory for Aeronautical	4	0	0	4	2
9	U18EEAE6L1	EE	Aircraft Design Project – I	4	0	0	4	2
ACTIVITY BASED COURSES								
12	U18MCAB609	MC	Social Services – Social Awareness	2	0	0	2	0
13	U18MCAB610	MC	Social Services – NSS	2	0	0	2	0
TOTAL				**33**	**15**	**0**	**18**	**21**

SEMESTER VII								
Sl. No.	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**
THEORY								
1	U18PCAE701	PC	Computational Fluid Dynamics for Aerospace Engineering	3	3	0	0	3
2	U18PCAE702	PC	Introduction to Avionics	3	3	0	0	3
3	U18PEAE7E3	PE	Professional Elective – III	3	3	0	0	3
4	U18PEAE7E4	PE	Professional Elective – IV	3	3	0	0	3
5	U18PEAE7E5	PE	Professional Elective – V	3	3	0	0	3
6	U18OEAE7E2	OE	Open Elective – II	3	3	0	0	3
PRACTICAL								
7	U18PCAE7L1	PC	Avionics Laboratory	4	0	0	4	2
8	U18EEAE7L1	EE	Aircraft Design Project – II	4	0	0	4	2
9	U18PRAE7P1	PR	Project Phase I	4	3	0	0	3
ACTIVITY BASED COURSES								
10	U18MCAB713	MC	Behavioral and Interpersonal Skills	2	0	0	2	0
11	U18MCAB714	MC	Nature – Nature club	2	0	0	2	0
TOTAL				**34**	**21**	**0**	**12**	**25**

SEMESTER VIII								
Sl. No.	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**
THEORY								
1	U18PEAE8E6	PE	Professional Elective – VI	3	3	0	0	3
2	U18OEAE8E3	OE	Open Elective – III (MOOC)	0	0	0	0	2
3	U18OEAE8E4	OE	Open Elective – IV	3	3	0	0	3
PRACTICAL								
4	U18PRAE8P2	PR	Project Phase II	18	0	0	18	9
5	U18EEAE8C1	EE	Comprehension	0	0	0	2	1
ACTIVITY BASED COURSES								
6	U18MCAB815	MC	Innovation – Project based – Sc., Tech, Social, Design & Innovation	2	0	0	2	0
TOTAL				**26**	**6**	**0**	**22**	**18**

Total No. of Contact Hours : 270 Hours

Total No. of Credits : 187

SUMMARY OF CURRICULUM STRUCTURE AND CREDIT & CONTACT HOUR DISTRIBUTION

Sl. No.	Category of Courses	Semester wise Credits								No. of Credits	% of Credits
		I	II	III	IV	V	VI	VII	VIII		
1	Humanities and Social Sciences (HS)	3	3	-	-	-	3	-	-	9	4.8
2	Basic Sciences (BS)	10	16	4	4	-	-	-	-	34	18.18
3	Engineering Sciences (ES)	8	8	11	-	-	-	-	-	27	14.43
4	Professional Core (PC)	-	-	9	20	24	10	8		71	37.96
5	Professional Electives (PE)	-	-	-	-	3	3	9	3	18	9.62
6	Open Electives (OE)	-	-	-	-	-	3	3	5	11	5.88
7	Employability Enhancement (EE) Courses: Technical Seminar, Internship, Term Paper, Comprehension, etc.	-	-	-	-	-	2	2	1	5	2.67
8	Project Work, (PR)	-	-	-	-	-	-	3	9	12	6.41
9	Mandatory Courses (MC)	-	-	-	-	-	-	-	-	-	-
Total Credit		21	27	24	24	27	21	25	18	187	100
Total Contact Hours		31	37	34	35	40	33	34	26	270 Hours	

LIST OF ELECTIVES

List of Professional Elective(PE) I:

Code No.	Specialization	Course Title	L	T	P	C
U18PEAE011	Maintenance	Aircraft General Engineering and Maintenance Practices	3	0	0	3
U18PEAE012	Propulsion	Rockets and Missiles	3	0	0	3
U18PEAE013	Aerodynamics	Experimental Aerodynamics	3	0	0	3
U18PEAE014	Aerodynamics	Boundary Layer Theory	3	0	0	3

List of Professional Elective (PE)II:

Code No.	Specialization	Course Title	L	T	P	C
U18PEAE021	Maintenance	Civil Aviation Regulations	3	0	0	3
U18PEAE022	Structures	Theory of Elasticity	3	0	0	3
U18PEAE023	Propulsion	Principles of Turbo machinery in Air breathing Engines	3	0	0	3
U18PEAE024	Materials science	Aircraft Materials	3	0	0	3

List of Professional Elective (PE) III:

Code No.	Specialization	Course Title	L	T	P	C
U18PEAE031	Maintenance	Vibrations and Elements of Aero elasticity	3	0	0	3
U18PEAE032	Structures	Aircraft Engine Repair and Maintenance	3	0	0	3
U18PEAE033	Propulsion	Missile Aerodynamics	3	0	0	3
U18PEAE034	Materials science	Hypersonic Aerodynamics	3	0	0	3

List of Professional Elective (PE) IV:

Code No.	Specialization	Course Title	L	T	P	C
U18PEAE041	Propulsion	An Introduction to Combustion	3	0	0	3
U18PEAE042	Materials science	Nano Science and Technology	3	0	0	3
U18PEAE043	Maintenance	Airport Engineering	3	0	0	3
U18PEAE044	Structures	Theory of Plate and shell	3	0	0	3

List of Professional Elective (PE) V:

Code No.	Specialization	Course Title	L	T	P	C
U18PEAE051	Materials science	Composite Materials and Structures	3	0	0	3
U18PEAE052	Structures	Experimental Stress Analysis	3	0	0	3
U18PEAE053	Maintenance	Helicopter Maintenance	3	0	0	3
U18PEAE054	Propulsion	Heat Transfer in Aerospace Applications	3	0	0	3

List of Professional Elective (PE) VI:

Code No.	Specialization	Course Title	L	T	P	C
U18PEAE061	Materials science	High Temperature Materials	3	0	0	3
U18PEAE062	Structures	Fatigue and Fracture Mechanics	3	0	0	3
U18PEAE063	Propulsion	Cryogenic Rocket Propulsion	3	0	0	3
U18PEAE064	Structures	Structural Dynamics	3	0	0	3

List of Open Electives

Code No.	Specialization	Course Title	L	T	P	C
U18OEAE001	Aerodynamics	Industrial aerodynamics	3	0	0	3

U18OEAE002	Engineering science	Elements of Aeronautics and Astronautics	3	0	0	3
U18OEAE004	Structures	Unmanned Aerial Vehicle	3	0	0	3
U18OEAE003	Avionics	Avionics systems	3	0	0	3
U18OEAE005	Propulsion	Rocket propulsion	3	0	0	3

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMES

ALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18OEBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations

20 U18OECE003-Road Safety

21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics

38. U18OEAE003- Unmanned Aerial Vehicle
39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion
41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance
43. U18OEEE003-Energy Conservation Techniques
44. U18OEEE004-PLC and SCADA for Industrial
45. U18OEEC-001-Communication Systems
46. U18OEEC-002-VLSI circuits
47. U18OEEC-003-Image Processing Techniques
48. U18OEEC-004-Communication Networks
49. U18OEEC-005-An Introduction to DSP
50. U18OEEC-006-Basics of IoT
51. U18OEBM001-Medical Radiation Safety Engineering
52. U18OEBM002-Medical Waste Management
53. U18OEBM003-Quality Control in Healthcare
54. U18OEBM004-Wearable Technology
55. U18OEEI001-Analytical Methods and Instrumentation
56. U18OEEI002-Introduction to process Data Analytics
57. U18OEEI003-Reliability and Safety in Process industries
58. U18OEEI004-Multi sensor data fusion
59. U18OEBT001- Bioprocess Economics & Plant Design
60. U18OEBT002-Brewing technology
61. U18OEBT003-Biomining
62. U18OEBT004-Industrial Safety Engineering
63. U18OEAC001-Geo- informatics for Precision Farming
64. U18OEAC002-Livestock and poultry management
65. U18OEAC003-Extension methodologies and transfer of Agricultural Technologies
66. U18OEAC004-Soil and Water Conservation Engineering
67. U18OEIT001-Block Chain Technology
68. U18OEIT002-Semantic Web
69. U18OEIT003-Entrepreneurship Development
70. U18OEIT004-Ethical Hacking Techniques
71. U18OECS001-Mobile Application Development
72. U18OECS002-System Modelling and Simulation
73. U18OECS003-Web Programming
74. U18OECS004-Virtual Reality
75. U18OECS005- E Commerce
76. U18OEGE001-Metagenomics and Epigenomics
77. U18OEGE002-Molecular Genetics and Genomics
78. U18OEGE003-Principles of Molecular cell biology

Subject code: U18HSEN101	**Subject Name : COMMUNICATIVE ENGLISH (Common to B. Tech - Mech, Mechatronics, Automobile, Aero, EEE, EIE, ECE, CSE, IT, Civil & Bio Medical admitted from July 2018)**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – School Level English				
	Course Coordinator Name & Department:- Mr. M. Gopinath & Dept. of English				
COURSE OBJECTIVES:-	Enhance the learner's communication skills by giving adequate exposure in LSRW – Listening, Speaking, Reading, Writing skills and the related sub-skills. Help the learners recognize and operate in various styles and registers in English.				

UNIT I SPEAKING

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations introducing oneself – exchanging personal information- narratingevents, -incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development – prefixes- suffixes - articles, prepositions.

UNIT II READING

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building - The concept of Word Formation

UNIT III LISTENING

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun pronoun agreement

UNIT IV WRITING Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles - Pre

UNIT V LANGUAGE DEVELOPMENT Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing-listening to talks, conversations to complete the remaining, participating in conversations-short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence-Organizing principles of paragraphs in documents- Techniques for writing precisely

COURSE OUTCOMES (COs)	
CO1	Enable students to learn and identify faulty pronunciation, grammar and vocabulary. (Understand)
CO2	Help students develop the knowledge, skills and strategies to become proficient and independent readers and make them to interact and construct meaning from the content.(Analyze)
CO3	Develop listening abilities of the students, and teach basic listening strategies and expose them to a number of different listening situations through activities. (Remember)
CO4	Impart writing skills by sensitizing the learners to the dynamics of effective writing. (Create)
CO5	Recognize culture-specific perspectives and values embedded in language behavior to make students interpret authentic texts of different genres. (Analyze)
CO6	Communicate effectively using verbal and non-verbal communication skills. (Apply)

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

	Total Contact Hours – 60	3	1	0	4
	Prerequisite Course– School Level Mathematics				
	Course Coordinator Name & Department – Ms. J. Aiswarya& Department of Mathematics				
COURSE OBJECTIVES	➢ The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. ➢ It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3) Hrs

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3) Hrs

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3) Hrs

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3) Hrs

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3) Hrs

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.

3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. Narayanan S., Manicavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers,
5. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth Edition
Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	Analyze the optimum solution of various engineering problems involving single variables.
CO2	Know the basic concepts of integration and evaluating the problems which involves Beta and Gamma functions.
CO3	Solve the differential functions and optimizes the problems with two variables functions.
CO4	Apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three-dimensional spaces.
CO5	Evaluate Eigenvalue and eigen vector problems from practical areas using transformations;
CO6	Construct the eigen vector for the problem in engineering field and Diagonalizing the matrix

Mapping of Course Outcomes with Program outcomes (POs) **H –High, M-Medium, L-Low**

U18BSPH101	WAVES AND OPTICS (For B.Tech –Common to all branches)	L	T	P	C
	Total contact hours -45	3	0	0	3
	Prerequisite: +2				
	Course offered by –Department of Physics				
	Data Book/Codes /Standards : Higher Secondary				

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity. **(Contact Hours - 9)**

UNIT 2 ULTRASONIC WAVES

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.**(Contact Hours - 9)**

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them.**(Contact Hours - 9)**

UNIT 4 WAVE OPTICS

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power.**(Contact Hours - 9)**

UNIT 5 LASERS

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.**(Contact Hours - 9)**

9)

COURSE OUTCOMES(COs)	
CO1	Describe the basic concept of waves (Understand)
CO2	Identify the importance of Ultrasonic waves (Understand)
CO3	Recognizethe propagation of light and geometrical optics (Remember)
CO4	Discuss the optical phenomenon like interference, diffraction and superposition of waves (Understand)
CO5	Observe the concept of laser and its applications (Understand)
CO6	Examine the properties of light and sound waves and its wide range of applications(Apply)

Mapping of course outcomes with programme outcomes(POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	**Approval**	47th Meeting of Academic Council held in Aug, 2018											

U18BSCH101	Subject Name: ENGINEERING CHEMISTRY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course: +2				
	Course Offered by : Dept.of.Chemistry				
	Data Book/ Codes/ Standards : Periodic Table				

UNIT I WATER TECHNOLOGY (Contact Hours – 09)

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS (Contact Hours – 09)

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead. Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non-ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES (Contact Hours – 09)

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS (Contact Hours – 09)

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY (Contact Hours – 09)

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires:

Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	Discuss boiler feed water requirements and water treatment techniques **(Understand)**
CO2	Explain the industrial importance of Phase rule and its applications to one and two component systems **(Apply)**
CO3	Illustrate the principles of Conventional and non- conventional energy sources and energy storage devices **(Understand)**
CO4	Describe the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels **(Remember)**
CO5	Classify Nanomaterials and state their applications in biology and medicine**(Understand)**
CO6	Describe the industrial requirements for resources, energy and materials administer **(Apply)**

U18ESCS101	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: NIL				
	Course Designed by : Dept. of Computer Science and Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES 9

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

COURSE OUTCOMES (COs)	
CO1	Understand basic of algorithmic solutions to find simple computational problems.
CO2	Execute basic syntax, data expressions and programs in Python.
CO3	Apply conditional statements and functional parameters to read and write input/output files
CO4	Analyze list operations, tuples assignments, various dictionaries and sorting methods.
CO5	Remember user-defined functions, modules and packages.
CO6	Implement the exception and file handling operations using various list parameters.

U18ESME101	**Engineering Graphics & Design (Theory & Lab.)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	3	0	0	3
	Prerequisite – Higher Secondary School Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet des needs, using the techniques, skills, and modern engineering tools necessary engineering practice				

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM)

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle;

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP;

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

MODULE4: SECTIONSOF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True

shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone;

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS:

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students will get Exposure to basics of building construction
CO4	Students will get Exposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.
CO6	Crete 3D part models. Develop its surfaces with solid modelling software for assembly of parts

Mapping of Course Outcomes with Student Outcomes (SOs)

U18BSPH2L1	WAVE OPTICS AND MECHANICS LABORATORY (Common to B.Tech. –Civil, Mech, Mechatronics, Aero, Aerospace & Auto)	L	T	P	C
	Total contact hours - 30	0	0	4	2
	Prerequisite: Wave Optics and Mechanics				
	Course offered by – Department of Physics				
	Data Book/Codes /Standards : Higher Secondary				

PHYSICS LAB EXPERIMENTS FOR SEMESTER I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Mechanics

1) Torsional Pendulum – without symmetrical mass
2) Torsional Pendulum – With symmetrical mass
3) Young's Modulus – Non-uniform bending
4) Young's Modulus – Uniform Bending
5) Compound Pendulum
6) Coefficient of viscosity of the given liquid – Poiseuille method

COURSE OUTCOMES(COs)	
CO1	Achieve the fundamental concept of optics (Precision)
CO2	Demonstrate the concept of production of ultrasonic waves (Manipulate)
CO3	Achieve the basic concept of mechanics (Precision)

	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a Polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

U18ESCS1L1	PROBLEM SOLVING AND PYTHON PROGRAMMINGLABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)

3. ExSOnentiation (SOwer of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib
CO6	To Understand about Simulate bouncing ball using Pygame.

U18HSEN201	**TECHNICAL ENGLISH**	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite course –1 Semester English				
	Course Coordinator Name & Department:- Mr. M. Gopinath& Dept. of				
OBJECTIVES	➢ Train the students in technical writing in English in writing descriptions of gadgets, Preparing texts and reports as well as comprehending technical texts. Prepare the students in content writing and copy editing				

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issuebased essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependent, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

TEXT BOOKS:

COURSE OUTCOMES (COs)

On completion of the course, the students will be able to	
CO1	Develop global listening abilities of the students, and teach them a few basic listening strategies and expose them to a number of different listening situations through activities. (Understand)
CO2	Help students develop the knowledge, skills and strategies they must possess to become proficient and independent readers who is able to interact and construct meaning from the content. (Apply)
CO3	Use technical information and knowledge in practical documents for a variety of professional audiences, including peers and colleagues or management, and public audiences.(Apply)
CO4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Create)
CO5	Help students recognize culture-specific perspectives and values embedded in language behavior. Decode, analyze, and interpret authentic texts of different genres. (Evaluate)
CO6	Designing digital slides. Breaking up a presentation into parts of reasonable length. Using statistics effectively to persuade an audience. Incorporating concrete examples and stories to illustrate points. (Create)

Approval	47th Meeting of the Academic Council

U18BSMA201	**Engineering Mathematics II (Common to B.Tech - Mech, Mechatronics, Automobile, Aero, EEE, EIE, ECE, CSE, IT, Civil & Bio Medical admitted from July 2018)**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	**3**	**1**	**0**	**4**
	Prerequisite Course– School Level Mathematics				
	Course Coordinator Name & Department – Dr. N. Ramya& Department of Mathematics				
COURSE OBJECTIVE	➢ The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables. ➢ Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.
5.

COURSE OUTCOMES (COs)	
CO1	Solve the higher order differential equations with constant and variable coefficients.
CO2	Apply Green's, Stoke's and Gauss Theorems in the application of engineering problems which involves line, surface and volume integrals .
CO3	Understand the analytic functions and able to construct an analytic function, solve the conformal mapping
CO4	Evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	Apply the concept of Laplace Transformation in analysis.
CO6	Use Laplace transform methods to solve differential equations.

Mapping of Course Outcomes with Program outcomes(POs)

U18BSPH201	**INTRODUCTION TO MECHANICS (Common to B.Tech. –Civil, Mech, Mechatronics, Aero, Aerospace & Auto)**	**L**	**T**	**P**	**C**
	Total contact hours -45	3	0	0	3
	Prerequisite: +2				
	Course offered by –Department of Physics				
	Data Book/Codes /Standards : Higher Secondary				

UNIT I -Forces in Nature; Newton's laws and its completeness in describing particle motion; Solving Newton's equations of motion in polar coordinates; Problems including constraints and friction; Extension to cylindrical and spherical coordinates**(Contact Hours – 9)**

UNIT II - Potential energy function; F = - Grad V, equipotential surfaces and meaning of gradient; Conservative and non-conservative forces, curl of a force field; Central forces; Conservation of Angular Momentum; Energy equation and energy diagrams; Elliptical and parabolic orbits. **(Contact Hours – 9)**

UNIT III - Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and lightly-damped oscillators; Forced oscillations and resonance**(Contact Hours – 9)**

UNIT IV - Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion, Kinetic energy of a rotating body**(Contact Hours – 9)**

UNIT V - Introduction to three-dimensional rigid body motion — only need to highlight the distinction from two-dimensional motion in terms of (a) Angular velocity vector, and its rate of change and (b) Moment of inertia tensor; Three-dimensional motion of a rigid body wherein all points move in a coplanar manner: e.g. Rod executing conical motion with centre of mass fixed. **(Contact Hours – 9)**

COURSE OUTCOMES(COs)	
CO1	Identify and solve the various equation of motions in different coordinate systems (Remember)
CO2	Generalize the idea of conservation of energy and angular momentum (Understand)
CO3	Visualize the concept of harmonic motion in different damped conditions (Remember)
CO4	Discuss the motion of a rigid body under different criteria (Understand)
CO5	Describes the motion of a rigid body in three dimensions (Understand)
CO6	Demonstrates the basics of particle motion and kinematics in 1D, 2D and 3D (Apply)

U18BSCH201	ENVIRONMENTAL SCIENCES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course +2				
	Course Offered by Dept of Chemistry				
OBJECTIVES	➢ To study the interrelationship between living organism and environment. ➢ To study of the nature and concepts of ecosystem. ➢ To learn about the integrated themes and biodiversity of an environment. ➢ To study of pollution control and waste management. ➢ To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I -NATURAL RESOURCES 9

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS 9

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION 9

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder- Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.

Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES (COs)	
CO1	Observe the overutilization of water and energy from different sources, conserve water and identify alternative energy sources **(Remember)**
CO2	Explain different ecosystem, identify possible solutions to environment issues
CO3	Describe the biodiversity, its importance and conservation **(Remember)**
CO4	Explain various forms of environment pollution and realize the responsibilities of individuals in prevention of pollution **(Apply)**
CO5	Identify the social and environmental issues and predict the possible engineering solutions **(Understand)**
CO6	Describe the social and environmental problems and administer the possible solutions **(Apply)**

	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector					

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System - types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity-antigens-antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines-cloning-bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

COURSE OUTCOMES (COs)													
CO1	Recall the relationship between structure and function of cells at molecular level												
CO2	List the defining characteristics of biological life												
CO3	Determine the importance of genetics and immunological response												
CO4	Categorize the mechanism of infection about diseases and disorders affecting specific organs												
CO5	Demonstrate the techniques from multiple disciplines and apply to biological problems												
CO6	Discuss the biological science related to different disciplinary areas.

	Total contact hours-45	**3**	**0**	**0**	**3**
	Prerequisite: School Level Physics				
	Course offered by –Department of Electrical and Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications.				

MODULE 1 :DCCIRCUITS (12 periods)

Electrical circuit elements, voltage and current sources, Fundamentals Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transfer Theorem.

MODULE 2:AC CIRCUITS (9 Periods)

Representationofsinusoidalwaveforms,peakandrmsvalues,phasorrepresentation,realpower, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and deltaconnections.

MODULE 3: ELECTRICAL MACHINES&TRANSFORMERS (9 Periods)

Principles of operation and characteristics of; DC machines, Synchronous machines, threephase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer.

MODULE 4: SEMICONDUCTOR DEVICESANDAPPLICATIONS (9 periods)

CharacteristicsofPNJunctionDiode–ZenerEffect–ZenerDiodeanditsCharacteristics–Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction toOP-AMP.

MODULE 5:DIGITALELECTRONICS (6 Periods)

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

COURSE OUTCOMES(COs)	
CO1	Apply simple electrical circuits and verify DC network theorems.**(Apply)**
CO2	Obtain electrical parameters like voltage, current, power and sketch phase diagram of a given ac circuits. .**(Understand)**
CO3	Explain the working principle of DC, AC Machines and transformer.**(Understand)**
CO4	Draw the characteristics of semiconductor devices and to obtain signal analysis of BJT **(Understand)**
CO5	Perform the basic Boolean operations. **(Remember)**

U18ESME1L2	**Workshop/Manufacturing Practices Laboratory**	L	T	P	C
	Total Contact Periods – 75	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

Lectures & videos: (15 hours)

1. Detailed contents
2. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods (3 lecture)
3. CNC machining, Additive manufacturing (2 lecture)
4. Fitting operations & power tools (2 lecture)
5. Carpentry (2 lecture)
6. Plastic moulding, glass cutting (2 lecture)
7. Metal casting (2 lecture)
8. Welding (arc welding & gas welding), brazing (2 lecture)

WORKSHOP PRACTICE:

Machine shop (6 hours)

1. Facing
2. Turning
3. Drilling Practice

Fitting shop (6 hours)

1. Fitting Exercises–Preparation of square fitting
2. Vee–fittingmodels.

Carpentry (9 hours)

a) Preparation of Lap joints.
b) Mortise and Tenonjoints.
c) Cross Half joints.
d) Dove Tail joints.

Welding shop (Arc welding 6 hrs + gas welding 3 hrs) (9 hours)

Preparation of butt joints, lap joints and Tee joints

Sheet Metal working (9 hours)

Forming &Bending:
Model making–Trays, funnels, etc.
Different type of joints

Demonstration (6 Hours)

Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

U18ESEE1L3	BASIC ELECTRICAL AND ELECTRONIC ENGINEERING PRACTICES LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – School Level Physics & Basic Electrical and Electronic Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and CurrentLaws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a stepchangeinvoltage(transientmaybeobservedonastorageoscilloscope).Sinusoidalsteadystate response of R-L, and R-C circuits – impedance calculation andverification.
3. Fluorescent lampwiring.
4. Staircasewiring.
5. Measurement of energy using single phase energymeter.
6. Observationoftheno-loadcurrentwaveformonanoscilloscopeandMeasurementofPrimary and secondary voltages and currents of aTransformer.
7. Demonstration of cut-out sections of machines: dc machine (commutator-brusharrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase inductionmachine.
8. Demonstrationof(a)dc-dcconverters(b)dc-acconverters–PWMwaveform(c)theuseofdc-acconverter for speed control of an induction motor and (d) Components of LTswitchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and functiongenerator.
2. Characteristics – Half wave and Full waveRectifiers.
3. Characteristics – Common Base transistorconfiguration.
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK andRS.
5. Applications of OperationalAmplifier.

4	**Approval**	47th Meeting of Academic Council, May 2018											

SEMESTER III

	Partial Differential Equations, Probability and Statistics (Common to B. Tech – Mech, Mechatronics, Automobile and Aero Engineering admitted from July 2018)	**L**	**T**	**P**	**C**
U18BSMA302	Total Contact Hours -60	**3**	**1**	**0**	**4**
	Prerequisite Course– Engineering Mathematics I & II				
	Course Coordinator Name & Department – K.L. Rajashree& Department of Mathematics				

OBJECTIVE:

- Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms.
- Learn techniques of solving the standard types of first order and second order partial differential equations.
- Learn solving wave and heat equation using Fourier series. Learn basics of probability, Baye's Theorem.
- Understand the concept of random variable, moment generating functions and their properties; learn standard distributions in discrete and continuous cases. Learn measures of central tendency and correlation and regressions, rank correlation, statistical intervals for single sample and test of hypothesis for a small and large sample

UNIT I FOURIER SERIES 12

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS 12

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS 12

Classifications second order linear partial differential equations – Solution of one dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation – Fourier Series solutions in Cartesian coordinates.

UNIT IV PROBABILITY DISTRIBUTION 12

Probability – Axioms of probability – Conditional probability – Baye's theorem – Random variables – Binomial – Poisson – Geometric – Uniform – Exponential and normal distribution and their properties.

UNIT V STATISTICS AND TESTING OF HYPOTHESIS 12

Measures of central tendency – Moments – Skewness and kurtosis – Correlation and Regression – Rank correlation – Test of significance: Large sample test for single proportion, difference of proportions – Chi Square test for goodness fit and independence of attributes.

	COURSE OUTCOMES (COs)
CO1	Apply Fourier series method to engineering problems. (Apply)
CO2	Solve PDE and higher order with constant coefficients and physically interpret the results. (Apply)
CO3	Analyze the solutions ofone dimensional and two dimensional boundary value problems in partial differential equations.(Analyze)
CO4	Apply the concept of probability to various distributions in engineering problems. (Apply)
CO5	Evaluate thestatistical problems including measures of central tendency, correlation and regression. (Evaluate)
CO6	Analyse the testing of hypothesis to statistical data. (Analyze)

U18PCAE301	**FUNDAMENTALS OF AERONAUTICS AND ASTRONAUTICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	**2**	**0**	**0**	**2**
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To help the student understand the history of aviation, different kinds of aircrafts, spacecrafts, their components and functioning.					

UNIT I EVOLUTION OF FLIGHT 4

Brief history of Aviation-Hot air balloon and heavier than air flying machines-early airplane configurations-Modern Airplanes-Components of airplane and their functions-Rotary wing aircrafts-Space vehicles.

UNIT II FUNDAMENTALS OF AERODYNAMICS 10

International Standard Atmosphere-Pressure, Temperature and Density altitude, Bernoulli's equation-Mach number-subsonic, transonic, sonic and supersonic flow regimes, Measurement of pressure and airspeed- IAS,EAS and TAS. Airfoil geometry and nomenclature - airfoil characteristics - lift, drag and moment coefficients-angle of attack-aspect ratio- induced drag and parasite drag.

UNIT III AIRCRAFT STRUCTURES AND MATERIALS 4

Structural components of an airplane- monocoque and semi monocoque structure –materials for structural components – composite materials and their significance in Aviation Technology.

UNIT IV AIRCRAFT PROPULSION 8

Propeller Engine – Gas Turbine Engine – Turbo prop, Turbo jet, Turbo fan Engines - variation of thrust, powerand specific fuel consumption with speed and altitude – materials for engine components.

UNIT V SPACE VEHICLES AND ASTRONAUTICS 4

Basics of Rocket Technology – escape velocity – re-entry vehicles – Satellite technology– Hypersonic vehicles, Elements of Astronautics.

U18PCAE302	FUNDAMENTALS OF MECHANICS AND MACHINES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Introduction to Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To enable the student to understand about the basics of mechanics, working of machines, the forces acting on different machines and the corresponding motion, prediction and design of machines.

UNIT I EQUILIBRIUM OF RIGID BODIES 9

Free Body Diagram, Equilibrium of Forces and Moments, Lame's theorem, Parallelogram and Triangle Law of Forces, Force Resolution, Types of Supports and Reactions, Requirements of Stable Equilibrium, Moments and Couple – Moment of force about a point and about an axis, Vector operation of forces, Resolution of Forces, Resultant of Several Concurrent Forces, Forces in Space

UNIT II PROPERTIES OF SURFACES AND SOLIDS 8

Determination of Areas, First Moment of Area and the Centroid of Standard Sections – T Section, I Section, Composite Figures, Hollow Section – Second Moments of Plane Area (Rectangle, Triangle, Circle, T Section, I Section, Hollow Section), Parallel Axis Theorem, Perpendicular Axis Theorem, Polar Moment of Inertia, Principal Moments of Inertia of Plane Areas – Basic Concepts of Mass Moment of Inertia

UNIT III MECHANISMS 10

Machine and Structure – Kinematic link, pair and chain – Grueblers criteria – Constrained motion – Degrees of freedom –Kutzbach criterion - Slider crank and crank rocker mechanisms – Inversions – Applications –Kinematic analysis of simple mechanisms – Determination of velocity and acceleration. – Introduction to Gears and Cams

UNIT IV FRICTION 8

Frictional force, Laws of Coulomb Friction, Cone of Friction, Angle of Repose, Friction in screw and nut – Pivot and collar – Thrust bearing – Plate and disc clutches – Belt (Flat and Vee) and rope drives. Ratio of tensions – Effect of centrifugal and initial tension – Condition for maximum power transmission – Open and crossed belt drive.

UNIT V FORCE ANALYSIS AND BALANCING 10

Introduction to force analysis – Inertia force and inertia torque - Static and dynamic balancing Single and several masses in different planes –Balancing of reciprocating masses-primary balancing and concepts of secondary balancing – Single and multicylinder engines

U18ESAE301	FUNDAMENTALS OF FLUID MECHANICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Introduction to Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To help the student understand the basic physics of fluids, fluid behavior under different conditions, laws governing fluid flows, measurements in fluids and functioning of fluid machinery.

UNIT I INTRODUCTION 7

Fluid –definition-Fluid properties-Newton's law of viscosity-Classification of fluids-fluid statics-Hydrostatic forces on submerged surfaces- basics of Stability of floating bodies

UNIT II FLUID FLOW ANALYSIS AND FLOW MEASUREMENT 10

Ideal and real flow-Concept of continuum-Eulerian and Lagrangian approaches-Velocity field-Pathline, Streakline, Streamline- Stream tube- Fluid acceleration-Continuity, momentum differential equations-Navier Stokes equation-Bernoulli's equation and its applications-Venturimeter-Orifice meter, Coefficient of Discharge, Flow Rate and Velocity Measurement.

UNIT III DIMENSIONAL ANALYSIS 8

Dimensional Homogeneity, Buckingham's Pi Theorem-Non dimensional numbers and their significance-Flow similarity, similitude, incomplete similarity and model studies – distorted models

UNIT IV FLOW THROUGH PIPES 11

Laminar and turbulent flow- Boundary layer flow – Boundary layer thickness - Reynolds number and its significance-Laminar fully developed pipe flow-Hagen-Poiseuille flow-Coefficient of friction-Head loss – Darcy-Weisbach equation-Hydraulic gradient- Total energy lines-Moody's diagram

UNIT V FLUID MACHINERY 9

Classification of fluid machines-Reciprocating and centrifugal pumps-impulse and reaction turbines and velocity triangles-Working principle of Pelton, Francis and Kaplan turbines

	FUNDAMENTALS OF AERO – THERMODYNAMICS	L	T	P	C
U18ESAE302	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To make the student understand about the basics of engineering thermodynamics, various laws and their applications, prediction of thermodynamic performance of various engines, and other thermal devices.					

UNIT I BASIC CONCEPTS AND FIRST LAW 7

Continuum, microscopic and macroscopic approach, thermodynamic system and surrounding, state, path, process, heat and work, zeroth law, concept of ideal and real gases, internal energy, specific heat capacities, enthalpy, first law of thermodynamics – PMM-1

UNIT II FIRST LAW APPLIED TO FLOW PROCESSES 10

Control volume – steady flow processes – steady flow energy equation – mass and energy balance – example of steady flow processes – variable flow processes

UNIT III SECOND LAW AND ENTROPY 11

Second law of thermodynamics, Kelvin – Planck's and Clausius Statements, PMM-2, reversibility and irreversibility, Carnot theorem, refrigerator, heat engine and heat pump, concept of entropy, irreversibility, Clausius inequality, principle of increase in entropy, absolute entropy, entropy generation in open and closed systems, entropy change in non-flow processes, availability, exergy

UNIT IV AIR POWER CYCLES 9

Carnot, Otto, Diesel, Dual, Stirling and Ericsson cycle - Air standard efficiency – Mean effective pressure

UNIT V BRAYTON CYCLE 8

Introduction to aircraft propulsion – gas turbine engine cycles – open and closed Brayton cycle – Brayton cycle with reheat, regeneration and intercooling.

	FUNDAMENTALS OF STRUCTURAL MECHANICS	L	T	P	C
U18ESAE303	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Introduction to Mechanics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To equip the students with the basics of structural mechanics and materials, material behavior & failure under load, its prediction and design based on it.					

UNIT I INTRODUCTION TO STRENGTH OF MATERIALS 10

Introduction to mechanics of deformable bodies - Material selection criteria – stress – strain – Stress and strain diagram - Hook's law - Elastic constants – definition of engineering constants: elastic moduli – Young's modulus, Bulk Modulus& Volumetric Strain, Poisson's ratio, Shear Modulus, relation between three elastic moduli and Poison's ratio, Statically determinate and indeterminate problems in tension and compression – Thermal stress – Impact loading – Composite bars

UNIT II STRESSES IN BEAMS 9

Shear force and bending moment diagrams for simply supported, cantilever beams and overhanging beams– bending stress variation in beams of symmetric sections, neutral axis

UNIT III DEFLECTION OF BEAMS 9

Double integration, Macaulay's method, moment area method, conjugate beam method, method of superposition, Maxwell's reciprocal theorem.

UNIT IV TORSION 8

Torsion of solid and hollow circular shafts – Power transmission in shafts – Open and closed-coiled helical springs – Stresses in helical springs.

UNIT V BI – AXIAL STRESSES AND ELEMENTS OF ELASTICITY 9

Stresses in thin cylindrical and spherical shell under internal pressure and volumetric strain– Principle stresses and maximum shear stresses– Combined loading – Mohr's circle and its construction – concept of theory of elasticity, basic assumptions, coordinate transformation, plane stress and plane strain conditions, stress tensor

U18PCAE3L1	STRENGTH OF MATERIALS LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Strength Of Materials				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the students with hands on experience on conducting various structural tests to determine the structural properties of a given material.

LIST OF EXPERIMENTS

1 Tension test of a mild steel and aluminium rod.
2 Shear test on mild steel and aluminium rod.
3 Torsion test on mild steel rod.
4 Hardness test (a) Brinell& (b) Rockwell.
5 Impact tests (a) Izod& (b) Charpy.
6 Estimation of Stiffness of a Helical Spring (a) Open Coil & (b) Closed Coil
7 Fatigue test: Rotating beam.
8 Block compression test.
9 Flexural test by 3 point bending method
10 Determination of fracture strength and fracture pattern of ductile and brittle material.

	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Engineering Graphics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the student with a practical experience of engineering drawing in the computer using commercial software packages.

LIST OF EXPERIMENTS

1 Study of various software for engineering design and drafting
2 Study of commercial software packages and their tools
3 Exercise on 2D drawing
4 Exercise on pad and groove
5 Exercise on shaft, mirror and array
6 Exercise on threading, bores and tappings
7 Exercise on part assembly
8 Exercise on drafting
9 Exercise on surface modeling
10 Exercise on kinematics

	Total Contact Hours – 30	**0**	**0**	**4**	**2**
	Prerequisite – Fundamentals Of Fluid Mechanics				
	Course Designed by – Department of Civil Engineering				

OBJECTIVE: To equip the students with hands on experience on conducting various experimental tests to determine the fluid properties of a given fluid and also to assess the performance of various fluid machinery.

LIST OF EXPERIMENTS

1 Determination of pipe flow losses.
2 Calibration of orifice meter and venture meter.
3 Flow through notches and weir.
4 Flow through open orifice
5 Verification of Bernoulli's Equation.
6 Performance characteristics of centrifugal pump.
7 Performance characteristics of submergible pump.
8 Performance characteristics of jet pump.
9 Characteristics of impulse turbine – Pelton wheel turbine.
10 Characteristics of reaction turbine – Francis turbine

SEMESTER IV

U18BSMA401	**Numerical Methods (Common to B. Tech - Mech, Mechatronics, Automobile, Aero admitted from July 2018)**	**L**	**T**	**P**	**C**
	Total Contact Hours- 60	**3**	**1**	**0**	**4**
	Prerequisite Course – Engineering Mathematics I & II				
	Course Coordinator Name & Department– P. Bhathmanaban & Department of Mathematics				

OBJECTIVE:

- The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra.
- It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.

UNIT I SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS 12

Fixed Point Iteration methods - Newton - Raphson method and Regula-Falsi method for single variable - solutions of linear system of equations by Gaussian, Gauss-Jordan, Jacobian and Gauss-Siedel methods.

UNIT II INTERPOLATION 12

Finite differences - Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals- Newton's Divided difference formula, Lagrange's Interpolation formula.

UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 12

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's Both 1/3rd and 3/8th rules. Double integration using Trapezoidal rule and Simpson rule.

UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 12

Single step methods- Taylor series, Euler and modified Euler methods, Runge-Kutta method of fourth order for solving first and second order differential equations, Multiple step methods- Milne and Adam's - Bash forth predictor and corrector methods.

UNIT V BOUNDARY VALUE PROBLEMS FOR ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 12

Finite difference - solution of 2nd order ODE - Finite difference solutions for two dimensional Laplace and Poisson equations, Finite difference solutions for one dimensional heat equation both implicit and explicit (Bender-Schmidt and Crank-Nicholson methods), Finite difference explicit method for one dimensional wave equation.

COURSE OUTCOMES (COs)	
CO1	Solve algebraic and transcendental equation using Newton Raphson and regula-Falsi methods and system of linear equations by various methods.
CO2	Apply method of interpolation and extrapolation for numerical data.
CO3	Describe the concept of numerical methods to differentiation and integration using Trapezoidal and Simpson's rules.
CO4	Solve initial value problems of ODE by applying Taylor's series and runge-Kutta methods.
CO5	Analyse the two dimensional Laplace, Poisson equations and one dimensional heat and wave equations of PDE.
CO6	Develop one dimensional and two dimensional problems in engineering field.

	ELEMENTS OF AEROSPACE STRUCTURES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
U18PCAE401	Prerequisite – Fundamentals of Mechanics and Machines, Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to understand about the basics of aerospace structures, different types of structural members, their design and analysis.					

UNIT I TRUSSES AND FRAMES 9

Statically determinate frames - Analysis of plane Truss - Method of joints - 3 D Truss-Plane frames - Composite beam.

UNIT II STATICALLY INDETERMINATE BEAMS 9

Propped Cantilever - Fixed-Fixed beams - Clapeyron's Three Moment Equation – moment distribution method.

UNIT III ENERGY METHODS 11

Strain energy evaluation in structural members – Castigliano's Theorem – dummy load & unit load methods – Maxwell's reciprocal theorem – energy methods applied to statically determinate and indeterminate beams, frames, rings & trusses

UNIT IV COLUMNS 9

Euler's column curve – inelastic buckling – effect of initial curvature – the Southwell plot – columns with eccentricity – use of energy methods – theory of beam columns – beam columns with different end conditions – stresses in beam columns.

UNIT V FAILURE THEORY 7

Fail safe and safe life structures, factor of safety, Brief introduction of yield material, brittle vs. ductile behavior, Creep and creep rupture, viscoelastic materials - environmental stress, stress potentials, effect of time and temperature - Fatigue and Fracture - Maximum Stress theory – Maximum Strain Theory – Maximum Shear Stress Theory – Distortion Theory – Maximum Strain energy theory – Application to aircraft Structural problems.

U18PCAE402	LOW SPEED AERODYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Mathematics I & II, Fundamentals of Fluid Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the students with the basic concepts necessary to understand the flow around low speed aircrafts, tools to estimate the forces thus generated and methods to design airfoils and wings of an aircraft.

UNIT I BASIC AERODYNAMIC PRINCIPLES 9

Models of fluid - System and Control volume approach, substantial, local and convective derivative, Continuity, momentum and energy equations, Inviscid flow, Euler equation, incompressible Bernoulli's Equation. Circulation and Vorticity

UNIT II FUNDAMENTALS OF INVISCID FLOWS 9

Elementary Flows and their combinations – Ideal Flow over a circular cylinder, D'Alembert's Paradox, Magnus effect, KuttaJoukowski Theorem, Starting Vortex, Kutta condition, Real flow over smooth and rough cylinder

UNIT III AIRFOIL THEORY 9

Complex Potential, Methodology of Conformal Transformation, Kutta-Joukowski transformation and its applications, Karman Trefftz Profiles, Thin Airfoil theory and its applications.

UNIT IV FINITE WING THEORY 9

Vortex Filament, Biot and Savart Law, Bound Vortex and trailing Vortex, Horse Shoe Vortex, Lifting Line Theory and its limitations, induced drag coefficient, elliptic and general lift distribution, Oswald's wing efficiency factor, effect of plan form and aspect ratio

UNIT V VISCOUS FLOW THEORY 9

Laminar Boundary layer and its thickness, displacement thickness, momentum thickness, Energy thickness, Shape parameter, Boundary layer equations for a steady two dimensional incompressible flow, Boundary Layer growth over a Flat plate, Critical Reynolds Number, Blasius solution, Basics of Turbulent flow

COURSE OUTCOMES	
CO 1	**Recall** the types of flows based on mathematical equations. (**Understand**)
CO 2	**Solve** flow over basic aerodynamic shapes using concept of inviscid flow theory.(**Apply**)
CO 3	**Determine** the geometric features of airfoils with the help of mathematical transformations. (**Apply**)
CO 4	**Describe** the concept of lift generation and the factors for efficient wing design. (**Understand**)
CO 5	**Determine** the skin friction drag over surfaces. (**Apply**)

U18PCAE403	AIRCRAFT PROPULSION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Aero – Thermodynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to understand about the basics of propulsion, working of different parts of a gas turbine engine, their design and analysis.					

UNIT I FUNDAMENTALS OF ENGINES 7

Gas turbine engine cycle - Engine performance parameters – Efficiencies, Methods of thrust augmentation – Characteristics of propeller, turboprop, turbofan and turbojet engines.

UNIT II INLETS AND NOZZLES 11

Subsonic inlets– External and internal flow pattern – inlet performance criterion –Boundary layer separation – Supersonic inlets – the starting problem – external deceleration– Exhaust nozzles –Theory of flow in isentropic nozzles – Losses in nozzles –Nozzle efficiency— nozzle choking –Over expanded and under expanded nozzles – Ejector and variable area nozzles

UNIT III COMPRESSORS 9

Principle of operation of centrifugal compressor – Work done and pressure rise – Velocity diagrams – Concept of pre whirl – Rotation stall – Operating Principle of axial flow compressor – Velocity triangles – degree of reaction – Centrifugal and Axial compressor performance characteristics.

UNIT IV COMBUSTION CHAMBERS 9

Classification of combustion chambers - Combustion process – Stoichiometric Ratio – Equivalence Ratio – Important factors affecting combustion chamber design — Combustion chamber performance – Effect of operating variables on performance – Flame tube cooling – Flame stabilization – flame holders.

UNIT V TURBINES 9

Operating Principle of axial flow turbine – Stator and rotor blades – losses in the blade – choice of blade profile, chord and pitch – stage and overall performance – blade cooling – radial flow turbine.

U18PCAE404	AIRCRAFT SYSTEMS AND INSTRUMENTATION	L	T	P	C
	Total Contact Hours – 30	2	0	0	2
	Prerequisite – Fundamentals of Aeronautics and Astronautics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To enlighten the student about the various systems and instruments necessary for the operation of a flight vehicle.

UNIT I AIRCRAFT SYSTEMS 6

Hydraulic systems - Study of typical workable system - components –Hydraulic systems controllers – Pneumatic systems - Advantages - Working principles - Typical Air pressure system – Brake system- Typical Pneumatic power system - Components, Landing Gear systems – Classification.

UNIT II AIRPLANE CONTROL SYSTEMS 8

Conventional Systems - fully powered flight controls - Power actuated systems – Modern control systems - Digital fly by wire systems - Auto pilot system active control Technology.

UNIT III ENGINE SYSTEMS 6

Fuel systems for Piston and jet engines, - Components of multi engines. Lubricating systems for piston and jet engines - Starting and Ignition systems - Typical examples for piston and jet engines.

UNIT IV AUXILIARY SYSTEMS 5

Basic Air cycle systems - Vapour Cycle systems, Evaporative vapour cycle systems - Oxygen systems - Fire protection systems, Deicing and anti-icing systems.

UNIT V AIRCRAFT INSTRUMENTS 5

Flight Instruments and Navigation Instruments – Gyroscope - Accelerometers, Air speed Indicators - Mach Meters - Altimeters - Principles and operation – Operation and Working Principle of various types of engine instruments – Tachometers, Temperature gauges, Pressure Gauges.

U18PCAE405	MANUFACTURING TECHNOLOGY	L	T	P	C
	Total Contact Hours – 30	3	0	0	3
	Prerequisite – Engineering Graphics & Design				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To help the student to understand about the different types of manufacturing processes and the uniqueness of different methods.					

UNIT I METAL WORKING PROCESS 5

Mechanical working of metals –hot and cold working –rolling, extrusion, spinning, wire-drawing, press working. Welding – different types of gas and arc welding process, soldering and brazing. Casting –different types, furnaces

UNIT II MACHINING PROCESSES 7

Lathe – introduction, types, construction, mechanisms and attachments for various operations, nomenclature of single point cutting tool. Capstan and turret lathes various mechanisms, tool and loading arrangement. Automatic lathes - single spindle and multi spindle mechanisms, Introduction to CNC machining

UNIT III SHAPER, PLANER AND MILLING PROCESSES 7

Shaper, planer and slotter: types, specifications, mechanisms, holding devices, difference between shaper and planer. Milling machine – types and specification, mechanisms, holding devices, milling operations.

UNIT IV DRILLING, BORING, BROACHING, SURFACE FINISHING PROCESSES 6

Drilling, Boring- Specification, Nomenclature of drilling and reaming tool and its specification. Broaching: Specification, types, mechanisms, nomenclature of broaching tool. Grinding process, Types of grinding machines, Grinding Wheels, Honing, Super finishing, Polishing, Metal spraying, Galvanizing, Electroplating.

UNIT V NON – TRADITIONAL MACHINING PROCESSES 5

Non-traditional machining techniques, classification, Abrasive jet machining, Electrical Discharge Machining, E. D wire cutting, Electro chemical machining, Electron Beam Machining, Laser Beam Machining, Ultrasonic Machining – Introduction to 3D Printing

	AERODYNAMICS LABORATORY	L	T	P	C
U18PCAE4L1	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Fundamentals of Fluid Mechanics, Co-requisite – Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To give to the student a practical experience of using the subsonic wind tunnel to carry out experimentation on different design models and to calculate forces acting on the models based on the experimentation.

LIST OF EXPERIMENTS

1 Calibration of subsonic wind tunnel.
2 Pressure distribution over smooth cylinder
3 Pressure distribution over rough cylinder.
4 Pressure distribution over symmetric airfoil.
5 Pressure distribution over cambered airfoil.
6 Pressure distribution over a wing
7 Force measurement on an Airfoil using wind tunnel balance.
8 Pressure distribution over a building model.
9 Aerodynamic studies of automotive models.
10 Flow visualization at subsonic velocity using (a) Smoke (b) Oil.

U18PCAE4L3	AERO DESIGN AND MODELING LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Fundamentals of Aeronautics and Astronautics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To give the students a hands on experience on the design of small gliders, parachutes, paper planes, ornithopters, RC aircraft, quadrotors

LIST OF EXPERIMENTS

1 Design and fabrication of gliders using lightweight materials.
2 Design and fabrication of power gliders.
3 Design and fabrication of single and double crank flapping wing mechanism.
4 Design and fabrication of pivoted double crank flapping wing mechanism.
5 Design and fabrication of wing using lightweight materials.
6 Design and fabrication of horizontal and vertical stabilizer using lightweight materials.
7 Design and fabrication of fuselage using lightweight materials
8 Estimation the discharge rate of Li-Po battery for different thrust setting.
9 Estimating the propeller thrust for different voltage setting.
10 Assembling of Remote Control Aircraft.

COURSE OUTCOMES	
CO 1	**Design** and fabricate the Aircraft Structural components with appropriate materials. (**Naturalization**)
CO 2	**Conduct** flight testing of powered glider and RC plane. (**Precision**)
CO 3	**Observe** Performance characteristics of Glider and RC plane. (**Imitation**)

SEMESTER V

U18PCAE501	AIRCRAFT STRUCTURAL MECHANICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Elements of Aerospace Structures				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the student with the knowledge about the mechanics of different aircraft structural members, and their design.

UNIT I UNSYMMETRICAL BENDING 9

Bending of symmetric beams subject to skew loads - bending stresses in beams of unsymmetrical sections – generalized 'k' method, neutral axis method, principal axis method- advantages and disadvantages.

UNIT II SHEAR FLOW IN OPEN SECTIONS 9

Thin walled beams – concept of shear flow – the shear centre and its determination – shear flow distribution in symmetrical and unsymmetrical thin-walled sections – structural idealization – shear flow variation in idealized sections.

UNIT III SHEAR FLOW IN CLOSED SECTIONS 9

Bredt - Batho theory – single-cell and multi-cell tubes subject to torsion – shear flow distribution in thin-walled single & multi-cell structures subject to combined bending torsion – with walls effective and ineffective in bending – shear center of closed sections.

UNIT IV BUCKLING OF PLATES 9

Bending of thin plates – rectangular sheets under compression - local buckling stress of thin walled sections – crippling strength by Needham's and Gerard's methods – thin-walled column strength – load carrying capacity of sheet stiffener panels – effective width – inter-rivet and sheet wrinkling failures - short panel failing strength.

UNIT V STRESS ANALYSIS OF WING AND FUSELAGE 9

Wing structural arrangements – factors influencing - wing stress analysis methods – determination of shear force and bending moment distribution over fuselage – Numerical problems – Tension field beam – general Wagner equation - Semi-tension field beams.

COURSE OUTCOMES	
CO 1	**Compute** the bending stress distribution in beams of symmetric and unsymmetrical sections. (**Apply**)
CO 2	**Calculate** the shear flow distribution in symmetrical and unsymmetrical thin-walled open section and its shear center. (**Apply**)
CO 3	**Calculate** the shear flow distribution in thin walled single and multi-cell structures subjected to combined loading. (**Apply**)
CO 4	**Compute** the crippling strength of thin plates and effective width of sheet stiffener panels. (**Apply**)
CO 5	**Analyze** the stress developed in aircraft wings and fuselage. (**Analyze**)

U18PCAE502	GAS DYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To make the student understand about the flow physics of high speed gases, shocks and high speed aircraft and experimentation techniques.					

(Use of Gas Tables is permitted)

UNIT I FUNDAMENTAL ASPECTS OF COMPRESSIBLE FLOW 9

Compressibility, Continuity, Momentum and Energy equation for steady one dimensional flow, Compressible Bernoulli's equation, Area – Mach number – Velocity relation, Mach cone, Mach angle, One dimensional Isentropic flow through variable area duct, Isentropic relations - Critical conditions, Characteristic Mach number, Maximum discharge velocity.

UNIT II SHOCKS AND EXPANSION WAVES 10

Normal shock relations, Prandtl's relation, Hugonoit equation, Rayleigh Supersonic Pitot tube equation, Oblique shocks, θβM relation, Shock Polar, Reflection of oblique shocks, Left running and Right running waves, Interaction of oblique shock waves, slip line, Rayleigh flow, Fanno flow, Expansion waves, Prandtl-Meyer expansion, Maximum turning angle, Simple and non-simple regions, Operating characteristics of convergent and convergent-divergent nozzles.

UNIT III TWO DIMENSIONAL COMPRESSIBLE FLOW 10

Potential equation for 2-dimensional compressible flow, Linearization of potential equation,Small perturbation theory, Linearized Pressure Coefficient, Linearized subsonic flow, Prandtl-Glauert rule, Linearized supersonic flow, Method of characteristics, Wave drag coefficient.

UNIT IV HIGH SPEED FLOW OVER AIRFOILS, WINGS AND AIRPLANE CONFIGURATION 8

Critical Mach number, Drag divergence Mach number, Shock Stall, Shock- Boundary layer interaction, Supercritical Airfoil Sections, Transonic area rule, Swept wing, Airfoils for supersonic flows, Lift, drag, Pitching moment and Centre of pressure for supersonic profiles, Shock-expansion theory, wave drag, supersonic wings.

UNIT V EXPERIMENTAL METHODS 8

Wind tunnels for Subsonic, transonic, Supersonic and hypersonic flows, Various Measurement techniques – velocity, pressure, Flow visualization techniques in high speed flows, Shock tube, Gun tunnels

WEBLINKS:
https://onlinecourses.nptel.ac.in/noc17_ae05/course

COURSE OUTCOMES	
CO 1	**Apply** the concepts of isentropic flow for problems related to variable area ducts. (**Apply**)
CO 2	**Calculate** the properties of flow through shock and expansion waves. (**Apply**)
CO 3	**Determine** the aerodynamic coefficients of compressible flows based on linearized flow theory. (**Apply**)
CO 4	**Categorize** various aircrafts intended for subsonic and supersonic regimes based on wing and fuselage design. (**Analyze**)
CO 5	**Describe** flow measurement and visualization techniques for high-speed flows. **(Understand)**

U18PCAE503	ADVANCED AEROSPACE PROPULSION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Aircraft Propulsion				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To enable the student to understand about the advanced aero engines, rocket engines, electric engines, components and functions.

UNIT I RAMJET PROPULSION 11

Operating principle of ramjet engine – Components of ramjet engines and their efficiencies – Combustion in ramjet engine – Critical, subcritical and supercritical modes of operation - Ramjet engine and its performance characteristics – Ramjet design calculations – Flame stability problems in ramjet combustors –Integral ram rockets.

UNIT II SCRAMJET PROPULSION 9

Introduction to hypersonic vehicles, design challenges and supersonic combustion - problems associated with supersonic combustion– Types of scramjet combustors – Fuel injection schemes in scramjet combustors – Flame Stabilization

UNIT III SOLID PROPELLANT ROCKETS 8

Operating principle – Specific impulse of rocket – Internal ballistics – Selection criteria of solid propellants – propellant grain design considerations – Progressive, Regressive and neutral burning in solid rockets.

UNIT IV LIQUID PROPELLANT ROCKETS 8

Liquid propellant rockets – selection of liquid propellants – various feed systems for liquid rockets –basics of cryogenic techniques – Cooling in liquid rockets and the associated heat transfer problems – advantages of liquid rockets over solid rockets - introduction to hybrid propulsion – advantages and limitations of hybrid propulsion - static testing of rockets and safety considerations

UNIT V NON – CONVENTIONAL PROPULSION TECHNIQUES 9

Pulse propulsion – combustion process in pulsejet engines – inlet charging process – Introduction to nozzleless propulsion and basic concepts - Electric rocket propulsion - Ion propulsion – Nuclear rocket – Types – Solar Sail - comparison of performance of these propulsion systems with chemical rocket propulsion systems.

U18PCAE504	AIRCRAFT PERFORMANCE	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the student with the knowledge of estimating the performance parameters of an aircraft and its design.

UNIT I AERODYNAMICS OF THE AIRPLANE 10

International Standard Atmosphere, TAS, IAS and EAS, , Aerodynamic Lift, Drag and Moments – Lift, Drag and Moment Co-efficient- Aerodynamic Center – NACA airfoil nomenclature – Streamlined and Bluff body – Skin friction Drag, Pressure Drag and Induced Drag – Drag Polar – Various drags of an airplane – Methods of Drag Reduction – Mach Number – Effect on Drag Polar.

UNIT II AIRCRAFT ENGINE PERFORMANCE 10

Power available and power required curves- Thrust available and thrust required curves- Conditions for power required and thrust required minimum-Thrust available and maximum velocity, Power available and maximum velocity-Altitude effects on power available and power required-thrust available and thrust required-Effect of drag divergence on maximum velocity.

UNIT III STEADY LEVEL FLIGHT 10

Steady level flight, the fundamental Parameters: Thrust – to – weight ratio, Wing loading, Drag polar, and lift-to – drag ratio. Aerodynamic relations associated with lift-to-drag ratio, Range and Endurance of Propeller and Jet aircrafts

UNIT IV GLIDING AND CLIMBING FLIGHT 8

Equation of motion for Rate of climb- Shallow and steep angles of climb, Rate of climb, Climb hodograph, Maximum Climb angle and Maximum Rate of climb- , Absolute and service ceiling, Cruise climb, Gliding flight, Glide hodograph

UNIT V ACCELERATED FLIGHT 7

Estimation of take-off and landing distances, Methods of reducing landing distance, level turn, minimum turn radius, bank angle and load factor, Constraints on load factor, Pull up and pull down maneuvers, V-n diagram.

U18PCAE505	CONTROL SYSTEMS	L	T	P	C
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Basic Electrical and Electronics Engg				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the student with the various methods necessary to carry out the design and analysis of aerospace control systems.

UNIT I SYSTEM AND REPRESENTATION 9

Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical systems – Transfer function – Block diagram reduction techniques

UNIT II TIME RESPONSE 9

Time response – Time domain specifications – Types of test input- I and II order system response – Error coefficients – Generalised error series – Steady state error- P, PI, PID modes of feedback control – Time response analysis.

UNIT III FREQUENCY RESPONSE 9

Frequency response – Bode plot- polar plot – Determination of closed loop response from open loop response – Correlation between frequency domain and time domain specifications.

UNIT IV CONCEPT OF STABILITY 9

Characteristics equation – Root Locus construction - Routh Hurwitz stability criterion

UNIT V SAMPLED DATA SYSTEMS 9

Sampled data control systems- functional elements – sampling process- z-transforms- properties inverse z transforms – ZOH and First Order Hold process- pulse transfer functions – step response – Introduction to digital control system, Digital Controllers and Digital PID controller

TEXTBOOKS:

U18PCAE5L1	**AIRCRAFT STRUCTURES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	**0**	**0**	**4**	**2**
	Prerequisite – Elements of Aerospace Structures, Co-requisite – Aircraft Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to understand about the structural analysis of different aircraft parts, shear centers, combined loading					

LIST OF EXPERIMENTS

1 Verification of Maxwell's theorem and principle of superposition.
2 Column – Testing.
3 Testing of riveted joints.
4 Unsymmetrical Bending of a Beam
5 Determination of Shear Centre in open Section
6 Determination of Shear Centre in closed Section
7 Combined bending and Torsion of a Hollow Circular Tube
8 Constant Strength Beams
9 Wagner beam – Tension field beam
10 Material properties test of composite laminate

	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Aircraft Systems and Instruments				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint the students with the basic inspection, repair and maintenance practices carried out for aircrafts.

LIST OF EXPERIMENTS

1 Aircraft systems observations during Ground run.
2 Aircraft "Mooring" and "Leveling" procedure.
3 Control System "Rigging check" procedure
4 Aircraft "Symmetry Check" procedure
5 Procedure to find the centre of gravity of Aircraft
6 Piston Engine – Cleaning, Visual Inspection. NDT Checks
7 Piston Engine Components – Dimensional Checks
8 Jet Engine – Identification of Components and Defects
9 Tube Bending and Flaring
10 Sheet Metal Forming

	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Fundamentals of Aeronautics and Astronautics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint with the basic starting and operation of a Cessna 172 aircraft through a flight simulator					

LIST OF EXPERIMENTS

1 Specification of Cessna C-172 –S
2 Cessna-172 Trainer Aircraft Operational Check
3 Study of Cessna – 172 Flight Simulators
4 Demonstrate the Autopilot Mode and Automatic Direction Control Mode of Cessna 172 Trainer Aircraft
5 Demonstration of Takeoff and Landing in Cessna-172 Trainer Aircraft using Flight Simulator
6 Demonstration of Basic Aircraft Instruments
7 Study of Ring Laser Gyro
8 Study of Fly-By-Wire and Fly-By-Light
9 Demonstration of Lateral Autopilot
10 Demonstration of Longitudinal Autopilot

REFERENCES:

	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Mathematics I & II				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint with the MATLAB application to solve various engineering problems.

LIST OF EXPERIMENTS

1 Introduction to MATLAB
2 Relational and Logical Expressions in MATLAB
3 Working with Matrices
4 Plotting using MATLAB
5 Exercise on Curve Fitting
6 Exercise on Complex and Statistical Analysis
7 Program Flow Control in MATLAB
8 Input and Output of Variables
9 Exercise on solving ODE's and PDE's
10 Exercise on using SIMULINK for dynamic simulation.

REFERENCES:

SEMESTER VI

U18HSBA601	ORGANIZATIONAL BEHAVIOR	L	T	P	C
	Total No. of contact hours: 45	3	0	0	3
	Pre-requisite: Nil				
	Course Designed by: Dept of Management Studies				

Course Objectives

1. Understanding the basic approaches in organization
2. Knowledge on theories of Personality
3. Clear sight on the Decision Making in Groups
4. Analyse the behaviour of individuals and groups in organizations in terms of the key factors that influence organizational behaviour.
5. Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behaviour.

UNIT I **9 hours**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

UNIT II **9 hours**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behaviour.

UNIT III **9 hours**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

UNIT IV **9 hours**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

UNIT V **9 hours**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

3. Chandhan JS, Organizational Behavior, Vikas Publishers
4. Stephen Robbins, Organizatonal Behavior, Pearson Education
5. RS Diwedi, Human Relations and Organizational Behavior, Mac Millan

COURSE OUTCOMES (COs)	
CO1	**Identify** the frame work of Organizational Behaviour.**(Remember)**
CO2	**Infer** concepts of Interpersonal perception. **(Understand)**
CO3	**Compare** the Merits and Demerits of Group decision making.**(Understand)**
CO4	**Describe** the approach of leadership and Summarize the Sources of power.**(Remember)**

CO5	**Relate** change, conflict and culture of management. **(Understand)**

CO / PO MAPPING **L –LOW, M – MEDIUM, H – HIGH**

U18PCAE601	FINITE ELEMENT ANALYSIS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Elements of Aerospace Structures				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint the student with basic numerical techniques called finite element techniques to analyze structural components.

UNIT I INTRODUCTION 9

Introduction to FEA - historical background - Review of various approximate methods – Rayleigh Ritz method, Weighted residual methods - Convergence criteria - Fundamentals of Finite Element Modeling – Element Division - Numbering Scheme - Examples of Finite Element Modeling

UNIT II ONE DIMENSIONAL SYSTEMS 9

Direct stiffness method – spring element- Derivation of the stiffness matrix- Example of a spring assemblage-Assembly of global stiffness matrix-Types of boundary conditions- The Potential energy approach –Examples- bar element – Coordinate systems and Shape Functions- The Potential Energy Approach- Assembly of Global Stiffness Matrix and Load Vector - Boundary Conditions- Temperature Effects – Heat transfer problems in 1D bar and wall

UNIT III TWO DIMENSIONAL SYSTEMS 9

Beam element – element stiffness – load vector – global stiffness matrix – boundary conditions – solution, Plane truss structure - Coordinate Transformation – Local & Global Coordinate- The Element Stiffness Matrix- Stress Calculations- Temperature Effects – Examples.Plane stress & strain – Constant Strain Triangle (CST)- Potential Energy Approach - Element Stiffness; Force Terms, Stress Calculations- Temperature Effects- Examples

UNIT IV THREE DIMENSIONAL SYSTEMS 9

Axisymmetric formulation – Element stiffness matrix and force vector – Body forces and temperature effects – Stress calculations – Boundary conditions and Nodal Solution; Mapping and Numerical Integration—Applications to cylinders under internal or external pressures – Rotating discs - Isoparametric Representation- Four noded quadrilateral for axisymmetric problems

UNIT V APPLICATIONS OF FEM TO AEROSPACE STRUCTURES 9

Linear static analysis-non linear static analysis –dynamic analysis-simple harmonic motion-damping consideration-forced vibration -Case studies and problems using software packages and programming.

U18PCAE602	AIRCRAFT STABILITY AND CONTROL	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To make the students understand the concept of stable and non-stable configuration of airplanes.

UNIT I STATIC LONGITUDINAL STABILITY AND CONTROL 12

General concepts-Degrees of freedom of a rigid body, Static and dynamic stability, Need for stability in an airplane, inherently and marginally stable airplanes, Stability and Controllability, Requirements of control surfaces, criteria for longitudinal static stability, contribution to stability by wing, tail, fuselage, wing fuselage combination, Total longitudinal stability, Neutral point-Stick fixed and Stick free aspects, Free elevator factor, static margin, Hinge moment, Power effects on stability-propeller and jet aircrafts, longitudinal control, Movement of centre of gravity, elevator control effectiveness, elevator control power, elevator angle to trim, elevator angle per g, maneuver point, Stick force gradient and stick force per g, Aerodynamic balancing

UNIT II STATIC DIRECTIONAL STABILITY AND CONTROL 11

Directional stability-yaw and sideslip, Criterion of directional stability, contribution to static directional stability by wing, fuselage, tail, Power effects on directional stability-propeller and jet aircrafts, Rudder fixed and rudder free aspects, Rudder lock and Dorsal fin, Directional control, rudder control effectiveness, rudder requirements, adverse yaw, asymmetric power condition, spin recovery

UNIT III STATIC LATERAL STABILITY AND CONTROL 8

Lateral stability-Dihedral effect, criterion for lateral stability, evaluation of lateral stability-contribution of fuselage, wing, wing fuselage, tail, total static lateral stability, lateral control, aileron control power, aileron effectiveness, strip theory estimation of aileron effectiveness, roll control by spoilers, aileron reversal, aileron reversal speed

UNIT IV DYNAMIC LONGITUDINAL STABILITY 8

Aircraft Equations of motion, small disturbance theory, Estimation of longitudinal stability derivatives stability derivatives, Routh's discriminant, solving the stability quartic, Phugoid motion, Factors affecting the period and damping.

UNIT V DYNAMIC LATERAL AND DIRECTIONAL STABILITY 6

Dutch roll and spiral instability, Auto rotation and spin, Stability derivatives for lateral and directional dynamics.

COURSE OUTCOMES	
CO 1	**Describe** criteria of static longitudinal stability under stick fixed and stick free conditions. (**Understand**)
CO 2	**Estimate** the contribution of aircraft components on static directional stability and the rudder effectiveness for different flight conditions. (**Apply**)
CO 3	**Estimate** the contribution of aircraft components on static lateral stability and compute the effectiveness of aileron. (**Apply**)
CO 4	**Estimate** dynamic longitudinal stability derivatives under non equilibriumconditions of aircraft. (**Apply**)
CO 5	**Compute** the stability derivatives for lateral and directional dynamics of aircraft. (**Apply**)

	Prerequisite – Elements of Aerospace Structures, Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint the student with various computer software for engineering analysis					

LIST OF EXPERIMENTS

1 Study of commercial software packages and their tools
2 Stress analysis of beams with different loading conditions
3 Stress analysis of a plate with circular hole
4 Stress analysis of an axisymmetric component
5 Vibration analysis of cantilever beam
6 Simple conduction example
7 Thermal mixed boundary example
8 Flow field analysis of jets
9 Flow field simulation over an airfoil
10 Fluid – Structure interaction

U18PCAE6L2	PROPULSION LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Low Speed Aerodynamics, Aircraft Propulsion				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To give an experience on experimentation with fluid jets, combustion and heat transfer.

LIST OF EXPERIMENTS

1 Estimation of spread rate in incompressible circular jets.
2 Estimation of spread rate in incompressible non- circular jets.
3 Estimation of centre line velocity decay in supersonic circular jets.
4 Estimation of centre line velocity decay in supersonic non-circular jets.
5 Determination of Wall jet velocity profile.
6 Supersonic Jet Pattern Analysis using Schlieren Technique.
7 Study of free convective heat transfer over a flat plate.
8 Study of forced convective heat transfer over a flat plate.
9 Operation of a subsonic Ramjet engine.
10 Determine the calorific value of Fuel using Bomb Calorimeter.

	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Flight Mechanics, Engineering Graphics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to carry out a preliminary design of an aircraft.					

LIST OF EXPERIMENTS

1 Comparative configuration study of different types of airplanes
2 Comparative study on specification and performance details of aircraft
3 Preparation of comparative data sheets
4 Work sheet layout procedures
5 Comparative graphs preparation.
6 Selection of main parameters
7 Preliminary weight estimations.
8 Power plant selection.
9 Aerofoil selection
10 Wing and stabilizers selection.
11 Control surfaces designing.
12 Drag estimation
13 Detailed performance calculations
14 Stability Estimates
15 Preparation of layouts of balance diagram and three view drawings

SEMESTER VII

U18PCAE701	**COMPUTATIONAL FLUID DYNAMICS IN AEROSPACE ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Low Speed Aerodynamics, Numerical Methods				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To equip the student with the knowledge of various numerical techniques to carry out flow analysis.					

UNIT I GOVERNING EQUATIONS 9

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations. Time-Averaged Equations for Turbulent flow – Reynolds Stress Equations.

UNIT II FDM AND FVM FOR DIFFUSION PROBLEMS 10

Derivation of finite difference equations – Simple Methods – General Methods for first and second order accuracy – Finite volume formulation for steady One, Two and Three dimensional diffusion problems –Parabolic equations – Explicit and Implicit schemes – Example problems on elliptic and parabolic equations – Use of Finite Difference and Finite Volume methods.

UNIT III FVM FOR CONVECTION – DIFFUSION PROBLEMS 9

Steady one-dimensional convection diffusion – Central, upwind differencing schemes properties of discretization schemes – Conservativeness, Boundedness, Transportiveness, Hybrid, Power-law, QUICK Schemes. - SIMPLE, SIMPLER algorithms.

UNIT IV TURBULENCE MODELING 9

Turbulence models, mixing length model, Two equation (k-ε) models – High and low Reynolds number models. Large eddy simulation- Direct numerical simulation.

UNIT V APPLICATIONS 8

Large Scale problems in CFD – Iterative Solvers – Preconditioning Techniques – Vector and Parallel Computing – Post Processing for Visualization – CFD analysis using commercial packages and programming

U18PCAE702	INTRODUCTION TO AVIONICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basic Electricals and Electronics Engg				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To provide the students an understanding of avionics in civil and military industry, avionics subsystems, integrated systems and design approaches

UNIT I OVERVIEW 9

Introduction to aircraft – Axes system – Parts, importance and role of Avionics- systems which interface directly with pilot – Aircraft state sensor systems – Navigation systems- – External world sensor systems – task automation systems- Avionics architecture evolution. Avionics Data buses – MIL STD 1553, ARNC 429.

UNIT II RADIO NAVIGATION 9

Types of Radio Navigation – ADF, DME, VOR, LORAN, DECCA, OMEGA, ILS, MLS

UNIT III INERTIAL AND SATELLITE NAVIGATION SYSTEMS 9

Inertial sensors – Gyroscopes, Accelerometers, Inertial navigation systems – Block diagram, Platform and strap down INS, Satellite Navigation – GPS

UNIT IV AIR DATA SYSTEMS AND AUTOPILOT 9

Air data quantities – Altitude, Airspeed, Mach no., Vertical speed, Total Air temperature, Stall warning, Altitude warning. Autopilot – basic principles – longitudinal and lateral autopilot. Digital Fly by wire.

UNIT V COCKPIT DISPLAYS 9

Display technologies –LED, LCD, CRT, Flat Panel Display, Primary Flight parameter displays – Head UP Display, Helmet Mounted Display, Night vision goggles, Head Down Display, MFD, MFK, Virtual cockpit.

U18EEAE7L1	AIRCRAFT DESIGN PROJECT II	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Aircraft Structural Mechanics, Aircraft Design Project I				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To introduce to the student about the various kinds of loads acting on an airplane and about the detailed structural design of an aircraft

LIST OF EXPERIMENTS

1 V-n diagram for the design study
2 Gust and maneuverability envelopes
3 Critical loading performance and final V-n graph calculation
4 Structural design study – Theory approach
5 Load estimation of wings
6 Load estimation of fuselage.
7 Balancing and Maneuvering loads on tail plane, Aileron and Rudder loads.
8 Detailed structural layouts.
9 Design of some components of wings, fuselage
10 Preparation of a detailed design report with drawings.
11 Preparation of model using computer aided design packages.
12 Preparation of structural analysis report for wing.
13 Preparation of structural analysis report for Fuselage.
14 Preparation of flow analysis report for wing.
15 Preparation of flow analysis report for fuselage.

	PROJECT PHASE I	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
U18EEAE7P1	Prerequisite – Gas Dynamics, Aircraft Structural Mechanics, Advanced Aerospace Propulsion				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVES

1. To acquaint the student with theoretical and experimental studies related to aeronautical science.
2. To enable the student to get involved in key area of research in the branch of study.
3. To perform the literature studies and survey that will help in formulating the problem statement.
4. To enable the student to understand the concept of the acquired statement to get the idea about the work.
5. To work according to the acquired idea and to develop report in the form as specified in the guidelines

DESCRIPTION

The objective of the project phase I is to enable the students in convenient groups of not more than 4 members on a project involving theoretical and experimental studies related to the branch of study. Every project work shall have a guide who is the member of the faculty of the institution. Each student shall finally produce a comprehensive report covering background information, literature survey and problem statement. This final report shall be in typewritten form as specified in the guidelines.

COURSE OUTCOMES	
CO 1	**Observe** the current market scenario to develop new or modify the existing product. **(Imitation)**
CO 2	**Build** a preliminary design of the prototype. **(Manipulation)**
CO 3	**Point out** the methodology for implementation of design. **(Manipulation)**

CO / PO MAPPING

SEMESTER VIII

	Project Phase II	L	T	P	C
	Total Contact Hours – 18 periods per week	0	0	18	9
U18PCAE8P1	Prerequisite – Low Speed Aerodynamics, Aircraft Structural Mechanics, Advanced Aerospace Propulsion				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVES

1. To introduce to the student about the scientific method of research
2. To accustom the student to the processes involved during a project work
3. To enable the student to understand the concepts of scrutiny to get the idea about the work that takes place during a project
4. To familiarize the student on the preparation of technical reports/paper of his/her project work
5. To enable the student to be able to make a proper presentation of his/her assigned work/project

DESCRIPTION

The objective of the project work is to enable the students in convenient groups of not more than 4 members on a project involving theoretical and experimental studies related to the branch of study. Every project work shall have a guide who is the member of the faculty of the institution. Eighteen periods per week shall be allotted in the time table and this time shall be utilized by the students to receive the directions from the guide, on library reading, laboratory work, computer analysis or field work as assigned by the guide and also to present in periodical seminars on the progress made in the project. Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion. This final report shall be in typewritten form as specified in the guidelines

COURSE OUTCOMES	
CO 1	**Tell** the value of achieving perfection in projects implementation & completion. **(Imitation)**
CO 2	**Build** the skills, competencies and point of view of designed concepts. **(Naturalization)**
CO 3	**Replicate** professional skills in Presentation, Technical report writing, critical thinking and decision making. **(Manipulation)**

CO / PO MAPPING
L –LOW, M – MEDIUM, H – HIGH

Category	Employability Enhancement (EE)
Approval	48th Academic Council Meeting

PROFESSIONAL ELECTIVE I (PE I)

U18PEAE011	**AIRCRAFT GENERAL ENGINEERING AND MAINTENANCE PRACTICES**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Fundamentals of Aeronautics and Astronautics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint the student with the fundamentals aspects of aircraft general engineering and maintenance practices					

UNIT I AIRCRAFT GROUND HANDLING AND SUPPORT EQUIPMENT 10

Mooring, jacking, leveling and towing operations – Preparation – Equipment – precautions– Engine starting procedures – Piston engine, turboprops and turbojets – Engine fire extinguishing – Ground power unit.

UNIT II GROUND SERVICING OF VARIOUS SUB SYSTEMS 8

Air conditioning and pressurization – Oxygen and oil systems – Ground units and their maintenance.

UNIT III HAZARDOUS MATERIALS AND SAFETY PRACTICES 5

Hazardous materials- characterization – NFPA Hazard Diamond – Hazardous waste handling – Material Safety Data Sheet (MSDS)

UNIT IV INSPECTION 10

Process – Purpose – Types – Inspection intervals – Techniques – Checklist – Special inspection – Publications, bulletins, various manuals – FAR Air worthiness directives – Type certificate Data sheets – ATA Specifications

UNIT V AIRCRAFT HARDWARE, MATERIALS AND SYSTEM PROCESSES 12

Hand tools – Precision instruments – Special tools and equipment in an airplane maintenance shop – Identification terminology – Specification and correct use of various aircraft hardware (i.e. nuts, bolts, rivets, screws etc) – American and British systems of specifications – Threads, gears, bearings, etc – Drills, tapes and reamers – Identification of all types of fluid line fittings. Materials, metallic and non-metallic - Plumbing connectors – Cables – Swaging procedures, tests, Advantages of swaging over splicing.

TEXTBOOKS:

1. Aviation Maintenance Technician Handbook, General, AC 65-9A, Shroff Publishers and Distributors, 2008

REFERENCES:

1. Aviation Maintenance Technician Handbook, Airframe, AC 65-15A, Shroff Publishers and Distributors, 2008
2. Kroes Watkins Delp, “Aircraft Maintenance and Repair”, McGraw Hill, 7th edition, New York, 2013.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc18_ae03

COURSE OUTCOMES	
CO 1	**Discuss** the fundamentals aspects of aircraft maintenance and repair. **(Understand)**
CO 2	**Describe** the repair and maintenance procedures of aircraft structures. **(Understand)**
CO 3	**Explain** the trouble shooting procedures involved in primary aircraft systems. **(Understand)**
CO 4	**Explain** the maintenance procedures of engine and fuel system. **(Understand)**
CO 5	**Summarize** the maintenance procedures of auxiliary and instruments. **(Understand)**

U18PEAE012	ROCKETS AND MISSILES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To learn about the aerodynamics and stability of Rockets and Missiles.					

UNIT I AERODYNAMICS OF ROCKETS AND MISSILES 9

Airframe components of rockets and missiles – forces acting on a missile while passing through atmosphere – classification of missiles – slender body aerodynamics – method of describing forces and moments – lift force and lateral moment –lateral aerodynamic damping moment – longitudinal moment – drag estimation – body upwash and body downwash in missiles – rocket dispersion.

UNIT II ROCKET MOTION IN FREE SPACE AND GRAVITATIONAL FIELD 9

One dimensional and two-dimensional rocket motions in free space and homogeneous gravitational fields – description of vertical, inclined and gravity turn trajectories – determination of range and altitude – simple approximations to burn out velocity and altitude – estimation of culmination time and altitude.

UNIT III ROCKET SYSTEMS 9

Ignition system in rockets – types of igniters and igniter design considerations – injection system of liquid rockets and their design considerations – design considerations of liquid rocket thrust chambers – cryo fuel systems – combustion mechanisms of liquid and solid propellants.

UNIT IV STAGING AND CONTROL OF ROCKETS AND MISSILES 9

Design philosophy behind multistaging of launch vehicles and ballistic missiles – multistage vehicle optimization – stage separation techniques in atmosphere and in space – stage separation dynamics and lateral separation characteristics – various types of thrust vector control methods including secondary injection thrust vector control – numerical problems on stage separation and multistaging.

UNIT V MATERIALS FOR ROCKETS AND MISSILES 9

Selection criteria of materials for rockets and missiles – materials for various airframe components and engine parts – materials for thrust control devices – various adverse conditions faced by aerospace vehicles and the requirement of materials to perform under these conditions.

TEXTBOOKS:

1. Ramamurthy K, "Rocket Propulsion", Trinity Publications, 2017. (Units 2, 3 & 5)
2. Sutton, G.P., "Rocket Propulsion Elements", John Wiley & Sons Inc., New York, 9th Edition (Units 1 & 4)

REFERENCES:

1. J.D.Mattingly, Elements of Propulsion - Gas Turbines and Rockets, AIAA Education series, 2006,.

3. Martin J L Turner, Rocket and Spacecraft Propulsion, Springer-Praxis Publishing, 2001

WEBLINKS:
www.propulsion-analysis.com/
www.rocket.com/design-and-analysis

COURSE OUTCOMES	
CO 1	**Describe** combustion mechanisms in solid and liquid propellant rockets**. (Understand)**
CO 2	**Compute** the forces and moments acting on rockets and missile while passing through atmosphere. **(Apply)**
CO 3	**Analyze** the trajectory of rockets and missiles in free space and gravitational field. **(Analyze)**
CO 4	**Summarize** different thrust vector control techniques and **Solve** stage separation problems inrockets. **(Understand)**
CO 5	**Analyze** the adverse conditions faced by aerospace vehicles and **Identify** suitable materials used for their construction. **(Analyze)**

U18PEAE013	EXPERIMENTAL AERODYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To understand the various experimentation and measurement techniques in the field of aerodynamics.

UNIT I LOW SPEED WIND TUNNEL TESTING 9

Low speed wind tunnels-Power losses in wind tunnel, energy ratio, Calibration, Flow angularity, Yaw Sphere, Yaw meter, Turbulence sphere, Pressure sphere, Wind tunnel balances, boundary layer correction, calculation of CL and CD for airfoils, Magnetic suspension methods

UNIT II HIGH SPEED WIND TUNNEL TESTING 9

High Speed wind tunnels- Blow down, Induction Type Tunnels, Losses in supersonic tunnels, Second throat, running time estimation, transonic, hypersonic tunnels, Shock tunnels, Gun tunnels

UNIT III MEASUREMENT TECHNIQUES 9

Pressure measurement, Hot wire anemometer, laser Doppler anemometer for turbulence and velocity Measurements-Temperature measurement, Measurement of wall shear stress, Rotameters and Ultrasonic flow meters, Laser Doppler velocimetry, Particle image velocimetry,

UNIT IV FLOW VISUALIZATION AND ANALOGUE METHODS 9

Heleshaw Apparatus, Smoke tunnel, Tuft method, chemical coating, interferometer, Shadowgraph method, Schlieren method, laser induced fluorescence, Hydraulic analogy, limitations of analogy

UNIT V DATA ACQUISITION AND UNCERTAINTY ANALYSIS 9

Measurement systems, data acquisition, signal conditioning, multiplexing, data conversion, uncertainty analysis

TEXTBOOKS:

1. Rathakrishnan. E “Instrumentation, Measurement and Experiments in Fluids”, CRC Press, London, 2007

REFERENCES:

2. Pope. A andGoin. L “High speed wind tunnel testing” John Wiley, 1985

WEBLINKS:

https://nptel.ac.in/courses/101106040/

COURSE OUTCOMES	
CO 1	**Discuss** calibration procedures using various instruments and **Determine** aerodynamic coefficients. (**Apply**)
CO 2	**Explain** various types of high-speed wind tunnels and discuss their design parameters. **(Understand)**
CO 3	**Describe** measurement techniques for flow properties.**(Understand)**

CO 4	**Explain** different flow visualizations technique in subsonic and supersonic regimes. **(Understand)**
CO 5	**Discuss** data acquisition and error analysis. **(Understand)**

	BOUNDARY LAYER THEORY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
U18PEAE014	Prerequisite – Fundamentals of Fluid Mechanics, Co-requisite – Gas Dynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to understand about the various aspects of viscous flow, laminar and turbulent boundary layer, prediction of skin friction drag					

UNIT I FUNDAMENTAL EQUATIONS OF VISCOUS FLOW 9

Fundamental equations of viscous flow, Conservation of mass, Conservation of Momentum-Navier-Stokes equations, Energy equation, Mathematical character of basic equations, Dimensional parameters in viscous flow, Non dimensionalising the basic equations and boundary conditions, vorticity considerations, creeping flow, boundary layer flow

UNIT II SOLUTIONS OF VISCOUS FLOW EQUATIONS 9

Solutions of viscous flow equations, Couette flows, Hagen-Poisuelle flow, Flow between rotating concentric cylinders, Combined Couette-Poiseuille Flow between parallel plates, Creeping motion, Stokes solution for an immersed sphere, Development of boundary layer, Displacement thickness, momentum and energy thickness.

UNIT III LAMINAR BOUNDARY LAYER EQUATIONS 9

Laminar boundary layer equations, Flat plate Integral analysis of Karman – Integral analysis of energy equation – Laminar boundary layer equations – boundary layer over a curved body-Flow separation- similarity solutions, Blasius solution for flat-plate flow, Falkner–Skan wedge flows, Boundary layer temperature profiles for constant plate temperature –Reynold's analogy, Integral equation of Boundary layer – Pohlhausen method – Thermal boundary layer calculations

UNIT IV TURBULENT BOUNDARY LAYER EQUATIONS 9

Turbulence-physical and mathematical description, Two-dimensional turbulent boundary layer equations — Velocity profiles – The law of the wall – The law of the wake – Turbulent flow in pipes and channels – Turbulent boundary layer on a flat plate – Boundary layers with pressure gradient, Eddy Viscosity, mixing length , Turbulence modeling

UNIT V COMPRESSIBLE BOUNDARY LAYERS EQUATIONS 9

Compressible boundary layer equations, Recovery factor, similarity solutions, laminar supersonic Cone rule, shock-boundary layer interaction

TEXTBOOKS:

1. White, F. M., Viscous Fluid Flow, McGraw-Hill & Co., Inc., New York, 2005.

REFERENCES:

1. Schlichting, H., Boundary Layer Theory, McGraw-Hill, New York, 2000.
2. Reynolds, A, J., Turbulent Flows Engineering, John Wiley and Sons, 1980.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc16_me04

COURSE OUTCOMES	
CO 1	**Recall** the fundamental equations of viscous flow and basics of boundary layer theory. **(Understand)**

CO 2	**Discuss** the solutions of simplified viscous flow equations. **(Understand)**
CO 3	**Discuss** theequations and methods used for solving the flow field of laminar boundary layer over a flat plate. **(Understand)**
CO 4	**Describe** the basics of Turbulent boundary layer. **(Understand)**
CO 5	**Describe** the basics of Compressible boundary layer. **(Understand)**

PROFESSIONAL ELECTIVE II (PE II)

U18PEAE021	**CIVIL AVIATION REGULATIONS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Fundamentals of Aeronautics and Astronautics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To familiarize the student with the various aircraft rules and regulations in India.					

UNIT I CAR SERIES "A" & "B" 9

C.A.R series 'A' - procedure for civil air worthiness Requirements and responsibility operators vis-a-vis Air Worthiness directorate - Responsibilities of operators/owners; procedure of CAR issue, amendments etc; objectives and targets of airworthiness directorate; airworthiness regulations and safety oversight of engineering activities of operations.

C.A.R. series "B" – issue approval of cockpit check list, MEL, CDL - Deficiency list (MEL & CDL); preparation and use of cockpit check list and emergency check list.

UNIT II CAR SERIES "C" & "D" 9

C.A.R. series 'C' - defect recording, monitoring, investigation and reporting- Defect recording, reporting, investigation, rectification and analysis; Flight report; Reporting and rectification of defects observed on aircraft; Analytical study of in-fight readings & recordings; Maintenance control by reliability Method.

C.A.R. series 'D'-aircraft maintenance programmes - Reliability Programme (Engines); Aircraft maintenance programme& their approval - On condition maintenance of reciprocating engines; TBO - Revision programme; Maintenance of fuel and oil uplift and consumption records - Light aircraft engines; Fixing routine maintenance periods and component TBOs - Initial & revisions.

UNIT III CAR SERIES "E" & "F" 9

C.A.R. series 'E' - approval of organizations - Approval of organizations in categories A, B, C, D, E, F, & G; Requirements of infrastructure at stations other than parent base.

C.A.R. series 'F' - air worthiness and continued air worthiness - Procedure relating to registration of aircraft; Procedure for issue / revalidation of Type Certificate of aircraft and its engines / propeller; Issue / revalidation of Certificate of Airworthiness; Requirements for renewal of Certificate of Airworthiness

UNIT IV CAR SERIES "L" & "M" 9

C.A.R. series 'L' - aircraft maintenance engineer – licensing - Issue of AME License, its classification and experience requirements, Complete Series 'L'. C.A.R. series 'M' Mandatory Modifications / Inspections.

UNIT V CAR SERIES "T" & "X" 9

C.A.R. series 'T' - flight testing of aircraft - Flight testing of (Series) aircraft for issue of C of A; Fight testing of aircraft for which C or A had been previously issued.

C.A.R. series 'X' - miscellaneous requirements - Registration Markings of aircraft; Weight and balance control of an aircraft; Provision of first aid kits & Physician's kit in an aircraft; Use of furnishing materials in an aircraft; Concessions; Aircraft log books; Document to be carried on board on Indian registered aircraft; Procedure for issue of taxy permit; Procedure for issue of type approval of aircraft components and equipment including instruments.

TEXTBOOKS:

1. " Aircraft Manual (India) ", The English Book Store, 17-1, Connaught Circus, New Delhi.

REFERENCES:

1. " Civil Aviation Requirements with latest Amendment (Section 2 Airworthiness) ", Published by DGCA, The English Book Store, 17-1, Connaught Circus, New Delhi.
2. "Aeronautical Information Circulars (relating to Airworthiness) ", from DGCA Advisory Circulars ", form DGCA.

WEBLINKS:

https://www.iata.org/training/subject-areas/Pages/civil-aviation-courses.aspx

COURSE OUTCOMES	
CO 1	**Identify** the aircraft airworthiness and to list the responsibilities of owners/operators. **(Understand)**
CO 2	**Discuss** the procedures involved in defect recording, monitoring, investigation, reporting and maintenance programmes. **(Understand)**
CO 3	**Explain** the procedures of approval for aircraft manufacturing and maintenance industries. **(Understand)**
CO 4	**Outline** the procedures followed to conduct AME examinations and license issue. **(Analyze)**
CO 5	**Discuss** the procedures followed in flight testing of aircrafts and the miscellaneous requirements. **(Understand)**

U18PEAE022	THEORY OF ELASTICITY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To make the student understand the elastic behavior of different structural components under various loadings and boundary conditions					

UNIT I BASIC EQUATIONS OF ELASTICITY 9

Definition of Stress and Strain: Stress - Strain relationships - Equations of Equilibrium, Compatibility equations, Boundary Conditions, Saint Venant's principle - Principal Stresses, Stress Ellipsoid - Stress invariants

UNIT II PLANE STRESS AND PLANE STRAIN PROBLEMS 9

Airy's stress function, Bi-harmonic equations, Polynomial solutions, Simple two dimensional problems in Cartesian coordinates like bending of cantilever and simply supported beams.

UNIT III POLAR COORDINATES 9

Equations of equilibrium, Strain - displacement relations, Stress – strain relations, Airy's stress function, Axi – symmetric problems, Introduction to Dunder's table, Curved beam analysis, Lame's, Kirsch, Michell's and Boussinesque problems – Rotating discs

UNIT IV TORSION 9

Navier's theory, St. Venant's theory, Prandtl's theory on torsion, semi- inverse method and applications to shafts of circular, elliptical, equilateral triangular and rectangular sections. Membrane Analogy.

UNIT V INTRODUCTION TO THEORY OF PLATES AND SHELLS 9

Classical plate theory – Assumptions – Governing equations – Boundary conditions – Navier's method of solution for simply supported rectangular plates – Levy's method of solution for rectangular plates under different boundary conditions.

TEXTBOOKS:

1. Timoshenko, S., and Goodier, T.N., "Theory of Elasticity", McGraw–Hill Ltd., Tokyo, 1990.

REFERENCES:

1. Enrico Volterra & J.H. Caines, "Advanced Strength of Materials", Prentice Hall, New Jersey, 1991.
2. Wng, C.T., "Applied Elasticity", McGraw–Hill Co., New York, 1993.
3. Sokolnikoff, I.S., "Mathematical Theory of Elasticity", McGraw–Hill New York,1978.

COURSE OUTCOMES	
CO 1	**Define** basic elements of theclassical theory of elasticity**(Understand).**
CO 2	**Solve** two dimensional Cartesian problems using Airy's stress function**(Apply).**
CO 3	**Reframe** theclassical theory of elasticity in polar-coordinate system **(Evaluate).**
CO 4	**Analyze** torsion of solid, thick-walled andthin-walled sections**(Analyze).**
CO 5	**Discuss**the classical plate theory**(Understand).**

U18PEAE023	**PRINCIPLES OF TURBOMACHINERY IN AIRBREATHING ENGINES**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Aircraft Propulsion				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To familiarize the student with the basic of turbomachinery in air breathing engines, components and their design.					

UNIT I INTRODUCTION TO TURBOMACHINERY 9

Turbomachinery- definition, Classification of Turbomachines, Power absorbing and power producing turbomachines, Centrifugal compressor-components, Axial compressor-components, Single stage and multi stage, subsonic and transonic axial compressors, Radial turbine-components, Axial turbine-single and multistage, Review of basic laws-conservation of mass, momentum and energy, Euler's turbo machine equation, simple gas turbine cycle, Variation of thrust and SFC with Mach number and altitude for typical turbojet engine

UNIT II CENTRIFUGAL COMPRESSORS 9

Work done and pressure rise, impeller, velocity triangle, slip factor, power input factor, Coriolis acceleration, diffuser, compressibility effects, inlet Mach number for impeller and diffuser, prewhirl, Compressor characteristics, non-dimensional quantities, stage pressure ratio, Instability-surge, rotating stall, choking

UNIT III AXIAL FLOW COMPRESSORS 9

Basic operation, stator, rotor, velocity triangle, factors affecting stage pressure ratio, de Haller number, diffusion factor, degree of reaction, radial equilibrium of fluid element, basic design process, estimation of number of stages, considerations in blade design, blade cascade, compressibility effects, axial compressor characteristics

UNIT IV AXIAL AND RADIAL TURBINES 11

Elementary theory of axial flow turbines, blade loading coefficient, flow coefficient, degree of reaction, rotor blade loss, Vortex theory-Free vortex design, constant nozzle angle design, choice of blade profile, pitch and chord, rotor blade stresses, Firtree root, limiting factors in turbine design, Radial flow turbine

UNIT V MATCHING OF COMPONENTS AND BLADE COOLING 7

Component characteristics-compressor, turbine, off-design operation, load characteristics, equilibrium running, matching of two turbines in series, turbine blade cooling

TEXTBOOKS:

WEBLINKS:
https://www.coursebuffet.com/sub/aerospace-engineering/415/turbomachinery-aerodynamics

COURSE OUTCOMES	
CO 1	**Recall** basic thermodynamic laws and working principles of Gas Turbines. **(Remember)**
CO 2	**Discuss** the operating principle of centrifugal compressor and **compute** the power input to the compressor. **(Understand)**
CO 3	**Describe** the operating principle of axial flow compressor and compute the power input to the compressor. **(Understand)**
CO 4	**Discuss** the design procedure of compressors. **(Understand)**
CO 5	**Discuss** the basic theory of Turbine design. **(Understand)**

	AIRCRAFT MATERIALS	L	T	P	C
U18PEAE024	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To introduce to the students about the importance of materials in the design of the aircraft

UNIT I INTRODUCTION 9

Properties of Flight Vehicle Materials, Importance of strength to weight ratio and change in properties with respect to temperature variations, factors affecting choice of material for different parts of airplane, Structure of solid materials - crystal structure, effect of crystal imperfections on mechanical properties

UNIT II ALLOYS FOR AIRCRAFT APPLICATIONS 9

Aluminum alloys, High strength and corrosion resistance alloys. Magnesium alloys and their properties, Carbon Steels and Steel Alloys, Effect of alloying elements, Applications of these alloys to aircrafts.

UNIT III HIGH STRENGTH AND HEAT RESISTANT ALLOYS 9

Classification of heat resistant materials, Iron, Nickel and Cobalt base alloys, Refractory materials, Ceramics, Titanium and its alloys, properties of Inconel, Monel & K-Monel, Nimonic and Super Alloys – Applications to Aircrafts

UNIT IV HEAT TREATMENT AND CORROSION RESISTANCE 9

Heat treatment of carbon steel, aluminium alloys, magnesium alloys and titanium alloys used in aircraft. Types of corrosions - Effect of corrosion on mechanical properties - Protection against corrosion - Corrosion resistant materials used in aerospace vehicles.

UNIT V MODERN MATERIALS 9

Significance of Composites and Nanomaterials in Aerospace Engineering, Introduction to graphene, spider silk, silica aerogel, shrilk, stanene and metamaterials and their applications.

TEXTBOOKS:

1. Aircraft Material and Processes: G F Titterton, 5th Edition, Himalayan Books, New Delhi.

WEBLINKS:
https://www.edx.org/course/introduction-to-aerospace-structures-and-materials-0

COURSE OUTCOMES	
CO 1	**Explain** mechanical properties of aircraft structural materials. (Understand)
CO 2	**Classify** different types of alloys and discuss their effects on corrosion resistance. (Understand)
CO 3	**Compare** properties of alloys in high temperature applications. (Anlayze)
CO 4	**Describe** the heat treatment processes of alloys and methods to prevent corrosion. (Understand)
CO 5	**Summarize** the application of advanced materials in aerospace engineering. (Understand)

OPTIONS FOR PROFESSIONAL ELECTIVE (PE) III

U18PEAE031	**VIBRATIONS AND ELEMENTS OF AERO ELASTICITY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Elements of Aerospace Structures				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To know about the role of vibrations, vibration analysis and ideas about Aero elasticity in engineering and industry and design and analysis of components subject to vibrations.					

UNIT I SINGLE DEGREE OF FREEDOM SYSTEMS 10

Vibration Terminologies, Simple harmonic motion, Newton's law, D' Alembert's principle, Energy methods, Free vibrations, Damped vibrations, Forced Vibrations with and without damping, support excitation, Transmissibility, Vibration measuring instruments.

UNIT II MULTI DEGREE OF FREEDOM SYSTEMS 10

Two degrees of freedom systems, static and dynamic couplings, Vibration absorbers, Principal co-ordinates, principal modes and orthogonal condition, Eigen value problems, Lagrangian equations and applications.

UNIT III CONTINUOUS SYSTEMS 8

Vibration of elastic bodies, vibration of strings, Longitudinal –lateral and Torsional vibrations.

UNIT IV APPROXIMATE METHODS 9

Approximate methods-Rayleigh's method, Dunkerleys method, Holzer method, Matrix iteration method

UNIT V ELEMENTS OF AEROELASCTICITY 8

Vibrations due to coupling of bending and torsion, collars triangle, aero elastic instabilities and their prevention, Wing divergence, reversal of aileron control, Flutter and its prevention.

TEXTBOOKS:

1. V. P. Singh, "Mechanics of Vibration", (Units 1 to 4)

5. Thomson W T, 'Theory of Vibration with Application' - CBS Publishers, 1990.

6. Timoshenko S., Vibration Problems in Engineering – John Wiley and Sons, New York, 1993.

WEBLINKS:
https://swayam.gov.in/course/4531-introduction-to-mechanical-vibration

CO 1	**Compute** the natural frequency of SDOF systems under free and forced vibrations. **(Apply)**
CO 2	**Determine** the frequency of vibrating body using instruments. **(Apply)**
CO 3	**Calculate** principle mode of vibration for MDOF systems. **(Apply)**
CO 4	**Calculate** the natural frequency of continuous systems. **(Apply)**
CO 5	**Calculate** natural frequency of MDOF systems using approximate methods. **(Apply)**
CO 6	**Discuss** the problems in aeroelastic instability and its prevention. **(Understand)**

	AIRCRAFT ENGINE REPAIR AND MAINTENANCE	L	T	P	C
U18PEAE032	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Fundamentals of Aeronautics and Astronautics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To familiarize with the inspection, overhaul and maintenance of aircraft piston engines and jet engines.					

UNIT I INSPECTION AND TROUBLE SHOOTING OF PISTON ENGINES 9

Need for Inspection, maintenance and trouble shooting in Piston engine – Inspection of all components – Daily and routine checks – Overhaul procedures – Compression testing of cylinders – Special inspection schedules – Engine fuel, control and exhaust systems – Engine mount and super charger – Details of carburetion and injection systems for small and large engines – Ignition system components – Spark plug – Maintenance and inspection check to be carried out.

UNIT II INSPECTION AND TROUBLE SHOOTING OF PROPELLER 9

Propeller theory - operation, construction assembly and installation -Pitch change mechanism-Propeller axially system- Damage and repair criteria - General Inspection procedures - Checks on constant speed propellers - Pitch setting, Propeller Balancing, Blade cuffs, Governor/Propeller operating conditions.

UNIT III OVERHAULING OF PISTON ENGINES 9

Symptoms of failure - Fault diagnostics - Case studies of different piston engine systems - Rectification during testing equipments for overhaul: Tools and equipments requirements for various checks and alignment during overhauling - Tools for inspection - Tools for safety and for visual inspection - Methods and instruments for non destructive testing techniques - Equipment for replacement of parts and their repair. Engine testing: Engine testing procedures and schedule preparation - Online maintenance

UNIT IV INSPECTION AND TROUBLE SHOOTING OF GAS TURBINE ENGINES 9

Gas turbine engine inspection & checks – Use of instruments for online maintenance – Maintenance procedures of gas turbine engines – Trouble shooting and rectification procedures – Component maintenance procedures – Systems maintenance procedures. Special inspection procedures: Foreign Object Damage – Blade damage – etc. Gas turbine testing procedures – test schedule preparation – Storage of Engines – Preservation and de-preservation procedures.

UNIT V OVERHAULING OF GAS TURBINE ENGINES 9

Gas turbine Engine Overhaul procedures – Inspections and cleaning of components – Repairs schedules for overhaul – Balancing of Gas turbine components. Trouble Shooting - Procedures for rectification – Condition monitoring of the engine on ground and at altitude – engine health monitoring and corrective methods.

TEXTBOOKS:

1. Kroes& Wild, “Aircraft Power plants”, 7th Edition – McGraw Hill, New York, 1994.

REFERENCES:

1. Turbomeca, “Gas Turbine Engines”, The English Book Store, New Delhi, 1995.
2. United Technologies Pratt & Whitney, “The Aircraft Gas turbine Engine and its Operation”, The English Book Store, New Delhi.

WEBLINKS:
https://onlinecourses.nptel.ac.in/noc19_ae02

COURSE OUTCOMES	
CO 1	**Describe** the inspection and troubleshooting procedure for piston engine components. **(Understand)**
CO 2	**Explain** the inspection and troubleshooting methods of aircraft propeller. **(Understand)**
CO 3	**Discuss** the overhauling and testing procedure for aircraft reciprocating engine. **(Understand)**
CO 4	**Describe** the checks and maintenance procedures followed in gas turbine engines and **select** appropriate trouble shooting technique. **(Understand)**
CO 5	**Discuss** the overhauling procedure of aircraft gas turbine engine. **(Understand)**

U18PEAE033	MISSILE AERODYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To make the students learn the basics of missile aerodynamics, aerodynamic design and analysis of missile components.

UNIT I BASICS ASPECTS OF MISSILE AERODYNAMICS 9

Classification of missiles-Aerodynamics characteristics and requirements of air to air missiles, air to surface missiles and surface to air missiles-Missile trajectories-fundamental aspects of hypersonic aerodynamics.

UNIT II MISSILE CONFIGURATIONS AND DRAG ESTIMATION 9

Types of Rockets and missiles-various configurations-components-forces on the vehicle during atmospheric flight-nose cone design and drag estimation

UNIT III AERODYNAMICS OF SLENDER AND BLUNT BODIES 9

Aerodynamics of slender and blunt bodies, wing-body interference effects-Asymmetric flow separation and vortex shedding-unsteady flow characteristics of launch vehicles-determination of aero elastic effects

UNIT IV AERODYNAMIC ASPECTS OF LAUNCHING PHASE 9

Booster separation-cross wind effects-specific considerations in missile launching-missile integration and separation-methods of evaluation and determination- Wind tunnel tests – Comparison with CFD Analysis.

UNIT V STABILITY AND CONTROL OF MISSILES 9

Forces and moments acting on missiles-Lateral, rolling and longitudinal moments-missile dispersion-stability aspects of missile configuration-Aerodynamic control methods-Jet control methods-Stability derivatives.

TEXTBOOKS:

1. Nielson, Jack N, Stever, Gutford, “Missile Aerodynamics”, McGraw Hill, New York,1960.

REFERENCES:

1. Anderson, J.D., “Hypersonic and High Temperature Gas Dynamics”, AIAA Education Series.
2. Chin SS, “Missile Configuration Design”, McGraw Hill, New York, 1961.
3. Micheal J Hemsch, “Tactical Missile Aerodynamics”, Progress in Aeronautics and Astronautics, AIAA, 1992.

WEBLINKS:

https://searchworks.stanford.edu/view/8798442

COURSE OUTCOMES	
CO 1	**Describe** the classification of missiles (**Understand**)
CO 2	**Estimate** the Aerodynamic forces on missiles. (**Apply**)
CO 3	**Describe** the Aerodynamic characteristics methods of missiles. **(Understand)**
CO 4	**Describe** the aerodynamic aspects of launching phase. **(Understand)**
CO 5	Describe the stability characteristics of missiles. **(Understand)**

U18PEAE034	HYPERSONIC AERODYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Gas Dynamics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To study the environment around hypersonic vehicles and bodies created by strong shock waves.

UNIT I FUNDAMENTALS OF HYPERSONIC AERODYNAMICS 9

Introduction to hypersonic aerodynamics-differences between hypersonic aerodynamics and supersonic aerodynamics-concept of thin shock layers-hypersonic flight paths – hypersonic similarity parameters-shock wave and expansion wave relations of inviscid hypersonic flows.

UNIT II SIMPLE SOLUTION METHODS FOR HYPERSONIC IN VISCID FLOWS 9

Local surface inclination methods-Newtonian theory-modified Newtonian law-tangent wedge and tangent cone and shock expansion methods-approximate theory-thin shock layer theory.

UNIT III VISCOUS HYPERSONIC FLOW THEORY 9

Boundary layer equation for hypersonic flow-hypersonic boundary layers-self similar and non self similar boundary layers-solution methods for non self similar boundary layers aerodynamic heating.

UNIT IV VISCOUS INTERACTIONS IN HYPERSONIC FLOWS 9

Introduction to the concept of viscous interaction in hypersonic flows-strong and weak viscous interactions-hypersonic viscous interaction similarity parameter-introduction to shock wave boundary layer interactions.

UNIT V INTRODUCTION TO HIGH TEMPERATURE EFFECTS 9

Nature of high temperature flows-chemical effects in air-real and perfect gases-Gibb's free energy and entropy-chemically reacting mixtures-recombination and dissociation.

TEXTBOOKS:

1. Ethirajan Rathakrishnan., "High Enthalpy Gas Dynamics", John Wiley and Sons, 2015

REFERENCES:

1. John. D. Anderson. Jr., "Hypersonic and High Temperature Gas Dynamics", AIAA Series, New York, 2006.
2. John. D. Anderson. Jr., "Modern compressible flow with historical perspective", McGraw Hill Publishing Company, New York, 1996.
3. John. T Bertin, "Hypersonic Aerothermodynamics", published by AIAA Inc.,Washington. D.C., 1994.

WEBLINKS:

https://nptel.ac.in/courses/101103003/

COURSE OUTCOMES	
CO 1	**Recall** the concepts of compressible flows and differentiate between supersonic and hypersonic flows. **(Remember)**
CO 2	**Discuss** simple solution methods of hypersonic inviscid flows. **(Understand)**
CO 3	**Discuss** the basics of viscous hypersonic flows. **(Understand)**
CO 4	**Describe** the shock shear layer interaction in hypersonic flows. **(Understand)**
CO 5	**Discuss** basics of high temperature flows. **(Understand)**

OPTIONS FOR PROFESSIONAL ELECTIVE (PE) IV

U18PEAE041	**AN INTRODUCTION TO COMBUSTION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Fundamentals of Aero – Thermodynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint the student with the basics of combustion in aircraft and rocket engines.					

UNIT I INTRODUCTION TO COMBUSTION 9

Thermochemical equations – heat of reaction- first, second and third order reactions – premixed flames – diffusion flames – Stoichiometric ratio, equivalence ratio – measurement of burning velocity – various methods – effect of various parameters on burning velocity – flame stability – deflagration – detonation – Rankine-Hugoniot curves – radiation by flames

UNIT II COMBUSTION IN AIRCRAFT PISTON ENGINES 9

Introduction to combustion in aircraft piston engines – various factors affecting the combustion efficiency - fuels used for combustion in aircraft piston engines and their selection – detonation in piston engine combustion and the methods to prevent the detonation

UNIT III COMBUSTION IN GAS TURBINE ENGINES 9

Combustion in gas turbine combustion chambers - recirculation – combustion efficiency, factors affecting combustion efficiency, fuels used for gas turbine combustion chambers – combustion stability – ramjet combustion – differences between the design of ramjet combustion chambers and gas turbine combustion chambers- flame holders types – numerical problems.

UNIT IV COMBUSTION IN SCRAMJET ENGINES 9

Introduction to supersonic combustion – need for supersonic combustion for hypersonic air-breathing propulsion- supersonic combustion controlled by diffusion, mixing and heat convection – analysis of reactions and mixing processes - supersonic burning with detonation shocks - various types of supersonic combustors.

UNIT V COMBUSTION IN ROCKET ENGINES 9

Solid propellant combustion - double and composite propellant combustion – various combustion models – combustion in liquid rocket engines – single fuel droplet combustion model – combustion hybrid rockets

TEXTBOOKS:

1. Stephen R turns, ”An Introduction to Combustion”, Tata Mc. Graw Hill Publishing Co., Ltd., New Delhi, Reprint 2013. (Units 1 & 2)
2. Lefebvre AG and Dilip R ballal, “Gas Turbine Combustion”, CRC press, Third Edition, 2010. (Unit 3)
3. Corin Segal, “The Scramjet engine”, Cambridge University Press, 2009 (Unit 4)
4. Sutton, G.P., “Rocket Propulsion Elements”, John Wiley & Sons Inc., New York, 7th Edition, 2001 (Unit 5)

REFERENCES:

1. Warnatz J, Maas U and Dibble RW, ”Combustion”, Springer, Fourth Edition,2006.

3. Sharma, S.P., and Chandra Mohan, “Fuels and Combustion”, Tata Mc. Graw Hill Publishing Co., Ltd., New Delhi, 1987

WEBLINKS:
https://swayam.gov.in/course/4339-fundamentals-of-combustion-i

COURSE OUTCOMES	
CO 1	**Explain** thermo chemical reaction associated with combustion process and the various parameters affecting burning velocity. **(Understand)**
CO 2	**Select** apt fuel for optimum combustion in piston engines. **(Analyze)**
CO 3	**Compare** the ramjet and gas turbine combustion chamber design. **(Understand)**
CO 4	**Analyze** the challenges associated with supersonic combustion.**(Analyze)**
CO 5	**Discuss** combustion process in solid, liquid propellant rockets and hybrid rockets. **(Understand)**

U18PEAE042	NANO SCIENCE AND TECHNOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint about the applications and significance of nanomaterials in aerospace engineering.

UNIT I INTRODUCTION 9

Introduction to nanoscale materials - atomic & molecular size. Scientific revolutions-nanotechnology application area. Scope of nanoscience and technology

UNIT II NANOSTRUCTURES AND DIMENSIONS 9

Classification of nanostructures-zero, one, two and three dimensional nanostructures. Size Dependency in Nanostructures-quantum size effects in nanostructures.

UNIT III NANOMATERIAL SYNTHESIS 9

Synthesis of nanomaterials-top down and bottom up approach. Method of nanomaterials preparation – wet chemical synthesis-mechanical grinding-gas phase synthesis.

UNIT IV NANOMATERIAL PROPERTIES 9

Surface to volume ratio. Surface properties of nanoparticles. Mechanical, optical, electronic, magnetic, thermal and chemical properties of nanomaterials. Size dependent properties-size dependent absorption spectra.Shape impact.

UNIT V PHYSICAL PROPERTIES OF NANOSTRUCTURED MATERIALS 9

Quantum dots-optical properties and applications. Carbon nanotubes-physical properties and applications. Magnetic behavior of nanomaterials. Electronic transport in quantum wires.

TEXTBOOKS:

1. T. Pradeep, “Nano the Essential Nanoscience and Nanotechnology”, Tata McGraw hill, 2007.

4. Mick Wilson, KamaliKannargare., Geoff Smith, “Nano technology: Basic Science and Emerging technologies”, Overseas Press, 2005.

WEBLINKS:

https://www.edx.org/learn/nanotechnology

COURSE OUTCOMES	
CO 1	**Memorize** the fundamentals of nanoscale materials and the scope of nanoscience and technology. **(Remember)**
CO 2	**Describe** the types of nanostructures and quantum size effects in nanostructures. **(Understand)**

CO 3	**Discuss** the synthesis of nanomaterials and methods of nanomaterials preparation. **(Understand)**
CO 4	**Define** the Mechanical, optical, electronic, magnetic, thermal and chemical properties of nanomaterials. **(Understand)**
CO 5	**List** the physical properties of nanostructured materials. **(Apply)**

U18PEAE043	AIRPORT ENGINEERING	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint about the systems, processes, standards in airport engineering.					

UNIT I INTRODUCTION 9

History, development, policy of air transport, Advantages and limitations of air transportation, aircrafts, aerodromes, air transport authorities, air transport activities, aircraft and its characteristics, airport classifications as per ICAO.

UNIT II AIRPORT PLANNING 9

Regional planning-concepts and advantages, location and planning of airport as per ICAO and F.A.A. recommendations, airport Elements -airfield, terminal area, obstructions, approach zone, zoning laws, airport capacity, airport size and site selection, estimation of future air traffic, development of new airport, requirements of an ideal airport layout.

UNIT III RUN WAY DESIGN 9

Wind rose and orientation of runway, wind coverage and crosswind component, factors affecting runway length, basic runway length, and corrections to runway length, runway geometrics and runway patterns (configurations). Runway marking.

UNIT IV TAXI WAY DESIGN 9

Controlling factors, taxiway geometric elements, layout, exit taxiway, location and geometrics, holding apron, turnaround facility. Aprons -locations, size, gate positions, aircraft parking configurations and parking systems, hangar-site selection, planning and design considerations, Fuel storage area, blast pads, wind direction indicator

UNIT V AIR TRAFFIC CONTROL AND TERMINAL DESIGN 9

Air traffic control-objectives, control system, control network-visual aids-landing information system, airport markings and lighting. Terminal area elements and requirements, terminal building functions, space requirements, location planning concepts, vehicular parking area and circulation network, passenger requirements at terminal building

TEXTBOOKS:

1. Airport Engineering - Rangawala, Charotar publishing House, Anand 388001 (Gujrat).

4. Airport planning and design – S.K. Khanna , M.G. Arora , S.S. Jain, Nem Chand and Brothers, Roorkee.

WEBLINKS:

https://www.iata.org/training/courses/Pages/airport-operations-tapp14.aspx

COURSE OUTCOMES	
CO 1	**State** the Role of ICAO and IATA and to D**efine** the airline management and organization. **(Remember)**

CO 2	**Describe** aircraft forecasting and fleet planning and to do route analysis. **(Understand)**
CO 3	**Summarize** the flight operations and various methods of flight scheduling. **(Understand)**
CO 4	**Discuss** the condition monitoring maintenance and ageing aircraft maintenance production. **(Understand)**
CO 5	**List** the equipment and tools for aircraft maintenance. **(Apply)**

U18PEAE044	THEORY OF PLATES AND SHELLS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVES

To acquaint about the classic plate theory, method of analysis various shapes and concept of shell.

UNIT I CLASSICAL PLATE THEORY 9

Classical Plate Theory – Assumptions – Differential Equations – Boundary Conditions – Axi-Symmetric Loading.

UNIT II PLATES OF VARIOUS SHAPES **9**

Navier's Method of Solution for Simply Supported Rectangular Plates – Levy's Method of Solution for Rectangular Plates under Different Boundary Conditions – Annular Plates – Plates of other shapes.

UNIT III EIGEN VALUE ANALYSIS **9**

Stability and Free Vibration Analysis of Rectangular Plates.

UNIT IV APPROXIMATE METHODS **9**

Rayleigh – Ritz, Galerkin Methods– Finite Difference Method – Application to Rectangular Plates for Static, Free Vibration and Stability Analysis.

UNIT V SHELLS **9**

Basic Concepts of Shell Type of Structures – Membrane and Bending Theories for Circular Cylindrical Shells.

TEXT BOOKS:

1. Timoshenko, S.P. Winowsky. S., and Kreger, Theory of Plates and Shells, McGraw Hill Book Co., 1990.
2. Varadhan. T. K. &Bhaskar.K., "Analysis of Plates – Theory and Problems", Narosa Publishing House, 2000

REFERENCES:

1. Flugge, W. Stresses in Shells, Springer – Verlag, 1985.
2. Timoshenko, S.P. and Gere, J.M., Theory of Elastic Stability, McGraw Hill Book Co.1986.

4. Llyod Hamilton, Donald, "Beams, Plates and Shells", McGraw Hill, 1976.
5. Ansel Ugural, Stresses in Plates & Shells, McGraw Hill, 1981
6. Reddy.J.N., "Theory & Analysis of Elastic Plates", CRC, I Edition, 1999

COURSE OUTCOMES	
CO 1	**Explain** the classical plate theory subjected to Axi-symmetric loading. **(Understand)**
CO 2	**Use** Navier's method and Levy's method to obtain solution for rectangular plates under different boundary conditions. **(Apply)**
CO 3	**Illustrate** the stability and free vibration analysis of rectangular plates. **(Understand)**
CO 4	**Apply** various approximate methods on rectangular plates for stability analysis. **(Apply)**
CO 5	**Describe** the concepts of shell type structures and bending theories for circular cylindrical shells. **(Understand)**

ELECTIVE (PE) V

U18PCAE051	**COMPOSITE MATERIALS AND STRUCTURES**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Fundamentals of Mechanics and Machines, Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To introduce the student about significance of composite materials, and their design and analysis using different approaches.					

UNIT I INTRODUCTION TO COMPOSITES AND MICROMECHANICS 10

Introduction – advantages, limitations and application of composite materials – types of reinforcements and matrices, natural fibers and fillers - micro mechanics – mechanics of materials approach, elasticity approach- bounding techniques – fiber volume ratio – mass fraction – density of composites – effectof voids in composites.

UNIT II MACROMECHANICS 10

Generalized Hooke's Law - elastic constants for anisotropic, orthotropic and isotropic materials -macro mechanics – stress-strain relations with respect to natural axis, arbitrary axis – determination ofin plane strengths of a lamina - experimental characterization of lamina – failure theories of a lamina – hygrothermal effects on lamina.

UNIT III LAMINATE THEORY 10

Governing differential equation for a laminate, stress – strain relations for a laminate, different types of laminates, in plane and flexural constants of a laminate, hygrothermal stresses and strains in a laminate, failure analysis of a laminate, impact resistance and interlaminar stresses, netting analysis

UNIT IV FABRICATION AND REPAIR OF COMPOSITES 8

Various open and closed mould processes, manufacture of fibers, importance of repair and differenttypes of repair techniques in composites – autoclave and non-autoclave methods.

UNIT V SANDWICH CONSTRUCTION 7

Basic design concepts of sandwich construction - materials used for sandwich construction – failure modes of sandwich panels - bending stress and shear flow in composite beams.

TEXTBOOKS:

1. Autar K Kaw, 'Mechanics of Composite Materials', CRC Press, 2005.

REFERENCES:

1. Agarwal, B.D., and Broutman, L.J., "Analysis and Performance of Fibre Composites," John Wiley and sons. Inc., New York, 1995.
2. Lubin, G., "Handbook on Advanced Plastics and Fibre Glass", Von Nostrand Reinhold Co., New York, 1989.
3. Calcote, L R. "The Analysis of laminated Composite Structures", Von – Nostrand Reinhold Company, New York 1998.
4. MadhujiMukhapadhyay, Mechanics of Composite Materials and Structures, University Press, 2004
5. Allen Baker, "Composite Materials for Aircraft Structures", AIAA Series, II Edition, 1999.

WEBLINKS:

https://online.stanford.edu/courses/aa256-mechanics-composites

COURSE OUTCOMES	
CO 1	**Discuss** the advantages of composites and the manufacturing of fiber-reinforced composites **(Remember).**
CO 2	**Develop** the mechanics of fiber-reinforced composites based on generalized classical theory of elasticity **(Apply).**
CO 3	**List** structural characterization method for composites in tension and bending modes and **describe** the failure theories of composites **(Apply).**
CO 4	**Discuss** fabrication and repair procedures used for composite components**(Understand).**
CO 5	**Develop** structural mechanics of composite beams and **describe** design of sandwich beam **(Apply).**

	EXPERIMENTAL STRESS ANALYSIS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
U18PEAE052	Prerequisite – Fundamentals of Mechanics and Machines, Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE:

To make the student understand on experimental method of finding the response of the structure to different types of load.

UNIT I MEASUREMENTS AND EXTENSOMETERS 9

Principles of measurements, Accuracy, Sensitivity and range of measurements, Mechanical, Optical, Acoustical and Electrical extensometers and their uses, Advantages and disadvantages.

UNIT II ELECTRICAL RESISTANCE STRAIN GAUGES 9

Principle of operation and requirements, Types and their uses, Materials for strain gauge, Calibration and temperature compensation, cross sensitivity, Rosette analysis, Wheatstone bridge and potentiometer circuits for static and dynamic strain measurements, strain indicators.

UNIT III PHOTOELASTICITY 9

Two dimensional photo elasticity, Photo elastic materials, Concept of light - photoelastic effects, stress optic law, Transmission and Reflection polariscopes, Interpretation of fringe pattern, Compensation and separation techniques, Introduction to three dimensional photo elasticity.

UNIT IV BRITTLE COATING AND MOIRE METHODS 9

Introduction to Moiré techniques, Brittle coating methods and Holography

UNIT V NON – DESTRUCTIVE TESTING 9

Fundamentals of NDT, Radiography, Ultrasonics, Eddy Current testing, Fluorescent Penetrant Testing, Acoustic Emission Technique

TEXTBOOKS:

1. Sadhu Singh, “Experimental Stress Analysis”, Khanna Publishers, 2009.

REFERENCES:

6. Ramesh, K., ” Experimental Stress Analysis”, Indian Institute of Technology Madras, India,E-book,2009.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc18_me39/preview

COURSE OUTCOMES	
CO 1	**Describe** the working principle of different extensometers and their uses. **(Understand)**
CO 2	**Compute** the strain in loaded structures based on measurement of change in resistance using strain gauges. (**Apply**)
CO 3	**Discuss** the techniques used for determination of stress in photo elastic materials. **(Understand)**
CO 4	**Explain** the concepts of more technique and brittle coating techniques. **(Understand)**
CO 5	**Summarize** the fundamentals of NDT and **Describe** the different type of NDT methods. **(Understand)**

U18PEAE053	HELICOPTER MAINTENANCE	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Aircraft Systems and Instrumentation				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint the student with the fundamentals of helicopter components, functions and their maintenance.

UNIT I HELICOPTER FUNDAMENTALS 6

Basic components of helicopters and working – Ground handling, bearing – Gears.

UNIT II MAINTENANCE OF MAIN ROTOR SYSTEM 12

Head maintenance – blade alignment – Static main rotor balance – Vibration – Tracking – Span wise dynamic balance – Blade sweeping –Electronic balancing – Dampener maintenance – Counter weight adjustment – Auto rotation adjustments – Mast & Flight Control Rotor - Mast – Stabilizer, dampeners – Swash plate flight control systems collective – Cyclic – Push pull tubes – Torque tubes – Bell cranks – Mixer box – Gradient unit control boosts – Maintenance & Inspection control rigging.

UNIT III MAINTENANCE OF MAIN ROTOR TRANSMISSION 12

Engine transmission coupling – Drive shaft – Maintenance clutch – Free wheeling units – Spray clutch – Roller unit – Torque meter – Rotor brake – Maintenance of these components – vibrations – Mounting systems – Transmissions.

UNIT IV MAINTENANCE OF POWERLANT AND TAIL ROTOR 9

Fixed wing power plant modifications – Installation – Different type of power plant maintenance. Tail rotor system – Servicing tail rotor track – System rigging.

UNIT V AIRFRAME AND RELATED SYSTEMS 6

Fuselage maintenance – Airframe Systems – Special purpose equipment.

TEXTBOOKS:

1. Jeppesen, “Helicopter Maintenance”, Jeppesens and Sons Inc., 2000.

REFERENCES:

1. “Civil Aircraft Inspection Procedures”, Part I and II, CAA, English Book House, New Delhi, 1998.
2. Larry Reithmier, “Aircraft Repair Manual”, Palamar Books Marquette, 1992.

WEBLINKS:

http://www.aviationmaintenance.edu/programs/

COURSE OUTCOMES	
CO 1	**Explain** the basic components and working of helicopter. **(Understand)**
CO 2	**Explain** the balancing of main rotor and **Discuss** the maintenance procedures in control rigging. **(Understand)**
CO 3	**Discuss** the main rotor transmission coupling and maintenance steps involved. **(Understand)**
CO 4	**Discuss** installation and modification of fixed wing power plant. **(Understand)**
CO 5	**Describe** maintenance procedure of power plant and tail rotor system. **(Understand)**
CO 6	**Explain** the maintenance procedures involved in fuselage and airframe systems. **(Understand)**

	HEAT TRANSFER IN AEROSPACE APPLICATIONS	L	T	P	C
U18PEAE054	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Aero – Thermodynamics, Fluid Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To familiarize the student with the various modes of heat transfer, estimation of heat transfer parameters and design of heat transfer devices, insulators and heat shields.

(Use of Heat and Mass Transfer Data Book is permitted)

UNIT I CONDUCTION HEAT TRANSFER – STEADY STATE 7

Modes of heat transfer: One dimensional steady state heat conduction: Composite Medium – Critical thickness – Effect of variation of thermal Conductivity – Extended Surfaces.

UNIT II CONDUCTION HEAT TRANSFER – TRANSIENT 10

Heat Conduction: Lumped System Analysis – Heat Transfer in Semi-infinite and infinite solids – Transient Heat Transfer – Temperature charts

UNIT III CONVECTIVE HEAT TRANSFER 8

Introduction – Free convection in atmosphere - free convection on a vertical flat plate – Empirical relation in free convection – Forced convection – Laminar and turbulent - convective heat transfer analysis in flows between parallel plates, over a flat plate and in a circular pipe. Empirical relations.

UNIT IV RADIATIVE HEAT TRANSFER AND HEAT EXCHANGERS 10

Concept of black body-Intensity of radiation-Laws of Black body Radiation-Radiation from non-black surfaces- real surfaces – Radiation between surfaces-Radiation shape factors-Radiation shields.

Types of heat exchangers -overall heat transfer coefficient- LMTD- NTU method of heat exchanger Analysis.

UNIT V HEAT TRANSFER PROBLEMS IN AEROSPACE ENGINEERING 10

Heat transfer problems in gas turbine engines, rocket nozzles and re-entry vehicles – Numerical techniques to solve heat transfer problems in aerospace engineering –numerical problems using software and programming.

TEXTBOOKS:

1. Sachdeva, S.C. “Fundamentals of Engineering, Heat and Mass Transfer, Wiley Eastern Ltd. Fourth Edition, New Delhi, 2012. (Units 1 to 4)
2. Sunden B, Juan Fu, “Heat Transfer in Aerospace Applications”, Academic Press, First Edition, 2016 (Unit 5)

REFERENCES:

1. Sutton, G.P., "Rocket Propulsion Elements ", John Wiley and Sons, 8th Edition.2010.
2. Lienhard J. H., “A Heat Transfer Text Book”, Phlogiston Press, U.S.A., 2008.
3. Ozisik M.N., “Heat Transfer A Basic Approach”, The McGraw-Hill Company, reprint 1995.
4. Holman, J.P., "Heat Transfer ", McGraw Hill Book Co., Inc., New York, TenthEdition.,2009.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc18_ch08/course

COURSE OUTCOMES	
CO 1	**Solve** one dimensional steady state heat conduction problems. (**Apply**)
CO 2	**Estimate** heat transfer rate ofsemi-infinite and infinite solids. (**Evaluate**)
CO 3	**Estimate** heat transfer coefficient for flow over a flat plate and circular pipe. (**Evaluate**)
CO 4	**Calculate** radiative heat transfer of black and gray surfaces. (**Apply**)
CO 5	**Compare** different types of heat exchangers and Evaluate their performance. (**Analyze**)
CO 6	**Solve** heat transfer problems related to aerospace applications. (**Apply**)

PROFESSIONAL ELECTIVE (PE) VI

U18PEAE061	**HIGH TEMPERATURE MATERIALS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint the student with the fundamentals of creep, hot corrosion, fracture mechanisms under high temperature and alloys for high temperature applications.					

UNIT I INTRODUCTION TO HIGH TEMPERATURE MATERIALS 6

Components exposed to high temperatures, significance of high temperature materials, recent trends in high temperature material research

UNIT II CREEP AND DESIGN FOR CREEP RESISTANCE 12

Factors influencing functional life of components at elevated temperatures, definition of creep curve, various stages of creep, metallurgical factors influencing various stages, effect of stress, temperature and strain rate. Design of transient creep time, hardening, strain hardening, expressions of rupture life of creep, ductile and brittle materials, Monkman-Grant relationship.

UNIT III FRACTURE 9

Various types of fracture, brittle to ductile from low temperature to high temperature, cleavage fracture, and ductile fracture due to micro void coalescence-diffusion controlled void growth; fracture maps for different alloys and oxides.

UNIT IV OXIDATION AND HOT CORROSION 9

Oxidation, Pilling, Bedworth ratio, kinetic laws of oxidation- defect structure and control of oxidation by alloy additions, hot gas corrosion deposit, modified hot gas corrosion, fluxing mechanisms, effect of alloying elements on hot corrosion, interaction of hot corrosion and creep, methods of combat hot corrosion.

UNIT V SUPER ALLOYS AND OTHER MATERIALS 9

Iron base, Nickel base and Cobalt base super alloys, composition control, solid solution strengthening, precipitation hardening by gamma prime, grain boundary strengthening, TCP phase, embrittlement, solidification of single crystals, Intermetallics, high temperature ceramics.

TEXTBOOKS:

1. Raj. R., "Flow and Fracture at Elevated Temperatures", American Society for Metals, USA, 1985. (Units 1, 2, 3 & 5)
2. David J. Young, "High Temperature Oxidation and Corrosion of Metals", Second Edition, Elsevier Science Ltd., 2016 (Unit 4)

REFERENCES:

5. Courtney T.H, "Mechanical Behavior of Materials", McGraw-Hill, USA, 1990.

WEBLINKS:
https://nptel.ac.in/courses/113105019/

COURSE OUTCOMES	
CO 1	**Discuss** the effect of creep on the functional life of components. **(Understand)**
CO 2	**Explain** the creep resistance of ductile and brittle materials. **(Understand)**
CO 3	**Describe** the effect of different alloys and oxidesmaterials behaviour from low temperature to high temperature **. (Understand)**
CO 4	**Discuss** the fracture mechanism maps for different alloys and oxides**. (Understand)**
CO 5	**Describe** the process of oxidation and different oxidations prevention techniques. **(Understand)**
CO 6	**Discuss** the various types of super alloys and its strengthening mechanisms. **(Understand)**

U18PEAE062	FATIGUE AND FRACTURE MECHANICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Elements of Aerospace Structures				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To enable the student to understand the basic concepts of fatigue and fracture, processes, statistical tools for fatigue life prediction, realizing importance of fatigue and fracture in aerospace industry.

UNIT I FATIGUE OF STRUCTURES 9

S.N. curves - Endurance limits - Effect of mean stress, Goodman, Gerber and Soderberg relations and diagrams - Notches and stress concentrations - Neuber's stress concentration factors - Plastic stress concentration factors - Notched S.N. curves.

UNIT II STATISTICAL ASPECTS OF FATIGUE BEHAVIOUR 9

Low cycle and high cycle fatigue - Coffin - Manson's relation - Transition life - cyclic strain hardening and softening - Analysis of load histories - Cycle counting techniques -Cumulative damage - Miner's theory - Other theories.

UNIT III PHYSICAL ASPECTS OF FATIGUE 9

Phase in fatigue life - Crack initiation - Crack growth - Final Fracture - Dislocations - fatigue fracture surfaces.

UNIT IV FRACTURE MECHANICS 9

Strength of cracked bodies - Potential energy and surface energy - Griffith's theory - Irwin - Irwin extension of Griffith's theory to ductile materials - stress analysis of "cracked bodies - Effect of thickness on fracture toughness - stress intensity factors for typical geometries.

UNIT V FATIGUE DESIGN AND TESTINIG 9

Safe life and Fail-safe design philosophies - Importance of Fracture Mechanics in aerospace structures - Application to composite materials and structures.

3. T.L. Anderson, Fracture Mechanics - Fundamentals and Applications, 3rd Edition, Taylor and Francis Group, 2005

WEBLINKS:

https://ocw.mit.edu/courses/materials-science-and-engineering/3-35-fracture-and-fatigue-fall-2003/

COURSE OUTCOMES	
CO 1	**Calculate** the stress concentration in structures subjected to fatigue loads. (**Analyze**)
CO 2	**Describe** statistical methods to determine the strain in structures under fatigue loading. (**Understand**)
CO 3	**Describe** various stages of failures due to fatigue load. (**Understand**)
CO 4	**Determine** stress in cracked structures. (**Apply**)
CO 5	**Design** composite material-based structures subjected to fatigue load which are fail-safe. **(Create)**

	CRYOGENIC ROCKET PROPULSION	L	T	P	C
U18PEAE063	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Advanced Aerospace Propulsion				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To introduce to the student the basics of cryogenic systems and associated processes and cryogenic rocket technology.					

UNIT I INTRODUCTION TO CRYOGENIC SYSTEMS 9

Cryogenic systems and basic components, Properties of Cryogenic fluids, Liquefaction systems, ideal, Cascade, Linde Hampson and Claude cycles and their derivatives; Refrigerators: Stirling, Gifford-McMahon cycles and their derivatives. Cryogenic Insulations: Foam, Fibre, powder and Multilayer.

UNIT II CRYO FUEL SYSTEMS 9

Cryogenic and semi – cryogenic propellants - Hydrogen - properties, and pretreatment - Liquefaction of hydrogen - Linde, Claude and helium - hydrogen condensing cycles, Ortho-para conversion. Storage and handling of liquefied hydrogen

UNIT III CRYO EQUIPMENT AND ACCESSORIES 9

Mechanical and Thermal Properties of engineering materials at low temperatures; Compressors: types, construction and characteristics; Expansion machines: characteristics of reciprocating and turbine expanders, design of J-T expander; Heat exchangers: types, design approaches and selection criteria, Design of cryogenic storage vessels, transfer devices, insulation system, valves; Characteristics of cryogenic pumps, Instrumentation in cryogenic systems

UNIT IV CRYOGENIC ENGINES 9

Fluid circuits of various cryogenic engines and semi-cryogenic engines; Design of regeneratively cooled combustion chamber, film cooling, dump cooling, transpiration cooling and radiation cooling. Design of expansion nozzle- characteristics, Design of injector–hydraulic characteristics; Engine thrust and mixture ratio control, Igniters, Propellant tanks.

UNIT V CHALLENGES IN CRYOGENIC ROCKET TECHNOLOGY 9

Problems in storage and handling of cryogenic propellants: safety aspects, Thermal protection systems for stage tanks, Thermal stratification- destratification, Geysering effect – geysering elemination, Zero “g” problems – restart mechanism.

TEXTBOOKS:

1. “A text book of Cryogenics”, “Valery V. Kostionk”, Discovery Publishing House, 2010. (Units 1 to 3)
2. “Operation of a Cryogenic Rocket Engine”, “Kitsche, Wolfgang”, Springer Publications, 2011. (Units 4 & 5)

REFERENCES:

1. “Rocket Propulsion Elements”, “Sutton G. P., Bibliarz”

WEBLINKS:

https://nptel.ac.in/courses/112101004/

COURSE OUTCOMES	
CO 1	**Discuss** the basic components of cryogenic systems. **(Understand)**
CO 2	**Explain** the types of cryogenic propellant used and their storage and handling. **(Understand)**
CO 3	**Discuss** cryo equipment and accessories of cryogenic engine system. **(Understand)**
CO 4	**Discuss** various subsystem involved in the operation of cryogenic engine and their design aspects. **(Understand)**
CO 5	**Discuss** the challenges in cryogenic rocket technology. **(Understand)**

U18PEAE064	STRUCTURAL DYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To study the effect of periodic and a periodic forces on mechanical systems with matrix approach and also to get the natural characteristics of large sized problems using approximate methods.

UNIT I FORCE DEFLECTION PROPERTIES OF STRUCTURES 9

Constraints and Generalized coordinates-Virtual work and generalized forces- Force-Deflection influence functions-stiffness and flexibility methods.

UNIT II PRINCIPLES OF DYNAMICS 9

Free and forced vibrations of systems with finite degrees of freedom-Damped oscillations-D" Alembert's principle-Hamilton's principle-Lagrangean equations of motion and applications.

UNIT III NATURAL MODES OF VIBRATION 9

Equations of motion for Multi degree of freedom Systems - Solution of Eigen value problems – Normal coordinates and orthogonality Conditions. Modal Analysis.

UNIT IV ENERGY METHODS 9

Rayleigh's principle-Rayleigh-Ritz method-Coupled natural modes-Effect of rotary inertia and shear on lateral vibrations of beams-Natural vibrations of plates.

UNIT V APPROXIMATE METHODS 9

Approximate methods of evaluating the Eigen values and the dynamic response of continuous systems. Application of Matrix methods for dynamic analysis.

TEXTBOOKS:

1. F. S. Tse, I. E. Morse and H. T. Hinkle, "Mechanical Vibration", Prentice Hall of India Pvt. Ltd, NeW Delhi, 1988.
2. W. C. Hurty and M. F. Rubinstein, "Dynamics of Structures", Prentice Hall of India Pvt. Ltd, New Delhi, 1987.

REFERENCES:

1. R. K. Vierck, "Vibration Analysis" 2nd Edition, Thomas Y. Crowell & Co Harper &Row Publishers, New York, U.S.A. 1989.
2. S. P. Timoshnko ad D. H. Young, "Vinration Problems in Engineering", John Willey & Sons Inc., 1984.
3. von Karman and A. Biot, "Mathematical Methods in Engineering", McGraw-Hill Book Co.,New York, 1985.
4. Ramamurthi. V., "Mechanical Vibration Practice and Noise Control" Narosa Publishing House Pvt. Ltd, 2008

COURSE OUTCOMES	
CO 1	**Review**stiffness and flexibility method of structural analysis (**Understand)**
CO 2	**Describe** the significance of dynamic loadingand **solve** forced vibrations of finite degree of freedom systems (**Apply**).
CO 3	**Explain** modal analysis of multiple degree of freedom systems (**Analyze**).
CO 4	**Apply** energy methodsto solve beam and plate vibrations problems under dynamics loads (**Apply**).
CO 5	**Evaluate**dynamic response of continuous systems using approximate methods (**Analyze**)

CURRICULUM AND SYLLABUS

(R2018)

B – FACT: (Bharath – **F**lexible **A**ccommodative **C**hoice based credit system for **T**echnology)

(Applicable to the batches admitted from July 2018)

B.Tech - AEROSPACE ENGINEERING

FULL TIME

I – VIII SEMESTERS

SEMESTER I

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMES

ALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18OEBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations
20 U18OECE003-Road Safety
21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics
38. U18OEAE003- Unmanned Aerial Vehicle
39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion
41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance

43. U18OEEE003-Energy Conservation Techniques
44. U18OEEE004-PLC and SCADA for Industrial
45. U18OEEC-001-Communication Systems
46. U18OEEC-002-VLSI circuits
47. U18OEEC-003-Image Processing Techniques
48. U18OEEC-004-Communication Networks
49. U18OEEC-005-An Introduction to DSP
50. U18OEEC-006-Basics of IoT
51. U18OEBM001-Medical Radiation Safety Engineering
52. U18OEBM002-Medical Waste Management
53. U18OEBM003-Quality Control in Healthcare
54. U18OEBM004-Wearable Technology
55. U18OEEI001-Analytical Methods and Instrumentation
56. U18OEEI002-Introduction to process Data Analytics
57. U18OEEI003-Reliability and Safety in Process industries
58. U18OEEI004-Multi sensor data fusion
59. U18OEBT001- Bioprocess Economics & Plant Design
60. U18OEBT002-Brewing technology
61. U18OEBT003-Biomining
62. U18OEBT004-Industrial Safety Engineering
63. U18OEAC001-Geo- informatics for Precision Farming
64. U18OEAC002-Livestock and poultry management
65. U18OEAC003-Extension methodologies and transfer of Agricultural Technologies
66. U18OEAC004-Soil and Water Conservation Engineering
67. U18OEIT001-Block Chain Technology
68. U18OEIT002-Semantic Web
69. U18OEIT003-Entrepreneurship Development
70. U18OEIT004-Ethical Hacking Techniques
71. U18OECS001-Mobile Application Development
72. U18OECS002-System Modelling and Simulation
73. U18OECS003-Web Programming
74. U18OECS004-Virtual Reality
75. U18OECS005- E Commerce
76. U18OEGE001-Metagenomics and Epigenomics
77. U18OEGE002-Molecular Genetics and Genomics
78. U18OEGE003-Principles of Molecular cell biology

Subject code: U18HSEN101	**Subject Name : COMMUNICATIVE ENGLISH (Common to B. Tech - Mech, Mechatronics, Automobile, Aero, EEE, EIE, ECE, CSE, IT, Civil & Bio Medical admitted from July 2018)**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – School Level English				
	Course Coordinator Name & Department:- Mr. M. Gopinath& Dept. of English				
COURSE OBJECTIVES:-	Enhance the learner's communication skills by giving adequate exposure in LSRW – Listening, Speaking, Reading, Writing skills and the related sub-skills. Help the learners recognize and operate in various styles and registers in English.				

UNIT I SPEAKING

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal

Presentations introducing oneself – exchanging personal information- narratingevents, -incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development – prefixes- suffixes - articles, prepositions.

UNIT II READING

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building - The concept of Word Formation

UNIT III LISTENING

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun pronoun agreement

UNIT IV WRITING Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles - Pre

UNIT V LANGUAGE DEVELOPMENT Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing-listening to talks, conversations to complete the remaining, participating in conversations-short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence-Organizing principles of paragraphs in documents- Techniques for writing precisely

COURSE OUTCOMES (COs)	
CO1	Enable students to learn and identify faulty pronunciation, grammar and vocabulary. (Understand)
CO2	Help students develop the knowledge, skills and strategies to become proficient and independent readers and make them to interact and construct meaning from the content.(Analyze)
CO3	Develop listening abilities of the students, and teach basic listening strategies and expose them to a number of different listening situations through activities. (Remember)
CO4	Impart writing skills by sensitizing the learners to the dynamics of effective writing. (Create)
CO5	Recognize culture-specific perspectives and values embedded in language behavior to make students interpret authentic texts of different genres. (Analyze)
CO6	Communicate effectively using verbal and non-verbal communication skills. (Apply)

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSMA101	**Engineering Mathematics – I (Common to B. Tech - Mech, Mechatronics, Automobile, Aero, EEE, EIE, ECE, CSE, IT, Civil & Bio Medical admitted from July 2018)**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite Course– School Level Mathematics				
	Course Coordinator Name & Department – Ms. J. Aiswarya& Department of Mathematics				
COURSE OBJECTIVES	➢ The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. ➢ It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3) Hrs

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3) Hrs

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3) Hrs

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3) Hrs

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3) Hrs

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	Analyze the optimum solution of various engineering problems involving single variables.
CO2	Know the basic concepts of integration and evaluating the problems which involves Beta and Gamma functions.
CO3	Solve the differential functions and optimizes the problems with two variables functions.
CO4	Apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three-dimensional spaces.
CO5	Evaluate Eigenvalue and eigen vector problems from practical areas using transformations;
CO6	Construct the eigen vector for the problem in engineering field and Diagonalizing the matrix

Mapping of Course Outcomes with Program outcomes (POs) **H –High, M-Medium, L-Low**

U18BSPH101	WAVES AND OPTICS (For B.Tech –Common to all branches)	L	T	P	C
	Total contact hours -45	3	0	0	3
	Prerequisite: +2				
	Course offered by –Department of Physics				
	Data Book/Codes /Standards : Higher Secondary				

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity. **(Contact Hours - 9)**

UNIT 2 ULTRASONIC WAVES

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.**(Contact Hours - 9)**

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them.**(Contact Hours - 9)**

UNIT 4 WAVE OPTICS

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power.**(Contact Hours - 9)**

UNIT 5 LASERS

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO_2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.**(Contact Hours - 9)**

9)

COURSE OUTCOMES(COs)	
CO1	Describe the basic concept of waves (Understand)
CO2	Identify the importance of Ultrasonic waves (Understand)
CO3	Recognizethe propagation of light and geometrical optics (Remember)
CO4	Discuss the optical phenomenon like interference, diffraction and superposition of waves (Understand)
CO5	Observe the concept of laser and its applications (Understand)
CO6	Examine the properties of light and sound waves and its wide range of applications(Apply)

Mapping of course outcomes with programme outcomes(POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO6	H	M	H									
3	Category	**Basics Sciences(BS)**											
4	**Approval**	47th Meeting of Academic Council held in Aug, 2018											

U18BSCH101	Subject Name: ENGINEERING CHEMISTRY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course: +2				
	Course Offered by : Dept.of.Chemistry				
	Data Book/ Codes/ Standards : Periodic Table				

UNIT I WATER TECHNOLOGY (Contact Hours – 09)

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS (Contact Hours – 09)

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead. Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non-ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES (Contact Hours – 09)

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS (Contact Hours – 09)

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method-

Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels-water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY (Contact Hours – 09)

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	Discuss boiler feed water requirements and water treatment techniques **(Understand)**
CO2	Explain the industrial importance of Phase rule and its applications to one and two component systems **(Apply)**
CO3	Illustrate the principles of Conventional and non- conventional energy sources and energy storage devices **(Understand)**
CO4	Describe the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels **(Remember)**
CO5	Classify Nanomaterials and state their applications in biology and medicine **(Understand)**
CO6	Describe the industrial requirements for resources, energy and materials administer **(Apply)**

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: NIL				
	Course Designed by : Dept. of Computer Science and Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES 9

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

COURSE OUTCOMES (COs)	
CO1	Understand basic of algorithmic solutions to find simple computational problems.
CO2	Execute basic syntax, data expressions and programs in Python.
CO3	Apply conditional statements and functional parameters to read and write input/output files
CO4	Analyze list operations, tuples assignments, various dictionaries and sorting methods.
CO5	Remember user-defined functions, modules and packages.
CO6	Implement the exception and file handling operations using various list parameters.

U18ESME101	Engineering Graphics & Design (Theory & Lab.)	L	T	P	C
	Total Contact Periods – 75	3	0	0	3
	Prerequisite – Higher Secondary School Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet des needs, using the techniques, skills, and modern engineering tools necessary engineering practice				

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM)

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle;

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP;

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

MODULE4: SECTIONSOF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True

shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone;

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS:

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students will get Exposure to basics of building construction
CO4	Students will get Exposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.
CO6	Crete 3D part models. Develop its surfaces with solid modelling software for assembly of parts

Mapping of Course Outcomes with Student Outcomes (SOs)

U18BSPH2L1	**WAVE OPTICS AND MECHANICS LABORATORY (Common to B.Tech. –Civil, Mech, Mechatronics, Aero, Aerospace & Auto)**	**L**	**T**	**P**	**C**
	Total contact hours - 30	**0**	**0**	**4**	**2**
	Prerequisite: Wave Optics and Mechanics				
	Course offered by – Department of Physics				
	Data Book/Codes /Standards : Higher Secondary				

PHYSICS LAB EXPERIMENTS FOR SEMESTER I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Mechanics

1) Torsional Pendulum – without symmetrical mass
2) Torsional Pendulum – With symmetrical mass
3) Young's Modulus – Non-uniform bending
4) Young's Modulus – Uniform Bending
5) Compound Pendulum
6) Coefficient of viscosity of the given liquid – Poiseuille method

COURSE OUTCOMES(COs)	
CO1	Achieve the fundamental concept of optics (Precision)
CO2	Demonstrate the concept of production of ultrasonic waves (Manipulate)
CO3	Achieve the basic concept of mechanics (Precision)

Mapping of course outcomes with programme outcomes(POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18BSCH2L4	**CHEMISTRY LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a Polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

U18ESCS1L1	**PROBLEM SOLVING AND PYTHON PROGRAMMINGLABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. ExSOnentiation (SOwer of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib
CO6	To Understand about Simulate bouncing ball using Pygame.

U18HSEN201	**TECHNICAL ENGLISH**	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite course –1 Semester English				
	Course Coordinator Name & Department:- Mr. M. Gopinath& Dept. of				
OBJECTIVES	➢ Train the students in technical writing in English in writing descriptions of gadgets, Preparing texts and reports as well as comprehending technical texts. Prepare the students in content writing and copy editing				

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependent, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

TEXT BOOKS:

COURSE OUTCOMES (COs)

On completion of the course, the students will be able to	
CO1	Develop global listening abilities of the students, and teach them a few basic listening strategies and expose them to a number of different listening situations through activities. (Understand)
CO2	Help students develop the knowledge, skills and strategies they must possess to become proficient and independent readers who is able to interact and construct meaning from the content. (Apply)
CO3	Use technical information and knowledge in practical documents for a variety of professional audiences, including peers and colleagues or management, and public audiences.(Apply)
CO4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. (Create)
CO5	Help students recognize culture-specific perspectives and values embedded in language behavior. Decode, analyze, and interpret authentic texts of different genres. (Evaluate)
CO6	Designing digital slides. Breaking up a presentation into parts of reasonable length. Using statistics effectively to persuade an audience. Incorporating concrete examples and stories to illustrate points. (Create)

U18BSMA201	**Engineering Mathematics II (Common to B.Tech - Mech, Mechatronics, Automobile, Aero, EEE, EIE, ECE, CSE, IT, Civil & Bio Medical admitted from July 2018)**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	**3**	**1**	**0**	**4**
	Prerequisite Course– School Level Mathematics				
	Course Coordinator Name & Department – Dr. N. Ramya& Department of Mathematics				
COURSE OBJECTIVE	➢ The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables. ➢ Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.
5.

COURSE OUTCOMES (COs)	
CO1	Solve the higher order differential equations with constant and variable coefficients.
CO2	Apply Green's, Stoke's and Gauss Theorems in the application of engineering problems which involves line, surface and volume integrals .
CO3	Understand the analytic functions and able to construct an analytic function, solve the conformal mapping
CO4	Evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	Apply the concept of Laplace Transformation in analysis.
CO6	Use Laplace transform methods to solve differential equations.

Mapping of Course Outcomes with Program outcomes(POs)

U18BSPH201	**INTRODUCTION TO MECHANICS (Common to B.Tech. –Civil, Mech, Mechatronics, Aero, Aerospace & Auto)**	**L**	**T**	**P**	**C**
	Total contact hours -45	3	0	0	3
	Prerequisite: +2				
	Course offered by –Department of Physics				
	Data Book/Codes /Standards : Higher Secondary				

UNIT I -Forces in Nature; Newton's laws and its completeness in describing particle motion; Solving Newton's equations of motion in polar coordinates; Problems including constraints and friction; Extension to cylindrical and spherical coordinates**(Contact Hours – 9)**

UNIT II - Potential energy function; F = - Grad V, equipotential surfaces and meaning of gradient; Conservative and non-conservative forces, curl of a force field; Central forces; Conservation of Angular Momentum; Energy equation and energy diagrams; Elliptical and parabolic orbits. **(Contact Hours – 9)**

UNIT III - Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and lightly-damped oscillators; Forced oscillations and resonance**(Contact Hours – 9)**

UNIT IV - Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion, Kinetic energy of a rotating body**(Contact Hours – 9)**

UNIT V - Introduction to three-dimensional rigid body motion — only need to highlight the distinction from two-dimensional motion in terms of (a) Angular velocity vector, and its rate of change and (b) Moment of inertia tensor; Three-dimensional motion of a rigid body wherein all points move in a coplanar manner: e.g. Rod executing conical motion with centre of mass fixed. **(Contact Hours – 9)**

COURSE OUTCOMES(COs)	
CO1	Identify and solve the various equation of motions in different coordinate systems (Remember)
CO2	Generalize the idea of conservation of energy and angular momentum (Understand)
CO3	Visualize the concept of harmonic motion in different damped conditions (Remember)
CO4	Discuss the motion of a rigid body under different criteria (Understand)
CO5	Describes the motion of a rigid body in three dimensions (Understand)
CO6	Demonstrates the basics of particle motion and kinematics in 1D, 2D and 3D (Apply)

U18BSCH201	ENVIRONMENTAL SCIENCES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course +2				
	Course Offered by Dept of Chemistry				
OBJECTIVES	➢ To study the interrelationship between living organism and environment. ➢ To study of the nature and concepts of ecosystem. ➢ To learn about the integrated themes and biodiversity of an environment. ➢ To study of pollution control and waste management. ➢ To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I -NATURAL RESOURCES 9

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS 9

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION 9

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste

Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder- Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.

Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES (COs)	
CO1	Observe the overutilization of water and energy from different sources, conserve water and identify alternative energy sources **(Remember)**
CO2	Explain different ecosystem, identify possible solutions to environment issues
CO3	Describe the biodiversity, its importance and conservation **(Remember)**
CO4	Explain various forms of environment pollution and realize the responsibilities of individuals in prevention of pollution **(Apply)**
CO5	Identify the social and environmental issues and predict the possible engineering solutions **(Understand)**
CO6	Describe the social and environmental problems and administer the possible solutions **(Apply)**

	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector					

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System - types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity-antigens-antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines-cloning-bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

3. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)													
CO1	Recall the relationship between structure and function of cells at molecular level												
CO2	List the defining characteristics of biological life												
CO3	Determine the importance of genetics and immunological response												
CO4	Categorize the mechanism of infection about diseases and disorders affecting specific organs												
CO5	Demonstrate the techniques from multiple disciplines and apply to biological problems												
CO6	Discuss the biological science related to different disciplinary areas.												
Mapping of Course Outcomes with StudentsOutcomes (SOs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18ESEE101	**Basic Electrical and Electronics Engineering**	**L**	**T**	**P**	**C**
	Total contact hours-45	**3**	**0**	**0**	**3**
	Prerequisite: School Level Physics				
	Course offered by –Department of Electrical and Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications.				

MODULE 1 :DCCIRCUITS (12 periods)

Electrical circuit elements, voltage and current sources, Fundamentals Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transfer Theorem.

MODULE 2:AC CIRCUITS (9 Periods)

Representationofsinusoidalwaveforms,peakandrmsvalues,phasorrepresentation,realpower, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and deltaconnections.

MODULE 3: ELECTRICAL MACHINES&TRANSFORMERS (9 Periods)

Principles of operation and characteristics of; DC machines, Synchronous machines, threephase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer.

MODULE 4: SEMICONDUCTOR DEVICESANDAPPLICATIONS (9 periods)

CharacteristicsofPNJunctionDiode–ZenerEffect–ZenerDiodeanditsCharacteristics–Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction toOP-AMP.

MODULE 5:DIGITALELECTRONICS (6 Periods)

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

COURSE OUTCOMES(COs)	
CO1	Apply simple electrical circuits and verify DC network theorems.**(Apply)**
CO2	Obtain electrical parameters like voltage, current, power and sketch phase diagram of a given ac circuits. .**(Understand)**
CO3	Explain the working principle of DC, AC Machines and transformer.**(Understand)**
CO4	Draw the characteristics of semiconductor devices and to obtain signal analysis of BJT **(Understand)**
CO5	Perform the basic Boolean operations. **(Remember)**

Mapping of course outcomes with programme outcomes(POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18ESME1L2	Workshop/Manufacturing Practices Laboratory	L	T	P	C
	Total Contact Periods – 75	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

Lectures & videos: (15 hours)

1. Detailed contents
2. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods (3 lecture)
3. CNC machining, Additive manufacturing (2 lecture)
4. Fitting operations & power tools (2 lecture)
5. Carpentry (2 lecture)
6. Plastic moulding, glass cutting (2 lecture)
7. Metal casting (2 lecture)
8. Welding (arc welding & gas welding), brazing (2 lecture)

WORKSHOP PRACTICE:

Machine shop (6 hours)

1. Facing
2. Turning
3. Drilling Practice

Fitting shop (6 hours)

1. Fitting Exercises–Preparation of square fitting
2. Vee–fittingmodels.

Carpentry (9 hours)

a) Preparation of Lap joints.
b) Mortise and Tenonjoints.
c) Cross Half joints.
d) Dove Tail joints.

Welding shop (Arc welding 6 hrs + gas welding 3 hrs) (9 hours)

Preparation of butt joints, lap joints and Tee joints

Sheet Metal working (9 hours)

Forming &Bending:
Model making–Trays, funnels, etc.
Different type of joints

Demonstration (6 Hours)

Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

5. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGraw Hill House, 2017.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

U18ESEE1L3	BASIC ELECTRICAL AND ELECTRONIC ENGINEERING PRACTICES LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – School Level Physics & Basic Electrical and Electronic Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and CurrentLaws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a stepchangeinvoltage(transientmaybeobservedonastorageoscilloscope).Sinusoidalsteadystate response of R-L, and R-C circuits – impedance calculation andverification.
3. Fluorescent lampwiring.
4. Staircasewiring.
5. Measurement of energy using single phase energymeter.
6. Observationoftheno-loadcurrentwaveformonanoscilloscopeandMeasurementofPrimary and secondary voltages and currents of aTransformer.
7. Demonstration of cut-out sections of machines: dc machine (commutator-brusharrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase inductionmachine.
8. Demonstrationof(a)dc-dcconverters(b)dc-acconverters–PWMwaveform(c)theuseofdc-acconverter for speed control of an induction motor and (d) Components of LTswitchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and functiongenerator.
2. Characteristics – Half wave and Full waveRectifiers.
3. Characteristics – Common Base transistorconfiguration.
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK andRS.
5. Applications of OperationalAmplifier.

4	**Approval**	47th Meeting of Academic Council, May 2018											

SEMESTER III

U18BSMA302	**Partial Differential Equations, Probability and Statistics (Common to B. Tech – Mech, Mechatronics, Automobile and Aero Engineering admitted from July 2018)**	**L**	**T**	**P**	**C**
	Total Contact Hours -60	**3**	**1**	**0**	**4**
	Prerequisite Course– Engineering Mathematics I & II				
	Course Coordinator Name & Department – K.L. Rajashree& Department of Mathematics				

OBJECTIVE:

- Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms.
- Learn techniques of solving the standard types of first order and second order partial differential equations.
- Learn solving wave and heat equation using Fourier series. Learn basics of probability, Baye's Theorem.
- Understand the concept of random variable, moment generating functions and their properties; learn standard distributions in discrete and continuous cases. Learn measures of central tendency and correlation and regressions, rank correlation, statistical intervals for single sample and test of hypothesis for a small and large sample

UNIT I FOURIER SERIES 12

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS 12

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS 12

Classifications second order linear partial differential equations – Solution of one dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation – Fourier Series solutions in Cartesian coordinates.

UNIT IV PROBABILITY DISTRIBUTION 12

Probability – Axioms of probability – Conditional probability – Baye's theorem – Random variables – Binomial – Poisson – Geometric – Uniform – Exponential and normal distribution and their properties.

UNIT V STATISTICS AND TESTING OF HYPOTHESIS 12

Measures of central tendency – Moments – Skewness and kurtosis – Correlation and Regression – Rank correlation – Test of significance: Large sample test for single proportion, difference of proportions – Chi Square test for goodness fit and independence of attributes.

	COURSE OUTCOMES (COs)
CO1	Apply Fourier series method to engineering problems. (Apply)
CO2	Solve PDE and higher order with constant coefficients and physically interpret the results. (Apply)
CO3	Analyze the solutions ofone dimensional and two dimensional boundary value problems in partial differential equations.(Analyze)
CO4	Apply the concept of probability to various distributions in engineering problems. (Apply)
CO5	Evaluate thestatistical problems including measures of central tendency, correlation and regression. (Evaluate)
CO6	Analyse the testing of hypothesis to statistical data. (Analyze)

U18PCAS301	**INTRODUCTION TO AEROSPACE ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	**2**	**0**	**0**	**2**
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To help the student understand the history of aviation, different kinds of aircrafts, spacecrafts, their components and functioning.					

UNIT I EVOLUTION OF FLIGHT 4

Brief history of Aviation-Hot air balloon and heavier than air flying machines-early airplane configurations-Modern Airplanes-Components of airplane and their functions-Rotary wing aircrafts-Space vehicles.

UNIT II FUNDAMENTALS OF AERODYNAMICS 10

International Standard Atmosphere-Pressure, Temperature and Density altitude, Bernoulli's equation-Mach number-subsonic, transonic, sonic and supersonic flow regimes, Measurement of pressure and airspeed- IAS,EAS and TAS. Airfoil geometry and nomenclature - airfoil characteristics - lift, drag and moment coefficients-angle of attack-aspect ratio- induced drag and parasite drag.

UNIT III AEROSPACE STRUCTURES 4

Structural components of an airplane- monocoque and semi monocoque structure –materials for structural components – composite materials and their significance in Aviation Technology.

UNIT IV AEROSPACE PROPULSION 8

Propeller Engine – Gas Turbine Engine – Turbo prop, Turbo jet, Turbo fan Engines - variation of thrust, power and specific fuel consumption with speed and altitude – materials for engine components.

UNIT V SPACE VEHICLES AND ASTRONAUTICS 4

Basics of Rocket Technology – escape velocity – re-entry vehicles – Satellite technology– Hypersonic vehicles, Elements of Astronautics.

U18PCAS302	APPLIED DYNAMICS AND VIBRATION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To enable the student to understand about the basics of mechanics, working of machines, the forces acting on different machines and the corresponding motion, prediction and design of machines.

UNIT I EQUILIBRIUM OF RIGID BODIES 9

Free Body Diagram, Equilibrium of Forces and Moments, Lame's theorem, Parallelogram and Triangle Law of Forces, Force Resolution, Types of Supports and Reactions, Requirements of Stable Equilibrium, Moments and Couple – Moment of force about a point and about an axis, Vector operation of forces, Resolution of Forces, Resultant of Several Concurrent Forces, Forces in Space

UNIT II PROPERTIES OF SURFACES AND SOLIDS 8

Determination of Areas, First Moment of Area and the Centroid of Standard Sections – T Section, I Section, Composite Figures, Hollow Section – Second Moments of Plane Area (Rectangle, Triangle, Circle, T Section, I Section, Hollow Section), Parallel Axis Theorem, Perpendicular Axis Theorem, Polar Moment of Inertia, Principal Moments of Inertia of Plane Areas – Basic Concepts of Mass Moment of Inertia

UNIT III MECHANISMS 10

Machine and Structure – Kinematic link, pair and chain – Grueblers criteria – Constrained motion – Degrees of freedom –Kutzbach criterion - Slider crank and crank rocker mechanisms – Inversions – Applications –Kinematic analysis of simple mechanisms – Determination of velocity and acceleration. – Introduction to Gears and Cams

UNIT IV FRICTION AND FORCE ANALYSIS 10

Frictional force, Laws of Coulomb Friction, Cone of Friction, Angle of Repose, Belt(Flat and Vee) and rope drives. Ratio of tensions – Effect of centrifugal and initial tension – Condition for maximum power transmission – Open and crossed belt drive. Introduction to force analysis –Static and dynamic balancing Single and several masses in different planes – Balancing of reciprocating masses- primary balancing and concepts of secondary balancing

UNIT V INTRODUCTION TO VIBRATIONS 8

Free, forced and damped vibrations of single degree of freedom systems – Force transmitted to supports – Vibration isolation –Vibration absorption –Torsional vibration of shaft –Single and multi rotor systems – Geared shafts–Critical speed of shaft.

U18ESAS301	FUNDAMENTALS OF FLUID MECHANICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To help the student understand the basic physics of fluids, fluid behavior under different conditions, laws governing fluid flows, measurements in fluids and functioning of fluid machinery.

UNIT I INTRODUCTION 7

Fluid –definition-Fluid properties-Newton's law of viscosity-Classification of fluids-fluid statics-Hydrostatic forces on submerged surfaces- basics of Stability of floating bodies

UNIT II FLUID FLOW ANALYSIS AND FLOW MEASUREMENT 10

Ideal and real flow-Concept of continuum-Eulerian and Lagrangian approaches-Velocity field-Pathline, Streakline, Streamline- Stream tube- Fluid acceleration-Continuity, momentum differential equations-Navier Stokes equation-Bernoulli's equation and its applications-Venturimeter-Orifice meter, Coefficient of Discharge, Flow Rate and Velocity Measurement.

UNIT III DIMENSIONAL ANALYSIS 8

Dimensional Homogeneity, Buckingham's Pi Theorem-Non dimensional numbers and their significance-Flow similarity, similitude, incomplete similarity and model studies – distorted models

UNIT IV FLOW THROUGH PIPES 11

Laminar and turbulent flow- Boundary layer flow – Boundary layer thickness - Reynolds number and its significance-Laminar fully developed pipe flow-Hagen-Poiseuille flow-Coefficient of friction-Head loss – Darcy-Weisbach equation-Hydraulic gradient- Total energy lines-Moody's diagram

UNIT V FLUID MACHINERY 9

Classification of fluid machines-Reciprocating and centrifugal pumps-impulse and reaction turbines and velocity triangles-Working principle of Pelton, Francis and Kaplan turbines

	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To make the student understand about the basics of engineering thermodynamics, various laws and their applications, prediction of thermodynamic performance of various engines, and other thermal devices.					

(Use of Steam Tables is Permitted)

UNIT I BASIC CONCEPTS AND FIRST LAW 7

Continuum, microscopic and macroscopic approach, thermodynamic system and surrounding, state, path, process, heat and work, zeroth law, concept of ideal and real gases, internal energy, specific heat capacities, enthalpy, first law of thermodynamics – PMM-1

UNIT II FIRST LAW APPLIED TO FLOW PROCESSES 10

Control volume – steady flow processes – steady flow energy equation – mass and energy balance – example of steady flow processes – variable flow processes

UNIT III SECOND LAW AND ENTROPY 11

Second law of thermodynamics, Kelvin – Planck's and Clausius Statements, PMM-2, reversibility and irreversibility, Carnot theorem, refrigerator, heat engine and heat pump, concept of entropy, irreversibility, Clausius inequality, principle of increase in entropy, absolute entropy, entropy generation in open and closed systems, entropy change in non-flow processes, availability, energy

UNIT IV AIR POWER CYCLES 9

Carnot, Otto, Diesel, Dual, Stirling and Ericsson cycle - Air standard efficiency – Mean effective pressure

UNIT V BRAYTON CYCLE 8

Introduction to aircraft propulsion – gas turbine engine cycles – open and closed Brayton cycle – Brayton cycle with reheat, regeneration and intercooling.

COURSE OUTCOMES	
CO1	**Discuss** the fundamental laws of thermodynamics and its relations. **(Understand)**
CO2	**Solve** thermodynamic problems on first law of thermodynamics. **(Apply)**
CO3	**Solve** thermodynamic problems on Second law of thermodynamics. **(Apply)**
CO4	**Compute** the air standard efficiencies using P-V and T-S diagram of various air power cycles. (**Apply**)
CO5	**Calculate** the efficiency of jet propulsion cycles. (**Apply**)

U18ESAS303	**FUNDAMENTALS OF STRUCTURAL MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To equip the students with the basics of structural mechanics and materials, material behavior & failure under load, its prediction and design based on it.					

UNIT I INTRODUCTION TO STRENGTH OF MATERIALS 10

Introduction to mechanics of deformable bodies - Material selection criteria – stress – strain – Stress and strain diagram - Hook's law - Elastic constants – definition of engineering constants: elastic moduli – Young's modulus, Bulk Modulus& Volumetric Strain, Poisson's ratio, Shear Modulus, relation between three elastic moduli and Poison's ratio, Statically determinate and indeterminate problems in tension and compression – Thermal stress – Impact loading – Composite bars

UNIT II STRESSES IN BEAMS 9

Shear force and bending moment diagrams for simply supported, cantilever beams and overhanging beams– bending stress variation in beams of symmetric sections, neutral axis

UNIT III DEFLECTION OF BEAMS 9

Double integration, Macaulay's method, moment area method, conjugate beam method, method of superposition, Maxwell's reciprocal theorem.

UNIT IV TORSION 8

Torsion of solid and hollow circular shafts – Power transmission in shafts – Open and closed-coiled helical springs – Stresses in helical springs.

UNIT V BI – AXIAL STRESSES AND ELEMENTS OF ELASTICITY 9

Stresses in thin cylindrical and spherical shell under internal pressure and volumetric strain– Principle stresses and maximum shear stresses– Combined loading – Mohr's circle and its construction – concept of theory of elasticity, basic assumptions, coordinate transformation, plane stress and plane strain conditions, stress tensor

U18PCAS3L1	STRENGTH OF MATERIALS LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the students with hands on experience on conducting various structural tests to determine the structural properties of a given material.

LIST OF EXPERIMENTS

1 Tension test of a mild steel and aluminium rod.
2 Shear test on mild steel and aluminium rod.
3 Torsion test on mild steel rod.
4 Hardness test (a) Brinell& (b) Rockwell.
5 Impact tests (a) Izod& (b) Charpy.
6 Estimation of Stiffness of a Helical Spring (a) Open Coil & (b) Closed Coil
7 Fatigue test: Rotating beam.
8 Block compression test.
9 Flexural test by 3 point bending method
10 Determination of fracture strength and fracture pattern of ductile and brittle material.

	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Engineering Graphics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the student with a practical experience of engineering drawing in the computer using commercial software packages.

LIST OF EXPERIMENTS

1 Study of various software for engineering design and drafting
2 Study of commercial software packages and their tools
3 Exercise on 2D drawing
4 Exercise on pad and groove
5 Exercise on shaft, mirror and array
6 Exercise on threading, bores and tappings
7 Exercise on part assembly
8 Exercise on drafting
9 Exercise on surface modeling
10 Exercise on kinematics

REFERENCES:

	Total Contact Hours – 30	**0**	**0**	**4**	**2**
	Prerequisite – Nil				
	Course Designed by – Department of Civil Engineering				

OBJECTIVE: To equip the students with hands on experience on conducting various experimental tests to determine the fluid properties of a given fluid and also to assess the performance of various fluid machinery.

LIST OF EXPERIMENTS

1 Determination of pipe flow losses.
2 Calibration of orifice meter and venture meter.
3 Flow through notches and weir.
4 Flow through open orifice
5 Verification of Bernoulli's Equation.
6 Performance characteristics of centrifugal pump.
7 Performance characteristics of submergible pump.
8 Performance characteristics of jet pump.
9 Characteristics of impulse turbine – Pelton wheel turbine.
10 Characteristics of reaction turbine – Francis turbine

SEMESTER IV

		L	T	P	C
U18BSMA401	**Numerical Methods (Common to B. Tech - Mech, Mechatronics, Automobile, Aero admitted from July 2018)**				
	Total Contact Hours- 60	**3**	**1**	**0**	**4**
	Prerequisite Course – Engineering Mathematics I & II				
	Course Coordinator Name & Department– P. Bhathmanaban& Department of Mathematics				

OBJECTIVE:

- The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra.
- It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.

UNIT I SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS 12

Fixed Point Iteration methods - Newton - Raphson method and Regula-Falsi method for single variable - solutions of linear system of equations by Gaussian, Gauss-Jordan, Jacobian and Gauss-Siedel methods.

UNIT II INTERPOLATION 12

Finite differences - Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals- Newton's Divided difference formula, Lagrange's Interpolation formula.

UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 12

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's Both 1/3rd and 3/8th rules. Double integration using Trapezoidal rule and Simpson rule.

UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 12

Single step methods- Taylor series, Euler and modified Euler methods, Runge-Kutta method of fourth order for solving first and second order differential equations, Multiple step methods- Milne and Adam's - Bash forth predictor and corrector methods.

UNIT V BOUNDARY VALUE PROBLEMS FOR ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 12

Finite difference - solution of 2nd order ODE - Finite difference solutions for two dimensional Laplace and Poisson equations, Finite difference solutions for one dimensional heat equation both implicit and explicit (Bender-Schmidt and Crank-Nicholson methods), Finite difference explicit method for one dimensional wave equation.

COURSE OUTCOMES (COs)	
CO1	Solve algebraic and transcendental equation using Newton Raphson and regula-Falsi methods and system of linear equations by various methods.
CO2	Apply method of interpolation and extrapolation for numerical data.
CO3	Describe the concept of numerical methods to differentiation and integration using Trapezoidal and Simpson's rules.
CO4	Solve initial value problems of ODE by applying Taylor's series and runge-Kutta methods.
CO5	Analysethe two dimensional Laplace, Poisson equations and one dimensional heat and wave equations of PDE.
CO6	Develop one dimensional and two dimensional problems in engineering field.

Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong, M – Medium, W – Weak

	ELEMENTS OF AEROSPACE STRUCTURES	L	T	P	C
U18PCAS401	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Mechanics and Machines, Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to understand about the basics of aerospace structures, different types of structural members, their design and analysis.					

UNIT I TRUSSES AND FRAMES 9

Statically determinate frames - Analysis of plane Truss - Method of joints - 3 D Truss-Plane frames - Composite beam.

UNIT II STATICALLY INDETERMINATE BEAMS 9

Propped Cantilever - Fixed-Fixed beams - Clapeyron's Three Moment Equation – moment distribution method.

UNIT III ENERGY METHODS 11

Strain energy evaluation in structural members – Castigliano's Theorem – dummy load & unit load methods – Maxwell's reciprocal theorem – energy methods applied to statically determinate and indeterminate beams, frames, rings & trusses

UNIT IV COLUMNS 9

Euler's column curve – inelastic buckling – effect of initial curvature – the Southwell plot – columns with eccentricity – use of energy methods – theory of beam columns – beam columns with different end conditions – stresses in beam columns.

UNIT V FAILURE THEORY 7

Fail safe and safe life structures, factor of safety, Brief introduction of yield material, brittle vs. ductile behavior, Creep and creep rupture, viscoelastic materials - environmental stress, stress potentials, effect of time and temperature - Fatigue and Fracture - Maximum Stress theory – Maximum Strain Theory – Maximum Shear Stress Theory – Distortion Theory – Maximum Strain energy theory – Application to aircraft Structural problems.

4	**Approval**	**48th Academic Council Meeting**													

U18PCAS402	AERODYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Mathematics I & II, Fundamentals of Fluid Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the students with the basic concepts necessary to understand the flow around low speed aircrafts, tools to estimate the forces thus generated and methods to design airfoils and wings of an aircraft.

UNIT I BASIC AERODYNAMIC PRINCIPLES 9

Models of fluid - System and Control volume approach, substantial, local and convective derivative, Continuity, momentum and energy equations, Inviscid flow, Euler equation, incompressible Bernoulli's Equation. Circulation and Vorticity

UNIT II FUNDAMENTALS OF INVISCID FLOWS 9

Elementary Flows and their combinations – Ideal Flow over a circular cylinder, D'Alembert's Paradox, Magnus effect, KuttaJoukowski Theorem, Starting Vortex, Kutta condition, Real flow over smooth and rough cylinder

UNIT III AIRFOIL THEORY 9

Complex Potential, Methodology of Conformal Transformation, Kutta-Joukowski transformation and its applications, Karman Trefftz Profiles, Thin Airfoil theory and its applications.

UNIT IV FINITE WING THEORY 9

Vortex Filament, Biot and Savart Law, Bound Vortex and trailing Vortex, Horse Shoe Vortex, Lifting Line Theory and its limitations, induced drag coefficient, elliptic and general lift distribution, Oswald's wing efficiency factor, effect of plan form and aspect ratio

UNIT V VISCOUS FLOW THEORY 9

Laminar Boundary layer and its thickness, displacement thickness, momentum thickness, Energy thickness, Shape parameter, Boundary layer equations for a steady two dimensional incompressible flow, Boundary Layer growth over a Flat plate, Critical Reynolds Number, Blasius solution, Basics of Turbulent flow

https://ocw.mit.edu/courses/aeronautics-and-astronautics/16-100-aerodynamics-fall-2005/

COURSE OUTCOMES	
CO 1	**Recall** the types of flows based on mathematical equations. (**Understand**)
CO 2	**Solve** flow over basic aerodynamic shapes using concept of inviscid flow theory.(**Apply**)
CO 3	**Determine** the geometric features of airfoils with the help of mathematical transformations. (**Apply**)
CO 4	**Describe** the concept of lift generation and the factors for efficient wing design. (**Understand**)
CO 5	**Determine** the skin friction drag over surfaces. (**Apply**)

Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong, M – Medium, W – Weak

1	**COs/ POs**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO 1**	**PSO 2**

U18PCAS403	AIRBREATHING PROPULSION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Aero – Thermodynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to understand about the basics of propulsion, working of different parts of a gas turbine engine, their design and analysis.					

UNIT I FUNDAMENTALS OF ENGINES 7

Gas turbine engine cycle - Engine performance parameters – Efficiencies, Methods of thrust augmentation – Characteristics of propeller, turboprop, turbofan and turbojet engines.

UNIT II INLETS AND NOZZLES 11

Subsonic inlets– External and internal flow pattern – inlet performance criterion –Boundary layer separation – Supersonic inlets – the starting problem – external deceleration– Exhaust nozzles –Theory of flow in isentropic nozzles – Losses in nozzles –Nozzle efficiency— nozzle choking –Over expanded and under expanded nozzles – Ejector and variable area nozzles

UNIT III COMPRESSORS 9

Principle of operation of centrifugal compressor – Work done and pressure rise – Velocity diagrams – Concept of pre whirl – Rotation stall – Operating Principle of axial flow compressor – Velocity triangles – degree of reaction – Centrifugal and Axial compressor performance characteristics.

UNIT IV COMBUSTION CHAMBERS 9

Classification of combustion chambers - Combustion process – Stoichiometric Ratio – Equivalence Ratio – Important factors affecting combustion chamber design — Combustion chamber performance – Effect of operating variables on performance – Flame tube cooling – Flame stabilization – flame holders.

UNIT V TURBINES 9

Operating Principle of axial flow turbine – Stator and rotor blades – losses in the blade – choice of blade profile, chord and pitch – stage and overall performance – blade cooling – radial flow turbine.

U18PCAS404	AEROSPACE MATERIALS	L	T	P	C
	Total Contact Hours – 30	2	0	0	2
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To introduce to the students about the importance of materials in the design of the aircraft					

UNIT I INTRODUCTION 9

Properties of Flight Vehicle Materials, Importance of strength to weight ratio and change in properties with respect to temperature variations, factors affecting choice of material for different parts of airplane, Structure of solid materials - crystal structure, effect of crystal imperfections on mechanical properties

UNIT II ALLOYS FOR AIRCRAFT APPLICATIONS 9

Aluminum alloys, High strength and corrosion resistance alloys. Magnesium alloys and their properties, Carbon Steels and Steel Alloys, Effect of alloying elements, Applications of these alloys to aircrafts.

UNIT III HIGH STRENGTH AND HEAT RESISTANT ALLOYS 9

Classification of heat resistant materials, Iron, Nickel and Cobalt base alloys, Refractory materials, Ceramics, Titanium and its alloys, properties of Inconel, Monel& K-Monel, Nimonic and Super Alloys – Applicationsto Aircrafts

UNIT IV HEAT TREATMENT AND CORROSION RESISTANCE 9

Heat treatment of carbon steel, aluminium alloys, magnesium alloys and titanium alloys used in aircraft. Types of corrosions - Effect of corrosion on mechanical properties - Protection against corrosion - Corrosion resistant materials used in aerospace vehicles.

UNIT V MODERN MATERIALS 9

Significance of Composites and Nanomaterials in Aerospace Engineering, Introduction to graphene, spider silk, silica aerogel, shrilk, stanene and metamaterials and their applications.

U18PCAS405	MANUFACTURING TECHNOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Engineering Graphics & Design				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To help the student to understand about the different types of manufacturing processes and the uniqueness of different methods.					

UNIT I METAL WORKING PROCESS 5

Mechanical working of metals –hot and cold working –rolling, extrusion, spinning, wire-drawing, press working. Welding – different types of gas and arc welding process, soldering and brazing. Casting –different types, furnaces

UNIT II MACHINING PROCESSES 7

Lathe – introduction, types, construction, mechanisms and attachments for various operations, nomenclature of single point cutting tool. Capstan and turret lathes various mechanisms, tool and loading arrangement. Automatic lathes - single spindle and multi spindle mechanisms, Introduction to CNC machining

UNIT III SHAPER, PLANER AND MILLING PROCESSES 7

Shaper, planer and slotter: types, specifications, mechanisms, holding devices, difference between shaper and planer. Milling machine – types and specification, mechanisms, holding devices, milling operations.

UNIT IV DRILLING, BORING, BROACHING, SURFACE FINISHING PROCESSES 6

Drilling, Boring- Specification, Nomenclature of drilling and reaming tool and its specification. Broaching: Specification, types, mechanisms, nomenclature of broaching tool. Grinding process, Types of grinding machines, Grinding Wheels, Honing, Super finishing, Polishing, Metal spraying, Galvanizing, Electroplating.

UNIT V NON – TRADITIONAL MACHINING PROCESSES 5

Non-traditional machining techniques, classification, Abrasive jet machining, Electrical Discharge Machining, E. D wire cutting, Electro chemical machining, Electron Beam Machining, Laser Beam Machining, Ultrasonic Machining – Introduction to 3D Printing

COURSE OUTCOMES	
CO 1	**Describe** various metal forming process and different types of welding. (**Understand**)
CO 2	**Describe** types of lathe and their construction. (**Understand**)
CO 3	**Explain** the process of shaping, planing and milling operations. (**Understand**)
CO 4	**Discuss** the process involved in drilling, boring, broaching, surface finishing. (**Understand**)
CO 5	**Describe** the working principle of various Non-traditional machining techniques. (**Understand**)

U18PCAS4L1	AERODYNAMICS LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Fundamentals of Fluid Mechanics, Co-requisite – Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To give to the student a practical experience of using the subsonic wind tunnel to carry out experimentation on different design models and to calculate forces acting on the models based on the experimentation.

LIST OF EXPERIMENTS

1 Calibration of subsonic wind tunnel.
2 Pressure distribution over smooth cylinder
3 Pressure distribution over rough cylinder.
4 Pressure distribution over symmetric airfoil.
5 Pressure distribution over cambered airfoil.
6 Pressure distribution over a wing
7 Force measurement on an Airfoil using wind tunnel balance.
8 Pressure distribution over a building model.
9 Aerodynamic studies of automotive models.
10 Flow visualization at subsonic velocity using (a) Smoke (b) Oil.

https://www.youtube.com/watch?v=UqBmdZ-BNig

COURSE OUTCOMES	
CO 1	**Carryout** flow analysis over various aerodynamic models. (**Imitation**)
CO 2	**Demonstrate** the usage of mechanical and electronic instruments in data acquisition. (**Manipulation**)
CO 3	**Conduct** experiments at various orientation of models to characterize the flow. (**Articulation**)

	Prerequisite – Nil, Co-requisite – Manufacturing Technology				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the student with the knowledge and practical experience of operating various manufacturing machines like lathes, milling machines, shaper, planer

LIST OF EXPERIMENTS

1 Study of centre, capstan and automatic lathes and their accessories.
2 Exercise on setting the work piece and the tool in the lathe.
3 Plane turning and step turning.
4 Taper turning and knurling.
5 Eccentric Turning.
6 Thread cutting and grooving.
7 Drilling and reaming.
8 Drilling and boring.
9 Surface grinding
10 Study of milling and grinding machines.

U18PCAS4L3	INTRODUCTION TO MATLAB	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Mathematics I & II				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint with the MATLAB application to solve various engineering problems.

LIST OF EXPERIMENTS

1 Introduction to MATLAB
2 Relational and Logical Expressions in MATLAB
3 Working with Matrices
4 Plotting using MATLAB
5 Exercise on Curve Fitting
6 Exercise on Complex and Statistical Analysis
7 Program Flow Control in MATLAB
8 Input and Output of Variables
9 Exercise on solving ODE's and PDE's
10 Exercise on using SIMULINK for dynamic simulation.

REFERENCES:

1. MATLAB Lab Manual, Department of Aeronautical Engineering, 2018.

WEBLINKS:

https://www.mathworks.com/support/learn-with-matlab-tutorials.html

COURSE OUTCOMES	
CO 1	**Master** thebasic computing and programming features of MATLAB **(Precision).**
CO 2	**Perform** data plotting, curve fitting and statistical analysisin MATLAB**(Precision).**
CO 3	**Adapt**MATLAB to solve engineering-related problems using numerical methods and in performing dynamic simulation **(Articulation).**

SEMESTER V

U18PCAS501	AEROSPACE STRUCTURAL MECHANICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Elements of Aerospace Structures				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the student with the knowledge about the mechanics of different aircraft structural members, and their design.

UNIT I UNSYMMETRICAL BENDING 9

Bending of symmetric beams subject to skew loads - bending stresses in beams of unsymmetrical sections – generalized 'k' method, neutral axis method, principal axis method- advantages and disadvantages.

UNIT II SHEAR FLOW IN OPEN SECTIONS 9

Thin walled beams – concept of shear flow – the shear centre and its determination – shear flow distribution in symmetrical and unsymmetrical thin-walled sections – structural idealization – shear flow variation in idealized sections.

UNIT III SHEAR FLOW IN CLOSED SECTIONS 9

Bredt - Batho theory – single-cell and multi-cell tubes subject to torsion – shear flow distribution in thin-walled single & multi-cell structures subject to combined bending torsion – with walls effective and ineffective in bending – shear center of closed sections.

UNIT IV BUCKLING OF PLATES 9

Bending of thin plates – rectangular sheets under compression - local buckling stress of thin walled sections – crippling strength by Needham's and Gerard's methods – thin-walled column strength – load carrying capacity of sheet stiffener panels – effective width – inter-rivet and sheet wrinkling failures - short panel failing strength.

UNIT V STRESS ANALYSIS OF WING AND FUSELAGE 9

Wing structural arrangements – factors influencing - wing stress analysis methods – determination of shear force and bending moment distribution over fuselage – Numerical problems – Tension field beam – general Wagner equation - Semi-tension field beams.

COURSE OUTCOMES	
CO 1	**Compute** the bending stress distribution in beams of symmetric and unsymmetrical sections. (**Apply**)
CO 2	**Calculate** the shear flow distribution in symmetrical and unsymmetrical thin-walled open section and its shear center. (**Apply**)
CO 3	**Calculate** the shear flow distribution in thin walled single and multi-cell structures subjected to combined loading. (**Apply**)
CO 4	**Compute** the crippling strength of thin plates and effective width of sheet stiffener panels. (**Apply**)
CO 5	**Analyze** the stress developed in aircraft wings and fuselage. (**Analyze**)

U18PCAS502	COMPRESSIBLE FLOW	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To make the student understand about the flow physics of high speed gases, shocks and high speed vehicles and experimentation techniques.

(Use of Gas Tables is permitted)

UNIT I FUNDAMENTAL ASPECTS OF COMPRESSIBLE FLOW 9

Compressibility, Continuity, Momentum and Energy equation for steady one dimensional flow, Compressible Bernoulli's equation, Area – Mach number – Velocity relation, Mach cone, Mach angle, One dimensional Isentropic flow through variable area duct, Isentropic relations - Critical conditions, Characteristic Mach number, Maximum discharge velocity.

UNIT II SHOCKS AND EXPANSION WAVES 10

Normal shock relations, Prandtl's relation, Hugonoit equation, Rayleigh Supersonic Pitot tube equation, Oblique shocks, θβM relation, Shock Polar, Reflection of oblique shocks, Left running and Right running waves, Interaction of oblique shock waves, slip line, Rayleigh flow, Fanno flow, Expansion waves, Prandtl-Meyer expansion, Maximum turning angle, Simple and non-simple regions, Operating characteristics of convergent and convergent-divergent nozzles.

UNIT III TWO DIMENSIONAL COMPRESSIBLE FLOW 10

Potential equation for 2-dimensional compressible flow, Linearization of potential equation,Small perturbation theory, Linearized Pressure Coefficient, Linearized subsonic flow, Prandtl-Glauert rule, Linearized supersonic flow, Method of characteristics, Wave drag coefficient.

UNIT IV HIGH SPEED FLOW OVER AIRFOILS, WINGS AND AIRPLANE CONFIGURATION 8

Critical Mach number, Drag divergence Mach number, Shock Stall, Shock- Boundary layer interaction, Supercritical Airfoil Sections, Transonic area rule, Swept wing, Airfoils for supersonic flows, Lift, drag, Pitching moment and Centre of pressure for supersonic profiles, Shock-expansion theory, wave drag, supersonic wings.

UNIT V EXPERIMENTAL METHODS 8

Wind tunnels for Subsonic, transonic, Supersonic and hypersonic flows, Various Measurement techniques – velocity, pressure, Flow visualization techniques in high speed flows, Shock tube, Gun tunnels

COURSE OUTCOMES	
CO 1	**Apply** the concepts of isentropic flow for problems related to variable area ducts. (**Apply**)
CO 2	**Calculate** the properties of flow through shock and expansion waves. (**Apply**)
CO 3	**Determine** the aerodynamic coefficients of compressible flows based on linearized flow theory. (**Apply**)
CO 4	**Categorize** various aircrafts intended for subsonic and supersonic regimes based on wing and fuselage design. (**Analyze**)
CO 5	**Describe** flow measurement and visualization techniques for high-speed flows. **(Understand)**

U18PCAS503	ROCKET PROPULSION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Airbreathing Propulsion				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to understand about the rocket engines, electric engines, components and functions.					

UNIT I THEORY OF ROCKET PROPULSION 8

Brief History – Classification – Rocket Principle and Rocket Equation – Mass Ratio – Specific Impulse – Desirable Parameters of Rockets – Propulsive Efficiency – Performance Parameters – Staging and Clustering of Rockets – Statics Testing of Rockets

UNIT II SOLID PROPELLANT ROCKETS 9

Operating principle – Specific impulse of a rocket – Igniters – Internal ballistics – Selection criteria of solid propellants – propellant grain design considerations – Progressive, Regressive and neutral burning in solid rockets.

UNIT III LIQUID PROPELLANT ROCKETS 10

Liquid propellant rockets – selection of liquid propellants – performance and choice of various feed systems for liquid propellant rockets – hydrazine monopropellant rockets–basics of cryogenic techniques – Cooling in liquid rockets and the associated heat transfer problems – advantages of liquid rockets over solid rockets –draining of propellant tanks under microgravity conditions

UNIT IV MODERN PROPULSION TECHNIQUES 8

Hybrid Rockets, Burning Mechanism, Advantages of Hybrid Rockets over Solid and Liquid Propellant Rockets – Nuclear Rockets – Pulse Detonation Rockets – Beamed Rockets and Sail Propulsion – Basics of Electrothermal, Electrostatic and Electromagnetic Thrusters

UNIT V ROCKET NOZZLE AND PERFORMANCE 10

Nozzle types – Effect of Shape and Area Ratio – Performance Losses, Flow Separation in Nozzles – Mass Flow Rate and Characteristic Velocity – Thrust Coefficient – Bell Nozzle – Unconventional Nozzles, SERN nozzle – Aerospike nozzle, annular nozzles.

TEXTBOOKS:

WEBLINKS:

https://ocw.mit.edu/courses/aeronautics-and-astronautics/16-512-rocket-propulsion-fall-2005/

COURSE OUTCOMES	
CO 1	Analyze the propulsion system with performance parameters
CO 2	Describe performance parameters used in solid rocket motor engines
CO 3	Explain the fundamental concept of a liquid rocket engine performance
CO 4	Comprehend and illustrate the basics of hybrid, nuclear rockets in terms of their designing approach
CO 5	Relate the significance of nozzle design.

Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong, M – Medium, W – Weak

1	**COs/ POs**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO 1**	**PSO 2**

3	**Category**	**Professional Core (PC)**													
4	**Approval**	**48th Academic Council Meeting**													

U18PCAS504	AIRCRAFT PERFORMANCE	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

UNIT I AERODYNAMICS OF THE AIRPLANE 10

International Standard Atmosphere, TAS, IAS and EAS, , Aerodynamic Lift, Drag and Moments – Lift, Drag and Moment Co-efficient- Aerodynamic Center – NACA airfoil nomenclature – Streamlined and Bluff body – Skin friction Drag, Pressure Drag and Induced Drag – Drag Polar – Various drags of an airplane – Methods of Drag Reduction – Mach Number – Effect on Drag Polar.

UNIT II AIRCRAFT ENGINE PERFORMANCE 10

Power available and power required curves- Thrust available and thrust required curves- Conditions for power required and thrust required minimum-Thrust available and maximum velocity, Power available and maximum velocity-Altitude effects on power available and power required-thrust available and thrust required-Effect of drag divergence on maximum velocity.

UNIT III STEADY LEVEL FLIGHT 10

Steady level flight, the fundamental Parameters: Thrust – to – weight ratio, Wing loading, Drag polar, and lift-to – drag ratio. Aerodynamic relations associated with lift-to-drag ratio, Range and Endurance of Propeller and Jet aircrafts

UNIT IV GLIDING AND CLIMBING FLIGHT 8

Equation of motion for Rate of climb- Shallow and steep angles of climb, Rate of climb, Climb hodograph, Maximum Climb angle and Maximum Rate of climb- , Absolute and service ceiling, Cruise climb, Gliding flight, Glide hodograph

UNIT V ACCELERATED FLIGHT 7

Estimation of take-off and landing distances, Methods of reducing landing distance, level turn, minimum turn radius, bank angle and load factor, Constraints on load factor, Pull up and pull down maneuvers, V-n diagram.

WEBLINKS:

https://swayam.gov.in/course/1316-introduction-to-airplane-performance

COURSE OUTCOMES	
CO 1	**Describe** basic principles relating to drag polar equation of the aircraft. (**Understand**)
CO 2	**Examine** the aircraft engine performance. (**Apply**)
CO 3	**Calculate** range and endurance for power and thrust producing engine under various flight conditions. (**Apply**)
CO 4	**Examine** climb and glide performance for shallow and steep angles. (**Apply**)
CO 5	**Calculate** take off, landing and turning performance under various flight conditions. (**Apply**)

U18PCAS505	AIRCRAFT STABILITY AND CONTROL	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				

UNIT I STATIC LONGITUDINAL STABILITY AND CONTROL 12

General concepts-Degrees of freedom of a rigid body, Static and dynamic stability, Need for stability in an airplane, inherently and marginally stable airplanes, Stability and Controllability, Requirements of control surfaces, criteria for longitudinal static stability, contribution to stability by wing, tail, fuselage, wing fuselage combination, Total longitudinal stability, Neutral point-Stick fixed and Stick free aspects, Free elevator factor, static margin, Hinge moment, Power effects on stability-propeller and jet aircrafts, longitudinal control, Movement of centre of gravity, elevator control effectiveness, elevator control power, elevator angle to trim, elevator angle per g, maneuver point, Stick force gradient and stick force per g, Aerodynamic balancing

UNIT II STATIC DIRECTIONAL STABILITY AND CONTROL 11

Directional stability-yaw and sideslip, Criterion of directional stability, contribution to static directional stability by wing, fuselage, tail, Power effects on directional stability-propeller and jet aircrafts, Rudder fixed and rudder free aspects, Rudder lock and Dorsal fin, Directional control, rudder control effectiveness, rudder requirements, adverse yaw, asymmetric power condition, spin recovery

UNIT III STATIC LATERAL STABILITY AND CONTROL 8

Lateral stability-Dihedral effect, criterion for lateral stability, evaluation of lateral stability-contribution of fuselage, wing, wing fuselage, tail, total static lateral stability, lateral control, aileron control power, aileron effectiveness, strip theory estimation of aileron effectiveness, roll control by spoilers, aileron reversal, aileron reversal speed

UNIT IV DYNAMIC LONGITUDINAL STABILITY 8

Aircraft Equations of motion, small disturbance theory, Estimation of longitudinal stability derivatives stability derivatives, Routh's discriminant, solving the stability quartic, Phugoid motion, Factors affecting the period and damping.

UNIT V DYNAMIC LATERAL AND DIRECTIONAL STABILITY 6

Dutch roll and spiral instability, Auto rotation and spin, Stability derivatives for lateral and directional dynamics.

WEBLINKS:

https://nptel.ac.in/courses/112103021/

COURSE OUTCOMES	
CO 1	Carry out experimentation on high speed flows.
CO 2	Conduct pressure distribution experiments on models
CO 3	Demonstrate optical flow visualization pattern over the models

Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong, M – Medium, W – Weak

U18PCAE5L3	FLIGHT SIMULATION LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Fundamentals of Aeronautics and Astronautics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint with the basic starting and operation of a Cessna 172 aircraft through a flight simulator					

LIST OF EXPERIMENTS

1 Specification of Cessna C-172 –S
2 Cessna-172 Trainer Aircraft Operational Check
3 Study of Cessna – 172 Flight Simulators
4 Demonstrate the Autopilot Mode and Automatic Direction Control Mode of Cessna 172 Trainer Aircraft
5 Demonstration of Takeoff And Landing in Cessna-127 Trainer Aircraft using Flight Simulator
6 Demonstration of Basic Aircraft Instruments
7 Study of Ring Laser Gyro
8 Study of Fly-By-Wire And Fly-By-Light
9 Demonstration of Lateral Autopilot
10 Demonstration of Longitudinal Autopilot

REFERENCES:

WEBLINKS:

https://www.digitaltrends.com/gaming/best-free-flight-simulators/

COURSE OUTCOMES	
CO 1	**Recognize**features of theflight simulator and observe basic operational procedure (pre-takeoff, takeoff and landing) for flying Cessna – 172 aircraft **(Understand).**
CO 2	**Identify** the basic aircraft instruments and their application during takeoff and landing **(Understand).**
CO 3	**Demonstrate** takeoff, autopilot and landing Cessna-172 **(Understand).**

Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong, M – Medium, W – Weak

SEMESTER VI

U18HSBA601	Organizational Behavior	L	T	P	C
	Total No. of contact hours: 45	3	0	0	3
	Pre-requisite: Nil				
	Course Designed by: Dept of Management Studies				

Course Objectives

1. Understanding the basic approaches in organization
2. Knowledge on theories of Personality
3. Clear sight on the Decision Making in Groups
4. Analyse the behaviour of individuals and groups in organizations in terms of the key factors that influence organizational behaviour.
5. Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behaviour.

UNIT I **9 hours**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

UNIT II **9 hours**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behaviour.

UNIT III **9 hours**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

UNIT IV **9 hours**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

UNIT V **9 hours**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

REFERENCES

3. Chandhan JS, Organizational Behavior, Vikas Publishers
4. Stephen Robbins, Organizatonal Behavior, Pearson Education
5. RS Diwedi, Human Relations and Organizational Behavior, Mac Millan

COURSE OUTCOMES (COs)	
CO1	**Identify** the frame work of Organizational Behaviour.**(Remember)**
CO2	**Infer** concepts of Interpersonal perception. **(Understand)**
CO3	**Compare** the Merits and Demerits of Group decision making.**(Understand)**

CO4	**Describe** the approach of leadership and Summarize the Sources of power.**(Remember)**
CO5	**Relate** change, conflict and culture of management. **(Understand)**

Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong, M – Medium, W – Weak

1	**COs/ POs**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO 1**	**PSO 2**

3	**Category**	**Humanities and Sciences (HS)**													
4	**Approval**	**48th Academic Council Meeting**													

U18PCAS601	FINITE ELEMENT ANALYSIS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Elements of Aerospace Structures				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint the student with basic numerical techniques called finite element techniques to analyze structural components.

UNIT I INTRODUCTION 9

Introduction to FEA - historical background - Review of various approximate methods – Rayleigh Ritz method, Weighted residual methods - Convergence criteria - Fundamentals of Finite Element Modeling – Element Division - Numbering Scheme - Examples of Finite Element Modeling

UNIT II ONE DIMENSIONAL SYSTEMS 9

Direct stiffness method – spring element- Derivation of the stiffness matrix- Example of a spring assemblage-Assembly of global stiffness matrix-Types of boundary conditions- The Potential energy approach –Examples- bar element – Coordinate systems and Shape Functions- The Potential Energy Approach- Assembly of Global Stiffness Matrix and Load Vector - Boundary Conditions- Temperature Effects – Heat transfer problems in 1D bar and wall

UNIT III TWO DIMENSIONAL SYSTEMS 9

Beam element – element stiffness – load vector – global stiffness matrix – boundary conditions – solution, Plane truss structure - Coordinate Transformation – Local & Global Coordinate- The Element Stiffness Matrix- Stress Calculations- Temperature Effects – Examples.Plane stress & strain – Constant Strain Triangle (CST)- Potential Energy Approach - Element Stiffness; Force Terms, Stress Calculations- Temperature Effects- Examples

UNIT IV THREE DIMENSIONAL SYSTEMS 9

Axisymmetric formulation – Element stiffness matrix and force vector – Body forces and temperature effects – Stress calculations – Boundary conditions and Nodal Solution; Mapping and Numerical Integration—Applications to cylinders under internal or external pressures – Rotating discs - Isoparametric Representation- Four noded quadrilateral for axisymmetric problems

UNIT V APPLICATIONS OF FEM TO AEROSPACE STRUCTURES 9

Linear static analysis-non linear static analysis –dynamic analysis-simple harmonic motion-damping consideration-forced vibration -Case studies and problems using software packages and programming.

COURSE OUTCOMES	
CO 1	**Compare** various functional approximation methods for structural problems. (**Analyze**)
CO 2	**Calculate** the nodal field variables for one dimensional structure. (**Apply**)
CO 3	**Determine** the stiffness matrix and stress developed in two dimensional structures. (**Apply**)
CO 4	**Calculate** the nodal displacements and stress for axi-symmetric structures. (**Apply**)
CO 5	**Analyze t**he static and dynamic behavior of structures. (**Analyze**)

	HEAT TRANSFER	L	T	P	C
U18PCAS602	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Aero – Thermodynamics, Fluid Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To familiarize the student with the various modes of heat transfer, estimation of heat transfer parameters and design of heat transfer devices, insulators and heat shields.

(Use of Heat and Mass Transfer Data Book is permitted)

UNIT I CONDUCTION HEAT TRANSFER – STEADY STATE 7

Modes of heat transfer: One dimensional steady state heat conduction: Composite Medium – Critical thickness – Effect of variation of thermal Conductivity – Extended Surfaces.

UNIT II CONDUCTION HEAT TRANSFER – TRANSIENT 10

Heat Conduction: Lumped System Analysis – Heat Transfer in Semi-infinite and infinite solids – Transient Heat Transfer – Temperature charts

UNIT III CONVECTIVE HEAT TRANSFER 8

Introduction – Free convection in atmosphere - free convection on a vertical flat plate – Empirical relation in free convection – Forced convection – Laminar and turbulent - convective heat transfer analysis in flows between parallel plates, over a flat plate and in a circular pipe. Empirical relations.

UNIT IV RADIATIVE HEAT TRANSFER AND HEAT EXCHANGERS 10

Concept of black body-Intensity of radiation-Laws of Black body Radiation-Radiation from non-black surfaces- real surfaces – Radiation between surfaces-Radiation shape factors-Radiation shields.

Types of heat exchangers -overall heat transfer coefficient- LMTD- NTU method of heat exchanger Analysis.

UNIT V HEAT TRANSFER PROBLEMS IN AEROSPACE ENGINEERING 10

Heat transfer problems in gas turbine engines, rocket nozzles and re-entry vehicles – Numerical techniques to solve heat transfer problems in aerospace engineering –numerical problems using software and programming.

TEXTBOOKS:

4. Holman, J.P., "Heat Transfer ", McGraw Hill Book Co., Inc., New York, TenthEdition.,2009.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc18_ch08/course

COURSE OUTCOMES	
CO 1	Students will be able to calculate heat transfer rate through plane wall, cylinder and sphere
CO 2	Student will be able to solve problem involving unsteady heat transfer by conduction
CO 3	Students will be able to design and analysis system involving convective heat transfer
CO 4	Student will be able to calculate the amount of heat transfer by radiation
CO 5	Student will be able to solve the heat transfer problem in gas turbine, reentry vehicle

Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong, M – Medium, W – Weak

U18PCAS6L1	COMPUTER AIDED ANALYSIS LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Elements of Aerospace Structures, Low Speed Aerodynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint the student with various computer software for engineering analysis					

LIST OF EXPERIMENTS

1 Study of commercial software packages and their tools
2 Stress analysis of beams with different loading conditions
3 Stress analysis of a plate with circular hole
4 Stress analysis of an axisymmetric component
5 Vibration analysis of cantilever beam
6 Simple conduction example
7 Thermal mixed boundary example
8 Flow field analysis of jets
9 Flow field simulation over an airfoil
10 Fluid – Structure interaction

REFERENCES:

1. CAA Lab Manual, Department of Aeronautical Engineering, 2017

WEBLINKS:

https://www.ansys.com/en-in/academic/free-student-products/support-resources

COURSE OUTCOMES	
CO 1	**Carry out** elementary mechanical coupon testing of materials as per the given procedure**. (Imitation)**
CO 2	**Acquire** data using the available measuring devices. **(Manipulation)**
CO 3	**Perform** basic mathematical calculation using the appropriate formulae and represent the results in form of graph and table**.(Precision)**

U18PCAS6L2	PROPULSION LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	4	2
	Prerequisite – Low Speed Aerodynamics, Aircraft Propulsion				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To give an experience on experimentation with fluid jets, combustion and heat transfer.					

LIST OF EXPERIMENTS

1 Estimation of spread rate in incompressible circular jets.
2 Estimation of spread rate in incompressible non- circular jets.
3 Estimation of centre line velocity decay in supersonic circular jets.
4 Estimation of centre line velocity decay in supersonic non-circular jets.
5 Determination of Wall jet velocity profile.
6 Supersonic Jet Pattern Analysis using Schlieren Technique.
7 Study of free convective heat transfer over a flat plate.
8 Study of forced convective heat transfer over a flat plate.
9 Operation of a subsonic Ramjet engine.
10 Determine the calorific value of Fuel using Bomb Calorimeter.

U18EEAS6L1	AIRCRAFT DESIGN PROJECT	L	T	P	C
	Total Contact Hours – 45	0	0	6	3
	Prerequisite – Flight Mechanics, Engineering Graphics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to carry out a preliminary design of an aircraft.					

LIST OF EXPERIMENTS

1 Comparative configuration study of different types of airplanes
2 Comparative study on specification and performance details of aircraft
3 Preparation of comparative data sheets
4 Selection of main parameters for the design
5 Preliminary and Secondary weight estimations.
6 Power plant selection and airfoil selection
7 Estimation of Drag Polar
8 Performance calculations and stability estimates
9 V – n diagram
10 Critical loading performance and final V – n graph calculation
11 Structural Design Study
12 Load estimation of wings and fuselage
13 Design of components of wings and fuselage
14 Balancing and maneuvering loads
15 Preparation of layouts of balance diagram and three view drawings

SEMESTER VII

	GUIDANCE AND CONTROL	L	T	P	C
U18PCAS701	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basic Electricals and Electronics, Aircraft Stability and Control				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To provide the students the basic knowledge of guidance and control					

UNIT I INTRODUCTION **4**

Introduction to Guidance and control - Definition, Historical background.

UNIT II AUGMENTATION SYSTEMS **7**

Need for automatic flight control systems, Stability augmentation systems, control augmentation systems, Gain scheduling concepts.

UNIT III LONGITUDINAL AUTOPILOT **12**

Displacement Autopilot-Pitch Orientation Control system, Acceleration Control System, Glide Slope Coupler and Automatic Flare Control and Flight path stabilization, Longitudinal control law design using back stepping algorithm.

UNIT IV LATERAL AUTOPILOT **10**

Damping of the Dutch Roll, Methods of Obtaining Coordination, Yaw Orientation Control system, turn compensation, Automatic lateral Beam Guidance. Introduction to Fly-by-wire flight control systems, Lateral control law design using back stepping algorithm.

UNIT V MISSILE AND LAUNCH VEHICLE GUIDANCE **12**

Operating principles and design of guidance laws, homing guidance laws- short range, Medium range and BVR missiles, Launch Vehicle- Introduction, Mission requirements, Implicit guidance schemes, Explicit guidance, Q guidance schemes.

COURSE OUTCOMES

CO 1	**Explain** the equations governing the aircraft dynamics and the process of liberalizing them.
CO 2	**Discuss** the guidance schemes and requirements for aircrafts and missiles
CO 3	**Apply** the principle of stability and control augmentation systems.
CO 4	**Analyze** the oscillatory modes and methods of suppressing them
CO 5	**Design** the controller for lateral, longitudinal and directional control of aircrafts.

	SATELLITE TECHNOLOGY	L	T	P	C
U18PCAS702	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basic Electricals and Electronics, Applied Dynamics and Vibrations				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To provide the students an understanding of different kinds of satellites, their design, dynamics and their components					

UNIT I INTRODUCTION TO SATELLITE SYSTEMS 9

Common satellite applications and missions – Typical spacecraft orbits – Definitions of spin the three axis stabilization-Space environment – Launch vehicles – Satellite system and their functions (structure, thermal, mechanisms, power, propulsion, guidance and control, bus electronics).

UNIT II SATELLITE DYNAMICS 9

Fundamental of satellite dynamics – Time and coordinate systems – Orbit determination and prediction – Orbital maneuvers – GPS systems and application for satellite/orbit determination – Ground station network requirements.

UNIT III SATELLITE STRUCTURES & THERMAL CONTROL 9

Satellite mechanical and structural configuration: Satellite configuration choices, launch loads, separation induced loads, deployment requirements – Design and analysis of satellite structures – Structural materials and fabrication – The need of thermal control: externally induced thermal environment – Internally induced thermal environment - Heat transfer mechanism: internal to the spacecraft and external heat load variations – Thermal control systems: active and passive methods.

UNIT IV SPACECRAFT CONTROL 9

Control requirements: attitude control and station keeping functions, type of control maneuvers – Stabilization schemes: spin stabilization, gravity gradient methods, 3 axis stabilization – Commonly used control systems: mass expulsion systems, momentum exchange systems, gyro and magnetic torque - Sensors star and sun sensors, earth sensor, magnetometers and inertial sensors

UNIT V POWER SYSTEM AND BUS ELECTRONICS 9

Solar panels: Silicon and Ga-As cells, power generation capacity, efficiency – Space battery systems – battery types, characteristics and efficiency parameters – Power electronics. Telemetry and telecommand systems: Tm & TC functions, generally employed communication bands (UHF/VHF, S, L, Ku, Kaetc), their characteristics and applications-Coding Systems – Onboard computer- Ground checkout Systems.

U18EEAS7P1	PROJECT PHASE I	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Gas Dynamics, Aircraft Structural Mechanics, Advanced Aerospace Propulsion				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVES

1. To acquaint the student with theoretical and experimental studies related to aeronautical science.
2. To enable the student to get involved in key area of research in the branch of study.
3. To perform the literature studies and survey that will help in formulating the problem statement.
4. To enable the student to understand the concept of the acquired statement to get the idea about the work.
5. To work according to the acquired idea and to develop report in the form as specified in the guidelines

DESCRIPTION

The objective of the project phase I is to enable the students in convenient groups of not more than 4 members on a project involving theoretical and experimental studies related to the branch of study. Every project work shall have a guide who is the member of the faculty of the institution. Each student shall finally produce a comprehensive report covering background information, literature survey and problem statement. This final report shall be in typewritten form as specified in the guidelines.

COURSE OUTCOMES	
CO 1	**Observe** the current market scenario to develop new or modify the existing product. **(Imitation)**
CO 2	**Build** a preliminary design of the prototype. **(Manipulation)**
CO 3	**Point out** the methodology for implementation of design. **(Manipulation)**

4	Approval	48th Academic Council Meeting													

SEMESTER VIII

	PROJECT WORK	L	T	P	C
	Total Contact Hours – 18 hours per week	**0**	**0**	**18**	**9**
U18PRAS8P1	Prerequisite – Low Speed Aerodynamics, Aircraft Structural Mechanics, Advanced Aerospace Propulsion				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVES

1. To introduce to the student about the scientific method of research
2. To accustom the student to the processes involved during a project work
3. To enable the student to understand the concepts of scrutiny to get the idea about the work that takes place during a project
4. To familiarize the student on the preparation of technical reports/paper of his/her project work
5. To enable the student to be able to make a proper presentation of his/her assigned work/project

DESCRIPTION

The objective of the project work is to enable the students in convenient groups of not more than 4 members on a project involving theoretical and experimental studies related to the branch of study. Every project work shall have a guide who is the member of the faculty of the institution. Eighteen periods per week shall be allotted in the time table and this time shall be utilized by the students to receive the directions from the guide, on library reading, laboratory work, computer analysis or field work as assigned by the guide and also to present in periodical seminars on the progress made in the project. Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion. This final report shall be in typewritten form as specified in the guidelines.

COURSE OUTCOMES	
CO 1	**Tell** the value of achieving perfection in projects implementation & completion. **(Imitation)**
CO 2	**Build** the skills, competencies and point of view of designed concepts. **(Naturalization)**
CO 3	**Replicate** professional skills in Presentation, Technical report writing, critical thinking and decision making. **(Manipulation)**

Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong, M – Medium, W – Weak

1	**COs/ POs**	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO 1**	**PSO 2**
2	CO1	H	H	H						H	H			L	L
	CO2	H	H	H		H				H	H			L	L
	CO3	H	H	H		H				H	H			L	L
3	**Category**	**Professional Core (PC)**													
4	**Approval**	**48th Academic Council Meeting**													

PROFESSIONAL ELECTIVE I (PE I)

U18PEAS011	**SPACE MISSION DESIGN AND ANALYSIS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Introduction to Aerospace Engineering				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To make the students learn basics of Space Mission design process					

UNIT I SPACE MISSION DESIGN PROCESS 9

Classification of space missions – Low earth, Medium altitude, Geo-stationary, deep space, space mission life cycle, Mission objectives, identification of mission needs, requirements and constraints, mission characterization, mission evaluation, orbit and constellation design - Space Environment – peculiarities, survivability, selection of spacecraft material - Selection of launch systeM

UNIT II SPACECRAFT SYSTEM ENGINEERING 9

Spacecraft design and sizing, spacecraft payload design, spacecraft subsystems, functional requirement - Propulsion, attitude determination and control, power systems, thermal control, navigation and guidance, telemetry, tracking and command systems, ground system design

UNIT III GENERAL N-BODY PROBLEM 9

Relative Motion in the N-body Problem, Two body problem, orbit determination techniques, Kepler's equation, Lamberts problem - Restricted Three Body Problem – Lagrange points - Jacobi Integral, orbital perturbation

UNIT IV SATELLITE INJECTION AND REENTRY FLIGHT DYNAMICS 9

Launching of a satellite - General aspects of satellite Injections, launch vehicle ascent trajectories, injection parameters and orbital elements, launch vehicle performance, orbit deviations due to injection errors - Reentry flight dynamics – fundamentals of entry flight mechanics, fundamentals of entry heating, entry vehicle design, landing and recovery techniques

UNIT V INTERPLANETARY TRAJECTORIES 9

Patched Conic Approximation - Patched Conic Procedure - Sphere of Influence - Locating the Planets - Design of the Transfer Ellipse - Design of the Departure Trajectory - Design of the Arrival Trajectory - Gravity-Assist maneuver - Establishing Planetary Orbit – Motion of the Earth-Moon System - Time of Flight and Injection Velocity - Lunar Patched Conic

TEXTBOOKS:

5. Ashish Tewari, “Atmospheric and Space Flight Dynamics”, Birkhauser, Boston, 2007

WEBLINKS:
https://www.aticourses.com/space_mission_analysys.html

COURSE OUTCOMES	
CO 1	Describe the basic process of space mission design (understand)
CO 2	Classify the various spacecraft systems and their design (understand)
CO 3	Summarize orbit determination techniques and n body problems (understand)
CO 4	Identify the concepts of launching and reentry of vehicles (understand)
CO 5	Develop the trajectory and orbits for space vehicles (apply)

U18PEAS012	SYSTEMS ENGINEERING	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To introduce the concepts related to system engineering and its significance with respect to aerospace systems.					

UNIT I INTRODUCTION 9

Overview, Systems definition and concepts, Conceptual system design, Systems thinking and Systems Engineering.

UNIT II DESIGN AND DEVELOPMENT 9

Detail Design Requirements, The Evolution of Detail Design, Design Data, Information, and Integration, Various phases in product life cycle, Systems verification & Integration

UNIT III DESIGN FOR OPERATIONAL FEASIBILITY 9

Design for Reliability, Maintainability, Usability, Sustainability and Affordability - Definition and Explanation, Measures, System Life Cycle cost, Analysis Methods, Practical considerations.

UNIT IV SYSTEMS ENGINEERING MANAGEMENT 9

Systems Engineering Planning and Organization, Systems Engineering Management Plan (SEMP), Program Leadership and Direction, Risk Management, Evaluation and Feedback.

UNIT V CASE STUDIES 9

Systems Integration -Aircraft Systems, Missile Systems, Satellite Systems-Launch Vehicle Systems and Radar, Design Drivers in the Project, Product, Operating Environment-Interfaces with the Subsystems

TEXTBOOKS:

1. Systems Engineering and Analysis by Benjamin S. Blanchard / WolterJ.Fabrycky, Prentice Hall, International Version 2010

REFERENCES:

1. Alexander Kossiakoff, William N. Sweet, Systems Engineering : Theory & Practice, John Wiley &Sons, 2002
2. James N. Martin, Systems Engineering Guidebook: A Process for Developing Systems and Products, CRC Press, 1997

4. Andrew P Sage and James E Armstrong, Systems Engineering, Wiley Inter science publications, (2004)

WEBLINKS:

https://www.coursera.org/learn/systems-engineering

COURSE OUTCOMES	
CO 1	Explain the conceptual system design (Understand)
CO 2	Describe the stage s of product development (Understand)
CO 3	Observe the parameters influencing the design (Remember)
CO 4	Enumerate the factors related to systems engineering management(Remember)
CO 5	Appraisevarious systems and their processes, faults, rectifications etc through case studies.(ANALYSE)

	LAUNCH VEHICLE AERODYNAMICS	L	T	P	C
U18PEAS013	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Applied Dynamics and Vibrations, Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint the students with the fundamentals of the aerodynamics of launch vehicles					

UNIT I BASICS OF HIGH SPEED AERODYNAMICS 9

Compressible flows-Isentropic relations-mathematical relations of flow properties across shock and expansion waves-fundamentals of Hypersonic Aerodynamics

UNIT II BOUNDARY LAYER THEORY 9

Basics of boundary layer theory-compressible boundary layer-shock shear layer interaction - Aerodynamic heating-heat transfer effects

UNIT III LAUNCH VEHICLE CONFIGURATIONS AND DRAG ESTIMATION 9

Types of Rockets and missiles-various configurations-components-forces on the vehicle during atmospheric flight-nosecone design and drag estimation.

UNIT IV AERODYNAMICS OF SLENDER AND BLUNTBODIES 9

Aerodynamics of slender and blunt bodies, wing-body interference effects-Asymmetric flow separation and vortex shedding-unsteady flow characteristics of launch vehicles-determination of aero elastic effects.

UNIT V AERODYNAMIC ASPECTS OF LAUNCHING PHASE 9

Booster separation-crosswind effects-specific consideration sin missile launching-missile integration and separation-methods of evaluation and determination-Stability and Control Characteristics of Launch Vehicle Configuration-Wind tunnel tests –Comparison with CFD Analysis.

TEXTBOOKS:

1. Anderson, J.D., “Fundamentals of Aerodynamics”, McGraw-Hill BookCo. NewYork, 2010. (Units 1 & 2)
2. Chin SS, Missile Configuration Design, McGrawHill, New York, 1961. (Unit 3)
3. Anderson, J.D., “Hypersonic and High Temperature Gas Dynamics”, AIAA Education Series.(Units 4 & 5)

4. Elements of Space Technology for Aerospace Engineers”, Meyer Rudolph X, Academic Press,1999

WEBLINKS:

https://www.edx.org/course/flight-vehicle-aerodynamics-mitx-16-110x-0

COURSE OUTCOMES	
CO 1	Summarize the fundamentals of high speed aerodynamics (understand)
CO 2	Discuss the importance of the boundary layer study in high speed flows (understand)
CO 3	Identify the various configurations of launch vehicles (understand)
CO 4	Examine the aerodynamic concepts of slender and blunt bodies (apply)
CO 5	Observe the importance of aerodynamics during the launching phase (understand)

	BOUNDARY LAYER THEORY	L	T	P	C
U18PEAS014	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Fluid Mechanics, Co-requisite – Gas Dynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To enable the student to understand about the various aspects of viscous flow, laminar and turbulent boundary layer, prediction of skin friction drag					

UNIT I FUNDAMENTAL EQUATIONS OF VISCOUS FLOW 9

Fundamental equations of viscous flow, Conservation of mass, Conservation of Momentum-Navier-Stokes equations, Energy equation, Mathematical character of basic equations, Dimensional parameters in viscous flow, Nondimensionalising the basic equations and boundary conditions, vorticity considerations, creeping flow, boundary layer flow

UNIT II SOLUTIONS OF VISCOUS FLOW EQUATIONS 9

Solutions of viscous flow equations, Couette flows, Hagen-Poisuelle flow, Flow between rotating concentric cylinders, Combined Couette-Poiseuille Flow between parallel plates, Creeping motion, Stokes solution for an immersed sphere, Development of boundary layer, Displacement thickness, momentum and energy thickness.

UNIT III LAMINAR BOUNDARY LAYER EQUATIONS 9

Laminar boundary layer equations, Flat plate Integral analysis of Karman – Integral analysis of energy equation – Laminar boundary layer equations – boundary layer over a curved body-Flow separation- similarity solutions, Blasius solution for flat-plate flow, Falkner–Skan wedge flows, Boundary layer temperature profiles for constant plate temperature –Reynold's analogy, Integral equation of Boundary layer – Pohlhausen method – Thermal boundary layer calculations

UNIT IV TURBULENT BOUNDARY LAYER EQUATIONS 9

Turbulence-physical and mathematical description, Two-dimensional turbulent boundary layer equations — Velocity profiles – The law of the wall – The law of the wake – Turbulent flow in pipes and channels – Turbulent boundary layer on a flat plate – Boundary layers with pressure gradient, Eddy Viscosity, mixing length , Turbulence modeling

UNIT V COMPRESSIBLE BOUNDARY LAYERS EQUATIONS 9

Compressible boundary layer equations, Recovery factor, similarity solutions, laminar supersonic Cone rule, shock-boundary layer interaction

TEXTBOOKS:

1. White, F. M., Viscous Fluid Flow, McGraw-Hill & Co., Inc., New York, 2005.

REFERENCES:

1. Schlichting, H., Boundary Layer Theory, McGraw-Hill, New York, 2000.
2. Reynolds, A, J., Turbulent Flows Engineering, John Wiley and Sons, 1980.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc16_me04

COURSE OUTCOMES	
CO 1	**Recall** the fundamental equations of viscous flow and basics of boundary layer theory. **(Understand)**
CO 2	**Discuss** the solutions of simplified viscous flow equations. **(Understand)**
CO 3	**Discuss** theequations and methods used for solving the flow field of laminar boundary layer over a flat plate. **(Understand)**
CO 4	**Describe** the basics of Turbulent boundary layer. **(Understand)**
CO 5	**Describe** the basics of Compressible boundary layer. **(Understand)**

PROFESSIONAL ELECTIVE II (PE II)

U18PEAS021	**THEORY OF ELASTICITY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To make the student understand the elastic behavior of different structural components under various loadings and boundary conditions					

UNIT I BASIC EQUATIONS OF ELASTICITY 9

Definition of Stress and Strain: Stress - Strain relationships - Equations of Equilibrium, Compatibility equations, Boundary Conditions, Saint Venant's principle - Principal Stresses, Stress Ellipsoid - Stress invariants

UNIT II PLANE STRESS AND PLANE STRAIN PROBLEMS 9

Airy's stress function, Bi-harmonic equations, Polynomial solutions, Simple two dimensional problems in Cartesian coordinates like bending of cantilever and simply supported beams.

UNIT III POLAR COORDINATES 9

Equations of equilibrium, Strain - displacement relations, Stress – strain relations, Airy's stress function, Axi – symmetric problems, Introduction to Dunder's table, Curved beam analysis, Lame's, Kirsch, Michell's and Boussinesque problems – Rotating discs

UNIT IV TORSION 9

Navier's theory, St. Venant's theory, Prandtl's theory on torsion, semi- inverse method and applications to shafts of circular, elliptical, equilateral triangular and rectangular sections. Membrane Analogy.

UNIT V INTRODUCTION TO THEORY OF PLATES AND SHELLS 9

Classical plate theory – Assumptions – Governing equations – Boundary conditions – Navier's method of solution for simply supported rectangular plates – Levy's method of solution for rectangular plates under different boundary conditions.

TEXTBOOKS:

1. Timoshenko, S., and Goodier, T.N., "Theory of Elasticity", McGraw–Hill Ltd., Tokyo, 1990.

REFERENCES:

1. Enrico Volterra& J.H. Caines, "Advanced Strength of Materials", Prentice Hall, New Jersey, 1991.
2. Wng, C.T., "Applied Elasticity", McGraw–Hill Co., New York, 1993.
3. Sokolnikoff, I.S., "Mathematical Theory of Elasticity", McGraw–Hill New York,1978.

COURSE OUTCOMES	
CO 1	The student will know about the basic equations of elasticity
CO 2	The student will be able to solve plane stress and plane strain problems using modules
CO 3	The student will know the procedure of coordinates system.
CO 4	The student will understand the procedure of conduct torsion problems
CO 5	The student will get an idea of theory of plates and shells

U18PEAS022	MANNED SPACE MISSIONS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Introduction to Aerospace Engineering				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint the students with the basic requirements and mission planning for manned space missions.

UNIT I INTRODUCTION 9

The physics of space - Current missions: space station, Moon mission, and Mars missions - Engineering challenges on Manned vs. unmanned missions - Scientific and technological gains from space programs - Salient features of Apollo and Space station missions – space shuttle mission

UNIT II EFFECT OF SPACE ENVIRONMENT 9

Atmosphere: Structure and Composition - - Atmosphere: Air Pressure, Temperature, and Density - Atmosphere: Meteoroid, Orbital Debris & Radiation Protection - Human Factors of Crewed Spaceflight,Safety of Crewed Spaceflight - Magnetosphere - Radiation Environment: Galactic Cosmic Radiation (GCR), Solar Particle Events (SPE) - Radiation and the Human Body – Impact of microgravity and g forces on humans – space adaptation syndrome.

UNIT III LIFE SUPPORT SYSTEMS 9

Life Support Systems and Space Survival Overview - - Environment Controlled Life Support Systems - Human / Machine Interaction - - Human Factors in Control Design – Crew Accommodations

UNIT IV MISSION PLANNING 9

Ground Communication and Support - Space Resources and Mission Planning - Space Mission Design: Rockets and Launch Vehicles - Orbital Selection and Astrodynamics, Entry, Descent, Landing, and Ascent, Designing and Sizing Space elements, Transfer, Entry, Landing, and Ascent Vehicles, Designing, Sizing, and Integrating a Surface Base, Planetary Surface Vehicles

UNIT V SPACECRAFT SUBSYSTEMS 9

Spacecraft Subsystems: Space Operations - Space Architecture, Attitude Determination and Control - Designing Power Systems - Extravehicular Activity Systems - Space Robotics – Mission Operations for Crewed Spaceflight - Command, Control, and Communications Architecture

TEXTBOOKS:

1. Larson, W. J. and Pranke, L. K., Human Spaceflight: Mission Analysis and Design, McGrawHill Higher Education, Washington, DC , 1999

REFERENCES:

1. Connors, M.M., Harrison, A.A., and Akins, F.R. 2005. Living Aloft: Human Requirements for Extended Spaceflight, University Press of the Pacific,Honolulu, Hawaii: ISBN: 1-4102-1983-6
2. Eckart, P. 1996. Spaceflight Life Support and Biospherics.

WEBLINKS:
https://www.edx.org/course/human-spaceflight-introduction-kthx-sd2905-1x-0

COURSE OUTCOMES	
CO 1	Identifythe basics of manned space missions (remember)
CO 2	Describe the effect of space environment on spacecraft and living things(Understand)
CO 3	Generalize the various life support systems necessary for manned space missions (understand)
CO 4	Sketch various plans for space missions (Apply)
CO 5	Explain the different subsystems of a spacecraft (Understand)

U18PEAS023	ELECTRIC PROPULSION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Rocket Propulsion				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To introduce basic physics of electric propulsion systems.					

UNIT I INTRODUCTION TO THE BASIC PHYSICS OF ELECTRIC PROPULSION SYSTEMS 8

Historical outline - Definition of Electric Propulsion - High impulse Space Missions - Exhaust velocity and specific impulse - Power supply penalty – Electric charges and Electrostatic fields - Currents and Magnetic interactions - Time dependent fields and Electromagnetic wave propagation - Application to ionized gas flows

UNIT II PHYSICS OF IONIZED GASES 12

Atomic structure of gases - Ionization processes - Particle collisions in an ionized gas - Electrical conductivity of an ionized gas - Kinetic Theory

UNIT III ELECTRO-THERMAL PROPULSION 9

One dimensional model - Enthalpy of high temperature gases - Frozen flow efficiency - Resistojets - Electrical discharges - Arcjets - Operation and Analysis - Materials - Advantages and Disadvantages

UNIT IV ELECTROMAGNETIC PROPULSION 9

The Lorentz force - Magnetogasdynamics channel flow - Ideal steady flow acceleration - Thermal and viscous losses - Geometry considerations - Self induced fields - Sources of the conducting gas - The magnetoplasmadynamic arc - Magneto- plasmadynamic (MPD) thrusters - Pulsed plasma acceleration - Pulsed plasma thrusters (PPT) - Quasi steady acceleration - Pulsed inductive acceleration - Traveling wave acceleration

UNIT V ELECTROSTATIC PROPULSION 7

One dimensional space-charge flows - Basic relationships - The acceleration- deceleration concept - Ion engines - Design and Performance - Hall effect – Hall thrusters - Field emission electric propulsion (FEEP) - Colloid thrusters

TEXTBOOKS:

1. Robert G. Jahn, “Physics of Electric Propulsion”, McGraw-Hill Series, New York, 1968.

https://engineering.purdue.edu/ProEd/courses/electric-propulsion

https://ocw.mit.edu/courses/aeronautics-and-astronautics/16-522-space-propulsion-spring-2015/

COURSE OUTCOMES	
CO 1	LIST different types of techniques used in electric PROPULSION(Remember)
CO 2	Discuss the properties of ionized gases (Understand)
CO 3	Classify electro thermal propulsive engines (understand)
CO 4	Identify the engines working based on electromagnetic propulsion(Understand)
CO 5	Explain the field electric propulsive systems

U18PEAS024	SPACECRAFT POWER SYSTEMS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basic Electricals and Electronics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: The students will understand the advanced concepts of Spacecraft power systems, its elements, energy storage technology, power convertors and power distribution.

UNIT I SPACECRAFT ENVIRONMENT & DESIGN CONSIDERATION 9

Orbit definition /Mission Requirements of LEO, GEO, GTO & HEO, Lunar orbits, IPO with respect to Power Generation – Power System Elements - Solar aspect angle Variations

UNIT II POWER GENERATION 9

Study of Solar spectrum - Solar cells - Solar Panel design - Solar Panel Realization – Solar Panel testing - Effects of Solar cells and panels (IR, UV, Particles)

UNIT III ENERGY STORAGE TECHNOLOGY 9

Types of batteries – Primary & Secondary batteries - Nickel Cadmium - Nickel-Hydrogen – Nickel metal hydride - Lithium-ion –Lithium Polymer - Silver Zinc– Electrical circuit model – Performance characteristics of batteries - Application of batteries in launch vehicles and satellites – Fuel Cell – Polymer Electrolyte membrane Fuel Cell – Regenerative Fuel Cell

UNIT IV POWER CONVERTERS 9

DC – DC converters – Basic Convertors - Buck, Boost, Buck- boost converter –Derived converters: Fly back converter – Transformer coupled forward converter – Push-Pull converter - CUKs convertor– Resonant converter – Voltage and current regulators

UNIT V POWER CONTROL, CONDITIONING AND DISTRIBUTION 9

Solar Array Regulators – Battery changing schemes – Protection Schemes - Distribution – Harness - Thermal Design - EMI/EMC/ESD/Grounding schemes for various types of circuits and systems

TEXTBOOKS:

1. Patel, Mukund R, ‘Spacecraft Power Systems’ CRC Press Boca Raton, 2005

REFERENCES:

WEBLINKS:

https://www.aticourses.com/spacecraft_power_systems.htm
https://online-learning.tudelft.nl/courses/spacecraft-technology/

COURSE OUTCOMES	
CO 1	Recall the concepts of orbits in space(Remember)
CO 2	Discuss the techniques involved in solar panels (understand)
CO 3	Classify the types of power storage systems in space applications(Understand)
CO 4	List the efficient power convertors for space applications (Remember)
CO 5	Describe the schemes involved in power conversion and distribution(understand)

PROFESSIONAL ELECTIVE (PE) III

U18PEAS031	**HYPERSONIC AERODYNAMICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Gas Dynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To study the environment around hypersonic vehicles and bodies created by strong shock waves.					

UNIT I FUNDAMENTALS OF HYPERSONIC AERODYNAMICS 9

Introduction to hypersonic aerodynamics-differences between hypersonic aerodynamics and supersonic aerodynamics-concept of thin shock layers-hypersonic flight paths – hypersonic similarity parameters-shock wave and expansion wave relations of inviscid hypersonic flows.

UNIT II SIMPLE SOLUTION METHODS FOR HYPERSONIC IN VISCID FLOWS 9

Local surface inclination methods-Newtonian theory-modified Newtonian law-tangent wedge and tangent cone and shock expansion methods-approximate theory-thin shock layer theory.

UNIT III VISCOUS HYPERSONIC FLOW THEORY 9

Boundary layer equation for hypersonic flow-hypersonic boundary layers-self similar and non self similar boundary layers-solution methods for non self similar boundary layers aerodynamic heating.

UNIT IV VISCOUS INTERACTIONS IN HYPERSONIC FLOWS 9

Introduction to the concept of viscous interaction in hypersonic flows-strong and weak viscous interactions-hypersonic viscous interaction similarity parameter-introduction to shock wave boundary layer interactions.

UNIT V INTRODUCTION TO HIGH TEMPERATURE EFFECTS 9

Nature of high temperature flows-chemical effects in air-real and perfect gases-Gibb's free energy and entropy-chemically reacting mixtures-recombination and dissociation.

TEXTBOOKS:

1. EthirajanRathakrishnan., "High Enthalpy Gas Dynamics", John Wiley and Sons, 2015

3. John. T Bertin, "Hypersonic Aerothermodynamics", published by AIAA Inc.,Washington. D.C., 1994.

WEBLINKS:

https://nptel.ac.in/courses/101103003/

COURSE OUTCOMES	
CO 1	**Recall** the concepts of compressible flows and differentiate between supersonic and hypersonic flows. **(Remember)**
CO 2	**Discuss** simple solution methods of hypersonic inviscid flows. **(Understand)**
CO 3	**Discuss** the basics of viscous hypersonic flows. **(Understand)**
CO 4	**Describe** the shock shear layer interaction in hypersonic flows. **(Understand)**
CO 5	**Discuss** basics of high temperature flows. **(Understand)**

	VIBRATIONS AND ELEMENTS OF AERO ELASTICITY	L	T	P	C
U18PEAS032	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Elements of Aerospace Structures				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To know about the role of Vibrations, vibration analysis and ideas about Aero elasticity in engineering and industry and design and analysis of components subject to vibrations.

UNIT I SINGLE DEGREE OF FREEDOM SYSTEMS 10

Vibration Terminologies, Simple harmonic motion, Newton's law, D' Alembert's principle, Energy methods, Free vibrations, Damped vibrations, Forced Vibrations with and without damping, Support excitation, Transmissibility, Vibration measuring instruments.

UNIT II MULTI DEGREE OF FREEDOM SYSTEMS 10

Two degrees of freedom systems, static and dynamic couplings, Vibration absorbers, Principal co-ordinates, principal modes and orthogonal condition, Eigen value problems, Lagrangean equations and applications.

UNIT III CONTINUOUS SYSTEMS 8

Vibration of elastic bodies, vibration of strings, Longitudinal –lateral and Torsional vibrations.

UNIT IV APPROXIMATE METHODS 9

Approximate methods-Rayleigh's method, Dunkerleys method, Holzer method, Matrix iteration method

UNIT V ELEMENTS OF AEROELASCTICITY 8

Vibrations due to coupling of bending and torsion, collars triangle, aero elastic instabilities and their prevention, Wing divergence,reversal of aileron control, Flutter and its prevention.

TEXTBOOKS:

1. V. P. Singh, "Mechanics of Vibration", (Units 1 to 4)

WEBLINKS:

https://swayam.gov.in/course/4531-introduction-to-mechanical-vibration

CO 1	**Compute** the natural frequency of SDOF systems under free and forced vibrations. **(Apply)**
CO 2	**Determine** the frequency of vibrating body using instruments. **(Apply)**
CO 3	**Calculate** principle mode of vibration for MDOF systems. **(Apply)**
CO 4	**Calculate** the natural frequency of continuous systems. **(Apply)**
CO 5	**Calculate** natural frequency of MDOF systems using approximate methods. **(Apply)**
CO 6	**Discuss** the problems in aeroelastic instability and its prevention. **(Understand)**

U18PEAS033	SPACE VEHICLE DESIGN	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Elements of Aerospace Structures				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To introduce to the student about the design of a space vehicle					

UNIT I FUNDAMENTAL ASPECTS OF SPACE SYSTEMS ENGINEERING 9

Space Systems Engineering – Definition, Requirements of Systems Engineering, Design Team, Tradeoffs, Top level requirements, Functional requirements, Functional Block diagram, Tradeoff analysis, Communication Systems and Power systems, Technology Tradeoffs

UNIT II SPACE MISSIONS 9

Space Missions - Low Earth Orbit, Flight Tests, Earth Observation, Space observation, Medium Altitude Earth Orbit, Geosynchronous Earth Orbit, Communications Satellites, Weather satellites, Lunar and Deep space missions – Inner and outer planetary missions, Observation of small bodies – comets and asteroids, Orbit Design Considerations, Advanced Mission concepts-Large Space structures, Space stations, space colonies, Use of lunar and asteroid materials, Nuclear waste disposal

UNIT III ENVIRONMENTAL CONSTRAINTS 9

Natural and Manmade environments, Earth environment – corrosion due to humidity, Clean room, problems in transporting, Launch environment, Shuttle Vibration, Atmospheric environment – wind shear constraint, density shear, Effect of Polar mesospheric clouds during re – entry, Space and Upper Atmosphere environment – Effect of vacuum on materials, Space plasma and spacecraft charging, Magnetic field, Weightlessness and microgravity, Radiation – Van Allen Radiation belt, Micrometeoroids, Orbital debris, Thermal environment

UNIT IV LAUNCH VEHICLE SELECTION AND ATMOSPHERIC ENTRY 9

Solid vs Liquid propellant, Hybrid propulsion, Space shuttle payload accommodations, expendable launch vehicles, Atmospheric entry – Requirements, fundamentals of entry flight mechanics, ballistic entry, gliding entry, skip entry, Cross-Range entry, Entry heating, free molecular heating, Thermal protection, Entry vehicle design

UNIT V STRUCTURAL DESIGN CONSIDERATIONS 9

Vehicle center of mass, Vehicle moment of inertia, structural loads, load alleviation, modal analysis, fracture mechanics, stress levels and safety factors, large structures, structural materials, films and fabrics

TEXTBOOKS:

1. Michael D.Griffin and James R. French, " Space Vehicle design" AIAA Education Series, Second Edition, 2004

REFERENCES:

1. NickolayZosimovych, " Commercial Launch Vehicle Design" , LAP LAMBERT Academic Publishing , 2016

WEBLINKS:

https://www.uclaextension.edu/engineering/engineering-short-courses/course/space-launch-vehicle-design-and-system-engineering

COURSE OUTCOMES

CO 1	Describe the fundamentals of space systems
CO 2	Demonstrate various space mission program
CO 3	Examine the challenges in space environment
CO 4	Classify the method of selection to launch vehicle and methods for re entry
CO 5	Determine the structural parameters in space system design

U18PEAS034	SOLAR THERMAL ENERGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To learn the basics of solar thermal energy					

UNIT I INTRODUCTION 9

Introductory aspects of non-renewable and renewable energy sources – fundamentals of thermal radiation – resource assessment – solar radiation concepts – solar-earth geometry – models to predict global and daily and hourly irradiation.

UNIT II SOLAR COLLECTION THEORY AND TECHNOLOGIES 8

Heat transfer in solar collectors – basic modeling aspects – steady and dynamic analysis – performance parameters.

UNIT III SOLAR CONCENTRATION SYSTEMS AND RECEIVERS 10

Overview and introduction to concentration optics – concentration ratio and thermodynamic maximum – linear concentration: trough and linear Fresnel – point concentration: dish and tower (central receiver system).

UNIT IV SOLAR POWER GENERATION SYSTEMS 9

Overview and types of systems – components and sub systems – aspects of design and performance prediction.

UNIT V THERMAL STORAGE AND SOLAR COOLING 9

Need for thermal storage – methods – simple models for thermal storage - solar liquid absorption and solar solid sorption technologies

TEXTBOOKS:

1. Boyle, G., Renewable Energy: Power for a Sustainable Future, 3rd ed., Oxford Univ. Press (2012).

REFERENCES:

1. Duffie, J. A. and Beckman, W. A., Solar Engineering of Thermal Processes, John Wiley (1991).
2. Sukhatme, S. P. and Nayak, J. K., Solar Energy: Principles of Thermal Collection and Storage, 3rd ed., McGraw-Hill (2009).

WEBLINKS:

https://solarenergytraining.org/
https://www.edx.org/course/solar-energy

COURSE OUTCOMES	
CO 1	Describe the different techniques to extract energy form the sun (Understand)
CO 2	Discuss the modeling and analysis of solar collectors (Understand)
CO 3	Explain the principle , working methodology for solar concentrators and receivers (understand)
CO 4	Classify solar power generation systems based on efficiencies (understand)
CO 5	Identify the models for thermal storage and cooling systems (Understand)

PROFESSIONAL ELECTIVE (PE) IV

U18PEAS041	**INTRODUCTION TO COMBUSTION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Fundamentals of Aero – Thermodynamics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To acquaint the student with the basics of combustion in aircraft and rocket engines.					

UNIT I INTRODUCTION TO COMBUSTION 9

Thermochemical equations – heat of reaction- first, second and third order reactions – premixed flames – diffusion flames – Stoichiometric ratio, equivalence ratio – measurement of burning velocity – various methods – effect of various parameters on burning velocity – flame stability – deflagration – detonation – Rankine-Hugoniot curves – radiation by flames

UNIT II COMBUSTION IN AIRCRAFT PISTON ENGINES 9

Introduction to combustion in aircraft piston engines – various factors affecting the combustion efficiency - fuels used for combustion in aircraft piston engines and their selection – detonation in piston engine combustion and the methods to prevent the detonation

UNIT III COMBUSTION IN GAS TURBINE ENGINES 9

Combustion in gas turbine combustion chambers - recirculation – combustion efficiency, factors affecting combustion efficiency, fuels used for gas turbine combustion chambers – combustion stability – ramjet combustion – differences between the design of ramjet combustion chambers and gas turbine combustion chambers- flame holders types – numerical problems.

UNIT IV COMBUSTION IN SCRAMJET ENGINES 9

Introduction to supersonic combustion – need for supersonic combustion for hypersonic air-breathing propulsion- supersonic combustion controlled by diffusion, mixing and heat convection – analysis of reactions and mixing processes - supersonic burning with detonation shocks - various types of supersonic combustors.

UNIT V COMBUSTION IN ROCKET ENGINES 9

Solid propellant combustion - double and composite propellant combustion – various combustion models – combustion in liquid rocket engines – single fuel droplet combustion model – combustion hybrid rockets

TEXTBOOKS:

1. Stephen R turns, ”An Introduction to Combustion”, Tata Mc.Graw Hill Publishing Co., Ltd., New Delhi, Reprint 2013. (Units 1 & 2)
2. Lefebvre AG and Dilip R ballal, “Gas Turbine Combustion”, CRC press, Third Edition, 2010. (Unit 3)
3. Corin Segal, “The Scramjet engine”, Cambridge University Press, 2009 (Unit 4)
4. Sutton, G.P., “Rocket Propulsion Elements”, John Wiley & Sons Inc., New York, 7th Edition, 2001 (Unit 5)

REFERENCES:

1. Warnatz J, Maas U and Dibble RW, ”Combustion”, Springer, Fourth Edition,2006.

3. Sharma, S.P., and Chandra Mohan, “Fuels and Combustion”, Tata Mc. Graw Hill Publishing Co., Ltd., New Delhi, 1987

WEBLINKS:
https://swayam.gov.in/course/4339-fundamentals-of-combustion-i

COURSE OUTCOMES	
CO 1	**Explain** thermo chemical reaction associated with combustion process and the various parameters affecting burning velocity. **(Understand)**
CO 2	**Select** apt fuel for optimum combustion in piston engines. **(Analyze)**
CO 3	**Compare** the ramjet and gas turbine combustion chamber design. **(Understand)**
CO 4	**Analyze** the challenges associated with supersonic combustion.**(Analyze)**
CO 5	**Discuss** combustion process in solid, liquid propellant rockets and hybrid rockets. **(Understand)**

U18PEAS042	THEORY OF PLATES AND SHELLS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVES

To acquaint about the classic plate theory, method of analysis various shapes and concept of shell.

UNIT I CLASSICAL PLATE THEORY 9

Classical Plate Theory – Assumptions – Differential Equations – Boundary Conditions – Axi-Symmetric Loading.

UNIT II PLATES OF VARIOUS SHAPES **9**

Navier's Method of Solution for Simply Supported Rectangular Plates – Levy's Method of Solution for Rectangular Plates under Different Boundary Conditions – Annular Plates – Plates of other shapes.

UNIT III EIGEN VALUE ANALYSIS **9**

Stability and Free Vibration Analysis of Rectangular Plates.

UNIT IV APPROXIMATE METHODS **9**

Rayleigh – Ritz, Galerkin Methods– Finite Difference Method – Application to Rectangular Plates for Static, Free Vibration and Stability Analysis.

UNIT V SHELLS **9**

Basic Concepts of Shell Type of Structures – Membrane and Bending Theories for Circular Cylindrical Shells.

Text Books:

1. Timoshenko, S.P. Winowsky. S., and Kreger, Theory of Plates and Shells, McGraw Hill Book Co., 1990.
2. Varadhan. T. K. &Bhaskar.K., "Analysis of Plates – Theory and Problems", Narosa Publishing House, 2000

References:

1. Flugge, W. Stresses in Shells, Springer – Verlag, 1985.
2. Timoshenko, S.P. and Gere, J.M., Theory of Elastic Stability, McGraw Hill Book Co.1986.
3. Harry Kraus, 'Thin Elastic Shells', John Wiley and Sons, 1987.
4. Llyod Hamilton, Donald, "Beams, Plates and Shells", McGraw Hill, 1976.
5. AnselUgural, Stresses in Plates & Shells, McGraw Hill, 1981
6. Reddy.J.N., "Theory & Analysis of Elastic Plates", CRC, I Edition, 1999

COURSE OUTCOMES	
CO 1	**Explain** the classical plate theory subjected to Axi-symmetric loading. **(Understand)**
CO 2	**Use** Navier's method and Levy's method to obtain solution for rectangular plates under different boundary conditions. **(Apply)**
CO 3	**Illustrate** the stability and free vibration analysis of rectangular plates. **(Understand)**
CO 4	**Apply** various approximate methods on rectangular plates for stability analysis. **(Apply)**
CO 5	**Describe** the concepts of shell type structures and bending theories for circular cylindrical shells. **(Understand)**

U18PEAS043	**SPACECRAFT ATTITUDE DYNAMICS AND CONTROL**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Space Flight Mechanics				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To familiarize the student with the basics of spacecraft attitude dynamics and control					

UNIT I ATTITUDE SENSORS 8

Relative Attitude sensors – Gyroscopes, Motion reference Units, Absolute Attitude sensors – Horizon sensor, Orbital Gyrocompass, Earth sensors, sun sensors (Digital and analog), star sensor- Magnetometer

UNIT II CONTROL ACTUATORS 9

Fundamental principles of operation of Thrusters- Momentum Wheel-Control Moment Gyros Reaction wheel- Magnetic Torques- Reaction Jets- Ion Propulsion- Electric propulsion- solar sails

UNIT III ATTITUDE DYNAMICS, ATTITUDE AND ORBITAL DISTURBANCES 9

Rigid Body Dynamics - Flexible body Dynamics - Slosh Dynamics- disturbing forces due to Drag, Solar radiation Pressure and forces - Disturbances due to Celestial bodies

UNIT IV ATTITUDE STABILIZATION SCHEMES & ORBIT MANEUVERS 10

Spin, Dual spin - Gravity gradient - Zero momentum system - Momentum Biased system - Reaction control system - Single and Multiple Impulse orbit Adjustment - Hohmann Transfer Station Keeping and fuel Budgeting

UNIT V MISSILE AND LAUNCH VEHICLE GUIDANCE 9

Operating principles and design of guidance laws - homing guidance laws- short range - Medium range and BVR missiles - Launch Vehicle- Introduction - Mission requirements- Implicit guidance schemes - Explicit guidance - Q guidance schemes

TEXTBOOKS:

1. Marcel J. Sidi, “Spacecraft Dynamics and control, A Practical Engineering Approach”, Cambridge University Press.2000

REFERENCES:

1. James R Wertz, Spacecraft Attitude Determination and control, Reidel Publications.2001.
2. Vladimir AChobotov,”Spacecraft Attitude Dynamics and Control (Orbit)”, Krieger Publishing Company Publishers, 1991.
3. Blake Lock, J.H ‘Automatic control of Aircraft and missiles ‘, John Wiley Sons, New York, 1990.
4. Meyer Rudolph X, Elements of Space Technology for Aerospace Engineers”, Academic Press, 1999
5. Kaplan M, “Modern Spacecraft Dynamics and control”, Wiley Press, 1979.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc19_ae04

https://www.coursera.org/specializations/spacecraft-dynamics-control

COURSE OUTCOMES	
CO 1	Describe the sensors used in spacecraft to determine the attitude (understand)
CO 2	Classify the different types of control actuators (understand)
CO 3	Discuss the reasons behind orbital / attitude disturbances (Understand)
CO 4	Establish relevant equations for stabilization systems (Apply)
CO 5	Compare missile guidance and control methods (Understand)

U18PEAS044	HIGH TEMPERATURE GAS DYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Compressible Flow				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To enable the student to understand about the basics of high temperature gas flows

UNIT I INTRODUCTION 8

Importance of high temperature flows –Atmospheric Entry-Nature of High temperature flows-Chemical Effects in Air- High temperature effects in rocket engines

UNIT II STATISTICAL THERMODYNAMICS 8

Introduction to statistical thermodynamics – Microscopic Description of Gases-Boltzmann Distribution- Partition Function-Thermodynamic properties of High Temperature Air.

UNIT III KINETIC THEORY AND HYPERSONIC FLOWS 9

Chemical equilibrium calculation of equilibrium composition of high temperature air – equilibrium properties of high temperature air – collision frequency and mean free path – velocity and speed distribution functions.

UNIT IV INVISCID HIGH TEMPERATURE FLOWS 10

Equilibrium and non – equilibrium flows – governing equations for inviscid high temperature equilibrium flows – equilibrium normal and oblique shock wave flows – frozen and equilibrium flows – equilibrium conical and blunt body flows – governing equations for non-equilibrium inviscid flows.

UNIT V TRANSPORT PROPERTIES IN HIGH TEMPERATURE GAS 10

Transport coefficients – mechanisms of diffusion – total thermal conductivity – transport characteristics for high temperature air – radiative transparent gases – radiative transfer equation for transport, absorbing and emitting and absorbing gases

TEXTBOOKS:

1. "EthirajanRathakrishnan", "High Enthalpy Gas Dynamics", John Wiley and Sons, 2017

REFERENCES:

1. John D. Anderson, Jr., Hypersonic and High Temperature Gas Dynamics, McGraw-Hill Series, New York, 1996.
2. John D. Anderson, Jr., Modern Compressible Flow with Historical perspective McGraw Hill Series, New York, 1996.
3. William H. Heiser and David T. Pratt, Hypersonic Air breathing propulsion, AIAA Education Series.
4. John T. Bertin, Hypersonic Aerothermodynamics publishers - AIAA Inc., Washington, D.C., 1994.
5. .K.Bose, High Temperature Gas Dynamics

WEBLINKS:

https://engineering.purdue.edu/ProEd/courses/molecular-gas-dynamics
https://www.iitk.ac.in/new/ae690a

COURSE OUTCOMES	
CO 1	Acquiring comprehensive knowledge on high temperature gas dynamics

CO 2	Understand the concept of statistical thermodynamics for high temperature flows
CO 3	Acquire knowledge on kinetic properties of high temperature flows
CO 4	Understand oblique and curved shock waves and shock wave structure in high temperature flows
CO 5	Know the transport mechanisms in high temperature gas.

PROFESSIONAL ELECTIVE (PE) V

U18PEAS051	**SPACE FLIGHT MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Introduction to Aerospace Engineering				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To introduce to the student about the basic concepts in space mechanics and about the laws that govern motion in space					

UNIT I BASIC CONCEPTS AND THE GENERAL N- BODY PROBLEM 10

The solar system – reference frames and coordinate systems – terminology related to the celestial sphere and its associated concepts – Kepler's laws of planetary motion and proof of the laws – Newton's universal law of gravitation - the many body problem- Lagrange-Jacobi identity – the circular restricted three body problem – libration points – the general N-body problem two body problems – relations between position and time.

UNIT II SATELLITE INJECTION AND SATELLITE PERTURBATIONS 9

General aspects of satellite injection – satellite orbit transfer – various cases – orbit deviations due to injection errors – special and general perturbations – Cowell's method and Encke's method – method of variations of orbital elements – general perturbations approach.

UNIT III INTERPLANETARY TRAJECTORIES 9

Two-dimensional interplanetary trajectories – fast interplanetary trajectories – three dimensional interplanetary trajectories – launch of interplanetary spacecraft – trajectory estimation about the target planet – concept of sphere of influence – Lambert's theorem

UNIT IV BALLISTIC MISSILE TRAJECTORIES 9

Introduction to ballistic missile trajectories – boost phase – the ballistic phase – trajectory geometry – optimal flights – time of flight – re-entry phase – the position of impact point – influence coefficients.

UNIT V MATERIALS FOR SPACECRAFT 8

Space environment – peculiarities of space environment – effect of space environment on materials of spacecraft structure – materials required for the construction of space craft – TPS for re-entry space vehicles.

TEXTBOOKS:

1. Cornelisse, J.W., "Rocket Propulsion and Space Dynamics", J.W. Freeman &Co., Ltd, London, 1982

REFERENCES:

1. Sutton, G.P., "Rocket Propulsion Elements", John Wiley & Sons Inc., New York, 7th Edition, 2001.
2. Parker, E.R., "Materials for Missiles and Spacecraft", McGraw Hill Book Co. Inc., 1982.

WEBLINKS:

https://online.stanford.edu/courses/aa279a-space-mechanics

COURSE CONTENT	
COURSE OUTCOMES	
CO 1	Describe n-body problem with terminologies(understand)
CO 2	Discuss the methods for satellite injection , parking and transfer orbits(understand)
CO 3	Examine the interplanetary trajectories for manned and unmanned missions to other planets (Apply)
CO 4	Explain the need and importance of trajectory for ballistic missiles(analyze)
CO 5	Interpret the effect of space environment on materials

	EXPERIMENTAL STRESS ANALYSIS	L	T	P	C
U18PEAS052	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Mechanics and Machines, Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE:

To make the student understand on experimental method of finding the response of the structure to different types of load.

UNIT I MEASUREMENTS AND EXTENSOMETERS 9

Principles of measurements, Accuracy, Sensitivity and range of measurements, Mechanical, Optical, Acoustical and Electrical extensometers and their uses, Advantages and disadvantages.

UNIT II ELECTRICAL RESISTANCE STRAIN GAUGES 9

Principle of operation and requirements, Types and their uses, Materials for strain gauge, Calibration and temperature compensation, cross sensitivity, Rosette analysis, Wheatstone bridge and potentiometer circuits for static and dynamic strain measurements, strain indicators.

UNIT III PHOTOELASTICITY 9

Two dimensional photo elasticity, Photo elastic materials, Concept of light - photoelastic effects, stress optic law, Transmission and Reflection polariscopes, Interpretation of fringe pattern, Compensation and separation techniques, Introduction to three dimensional photo elasticity.

UNIT IV BRITTLE COATING AND MOIRE METHODS 9

Introduction to Moiré techniques, Brittle coating methods and Holography

UNIT V NON – DESTRUCTIVE TESTING 9

Fundamentals of NDT, Radiography, Ultrasonics, Eddy Current testing, Fluorescent Penetrant Testing, Acoustic Emission Technique

TEXTBOOKS:

1. Sadhu Singh, “Experimental Stress Analysis”, Khanna Publishers, 2009.

REFERENCES:

1. Hetenyi, M., “Hand book of Experimental Stress Analysis”, John Wiley and Sons Inc., New York, 1972.
2. Max Mark Frocht,” Photo Elasticity”, John Wiley and Sons Inc., New York, 1968

4. Srinath, L.S., Raghava, M.R., Lingaiah, K., Garagesha, G., Pant B., and Ramachandra, K., “Experimental Stress Analysis”, Tata McGraw Hill, New Delhi, 1984.
5. James F. Doyle ,”Modern Experimental Stress Analysis “,John Wiley & Sons, 2004.
6. Ramesh, K., ” Experimental Stress Analysis”, Indian Institute of Technology Madras, India,E-book,2009.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc18_me39/preview

COURSE OUTCOMES	
CO 1	**Describe** the working principle of different extensometers and their uses. **(Understand)**
CO 2	**Compute** the strain in loaded structures based on measurement of change in resistance using strain gauges. (**Apply**)
CO 3	**Discuss** the techniques used for determination of stress in photo elastic materials. **(Understand)**
CO 4	**Explain** the concepts of more technique and brittle coating techniques. **(Understand)**
CO 5	**Summarize** the fundamentals of NDT and **Describe** the different type of NDT methods. **(Understand)**

U18PEAS053	AUTOMATIC CONTROL	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basic Electrical and Electronics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To equip the student with the various methods necessary to carry out the design and analysis of aerospace control systems.

UNIT I SYSTEM AND REPRESENTATION 9

Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical systems – Transfer function – Block diagram reduction techniques

UNIT II TIME RESPONSE 9

Time response – Time domain specifications – Types of test input- I and II order system response – Error coefficients – Generalised error series – Steady state error- P, PI, PID modes of feedback control – Time response analysis.

UNIT III FREQUENCY RESPONSE 9

Frequency response – Bode plot- polar plot – Determination of closed loop response from open loop response – Correlation between frequency domain and time domain specifications.

UNIT IV CONCEPT OF STABILITY 9

Characteristics equation – Root Locus construction - Routh Hurwitz stability criterion

UNIT V SAMPLED DATA SYSTEMS 9

Sampled data control systems- functional elements – sampling process- z-transforms- properties inverse z transforms – ZOH and First Order Hold process- pulse transfer functions – step response – Introduction to digital control system, Digital Controllers and Digital PID controller

TEXTBOOKS:

1. Nagarath.I.J. andGopal M, " Control System Engineering', New Age International Publishers, New Delhi, 2015. (Units 1 to 4)
2. Houpis, C.H. and Lamont, G.B. Digital control Systems, McGraw Hill Book co., New York, U.S.A. 1995 (Unit 5)

REFERENCES:

1. OGATO, Modern Control Engineering, Fifth Edition, Prentice-Hall of India Pvt.Ltd., New Delhi, 2010.
2. Kuo, B.C. Automatic Control Systems, Prentice-Hall of India Pvt.Ltd., New Delhi, 2009.
3. Azzo, J.J.D. and C.H. Houpis, Feedback Control System Analysis And Synthesis, McGraw-Hill International 3rd Edition, 1998.
4. Naresh K Sinha, Control Systems, New Age International Publishers, New Delhi, 1998.

WEBLINKS:

https://onlinecourses.nptel.ac.in/noc18_ee41/course

COURSE OUTCOMES	
CO 1	**Analyze** mathematical model for mechanical and Electrical systems. **(Analyze)**
CO 2	**Analyze** time response of the system with various test inputs and steady state errors. (**Analyze**)
CO 3	**Analyze** the frequency response of the system and correlate frequency - time domain specifications. (**Analyze**)
CO 4	**Predict** the stability of the system using Root Locus and Routh Hurwitz stability criterion. (**Evaluate**)
CO 5	**Discuss** the basic components of Digital Control System. **(Understand)**

U18PEAS054	COMPUTATIONAL FLUID DYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Aerodynamics, Numerical Methods				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To equip the student with the knowledge of various numerical techniques to carry out flow analysis.					

UNIT I GOVERNING EQUATIONS 9

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations. Time-Averaged Equations for Turbulent flow – Reynolds Stress Equations.

UNIT II FDM AND FVM FOR DIFFUSION PROBLEMS 10

Derivation of finite difference equations – Simple Methods – General Methods for first and second order accuracy – Finite volume formulation for steady One, Two and Three dimensional diffusion problems –Parabolic equations – Explicit and Implicit schemes – Example problems on elliptic and parabolic equations – Use of Finite Difference and Finite Volume methods.

UNIT III FVM FOR CONVECTION – DIFFUSION PROBLEMS 9

Steady one-dimensional convection diffusion – Central, upwind differencing schemes properties of discretization schemes – Conservativeness, Boundedness, Transportiveness, Hybrid, Power-law, QUICK Schemes. - SIMPLE, SIMPLER algorithms.

UNIT IV TURBULENCE MODELING 9

Turbulence models, mixing length model, Two equation (k-ε) models – High and low Reynolds number models. Large eddy simulation- Direct numerical simulation.

UNIT V APPLICATIONS 8

Large Scale problems in CFD – Iterative Solvers – Preconditioning Techniques – Vector and Parallel Computing – Post Processing for Visualization – CFD analysis using commercial packages and programming

TEXTBOOKS:

1. H.K. Versteeg and W. Malalasekera "An Introduction to Computational Fluid Dynamics, The Finite Volume Method", Longman Scientific & Technical, 2007. (Units 1 to 3)
2. JiyuanTu, Guan, HengYeoh, Chaoqun Liu, "Computational Fluid Dynamics A Practical Approach" Springer Verlag, 2012. (Units 4 & 5)

REFERENCES:

1. J. D. Anderson, "Computational Fluid Dynamics", McGraw Hill International, 2012.
2. T. J. Chung, "Computational Fluid Dynamics", Cambridge University Press, 2002.

WEBLINKS:

http://www.cfdonline.com

https://onlinecourses.nptel.ac.in/noc16_ch02

COURSE OUTCOMES	
CO 1	**Describe** governing equations of fluid dynamics. (**Understand**)
CO 2	**Apply** appropriate Finite Difference method and Finite volume method for solving diffusion problems. (**Apply**)
CO 3	**Analyze** various explicit and implicit schemes in Finite Volume Method for solving one dimensional convection diffusion problems. (**Analyze**)
CO 4	**Identify** suitable turbulence model for fluid flow problems. (**Understand**)
CO 5	**Analyze** Computational Fluid Dynamics problems by using packages and programming software. (**Analyze**)

PROFESSIONAL ELECTIVE (PE) VI

U18PEAS061	**CRYOGENIC ROCKET PROPULSION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite – Advanced Aerospace Propulsion				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To introduce to the student the basics of cryogenic systems and associated processes and cryogenic rocket technology.					

UNIT I INTRODUCTION TO CRYOGENIC SYSTEMS 9

Cryogenic systems and basic components, Properties of Cryogenic fluids, Liquefaction systems, ideal, Cascade, LindeHampson and Claude cycles and their derivatives; Refrigerators: Stirling, Gifford-McMahon cycles and their derivatives. Cryogenic Insulations: Foam, Fibre, powder and Multilayer.

UNIT II CRYO FUEL SYSTEMS 9

Cryogenic and semi – cryogenic propellants - Hydrogen - properties, and pretreatment - Liquefaction of hydrogen - Linde, Claude and helium - hydrogen condensing cycles, Ortho-para conversion. Storage and handling of liquefied hydrogen

UNIT III CRYO EQUIPMENT AND ACCESSORIES 9

Mechanical and Thermal Properties of engineering materials at low temperatures; Compressors: types, construction and characteristics; Expansion machines: characteristics of reciprocating and turbine expanders, design of J-T expander; Heat exchangers: types, design approaches and selection criteria, Design of cryogenic storage vessels, transfer devices, insulation system, valves; Characteristics of cryogenic pumps, Instrumentation in cryogenic systems

UNIT IV CRYOGENIC ENGINES 9

Fluid circuits of various cryogenic engines and semi-cryogenic engines; Design of regeneratively cooled combustion chamber, film cooling, dump cooling, transpiration cooling and radiation cooling. Design of expansion nozzle- characteristics, Design of injector–hydraulic characteristics; Engine thrust and mixture ratio control, Igniters, Propellant tanks.

UNIT V CHALLENGES IN CRYOGENIC ROCKET TECHNOLOGY 9

Problems in storage and handling of cryogenic propellants: safety aspects, Thermal protectionsystems for stage tanks, Thermal stratification- destratification, Geysering effect – geyseringelemination, Zero “g” problems – restart mechanism.

TEXTBOOKS:

1. “A text book of Cryogenics”, “Valery V. Kostionk”, Discovery Publishing House, 2010. (Units 1 to 3)
2. “Operation of a Cryogenic Rocket Engine”, “Kitsche, Wolfgang”, Springer Publications, 2011. (Units 4 & 5)

REFERENCES:

1. “Rocket Propulsion Elements”, “Sutton G. P., Bibliarz”

WEBLINKS:

https://nptel.ac.in/courses/112101004/

COURSE OUTCOMES	
CO 1	**Discuss** the basic components of cryogenic systems. **(Understand)**
CO 2	**Explain** the types of cryogenic propellant used and their storage and handling. **(Understand)**
CO 3	**Discuss** cryo equipment and accessories of cryogenic engine system. **(Understand)**
CO 4	**Discuss** various subsystem involved in the operation of cryogenic engine and their design aspects. **(Understand)**
CO 5	**Discuss** the challenges in cryogenic rocket technology. **(Understand)**

U18PEAS062	HIGH TEMPERATURE MATERIALS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fundamentals of Structural Mechanics				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To acquaint the student with the fundamentals of creep, hot corrosion, fracture mechanisms under high temperature and alloys for high temperature applications.

UNIT I INTRODUCTION TO HIGH TEMPERATURE MATERIALS 6

Components exposed to high temperatures, significance of high temperature materials, recent trends in high temperature material research

UNIT II CREEP AND DESIGN FOR CREEP RESISTANCE 12

Factors influencing functional life of components at elevated temperatures, definition of creep curve, various stages of creep, metallurgical factors influencing various stages, effect of stress, temperature and strain rate. Design of transient creep time, hardening, strain hardening, expressions of rupture life of creep, ductile and brittle materials, Monkman-Grant relationship.

UNIT III FRACTURE 9

Various types of fracture, brittle to ductile from low temperature to high temperature, cleavage fracture, and ductile fracture due to micro void coalescence-diffusion controlled void growth; fracture maps for different alloys and oxides.

UNIT IV OXIDATION AND HOT CORROSION 9

Oxidation, Pilling, Bedworth ratio, kinetic laws of oxidation- defect structure and control of oxidation by alloy additions, hot gas corrosion deposit, modified hot gas corrosion, fluxing mechanisms, effect of alloying elements on hot corrosion, interaction of hot corrosion and creep, methods of combat hot corrosion.

UNIT V SUPER ALLOYS AND OTHER MATERIALS 9

Iron base, Nickel base and Cobalt base super alloys, composition control, solid solution strengthening, precipitation hardening by gamma prime, grain boundary strengthening, TCP phase, embrittlement, solidification of single crystals, Intermetallics, high temperature ceramics.

TEXTBOOKS:

1. Raj. R., "Flow and Fracture at Elevated Temperatures", American Society for Metals, USA, 1985. (Units 1, 2, 3 & 5)
2. David J. Young, "High Temperature Oxidation and Corrosion of Metals", Second Edition, Elsevier Science Ltd., 2016 (Unit 4)

REFERENCES:

2. Bressers. J., "Creep and Fatigue in High Temperature Alloys", Applied Science, 1981.
3. McLean D., "Directionally Solidified Materials for High Temperature Service", The Metals Society, USA, 1985.
4. Hertzberg R. W., "Deformation and Fracture Mechanics of Engineering materials", 4th Edition, John Wiley, USA, 1996.
5. Courtney T.H, "Mechanical Behavior of Materials", McGraw-Hill, USA, 1990.

WEBLINKS:
https://nptel.ac.in/courses/113105019/

COURSE OUTCOMES	
CO 1	**Discuss** the effect of creep on the functional life of components. **(Understand)**
CO 2	**Explain** the creep resistance of ductile and brittle materials. **(Understand)**
CO 3	**Describe** the effect of different alloys and oxidesmaterials behaviour from low temperature to high temperature **. (Understand)**
CO 4	**Discuss** the fracture mechanism maps for different alloys and oxides**. (Understand)**
CO 5	**Describe** the process of oxidation and different oxidations prevention techniques. **(Understand)**
CO 6	**Discuss** the various types of super alloys and its strengthening mechanisms. **(Understand)**

U18PEAS063	STRUCTURAL DYNAMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				

OBJECTIVE: To study the effect of periodic and a periodic forces on mechanical systems with matrix approach and also to get the natural characteristics of large sized problems using approximate methods.

UNIT I FORCE DEFLECTION PROPERTIES OF STRUCTURES 9

Constraints and Generalized coordinates-Virtual work and generalized forces- Force-Deflection influence functions-stiffness and flexibility methods.

UNIT II PRINCIPLES OF DYNAMICS 9

Free and forced vibrations of systems with finite degrees of freedom-Damped oscillations-D" Alembert's principle-Hamilton's principle-Lagrangean equations of motion and applications.

UNIT III NATURAL MODES OF VIBRATION 9

Equations of motion for Multi degree of freedom Systems - Solution of Eigen value problems – Normal coordinates and orthogonality Conditions. Modal Analysis.

UNIT IV ENERGY METHODS 9

Rayleigh's principle-Rayleigh-Ritz method-Coupled natural modes-Effect of rotary inertia and shear on lateral vibrations of beams-Natural vibrations of plates.

UNIT V APPROXIMATE METHODS 9

Approximate methods of evaluating the Eigen values and the dynamic response of continuous systems. Application of Matrix methods for dynamic analysis.

COURSE OUTCOMES	
CO 1	**Review** stiffness and flexibility method of structural analysis (**Understand)**
CO 2	**Describe** the significance of dynamic loadingand **solve** forced vibrations of finite degree of freedom systems (**Apply**).
CO 3	**Explain** modal analysis of multiple degree of freedom systems (**Analyze**).
CO 4	**Apply** energy methods to solve beam and plate vibrations problems under dynamics loads (**Apply**).
CO 5	**Evaluate** dynamic response of continuous systems using approximate methods (**Analyze**)

	HIGH TEMPERATURE PROBLEMS IN AEROSPACE STRUCTURES	L	T	P	C
U18PEAS064	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Aeronautical Engineering				
OBJECTIVE: To study the effect of Temperature effects in aerospace applications.					

UNIT I TEMPERATURE EQUATIONS & AERODYNAMIC HEATING 9

For condition, radiation and convection – Fourier's equation – Boundary and initial conditions – One-dimensional problem formulations – Methods and Solutions. Heat balance equation for idealised structures – Adiabatic temperature – Variations – Evaluation of transient temperature.

UNIT II THERMAL STRESS ANALYSIS 9

Thermal stresses and strains – Equations of equilibrium – Boundary conditions – Thermoelasticity – Two dimensional problems and solutions – Airy stress function and applications.

UNIT III THERMAL STRESS IN BEAMS, TRUSSES AND THIN CYLINDERS 9

Thermal stresses in axially loaded members, beams with varying cross sections. Effect of temperature in thin cylinders.

UNIT IV THERMAL STRESSES IN PLATES 9

Membrane thermal stresses – Circular plates – Rectangular plates – Bending thermal stresses – Thick plates with temperature varying along thickness – Thermal vibration of plates.

UNIT V SPECIAL TOPICS & MATERIALS 9

Thermal bucking, Fatigue and shock applications – High temperature effects on material properties.

TEXTBOOKS:

1. A.B. Bruno and H.W. Jerome, "Theory of Thermal Stresses", John Wiley & Sons Inc., New York, 1980.
2. N.J. Hoff, "High Temperature effects in Aircraft Structures", John Wiley & Sons Inc., London, 1986.

REFERENCES:

1. D.J. Johns, "Thermal Stress Analysis", Pergamon Press, Oxford, 1985.

COURSE OUTCOMES	
CO 1	Describe basic parameters of Aerodynamic heating and temperature effects..
CO 2	Demonstrate the important principles of Stress analysis in thermal problems.
CO 3	Solve for thermal stress in bars, cylinders
CO 4	Detect the variousstresses in rectangular, circular plates
CO 5	Determine the high temperature effect on modern materials

CURRICULUM AND SYLLABUS(R2018)

CHOICE BASED CREDIT SYSTEM

(Applicable to the batches admitted from July 2018)

B. Arch – BACHELOR OF ARCHITECTURE

(FULL TIME)

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 1LI	ARCHITECTURAL BASIC DESIGN	0	0	14	6

OBJECTIVES:

- To understand the elements and principles of Basic Design as the building blocks of Creative design through exercises that will develop originality, expression, skill and creative thinking.
- To involve students in a number of exercises to understand the grammar of Design and Visual composition.
- To enable the understanding of 3D Composition by involving students in a number of exercises which will help generation of a form from a two dimensional / abstract idea.
- To understand architecture as a craft, of making and of putting together.
- To sensitize students to materials both planar and plastics and Processes involved in working with them.
- To draw inspiration and clues from nature.
- To introduce Drawing as an analytical tool.
- To introduce students to History of Design and craft.

UNIT I INTRODUCTION TO BASIC DESIGN 1 9

Introduction to architectural design –

- Line
- Direction
- Shape
- Size
- Texture
- Value colour.

UNIT II WORKSHOP

Using of carpentry, masonry model making, space frame models, such as match sticks, straw, steel wire etc.

TOTAL: 75 PERIODS

Text Book:

1. Francis DK Ching – "Form space and order"

2. VS. Prammar – "Design fundamentals in architecture"

References:

1. Edward D. Mills – "Planning the Architects handbook, London 1985"

2. Paul Laseau , Graphic thinking for Architects and Designers, John Wiley & Sons, New York , 2

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Identify the basic design elements and principles and applying the same in designing
CO2	Develop the skills of art appreciation and sense of aesthetics by studying, correlating the basic design principles and works of master architects.
CO3	Developing the skills of expressing the ideas visually through sketching, renderings using different media.
CO4	An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
CO5	An understanding of the qualities of different elements as well as their composite fusions.
C06	An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

2	CO1				L		M		L			L	
	CO2	H											M
	CO3		M		L			H		H			
	CO4					L	M		L		M		
	CO5		M									L	
	C06							H					L
3	Category	Professional Core (PC)											
4	Approval	26th Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 101	THEORY OF ARCHITECTURE – I	3	0	0	3

OBJECTIVES:

- To understand that architecture is a dynamic interface between man and his environment: through its constituent aspects and elements.
- To understand the various principles of architectural design, with which the above objective is attained.
- To understand that architecture is communicative medium involving aspects of expression and experience.
- To understand the various possibilities of approaching architectural design, through examples from historical and contemporary examples.

UNIT I INTRODUCTION 9

APPLICATION OF COLOUR IN ARCHITECTURE

Effect of Colour in architecture – Colour symbolism.

UNIT II

ORGANISATION OF FORMS AND SPACES

a) Spatial Relationship

i) Space within space

ii) Interlocking Spaces

iii) Adjacent spaces

iv) Space linked by a common space.

b) Spatial Organization – influencing factors and their types

i) Centralized

ii) Linear

iii) Radial

iv) Clustered

v) Grid

c) Articulation of forms and spaces types

i) Edges and Corners

ii) Surface.

UNIT III

Factors influencing the character and style of buildings. Study of examples from Buddhist, Hindu and Islamic Architecture in India – Greek, Roman, Gothic, Renaissance, Modem and Post Modern Movement.

UNIT IV

PRINCIPLES OF COMPOSITION

Unity, Harmony and specific qualities of design to include Dominance, Punctuating Effect, Dramatic Effect, Fluidity, Climax, Accentuation and Contrast with building examples.

UNIT V

CIRCULATION

Function of building circulation components of building circulation – The building approach, the building entrance, Configuration of the Path, path space relationship, from of circulation space with examples.

Simple circulation diagram for buildings.

TOTAL: 45 PERIODS

Text Book:

1. Sir-Bannister Fletcher – "A History of Architecture", Butterworths, London, 1987.

2. Francis D.K. Ching, Architecture – "Forms, Space and Order", Van Nostrand Publications, New York, 1979.

3. Paul Alan Johnson - The Theory of Architecture - Concepts and Themes - Van Vostrand Reinhold Co – 1994

4. V.S. Pramar, Design Fundamental in Architecture - Somaiya Publications Pvt. Ltd. New Delhi,1973

References:

1. Ernest Burden – "Elements of Architectural Design" – A Visual resource, Van Nostrand Reinhold, 1994.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To know the difference between architecture and engineering.
CO2	Understand the primary elements and forms in architecture, their role and impact on architecture and the development of new forms by applying the same techniques.
CO3	Understand about the elements and fundamentals Techniques of space making of space making.
CO4	An exposure to the principles of architecture and applications of the same in buildings.
CO5	A thorough understanding on the definition of architecture; elements of architectures of form.
C06	An understanding the meaning of character and style of buildings with examples.

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO3	H				L				M			H
	CO4		L							M		M	
	CO5	H	M	M	M				M		H		H
	C06			M			L						
3	Category	Professional Core (PC)											
4	Approval	32nd Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 102	HISTORY OF ARCHITECTURE – I	3	0	0	3

OBJECTIVES:

- To inform about the development of architecture in the Ancient Western World and the cultural and contextual determinants that produced that
- To understand architecture as evolving within specific cultural contexts including aspects of politics, society, religion and climate.
- To gain knowledge of the development of architectural form with reference to Technology, Style and Character in the prehistoric world, Ancient Egypt, West Asia, Greece , Rome, Medieval times and Renaissance period.

UNIT I

PREHIST AND EGYPT 9

Old stone age – the agricultural revolution – the new stone age – development of shelter – nature of art and architecture – out line of architectural character pyramid of Cheops – temple of Ammoon etc.,

UNIT II

WEST ASIA 8

Sumerian, Babylonian and Persian cultures – architectural characters – Ziggurats – Palace of Sargoan – Palace at Persepolis

UNIT III

GREECE 10

Evolution of city states – arts culture development – classical periods – architectural characters – orders in architecture examples Parthenon of Athens, Erecthion, Theatre etc.,

UNIT IV

ROME 6

Republican States – factors influencing architecture – out line of architectural character – examples.

UNIT V

EARLY CHRISTIAN AND BYZANTINE 12

British and spread of Christianity – church forms – out line of architectural character and various examples.

TOTAL: 45 PERIODS

Text Book:

1. Sir Banister Fletcher "A History of Architecture"

References:

1. Spiro Kostof – "A History of Architecture"
2. Pier Liugi Nervi – "History of World Architecture New York 1972"

COURSE OUTCOMES (COs)	
The student will be able	
CO 1	***Understand*** the origin of architecture in prehistoric age in western world.
CO 2	***Understand*** the origin of architecture in prehistoric age in western world.
CO 3	Know the importance of the history, relate to design thinking, cultural aspiration, social needs, and the evolution of the built environment
CO 4	Interpret the characteristics of designing of temples and tombs by Egyptian, Babylonian, and Mesopotamian, Greek, Rome and Byzantine builders.
CO 5	Compare spatial and stylistic qualities associated with church architecture
C06	An Understanding of architecture as an outcome of various social, political and economic upheavals, and as a response to the cultural and context.

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO2	L		M	M						L	H	L
	CO3		L			L			M				H
	CO4									M		M	H
	CO5		M	M	M				M		H	W	
	C06				M				L				
3	Category	Professional Core(PC)											
4	Approval	32nd Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 103	MECHANICS OF STRUCTURES I	3	0	0	3

OBJECTIVES:

- To enable a student to understand the effect of action of forces on a body and the concept of equilibrium of the body through exercises.
- To determine the internal forces induced in truss members due to external loads by working out
- problems.
- To calculate the sectional properties (centroid, moment of inertia, section modulus and radius of gyration) for various sections by working out problems.
- To study the stress – strain behaviours of steel and concrete due to axial loads and to determine the stresses and strains developed in solids due to external action through select problems.
- To derive the relationship between elastic constants and solving problems.

UNIT I **9**

FORCES AND STRUCTURAL SYSTEMS

Types of force systems – Resultant of parallel forces – principle of moments –principle of equilibrium – simple problems.

UNIT II **8**

ANALYSIS OF PLANE TRUSSES

Introduction to determinate and indeterminate Plane trusses – Analysis of simple supported and cantilevered trusses by method of joints and method of sections.

UNIT III **10**

PROPERTIES OF SECTION

Centroid – Moment of Inertia – Section modulus – Radius of gyration – Theorem of perpendicular axis – Theorem of parallel axis.

UNIT IV **6**

ELASTIC PROPERTIES OF SOLIDS

Stress strain diagram for mild steel, High tensile steel and concrete – concept of axial and volumetric stresses and strains.

UNIT V **12**

ELASTIC CONSTANTS

Elastic constants – Relation between elastic constants – Application to problem

Text Book:

1. P.C. Punmia, "Strength of Materials and Theory of Structures", Vol 1, Laxmi Publications, Delhi 1994.

2. S. Ramamurtham, "Strength of Materials", Dhanpatrai & Sons, Delhi 1990.

References:

1. W.a. Nash, "Strength of Materials" – Schaums Series – McGraw Hill Book Company, 1989.

2. R.K. Bansal – "Engineering Mechanics and Strength of Materials" – Lakshmi Publications, Delhi 1990.

3. R.K. Rajput – "Strength of Materials', S. Chand & Company Ltd., New Delhi 1996.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Apply the concepts of action of forces on a body and should be able to apply the equilibrium concepts.
- Analyze any type of determinate trusses with different end conditions.
- To solve the sectional properties for any geometrical shapes.
- The concepts of elastic constants and its applications for various types of problems with a thorough understanding of stresses and strain.

TEXTBOOKS:

1. R.K.Bansal – A text book on Engineering Mechanics, Laxmi Publications, Delhi, 2005.

2. R.K.Bansal – A textbook on Strength of Materials, Lakshmi Publications, Delhi 2007.

REFERENCES:

1. P.C.Punmia, Strength of Materials and Theory of Structures; Vol. I, Lakmi Publications, Delhi 1994.

2. S. Ramamrutham, Strength of Materials – Dhanpatrai & Sons, Delhi, 1990.

3. W.A.Nash, Strength of Materials – Schaums Series – McGraw Hill Book Company, 1989.

4. R.K. Rajput – Strength of Materials, S. Chand & Company Ltd. New Delhi 1996.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Relate*** with basic engineering mechanics concepts required for analyzing static structures. To calculate resultant of parallel forces
CO2	***Solve*** the problems of Free body Diagram & principle of equilibrium
CO3	***Identify*** and model various types of loading and support conditions that act on structural
CO4	***Analyze*** any type of determinate trusses with different end conditions.
CO5	***Demonstrate*** the relations for centroid and Center of Gravity and ***Analyze*** the moment of
C06	***Apply*** the knowledge of stress and strain in the design of structural elements.

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO5	H	M	M	M				M		H		H
	C06			h								l	
3	Category	Building sciences and Applied Engineering (BS & AE)											
4	Approval	30th Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BMA 102	MATHEMATICS	3	0	0	3

OBJECTIVES:

- Identifying practical problems to obtain solutions involving trigonometric and exponential functions.
- Studying the properties of lines and planes in space, along with sphere and providing a tool too.
- Understand 3D material.
- Understand functions of more than one variable, along with differentiation under integral sign.
- Solving differential equation of certain type and analyzing data collection and interpretation of results using statistical tools.

UNIT I **9**

PLANE AND LINES

Direction rations and cosines of a line – equations of a plane and intersecting planes – symmetric form of a straight line – angle between lines and planes – coplanar lines – skew lines – shortest distance.

UNIT II **8**

CURVED SURFACES 8

Equations of Sphere – section by a plane – tangent plane – standard equations of cone, cylinder and conoid – Properties.

UNIT III **10**

MATRICES

Characteristic equation, values and eigen vectors of a real matrix cayley – Trigonom Theorem without proof, reduction of a real symmetric matrix to diagonal from.

UNIT IV **6**

INTEGRATION

Integration of rational, trigonometric and irrational functions, properties of definite integrals, reduction formulae for trigonometric functions.

UNIT V **12**

ORDINARY DIFFERENTIAL EQUATIONS AND FUNCTIONS OF TWO VARIABLES

Linear second order and higher order different equations with constant co effienients. Differential equations with variable coefficients of Euler type. Partial differentiation, total derivative, approximations, Taylor's theorem with remainder Maxima and Minima envelope.

TOTAL: 45 PERIODS

Text Book:

1. B.S. Grewal, "Higher Engineering Mathematics", Khanna Publications, Delhi

2. P. Kandhaswamy, K. Thilagavathi, "Engineering Mathematics" Vol – I & II, S. Chandhan Publishers – 1998.

2. Narayan S. Manickavachagam Pillai T.K. Ramanaiah G – "Advanced Mathematics for Engineering Students" – Vol I & II S. Viswanathan Printers – 1993.

References :

1. V.Ramamurthy – Engineering Mathametics – Vol I & II, Amudha publications

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Find*** area and volumes of simple, complex and irregular geometries using various rules.
CO2	***Apply*** Trignometry on architectural elements
CO3	***Demonstrate*** the appropriate role of the mathematical concepts learnt.
CO4	***Analyze*** Tally charts, Tables and graphs and statistical diagrams using for various types of data.
CO5	***Explain*** about various architectural proportioning systems and calculating the same.
C06	Understanding of the appropriate role of the mathematical concepts learnt

Mapping of Course Outcomes with Program Outcomes (POs)

3	Category	Basic Sciences (BS)											
4	Approval	31St Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BEN 102	ENGLISH	3	0	0	3

OBJECTIVES: The English Language Course for students of architecture would,

- Enhance their communication skills in English by developing their listening, speaking, reading and writing skills.
- Develop their speaking skills with specific reference to prospective/actual clients, suppliers, business partners and colleagues.
- Enhance their reading particularly, rules and regulations, catalogues, architecture journals and textbooks.
- Develop their writing skills especially writing emails, proposals and reports.

UNIT I **9**

LISTENING

Importance of listening, how listening plays a vital role listening comprehension - listening to audio cassettes – listening to interviews & group discussion and debate.

UNIT II **8**

SPEAKING

Defining things – Describing objects using adjectives – comparing – pronunciation practice –world stress – discourse markets – intonation – role play.

UNIT III **10**

READING

Detailed reading – interpreting tables, flow charts, tree diagram, pie diagram – understanding discourse coherence – guessing the meaning and training sentences (technical as well as general meaning) – vocabulary analysis.

UNIT IV **6**

WRITING

Sentence Patterns – SVO, SVOC, SVOCA…., recommendations and suggestions – preparing checklists, preparing an agenda to organize any program – formal and informal letters – preparing resume paragraph writing – note making and precise writing.

UNIT V **12**

LANGUAGES FOCUS

Parts of speech, prefixes & suffixes, degrees of comparison, prepositions, types of verbs, punctuation, error detection & correction synonyms and antonyms.

TOTAL: 45 PERIODS

Text Book:

1. "English for Engineers and technologist" Vil. I Orient Longman Ltd.

References:

1. Narayanasami, "Strength your writing"-Orient Longman revised edition.
2. Picket and laster, "Technical Writing" – New York Haper and Row publication.
3. Swan, Michel, "Basic English" – OUP
4. Technical communication – Principles – Meenakshi Raman & Sangeetha Sharma, Oxford University

COURSE OUTCOMES (COs)	
The student will be able	
CO1	*Identify* different strategies of reading and writing skills.
CO2	*Revise* the library skills in their learning process.
CO3	*Apply* different techniques to various types of material such as a novel, newspaper, poem, drama and other reading papers.
CO4	*Use* visual aids to support verbal matters into language discourse.
CO5	*Prepares* to face the written exam with confidence and without any fear or tension.
C06	Speak convincingly, express their opinions clearly, initiate a discussion, negotiate, and argue using appropriate communicative strategies.

4	Approval	30th Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 1L2	ARCHITECTURAL GRAPHICS & ART STUDIO	0	0	6	3

OBJECTIVES:

- To understand drawing as a medium to visualize and communicate design ideas.
- To understand the concepts of Architectural Drawing with the introduction of drafting fundamentals.
- To understand the language of Architectural representations through Architectural Drawing systems and to introduce the basics of measured drawing.

UNIT I **9**

GEOMETRICAL DRAWING: INTRODUCTION

Introduction to fundamentals of drawing/ drafting: Construction of lines, line value, line types, lettering, dimensioning, representation, format for presentation, etc.; Construction of angles, use of scales; Construction of circles, tangents, curves and conic sections.

Fundamentals of art – Elements and principles of drawing – Types of drawing – Visual effects of drawing – Scale drawing – Composition – Approach to sketching – Study of light, shade and shadow.

Exercise involving Indoor and outdoor sketching – Spot sketching - Drawing from imagination –

Study of 3 D effects through light and shade from nature – Tools and materials – Illustration – Study of human being and mobiles.

UNIT II **8**

GEOMETRICAL DRAWING: PLANE & SOLID GEOMETRY

Construction and development of planar surface – square, rectangle, polygon etc Introduction of multi-view projection – projection of points, lines and planes.

Multi- view projection of solids – cube, prism, pyramids, cones, cylinders etc.; Sections of solids, true shape of solids.

UNIT III **10**

GEOMETRICAL DRAWING: AXONOMETRICPROJECTION & MEASURED DRAWING

Isometric, plan oblique and elevation oblique projection of planes, solids and combination of solid etc.

Introduction to fundamentals of measured drawing, line value, lettering, drawing representation, format for presentation methods and technique of measuring buildings and their details. Measured drawing of simple objects like furniture, detailing in terms of construction, ornamentation, measured drawing of building

components like column, door, window, cornice, etc

UNIT IV **6**

PAINTING I & II

Introduction of painting – Colour – Properties of colour – Colour schemes – Types of colours - Application and visual effects of colour. Exercise involving Study of colour – Properties of paper, brush and other tools – Basic washes – 3D effects from still-life, nature and built environment using mono chromatic and multi colour.

Indoor and outdoor painting – Rendering techniques Exercise involving Water colour – Water soluble colour pencil – Tempra – Acarali – Water soluble oil colour – Oil colour – Pen and ink –

Brush – Air brush – Mixed mediums – Study of multi colour and 3D effects from nature and built environment.

UNIT V SCULPTURE **6**

Introduction of sculpture –Sculpture using various materials such as clay, plaster of Paris, paper mache, and wire.

UNIT VI APPLIED ART **6**

Graphic representations – Visual composition and Abstraction- Exercises involving Logo design, collage, calligraphy and printing.

OUTCOMES

- An understanding on the concepts of architectural drawing as well as representation skills are imparted.
- An understanding on the building representation in 2D and 3D among students in addition to preparation of measured drawing.
- The students are exposed to various mediums and techniques.
- Bold enough to handle to the colours for the presentation sheets.
- The students are mastery in sketching and expression through forms.
- The skill and knowledge gained through the subject is most useful to their profession

TOTAL: 45 PERIODS

TEXTBOOKS:

1. IH. Morris, Geometrical Drawing for Art Students - Orient Longman, Madras, 2004.

2. Francis D. K. Ching, Architectural Graphics, John – Wiley and Sons, 2009.

3. Fraser Reekie, Reekie's Architectural Drawing, Edward Arnold, 1995

4. Webb, Frank, "The Artist guide to Composition", David & Charles, U.K., 1994.

5. Drawing a Creative Process", Ching Francis, Van Nostrand Reinhold, New York, 1990.

6. Alan Swann, Graphic Design School, Harper Collins,1991.

5. Caldwell Peter, "Pen and Ink Sketching", B.T. Bats ford Ltd., London, 1995.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Demonstrate*** the usage of various drafting tools in the process of preparing drawings.
CO2	***Assess*** 3D objects and represent them in drawings.
CO3	***Construct*** lines, Planar and solid geometry of simple and complex objects in reduced scales.
CO4	***Compare*** the various types of projections
CO5	***Construct*** Orthographic projections, Axonometric and Isometric views of three dimensional objects in reduced scales.
C06	An understanding on the concepts of architectural drawing as well as representation skills are imparted

BAR 2 LI	ARCHITECTURAL DESIGN – II	0	0	11	6

UNIT I

DESIGN STUDIO

The problems involve simple space organization starting with single space single use – small span Horizontal movement – single bay – passive energy type spaces. The study of space standards and an anthropometrics related to each problem is stressed upon. Anthropometry as related to physically handicapped and elderly persons is required to be studies.

Examples and exercises include

a) Toilet for a physically handicapped person, Hostel Room, Bedroom, Kitchen.

b) Shop, Workshop, Pavilions, Snack bar.

c) Residence, Petrol bunk, fire station, police station, cottage for an elderly couple.

UNIT II WORKSHOP

Elementary models including wall surfaces floral designs, ceilings, glass areas; law water, bodies etc., Block models of small campuses using wood, the ramacol mount broad, soap, soap, corkboard, etc., Detailed model of a small building like branch bank, small residence, bus shelter, snack bar, including landscape details.

TOTAL: 180 PERIODS

References:

Design Studio

1. "E and O.E Planning", L life Book Ltd., London, 1973

2. De. Chiara and Callender, "Timer – saver standards for building types" McGrawHill Co., New York, 1973.

3. Sid Delk Mar Leach, "Techniques of Interior Design Rendering and Presentation", McGraw Hill Co., New York, 1973.

Workshop II

1. Wenninger (Magrus. J) "Sperical Models", Cambridge University Press, 1979.

2. Arundell (Jan), "Exploring Sculpture", Mills and Boom, London/Charles T. Brandford Company, USSA, 1972.

3. John W. Mills, "The Technique of Sculpture", B.T. Batsford Ltd., New York Reinhold Publishing Corpn., London, 1966.

4. Jannsen Constructional Drawing and Architectural models, KariKramer Verlag, Stuttgart

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Demonstrate the knowledge on arriving spatial requirements for various human activities
CO2	Demonstrate the knowledge on anthropometry and ergonomics in architectural design.
CO3	Interpret the case study examples to develop knowledge on architectural design.
CO4	Design of single spaces with the understanding of structural, utility, aesthetics and material considerations.
CO5	Develop a neat presentation drawings scale models using various media
C06	Learn to reciprocate and sensitize the design/concept to the environment and the design skill of the project

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 201	THEORY OF ARCHITECTURE – II	3	0	0	3

OBJECTIVES:

- To introduce the large scale changes from 1960s as context for new thought in architecture.
- To give exposure to the critiques of modern architecture.
- To study in detail the different post modern directions in architecture.
- To give an outline of architectural approaches across the world from late 20^{th} century.
- To give an understanding of the trajectory of post independence architecture of India till the present.

UNIT I **9**

INTRODUCTION

Developments during the industrial area, the great inventions and the reason for the birth of modern architecture.

UNIT II **8**

USE OF NEW MATERIALS

Extensive use of steel, glass and concrete – the great or the international exhibitions and their influence on architecture. The characteristic feature of modern architecture.

UNIT III **10**

CONTEMPORARY ARCHITECTS

The various moments, thoughts and philosophies of the 19th and 20th centuries to include Art Nouveau, Brutalism, Chicago school, constructivism, expressionism, Bauhaus, Functionalism, futurism, Neoclassicism, Organic architecture, Modular Co-ordination.

UNIT IV **12**

CONTEMPORARY ARCHITECTS

The three generations of architects : first generation to include L. Sullivan, F.L. Wright, Le Corbusier, Mies Van Der Rohe, Eric Mendelson. Walter Gropius, Richard Neutra. Second generation to include, Erro Sarrinen, Kenzo Tange, Louis Kahn, Minoru Yamasaki, Hugh Stubbins, Paul Rudolph, Skidmore Owings and Merrill.

UNIT V **6**

LATER TREND

Developments of prefabrication techniques, futuristic thoughts of Buck Minister Fuller.

TOTAL: 45 PERIODS

3. Kenneth Frampton, “Modern Architecture – A critical history” – Oxford University Press, 1980.
4. William J. Christ “Modern architecture since 1900”, Paidon Press Ltd., Oxford, 1982.

COURSE OUTCOMES (COs)	
The student will be able	
CO	Understand the impact of literature in architecture on philosophical development of
CO	Understand concepts, material and construct the alternative architectural methods
CO	Exposed to the master architects works and trace the development of evolution of their
CO 4	Understand the spatial organization and spatial qualities of different typologies of buildings
CO	Knowledge of the contemporary design process and apply the same in the architectural
C0	Understanding the conceptualization of architectural design with respect to program,

COURSE CODE	COURSE TITLE	L	T	P/ S	C
BAR 202	HISTORY OF ARCHITECTURE – II	3	0	0	3

OBJECTIVES:

- To give an overall understanding of the architecture in India up to the colonial period as parallel and sequential productions rising from the cumulative effect of forces operating and intersecting in the Indian subcontinent.
- To inform about specific and prominent modes of architecture in terms of evolution,
- Togive exposure to works that are architecturally exemplary and/or representative.
- To appreciate architecture as a giver of particular or universal meaning.

UNIT I **9**

ANCINET INDIA

Indus valley civilization – Culture and pattern of settlement. Impact of Aryan Culture – Vedic Village and the rudimentary forms of bamboo and wood wooden construction under the Mauryan Rule.

UNIT II **8**

BUDDHIST ARCHITECTURE

Hinayana and Mahayana Buddhism – Interaction of Hellenic & Indian ideas in Northern India – Architectural Production During Ashoka's Rule – Ashokan Pillar, Sarnath, Rock cut caves at Barabar, Sanchi Stupa, Salient features of a Chaitya hall and Vihara, Rock cut architecture in the Western and Eastern Ghats – Karli, Viharas at Nasik, Rani Gumpha, Udaigiri, Takti Bhai, Gandhara.

UNIT III **10**

HINDU ARCHITECTURE

Evolution of Hindu Temple – Early shrines of the Gupta and Chalukya periods – Tigawa Temple, Ladh Khan and Durga Temple, Aihole, Papanatha and Virupaksha Temples, Pattadakal.

UNIT IV **12**

DRAVIDIAN ARCHITECTURE

Dravidian culture – Rock cut products under Pallavas – Shore Temple, Mahabalipuram – Dravidian Order – Brihadeeswara Temple, Tanjore – Evolution and Form of Gopuram – Complexity in temple plan due to complexity in Ritual – Minakshi Temple, Madurai.

UNIT V **6**

INDO ARYAN STYLE

Salient Features of an Indo Aryan Temple – Lingaraja Temple, Bhuvaneswar – Sun Temple, Konarak, Kunds and Vavs – Sabali Kund – Adalaj – Surya Kund, Modhera.

TOTAL: 45 PERIODS

Test Book:

1. Percy Brown, "Indian Architecture (Buddhist and Hindu period)", Taraporevalla and sons, Bombay, 1983.

2. Satish Grover, "The Architecture of India (Buddhist and Hindu period)", Vikas Publishing Housing.

References:

1. Christoper Tadgelli, The History of Architecture in India From the Dawn of civilization to the end of Raj, Longman Group, U.K. Ltd., London, 1990.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Understand*** the origin of various civilization and Architecture in India at different points of time
CO2	***Understanding*** the architectural responses with respect to materials, technology, style and character in the Buddhist, Hindu and Dravidian Architecture
CO3	***Understand*** the emergence of Islamic Architecture, form and function of different structures and the underlying geometry and concepts of decoration and colour.
CO4	***Gain Knowledge*** on the history related to design thinking, cultural aspiration, social needs, and the evolution of the built environment
CO5	An understanding of the diversity of architecture in India and sensitivity towards its syncretic aspects
C06	Ability to appreciate particular cultural, symbolic, spatial and material qualities in architecture and cities as givers of meaning and continuity.

Mapping of Course Outcomes with Program Outcomes (POs)

4	Approval	31St Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 203	MECHANICS OF STRUCTURES II	3	0	0	3

OBJECTIVES:

To enable understanding of the basic concepts of shear force and bending moment acting on beams subjected to different loading conditions.

- To give knowledge about how to determine stresses in beams and strength ofsections.
- To give knowledge about how to calculate deflection of beams.
- To enable study of theory of columns.
- To give an understanding of the concept of indeterminate structure and its analysis.

UNIT I **9**

SHEAR FORCE AND BENDING MOMENT

Concept of sharing forces and Bending Moments – shear force and bending Moment diagrams for cantilver and simply supported beams subjected to point load, uniformly distributed loads and their combinations.

UNIT II **8**

STRESSES IN BEAMS

Theory of simple blending stresses in beams, share stresses in beams – examples on simple sections. Stress distribution diagrams.

UNIT III **10**

DEFLECTION OF BEAMS

Slope and deflection at a section – Double Integration and Macaulay's method for simply supported and cantilever beams.

UNIT IV **12**

THEORY OF COLUMNS

Short and long columns – Euler's method and its limitation. Derivations of Euler's formula (for different end conditions) – Rankine's formula for columns, examples, effect of eccentric loading.

UNIT V **6**

INTRODUCTION INDETERMINATE STRUCTURES

Concept in Analysis of continuous beams, fixed, beams, cantilevers, and partial frames (No problems)

TOTAL: 45 PERIODS

Text Books:

1. M.M. Ratwani, & V.N. Vazirani, "Analysis of Structures, Vol. I" Khanna Publishers – Delhi, 1987.

2. A.R. Jain and B.K. Jain, "Theory and Analysis of Structures, Vol I" Nemchand and Bros, Roorkeee, 1987.

3. B.C. Punmia, 'Strength of Materials and Theory of Structures" Vol I Laxmi publications New Delhi, 1994.

4. R.K. Rajput "Strength of Materials", S. Chand & Company Ltd., New Delhi 1996.

References:

1. Timoshenko, S.P. and D.H. Young, "Elements of Strength of Materials" Fifth Editions, East West Press, 1983.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Identify*** various types of loading and support conditions that act on structural systems and Understand the basic principles used in the analysis of structural members.
CO2	***Apply*** the concepts for finding the shear forces and moments for various structural members.
CO3	***Apply*** the concepts for finding the shear forces and moments for various structural members.
CO4	***Analyze*** the long and short columns and determine the design loads.
CO5	***Analyze*** indeterminate beams like continuous beams and fixed beams
C06	***Analyze*** and solve the problems in practical installations of the structural members

3	Category	Building Sciences and Applied Engineering (BS &AE)											
4	Approval	32nd Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BMA 204	PERSONALITY DEVELOPMENT, SOFT SKILLS ENHANCEMENT	3	0	0	3

OBJECTIVES

The objective of the training programme is bring about personality development with regard to the different behavioral dimensions that have far reaching significance in the direction of organizational effectiveness.

Unit 1 **9**

Leadership Introduction to Leadership, Leadership Power, Leadership Styles, Leadership in Administration.

Unit 2 **8**

Interpersonal skills – Conversation, Feedback, Feed forward

Interpersonal skills – Delegation, Humor, Trust, Expectations, Values, Status,

Unit 3 **5**

Communication Introduction to Communication, Flow of Communication, Listening, Barriers of Communication, How to overcome barriers of communication.

Unit 4 **6**

Stress Introduction to Stress, Causes of Stress, Impact Management Stress, Managing Stress

Unit 5 **6**

Group Dynamics Importance of groups in organization, and Team Interactions in group, Group Building Decision Taking, Team Building, Interaction with the Team, How to build a good team?

Unit 6 5

Time Time as a Resource, Identify Important Time Management Wasters, Individual Time Management Styles, Techniques for better Time Management.

Unit 7 **5**

Motivation Introduction to Motivation, Relevance and types of Motivation, Motivating the subordinates, Analysis of Motivation

TOTAL: 45 PERIODS

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Students gets the ability to apply visual and verbal communication skills at various stages of architectural design and project delivery process.
CO2	Students gains self-confidence to get into the global world.
CO3	*Apply* different techniques to various types of material such as a novel, newspaper, poem, drama and other reading papers.
CO4	*Use* visual aids to support verbal matters into language discourse.
CO5	*Prepares* to face the written exam with confidence and without any fear or tension.
C06	Speak convincingly, express their opinions clearly, initiate a discussion, negotiate, and argue using appropriate communicative strategies.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 205	ARCHITECTURAL GRAPHICS – II	3	0	0	3

UNIT I **15**

PERSPECTIVE

Characteristic of Perspective Drawings, Perspective Systems and methods. Two point perspective of simple objects, outdoor and indoor view of building etc.

UNIT II **15**

ONE POINT AND TWO POINT PERSPECTIVE

One and two point perspective of interiors, Perspective theory and practice.

UNIT III **15**

SCIOGRAPHY

Principles of shade and shadows – of lines and Circles, shadows of Architectural elements, etc., Shadows of circular solids, shadows on buildings.

TOTAL:45 PERIODS

Text Book:

I Perspective:

1. Robert W. Gill, “Basic Perspective”, Thames and Hudson, London, 1974.
2. Interiors: “Perspective in Architectural Design Graphic” – SMA Publishing Co., Ltd., Japan, 1967.

II Sciography :

1. C. Leslie Martin, “Architectural Graphics”, The Macmillan Company, New York, 1964.
2. Francis Ching, “Architectural Graphics”, Van Nostrand and Reinhold Company, New York, 1975.
3. Ernest Norling, “Perspective Drawing”, Walter Foster Art Books, California, 1986.
4. Bernard Alkins – 147, “Architectural Rendering”, Walter Foster Art Books, 1986.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Demonstrate*** the usage of various drafting tools in the process of preparing drawings.
CO2	***Assess*** 3D objects and represent them in drawings.
CO3	***Measure*** and prepare scaled measured drawings of various objects and existing buildings/
CO4	***Create*** One-point and Two-point perspective views of objects, interior and exterior of buildings from given plans and elevations.
CO5	***Analyze*** and ***draft*** the formation of shade and shadows of basic geometric shapes, forms and
C06	Ability to construct the 3d views and perspective drawings of the buildings.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 206	MATERIALS AND CONSTRUCTION I	0	0	6	3

1 INTRODUCTION **15**

Functional requirements of a building and its components - Drawings of foundations, plinth superstructure, roofings. Soils - Formation - grainsize distribution - soil classification systems. Lime - fat/hydraulic limes - Their uses and properties - Manufacturing process -Mortar, functions - requirements - mix proportions.

2 RURAL - MATERIAL AND CONSTRUCTION **20**

Mud as a building material - Soil stabilisation, soil blocks-Drawings of foundations - types, S.S. Block - S.S.Castinsitu walls - flooring - roofing - plastering. Bamboo, casuarina coconut, palam, hay coir,jute-properties-uses-fire retardent treatment insection proofing. Types of foundations - walls - simple rooftrusses, floors for rural structures.

3 STONE **25**

Classification of rocks - Building stones - their uses - physical properties - brief study of tests for stone - deterioration - preservation of stone - various stone finishes - cutting and polishing of granites. Drawings of foundations - types of masonry - random rubble/Ashlar, etc.-cavity walls - flooring copings, sills, lintels,corbels, arches.

4 BRICKS AND CLAY PRODUCTS **15**

Bricks - brief study on manufacture of bricks - properties - uses - suitability - types of bricks - uses in buildings, structural titles, ceramics, terracotta - uses.

TOTAL: 45 PERIODS

TEXTBOOKS:

1. R.J.S.Spencke and D.J.Cook, Building Materials in Developing Countries, John Wiley and Sons,1983.
2. HUDCO -All you want to know about soil stabilized mud blocks, HUDCO Pub., New Delhi, 1989.
3. UNO - Use of bamboo and reeds in construction - UNO Publications.
4. Rural Construction - NBO,New Delhi.

UNIT I

DESIGN STUDIO **120**

Single level planning in small scale, small span, horizontal movement and simple vertical movement, data collection, case studies, analysis and presentation of studies – Data collection with respect to design and detailing for physically handicapped persons – Concepts and presentation of design with scales models – Examples : Residential buildings, Institutional buildings, banks, Nursery or Primary schools, Primary Health Centre, School for children with learning disabilities, neighbourhood market, etc.

UNIT II

COMPUTER LAB STUDIO

Introduction to computer aided drafting system, concepts of real dimension, colours, symbols repeatability modification, layers, exercises related to design projects above.

TOTAL:210 PERIODS

References:

1. De Chiara and Callender, “Time Saver Standards Building Types”, McGraw Hill Co., 2nd Editions, 1980.

2. Edward D. Mills, Planning-“the Architects Handbook” – 10th Edition, British Library C Taloguing in Publishing Data, 1985.

3. Wakita / Linde, “The Professional practice of Architectural working, drawing” Jonh Wiley & Sons, 1984.

4. Andrew Alpern, “Handbook of specialty Elements in Architecture”, McGraw Hill Book Co., 1982.

5. Julius Panero & Martin Zelnik, “Human Dimension and Interior Space”, Whitney Library of Design Publication, 1979.

6. “Neufert Architect’s Data”, Rudolf Hefg, Crosby Lockwood and Sons Ltd., 1970.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To understand the characteristics of site and the importance of site planning which includes built form and open space.
CO2	Determine spatial arrangements, circulation of buildings and the response of user group through case studies.
CO3	Learn the process of design
CO4	Design of spaces with functional, aesthetics and material considerations by applying the knowledge gained in case studies.
CO5	Producing neat presentation drawings using various media and making scale models .
C06	Ability to perceive, understand and represent fundamental attributes of form-spacewith respect to human experience and use.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 301	BUILDING SERVICES I	3	0	0	3

OBJECTIVES:

- To Study Water supply, treatments, distribution and plumbing system for all type of buildings.
- To Study Waste water treatments, Sewer lines for all types of buildings.
- To Study Drainage system for a Small Campus and a Residential neighbourhood.
- To understand Refuse collections, disposal, composting, Landfill, Bio gas for a Town and City.
- Applications of all the above systems to a Buildings, Small Campus and a Residential neighbourhood.

CONTENT:

UNIT I WATER QUALITY, TREATMENTS AND DISTRIBUTION 9

Sources of water supply – Water Quality - Water requirements for all type of residential, commercial, Industrial buildings and for town – Water treatment methods – Screening, aeration, Sedimentation, Filtration, Disinfection, Softening, conveyance of water – Distribution of water – Choice of pipe materials - Types of fixtures and fittings – System of plumbing in all type of buildings.

UNIT II WASTE WATER, TREATMENTS AND DISPOSAL 8

Waste water – Sewage disposal, primary treatment. Secondary treatment, Biological treatment and Modern types of Sewage Treatment Plants - Sewer line fixtures and traps, Manholes, Septic tank.

UNIT III STORM WATER DRAINAGE AND RAIN WATER HARVESTING 10

Basic principles of storm water drainage – drain pipes and type of pipe – storm water gutter –rain water harvesting principles – storage sumps

UNIT IV SOLID WASTE, COLLECTIONS, TREATMENTS, DISPOSAL, MODERN DRAINAGE SYSTEMS 12

Refuse collection, disposal, Incinerator, Composting, Vermicomposting, Sanitary Land filling, Bio gas system and Modern renewable energy system. Modern plumbing system, drainage collection system, disposal for a housing colony, small towns – Selection of pumps and Construction of pump rooms.

UNIT V APPLICATION OF THE ABOVE UNITS 6

Layout design and details of water supply distribution system in a Campus or Small residential neighbourhood - Layout design and details of sewage and drainage system for different types of buildings –

water supply pipe lines, storm water drainage pipe lines and Rain water Harvesting for small residential neighbourhood.

TOTAL: 45 PERIODS

OUTCOMES

1. Students have through understanding of how water and waste water are managed, in residential unit, small campus and for a large city.
2. Students are aware of the principles and best practices for Solid waste management in residential unit, small campus and for a large city.

TEXTBOOK:

1. Manual of water supply and treatment, Second edition, CPHEEO, Ministry of works and housing, New Delhi 1977
2. AFEWise, JASwaffiedWater, Sanitary &Waste Services in buildings –Mitchell Publishing Co. Ltd. – 2002, V Edition
3. Punmia B.C., Waste Water Engineering, Laxmi Publications, 2009.
4. Arceivala S.J., Waste Water Treatment for Pollution Control, Tata McGraw Hill, 2008.

REFERENCES:

1. G.M. Fair, J.C. Geyer and D.Okin, Water and Waste water engineering Volume II, John Wiley & Sons, Inc. New York, 1968
2. Manual on sewerage and sewerage treatment, CPHEEO – Ministry of works and housing, New Delhi, 1980
3. Renewable energy, basics and technology, supplement volume on integrated energy systems) Auroville, 1998 Sri Aurobindo Ashram, Pondicherry 605002 India

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Outline*** the sources and treatment of ground water
CO2	***Explain*** the various water supply and drainage systems
CO3	***Assess*** the water supply requirements and sewerage generated.
CO4	***Select*** the pumps, water supply and drainage pipes.
CO5	***Design*** the water supply and drainage layout of residential buildings.
C06	***Illustrate*** the solid waste management concepts and systems.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 302	HISTORY OF ARCHITECTURE – III	3	0	0	3

UNIT I **9**

ROMANESQUE

The medieval ages – learning in the monasteries, evolution of the guilds – Factors influencing architecture – outline of architectural character in Italy, France and England – Examples: Pisa group, Italy; Abbey Aux Hommes, Caen; Tower of London.

UNIT II **8**

FRENCH GOTHIC

Religious and social influence – evolution of vaulting and development of structural systems – outline of Architectural character – Examples: Notre Dame, Paris.

UNIT III **10**

ENGLISH AND ITALIAN GOTHIC

Development of English gothic vaulting – outline of architectural character in England and Italy – Examples: West Minister Abbey, Hampton Court Place, London: Doges Palace, Venice: Milan Cathedral.

UNIT IV **12**

ITALIAN RENAISSANCE

The Idea of rebirth and revival of art – sociological influences in art architecture – Development of thought, emergence of merchant communities and their patronage. Outline of the Architecture during the Early Renaissance. High Renaissance and Baroque Periods – Features of a typical Renaissance Place, example: Palazzo Ricardi, Study of life History, Philosophy, contribution of the following architects: Brunelleschi, Michael Angelo, and Andrea Palladio.

UNIT V **6**

FRENCH & ENGLISH RENAISSANCE

Outline of the architectural character of French and English Renaissance – Domestic Architecture in England – Study of the life, Philosophy and works of the following architecture: Sir Christopher Wren. Indigo Jones.

TOTAL: 45 PERIODS

Text Books:

1. Sir Bannister Fletcher, "A History of Architecture", University of London, The Antholone Press. 1986.

2. G.K.Hiraskar, Great Ages of World Architecture ,Dhanpat Rai and Sons,Delhi

References:

1. Pier Luigi Nervi, "History of World Architecture Series". Harry N. Abrame Inc. Publication, New York, 1972.

2. S. Lloyd/H.W. Muller, "History of World Architecture" – Series Faber Ltd., London, 1986.

3. Spiro Kostof, "A History of Architecture" – Settings and Rituals, Oxford University Press, London, 1985.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Explain the architectural characters of Medieval Europe through selected examples.
CO2	Analyze the continuity between each style – the factors that connect each style
CO3	Analyze the trend or the pattern of development of architectural styles.
CO4	Interpret the contemporary architectural style and its development leading to new styles.
CO5	Understanding Characteristics and styles of colonial architecture
C06	Understanding the ideas and styles over revolution.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 303	DESIGN OF STRUCTURES I	3	0	0	3

OBJECTIVES: To introduce the design of various timber components in a building. • To enable the understanding of the types, efficiency and strength, advantages and
Disadvantages of Rivet and welded joints in steel. • To enable the design of Tension (beams) and compression (columns) steel members in a
building under various conditions.
• Case studies and models wherever applicable.

UNIT I

TIMBER STRUCTURES - DESIGN OF BEAMS AND COLUMNS 9

Grading of Timber – Permissible Stresses – Design of timber beams – Madras terrace roof – Design of timber columns.

UNIT II

STEEL STRUCTURES - BOLTED AND WELDED JOINTS 12

Assumptions – failure of Bolted joints – Strength and Efficiency of Bolted Joints – Types – Design of Bolted Joints for Axially Loaded Members (Excluding eccentric connections)Types of
welded joints – Advantages and disadvantages – Design of Fillet welds (Excluding eccentric connections).

UNIT III

TENSION MEMBERS 8

Introduction – Net sectional area – permissible stresses. Design of Axially loaded Tension member – Lug angle – code provision – tension splice.

UNIT IV

COMPRESSION MEMBERS 10

Introduction – various sections – built up section – Design of columns (excluding Lacing, Battening and other connections.)

UNIT V

STEEL BEAMS 6

Introduction – laterally supported and unsupported beams – Design of laterally supported beams.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

Design the timber beams and columns by applying the codal provisions. Able to design the steel joints for maximum efficiency and strength.

Tension members and compression members are designed for various conditions by applying the codal provisions.

Différent types of laterally unsupported & supported beams to be designed for various conditions.

TEXTBOOK:

1. L.S. Negi, Design of Streel Structures – Tata McGraw Hill Publishing Company Ltd., New Delhi, 1997.

2. S. Ramachandra, Design of Steel Structures - Standard Book House, Delhi, 1984.

3. Ramamurutham .S, Narayanan .R, Design of Steel Structures, Dhanpat Rai – Sons, 2006.

4. Punmia B.C., Design of Steel Structures, Laxmi Publications, 2005.

REFERENCES:

1. A.S.Arya, Structural Design in Steel, Masonry and Timber, Nemchand and Bros, Roorkee, 1971.

2. National Building Code of India, 1983, Part VI, Structural Design.

3. Gurucharan Singh, Design of Steel Structures, Standard Publishers, New Delhi, 1982.

4. Dayaratnam.P, Design of Steel Structures, Oxford and IBH Publishing Co.

5. IS 883 – Code of Practice for Design of Structural Timber in Buildings

6. IS 800 - 2007 – Code of Practice for use of Structural Steel in General Building Construction

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Illustrate*** masonry walls for axial loads and RCC walls.
CO2	***Apply*** relevant IS Code provisions to ensure safety and serviceability of structural elements
CO3	***Identify*** and compute the main mechanical properties of concrete and steel and structural
CO4	**Design** different types of foundations for axially short and long columns
CO5	***Design*** reinforced concrete slabs and beams by WSM and LSM for flexure
C06	Ability to Differentiate types of laterally unsupported & supported beams to be designed for various conditions

Mapping of Course Outcomes with Program Outcomes (POs)

	C06					H		L					

COURSE CODE	COURSE TITLE	L	T	P/S	C
BMA 304	CLIMATE AND ENVIRONMENTAL STUDIES	3	0	0	3

OBJECTIVES:

- To study human heat balance and comfort.
- To familiarize students with the design and settings for buildings for daylight and factors that influence temperature
- To inform about the air pattern around buildings and the effect of wind on design and siting of buildings
- To expose the students to the various design strategies for building in different types of climatic zones.

UNIT I CLIMATE AND HUMAN COMFORT 9

Factors that determine climate of a place – Components of Climate – Climate classifications for building designers in tropics – Climate characteristics. Human body heat balance – Human body heat loss – Effects of climatic factors on human body heat loss – Effective temperature – Human thermal comfort – Use of C.Mahony's tables.

UNIT II DESIGN OF SOLAR SHADING DEVICES 8

Movement of sun – Locating the position of sun – Sun path diagram – Overhead period–Solar shading– Shadow angles – Design of appropriate shading devices

UNIT III HEAT FLOW THROUGH BUILDING ENVELOPE CONCEPTS 10

The transfer of heat through solids – Definitions – Conductivity, Resistivity, Specific heat,
Conductance, Resistance and Thermal capacity – Surface resistance and air cavities – Air to air transmittance (U value) – Time lag and decrement – Types of envelops with focus on glass.

UNIT IV AIR MOVEMENT DUE TO NATURAL AND BUILT FORMS 12

The wind – The effects of topography on wind patterns – Air currents around the building – Air movement through the buildings – The use of fans – Thermally induced air currents – Stack effect, Venturi effect – Use of court yard.

UNIT V CLIMATE AND DESIGN OF BUILDINGS 6

Design strategies in warm humid climates, hot humid climates, hot and dry climates and cold climates – Climate responsive design exercises.

TOTAL: 45 PERIODS

OUTCOMES

- Understanding of Thermal balance in Human beings
- Designing Climate responsive structure
- Conceptual understanding of Air flow in Buildings

TEXTBOOKS:

1. O.H. Koenigsberger and Others, Manual of Tropical Housing and Building – Part I - Climate design, Orient Longman, Madras, India, 2010.

2. Bureau of Indian Standards IS 3792 (1987), Hand book on Functional requirements of buildings other than industrial buildings, (Part I – IV), Manakbhavan, 9, Bahadur Shah Zafar Marg, New Delhi – 110 002.

REFERENCES:

1. Martin Evans (1980), Housing Climate and Comfort – Architectural Press, London.

2. B. Givoni (1981), Man, Climate and Architecture, Architectural Sciences Series – Applied Science Publishers Ltd., London

3. B. Givoni (1994) Passive and Low Energy Cooling of building, Van Nortrand Reinhold New York, USA.

4. Galloe, Salam and Sayigh A.M.M. (1998) "Architecture, Comfort and Energy", Elsivier Science Ltd., Oxford, U.K.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Understand*** climatic types and design approaches
CO2	***Analyze*** design types of shading devices
CO3	***Understand*** thermal performance of various building materials
CO4	Able to ***design*** of buildings with good ventilation
CO5	Able to ***design*** of climatic conscious buildings
C06	Designing Climate responsive structure

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	34th Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 305	COMPUTER STUDIO – I	0	0	4	3

UNIT I

INTRODUCTION TO COMPUTER **15**

Technology of small computer system, computer terminology operation principles of P.C. introduction to application software, and graphic system, and use of printers, scanner, plotter, file management etc.,

UNIT II

INTRODUCTION TO COMPUTER AIDED 2D DRAFTING **15**

Understanding the use of drawing tools, object editing, drawing objects, filling and setting drawing units, scales, limits that size and dimensioning, text, Setting up of drawings of various simple architecture objects with complete text and dimensioning.

UNIT III

ADVANCE COMPUTER AIDED 2D DRAFTING **15**

Advance command programming – transparent overlays hatching utilities, assigned colour and line type, use of multiline, style, block, symbol library manipulation for accurate drawings, incorporating the above said utilities.

UNIT IV

INTRODUCTION TO 3D DRAFTING **15**

Introduction to 3D modeling technique and construction planes, drawing object 3D surface setting up elevation and thickness, and use of dynamic projections.

UNIT V

3D MODELLING **15**

Solid modeling with primitive commands and Boolean Operation. Use of region modeling in solid modification in solid modification.

TOTAL: 75 PERIODS

Text Book:

1. V. Rajaraman, "Principles of Computer Programming" – Prentice Hall of India.

References:

1. "Auto CAD reference manual" – Auto Desk Inc.

2. "Auto CAD Architectural users' guide" – Auto Desk Inc.

CO1	To **apply** softwares in the field of Architecture to represent design ideas.
CO2	***Produce*** 2D technical drawings using AutoCAD
CO3	***Develop*** the 3D model of buildings & objects using AutoCAD and Sketch Up
CO4	***Recreate*** realistic image of objects and buildings by using presentation software.
CO5	Sheet set ***organization*** and plot/print drawing to the scale.
C06	Ability to develop knowledge.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 306	MATERIALS AND CONSTRUCTION II	2	0	4	4

UNIT I

BRICKS AND CLAY PRODUCTS **15**

Drawings of brick foundations - buildings in brickwork, bonds columns,corners - structrual members in brickwork. Reinforced brick masonry - Arches - Lintels - Corbels - copings. Hollow clay blocks - for walls - patritions -roofs. Roofings - Flats Roofs - or Terrace roofs - Sloping roofs. Detailing includes for physically handicapped.

UNIT II

TIMBER AND ALLIED PRODUCTS **15**

Softwood and Hardwood - Secondary Timber - Physical properties and uses - Defects, Conversion, Seasoning, Decay and preservation of timber - Fire retardent treatment, anti-termite treatment. Industrial timbers - plywood,blockboard,particle board, fibre boards. Manufacture and uses - current developments.

UNIT III

TIMBER **15**

Drawings of timber joinery for Windows, doors, ventilators. Timber partitions, panelling, false ceiling,fixed ceiling - wall panelling. Timber staircases - Designed staircase - timber trusses - Lean to - close couple - Kingpost - Queen pot - Trusses. Timber floors - timber built-in-furniture - Detailing and fittings for physically handicapped.

UNIT III

LOW COST BUILDING TECHNOLOGY **15**

Drawings of foundations - walling - Roofs - Partitions - Ceiling panel - Doors and Windows. Miscellaneous - Drawing of Brick Jails, Screen Walls - Pavement blocks - Ferrocement water tanks. Detailing and specifications for physically handicapped.

GLASS **15**

Composition of glass - brief study on manufacture, treatment, properties and uses of glass - special types of glass, sheet glass, plate glass, safety glass, tinte coated glass - Glass blocks - properties and applications in the building Industry -current developments.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Understand the basics of structures and differentiate their types. Know the formation of soil, their classification and understand the importance of soil in building construction.
CO2	Classify the various types of timber and compare their properties and application in building construction.
CO3	Draw the various types of building components for rural and modern structures using various materials like timber
CO4	Classify the various types of stones and bricks and compare their properties and application in building construction.
CO5	Draw the various types of building components for rural and modern structures using various materials like brick, stone.
C06	Able to identify the good and clay products

BAR 4LI	ARCHITECTURAL DESIGN – IV	0	0	13	6

UNIT I

DESIGN STUDIO

Problem related to multi room, single use, small span – Multiple story, Horizontal and vertical movement, Active cum passive energy, Masonry and frame type buildings.

Ex: Department store, Library, higher secondary school, campus students' center, etc. The projects will consciously provide for movement and use by the physically handicapped and elderly.

UNIT II

DESIGN STUDIO – RURAL PROJECT

Problems related to Rural Housing – Visits to selected village – Surveys on socio – economic, physical, housing and surveys, etc. to study existing conditions – analysis of survey data – preparation of report and presentation in a seminar – preparation of design brief solutions for housing and community facilities.

UNIT III

COMPUTER LAB STUDIO

Documentation of rural project of Housing typology using computer – Introduction to 3D modeling and rendering 3D images. **TOTAL: 180 PERIODS**

5. Julius Panero & Martin Zelnik, "Human Dimension and Interior Space", Whitney Library of Design Publication, 1979.

6. "Neufert Architect's Data", Rudolf Herg, Crosby Lockwood and Sons Ltd., 1970.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Understand*** the space and furniture's required for various human activities.
CO2	***Interpretation*** of buildings for spatial arrangements and circulation.
CO3	***Design*** of medium scale public buildings with structural, utility, aesthetics and material considerations by applying the knowledge gained in case studies. Analyse a site with respect to various aspects
CO4	Learn the procedure of studying and **analysis** of rural housing and settlements and preparing design solutions.
CO5	***Involve*** in producing neat presentation drawings using various media like pencil color, water and poster colors, crayons etc.
C06	***Prepare*** scale models of studio exercises using sheets, boards, wood etc.

3	Category	Professional Core (PC)											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 401	BUILDING SERVICES II	3	0	0	3

UNIT I **9**

PUMPS AND MACHINERIES

Reciprocating, centrifugal, deep well, submersible automatic pumps, sewerage pump, compressors vacuum pump – their selection installation and maintenance – Hot Water Boiler –Lifts and Escalators – special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC / AC motors – generators – Laboratory services – gas, water, air and Electricity.

UNIT II **8**

ELECTRICAL SYSTEMS

Basics of electricity – single / three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI Specification.

UNIT III **10**

ELECTRICAL INSTALLATIONS IN BUILDINGS Type of wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – transformers and switch gears – Layout of substations.

UNIT IV **12**

PRINCIPLES OF ILLUMINATION

Visual Tasks – factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – additive and subtractive synthesis of colour – luminous flux – Candela – Solid angle illumination – Utilisation factor – depreciation factor – MSCP – MHCP – Lans of illumination.

UNIT V **6**

LIGHT DESIGN

Classification of lighting – Artificial light sources – spectral energy distribution – luminous efficiency – colour temperature – colour rendering. Design of modern lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination requited for physically handicapped and elderly in building types.

TOTAL: 45 PERIODS

Text Books:

1. “Handbook for Building Engineering in Metric systems”, NBC, New Delhi, 1968.

References:

1. E.R. Ambrose, "Hear Pumps and electric heating", John and Wiley and Sons, Inc., New York, 1968.
2. "Philips Lighting in Architectural Design", McGraw Hill, New York, 1964.
3. R.G. Hopkinson and J.D. Kay, "The Lighting of buildings", Faber and Faber, London, 1969.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Illustrate*** the basics of electricity, components and installations and ***prepare*** electrical layout
CO2	***Illustrate*** the fundamentals of lighting and ***prepare*** lighting design
CO3	***Outline*** energy efficient lighting design solutions
CO4	***Understand*** the fire safety requirements of buildings
CO5	***Identify*** fire detection and fire fighting systems for buildings and ***prepare*** fire safety
C06

4	Approval	32nd Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 402	HISTORY OF ARCHITECTURE – IV	3	0	0	3

UNIT I **9**

INTRODUCTION TO ISLAMIC ARCHITECTURE

Brief History of Islam in terms of birth, spread across countries and principles – Influences on Islamic Architecture – Evolution of building types in terms of forms and functions – the mosque, the tomb, and minaret, the madarasa, the palace, the caravanserai, vernacular architecture, the market – important principles, elements and character of Islamic architecture in terms of structure materials and methods of construction, elements of decoration, colour, geometry, light – important examples to illustrate development of Islamic architecture.

UNIT II **8**

ISLAMIC ARCHITECTURE IN INDIA

Advent of Islam into the Indian subcontinent and its impact – source of Islamic Architecture in India and influences on them – Brief history of development and classification urban different styles and regions.

UNIT III **10**

DELHI OR IMPERIAL STYLE

Development of architectural styles during the rule of the slave, Khilji, Tulip Spayed and Lodi Dynasties – important examples for each period.

UNIT IV **12**

PROVINCIAL STYLE

Development of the provincial styles in different regions – Punjab, Jaunpur, Bengal, Gujarat, Malwa, the Deccan (Bijapur, Golconda, Bidar and Gulbarga) – Important examples for each style.

UNIT V **6**

MUGHAL STYLE

Development of the Mughal style under the different rulers – Babur, Shershah, Humayun, Akbar, Jahangir, Shahjahan, Aurangzeb – important examples – development of the Mughal garden – important examples.

TOTAL: 45 PERIODS

Text Books:

1. Brown Percy, “Indian Architecture (Islamic Period)” Taraporevalla and Sons, Bombay, 1983.
2. Satish Grover .The Architecture of India(Islamic) Vikas Publishing House Pvt Ltd. New Delhi

References:

1. "Architecture of the Islamic World" – George Michell – its history and social meaning, Thames and Hudson, London, 1978.

2. "Islamic Architecture, Form, Function and Meaning", Robert Hillenbrand, Edinburgh University Press, 1994.

3. Christopher Tadgell – "The History of Architecture in India" – Penguin Books (India) Ltd., New Delhi, 1990.

4. Satish Grover, "The Architecture of India (Islamic)" Vikas Publishing House Pvt. Ltd., elk New Delhi, 1981.

5. R. Nath – "History of Mughal Architecture" – Abhinav Publications – New Delhi – 1985.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Understand*** the origin of various civilization and Architecture in India at different points of time
CO2	***Understanding*** the architectural responses with respect to materials, technology, style and character in the Buddhist, Hindu and Dravidian Architecture
CO3	***Understand*** the emergence of Islamic Architecture, form and function of different structures and the underlying geometry and concepts of decoration and colour.
CO4	***Gain Knowledge*** on the history related to design thinking, cultural aspiration, social needs, and the evolution of the built environment
CO5	An understanding of the diversity of architecture in India and sensitivity towards its syncretic aspects
C06	Ability to appreciate particular cultural, symbolic, spatial and material qualities in architecture and cities as givers of meaning and continuity.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 403	DESIGN OF STRUCTURES II	3	0	0	3

OBJECTIVES:

- To inform about the methods of design through working stress and limit state methods.
- To use the above two methods for the design of Concrete beams and slabs under various conditions.
- To use the limit state method for design of a concrete staircase.
- Case studies and models wherever applicable.

UNITI **9**

DESIGN OF CONCRETE MEMBERS AND WORKING STRESS

DESIGN OF BEAMS

Concept of Elastic method, Ultimate Load Method and Limit State Method – Advantages of Limit State Method over other methods. Analysis and Design of Singly and Doubly reinforced rectangular and flanged beams for bending.

UNITII **8**

LIMIT STATE DESIGN OF BEAMS

Analysis and design of singly and doubly reinforced rectangular and flanged beams for Bending – Design of Continuous beams using IS code co-efficient.

UNIT III **10**

LIMIT STATE DESIGN OF SLABS

Behavior of one way and two way slabs – Design of one way and two way slabs for various edge conditions - Corner effects.

UNIT IV **12**

DESIGN OF CIRCULAR SLABS

Design of Simply supported and fixed Circular slabs subjected to uniformly distributed loads.

UNIT V **6**

DESIGN OF STAIRCASE BY LIMIT STATE METHOD

Types of Staircases – Design of Dog Legged Staircase.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Understand the different concepts of WSM and LSD methods using the codal provisions.
- RC beams and slabs to be designed by applying the above concepts.
- Dog legged staircase design using LSD.

TEXTBOOK:

1. S.N. Sinha, Reinforced Concrete Design – Tata McGraw Hill Publishing Co. Ltd.,New Delhi,1998.

2. Shah, Reinforced Concrete, Vol. 1 and 2 – Charotar Publishing House, Anand, 1998.

2. C. Sinha and S.K. Roy, Fundamentals of Reinforced Concrete, S.Chand & Co., New Delhi, 1983.

3. Dr. B.C. Punmia, Reinforced Concrete Structures, Vol, 1 & 2 Laxmi publication, Delhi, 2004.

4. IS 456:2000, Indian Standard, Plain and Reinforced Concrete – Code of Practice, Bureau of Indian Standards.

5. S. Unnikrishnan Pillai and Devados Menon, Reinforced Concrete Design – Tata McGraw Hill Publishing Co. Ltd., New Delhi, 1999.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Design*** the Pre stressed members
CO2	***Explain*** the design concepts of Shells and folded plates
CO3	***Analyze*** the behavior of steel and R.C.C structural members
CO4	***Design*** the steel connections.
CO5	***Design*** the R.C.C structural members
C06	Understand the different concepts of WSM and LSD methods using the codal provisions

4	Approval	32nd Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 404	SITE PLANNING & LANDSCAPE ARCHITECTURE	0	0	4	3

OBJECTIVES:

- To teach the importance of site and its content in architectural creations
- To orient the students towards several influencing factors which govern the siting of a building or group of buildings in a given site.
- To teach various techniques of site analysis through exercises and case studies.
- To teach the students the methodology of preparing a site analysis diagram. This will serve as a prelude to any architectural creation through exercises.

UNIT I **9**

INTRODUCTION

Definition of plot, site, land and region, units of measurements. Introduction to survey, methods of surveying, where they are used, Surveying Instruments and their application. Need for surveying. Measuring and drawing out a site plan from the measurements

UNIT II **8**

SITE DRAWINGS

Computation of area by geometrical figures and other methods. Drawing marking out plan, layout plan and centerline plan – Importance, procedure for making these drawings and dimensioning. Setting out the building plan on site – Procedure and Precautions. Exercises on the above.

UNITIII **12**

SITE ANALYSIS

Importance of site analysis; On site and off site factors; Analysis of natural, cultural and aesthetic factors – topography, hydrology, soils, vegetation, climate, surface drainage, accessibility, size and shape, infrastructures available - sources of water supply and means of disposal system, visual aspects; Preparation of site analysis diagram. Study of microclimate:- vegetation, landforms and water as modifiers of microclimate. Study of land form;- contours, slope analysis, grading process, grading criteria, functional and aesthetic considerations – Case studies and exercises on the above.

UNITIV **10**

SITE CONTEXT

Context of the site. Introduction to existing master plans land use for cities, development control Rules. Preparation of maps of matrix analysis & composite analysis. Site selection criteria for housing development, commercial and institutional projects - Case studies.

UNIT V **6**

SITE PLANNING AND SITE LAYOUT PRINCIPLES

Organization of vehicular and pedestrian circulation, types of roads, hierarchy of roads, networks, road widths and parking, regulations. Turning radii & street intersections

TOTAL: 45 PERIODS

OUTCOMES

- The contextual importance on site analysis can be understood based on the various site factor with respect to the study area.
- A first hand understanding of site drawings for Landscape Architecture and Urban design is
- studied.
- Various scientific and analytic site analysis techniques is understood.
- A methodological approach for preparation of master plans for small scale and large scale projects can be understood.

TEXTBOOK:

1. Kevin Lynch - Site planning - MIT Press, Cambridge, MA - 1984.

2. Edward. T. Q. Site Analysis – Architectural Media, 1983

4. Storm Steven, Site engineering for landscape Architects, John wiley & Sons Ine, 2004.

5. Development Control Rules – CMDA, 2008.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Illustrate the application of various types of surveys in buildings
CO2	Survey a site or building
CO3	Analyse a site with respect to various aspects
CO4	Design and Develop a site plan
CO5	Outline the Environmental factors related to site planning
C06	Understand the Sensitivity towards aspects of site at macro and micro contexts.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 405	CLIMATE & BUILT ENVIRONMENT	3	0	0	3

OBJECTIVES:

At the end of this course the student is expected to understand what constitutes the environment, what are precious resources in the environment, how to conserve these resources, what is the role of a human being in maintaining a clean environment and useful environment for the future generations and how to maintain ecological balance and preserve bio-diversity. The role of government and non-government organization in environment managements.

UNIT I **9**

INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES

Definition, scope and importance of environment – need for public awareness - Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles.

Field study of local area to document environmental assets – river / forest / grassland / hill /mountain.

UNIT II **8**

ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY

Concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the

(a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems

(ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographically classification of India

– value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option

values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hotspots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.

Field study of common plants, insects, birds; Field study of simple ecosystems – pond, river, hill slopes, etc.

UNITIII **10**

ENVIRONMENTAL POLLUTION

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – soil waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides.Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

UNIT IV **12**

SOCIAL ISSUES AND THE ENVIRONMENT

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization- environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies.

– wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

UNIT V **6**

HUMAN POPULATION AND THE ENVIRONMENT

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TOTAL: 45 PERIODS

OUTCOMES:

1. Students are sensitized on the need for natural resource management, and sustainable lifestyles
2. Students appreciate the value of ecosystem and the need and methods for conserving the same.
3. Students understand the how pollution and hazards can be mitigated.

TEXT BOOKS:

1. Gilbert M.Masters, "Introduction to Environmental Engineering and Science", 2nd edition, Pearson Education, 2004.
2. Erach Bharucha, "Text book of Environmental Studies", University Press, Hyderabad, 2006.
3. Anubha Kaushik and Kaushik C.P., " Perspectives in Environmental Studies" New age International (P) Ltd., New Delhi, 2005
4. Venugopala Rao.P, " Principles of Environmental Science and Engineering" Prentice Hall of India Pvt. Ltd., New Delhi, 2006.

REFERENCES:

2. Dharmendra S. Sengar, "Environmental law", Prentice hall of India PVT LTD, New Delhi,2007
3. Rajagopalan, R, "Environmental Studies-From Crisis to Cure", Oxford University Press,2005
4. Richard T. Wright, "Environmental Science" Prentice Hall of India Pvt. Ltd., New Delhi,

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To understand what constitutes the environment and how to conserve it.
CO2	To analyse the need for natural resource management, and sustainable lifestyles
CO3	To evaluate the value of ecosystem and the need and methods for conserving the same.
CO4	To understand the how pollution and hazards can be mitigated.
CO5	To analyse with case studies on various social causes and understand the need to spread and learn more about the causes and the ways to prevent them.
C06	An overview of important regulations and bylaws

Mapping of Course Outcomes with Program Outcomes (POs)

4	Approval	32nd Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 406	MATERIALS AND CONSTRUCTION III	2	0	4	4

OBJECTIVES:

- To give an introduction to cement and concrete as materials for building construction.
- To help understand the principles, types, methods of construction and applications of concrete for structural and non-structural building components.
- To enable design and detail using concrete in buildings

1 CEMENT **10**

Varities of cement,compostion,properties and uses - brief study on manufacture of portland cement - tests for cement - mortar for various works.

2 CONCRETE,ITS INGREDIENTS MANUFACTURE & PROPERTIES **15**

Ingredients - suitability requirementsd for aggregates, grading of aggregates - role of water in concrete - reinforcement - admixtures - properties of concrete. Manufacture of concrete and concreting - mix proportioning - batching, mixing, transporting, placing, compaction, curing formwork - quality control - outline of tests for concrete - joints in concrete - concrete finishes.

3 SPECIAL CONCRETE AND CONCRETING METHODS **15**

Lightweight, high density, fibre reinforced, polymer concrete - outline of manufacture, properties and uses of the above - ready mixed concrete - grunting - cold weather and underwater concreting - current developments in concrete products and methods of concreting.

4 CONCRETE CONSTRUCTION **15**

Introduction to frames structures.

Concrete in foundations - types of footings - isolated, combines, continious,strip. Concrete floors, walls and partitions. Concrete Lintels, arches, sunshades Concrete slabs - types - concrete beams and columns.

5 CONCRETE STAIRCASES **20**

Factors involving staircase design - types of staircases like straightflight, doglegged, quarterturn, bifurcated,spiral,helical, etc. - different support conditions like inclined slab,cranked slab,continuous,cantilever - foundations, finishes for staircases- detailing out of handrails and balusters. Designing and detailing for physically handicapped.

WEBSITES:

http://dir.yahoo.com/Business-and -
Economy/companies/construction/concrete/materials

http://www.easyads.co.2a/yellow/india/construct

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Explain*** the composition, properties, and tests for cement
CO2	***Summarize*** the ingredients, properties ,quality control of concrete and its construction process
CO3	***Create*** detailed drawings of footing, lintels, beams and slabs
CO4	Ability to use concrete as a versatile material in different contexts and to use it innovatively in simple projects.
CO5	An understanding of the concepts of concrete as a building construction material
C06	Ability to design and detail specific components in concrete where there is scope for architectural design.

2. E and O.E. "Planning", Liffee Books Ltd., London, 1973.
3. "National Building Code" IST
4. De Chiara Callender, "Time Saver Standard for Building Types", McGraw Hills Co., 1973.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Demonstrate*** the concept of passive design in built environment
CO2	Ability to critically understand and address issue of resources.
CO3	***Analyze*** the impact of spatial configuration at building level and at site level on passive design.
CO4	***Analyze*** and interpret different case buildings.
CO5	***Design*** and development energy efficient buildings.
C06	***Develop*** working drawings and model displaying energy efficient and green building technologies.

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 501	BUILDING SERVICES III	3	0	0	3

UNIT I **9**

BASIC REFRIGERATION PRINCIPLES

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent of fusion, evaporation, sublimation – Saturation temperature – Super heated vapor – sub cooled liquid pressure temperature relationship for liquids – Refrigerants.

UNIT II **8**

REFRIGERATION CYCLE AND SYSTEM COMPONETNS

Vapor compression cycle – compressors – evaporators – Refrigerant control devices – electric motors – starters – Air handling units – Cooling towers.

UNIT III **10**

AIR-CONDIONING SYSTEM AND APPLICATIONS

Window type and package air-conditioners – chilled water plant – fan coil systems – water piping – cooling load – Air-conditioning systems for different types of buildings –Protection against fire to be caused by A.C. systems.

UNIT IV **12**

FIRE SAFETY – GENERAL PROVISIONS

Causes of fire in buildings – safety regulations – NBC – Planning considerations in buildings like Non-combustible materials, construction, staircase and life lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types.

UNIT V **6**

FIRE DETECTION AND FIGHTING INSTALLATIONS

Heat and smoke detectors – Fire Alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and Wet risers – Automatic sprinklers.

TOTAL: 45 PERIODS

Text Books:

1. William H. Severns and Julian R. Fellows, "Air conditioning and Refrigeration", John Wiley and Sons, London, 1988.

References:

1. A.F.C. Sherratt. "Air conditioning and Energy Conservation", The Architectural Press, London.

2. "National Building Code".

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Illustrate*** the basics of building management systems, scope and its importance.
CO2	***Outline*** the basics of BIM and Controllers.
CO3	***Categorize*** all the aspects of BMS and its role in advanced building services.
CO4	***Assess*** the components of BMS and its application in buildings
CO5	***Summarize*** the various technological advancements, current trends in BMS
C06	Ability to integrate services in buildings.

3	Category	Building Sciences and Applied Engineering (BS &AE)											
4	Approval	32nd Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/ S	C
BAR 402	HISTORY OF ARCHITECTURE – V	3	0	0	3

UNIT I **9**

LEADING TO A NEW ARCHITECTURE

Historical overview – Origins if Neo-Classicisms – Enlightenment Architects: Boulle and Ledoux. Beginning of New Extra – Industrial Revolution & its impart – Materials & Technology's History of Steel concrete glass.

UNIT II **8**

REVIEWING INDUSTRIALIZATION

Architecture Industrial Exhibition Arts and Crafts Movement in Europe and America – Art Nouveau and the works of Gaudi, Horta, Guimard, Macintosh – Early works of F.L. Wright.

UNIT III **10**

ISSUES OF ORNAMENTATION AND AESTHETICS

Adolf loos and the Arguments on Ornamentation – Futurists Movement Manifestos and the works of Sant Elia – Expressionism and the works of Mendelssohn, Taut, Polzeig – Cubism and Constructivism and its influence on Architecture – De stijl : Ideas and works.

UNIT IV **12**

INSTITUTIONS

Werkbund and Bahaus/Works of Behrens and Gropius – Cannonising Modernism – International Style – CIAM Congresses and Declarations.

Works and Ideas – Le Corbusier – Mies – Later Works of Wright – Alvar Alto.

UNIT V **6**

ARCHITECTURE IN COLONIAL INDIA

Colonialism and its impact – Early British Neo – classical Architecture – Indo – Sarcenic Architecture and the works of Chisholm – P.W.D. and the Institutionalisation of Architecture – Building New Delhi.

TOTAL: 45 PERIODS

Text Books:

2. Mechy Design – "Architecture after Independence".

References:

1. Leonardo Benevolo, “History of Modern Architecture”, 2 Vols. Routledge & Kegan Paul, London, 1971.

2. Manfredo Taferi/Franceso dal co., “Modern Architecture”, Faber and Faber / Electra, 1980.

3. Sigfried Giedion, “Space Time and Architecture”. The Growth of a New Tradition, Harvard University Press, 1978.

4. Thomas Metcalf, “An Imperial Vision”, Faber and Faber, London. 1989.

5. Tzonis Alexander – Santiago Calatrava International Publication

6. Kenneth Frampton, “Modern Architecture”. A Critical History, Thames and Hudson, London 1994.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Differentiate*** the chronological development of architectural style in relation with the material development and cultural change.
CO2	***Interpret*** the spatial configuration and three dimensional articulation of master architects
CO3	***Examine*** the contextual design solution, Spatial organization and spatial qualities of different typologies of buildings.
CO4	***Develop*** the knowledge towards logical design development.
CO5	An understanding of modernity as a fundamental transformation in Western society that spread across the world and the resultant architectural production.
C06	An insight into the development of modern architecture.

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	C06					L							

3	Category	Professional Core (PC)
4	Approval	29th Meeting of Academic Council

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 503	DESIGN OF STRUCTURES III	3	0	0	3

OBJECTIVES:

- To inform about structural design through working stress and limit state methods.
- To enable use of the above two methods for the design of concrete beams and slabs under different conditions.
- To enable use of limit state method for design of a concrete staircase.

UNIT I **9**

LIMIT STATE DESIGN OF RCC COLUMS

Code provisions – design of axially loaded short and long columns of rectangular and circular sections – ties and spiral reinforcements.

UNIT II **8**

LIMIT STATE DESING OF BEAMS, SLABS AND STAIRCASE

Limit state design of continuous beams and slabs using code coefficients. Types of staircases – design of doglegged staircase.

UNIT III **10**

SEISMIC STUDY AND STRUCTURAL APPLICATION IN BUILDING DESIGN

Introduction of seismic study – identification of seismic zones – effects of earthquake in environment and in built forms – types of structural damages due to seismic effects – precautions in structural design – form and shapes of built forms and structures. Materials related to structural forms – related building codes – safety factors.

UNIT IV **12**

WORKING STRESS DESIGN OF FOUNDATION

Types of foundation – isolated pad footings – combined footings – design principles for rafts, pile foundations. (No design calculations)

UNIT V **6**

WORKING STRESS DESIGN OF RETAINING WALLS

Design of RCC Cantilever retaining walls

TOTAL: 45 PERIODS

Text Books :

1. P. Dayaratnam, “Design of Reinforced Concrete Structure”, Oxford and IBH Publishing Co., 1983.

2. N.C. Sinha and S.K. Roy, Fundamentals of Reinforced Concrete’, S. Chand and Co., New Delhi, 1983.

References:

1. Vazirani and Ratwani, 'Concrete Structures', Khanna Publishers, New Delhi 1969.

2. S.N. Sinha 'Reinforced Concrete Design' Tata McGraw Hill, New Delhi 1998.

3. Ashok K. Jain 'Reinforced Concrete Limit State Design" Nemchand, Bros Roorkeee 1983.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Ability to understand the different concepts of WSM methods using the code provisions
CO2	Ability to understand the different concepts of LSD methods using the code provisions
CO3	Ability to design RCC beams and slabs by applying the aboveconcepts.
CO4	Ability to design RCC slabs by applying the aboveconcepts.
CO5	Ability to design RCC dog legged staircase design usingLSD.
C06	Ability to design RCC foundation.

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	C06						H	H					
3	Category	Building Sciences and Applied Engineering (BS &AE)											
4	Approval	32nd Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 5E1	ELECTIVE I- ENERGY EFFICIENT ARCHITECTURE	3	0	0	3

OBJECTIVES:

- To inform the need to use alternative sources of energy in view of the depleting resources and climate change.
- To familiarise the students with simple and passive design considerations
- To inform about the importance of day lighting and natural ventilation in building design
- To make the students aware of the future trends in creating sustainable built environment.

UNIT I **9**

PASSIVE DESIGN

Significance of Energy Efficiency in the contemporary context, Simple passive design considerations involving Site Conditions, Building Orientation, Plan form and Building Envelope - Heat transfer and Thermal Performance of Walls and Roofs

UNIT II **8**

ADVANCED PASSIVE ARCHITECTURE- PASSIVE HEATING

Direct Gain Thermal Storage ofWall and Roof - Roof Radiation Trap - Solarium - Isolated Gain

UNIT III **10**

PASSIVE COOLING 8

Evaporative Cooling - Nocturnal Radiation cooling - Passive Desiccant Cooling - Induced Ventilation - Earth Sheltering - Wind Tower - Earth Air Tunnels

UNIT IV **6**

DAY LIGHTING AND NATURAL VENTILATION

Daylight Factor - Daylight Analysis - Daylight and Shading Devices - Types of Ventilation - Ventilation and Building Design.

UNIT V **12**

CONTEMPORARY AND FUTURE TRENDS 12

Areas for innovation in improving energy efficiency such as Photo Voltaic Cells, Battery Technology, Thermal Energy Storage, Recycled and Reusable Building materials, Nanotechnology, smart materials and the future of built environment, Energy Conservation Building code.

TOTAL: 45 PERIODS

OUTCOMES:

- The students are exposed to alternative sources of energy and are exposed to passive design considerations
- An understanding on day lighting and natural ventilation in design in addition to the future trends in creating sustainable built environment

TEXTBOOK:

1. Manual on Solar Passive Architecture, IIT Mumbai and Mines New Delhi - 1999
2. Arvind Krishnan & Others, Climate Responsive Architecture, A Design Handbook for Energy Efficient Buildings, TATA McGraw Hill Publishing Company Limited, New Delhi, 2001
3. Majumdar M, Energy Efficient Building in India, TERI, 2000.

REFERENCES:

1. Fuller Moore, Environmental Control Systems, McGraw Hill INC, New Delhi - 1993
2. Sophia and Stefan Behling, Solpower, the Evolution of Solar Architecture, Prestel, New York, 1996
3. Givoni .B, Passive and Low Energy Cooling of Buildings, Van Nostrand Reinhold, New York, 1994
4. The energy efficient home: a complete guide by PatrickWaterfield, Crowood press ltd.
5. Dean Hawkes, Energy Efficient Buildings:Architecture, Engineering and Environment, W.W. Norton & Company
6. David Johnson, Scott Gibson, Green from the Ground Up: Sustainable, Healthy and Energy efficient home construction, Published April 2008 by Tauton.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Demonstrate*** the concept of passive design in built environment
CO2	Ability to critically understand and address issue of resources.
CO3	***Analyze*** the impact of spatial configuration at building level and at site level on passive design.
CO4	***Analyze*** and interpret different case buildings.
CO5	***Design*** and development energy efficient buildings.
C06	***Develop*** working drawings and model displaying energy efficient and green building technologies.

Mapping of Course Outcomes with Program Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	25th Meeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 5E1	ELECTIVE I- THEORY OF DESIGN	3	0	0	3

OBJECTIVES:

- To understand design and the role of the designer in changing society.
- To familiarize the students with methodologies, theories and models of the design process.
- To inform students about the term creativity and introduce techniques which will enable creative thinking.
- To inform the approaches that generate ideas for architectural design and the importance of the participatory approach to design.

UNIT I **9**

INTRODUCTION TO DESIGN

Definition and understanding of design- design in history -changing role of designer on society different classifications of design according to scale, process, mode of production, etc.,

UNIT II **8**

DESIGN METHODOLOGY MOVEMENT

Context for the rise of the design methodology movement- theories of the first generation and the second generation design methodologists- various models of the design process- focus on the design problem: ideas of escalation/regression and wicked problem.

UNIT III **10**

CREATIVE THINKING

Understanding the term creativity- theories on thinking: left brain/ right brain, convergent and divergent thinking, lateral and vertical thinking- design spectrum from the logical to chance - blocks in creative thinking- various techniques to generate creativity

UNIT IV **12**

ARCHITECTURAL CREATIVITY

Design puzzles and traps - approaches to generate ideas for architectural design - types of concepts- personal philosophies and strategies of individual designers - channels to creativity in architecture

UNIT V **6**

DESIGN AND PEOPLE

Concept of pattern language- participatory approach to design - design as process

TOTAL: 45 PERIODS

OUTCOMES:

An ability to think about architecture as one of the many fields under the broader ambit of design as a fundamental human activity.

TEXTBOOK:

1. Geoffrey Broadbent - Design in Architecture - Architecture and the human sciences - John Wiley & Sons, New York, 1981.

2. Bryan Lawson - How Designers Think, Architectural Press Ltd., London, 1980.

3. Anthony Antoniades, Poetics of architecture- Theory of design

4. Paul Alan Johnson, Theory of Architecture- Concepts, Themes,Wiley 2008 VNR, 1994

5. Christopher Alexander, Pattern Language, Oxford University Press,1977

6. James C. Snyder, Anthony J. Catanese, Timothy L. McGinty- Introduction to Architecture, McGraw Hill 1979.

REFERENCES:

1. Victor Papanek, Design for the real world

2. Edward De Bono, Lateral Thinking, Penguin, 1990.

3. Design methods- Christopher Jones, Wiley, 1980.

4. Tom Heath - Method in Architecture, John Wiley & Sons, New York, 1984.

5. Nigel Cross - Developments in Design Methodology, John Wiley & Sons, 1984.

6. Evans, Helen Marie; Dumesnil, Carla Davis- An Invitation to Design, Macmillan Publishing Co., New York, 1982

COURSE OUTCOMES (COs)	
The student will be able	
CO1	An ability to think about architecture as one of the many fields under the broader ambit of design as a fundamental human activity.
CO2	Focuses on the aesthetic and **function** of the structure.
CO3	It's **design** works to create a space that flows with its surroundings.
CO4	The infinite variety of these spaces can be as varied as life itself
CO5	**design theory** is a system of ideas that explains how and why **design** works.
CO6	To know how everything they put on a page communicates, influences, directs, invites, entices and excites an audience

3	Category	PE											
4	Approval	27THMeeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 5L2	COMPUTER STUDIO II	0	0	4	3

OBJECTIVES:

- To introduce Computer operation principles and explore image editing through a visual composition using graphics.
- To impart training in Computer aided 2D drafting and 3D Modeling through projects
- To enable the rendering of a building so as to create a photo realistic image.

UNIT I **10**

INTRODUCTION TO COMPUTER AND IMAGE EDITING

Technology of small computer system, computer terminology operation principles of P.C., introduction to application software, and graphic system, and use of printers, scanner, plotter, File management, etc. Understanding Bitmap images and Vector Graphics, Image size and Resolution. Basic Tools for Editing and Creating Graphics.

UNIT II **15**

THE BASICS OF BUILDING MODELLING

Creating a basic floor plan, About Temporary Dimensions, Adding and Modifying Walls, Working with Compound Walls, Using Editing Tools, Adding and Modifying Doors, Adding and Modifying Windows

UNIT III **20**

VIEWING THE BUILDING MODEL

Understanding the drawing unit's settings, scales, limits, drawing tools, drawing objects, object editing, and text, dimensioning. Transparent overlays, hatching utilities, line type, line weight and colour. Multiline, Polyline, etc. Styles, blocks and symbol library.

UNIT IV **15**

INTRODUCTION TO 3D MODELLING

Project: Create 3D sculpture using 3D primitives (cubes, spheres etc.)

Tools: Slide facilities script attributes, V-port, editing session. Introduction to 3D-modelling technique and construction planes, drawing objects, 3D surfaces setting up elevation thickness and use of dynamic projections.Solidmodelingwith primitive command andBoolean operation.

UNIT V **15**

3D RENDERING AND SETTING

Project: Visualize a building. Explore the potential of lights and camera and use the same in the model created for the final submission. Tools: Rendering and scene setting to create a photo realistic picture,

understanding material mapping, environment setting and image filling. Exercise to identify and visualize a building using the above said utilities.

TOTAL: 75 PERIODS

OUTCOMES:

- The students benefit by learning software which helps them to better visualize complicated forms and also helps in producing photo realistic images of those 3D forms.

TEXTBOOK:

1. Photoshop 7Bible ProfessionalEdition,Wiley John&Son INC,NewYork,Deke McClelland, 2000.

2. AutoCAD architectural user guide – Autodesk Inc., 1998.

3. A. Watt, Fundamentals of Three-Dimensional Computer Graphics, Addis Wesley, Massachusetts, 1989.

REFERENCES:

1. The Illustrated AutoCAD 2002 Quick Reference, Ralph Grabowski,

2. Autocad 2000: A Problem-Solving Approach, Sham tikoo. Pub: Thomson Learning, 1999.

3. 3D MAX - 6 Bible, Wiley, 2004.

CO1	To ***apply*** softwares in the field of Architecture to represent design ideas.
CO2	***Produce*** 2D technical drawings using AutoCAD
CO3	***Develop*** the 3D model of buildings & objects using AutoCAD and Sketch Up
CO4	***Recreate*** realistic image of objects and buildings by using presentation software.
CO5	Sheet set ***organization*** and plot/print drawing to the scale. In photoshop
C06	Ability to develop knowledge.

Mapping of Course Outcomes with Program Outcomes (POs)

COURSE CODE	COURSE TITLE	L	T	P/S	C
BAR 504	MATERIALS AND CONSTRUCTION – IV	2	0	4	4

UNIT I

FERROUS METALS **5**

Brief study on manufacture,properties and uses of cast iron,wrought iron,pig iron and steel - anticorrosive measures for steel - mechanical and heat treatment of steel - market forms of steel - structural steel, stainless steel, steel alloys - properties and uses - current developments.

UNIT II

STEEL CONSTRUCTION **10**

Structural steel sections - types of connections in steel - steel in foundations, columns and beams - different types of steel roof trusses including northlight truss - space frames - materials for roofcovering. Steel staircases and handrails,balusters. Steel doors and windows - openable, sliding - collapsible gates - rolling shutters. Steel in furniture and other interior uses. Detailing and specification for physically handicapped.

UNIT III

NON FERROUS METALS **15**

Aluminium and Aluminium Alloys - brief study on manufacture,properties and uses - Aluminium products - extrusions,foils,castings,sheets,etc.-tin and lead,properties and uses - current developments.

UNIT III

CONSTRUCTION USING NON-FERROUS METALS **20**

Aluminium doors - openable, sliding, pivoted.

Aluminium windows -

openable,sliding,fixed,pivoted.

Aluminium ventilators - top hung,bottom

hung,pivoted,louvred,fixed. Aluminium partitions,false

ceiling,shopfront handrails,curtainwalling. Aluminium roofing -

northlight glazing bar ,Aluminium roofing sheets.

Use of other nonferrous metals like copper,bronze,brass,etc.,in architectural construction. Detailing and specification for physically handicapped.

UNIT III

PLASTICS 10

Thermoplastics and thermosets - properties and architectural uses of plastics - structural plastics - reinforced plastics and decorative laminates - plastic coatings,adhesives and seatants - modifiers and plasticzers - fillers and stablizers - fabrications of plastics. Primary plastic building products for walls,roof and partitions -

secondary building products for rooms,windows,roof lights, domes,gullers handrails.

TOTAL:60 PERIODS

TEXTBOOKS:

1. .C.Rangwala,Engineering Materials, Charotar Publishing House,India,1997.
2. B.C.Punmia,Building Construction,laxmi Publications Pvt.Ltd.,New Delhi,1993.
3. Arthur Lyons - Materials for Architects and Builders - An Introduction - Arnold,London,1997.
4. Don A.Watson,Construction Materials and processes,McGraw Hill Co.,1972.
5. Harold B.Olin,Construction Principles materials and Method, The Institute of Financial Education, Chicago,1980.
6. Time Saver Standards for Architectural Design Data,Callendar JH,McGraw Hill,1974.

http://www.indiabussinesSonline.com

http://www.nrwas.com

http://www.arcadiaproducts.com

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Identify*** the appropriate Ferrous and Non-Ferrous materials in construction.
CO2	***Identify*** appropriate construction techniques using Ferrous and Non-Ferrous materials in construction
CO3	***Assess*** the suitable steel roof truss for different spans of industrial buildings.
CO 4	***Detailed drawings of Ferrous and Non Ferrous, Glass based building components***
CO5	***Apply the property of glass towards "Energy conservation***
C06	***Knowledge of properties of ferrous and non-ferrous metals as materials for buildings***

SEMESTER VII

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCAR701	COST ESTIMATION AND BUDGETTING	3	0	0	3

OBJECTIVES

- To enable understanding with respect to quality and quantity of materials, quantity and classes of skilled and unskilled labours, and tools and plants required for projects.
- To give an understanding of how to draw up specifications for the different items of a building project and also to prepare the schedule of programming of the project.
- To give knowledge on how to prepare approximate as well as detailed estimates and to have a clear picture of the project expenditure.
- To help calculate the exact quantities of items of work done for effecting payment especially when direct measurements are difficult and also to determine the quantities of different materials required for various items of work.
- To give understanding of how to prepare valuation report of real and landed property.
- To give exposure to budgeting in projects.

UNIT I
SPECIFICATION AND SPECIFICATION WRITING 9

Necessity of specification, importance of specification.How to write specification.Types of Specification.Principles of Specification writing.Important aspects of the design of specification.Sources of information.Classification of Specification.Brief Specification for1st class, 2nd class, 3rd class building. Detailed specification for earthwork excavation, plain cement concrete, reinforced concrete, first class and second class brickwork, damp proof course, ceramic tiles/marble flooring and dado, woodwork for doors, windows frames and shutters, cement plastering, painting & weathering course in terrace.

UNIT II
ESTIMATION 9

Types & purpose.Approximate estimate of buildings. Bill of quality, factors to be considered. Principles of measurement and billing.Contingencies.Measurement of basic materials like brick, wood, concrete and unit of measurement for various items of work.Abstract of an estimate. Costs associated with constructed facilities. Approaches to cost estimation. Type of construction cost estimates. Cost Indices. Applications of cost indices to estimating. Estimate based on engineer's list of quantities. Estimation of operating costs.

UNIT III
DETAILED ESTIMATE 11

Deriving detailed quantity estimates for various items of work for a single storied building. To include earthwork excavation, brick work, plain cement concrete, reinforced cement concrete works, wood work, iron works, plastering, painting, flooring, weathering course.

UNIT IV
VALUATION **8**

Valuation.Explanation of terms.Types of values.Sinking fund.Years of purchase.Depreciation. Types of depreciation.Valuation of real properties.Types, methods and purpose of valuation.

UNIT V
BUDGETING **8**

Elements of cash flow.Time value of money. Capital investment decision. Types of business firms. Budget and Budgetary Control.Types of Budgets.Preparation of financial budget.

TOTAL: 45 PERIODS

TEXTBOOKS:

Rangwala. S.C, 'Estimating, Costing and Valuation (Professional practice)', Charotar Publishing House,1984
M.Chakraborthi, 'Estimating, Costing, Specification and Valuation in Civil Engineering, Chakraborthi, 2010.
B.N. Dutta, 'Estimating and Costing' UBS Publishers and Distributors,2000.
S.SangaReddi and P.L.Meiyappan, 'Construction Management', Kumaran Publication, Coimbatore.
Gurcharan Singh and Jagdish Singh, 'Estimating Costing and Valuation', Standard Publishers Distributors, 2012.

'I.S.1200-1968 Methods of Measurements of Buildings and Civil Engineering works'.
Latest schedule of rates of P.W.D.
Latest Data book of P.W.D.
PWD Standard Specifications. Govt Publication.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Understand*** the unit measurement of materials.
CO2	***Understand*** the techniques of estimating and costing related to building construction.
CO3	***Apply and understand*** the various methods of quantity surveying, rate analysis of building and valuation for different materials used. Calculate material cost of given component/product.
CO4	***Know*** about Specification for basic building material and apply the same for another example
CO5	***Understand and apply*** the concepts of project planning and basics of financial management
CO6	***Analysing***the cost of the projects

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCAR702	PROJECT MANAGEMENT	3	0	0	3

UNIT I **9**
INTRODUCTION TO PROJECT MANAGEMENT

Introduction to project Management concepts of background of management, purpose, goal and objectives, characteristics of projects and different aspects of management.
Traditional management system, Gantt's approach load chart, progress chart, bar-chart merits and limitation. Schedule, time estimates units.

UNIT II **8**
PROJECTS PROGRAMMING

Project programming, resources balancing, phasing of activities, program, scheduling, project control, reviewing, updating and monitoring.
Introduction to modem management, concepts, uni dimensional management techniques – Introduction to PERT and CPM introduction to network concepts, network elements and inter-relationships.

UNIT III **10**
NETWORK – TECHNIQUES

Network techniques, network logic o inter relationships, activity information, data sheets, development of network.
CPM for management, CPM network analysis, identification of critical path float computation result sheets.

UNIT IV **12**
PERT NETWORK

PERT Network, introduction to the theory of probability and statistics, probabilistic time estimation for activities of PERT network.

UNIT V **6**
PROJECT COST

Introduction to two dimensional network analysis, activity cost information. Cost time relationship, crashed estimates for the activities, compression potential, cost slope, utility, data sheet, project direct cost and indirect cost.
Crashed program, network compression least cost solution least time solution, optimum time solution.
Network techniques, PERT/CPM, generating alternative strategies using computers.

TOTAL: 45 PERIODS

TEXT BOOKS:

Dr. B.C. Punmiya and K.K. Khandelwal – "Project Planning and Control with Pert/CPM" Laxmi Publications. New Delhi, 1987.

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCAR703	URBAN DESIGN	3	0	0	3

OBJECTIVES

- To create an understanding of urbanism and urban morphology as rising from various forces through history.
- To introduce the components of the modern city and their interdependencies.
- To introduce the scope and nature of urban design as a discipline
- To introduce key theories associated with urbanism and cities.
- To create awareness of contemporary urban issues and how they are addressed.
- To give exposure to ways of perceiving, documenting and analysing cities.

UNIT I
URBANISM IN HISTORY **10**

Outline of forces shaping urbanism. Urbanism of river valley civilisations.Morphology of pre-industrial European cities to include Greek and Roman cities, medieval European towns, Renaissance urbanism and ideal cities. Outline of historic cities of India. Temple town urbanism of Tamil Nadu.Mughal city form.Medieval cities of India.Colonial urbanism in India.

UNIT II
MODERN URBANISM **10**

Industrialisation and impact on urbanism.American grid iron planning.Theories, ideas and practice of good urban planning/cities/urbanism in early 20th century. Outline of modernist cities and urbanism across the world. Morphology of Indian modernist cities of Chandigarh, Bhuvaneshwar and Gandhi Nagar.Components of modern urbanism such as blocks, density, neighbourhood, streets etc., and their interdependencies.Evolution of urban design as a discipline, its scope and objectives.

UNIT III
CITIES AND URBANISM THROUGH TEXTS AND THEORIES **10**

Introduction to and discussion of key texts and theories of cities and urbanism - Imageability and Lynch, Townscape and Cullen, Genius Loci and Schulz, historic city and Rossi, social aspects of urbanism and the works of Jane Jacobs, William Whyte and Jan Gehl, Collage City and Colin Rowe, current theories and texts.

UNIT IV
CONTEMPORARY URBANISM AND URBAN INTERVENTIONS7

Understanding aspects, issues and solutions related to urbanism today through study of literature and best practices/case studies in urban design. Topics to include urban decay, change and renewal, place making, heritage, conservation, identity, suburban sprawl, gated communities, generic form, privatisation of public realm, role of real estate, transportation, zoning, globalisation, technology, digital age, sustainability, community participation, gender, class, power.

UNIT V
URBAN STUDIES **8**

Introduction to study and interpretation of cities (especially Indian) through understanding published studies/ analysis. The focus will be on components/aspects as well as tools/ methods. Tools and methods to include different types of maps/mapping, drawings, sketches, photo documentations, reading, data collection, analysis. Aspects to include topography, geology, hydrology, micro climate, vegetation, urban density, growth, city limits/boundaries, history, urban architecture, typologies, infrastructure, land parcels, public space, demographics, patterns of usage, land use.

TOTAL: 45 PERIODS

TEXTBOOKS

A.E.J. Morris, 'History of Urban Form before the Industrial Revolution', Prentice Hall, 1996.
Edmund Bacon, 'Design of Cities', Penguin, 1976.
Gordon Cullen, 'The Concise Townscape', The Architectural Press, 1978.
Michelle Provoost et al., 'Dutchtown', NAI Publishers, Rotterdam, 1999.
'Time Saver Standards for Urban Design', Donald Natson, McGraw Hill, 2003.
Kevin Lynch, 'The Image of the City' MIT Press, 1960.
Rithchie. A, 'Sustainable Urban Design: An Environmental Approach', Taylor & Francis, 2000.
Tridib Banerjee, Anastasia Loukaitou-Sideris, Editors, 'Companion to Urban Design', Routledge, 2014.

REFERENCES

Jonathan Barnett, 'An Introduction to Urban Design', Harper Row, 1982.
Lawrence Halprin, 'Cities', Reinhold Publishing Corporation, New York, 1964.
Gosling and Maitland, 'Concepts of Urban Design', St. Martin’s Press, 1984.
Malcolm Moor, 'Urban Design Futures', Routledge, 2006.
Geoffrey Broadbent, 'Emerging Concepts in Urban Space Design', Taylor & Francis, 2003.
AnuradhaMathu, 'Deccan Traverses', Rupa, 2006.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Plan / Undertake a study to identify existing issues related urban design in built environment.
CO2	Identify various factors that are responsible urban conditions.
CO3	Gather, correlate and interpret the data that are required for design proposal at historic cities.
CO4	Develop an urban renewal proposal for a city.
CO5	Develop a design proposal for the urban issues relating to the built environment
CO6	To provide a framework for exploring the meaning and **scope of urban design**

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCAR7L1	ARCHITECTURAL DESIGN VI	0	0	16	8

OBJECTIVES

- To enable an understanding of architecture as having the capacity to critically interpret and transform status quo in the built environment and society through the act of design.
- To guide in the taking of critical/ philosophical/ ideological positions relating to specific design situations in the current world and to explore architectural morphology as an expression of those positions.

CONTENT:

Architecture as a discipline balances many concerns in the creation of buildings. However, it also represents ideas and production reacting to/ reinforcing/ anticipating/ transforming specific aspects of the existing world towards a more desirable future. This could spring from individual perspectives as well as through concerted efforts which then become movements. Architecture can thus seek to understand, reflect, strengthen, question, change status quo. The process of design can thus offer a possible, intended future.

Projects/ design situations will be given in this regard which address issues/ programmes of current society with a larger impact in terms of scale or importance. Different realms/ aspects of contemporary life can be explored. Some possible projects/ area of inquiry are institutional campuses of significance, mixed use projects involving diverse user groups, culturally and socially important buildings, urban life, technological developments, culture, globalisation, place, meaning, identity, appropriate architecture, etc.,

Suitable processes can be engaged for critical and creative thinking which could include wide and interdisciplinary reading to take critical positions, contemporary processes such as mapping and diagramming, methods related to social, technical or empirical aspects, etc.,

The particular line of thought will be taken through to completion through the processes. It is preferable to have one major project with small exercises under it if required.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Understand the concept of energy efficient design & green building technologies.
CO2	Understand the impact of spatial configuration at building level and at site level on energy consumption
CO3	Analyze and interpret different case buildings.
CO4	Design and development energy efficient buildings.
CO5	Develop working drawings and model displaying energy efficient and green building technologies.
CO6	Demonstrate an understanding of the design philosophy, or vision of the architectural office and its implementation in the project/s

SEMESTER VIII

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18HSAR801	PROFESSIONAL ETHICS AND PRACTICE	3	0	0	3

OBJECTIVES

- To give an introduction to the architectural profession and the role of professional bodies and statutory bodies as well as ethics of the profession.
- To give familiarity with basic aspects of running an architectural practice.
- To give exposure to the processes involved in taking up and completing an architectural project.
- To inform about legal aspects and legislations associated with the profession.
- To give exposure to the larger implications of professional practice in the globalised world today.

UNIT I
INTRODUCTION TO ARCHITECTURAL PROFESSION CODE OF CONDUCT AND ETHICS

9

Architectural profession and role of architects in society.Registration of architects.Role of the Indian Institute of Architects. Architects Act 1972- intent, objectives, provisions with regard to architectural practice. Council of Architecture- role and functions.Importance of ethics in professional practice.Code of conduct for architects.Punitive action for professional misconduct of an architect.
Architecture as a professional service towards clients. Architect's office and its management - organisational structure, infrastructure requirement, skills required, elementary accounts, tax liabilities. Setting up architectural practice.

UNIT II
ARCHITECT'S SERVICES, SCALE OF FEES & COMPETITIONS **9**

Mode of engaging an architect.Comprehensive services, partial services and specialised services.Scope of work of an architect.Schedule of services. Scale of fees - Council of Architecture norms. Mode of payment.Terms and conditions of engagement.Letter of appointment.Importance of Architectural competitions.Types of competitions - open, limited, ideas competition, single and two stage competitions.Council of Architecture guidelines for conducting architectural competitions.National and international Competitions.Case studies.

UNIT III
PROJECT MANAGEMENT - TENDER & CONTRACT **12**

Tender - Definition. Types of Tenders - open and closed tenders. Conditions of tender.Tender notice. Tender documents.Concept of EMD.Submission of tender.Tender scrutiny.Tender analysis.

Recommendations. Work order. E-tendering - advantages, procedure, conditions.
Contract – definition. Contract agreement and its necessity. Contents - articles of agreement, terms and conditions, bills of quantities and specifications, appendix. Certification of contractors.Bills at different stages. New trends in project formulation and different types of execution - BOT, DBOT, BOLT, BOO, etc., Role of architect in project execution stage.

UNIT IV
LEGAL ASPECTS **6**

Arbitration - definition and advantages. Sole and joint arbitrators.Role of umpires, award. Arbitration clause in contract agreement -role of architect, excepted matters. Easement – meaning, types of easements. Copy rights and patenting – provisions of copy right acts in India, copy right in architectural profession. Consumer Protection Act - intent, architects responsibility towards his clients.

UNIT V
IMPORTANT LEGISLATIONS AND CURRENT TRENDS **9**

Planning parameters at various scales.DTCP rules. Second Master Plan CMDA as case study. Chennai Corporation Building Rules 1972. Panchayat Rules. Building rules in National Building Code. Factories Act. Persons with Disabilities Act.Barrier Free Environment.Coastal Regulation Zone.Heritage Act.Globalisation and its impact on architectural profession.Preparedness for international practice.Entry of foreign architects in India.Information technology and its impact on architectural practice. Emerging specialisations in the field of architecture -architect as construction/ project manager, architectural journalism, architectural photography.

TOTAL: 45 PERIODS

TEXTBOOKS

Architects Act 1972.
Publications of Council of Architecture
RoshanNamavati, 'Professional Practice', Lakhani Book Depot, Mumbai, 2016.
Ar. V.S. Apte, 'Architectural Practice and Procedure', Mrs.PadmajaBhide, 2008.
MadhavDeobhakta, 'Architectural Practice in India', COA, 2007.

REFERENCES

J.J.Scott, 'Architect’s Practice', Butterworth, London 1985.
Development Regulations of Second Master Plan for Chennai Metropolitan Area-2026. (Second Master plan of CMA).
Chennai City Corporation Building Rules 1972.
T.N.D.M. Buildings rules, 1972.
Consumer Protection Act, 1986.
Arbitration Act, 1996.
Factories Act, 1948.
Persons with Disabilities Act, 1995.
Tamil Nadu Cinematography Act. DTCP Act.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Relate the responsibility of architect towards the society.
CO2	Illustrate the building rules and regulations essentials for practice.
CO3	Know the ethics to be followed while practicing the profession
CO4	Prepare tenders
CO5	Know the office procedure, work with allied professionals as a team in accordance with the architect'sact 1972
CO6	Prepare contract documents

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCAR802	URBAN HOUSING	3	0	0	3

OBJECTIVES

- To introduce housing in the Indian context and the various agencies involved in the production of housing.
- To outline factors, aspects and standards related to housing.
- To inform about the various housing design typologies and the processes involves in housing project development.
- To inform about current issues and aspects in housing.

UNIT I
INTRODUCTION TO HOUSING AND HOUSING ISSUES IN INDIA **9**

Housing and its importance in architecture, its relationship with neighborhood and city planning.Housing demand and supply.National Housing Policy.Housing agencies and their role in housing development.Impact of life style.Rural Housing.Public and private sector housing.

UNIT II
SOCIO-ECONOMIC ASPECTS **9**

Economics of housing.Social economic factors influencing housing affordability.Formal and informal sector.Equity in housing development.Sites and services.Slum housing, upgradation and redevelopment.Low Cost Housing.Health principles in housing.Legislation for housing development.Cost-effective materials and technologies for housing. Case studies in India and developing countries.

UNIT III
HOUSING STANDARDS **8**

UDPFI guide lines, standard and regulations.DCR. Performance standards for housing.

UNIT IV
SITE PLANNING AND HOUSING DESIGN **11**

Site Planning for housing. Selection of site for housing, consideration of physical characteristics of site, location factors, orientation, climate, topography, landscaping. Integration of services and parking.Housing design relating to Indian situations – traditional housing, row housing, cluster housing, apartments, high-rise housing. Case studies in India of the various types.

UNIT V
CURRENT ASPECTS AND ISSUES IN HOUSING **8**

Green building and sustainable practices.Disaster resistance and mitigation.Prefabrication Community participation.

TOTAL: 45 PERIODS

OUTCOME

Knowledge of various issues concerning housing & housing development in Indian & global context covering a cross section of income groups.
Ability to appreciate socio-economic aspects in housing.
An understanding of housing standards, site planning principles, housing concepts and types.
An understanding of key issues in housing today.

TEXTBOOKS:

Christopher Alexander, 'A Pattern Language', Oxford University press, New York 1977.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	On the comptetion of iheccLrse ire student must be aware of the significance of housing
CO2	The context of both global and narrana; scenario.
CO3	critical social and economic issues related to housing
CO4	They should familiarize to the various housing schemes
CO5	Housing Finance, Sources of Housing Finance
CO6	Concept of Aided Self Help- Housing the poor through the NGO s

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCAR8L1	ARCHITECTURAL DESIGN VII	0	0	16	8

OBJECTIVES:

- To enable an understanding of urbanism as a continuous experience involving the interrelated disciplines of architecture, urban design and town planning.
- To understand architecture as influenced by and influencing the dynamics of cities.
- To facilitate the taking of architectural design decisions in the context of the urban environment.

CONTENT:

Urbanism is a dynamic phenomenon involving many aspects - urban growth, landuse distribution and change, urban form, demographics including gender and class, cultural aspects such as place and heritage, physical infrastructure such as roads and transportation nodes, public spaces, etc., Architecture is an integral and large part of urbanism, shaping and being shaped by it. It can serve to include/ gather society and enrich the urban environment in a seamless manner.

Understanding of this aspect of architecture will be achieved by architectural projects involving interdependencies between architecture and the city. Some of the issues and areas that could be addressed are- transportation nodes, heritage areas, adaptive reuse, suburban sprawl, place making, identity, collective memory, mixed use programming, large scale urban interventions, revitalisation and renewal of urban fragments, urban waterfront development, urban nodes, multi-use urban complexes.

The tools and techniques can include contemporary ways/ tools of perceiving, gathering and analysing data, inclusive, collaborative and participatory approaches, etc.,
It is preferable to have one major project with small exercises under it if required.

TOTAL: 240 PERIODS

TEXTBOOKS

Jonathan Barnett, 'An Introduction to Urban Design', Harper and Row; 1982
Cavallo, R. et al, 'New Urban Configurations', IOS Press, 2014.
Henriette Steiner & Maximilian Sternberg, 'Phenomenologies of the City: Studies in the History and Philosophy of Architecture', Routledge 2015.
Jan Gehl, 'Life between Buildings- Using Public Space', ArkitektensForleg 1987.
'Time Savers Standard for Urban Design', Donald Watson, McGraw Hill, 2005.
Malcolm Moore & Jon Rowland Eds, 'Urban Design Futures', Routledge, 2006.

REFERENCES

Michelle Provoost et al., 'Dutchtown', NAI Publishers, Rotterdam, 1999.
Lawrence Halprin, 'Cities', Reinhold Publishing Corporation, New York, 1964.
Gosling and Maitland, 'Urban Design', St. Martin's Press, 1984.
Kevin Lynch, 'Site Planning', MIT Press, Cambridge 1967.
Jeremy Till et al, 'Spatial Agency: Other Ways of Doing Architecture', Routledge, 2011.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Demonstrate knowledge of the spatial planning system and basic tools of spatial policy in Poland and the EU.
CO2	Demonstrate knowledge of contemporary ideas of shaping space in cities.
CO3	Identify principles of formulating local zoning plans for advanced urban complexes using the applicable notation.
CO4	Demonstrate broad knowledge which takes into consideration the interdisciplinary character of circumstances of urban planning
CO5	Demonstrate advanced knowledge of parameters of traffic engineering and the principles of designing roads, streets, cycle lanes, pedestrian precincts and parking lots and equipment of technical infrastructure
CO6	Identify the regulations and procedures of formulating local land-use plans. zoning and their impact on the investment.

4	Approval	34THMeeting of Academic Council											

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCAR8L2	DISSERTATION	0	0	8	6

OBJECTIVES:

- To inculcate the spirit of research in architecture.
- To enable the acquisition of in-depth knowledge in a specific aspect/ issue in the discipline of architecture as well as develop perspectives on the same through reading, study, analysis and thought.
- To facilitate the development of a coherent line of thinking and express it through clear writing.
- To serve as prelude to Thesis.

CONTENT

Design studio emphasises on explaining and understanding architecture primarily through the mode of making. However, architecture as a field itself is driven by explicitly stated or implicitly understood ideas/ points of view of particular society and individuals. Dissertation offers an opportunity to look at architecture, history and design through ideas, texts and intent behind works. It involves process of observation, reflection and abstraction. Students are encouraged to choose any topic of their interest.

Topics may range from analysing the works of an architect, history, typological changes, writing, design process and many more. They could involve research based on primary sources in terms of doing actual field studies and/or secondary sources through reading. The dissertation proposal in about 1500 words stating the topic, issues to be explored and the scope must be submitted for approval. Work on the approved topic should start from the beginning of the semester and would be periodically reviewed. At the end of the semester, a well written report of a minimum 10,000 words should be submitted in the prescribed format, if any, provided by the University. The suggested structure for the report can be - outline/ background of the area of study, statement of objectives or research questions within the area of study, outline of methodology/ way to achieve the objectives or answer the questions of research, core section with necessary content such as documentation, analysis, arguments, etc., final conclusion. The report will be presented in the viva-voce exam and defended.

TOTAL: 90 PERIODS

TEXTBOOKS

Iain Borden and KaaterinaRuedi; 'The Dissertation: An Architecture Student's Handbook', Architectural Press, 2000.

Linda Grant and David Wang, 'Architectural Research Methods', John Wiley Sons, 2001.

John W Creswell, 'Research Design: Qualitative, Quantitative and Mixed Methods Approaches', Sage Publications, 2002.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	*Undertake* the research systematically in a chosen topic.
CO2	Illustrate the various methods available for the collection of information.
CO3	Analyses and interpret the information obtained from the study.
CO4	Organize the collected information graphically
CO5	*Develop* a report of the analyzed information with the logical reasoning and conclusion.
CO6	Builds his his/her capacity to work independently and methodically in a variety of intellectually demanding contexts.

SEMESTER IX

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCAR9PT	PRACTICAL TRAINING	0	0	0	12

OBJECTIVES:

- To introduce the challenges of architectural practice.
- To enable overall understanding of different stages in real life architectural projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific architectural practice - initiation of project, development of concepts into schematic drawings, approval process, presentations and working drawings, involvement in office discussions and client meetings, integrating structural and service concerns, estimation and tendering processes, site supervision and coordination in the construction process.

CONTENT:

Practical Training will be done in offices/ firms in India, empanelled by the institution, in which the principal architect is registered with the Council of Architecture. The student will attempt to learn as much of aspects outlined in the objectives, either first hand or indirectly.

The progress of practical training will be assessed periodically internally through submission of log books along with work done by the students in terms of drawings, reports, etc., along with the regular progress report from the employers.

The students will be evaluated based on the criteria related to their contribution in the office some of which are given below.

- Understanding and involvement in the process of architectural practice as mentioned in the objectives within the scope of the specific office in which training is undertaken.
- Adherence to time schedule, overall responsibility and professional conduct.
- Ability to carry out the instructions on preparation of schematic drawings, presentation drawings, working drawings and skill in this regard.
- Ability to work as part of a team in an office and contribute to related activities.
- Ability to participate in client meetings and discussions.
- Involvement in supervision at project site.
- Involvement/ initiative/ participation in any other aspects during the course of thetraining.
- At the end of the Practical Training, a portfolio of work done during the period of internship along with certification from the office should be submitted for evaluation through a viva voce examination.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Demonstrate an understanding of the design philosophy, or vision of the architectural office and its implementation in the project/s
CO2	Interpret the architectural design process evolves when structural and service issues are integrated to create the final product.
CO3	Demonstrate the Knowledge on how the Drawings are used at site and an insight into the relationship between the site and drawing.
CO4	Develop a office and run the office successfully
CO5	offices / firms in India empanelled by the Institution in which the principal architect
CO6	progress of practical training shall be assessed internally through submission

SEMESTER X

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PCARXTH	THESIS	0	0	32	18

OBJECTIVES:

All the architectural design courses offered since semester II culminate in the thesis Project to motivate students to involve in individual research and methodology. This is to train them in handling projects independently.

TOPICS OF STUDY

The main areas of study and research can include advanced architectural design, including contemporary design processes, urban design including urban-infill, environmental design, conservation and heritage precincts, housing etc. However, the specific thrust should be architectural design of built environment. Preparation of presentation drawings, working drawings, detailed drawings and study model are part of the requirements for submission.

METHOD OF SUBMISSION

The Thesis Project shall be submitted in the form of drawings, project report, models, slides, CDs and reports.

TOTAL: 510 PERIODS

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To use all the skills acquired in the duration of preceding academic courses.
CO2	Methodically self-direct effort by choosing the project of choice, builds capacity to work independently and methodically in a variety of intellectually and professionally demanding contexts.
CO3	Learn to make an original and individual, creative contribution to the academic discipline and/or the professional field in some cases.
CO4	Be able to interpret the urban forms of the past and present.
CO5	Articulate their stance and position as a designer within discourses of urbanism.
CO6	Research and analyse information relevant to developing the proposal

PROFESSIONAL ELECTIVE I

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR001	VERNACULAR ARCHITECURE	3	0	0	3

OBJECTIVES:

- To introduce the study of vernacular architecture as a process and not a product.
- To provide an overview of the different approaches and concepts to the study of vernacular architecture.
- To study the various vernacular architecture forms in the different regions of the country.
- To look at the impact of colonial rule on the vernacular architecture of India.

UNIT I	INTRODUCTION	7

Definition and classification of vernacular architecture. Vernacular architecture as a process. Methodology for survey and study of vernacular architecture. Overview of cultural and contextual responsiveness of vernacular architecture.

UNIT II	APPROACHES AND CONCEPTS	9

Overview of different approaches and concepts to the study of vernacular architecture. Aesthetic, architectural and anthropological studies in detail.

UNIT III	VERNACULAR ARCHITECTURE OF THE WESTERN AND NORTHERN REGIONS OF INDIA	11

Forms, spatial planning, cultural aspects, symbolism, colour, art, materials of construction and construction technique of the vernacular architecture of the deserts of Kutch and Rajasthan (including havelis of Rajasthan), rural and urban Gujarat (including wooden mansions/ havelis in general and that of the Bohra Muslims) and geographical regions of Kashmir (including house boats).

UNIT IV	VERNACULAR ARCHITECTURE OF SOUTH INDIA	8

Forms, spatial planning, cultural aspects, symbolism, art, colour, materials of construction and construction technique, proportioning systems, religious beliefs and practices in the vernacular architecture of Kerala (including houses of the Nair & Namboothri community, Koothambalam and Padmanabhapuram palace) and Tamil Nadu (including houses and palaces of the Chettinad region, agraharams).

UNIT V	WESTERN INFLUENCES ON VERNACULAR ARCHITECTURE OF INDIA	10

Colonial influences on the traditional Goan house. Evolution of the bungalow from the traditional bangla, Victorian villas. Planning principles and materials and methods of construction of the bungalow. Settlement pattern and house typologies of Pondicherry and Cochin.

TOTAL: 45 PERIODS

COURSE OUTCOMES (COs)	
The student will be able	
CO1	An understanding of Indian vernacular architecture as a process and to also provide an overview of various approaches and concepts towards its study.
CO2	Knowledge of vernacular architectural forms in different regions.
CO3	An understanding of the impact of colonial rule on vernacular architecture in India.
CO4	To understand how the contexts of a region have an impact on **vernacular** architectural forms.
CO5	The impact of context of a region over architectural forms
CO6	Expressions will lead to sensible and context specific and sensitive design solutions.

4	Approval	34THMeeting of Academic Council											

PROFESSIONAL ELECTIVE I

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR002	THEORY OF DESIGN	3	0	0	3

OBJECTIVES:

- To understand design and the role of the designer in changing society.
- To familiarize the students with methodologies, theories and models of the design process.
- To inform students about the term creativity and introduce techniques which will enable creative thinking.
- To inform the approaches that generate ideas for architectural design and the importance of the participatory approach to design.

UNIT I	INTRODUCTION TO DESIGN	9

Definition and understanding of design- design in history -changing role of designer on society different classifications of design according to scale, process, mode of production, etc.,

UNIT II	DESIGN METHODOLOGY MOVEMEN	8

Context for the rise of the design methodology movement- theories of the first generation and the second generation design methodologists- various models of the design process- focus on the design problem: ideas of escalation/regression and wicked problem.

UNIT III	CREATIVE THINKING	10

Understanding the term creativity- theories on thinking: left brain/ right brain, convergent and divergent thinking, lateral and vertical thinking- design spectrum from the logical to chance - blocks in creative thinking- various techniques to generate creativity

UNIT IV	ARCHITECTURAL CREATIVITY	12

Design puzzles and traps - approaches to generate ideas for architectural design - types of concepts- personal philosophies and strategies of individual designers - channels to creativity in architecture

UNIT V	DESIGN AND PEOPLE	6

Colonial influences on the traditional Goan house. Evolution of the bungalow from the traditional bangla, Victorian villas. Planning principles and materials and methods of construction of the bungalow. Settlement pattern and house typologies of Pondicherry and Cochin.

TOTAL: 45 PERIODS

TEXTBOOK:

Geoffrey Broadbent - Design in Architecture - Architecture and the human sciences - John Wiley & Sons, New York, 1981.
Bryan Lawson - How Designers Think, Architectural Press Ltd., London, 1980. Anthony Antoniades, Poetics of architecture- Theory of design
Paul Alan Johnson, Theory of Architecture- Concepts, Themes,Wiley 2008 VNR, 1994 Christopher Alexander, Pattern Language, Oxford University Press,1977
James C. Snyder, Anthony J. Catanese, Timothy L. McGinty- Introduction to Architecture, McGraw Hill 19

COURSE OUTCOMES (COs)	
The student will be able	
CO1	An ability to think about architecture as one of the many fields under the broader ambit of design as a fundamental human activity.
CO2	Focuses on the aesthetic and **function** of the structure.
CO3	It's **design** works to create a space that flows with its surroundings.
CO4	The infinite variety of these spaces can be as varied as life itself
CO5	**Design theory** is a system of ideas that explains how and why **design** works.
CO6	To know how everything they put on a page communicates, influences, directs, invites, entices and excites an audience

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO5		L				M						M
3	Category	PE(PROFESSIONAL ELECTIVE)											
4	Approval	27THMeeting of Academic Council											

PROFESSIONAL ELECTIVE II

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR003	SUSTAINABLE ARCHITECTURE	3	0	0	3

OBJECTIVES:

- To make student aware about the concepts, of environment, ecology, role of institutions in the country.
- To provide basic knowledge on Sustainable Technologies involved – tracing the growth of settlements – their response to climate – other technical options.
- To provide an orientation to students from Macro Level to Micro Level Design aspects, and
- To expose to students International and National Level agenda on concepts of conservation of Environment and its implications on sustainable concepts of Architecture and planning

UNIT I	INTRODUCTION	9

Planning Concept – Environment Impact Analysis – Ecological Footprints – Essential ingredients of Sustainable Development apart from Social and Economical – Environment, Stakeholders Participation, and Institutional Mechanism.

UNIT II	DEVELOPMENT IN HISTORICAL CONTEXT	8

Early settlement pattern – Climate Responsive Planned Layouts – orientation of Streets and Buildings, Creation of Habitable Environment, Early Planning Methods – Land Generation, Soil and Water Conservation, Bioregional Approach.

UNIT III	RESOURCE EFFICIENCY	10

Land, Water, Energy, Human Resource, Biodiversity – Suitable practices at settlement, Campus and Building Level

UNIT IV	SUSTAINABLE ARCHITECTURE	12

Appropriate materials and construction – review of their properties workability, Eco Friendly construction practices – Need for Legislation – sustainable campuses, neighborhoods, programs and case studies.

UNIT V	SUSTAINABLE PLANNING AND POLICIES	6

Awareness program at National, International levels Rio de Jenero agenda – Earth summits – agenda involved – their realization.

TOTAL: 45 PERIODS

TEXTBOOK:

Manik & Girish Komisva, IIPA,
Keeping Cities Clean and Green, Uppal Publishing House, 1997. Beer,
Environment Planning for Site Development.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	The students are oriented about the concepts of ecosystem carrying capacity, Understanding the footprint sustainability and sustainable development.
CO2	The students ate aware of the emerging vulnerabilities of global warming and climate change and understand the contribution of building industry to the same
CO3	The students are familiar with the various approaches to achieving sustainable buildings and communities
CO4	The students understand the various incentives and evaluation systems for green buildings.
CO5	Concept of Green buildings-Green building design
CO6	To understand the concept of sustainability and sustainable development

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	25THMeeting of Academic Council											

PROFESSIONAL ELECTIVE II

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR004	GLASS ARCHITECTURE AND DESIGN	3	0	0	3

OBJECTIVES:

- To introduce latest advances in the field of glass in architecture.
- To enable right selection and usage of right glass for appropriate purposes.
- To give understanding of use of glass in contemporary architecture as well as its role in green design and improving building performance

UNIT I	INTRODUCTION	10

Evolution & importance of glass in modern architecture. Applications of glass in buildings (façade/ interior applications). Understanding the production & properties of glass. Value additions including coating technology (importance & necessity) and processing (tempering, heat strengthening, DGU, laminated, ceramic fritting). Types of Glass- mirror, lacquered, fire resistant. Modern glass with different applications. Glass for hospitals, green homes, airports, offices, other buildings. Glass and human safety compliances. Role of glass in fire safety considerations - Class E, EI & EW. Role of glass in acoustics. International standards & codal provisions.

UNIT II	DEVELOPMENT IN HISTORICAL CONTEXT	10

Building Physics. Theory of electromagnetic radiation. Understanding of internal and external reflections. Day-lighting in Buildings - introduction and basic concepts (VLT) . Solar Control and thermal insulation (SF, UV, SHGC). Need for green Buildings. Energy efficient buildings. Achieving energy efficiency using glass. Factors of energy efficient material selection. Performance parameters. Energy codes and Green ratings - ECBC, IGBC, GRIHA. Approaches of energy efficiency - prescriptive method, trade off method. Accommodating passive architecture. Whole Building Simulation.

UNIT III	RESOURCE EFFICIENCY	10

Case study of green building designed predominantly with energy efficient materials. Calculations involving basic factors in glass design. Optimization of Glass - for wastage reduction and standardisation of Design. Construction site/ green building visit report**.**

UNIT IV	SUSTAINABLE ARCHITECTURE	15

Appropriate materials and construction – review of their properties workability, Eco Friendly construction practices – Need for Legislation – sustainable campuses, neighborhoods, programs and case studies.

UNIT V	SUSTAINABLE PLANNING AND POLICIES	15

Analysis of thickness for safety, consideration of aesthetics, economy, optimisation and wastage, air-conditioning load calculations and payback analysis.

TOTAL: 45 PERIODS

TEXTBOOK:

Christian Schittich, 'Glass Construction Manual', Birkhauser Basel, 2007. 'Architectural Glass Guide', Federation of Safety Glass, 2013.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Latest advances in the field of glass in architecture.
CO2	Enable right selection and usage of right glass for appropriate purposes.
CO3	To give understanding of use of glass in contemporary architecture as well as its role in green design and improving building performance
CO4	An understanding of glass and its potential in contemporary usage
CO5	An understanding of tools and software currently in practice with respect to the use of glass in buildings
CO6	Analysis of thickness for safety, consideration of aesthetics, economy

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

4	Approval	27THMeeting of Academic Council											

PROFESSIONAL ELECTIVE III

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR005	INTERIOR DESIGN	3	0	0	3

OBJECTIVES:

- To provide familiarity with the characteristics of interior spaces and furniture across history.
- To introduce the profession of interior design and bring out its role.
- To inform about the various components of interior space and give an understanding of the design aspects involved in each.

UNIT I	INTERIOR SPACES AND FURNITURE ACROSS HISTORY	11

Outline of the characteristics of representative/ exemplary interior spaces, interior decoration and furniture in the Western world from the beginnings to twentieth century. Outline of characteristics of representative/ exemplary interior spaces, interior decoration and furniture in India across the ages, including living folk traditions.

UNIT II	INTRODUCTION TO INTERIOR DESIGN	7

Introduction to the professions of interior decoration, interior design and furniture design, bringing out their origin, evolution and current scope of work. Definition and process of interior design. Introduction to the design of interior spaces as related to typology, function and themes. Vocabulary of design in terms of elements (point, line, shape, form, space, colour, light, pattern, texture) and principles (balance, proportion, scale, rhythm, hierarchy, unity, contrast, harmony, emphasis, movement) with specific reference to examples from interior design

UNIT III	COMPONENTS OF INTERIOR SPACE - I	9

Role of interior treatment and finishes in the experience of interior spaces. Outline of the design of components such as floors, ceilings, walls, partitions, window treatments and accessories based on parameters such as context, function, ambience, materials, properties, methods of construction, colour, texture. Study of representative examples.

UNIT IV	COMPONENTS OF INTERIOR SPACE - II	9

Role of lighting in the experience of interior spaces. Outline of different types of interior lighting systems and fixtures based on their effects and suitability in different contexts. Study of representative examples.Role of landscaping in the experience of interior space. Outline of interior landscaping elements such as rocks, plants, water, flowers, fountains, paving, artefacts. Their physical properties and effects on spaces. Study of representative examples.

UNIT V	COMPONENTS OF INTERIOR SPACE - III	15

Introduction to furniture design as related to parameters such as human comfort and function (including anthropometrics and ergonomics), built in or freestanding, materials and methods of construction, cultural particularities, changing trends and lifestyles, innovations and design ideas. Study of representative examples.

TOTAL: 45 PERIODS

TEXTBOOK:

- Francis D.K.Ching, 'Interior Design Illustrated', John Wiley & Sons, 2012.
- Joseph DeChiara, Julius Panero, Martin Zelnik, 'Time Saver's Standards for Interior Design', McGraw-Hill Professional, 2001.
- John F. Pile, 'Interior Design', Pearson Prentice Hall, 2007.
- Jan Pieper, George Michell, 'The Impulse to Adorn- Studies in Traditional Indian Architecture', Marg Publications, 1982.
- Aronson J, 'The Encyclopaedia of Furniture', Potter Style, 1965.
- Pat Kirkham, Susan Weber, Editors, 'History of Design: Decorative Arts and Material Culture, 1400-2000', Yale University Press, 2013.

John F.Pile, Judith Gura, 'A History of Interior Design', Wiley, 2013

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To become aware of the planning principle for **designing** various **interior** spaces.
CO2	To gain better understanding as regard the History of furniture, Anthropometric data in space **designing** for various activities.
CO3	To apply Ergonomics in **interior designing**.
CO4	Create a full set of design documents for an interior design project
CO5	Compose written justification of project designs and verbally communicate design
CO6	Collaboration, creating a positive impact on the classroom

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO4		M				M						
	CO5			L					M				H
3	Category	PE(PROFESSIONAL ELECTIVE)											
4	Approval	Meeting of Academic Council											

PROFESSIONAL ELECTIVE III

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR006	EARTHQUAKE RESISTANT ARCHITECTURE	3	0	0	3

OBJECTIVES:

- To enable an understanding of the fundamentals of earthquake and the basic terminologies.
- To give basic knowledge of earthquake resistant design concepts.
- To provide familiarity with design codes and building configuration
- To enable understanding of the different types of construction details to be adopted in a seismic prone area.
- To give knowledge for applying earthquake resistant principles in an architectural design project.

UNIT I	FUNDAMENTALS OF EARTHQUAKES	7

Earth's structure, seismic waves, plate tectonics theory, origin of continents, seismic zones in India. Predictability, intensity and measurement of earthquake. Basic terms- fault line, focus, epicentre, focal depth etc.

UNIT II	SITE PLANNING, PERFORMANCE OF GROUND AND BUILDINGS	10

Historical experience, site selection and development. Earthquake effects on ground, soil rupture, liquefaction, landslides. Behaviour of different types of building structures, equipments, lifelines, collapse patterns. Behaviour of non-structural elements like services, fixtures in earthquake-prone zones

UNIT III	SEISMIC DESIGN CODES AND BUILDING CONFIGURATION	10

Seismic design code provisions. Introduction to Indian codes. Building configuration - scale of building, size, horizontal and vertical plane, building proportions, symmetry of building - torsion, re-entrant corners, irregularities in buildings like short storeys, short columns, etc.

UNIT IV	DIFFERENT TYPES OF CONSTRUCTION DETAILS	11

Seismic design and detailing of masonry structures, wood structures, earthen structures. Seismic design and detailing of RC and steel buildings. Design of non-structural elements - architectural elements, water supply, drainage, electrical and mechanical components.

UNIT V	URBAN PLANNING AND ARCHITECTURAL DESIGN	7

Vulnerability of existing buildings, facilities planning, fires after earthquake, socio-economic impact after earthquakes. Conceptual design for earthquake resistance involving institutional masonry building with horizontal spread and height restriction, multi-storeyed RC framed apartment/commercial building.

TOTAL: 45 PERIODS

REQUIRED READING

'Guidelines for earthquake resistant non-engineered construction', National Information centre of earthquake engineering (NICEE, IIT Kanpur, India), 2004.

C.V.R Murthy, Andrew Charlson, 'Earthquake Design Concepts', NICEE, IIT Kanpur, 2006.

Agarwal.P, 'Earthquake Resistant Design', Prentice Hall of India, 2006.

Mary C. Comerio, Luigia Binda, 'Learning from Practice- A Review of Architectural Design and Construction Experience after Recent Earthquakes', Joint USA-Italy workshop, Oct.18-23, 1992, Orvieto, Italy.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Introduction to Disaster and disaster management
CO2	Basic knowledge of dynamics and methods of dynamic analysis
CO3	Blast and fire resistant design of structures
CO4	Earthquake resistant design of structures
CO5	Design of shear wall
CO6	Retrofitting, rehabilitation and strengthening of structures

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

PROFESSIONAL ELECTIVE IV

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR007	LANDSCAPE AND ECOLOGY	3	0	0	3

UNIT I	INTRODUCTION	9

Introduction to ecology, landscape conservation, reclamation and landscaping of derelict areas.

UNIT II	PLANT MATERIALS	8

Notes on basic plant data for plant selection and planting design

UNIT III	GARDEN DESIGN	10

A brief description of Mughal gardens of India, Japanese gardens and Italian gardens. Basic principles of landscape design and the visual aspects of plant forms

UNIT IV	SITE PLANNING	12

Site investigation appraisal and site planning neighbourhood parts, Children's parks toilets and sports area.

UNIT V	URBAN PLANNING AND ARCHITECTURAL DESIGN	6

Landscaping for various types of housing areas. Landscaping design for waterfront areas and functional areas in urban centers. Principles of urban landscape, urban design and architectural control.

TOTAL: 45 PERIODS

8. Bring.M Japanese Gardens, Design & Meaning
9. Introduction to landscape Design,Motloch J L Van Nostrand Rienhold Company

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To obtain knowledge of basic concepts, methods, and applications in **landscape ecology**,
CO2	To examine and understand the ways in which spatial patterns
CO3	Patial processes operate in an **ecological** context
CO4	To learn and become familiar with the techniques used by landscape ecologists in their work
CO5	To understand the relevance of landscape ecology to human society
CO6	To apply the concepts, models, and techniques in landscape ecology in natural resources management.

PROFESSIONAL ELECTIVE IV

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR008	CONTEMPORARY PROCESS IN ARCHITECTURAL DESIGN	3	0	0	3

OBJECTIVES:

- To introduce theories of media and its influence on the perception of space.
- To enable study of the various aspects of digital architecture and its exploration through emerging phenomena that relies on abstraction of ideas.
- To give understanding of the works of contemporary architects who have illustrated the influence of the digital media in architecture.

UNIT I	INTRODUCTION	7

Investigation of contemporary theories of media and their influence on the perception of space and architecture. Technology and art. Technology and architecture. Digital technology and architecture.

.

UNIT II	ASPECT OF DIGITAL ARCHITECTURE	8

Aspects of digital architecture. Design and computation. Difference between digital process and non-digital process. Architecture and cyberspace. Qualities of the new space. Issues of aesthetics and authorship of design. Increased Automatism and its influence.

UNIT III	CONTEMPORARY PROCESS	10

Emerging phenomena such as increasing formal and functional abstractions. Diagrams, diagrammatic reasoning, diagrams and design process. Animation and design. Digital hybrid.

UNIT IV	GEOMETRIES AND SURFACES	9

Fractal geometry. Shape grammar. Hyper surface. Liquid architecture. Responsive architecture.

UNIT V	CONTEMPORARY PROCESS AND ARCHITECTURAL WORKS	11

Ideas and works of architects related to contemporary processes. The architects to include Greg Lynn, Reiser + Umemotto, Lars Spuybroek / NOX Architects, UN studio, Diller Scofidio, Dominique Perrault, Decoi, Marcos Novak, Foreign Office Architects, Asymptote, Herzog and de Meuron, Neil Denari, Serie Architects, BIG Architects. Study to be undertaken in the form of assignments/discussions/seminars/presentations.

COURSE CODE	COURSE TITLE	L	T	P/S	C

U18PEAR009	ADVANCED STRUCTURES	3	0	0	3

OBJECTIVES:

- To give an understanding of the loss of pre- stress and design requirements for determinate beams.
- To provide familiarity with the concept of industrial structures and high rise structures.
- To enable the study of concepts of tensile structures, domes, shells and folded plates.

UNIT I	PRESTRESSED CONCRETE	10

Losses of Prestress. Design requirements. Design of determinate beams.

.

UNIT II	INDUSTRIAL STRUCTURES	8

Classification, planning and layout requirements, functional requirements. Types of industrial structures- power plants, bunkers and silos, cooling towers, containment structures, chimneys. Merits.

UNIT III	HIGH–RISE BUILDINGS	7

Introduction. Load action in high rise buildings. Various structural systems. Waffle slab. Approximate analysis of frames for gravity and horizontal loadings.

UNIT IV	TENSILE STRUCTURES	10

Concept, development, laws of formation, merits and demerits of pneumatic structures. Basic principles, forms, merits and demerits of cable structures.

UNIT V	SHELLS, DOMES AND FOLDED PLATES	10

Shells of translation. Shells of revolution. Classification of shells and different forms. Domes. Types of folded plates. Space frames.

TOTAL: 45 PERIODS

PROFESSIONAL ELECTIVE V

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR010	STEEL ARCHITECTURE AND DESIGN	3	0	0	3

OBJECTIVES:

- To introduce the design potential of steel as a material in building construction and its inherent structural benefits.
- To inform about the various components of steel as structural and aesthetic design through case studies.
- To provide familiarity with the best practices of steel as a construction material.

.UNIT I	INTRODUCTION TO STEEL AS BUILDING MATERIAL	8

Materiality of steel, structural properties of steel, advantages of steel in construction. History of metal in construction – Iron to Steel. Steel and tension. Industrialization and mass fabrication of steel. Casting of steel in historic and contemporary examples. Invention of hollow structural sections. Hot rolled steel shapes, various hollow structural sections.

.

UNIT II	STEEL IN HIGH TECH MOVEMENT, CONTEMPORARY ARCHITECTURE	10

Introduction to High Tech movement. Understanding of various typologies of high tech movement – Extruded, Grid/Bay, Diagrids, arched/ curved structures, tensile. Advantages of diagrids over standard frames. Curved steel – creating curves in steel buildings, limitations in curving steel. Evolution of AESS (architecturally exposed structural steel) through High Tech movement.

UNIT III	STRUCTURAL EXPRESSION OF STEEL	10

Introduction to AESS (architecturally exposed structural steel), standard structural steel versus AESS. Factors that define AESS. Characteristics and categories of AESS. Connection types for AESS – bolted, welded and cast connections. Member types for AESS – Tubular and standard sections. Various steel frame design, basic connection strategies, basic understanding of steel floor systems, truss systems and braced systems.

UNIT IV	SUSTAINABILITY, STEEL AND OTHER MATERIALS	9

Introduction to steel as a sustainable material. Recycled, reuse and adaptive reuse of steel. Steel and glazing systems, support systems for glazing. Technical aspects of combining steel with glass. Various steel and glass envelope systems - curtain wall system, wind braced support systems, cable net walls, spider steel connections with structural glass, simple and complex cable systems. Handling curves and lattice shell construction. Advanced framing system – Steel and Timber. Low carbon design strategies.

UNIT V	FABRICATIONS, ERECTION AND IMPLICATIONS ON DESIGN	8

Study on transformation of architectural design into fabricated elements. Study of process profile through case studies. Role of physical and digital models in fabrication. Steel in temporary/ exhibit buildings. Need for corrosion and fire protection. Various finishes and coating systems of steel. Detailed study on corrosion protection and fire protection systems. Transportation, site issues and erection on site. Erection of beams and columns. Effects of climate and weather on erections. Other issues relating to practical implication of design on site.

TOTAL: 45 PERIODS

COURSE OUTCOMES (COs)	
The student will be able	
CO1	***Design*** the Pre stressed members
CO2	***Explain*** the design concepts of Shells and folded plates
CO3	***Analyze*** the behavior of steel and R.C.C structural members
CO4	***Design*** the steel connections.
CO5	***Design*** the R.C.C structural members
CO6	Introduction of shells and folded plates

PROFESSIONAL ELECTIVE VI

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR011	ARCHITECTURAL CONSERVATION	3	0	0	3

OBJECTIVES:

- To introduce the various issues and practices of conservation in architecture.
- To provide familiarity with the status of conservation in India and the various agencies involved in the field of conservation worldwide and their policies.
- To outline the status of conservation practice in the country and the various guidelines for the preservation, conservation and restoration of buildings.
- To inform about the character and issues in Indian heritage towns through case studies.

.UNIT I	INTRODUCTION TO CONSERVATION	12

Understanding heritage. Defining conservation, preservation and adaptive reuse. Heritage conservation- need, debate and purpose. History of conservation movement. International agencies like ICCROM, ICOMOS, UNESCO and their role in conservation. Charters. Principles and ethics of conservation.

.

UNIT II	CONSERVATION IN INDIA	7

Museum conservation. Monument conservation and the role of ASI, SDA, INTACH. Central and state government policies and legislations. Inventories and projects. Selected case studies of sites such as Hampi, Golconda, Mahabalipuram. Craft Issues of conservation.

UNIT III	CONSERVATION METHODS AND MATERIALS	10

Investigation techniques and tools. Behaviour of historic materials and structures. Problems with masonry, foundation. Repair methods, traditional and modern methods. Seismic retrofit, services additions and disabled access to historic buildings. Moisture and pollution problems.

UNIT IV	CONSERVATION PRACTICE	7

Listing of monuments. Documentation of historic structures. Assessing architectural character. Historic structure report. Guidelines for preservation, rehabilitation and adaptive re-use of historic structures. Case studies of palaces in Rajasthan, dwellings in Chettinad and Swamimalai. Heritage site management.

UNIT V	URBAN CONSERVATION AND CONSERVATION PLANNING DESIGN	9

Understanding the character and issues of historic towns. Selected case studies. Historic districts and heritage precincts. Conservation as a planning tool. Financial incentives and planning tools such as TDR. Urban conservation and heritage tourism. Case studies of sites like Cochin, Pondicherry French town. Conservation project management.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	The recognition and protection of the historic environment to gain awareness
CO2	Understands the techniques and the theoretical frame which are essential for preparing the documentation work besides the restoration projects of the cultural heritage.
CO3	Improves the critical point of view using the examples.
CO4	Realizes the necessity of sustainable design: sustainability in architecture and urban design decisions and areas of natural
CO5	Realizes the responsibilities of legaslation aspects.
CO6	Culturally significant buildings, including the artificial protection of resources and the creation of healthy buildings and settlements

PROFESSIONAL ELECTIVE VI

COURSE CODE	COURSE TITLE	L	T	P/S	C
U18PEAR012	ARCHITECTURAL JOURNALISM AND PHOTOGRAPHY	3	0	0	3

OBJECTIVES:

- To introduce general skills necessary for the practice of professional journalism.
- To introduce the fundamentals of writing, explain different strategies and their criticism.
- To give particular exposure to architectural journalism.
- To introduce photojournalism, bring out importance/ contributions of photography in the architectural profession and to help develop proficiency in modern photography techniques.

UNIT I	INTRODUCTION	9

Introduction to journalism, key concepts and objectives of journalism. Specialised journalism with emphasis on architectural journalism. Journalism skills: research, reporting, writing, editing, photography, columnists, public relationships, criticism. Issues such as copyright, public art policy, the arts and urban redevelopment. Introduction to local culture scene.

.

UNIT II	TECHNOLOGIES IN JOURNALS	9

Environment, social change, persuasion. Interviewing techniques, argument and debate as a technique in the investigation of social problems. Evidence, proof, refutation, persuasion. Training in argumentative speaking. Introduction to software needed in journalism and photography, video coverage, walk-through of buildings, production of contemporary architectural journalism. Understanding the individual demands in the context of newspapers, radio, film, and television.

UNIT III	CONTEMPORARY ARCHITECTURAL JOURNALISM	9

Role of the editor. Editing of articles, features and other stories. Editing for online newspaper and magazines. Text preparation, mode of presentation, standards and guidelines for documentation. Code of ethics. Basic knowledge on press laws, Press Council of India. Multimedia/ online journalism and digital developments.

UNIT IV	DISCUSSIONS AND ISSUES	9

Regional, national and international discussion forums. Changes in contemporary and historical design practices. Discussions on topics needed in an architectural journal and current issues. Types of journals. Works of key architectural journalists. Public discourse on the internet. Mass media and public opinion. Critique on selected pieces of journalism.

UNIT V	ARCHITECTURAL PHOTOGRAPHY	9

Introduction to architectural photography and role of the photographic image in the global world. Equipment - cameras and lenses. Techniques- film speed, exposure measurement, gray scale, photo-finishing and editing digital images. Perspectives- single point, two- point, three- point and methods of correcting distortions. Lighting - external and interior

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Discuss the history of Photography, moving images and Photo Journalism
CO2	Demonstrate a brief understanding of news values, photo journalism and sources.
CO3	Explain various types of cameras, its components and accessories
CO4	Discuss the legal and ethical aspects of photography and photojournalism.
CO5	Assess the importance of digital technology in photography
CO6	Critically analyse and appreciate photographs

Total number of periods								30

U18HSEN101	**COMMUNICATIVE ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	0	2	3
	Prerequisite – School English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing oneself – exchanging personal information- narrating events, -incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building - The concept of Word Formation

UNIT III LISTENING 6

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development-synonyms-antonyms- phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6

Writing short essays – developing an outline- identifying main and subordinate ideas-dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures-Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely

SOFTSKILL LABORATORY 15

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations

3. Watching interviews & conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds - intonation.
12. Creative and critical thinking.

TEXT BOOKS:

COURSE OUTCOMES												
CO1	The student will be able to comprehend the text with clarity											
CO2	The capacity to read and listen will improve											
CO3	Writing technical report will be learnt properly											
CO4	Speaking skills will be acquired											
CO5	Overall communication skills will make them employable											
MAPPING BETWEEN COURSE OUTCOMES&PROGRAMME OUTCOMES

U18BSMA102	Mathematics I for Bio Engineering	L	T	P	C
	Total Contact Periods - 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	The aim is to develop mathematical curiosity and use inductive and deductive reasoning when solving problems, and to develop the knowledge, skills and attitudes necessary to pursue further studies in Mathematics and to become confident in using Mathematics to analyze and solve problems in real – life situations.				

UNIT I THEORY OF EQUATIONS (9+3)

Fundamental theory of algebra – number of roots of polynomial equations – conjugate pairs theorem (without proof) – Descartes rules of signs- symmetric functions of the roots – formation of equations – diminish the roots of an equations- Multiple roots – reciprocal equation.

UNIT II DIFFERENTIAL CALCULUS – One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions-Beta, Gamma functions and their properties.

UNIT V MATRICES (9+3)

Characteristic Equations –Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth EditionAddison-Wesley, Pearson.
5. Narayanan S., Manickavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers, 1992.

	COURSE OUTCOMES (COs)
CO1	Solve the equations (such as linear, factorable, quadratic and rational), applications and linear inequalities, to know the formation of equations.
CO2	Use both the limit definition and rules of differentiation to differentiate functions.The fallouts of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions
CO4	Compute definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gamma
CO5	Identify Eigen value problems from practical areas using transformations;

CO/PO Mapping:S – Strong, M – Medium, W – Weak

U18BSPH101	Waves and Optics	L	T	P	C
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVE OPTICS **9**

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS **9**

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

Course Outcomes (COs)													
CO1	Understand the basic concept of waves and lights												
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing												
CO3	Understand the propagation of light and geometrical optics												
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves												
CO5	Understand the concept of laser and its applications												
Mapping of Course Outcomes with Programme Outcomes (POs) **S – Strong, M – Medium, W – Weak**

	CO5	S	M	M	M				M		S	W	
3	Category	Basic Sciences (BS)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18BSCH101	ENGINEERING CHEMISTRY	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY 9

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis

of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESCS101	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudocode, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods;advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES 9

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet des needs, using the techniques, skills, and modern engineering tools necessary engineering practice				

Traditional Engineering Graphics:
Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:
Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM).

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypocycloid and Involute of circle.

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of Points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to oneplane – Parallel to one plane and inclined to other plane – Inclined to both the planes;Projections of planes inclined to either HP or VP.

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

MODULE 4:SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple Position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS:

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication

4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students willgetExposure to basics of building construction
CO4	Students willgetExposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.

Mapping of Course Outcomes with Programme Outcomes (POs)

(S/M/W indicates strength of correlation) S-Strong, M-Medium, W-Weak

U18ESCS1L1	**PROBLEM SOLVING AND PYTHON PROGRAMMINGLABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib

Mapping of Course Outcomes with Programme Outcomes (POs)

(S/M/W indicates strength of correlation) S-Strong, M-Medium, W-Weak

U18BSPH2L3	**Wave Optics and Bio Physics Laboratory (Common to B.Tech- IBT, GE & Agri Bio Tech)**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**0**	**0**	**3**	**1.5**
	Prerequisite – Wave Optics and Bio Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To impart knowledge of practical Physics to the students					

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Biophysics – Bio-Engineering branches

1. Determination of optical rotation using polarimeter
2. Determination of diffusion potential of biological sample

3. Analysis of viscosity of different biological sample using viscometer
4. Analysis of protein concentration using calorimeter
5. Quantification of DNA using UV-Vis spectrophotometer
6. Analysis of absorption maxima for an unknown sample

Course Outcome (CO's)													
CO1	Understand the fundamental concept of optics												
CO2	Understand the concept of production of ultrasonic waves												
CO3	Understand the estimation and functions of Biomolecules												
Mapping of Course Outcomes with Programme Outcomes (POs) S – Strong, M – Medium, W – Weak													
1	**COs/POs**	**a**	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**

U18BSCH2L4	**CHEMISTRY LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a Polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.
2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Student will be able to analyze Determination of Molecular weight of a Polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

MAPPING OF COs WITH POs: S – Strong, M – Medium, W – Weak

U18HSEN201	TECHNICAL ENGLISH	L	T	P	C
	Total Contact Periods – 45	2	1	0	3
	Prerequisite – I semester English				
	Course Designed by – Department of English				

OBJECTIVES

To gain fundamental knowledge of English language and its usage in day to day life.

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions – listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

TEXT BOOKS:

1. Fluency in English A Course book for Engineering and Technology.OrientBlackswan, Hyderabad: 2016
2. Sudharshana.N.P and Saveetha. C. English for Technical Communication. Cambridge University Press: New Delhi, 2016.

REFERENCES

3. Kumar, Suresh. E. Engineering English. Orient Blackswan: Hyderabad,2015
4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)

Upon completion of the course, the students will be able to	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

Category	Basic Science (BS)
Approval	47th Meeting of Academic Council held in Aug, 2018

	Mathematics II for Bio Engineering (Common to IBT, Genetics and Agricultural Bio Tech)	L	T	P	C
U18BSMA202	Total Contact Periods - 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	To make the students learn Mathematics in order to formulate and solve problems effectively in their respective fields of engineering.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT III VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Integration of vector function - Green's theorem in a plane – Gauss divergence theorem and Stoke's theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT IV ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions,Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.

3. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	Apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO3	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO4	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

U18BSPH203	INTRODUCTION TO BIOPHYSICS	L	T	P	C
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES:
To impart theories and methods of Physics to understand the functioning of Biological system

UNIT 1 ATOMIC PHYSICS **9**

Atom model - Vector atom model - Pauli's exclusion principle - explanation of periodic table - various quantum numbers - angular momentum and magnetic moment - spatial quantisation - Bohr magneton - Stern and Gerlach experiment.

UNIT 2 NUCLEAR PHYSICS **9**

Nuclear size, shapes and forces: Nuclear size determination - Electron scattering method- electric moments - magnetic moments - Nuclear forces - Models of nuclei – Liquid drop model of nuclei- Atomic masses and its significance.

UNIT 3 RADIATION BIOPHYSICS **9**

Basics of Radiation Physics Atomic structure models, Constituents of atomic nuclei, Isotopes, Isobars, Isotones, Radioactivity, law of Radioactivity, General properties of alpha, beta and gamma radiations, Radiation units: Units of measurement of radioactivity. Curie, Becquerel., Interaction of radiation with matter: Excitation and ionization, Photo electric effect, Compton Effect, pair production, Characteristic radiation.

UNIT 4 MEMBRANE BIOPHYSICS 9

Membrane potentials Cell surface charge, Resting membrane potential, Action potential, Ionic transport during Action Potential, properties of action potential, Nernst equation, Hodgkin-Huxley equation, Membrane impedance and capacitance, Transmembrane potential, total electrochemical potential.

UNIT 5 MOLECULAR BIOPHYSICS 9

Nucleic acids – Purine and Pyrimidine bases, nucleosides, nucleotides basic difference in structures and functions of DNA and RNA

Proteins– Amino acids – types, planarity of peptide bond – Ramachandran map - Primary, secondary, tertiary and quarternary structures of proteins.

REFERENCE BOOKS:

U18BSGE201	CYTOLOGY AND GENETICS	L	T	P	C
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES: To provide a basic understanding of cell, its structure, function, types and about its culture					

UNIT I CELL STRUCTURE AND ORGANELLES 6

Cells - definition - eukaryotic cell and prokaryotic cell- Relationship and evolution of eukaryotic cell and prokaryotic cell- plant cells and animal cells - Cell Organelles, Structure and function – Nucleus- Endoplasmic reticulum - Golgi complex- lysosomes- cell membranes- chloroplast- mitochondria.Cell cycle-Mitosis and meiosis

UNIT II CELLULAR TRANSPORT 6

Transport across cell membranes – classification – Active and passive transport. Active – Na+ K+ ATPase Pump - Lysosomal and Vacuolar pumps - Endocytosis and Exocytosis transport across prokaryotic membrane - Cotransport – Symport, antiport.

UNIT III CELL SIGNALING AND SIGNAL TRANSDUCTION 6

Cell signaling – various kinds of Receptors and ligands –Different modes of action of ligands- different modes of signal transduction and amplification with examples- signaling through G-Proteins (Monomeric and trimeric), signaling for growth factors- secondary messengers- protein kinases- Ca ions and cAMP molecule in signaling.

UNIT IV BASICS OF GENETICS AND CHROMOSOMES 6

Mendelian Laws - Mendel's experiment - monohybrid cross-phenotype – genotype - Dihybrid inheritance - Chromosome structure and organization in prokaryotes and eukaryotes - chromosome banding - chromosome abnormalities

UNIT V ALLELES 6

Classical concepts of Pleomorphism - Multiple alleles, ABO blood groups - Rh factor - sex linkage in Drosophila- mechanism of sex determination- sex differentiation

2. Cell Biology and Histology, Leslie P.Gartner and James L.Hiatt, Wolters Kluwer, 2014.
3. Principles of Genetics, Eldon John Gardener et al., Wiley publications, 2006.

COURSE OUTCOMES (COs)	
CO1	To understand the fundamentals of the structure of cells
CO2	To study the types and functions of cell organelles
CO3	To comprehend the methods involved in the cellular transport
CO4	To know the cause, and methods of cell signaling
CO5	To give a basic knowledge of cell culture and its applications
CO6	To understand about signal transduction

U18ESEE101	**BASIC ELECTRICAL & ELECTRONICS ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

MODULE 1 : DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamental Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems,Maximum Power Transfer Theorem.

MODULE 2: AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS **9**

Principles of operation and characteristics of; DC machines,Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency,all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS **9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS **6**

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

TEXT BOOKS:

1. John Bird, Electrical Circuit Theory &Technology,Taylor& Francis Ltd, 6th, edition. 2017.

3. Jacob Millman and Christos C-Halkias,"Electronic Devices and Circuits", Mcgraw Higher Ed, 4th Edition, 2015.

COURSE OUTCOMES (COs)	
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.
CO2	To gain knowledge regarding fundamentals of AC circuits.
CO3	To gain knowledge regarding electrical machines and transformers.
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.
CO5	To gain knowledge on principles of digital electronics systems.

Mapping of Course Outcomes with Programme Outcomes (POs)

U18BSCH201	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management.				

	• To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.

UNIT I -NATURAL RESOURCES 9

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS 9

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION 9

Definition, Causes, effects and control measures of Air Pollution, Water pollution, Soil Pollution, Marine Pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - Pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and Control of Pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder-Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.

Human population: Population growth, variation among nations, population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and

AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

U18ESME1L2	WORKSHOP/MANUFACTURING PRACTICES LABORATORY	L	T	P	C
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

SYLLABUS

Lectures & videos: (15 hours)

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice

2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.

3. Carpentry **(9 hours)**
   a) Preparation of Lap joints.
   b) Mortise and Tenon joints.
   c) Cross Half joints.
   d) Dove Tail joints.

1. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
Preparation of butt joints, lap joints and Tee joints

2. Sheet Metal working **(9 hours)**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints

3. Demonstration **(6 Hours)**
Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

1. Hajra Choudhury S.K., Hajra Choudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and publishers Private Limited, Mumbai.
2. Kalpakjian S. And Steven S. Schmid, "Manufacturing Engineering and Technology",4th edition, Pearson Education India Edition, 2002.
3. Gowri P. Hariharan and A. Suresh Babu,"Manufacturing Technology – I" Pearson Education, 2008.
4. Roy A. Lindberg, "Processes and Materials of Manufacture", 4th edition, Prentice Hall India, 1998.
5. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGraw Hill House, 2017.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING PRACTICES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronics Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				

OBJECTIVES:

To enhance the practical knowledge on basics of electrical and electronics components and circuits.

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer

7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier.

REFERENCE BOOKS:

1. S. K. Bhattacharya, "Basic Electrical and Electronics Engineeing", Pearson Education India,2011

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipments and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits .
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flops

U18BSMA305	Transforms and Numerical Methods	L	T	P	C
	Total Contact Hours - 60	3	1	0	4
	Prerequisite – Basic Mathematics				
	Course Designed by – Mathematics Department				

OBJECTIVES

1. Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms.
2. Understand the problems using Fourier transform and their properties.
3. Ability to apply knowledge of mathematics, science and engineering.
4. Ability to analyze and interpret data.
5. Identify, formulate and solve equations by various methods.

MODULE I FOURIER SERIES (12 Periods)

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series, Parseval's Identity – Harmonic Analysis.

MODULE II FOURIER TRANSFORMS (12 Periods)

Fourier integral theorem (without proof) – Fourier transform pairs – Fourier sine and cosine transform – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

MODULE III SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS (12 Periods)

Bisection method, Newton - Raphson method and Regula-Falsi method for single variable - solutions of linear system of equations by Gaussian, Gauss-Jordan , Jacobian and Gauss-Siedel methods.

MODULE IV INTERPOLATION (12 Periods)

Finite differences -Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals-Newton's Divided difference formula, Lagrange's Interpolation formula.

MODULE V NUMERICAL DIFFERNTIATION AND INTEGRATION (12 Periods)

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's both $1/3^{rd}$ and $3/8^{th}$ rules. Double integration using Trapezoidal rule and Simpson rule.

5. P.Kandasamy, K.Thilagavathy, K.Gunavathi- Numerical methods, S.Chand & Company, 2nd Edition 2010.

COURSE OUTCOMES (COs)	
CO1	Can able to do fourier series.
CO2	Understanding of Fourier Transforms
CO3	Able to bring solution of polynomial Equation
CO4	Understanding of transcendental equations
CO5	Detection and understanding of interpolation
CO6	Able to perform Numerical Differentiation And Integration

U18PCGE301	**ENZYME TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Molecular Biology, Biopharmaceutical technology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	1. To understand the basics of enzymes and classification and enzyme kinetics 2. To study the production, purification and characterization of enzymes 3.To study the Instrumental Techniques In Enzymatic Analysis				

MODULE 1: INTRODUCTION (12 periods)

Classification, Structure and functions of Enzymes. Specificity of enzyme action, Factors modifying enzyme activity, biotechnological applications of enzymes and applications of enzymes in various industries.

MODULE II: CHEMICAL NATURE OF ENZYME CATALYSTS (12 periods)

Structural Components of Enzymes – Structure, apoenzymes, prosthetic group, cofactors, Metal activated enzymes – metalloenzymes –involvement of coenzymes.

MODULE III: FREE AND IMMOBILISED ENZYME KINETICS (12 periods)

Pre-steady state kinetics, Kinetics of single substrate reactions, Kinetics of multi-substrate reactions, turnover number, Enzyme Inhibition, Methods of immobilization of enzymes. Allosteric enzymes – The Monad – Changeux – Wyman model (MCW) and The Koshland – Nemethy – Filmer (KNF) model.

MODULE IV: EXTRACTION AND PURIFICATION OF ENZYMES (12 periods)

Methods of production of enzymes, Extraction of Enzymes, soluble enzymes, membrane bound enzymes, Nature of extraction medium, purification of enzyme, criteria of purity, Determination of molecular weight of enzymes.

MODULE V: INSTRUMENTAL TECHNIQUES IN ENZYMATIC ANALYSIS (12 periods)

Principles – Manometry – Spectrophotometry – Spectrofluorimetry – Electrochemical methods – Enthalpimetry– Radio chemical methods – Automation in enzymatic analysis.

TEXT BOOKS

1. Principles of Fermentation technology – Stanbury, 2nd edition, 2003
2. Enzyme technology by Martin F. Chaplin, C. Bucke
3. Methods in Enzymology vol. 152 by S.L. Berger and A.R. Kimmel.

REFERENCE BOOKS

1. Enzymes by Trevor palmer
2. Enzymes by Robert A. Copeland, 2nd edition.

COURSE OUTCOMES (COs)	
CO1	Understand the basics of enzymes, nomenclature and classification
CO2	Apply the knowledge to derive the kinetics for enzymes
CO3	Learn and apply the different techniques for immobilization of enzymes and kinetics
CO4	To gain knowledge in various enzyme kinetics
CO5	Study and apply the knowledge on design of enzyme reactors
CO6	Discuss the applications of enzymes in Instrumental Techniques In Enzymatic Analysis

	PRINCIPLES OF GENETIC ENGINEERING	L	T	P	C
U18PCGE302	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Recombinant DNA technology, Principles of Genetics				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	1. To learn various types of vector-host systems and steps in creating a recombinant DNA molecule 2. To gain knowledge on various recombinant DNA techniques and their applications.				

MODULE I: SCOPE OF GENETIC ENGINEERING (9 Periods)

Basics, guidelines and Milestones in Genetic Engineering. Bio safety issues, Molecular Tools in Genetic Engineering – Medical Genetics, Restriction mapping of DNA fragments and Map construction, nucleic acid Amplification (PCR analysis) and its applications. Real time PCR.

MODULE II: GENE CLONING STRATEGIES (9 Periods)

Restriction enzymes and DNA Modifying enzymes (Polymerases, Reverse Transcriptase, Ligases, Alkaline phosphatase, Terminal deoxynucleotide transferases, Nucleases - S1 nucleases etc.). Gene Cloning vectors, Gene Cloning strategies, Transformation and selection of recombinants; Construction of DNA libraries.

MODULE III: GENE EXPRESSION (9 Periods)

Gene expression – hybridization techniques, Northern blot analysis, Primer extension, S1 mapping, RNAase protection assays, Reporter assays), Nucleic acid microarrays. Gene expression in bacteria and Yeast, expression in insects and insect cells, expression in mammalian cells, expression in plants – characterization of recombinant proteins, stabilization of proteins; Phage display, Yeast Two- and three Hybrid system.

MODULE IV: TRANSGENIC TECHNOLOGY (9 Periods)

Principles and Scope of Transgene technology, Gene tagging (T-DNA tagging and Transposon tagging), gene analysis (identification and isolation of gene), Transgenic and Gene Knockouts Technologies, Transgenic plants.

MODULE V: GENONIMCS AND FORENSICS (9 Periods)

Role of Genetic Engineering in Forensic Medicine. Nucleic acid sequencing, NGS, Genetic defects and detection; DNA profiling.

TEXT BOOKS:

3. DNA Cloning: a Practical Approach, .M. Glover and B.D. Hames, IRL Press, Oxford.
4. Methods in Enzymology vol. 152, Guide to Molecular Cloning Techniques, S.L. Berger and A.R. Kimmel, Academic Press, Inc. San Diego.
5. Methods in Enzymology Vol 185, Gene Expression Technology, D.V. Goeddel, Academic Press, Inc., San Diego.

COURSE OUTCOMES (COs)	
CO1	Understand the steps in Biopharmaceutical industries
CO2	Explain the features of Transformation and selection of recombinants
CO3	Characterization of recombinant proteins
CO4	Chromosome engineering, Gene Therapy, Strategies of gene delivery, gene replacement/ augmentation
CO5	Role of Genetic Engineering in Forensic Medicine
CO6	Understand the steps in mutational studies

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

U18PCGE303	Introduction to Molecular Techniques	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Recombinant DNA technology, Principles of Genetics				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	1. To learn various types of PCR 2. To gain knowledge on various DNA and RNA isolation procedures.				

MODULE I – NUCLEIC ACID ISOLATION AND AGAROSE GEL ELECTROPHORESIS (9 Periods)

Conventional and kit methods for isolation of nucleic acids - Plasmid DNA – Genomic DNA from Bacterial cells, Plant cells, Animal cells – RNA isolation and mRNA purification – Agarose gel electrophoresis – Staining techniques – Pulse field gel electrophoresis.

MODULE II - PCR TECHNIQUES (9 Periods)

Principle of polymerase chain reaction (PCR) - Components of PCR reaction and optimization of PCR -Gene specific primer and degenerate primer – Inverse PCR, Hot-start PCR, Loop mediated PCR -, Reverse transcription PCR and Real time PCR. Chemistry of primer synthesis.

MODULE III - HYBRIDIZATION METHODS (9 Periods)

Probes – Labeling of probes- Radioactive and non-radioactive probes - Detection techniques, Southern hybridization, Northern hybridization, Western blotting.

MODULE IV - DNA SEQUENCING AND GENE SYNTHESIS (9 Periods)

Sanger's method of DNA sequencing – Manual and automated methods. Pyrosequencing – massively parallel 454-sequencing, Illumina sequencing, SOLiD sequencing, single molecule sequencing.

MODULE V - PROTEIN TECHNIQUES (9 Periods)

Electrophoresis of protein – native and denaturing conditions, capillary and gel electrophoresis, 2D gel electrophoresis, ELISA, yeast hybrid system – one hybrid system – two hybrid system, phage display.

U18PCGE304	MICROBIOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Immunology, Clinical Pathology and Microbiology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES .	1. To learn about the general concepts of Microbes. 2. To understand the properties of interactions between bacteria and Fungi. 3. To know about the microbial biochemistry and physiology				

MODULE I: INTRODUCTION TO MICROBIOLOGY (9 Periods)

Scope of Microbiology. Characterization, Classification and Identification of microorganisms, Microscopic examination of Microbes and their morphology. Fine structures of bacteria, cultivation of bacteria, reproduction & growth, pure cultures and cultural characteristics.

MODULE II: MICROBIAL BIOCHEMISTRY AND PHYSIOLOGY (9 Periods)

Biochemistry of Microorganisms, Microbial metabolism, energy production, utilization of energy & biosynthesis, Bacterial genetics. Fungi – classification, importance, characteristics, morphology, reproduction, physiology cultivation, molds. Algae – importance of algae – characteristics of algae, classification of protozoans.

MODULE III: MICROBIAL GENETICS AND PATHOLOGY (9 Periods)

Organization of Genetic materials in Microorganisms. Microbial Genetics. Bacterial Genomics. Reproduction in microorganisms. Microbial proteomics. Pathophysiological aspects of Microorganisms.

MODULE IV: VIRUSES OF BACTERIA, ANIMAL AND PLANTS (9 Periods)

Viral Genomics, Virus infections in animals. Bacteriophages- General characteristics- Morphology and structure, Classification and Nomenclature - Bacteriophages of *E.coli*– Replication, viruses of plants - Structure- Replication- viruses in animals - Classification, isolation and identification-fatal diseases, Viroids.

MODULE V: ENVIRONMENTAL AND INDUSTRIAL MICROBIOLOGY

(9 Periods)

Microbiology of soil – aquatic microbiology, Microbiology of domestic water and waste water. Microbiology of fuel and Industrial microbiology.

TEXT BOOKS

1. Text of microbiology by Tortara, 10th edition
2. Microbiology by Pelczar, JR E.C.S Chan and noel R. Krieg. Fifth edition Tata McGraw Hill -2006

REFERENCE BOOKS

1. Microbiology – Harly and Prescott, 10th edition 2012
2. Microbiology by Sathyanarayana, 2010

COURSE OUTCOMES (COs)	
CO1	Outline the general concepts of pure culture and cultural characteristics.
CO2	Basic structures of microbes and its properties.
CO3	To know about microbial genetics and pathology.
CO4	Explain the concept of Structure and functions of Actinomycetes.
CO5	Illustrate the Basics of hospital acquired infections.
CO6	To describe the concept of fungal borne diseases.

4	Approval	47th Meeting of Academic Council held in Aug, 2018											

		L	T	P	C
U18PCGE305	**BASICS OF BIOCHEMISTRY**				
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Microbiology, Bio-organic chemistry				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES .	To be able to employ biochemical and Bio molecules, structure of water & its importance				

MODULE I: INTRODUCTION TO BIOCHEMISTRY (9 Periods)

Biomolecules, structure of water & its importance – Important noncovalent forces – Hydrogen bonds, electrostatic, hydrophobic & Vanderwaals forces – Acid, base & buffers – pH, Biological buffers and their significance – Principle of viscosity – surface tension, adsorption, diffusion, osmosis & their applications in biological systems.

MODULE II: STRUCTURE & PROPERTIES OF CARBOHYDRATES (9 Periods)

Classification and properties of Carbohydrates, Classification, and properties of amino acids & proteins. Classification, and properties of Lipids, Transport of lipids, Structure & functions of nucleic acids – Nucleosides , nucleotides – Cyclic AMP, cyclic GMP , ATP , GTP – DNA & RNA

MODULE III: CLASSIFICATION OF ENZYMES (9 Periods)

Chemical nature, Specificity of Enzyme catalyzed reactions, Enzyme Regulation- Feedback, Allosteric, Covalent modification, Hormonal regulation. Assay of enzymes, enzymes in clinical diagnosis of diseases. Introduction to Metabolism: Glycolysis, beta-oxidation, ketogenesis and cholesterol metabolism. TCA cycle: Structure of biological membranes, electron transport & Oxidative phosphorylation.

MODULE IV: HORMONES AS CHEMICAL MESSENGERS (9 Periods)

Liver function and their tests, Kidney function and its tests, constituents of urine and their clinical significance. General characteristics, structure, classification and function of hormones. Hormones as chemical messengers: General assay of hormones – Bio assay, chemical assay & immunoassays.

MODULE V: ANALYTICAL TECHNIQUES (9 Periods)

Principle, Types, and applications of electrophoresis, Isoelectric focusing, Two Dimensional Electrophoresis. Types of Chromatography and their significance, Spectro photometry, Fluorimetry, Flame photometry, Manometry, Microcalorimetry, Electrochemical methods, biosensors, use of radio isotopes in biochemistry.

TEXT BOOKS:

1. Harper's review of biochemistry By David.W. Martin, Peter. A. Mayes, Victor. W. Rodwell .LANGE medical publications.

U18PCGE3L1	**MICROBIOLOGY LABORATORY**				
	Total Contact Hours – 30	0	0	3	1.5
	Prerequisite – Basic Microbiology techniques				
	Course Designed by – Department of Genetic Engineering				
OBJECTIVES	1. Understand explicitly the concepts of microorganisms 2. Develop their skills in the preparation, identification and quantification of microorganisms				

LIST OF EXPERIMENTS

1. Sterilization techniques
2. Media preparation
3. Preparation of nutrient broth
4. Preparation of nutrient agar media
5. Staining Techniques (Simple, Gram staining, spore staining)
6. Pure culture techniques (a) streak plate method (b) pour plate method (c) Spread plate method
7. Acid fast technique
8. Antibiotic Assay - Antimicrobial Sensitivity Test (Disc Diffusion Method)
9. Biochemical Characterization of Bacteria
    i) Oxidation/Fermentation Test
    ii) Catalase, Oxidase and Urease Tests
10. Lethal effect of bacteria
11. Motility test by hanging drop method

TEXT BOOKS

1. Microbiology Bio 204 Laboratory Manual
2. Laboratory Manual in general Microbiology (1916)
3. Microbiology Bio1 2421L Laboratory Manual (Donna Cain, Hershell Hanks, Mary Weis,
4. Carroll Bottoms, and Jonathan Lawson)
5. Basic Practical Microbiology (John Grainger)

http://www.biotopics.co.uk/microbes/tech1.html

COURSE OUTCOMES (COs)	
CO1	Understand and demonstrate the working principles, procedures of microbiology Lab experiments and equipments
CO2	To understand the concept of sterilization
CO3	Observe and practice different types of culture media and broth for microbial cultivation
CO4	To know about disinfection methods
CO5	Differentiate microbes using different staining methods
CO6	Estimate and evaluate the microbial screening, identification and characterization

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	L
2	CO1	M	H			M		H		M	H		H
	CO2		M					H			H		H

	CO4		M			H		H		M	H		H
	CO5		H	M		M		H		H	M		M
3	Category	Professional core (PC)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18PCGE3L2	BIOCHEMISTRY LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	3	1.5
	Prerequisite – Basic Biochemical Techniques				
	Course Designed by – Department of Genetic Engineering				

OBJECTIVES

1. Provides an opportunity to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner.
2. Understand explicitly the concepts
3. Develop their skills in the preparation, qualitative and quantitative analysis.

LIST OF EXPERIMENTS

1. pH measurements and preparation of buffers.
2. Qualitative tests for Carbohydrates.
3. Estimation of sugars.
4. Estimation of proteins by Lowry's method / Biuret method.
5. Estimation of cholesterol by Zak's method.
6. Determination of saponification number of lipids.
7. Estimation of Amino acids.
8. Separation of amino acids - Thin layer chromatography.
9. Separation of sugars - Paper chromatography
10. Biochemical estimation of DNA /RNA using Spectrophotometer

TEXT BOOKS

1. Biochemistry Laboratory Manual - Mark Brandt, Ph.D. 3rd edition , 2002
2. Biochemistry Laboratory Manual – Dr. Dennis Welsh**,** 2013
3. Biochemistry Laboratory Manual Che 4350. Andrew J. Bonham, Ph. D, 2013
   https://www.liverpool.ac.uk/~agmclen/Medpracs/Prachomepage.html

COURSE OUTCOMES (COs)	
CO1	Determination of saponification number of lipids.
CO2	Estimation of Amino acids.
CO3	Separation of amino acids - Thin layer chromatography.
CO4	Separation of sugars - Paper chromatography
CO5	To detect proteins using Ramachandran Plot
CO6	Estimate and evaluate the Proteins and amino acids

U18PCGE401	rDNA TECHNOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Cell biology, Genetics, and Basic Biology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To learn various types of vector-host systems and steps in creating a recombinant DNA molecule				

MODULE I: MOLECULAR TOOLS FOR GENE CLONING (9 Periods)

Types of Restriction enzymes. DNA and RNA polymerases, reverse transcriptase, terminal transferase, DNA/RNA modifying enzymes- methylases- DNA ligase, RNA ligase. RNases, Nucleases – RNase free DNAse- T4 polynucleotide kinase. Phosphatases- Topoisomerase.

MODULE II: VECTORS FOR GENE CLONING (9 Periods)

Introduction to cloning vectors, plasmid vectors (high copy and low copy), phage vectors, cosmid vectors, phasmid vectors, BAC vectors and YAC vectors.

MODULE III: CLONING TECHNIQUES (9 Periods)

Cloning- blunt and cohesive end ligation – creation of restriction sites by PCR- linkers and adapters - homopolymer tailing. Strategies for cloning PCR products – TA cloning -TOPO-cloning-PCR product using SfrI restriction enzyme.

MODULE IV: CONSTRUCTION OF GENE LIBRARIES (9 Periods)

Construction of cDNA library- Construction subtractive cDNA library – Construction of genomic DNA library – BAC library – YAC library.

MODULE V: EXPRESSION OF RECOMBINANT PROTEIN IN E.COLI (9 Periods)

General features and promoters of Plasmid expression vectors- cloning of genes in expression vector- purification of recombinant protein using Histidine tag, GST tag, Chitin binding domain- codon usage databases- codon optimization in expression of recombinant protein.

TEXT BOOKS:

1. Principles of gene manipulation by Old and Primrose
2. Molecular Cloning – A Laboratory Manual by Sambrook and Russell

REFERENCE BOOKS

1. Molecular and Cellular Methods in Biology and Medicine, P.B. Kaufman, W. Wu. D. Kim and L.J; Cseke, CRC Press, Florida.
2. Molecular Cloning: a Laboratory Manual, J. Sambrook, E.F. Fritsch and T. Maniatis, Cold Spring Harbor Laboratory Press, New York, 2000.
3. http://www.ncbi.nlm.nih.gov/books/NBK9950/

COURSE OUTCOMES (COs)	
CO1	Understand the steps in recombinant DNA/RNA modifying enzymes
CO2	Explain the features of various types of gene cloning vectors
CO3	Strategies for cloning PCR products
CO4	construction subtractive cDNA library
CO5	Plasmid expression vectors-general features, promoters used in expression vectors
CO6	To gain knowledge on various recombinant DNA techniques and their applications.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

U18PCGE402	MOLECULAR BIOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Recombinant DNA technology, Genetics and Microbiology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To understand cellular organization, transport of molecules cell interactions and Signaling.				

MODULE I: - INTRODUCTION TO MOLECULAR BIOLOGY (9 Periods)

Scope and History, Structure of DNA-Nucleoside, Nucleotide, Features of Watson and Crick model, Super coiling- twist, writhe and linking number, Forms of DNA- A, B, Z. Structure and function of mRNA, rRNA, and tRNA.

MODULE II: REPLICATION AND REPAIR (9 Periods)

Types and functions of DNA polymerases in Prokaryote and Eukaryote, Replication in prokaryote and Eukaryote. Proof reading activity, 5'-3' exonuclease activity, topoisomerase activity, Telomeric DNA replication and Plasmid Replication models.

MODULE III: POST TRANSCRIPTIONAL MODIFICATIONS (9 Periods)

Fine structure of prokaryotic and eukaryotic gene, Structure and function of the promoters in mRNA, rRNA, tRNA genes. RNA polymerases in prokaryote and eukaryotes. Transcription of mRNA, rRNA, and tRNA genes in Prokaryote and Eukaryote.

MODULE IV: TRANSLATION AND POST TRANSLATIONAL PROCESSING (9 Periods)

Genetic code and Wobble hypothesis, Translation in prokaryote and eukaryote, Post translational Modifications, Principles of protein sorting and targeting into endoplasmic reticulum, mitochondria, chloroplast, and nucleus.

MODULE V: GENE REGULATION (9 Periods)

Principles of gene regulation- Transcriptional and post transcriptional gene regulation - activators, co-activators, suppressors, co-suppressors, moderators, silencers, insulators, enhancers. Operon- lac operon, trp operon, ara operon and gal operon.

TEXT BOOKS:

1. S.S. Purohit "Cell and Molecular biology", 2008, Agrobios (India).
2. Harvey Ladish "Cell Biology" W.H. Freeman, 2007.
3. Molecular Biology of Gene - Watson
4. Molecular and Cellular Biology- Stefen Wolfe

REFERENCE BOOKS

1. Molecular and Cellular Methods in Biology and Medicine, P.B. Kaufman, W. Wu. D. Kim and L.J; Cseke, CRC Press, Florida.
2. Molecular Cloning: a Laboratory Manual, J. Sambrook, E.F. Fritsch and T. Maniatis, Cold Spring Harbor Laboratory Press, New York, 2000.
3. Molecular biology of Gene, Fifth edition Author James D. Watson 2004Benjamine Cumin (Publisher)
4. http://www.web-books.com/MolBio/

COURSE OUTCOMES (COs)	
CO1	Scope and History. Structure of DNA-Nucleoside
CO2	Types and functions of DNA polymerases in Prokaryote and Eukaryote. Replication in prokaryote and Eukaryote.
CO3	Fine structure of prokaryotic and eukaryotic gene, structure and function of the promoters in mRNA, rRNA, tRNA genes
CO4	Genetic code and Wobble hypothesis. Translation in prokaryote and eukaryote
CO5	Understand the Principles of gene regulation- Transcriptional and post transcriptional gene regulation-activators, co-activators, suppressors, co-suppressors, moderators, silencers, insulators, enhancers
CO6	To describe DNA replication, gene expression at transcriptional and translational level gene regulation and DNA repair mechanisms

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCGE403	GENOMICS AND PROTEOMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Molecular biology, Genetics, rDNA Technology, and Bioinformatics				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To Coding, non-coding chromosomes. To Applications of Proteome analysis				

MODULE I: INTRODUCTION TO GENOMICS (9 Periods)

Organization and Structure of Genomes, Genome Size – Genome Structure in Viruses and microbes, Coding, Non-coding chromosomes and high order structures – Genomes relatedness.

MODULE II: PHYSICAL MAPPING TECHNIQUES (9 Periods)

Chromosomes Micro dissection, Chromosomal mapping techniques, Genome sequencing – Placing small fragments on map – STS assembly – Gap closure – Pooling strategies – Cytogenetic mapping techniques.

MODULE III: FUNCTIONAL GENOMICS (9 Periods)

Gene finding – Annotation – ORF and functional prediction – Subtractive DNA library, screening – DNA sequencing - Hybridization techniques – Differential display and representational difference analysis – SAGE – TOGA, Analysis of RNA expression.

MODULE IV: PROTEOMICS TECHNIQUES (9 Periods)

Proteome analysis – Bridging Genomics and Proteomics - Protein level estimation – Edman protein micro sequencing – Protein cleavage – 2D gel electrophoresis – Metabolic labeling - Pattern analysis – Mass spectrometry – Principles of MALDI-TOF .

MODULE V: PROTEIN PROFILING (9 Periods)

Protein-protein interaction –Protein Chips – Applications of Proteomics in drug discovery- Phage antibodies as tools – Proteomics in plant genetics and breeding.

COURSE OUTCOMES (COs)	
CO1	To organization and structure of genomes, Genome Size
CO2	To Chromosomes Micro dissection and chromosomal mapping techniques.
CO3	To understand the Functional Genomics.
CO4	To understand the principle of Mass spectrometry
CO5	To Understand the Phosphoprotein analysis- Genomics Vs Proteomics.
CO6	To know the proteomics in drug discovery research.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCGE404	**BASICS OF BIOINFORMATICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Biology, Enzyme Technology, and Basic computer Science				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To understand the significance of string alignment. To construct the phylogenetic tree.				

MODULE I: Introduction to Bioinformatics and Basics of Internet (9Periods)
Biology in the computer age - Introduction to Bioinformatics, Basics of computers - Servers, workstations, operating systems. Search Engines, Public Biological databases. Introduction to BIOSEQ's and types.

MODULE II: BIOLOGICAL DATABASES (9Periods)

Biological databases-Types and properties. Structure classification databases. Genome Information Resources: DNA sequence databases, specialized genomic resources, GRAIL, GENSCAN.

MODULE III: ALIGNMENT TECHNIQUES (9Periods)

Pair-wise Alignment Technique and searching: Global and local alignment, Multiple sequence Alignment databases and goals, Manual methods types, Secondary database searching and package analysis.

MODULE IV: PROTEIN ANALYSIS (9 Periods)

Protein Chips, Bioinformatics tools in proteomics - Protein identity based on composition, Motifs and patterns, secondary structure prediction, specialized secondary structures, tertiary structure.

MODULE V: INTRODUCTION TO PERL (9 Periods)

Using PERL to facilitate biological analysis, Strings, numbers, and variables, Basic input & output, File handles, Conditional Blocks & loops, Pattern matching, Arrays and Hashes.

TEXT BOOKS

1. Andreas D Baxevanis & B F Francis," Bioinformatics- A practical guide to analysis of Genes & Proteins", John Wiley, 2002.

REFERENCE BOOKS

1. Introduction to Bioinformatics, T. K. Attwood & D.J. Parry-Smith, Prentice Hall 2000.
2. Instant notes on Bioinformatics, D.R. West head.J.H. Parish R.M. Twyman, Liva Books, New Delhi, 2003
3. "Bioinformatics Sequence and Genome analysis", David W. Mount 2003.
4. "Bioinformatics Basics 'Applications in Biological science and Medicine" Hooman H. Rashidi &Lukas K. Buehie 2001.
5. Introduction to bioinformatics: A theoretical and practical approach by Stephen A wetz and David. D Woumble Publication: Humana Press. 2003
6. Sequence and Genome analysis. David W. Mount, 2004 Cold spring harbour laboratory press New York.

COURSE OUTCOMES (COs)	
CO1	Explain various types of network protocols and biological databases
CO2	Demonstrate and interpret the string matching and dynamic program algorithms of macromolecular strings
CO3	Apply, solve and interpret the heuristics based pair wise and multiple sequence analysis of macromolecules
CO4	Construct and interpret the molecular phylogenetic trees
CO5	Predict and understand the gene and protein structures, and microarrays
CO6	To understand the fundamentals of protein structure prediction and microarray analysis

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO3	H		M		M		L	H		H	M	H
	CO4		M		L	H		H		M		H	H
	CO5	H		M		M		H	M		M		M
3	Category	Professional core (PC)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18PCGE405	PLANT TISSUE CULTURE	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Recombinant DNA Technology				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1. This course deals with engineering gene of interest to produce transgenic animals and plants for human welfare 2. To make the students to understand the basic concepts and applications of plant tissue culture. 3. To impart knowledge on production of transgenic plants and exploiting it as bioreactors. 4. To improve awareness on the applications of transgenic plants				

MODULE I: BASICS OF PLANT TISSUE CULTURE (9 Periods)

History of plant tissue culture- totipotency- Organizing a tissue culture lab-sterilization techniques- callus differentiation of cell and organs - clonal propagation- Regeneration and hardening-somatic clonal variation.

MODULE II: PREPARATION OF TISSUE CULTURE MEDIA (9 Periods)

Different media used for plant tissue culture-Composition of MS, Gamborg and White media-Use of hormones-Auxins- Cytokinins.

MODULE III: TISSUE CULTURE TECHNIQUES (9 Periods)

Callus culture- suspension culture -micropropagation-somatic embryogenesis- embryo culture –protoplast fusion- synthetic seeds - anther culture. Applications of tissue culture.

MODULE IV: PLANT TRANSFORMATION (9 Periods)

Agrobacterium – mechanism of T-DNA transfer -Ti plasmids derived vector system – biolistic gene transfer –reporter genes-GUS—marker genes-selectable and scorable markers-

constitutive and tissue specific promoters strategies for developing marker free transgenic plants-chloroplast transformation.

MODULE V: APPLICATIONS OF TRANSGENIC PLANTS (9 Periods)

Bt transgenics – virus resistant plants (coat protein, antisense RNA) – Glycophosate resistant transgenics – Genetic manipulation of flower pigmentation (Blue Rose) – Vitamin A and iron fortified rice – Plant-made antibodies and edible vaccines.

TEXT BOOKS

1. Molecular Biotechnology by Bernard R. Click and Jack. J. Pasternek
2. Plant Biotechnology by S. Ignacimuthu.
3. Text book of Plant tissue culture – Sathyanarayana

REFERENCE BOOKS

1. Introduction to Plant tissue culture – M.k. Razdan
2. Plant tissue culture – PR white
3. Plant propagation by plant tissue culture – EF George.

COURSE OUTCOMES (COs)	
CO1	Acquired the concept and basics of plant tissue culture.
CO2	Improved the experience in preparation of tissue culture media.
CO3	To know the working principles of tissue culture techniques.
CO4	understood the plant transformation methods and its uses
CO5	Improved idea about the applications in transgenic plants
CO6	Understood the competency methods.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

U18PCGE4L1	rDNA TECHNOLOGY LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	3	1.5
	Prerequisite – rDNA Technology, Microbiology, and Cell Biology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To familiarize with cell counting and cell separation techniques.				

LIST OF EXPERIMENTS

1. Isolation of DNA from plant tissue
2. Isolation of DNA from animal tissue
3. Agarose gel electrophoresis
4. Effects of antibiotics by gradient method
5. UV induced mutagenesis
6. SDS page
7. Quantification of nucleic acids
8. Competent cell preparation
9. Transformation
10. Competent cell preparation
11. Polymerase Chain Reaction

TEXT BOOKS

1. Molecular biology laboratory manual - Hikmet Geckil.
2. Molecular Cloning – A Laboratory Manual by Sambrook and Russell.
4. https://www.inonu.edu.tr/Uploads/iys_dosyalar/1400/file/MBManual.pdf

COURSE OUTCOMES (COs)	
CO1	Demonstrate cell counting and cell separation techniques
CO2	Experiment to isolate DNA and RNA from various biological tissues.
CO3	Analyze and interpret DNA and RNA data.
CO4	Explain the activity of restriction enzymes and ligation of DNA.
CO5	Demonstrate bacterial genetics through conjugation experiment and Execute the effect of UV irradiation on bacterial genome
CO6	To gain hands on experience with action of restriction endonucleases and ligase on DNA

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCGE4L2	MOLECULAR BIOLOGY LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	3	1.5
	Prerequisite – Biology, Genetics and Microbiology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To give hands-on training in basic molecular biology techniques				

LIST OF EXPERIMENTS

1. DNA Extraction from plant using Agarose Gel Electrophoresis
2. Bacterial Transformation
3. Ligation technique
5. Design for PCR Oligonucleotide Handling
6. Polymerase Chain Reaction
7. Restriction Enzyme Digestion
8. Yeast (S. cerevisiae) Culturing
9. Plasmid DNA Isolation
10. RNA Extraction

U18PCGE4L3	PLANT TISSUE CULTURE LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	3	1.5
	Prerequisite – Plant Tissue Culture lab				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1. Provides an opportunity to understand the basic practices of plant tissue culture. 2. It also helps in understanding the theoretical principles of producing transgenic plants in a more explicit and concentrated manner. 3. The students should be able to Understand explicitly the concepts. 4. To develop their skills in the plant tissue culture techniques				

LIST OF EXPERIMENTS

1. Preparation of Tissue Culture Media
2. Callus Induction, using rice embryo/endosperm culture

3. Transformation of Agro bacterium
4. Selection and sub-culture of algal species
5. Bacterial antibiotic sensitivity
6. Isolation of mutant clones by replica plate method – MSGEN208
7. Collection and culture of marine alga
8. Identification of bio-fertiliser activity using marine alga
9. GUS assay
10. Transgenic analysis by PCR

REFERENCE BOOK

1. Plant biotechnology Laboratory Manual (Dr. Lingaraj Sahoo).

U18BSMA501	BIOSTATISTICS	L	T	P	C
	Total Contact Hours - 60	3	1	0	4
	Prerequisite – Maths-I, Analytical techniques.				
	Course Designed by – Dept of Mathematics				
OBJECTIVES	To be able to employ for numerical problems				

MODULE I: INTRODUCTION TO BIO-STATISTICS (numerical problems only) (12 Periods)

Introduction and Basics of Bio Statistics. Applications of Biostatistics. Handling univariate and bi-variate data – Measures of central tendency – Measures of dispersion –Skewness & Kurtosis – Correlation and Regression.

MODULE II: PROBABILITY & THEORETICAL DISTRIBUTIONS (12 Periods)

Probability concepts – Conditional probability – Baye's theorem – one – dimensional random variables –expectation, variance, moments. Theoretical distributions: Binomial, Poisson, Normal (Problems only).

MODULE III: TESTING OF HYPOTHESIS (12 Periods)

Introduction – Large sample tests based on normal distribution - Test for single mean, difference between means, proportion, difference between proportions, standard deviation, difference between standard deviation. Chi-square test for goodness of fit, Independence of attributes.

MODULE IV: ANALYSIS OF VARIANCE (12 Periods)

Small sample tests based on T and F distribution - Test for, single mean, difference between means, Paired t-test, test for equality of variances. ANOVA– One way classification, Two-way classification.

MODULE V: STATISTICAL QUALITY CONTROL (12 Periods)

Introduction – Process control – control charts for variables - X and R, X and s charts control charts for attributes: P chart, NP chart, C chart.

REFERENCE BOOKS:

1. Biostatistics, second edition: A Guide to Design, Analysis and Discovery by Ronals N. Forthofer, fun sel lee, and Mike Hemandez (Hardcover-Dec 28, 2006)
2. Biostatistics: Principles and Practice by B. Antonisamy Solomom Christopher, Prasanna Samuelson 1st edition Pub Date 14 Sep 09.
3. PN.Arora and S. Arora, 'Statistics for Management", S.Chand and sons, New Delhi 2003
4. http://www.dcscience.net/Lectures_on_biostatistics-ocr4.pdf

COURSE OUTCOMES (COs)	
CO1	To Biostatistics and Basics of Bio Statistics. Applications of Biostatistics
CO2	Identify synthetic strategies Probability concepts – conditional probability – Baye's theorem
CO3	Introduction – Large sample tests based on normal distribution
CO4	Understand the ANOVA– one –way classification, Two-way classification.
CO5	Understand the Statistical Quality Control.
CO6	To identify numerical methods

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

	IMMUNOLOGY	L	T	P	C
U18PCGE501	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Recombinant DNA technology, Principles of Genetics				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	1. To learn about the general concepts of immune system and immune organs 2.To understand the properties of antigens and antibodies and the concept of antigen-antibody interactions 3.To know about the mechanisms related to cell mediated immunity, complement system, Hypersensitivity and transplantation immunology.				

MODULE I: OVERVIEW OF THE IMMUNE SYSTEM (9 Periods)

Types of Immune responses. Innate Immunity, adaptive immunity, Cellular immunity, comparative immunity cells and organs of the immune system, Antigens - HLA antigens, MHC antigens.

MODULE II: IMMUNOGLOBULIN STRUCTURE AND FUNCTIONS (9 Periods)

Basic structures of Immunoglobulin's – Immunoglobulin classes and biological activities, Antigenic determinants on Ig, Plasma cells and B cell receptors, Monoclonal antibodies – cytokines – complement system.

MODULE III: ANTIGEN – ANTIBODY INTERACTIONS (9 Periods)

Antibody Affinity and activity – Antibody specificity - Precipitation reactions- agglutination reactions, MHC Antigen processing & presentations, Immunological network, Immunological techniques, Radio immunoassay- ELISA Western blotting, Immunoprecipitation, Immunofluroscence, Flow cytometers

MODULE IV: T & B CELL MATURATION, ACTIVATION & DIFFERENTIATION (9 Periods)

Structure and functions of T and B lymphocytes, Bone marrow and Hematopoietic stem cells. T cell receptor, T Cell maturation, Dendritic cells, Lymphocyte activation and differentiation of B cells - activation and differentiation of cell mediated immune responses.

MODULE V: IMMUNE SYSTEM IN HEALTH & DISEASE (9 Periods)

Basics of Immune disorders and inflammation, hypersensitive reactions, immune responses to infectious diseases, vaccines. Cancer immunology. Immunoinformatics, Clinical Immunology, Immunological databases.

TEXT BOOKS:

1. Kuby, Immunology by Richard A. Golds by Tharmas J. kindt fourth edition, 2000 and Barbara Osborne. W.H.Freeman and company
2. Text of Microbiology – Tortora, 10th edition

REFERENCE BOOKS

1. Roitt, Ivan. Essential Immunology, 9th ed., Blackwell Scientific, 1997
2. Roitt I, Brostoff J. and Male D. Immunology, 6thed. Mosby, 2001
3. Goldsby R.A., Kindt, T.J., Osbome, B.A. and Kerby J. Immunology, 5th ed., W.H.Freeman, 2003

4. Weir, D.M. and Stewart, J. Immunology, 8th ed., Cheerchill, Linvstone, 1997
https://www.immunology.org/

COURSE OUTCOMES (COs)	
CO1	Outline the general concepts of immune system and describe the cells and organs of the immune system
CO2	To understand molecular techniques of immunogens
CO3	Basic structures of Immunoglobulins – Ig classes and biological activities,
CO4	Antibody Affinity and activity – Antibody specificity - Precipitation reactions
CO5	Explain the concept of Structure and functions of T and B lymphocytes
CO6	Illustrate the Basics of Immune disorders and inflammation.

U18PCGE502	**GENES AND DISEASES**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Gene therapy, Bio-Pharmaceutical technology				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	To understand the genes that control or influence the heritable human diseases 1. To understand the pattern of inheritance of heritable diseases 2. To learn about the genetics of most prevalent cancers in India 3. To learn about the genetics of metabolic disorders and disease of nervous system 4. To learn about the genetics of ear, eye and blood disorders				

MODULE I: INTRODUCTION TO DEFECTIVE GENES (9 Periods)

Introduction to the diseases, Mechanism of Genetic Diseases, Types of Mutations. Dominance, recessive, co-dominance, autosomal and sex linked inheritance of diseases. Chromosomal maps.

MODULE II: GENETIC DISORDERS (9 Periods)

Single Gene disorders, X-linked recessive, Y-linked and Mitochondrial disorders. Multifactorial and polygenic disorders. FIND base. Genetic epidemiology. Inborn errors of metabolism. Population groups in biomedicine.

MODULE III: GENETIC TESTING (9 Periods)

Genetic Testing, Genetic diseases prevention, Genetic counseling. Pharmacogenomics. Public Health Genomics in Information centres. Human Genome Project.

MODULE IV: GENETIC DISEASES (9 Periods)

Genetic diseases of Blood and lymph, digestive system, ear, nose and throat. Diseases of the eye, glands and hormones. Diseases of heart and blood vessels. diseases of the immune system, and muscle and bone.

MODULE V: GENETIC DISORDERS (9 Periods)

Congenital and Neonatal diseases, Diseases of the nervous and Respiratory system, nutritional and metabolic diseases. diseases of skin and connective tissue. Prognosis and treatment of genetic disorders

TEXT BOOKS

1. Genes and Diseases, NCBI Bookself, free e-book.
2. The principles of gene manipulation (Primrose – sixth edition).

REFERENCE BOOKS

1. Genes, Benjamin and Lewin, 8th edition. Pearson Prentice Hall, 2004
2. Rodney J Y Ho, MILO Gibaldi, Biotechnology & Biopharmaceuticals Transforming proteins and genes into drugs, 1st Edition, Wiley Liss, 2003.
3. Human Genetics and Genomics, Third Edition - Bruce R. Korf
4. Human Genetics: Principles and Approaches - Friedrich Vogel and Arno G. Motulsky
5. http://www.ncbi.nlm.nih.gov/books/bookres.fcgi/gnd/tocstatic.html

COURSE OUTCOMES (COs)	
CO1	Mechanism of Genetic Diseases.
CO2	Genetics of metabolic disorders
CO3	Genetics of the diseases of nervous system
CO4	Genetics of ear, eye and blood disorders
CO5	Congenital disorders and Neonatal diseases
CO6	Treatment of genetic disorders.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO5		H	M		M		H			M	H	M
3	Category	Professional core (PC)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18PEGE42	VIROLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Microbiology, Cell biology and Basic Biology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To make the students aware of the overall industrial bioprocess so as to help them to manipulate the process to the requirement of the industrial needs				

MODULE I: CULTIVATION OF VIRUSES (9 Periods)

Cultivation of plant, animal and bacterial virus, growth curve, methods for purification of viruses, plaque assay, generation of transformed cell foci.

MODULE II: REPLICATION CYCLE (9 Periods)

Entry of enveloped and non-enveloped animal and plant virus. Bacteriophage; replication and expression of viral genome, bacteriophages- lytic and lysogenic cycle and its regulation; late events of viral infection.

MODULE III: PATHOGENESIS OF VIRAL INFECTION (9 Periods)

Modes of virus spread; multiplication and occurrence of disease; immune response. Fate of the host; pathogenesis of hepatitis, HIV, EBV and influenza virus.

MODULE IV: PREVENTION AND TREATMENT OF VIRAL INFECTION (9 Periods)

Vaccination strategy; chemotherapy of viral diseases; interferon-its induction and action. Virus as therapeutic agent; viruses for gene therapy

MODULE V - PRIONS AND VIROIDS (9 Periods)

General properties; hypothesis of prion generation; disease caused by prions and viroids. Viruses-promise and problems: Source and causes of emergent virus diseases

Text books:

1. Culture of Animal Cells: A Manual of Basic Technique. R. Ian Freshney. Latest edition / Pub. Date: September 2005. Wiley.
2. Culture of Cells for Tissue Engineering. R. Ian Freshney. Pub.Date: March 2006. Wiley.
3. Invertebrate Tissue Culture Methods. Jun Mitsuhashi. Latest edition /Pub. Date: February 2002. Publisher: Springer-Verlag New York, LLC.

Reference books:

1. Essential Cell Biology. Bruce Alberts, Dennis Bray, Keith Roberts, Julian Lewis, Martin Raff. latest edition/Pub. Date: October 2003. Publisher: Taylor & Francis, Inc.
2. Molecular Cell Biology. Harvey Lodish, James Darnell, Paul Matsudaira, Arnold Berk, S. Lawrence Zipursky. Latest edition/Pub. Date: August 2003. Publisher: W. H. Freeman Company.
3. www.virology.net/Big_Virology/BVHomePage.html

COURSE OUTCOMES (COs)	
CO1	Understand the bulk production of commercially important products of viral culture.
CO2	Explain the method of introducing viral genomes into the cells
CO3	Strategies for microbial metabolites from industries.
CO4	Understand the pathogenesis of viral infection
CO5	To know the viral vectors-general features, promoters used in expression vectors
CO6	To gain knowledge on **p**revention and treatment of viral infection**.**

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	I	j	k	l
2	CO1	M	H			M		H		M		H	H
	CO2	H	M		H		M		M		H

U18PCGE5L1	IMMUNOLOGY LABORATORY	L	T	P	C
	Total Contact Hours - 30	0	0	3	1.5
	Prerequisite – Cell Biology lab				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1. The students should be able to develop their skills. 2. Provides an opportunity to experimentally verify the theoretical concepts already studied. 3. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. 4. Explore the antigen and antibody reaction methods.				

LIST OF EXPERIMENTS

1. Blood grouping
2. Leukocyte count
3. PBMC preparation and their enumeration
4. Production of polyclonal antibodies – preparation of antigen – protocol for immunization in rabbits /mice
5. Antigen-antibody reaction- Haemagglutination, precipitation- Widal and VDRL
6. Immunodiffusion, Immunoelectrophoresis.
7. Affinity chromatography for antibody purification.
8. ELISA-DOT and plate ELISA
9. Immuno Blotting techniques
10. Agglutination reactions (a) direct (b) indirect

REFERENCE BOOK

1. Immunology Laboratory methods manual, 2009
2. Cell biology and immunology manual, Dr. Bea Holton

COURSE OUTCOMES (COs)	
CO1	Understood the blood grouping and types of blood groups.
CO2	Experienced in leucocytes count and PBMC preparation and their enumeration.
CO3	Production of polyclonal antibodies using immunization.
CO4	Antigen and Antibody reaction - types.
CO5	Blotting Techniques and ELISA types.
CO6	Antibody production

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCGE5L2	PROTEIN BIOCHEMISTRY LABORATORY	L	T	P	C
	Total Contact Hours - 30	0	0	3	1.5
	Prerequisite – Biochemistry lab				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1. The students should be able to develop their skills. 2. Provides an opportunity to experimentally verify the theoretical concepts already studied. 3. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. 4. Explore the antigen and antibody reaction methods.				

LIST OF EXPERIMENTS

1. Introduction to general techniques
2. Spectroscopy and Calorimetry.
3. Protein estimation
4. Chromatographic techniques
5. Gel electrophoresis
6. Protein Purification techniques
7. PCR
8. Identification methods of proteins
9. Western blotting
10. GC-MS

REFERENCE BOOK

U18PCGE5L3	GENOMICS LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	3	1.5
	Prerequisite – Genetics and Microbiology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To give hands-on training in basic molecular biology techniques				

LIST OF EXPERIMENTS

1. Isolation of RNA
2. Formaldehyde agarose gel electrophoresis of RNA
3. RNA quantification
4. cDNA synthesis
5. Reverse transcription PCR
6. Digital PCR
7. Transformation of E.coli with expression vector

8. Time course study of induction of gene expression with IPTG
9. SDS-PAGE
10. Northern Blotting

REFERENCE:

1. Laboratory Investigations in Genomics laboratory, Allen Bregman Wiley, 2007.
2. Laboratory manual for Molecular Biology - E. Eugene Williams, 2016

COURSE OUTCOMES (COs)	
CO1	To demonstrate cell counting and cell separation techniques
CO2	To experiment to isolate DNA and RNA from various biological tissues.
CO3	To analyze and interpret DNA and RNA data.
CO4	To explain the activity of restriction enzymes and ligation of DNA.
CO5	To demonstrate bacterial genetics through conjugation experiment and Execute the effect of UV irradiation on bacterial genome
CO6	To acquire practical skills related to DNA/ RNA isolation methods.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCGE601	**RESEARCH METHODOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Biophysics				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1. Early entry graduate-level survey of research methods with an emphasis on comprehension of the educational research literature.				

	2. Course includes scientific method, locating. 3. Summarizing published research, sampling, measurement, statistics. 4. Increase the knowledge on research design, and critique of published research

MODULE I: INTRODUCTION TO RESEARCH (9 Periods)

Introduction and Types of Research – Various Steps in Research process, Mathematical tools for analysis, research question and problem, Literature review, Surveying, synthesizing, critical analysis, reading materials, reviewing, rethinking, critical evaluation, interpretation, Research Purposes, Ethics in research – APA Ethics code.

MODULE II: APPLICATIONS OF PROBABILITY DISTRIBUTIONS (9 Periods)

Quantitative Methods for problem solving: Statistical Modeling and Analysis, Time Series Analysis Probability Distributions, Fundamentals of Statistical Analysis and Inference, Multivariate methods, Concepts of Correlation and Regression, Fundamentals of Time Series Analysis and Spectral Analysis, Error Analysis, Applications of Spectral Analysis.

MODULE III: FREQUENCY DISTRIBUTIONS (9 Periods)

Tabular and graphical description of data: Tables and graphs of frequency data of one variable, Tables and graphs that show the relationship between two variables , Relation between frequency distributions and other graphs, preparing data for analysis

MODULE IV: NEURAL NETWORK ANALYSIS (9 Periods)

Soft Computing: Computer and its role in research, Use of statistical soft ware SPSS, GRETL etc in research. Introduction to evolutionary algorithms - Fundamentals of Genetic algorithms, Simulated Annealing, Neural Network based optimization, Optimization of fuzzy systems.

MODULE V: RESEARCH REPORT ANALYSIS (9 Periods)

Structure and components of research report, Types of report, Layout of research report, Mechanism of writing a research report, referencing in academic writing.

TEXT BOOKS

Laarhoven & E.H. Aarts
4. Genetic Algorithms in Search, Optimization, and Machine Learning by David E. Goldberg.
5.https://docs.google.com/viewer?a=v&pid=forums&srcid=MTAxNDI0NTM4NjczMzU3MTYzMTIBMTQyOTU2MzI2MDIwMDM2MTc5NDQBSm05QUZ1UENMOFVKATAuMQEBdjI

COURSE OUTCOMES (COs)	
CO1	Basic descriptive statistics including measures of central tendency, dispersion, and relationships.
CO2	Basic measurement concepts including validity and reliability and the role of measurement in inquiry.
CO3	Common and differentiating features of basic, applied, and evaluation research
CO4	Common and differentiating features of typical research designs (e.g. quantitative vs. qualitative, experimental vs. non-experimental, group vs. single-case).
CO5	Quality indicators in published research.
CO6	To Understand the research and development.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCGE602	MOLECULAR EVOLUTION AND PHYLOGENY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – rDNA Technology, Microbiology, and Cell Biology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To familiarize with cell counting and cell separation techniques.				

MODULE I: INTRODUCTION (9 Periods)

Introduction in molecular evolution- Archaeology of the genome-Nature of molecular evolution - driving forces in evolution.

MODULE II: INTRODUCTION TO PHYLOGENETICS (9 Periods)

Fundamental elements of phylogenetic models-Identifying Orthologs and Paralogs-Trees and distances-Molecular Phylogenetic models-Universal phylogeny.

MODULE III: EVOLUTIONARY CHANGE (9 Periods)

Measuring genetic change - Genetic distance- Substitution models-Tree building methods-Distance based methods-Character based methods-Tree evaluation-Randomized trees Bootstrap-Phylogenetic softwares.

MODULE IV: MODELS OF MOLECULAR EVOLUTION (9 Periods)

Models of evolutionary process - Functional constraints - Molecular clocks, Evaluation of molecular clock hypothesis-Neutral theory.

MODULE V: PHYLOGENETIC APPLICATIONS (9 Periods)

Applications of molecular phylogenetics - Gene and Species trees, Organism phylogeny-Age and rates of diversification - Host parasite co-specification.

TEXT BOOK:

1."Evolution and population genetics" by Rashma sisodia 2006 (pg no.175 - 297)

REFERENCE:

https://www.biomedcentral.com/

COURSE OUTCOMES (COs)	
CO1	To learn about Nature of molecular evolution -driving forces in evolution
CO2	It also gives knowledge on Phylogenetic models-Universal phylogeny
CO3	It deals with protein truncation
CO4	It imparts determination of splicing variants
CO5	It impliments of the genetic variation
CO6	It gives the Knowledge about the Neutral theory

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCGE603	CYTOGENETICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Cell Biology, Cytology				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1. Early entry graduate-level survey of research methods with an emphasis on comprehension of the educational research literature. 2. Course includes scientific method, locating. 3. Summarizing published research, sampling, measurement, statistics. 4. Increase the knowledge on research design, and critique of published research.				

MODULE I: MENDELIAN GENETICS (9 Periods)

Genetic inheritance, Mendelian Genetics, Mendel's experiments, principles of segregation, monohybrid cross – Independent Assortment, Gene interaction, multiple alleles.

MODULE II: CHROMOSOME STRUCTURE AND ORGANIZATION (9 Periods)

Chromosome structure and organization in prokaryotes and eukaryotes, Giant chromosomes, polythene and lampbrush, Sex determination and sex linkage, techniques in cytogenetic.

MODULE III: LINKAGE AND CROSSING OVER (9 Periods)

Linkage, Crossing over, cytological basis of crossing over, chromosome mapping, two and three factor cross, interference, somatic cell hybridization.

MODULE IV: VARIATION IN CHROMOSOME STRUCTURE AND NUMBER (9 Periods)

Deficiencies, duplication, inversion, translocation, positive effects, chromosomal aberration - classification of mutation, classification of ploidy, variation in chromosome number, extra chromosomal inheritance.

MODULE V: RECOMBINATION IN BACTERIA (9 Periods)

Bacterial Genomics, Transformation, Transduction, Conjugation – mapping, plasmids and episomes.

TEXT BOOKS

1. Principles of Genetics by Gardner, Simmons, Snustad, 8th edition – John Wiley and Sons, Inc., 2003.

U18PCGE6L1	**GENE CLONING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	3	1.5
	Prerequisite – Molecular Biology laboratory				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1.The practical deals with creating recombinant DNA molecules 2.To give hands-on training in creating recombinant DNA molecules 3. Molecular analysis indirectly by restriction digestion and PCR as well as directly by DNA sequencing. 4. To give hands-on training Ligation and transformation				

LIST OF EXPERIMENTS

1. Isolation of total DNA.
2. Isolation of plasmid DNA.
3. Microbial cultures
4. Digestion and gel elution of vector and inserts
5. Ligation and transformation
6. Verification of cloning by colony PCR and patching the positive colonies
7. Plasmid isolation from PCR positive colonies
8. Confirmation of cloning by restriction digestion
9. Set up DNA sequencing reaction
10. Cleaning the sequencing reaction product

REFERENCE BOOK

1. Molecular Cloning - A Laboratory Manual. 4th ed, 2012 - Cold Spring Harbor Laboratory Press.
2. Molecular Biology I Biochemistry Level II: Practical Manual. Dr Peter Kille.
3. Molecular cloning – A laboratory manual. Joseph sambrook and David w. Russell
4. http://www.mclab.com/

COURSE OUTCOMES (COs)	
CO1	The studentcan able to isolate total DNA, Plant DNA and plasmid DNA.
CO2	The studentcan able to do molecular digestion and gel elution of vector and inserts and Ligation and transformation.
CO3	The studentcan able to do plasmid isolation from PCR positive colonies
CO4	The studentcan able to do Confirmation of cloning by restriction digestion
CO5	The studentcan able to do Ligation and transformation
CO6	Sequencing product

4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18PCGE6L2	BIOINFORMATICS LABORATORY	L	T	P	C
	Total Contact Hours - 30	0	0	3	1.5
	Prerequisite – Molecular modeling laboratory				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1.To know about databases and their use 2. To understand sequence alignment and programming 3. To analyze the protein sequence using bioinformatics tools 4. To understand the use of PERL, Python in programming and executing research				

LIST OF EXPERIMENTS

1. Knowledge of different biological database
2. Sequence retrieval from biological database
3. Identification of protein sequence
4. Sequence similarity searching of protein sequences
5. Variants of Blast
6. Multiple sequence alignment
7. Dynamic programming method- local alignment
8. Dynamic programming method- global alignment
9. Pattern finding in proteins
10. Phylogenetic analysis with Clustal W and Blast software

REFERENCE BOOK

1. “Introduction to Bioinformatics”, T.K. Attwood & D.J.Parry-Smith, Prentice Hall 2000.
2.”Instant notes on Bioinformatics”, D.R. West head. J.H.Parish R.M. Twyman, Lviva Books, New Delhi, 2003
3. “Bioinformatics Sequence and Genome analysis”, David W. Mount 2003.
4. “Bioinformatics Basics 'Applications in Biological science and Medicine” Hooman H. Rashidi & Lukas K. Buehie 2001.
5. https://www.amc.nl

COURSE OUTCOMES (COs)	
CO1	The student can able to perform Sequence retrieval from biological database
CO2	The student can able to perform Identification of protein sequence
CO3	The student can able to perform Sequence similarity searching of protein sequences
CO4	The student can able to perform dynamic programming method- global and local alignment
CO5	The student can able to perform Phylogenetic analysis with Clustal W and Blast software
CO6	Phylogenetic analysis.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCGE701	ANIMAL CELL CULTURE AND TRANSGENIC TECHNOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Transgenic technology, animal science, techniques				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES:	To enable understanding chemical principles governing biochemical reactions				

MODULE I: BIOLOGY OF CULTURED ANIMAL CELLS (9 Periods)

Introduction to cell culture and uses, Cell types, - Cell growth in culture media -Importance of Culture media & culture conditions-Maintenance and storage of cell cultures- Biosafety and biohazards.

MODULE II: PRESERVATION AND CHARACTERIZATION OF CELL LINES (9 Periods)

Primary culture, subculture, and cell lines- Cloning and selection- Cell separation , characterization and Cell differentiation -Transformation and Immortalization- Contamination- Cryopreservation techniques.

MODULE III: SCALING UP OF ANIMAL CELL CULTURE (9 Periods)

Cell quantification methods-Cell viability measurements-Growth kinetics-Scale up of suspension & monolayer cultures-Air lift bioreactors.

MODULE IV: PRODUCTION OF TRANSGENIC ANIMALS (9 Periods)

Production methods of transgenic animals – Retroviral vector method – DNA micro injection – Engineered embryonic stem cell method, Oocyte culture, Transgenic animals and Birds.

MODULE V: **APPLICATIONS OF ANIMAL CELL CULTURE (9 Periods)**

Animal cells as bioreactors – therapeutic proteins – Enzymes – Vaccines– applications of transgenic animals in recombinant proteins, better nutrition, bioindicators.

TEXT BOOKS

1. Culture of Animal cells by R.I. Freshney, Fifth edition
2. Culturing of Animal cells. Biotol publications
3. Molecular Biotechnology by Bernard R. Click and Jack. J. Pasternek

COURSE OUTCOMES (COs)	
CO1	Understand Importance of aseptic techniques
CO2	Preservation And Characterization Of Cell Lines.
CO3	Understand the Cell quantification
CO4	Understand the Methodology of production of transgenic animals.
CO5	understand the the production of recombinant proteins
CO6	Principles and advanced methods of animal cell culture techniques

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

U18PCGE7L1	ANIMAL CELL CULTURE LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	2	1
	Prerequisite – animal Cell Culture, anti cancer agent in cell culture				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES:	To enable understanding chemical principles governing biochemical reactions.				

LIST OF EXPERIMENTS

1. Preparation of culture media
2. Sterilization techniques of cell and tissue culture labwares/Glasswares
3. Adaptation of Animal virus in cell lines.
4. Study of effect of anti cancer agent in cell culture.
5. Organ Culture
5. MTT Assay
6. Live cell counting
7. Leukocyte culture
8. Culturing of spleen cells
9. PBMC or Myeloma cell culture
10. Fusion of cells by PEG

ELECTIVES

U18PEGE011	HUMAN GENETICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Principles of Genetics, Microbiology				
	Course Designed by – Department of Genetic Engineering				
OBJECTIVES	1. To understand fundamental laws of genetics. 2. To know techniques in *in situ* genetic analysis for mutation and aberration studies. 3. To identify and relate phenotype to changes in chromosome structure and number.				

MODULE I: GENOME ORGANIZATION AND INHERITANCE (9 Periods)

Organization of genomes, Types of Inheritance- Factors affecting Inheritance and Patterns- Consanguinity in Human Populations, X inactivation- Sex-Linked and Mitochondrial Inheritance.

MODULE II: GENOME MAPPING AND DEVELOPMENTAL GENETICS (9 Periods)

Physical Mapping, Genetic mapping- Two-point mapping, Multipoint mapping, parametric and Nonparametric linkage analysis, Development genetics - Molecular Toolbox- Pattern Formation.

MODULE III: MEDICAL GENETICS (9 Periods)

Chromosomal Basis of Human Disease- Nomenclature-Abnormalities of Chromosome Number and Structure- Cancer genetics- Activation of proto-oncogenes, Tumor suppressor genes, Pharmacogenetics.

MODULE IV: IDENTIFICATION OF DISEASE GENES (9 Periods)

Principles and strategies in identifying disease genes, positional cloning, Positional candidate strategy, its map position and expression, function or homology, confirming a candidate gene.

MODULE V: THE GENETICS OF COMMON DISEASES (9 Periods)

Genetic Screening and Diagnosis, Population Screening for Genetic Diseases, Prenatal Diagnosis of Genetic Disorders and Congenital Defects, Fetal Treatment, Pedigree analysis and Genetic Counseling.

TEXT BOOKS

1. Human Molecular Genetics – Tom Strachan and Andrew P. Read
2. Medical Genetics 3rd Edition- Jorde, Carey, Bamshad& White.

REFERENCE BOOKS

1. Human Genetics and Genomics, Third Edition - Bruce R. Korf
2. Human Genetics: Principles and Approaches - Friedrich Vogel and Arno G. Motulsky
3. Watson, J.D., Gilman, M., Witowski J.and Zoller, M. Recombinant DNA, 2nd ed., Scientific American Books, 1983
4. http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1684911/

COURSE OUTCOMES (COs)	
CO1	This course introduces the principles of genetics.
CO2	It discusses the basics laws of inheritance.
CO3	It gives chromosome structure and cytological techniques.
CO4	Properties of chromosome variation, linkage mapping and population genetics.
CO5	To understand the linkage analysis and recombination mapping.
CO6	To study population genetics and analyze quantitative characters.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO2	H	M		H		M		M		H		
	CO3			M		M		H		H		M	H
	CO4	H	M		H		M				L	M	M
	CO5		H	M		M		H	M		M	H	M
3	Category	Professional Elective (PE)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18PEGE12	ANIMAL TISSUE ENGINEERING	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Microbiology, Animal biotechnology, Tissue Engineering, Cell biology and Basic Biology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To make understand of the animal tissue culture engineering so as to help them to manipulate the cell to the requirement of the grafting needs				

MODULE I: **INTRODUCTION TO SEROLOGY** **(9 Periods)**

Biology of cells in culture, Origin and characterization of different cell types, Subculture, selection of medium, Development of serum free media, Composition and advantages of serum free media.

MODULE II: STERILIZATION AND DISINFECTION **(9 Periods)**

Aseptic techniques, Media preparation, Cell counting methods, Growth of adherent and suspension cultures, Measurement of growth parameters of cultured cells, Maintenance and cryopreservation of cell lines, Mycoplasma and virus testing, Cell transfection.

MODULE III: ANIMAL CELL CULTURE **(9 Periods)**

Animal handling techniques and care, Cell line preparation, Mass cell cultivation, Mouse embryo fibroblast culture, staining techniques for animal cells, preparation of mice splenocytes, culture and adaptation of virus in chick embryo culture.

MODULE IV: HYBRIDOMA TECHNOLOGY **(9 Periods)**

Hybridomas and cell transformation technology, Storage of hybridoma cells, Monoclonal antibodies and their commercial production and their use for mankind.

MODULE V: MAMMALIAN CELL CULTURE **(9 Periods)**

Gene transfer techniques in mammalian cells, Embryo fertilisation, Somatic cell nuclear transfer and transgenic animals, Characteristics of cancer cell growth in culture and senescence.

Text Books:

1. Campbell, N. A. and Jane B. Reece. Biology. 6th Edition. USA. Pearson Education, Inc. 2002. 198 199 199 Freshney, R.I. Culture of Animal Cells: A Manual of basic techniques. 5th Edition. USA. Wiley-Liss Inc. 2005.
2. Gamborg, O. L. and G. C. Phillips. Plant cell, tissue, and organ culture: fundamental methods. Germany. Springer-Verlag. 1995.

2. Freshney R. I. (2000): Culture of animal cells: A manual of basic technique. 4. iz. Willey-Lys, J.Willey & Sons. New York
3. Culture of Animal Cells: A Manual of Basic Technique (5th Edition) R. Ian Freshney. Wiley-Liss. It is in your best interest to bring this book to class.
4. www.zora.uzh.ch

COURSE OUTCOMES (COs)	
CO1	Understand the bulk development of serum free media.
CO2	Explain the method of Organ cultures and types of organ cultures
CO3	Strategies for gene transfer techniques in mammalian cells.
CO4	Understand the **c**ommercial production of monoclonal antibodies and their use for mankind
CO5	To know the viral vectors-general features, promoters used in expression vectors
CO6	To gain knowledge on Medical devices used for animal tissues cultures..

U18PEGE13	CLASSICAL AND MOLECULAR PLANT BREEDING	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Molecular biology, plant biotechnology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To make understand of the plant breeding molecular biology engineering so as to help them to manipulate the cell to the basic requirements				

MODULE I: INTRODUCTION TO PLANT BREEDNG (9 Periods)

History and objectives of Plant Breeding, Characteristics improved by plant breeding; Patterns of Evolution in Crop Plants -biodiversity and its significance. Genetic basis of breeding, pollinated crops.

MODULE II: PEDIGREE ANALYSIS (9 Periods)

Crop plants Self-incompatibility and male sterility in and their commercial exploitation. Pure

line theory and mass selection methods; Line breeding, pedigree, bulk, backcross, single seed descent and multi-line method.

MODULE III: BREEDING METHODS (9 Periods)

Breeding methods in cross pollinated crops; Population breeding,S1 and S2 progeny testing, progeny selection schemes, Selection schemes for intra and inter-population improvement and development of synthetics and composites.

MODULE IV: CROP IMPROVEMENT (9 Periods)

Concept of plant ideotype and its role in crop improvement; Transgressive breeding. Special breeding techniques- Mutation breeding; Breeding for abiotic and biotic stresses. Cultivar development- testing, release and notification.

MODULE V: ADVANCE BREEDING ANALYSIS (9 Periods)

Selection methods in segregating populations and evaluation of breeding material; Analysis of variance (ANOVA); Estimation of heritability and genetic advance; Maintenance of experimental records; Learning techniques in hybrid seed production using male-sterility in field crops.

Text Books:

1. Allard RW. 1981. Principles of Plant Breeding. John Wiley & Sons.
2. Chopra VL. 2001. Breeding Field Crops. Oxford & IBH.
3. Chopra VL. 2004. Plant Breeding. Oxford & IBH.

3. Singh BD. 2006. Plant Breeding. Kalyani. • Singh P. 2002. Objective Genetics and Plant Breeding. Kalyani.
4. Singh P. 2006. Essentials of Plant Breeding. Kalyani.
5. Singh S & Pawar IS. 2006. Genetic Bases and Methods of Plant Breeding CBS.
6. http://sharebooks.com/system/files/Crop-Histories.pdf

COURSE OUTCOMES (COs)	
CO1	To understand the molecular biology
CO2	To know the methods of plant breeding.
CO3	To understand the Breeding methods in cross pollinated crops
CO4	To know Concept of plant ideo type and its role in crop improvement
CO5	To understand how to Maintain of experimental records
CO6	Learning techniques in hybrid seed production using male-sterility in field crops.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEGE21	CANCER BIOLOGY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – System Biology, Genomics and proteomics				
	Course Designed by – Department of Genetic Engineering				
OBJECTIVES	1 To provide knowledge about biological aspects of cancer. 2. To impart basic concepts of cancer biology. 3. Various stages in carcinogenesis, molecular cell biology of cancer.				

MODULE I: FUNDAMENTALS OF CANCER BIOLOGY (9 Periods)

Regulation of cell cycle and mutations, effects on receptor, signal switches, tumor suppressor genes. Cancer screening and detection using biochemical assays, tumor markers, molecular tools for diagnosis of cancer. Cancer Epidemiology.

MODULE II: PRINCIPLES OF CARCINOGENESIS (9 Periods)

Theory of carcinogenesis, Chemical carcinogenesis, metabolism of carcinogenesis, principles of physical carcinogenesis, x-ray radiation-mechanisms of radiation carcinogenesis.

MODULE III: PRINCIPLES OF MOLECULAR CELL BIOLOGY OF CANCER (9 Periods)

Signal targets and cancer, activation of kinases; Oncogenes, identification of oncogenes, retroviruses and oncogenes, Oncogenes/ proto oncogene activity, Growth factors related to transformation, Telomerases.

MODULE IV: PRINCIPLES OF CANCER METASTASIS (9 Periods)

Clinical significances of invasion, Heterogenicity of metastatic phenotype, metastatic cascade, basement membrane disruption, three step theory of invasion, Proteinases and tumor cell invasion.

MODULE V: NEW MOLECULES FOR CANCER THERAPY (9 Periods)

Different forms of therapy, chemotherapy, radiation therapy, detection of cancers, prediction of aggressiveness of cancer. Use of signal targets towards therapy of cancer; Gene therapy.

TEXT BOOKS

1. Maly B.W.J, "Virology. A Practical Approach", IRLl Press, Oxford, 1987.
2. Dunmock N. J and Primrose S.B., "Introduction to Modern Virology", Blackwell Scientific Publications, Oxford, 1988.

REFERENCE BOOKS

4. **https://biology.mit.edu/research/cancer_biology**

COURSE OUTCOMES (COs)	
CO1	Fundamentals Of Cancer Biology
CO2	Principles Of Carcinogenesis
CO3	Principles Of Molecular Cell Biology Of Cancer
CO4	Principles Of Cancer Metastasis
CO5	New Molecules For Cancer Therapy
CO6	Cancer metastasis and cancer therapy.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEGE22	AGRI,VETERINARY AND MEDICAL INFORMATICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Biopharmaceutical technology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	1. To introduce the basic principles of computerized patent record 2. To understand the recent trends in medical informatics				

MODULE I: AGRICULTURAL INFORMATICS (9 Periods)

Introduction – plant genome, and Analysis of plant genome sequence, analysis of metabolites in plants, targeting study of compound against plant pathogens using bioinformatics tools.

MODULE II: VETERINARY INFORMATICS (9 Periods)

Introduction - history of pathogens, interaction between pathogens and host cell molecules using bioinformatics tools. Genome analysis for identification of diseases. Study of molecules and functional domain structure using bioinformatics tools

MODULE III: MEDICAL INFORMATICS (9 Periods)

Introduction - Structure of Medical Informatics –Internet and Medicine -Security issues , Computer based medical information retrieval, Hospital management and information system, Functional capabilities of a computerized HIS, e-health services.

MODULE IV: COMPUTERISED PATIENT RECORD (9 Periods)

Introduction, Components and functionality of CPR, Development tools, Intranet, CPR in Radiology- Application server provider, Clinical information system, Computerized prescriptions for patients.

MODULE V: RECENT TRENDS IN MEDICAL INFORMATICS (9 Periods)

Virtual reality applications in medicine, Computer assisted surgery, Surgical simulation, Telemedicine - Tele surgery computer aids for the handicapped, computer assisted instrumentation in Medical Informatics - Computer assisted patient education and health.

TEXT BOOKS:

1.R.D. Lele Computers in medicine progress in medical informatics, Tata McGraw Hill Publishing computers Ltd,2005, New Delhi

2.Mohan Bansal, Medical informatics Tata McGraw Hill Publishing computers Ltd, 2003 New Delhi

2. Bioinformatics Sequence and Genome analysis - David W. Mount, 2003.

3. Bioinformatics Basics 'Applications in Biological science and Medicine" Hooman H. Rashidi & Lukas K. Buehie 2001.

http://www.omicsonline.org/

COURSE OUTCOMES (COs)	
CO1	To learn about HIS
CO2	It also gives knowledge on veterinary informatics
CO3	To understand the clinical information system
CO4	It deals with CPR in radiology
CO5	It imparts health care information
CO6	Ability to do docking methods

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18PEGE23	GENETIC ENGINEERING OF PLANTS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Genetics, plant biotechnology, Genomics.				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To impart theoretical knowledge and practical skills about plant breeding objectives, modes of reproduction and genetic consequences, breeding methods for crop improvement				

MODULE I: PGR CONSERVATION METHODS (9 Periods)

Historical perspectives and need for PGR conservation; Importance of plant genetic resources; Taxonomical classification of cultivated plants; Centers of origin and global pattern of diversity; Basic genetic resources and transgenes.

MODULE II: GERM PLASM THEORY (9 Periods)

Principles, strategies and practices of exploration, collection, characterization, evaluation and cataloging of PGR; Plant quarantine and phytosanitary certification; Germplasm: Introduction and exchange; Principles of in vitro and cryopreservation.

MODULE III: GERMPLASM CONSERVATION (9 Periods)

Germplasm conservation- in situ, ex situ, and on-farm; short, medium and long term conservation strategies for conservation of orthodox seed and vegetatively propagated crops; Registration of plant genetic resources.

MODULE IV: DATABASE MANAGEMENT (9 Periods)

PGR data base management; Multivariate and clustering analysis, descriptors; National and international protocols for PGR management; PGR for food and agriculture (PGRFA); PGR access and benefit sharing; Role of CGIAR system in the germplasm exchange.

MODULE V : GENE ENHANCEMENT METHODS (9 Periods)

Genetic enhancement- need for genetic enhancement; Genetic enhancement and plant breeding; Reasons for failure in genetic enhancement; Sources of genes/ traits- novel genes for quality.

Text Books:

1. Frankel OH & Bennett E. 1970. Genetic Resources in Plants – their Exploration and Conservation. Blackwell. Gautam PL, Dass BS, Srivastava U & Duhoon SS. 1998. Plant Germplasm Collecting: Principles and Procedures. NBPGR, New Delhi.
2. Painting KA, Perry MC, Denning RA & Ayad WG. 1993. Guide Book for Genetic Resources Documentation. IPGRI, Rome, Italy.

Reference Books:

1. Paroda RS & Arora RK. 1991. Plant Genetic Resources, Conservation and Management. Concepts and Approaches. IPGRI Regional office for South and South Asia, New Delhi.

3.http://50.30.47.15/Ebook/Course_SUST_BMB/BMB_328/An_Introduction_to_Genetic_Engineering.pdf

COURSE OUTCOMES (COs)	
CO1	To understand the Importance of plant genetic resources;
CO2	To know the Basic genetic resources and transgenes
CO3	To understand the Germplasm conservation
CO4	To know the Role of CGIAR system in the germplasm exchange
CO5	To understand how to Maintain of experimental records
CO6	Learning techniques of Intellectual property, Patents, copyrights, trademarks and trade secrets.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

3	Category	Professional Elective (PE)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18PEGE31	MOLECULAR MEDICINE AND HEREDITORY DISORDERS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Molecular modelling				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVE:	1. To gain knowledge of basic cytogenetic techniques. 2. To learn about biochemical method used to detect metabolic changes. 3. To learn about molecular methods to detect changes in the DNA. 4. To learn about molecular methods to detect changes in the RNA and protein				

MODULE I: INTRODUCTION TO MOLECULAR MEDICINE (9 Periods)

Introduction to Molecular Medicine: Overview of the subject -Molecular mechanisms in development and differentiation -Molecular and biomedical aspects of ageing

MODULE II: GENE EXPRESSION AND PROTEIN FUNCTIONAL DEFECTS IN DISEASE (9 Periods)

Vesicle trafficking in cells -Abnormal protein function and disease -Diseases of DNA repair and genomic instability -RNA processing and disease-Oncology-Chromosomal translocations and leukemia: identification of novel therapeutic targets-Molecular aspects of neurodegenerative disease.

MODULE III: MOLECULAR PHARMACOLOGY (9 Periods)

Pharmacogenetics -Drug discovery -Drug design and development -Molecular aspects of infectious diseases- Intracellular pathogens: Bacillary dysentery Extracellular pathogens: Botulism and tetanus -Viral pathogens: Dengue hemorrhagic fever.

MODULE IV: IMMUNOLOGICAL ASPECTS OF MOLECULAR MEDICINE

(9 Periods)

Autoimmunity and transplantation -Human genome and predisposition to autoimmunity - Transgenic models of autoimmunity-Lessons from animal models for manipulation of the immune system.

MODULE V: MOLECULAR BIOTECHNOLOGY (9 Periods)

9Recombinant proteins; state of the art, problems, new developments -Antibodies, design production, engineering -Peptides and derivatives as therapeutic agents- Nanotechnology and pharmaceuticals – Drug delivery systems-Commercialization -Clinical trials/ethics.

TEXT BOOKS

1. Medical Genetics 3rd Edition- Jorde, Carey, Bamshad & White.
2. Molecular pharmacology A short course by Jerry Kenatin: John Wiley and Sons publications.

REFERENCES:

1. Gary Walsh – "Proteins – Biochemistry and Biotechnology" Robert A. Meyers – Encyclopedia of Molecular Cell Biology and Molecular Medicine (Ed) – Vol I, II ed.
2. Barry Halliwell - Free Radicals in Health and Disease.
3. http://molmed.org/

COURSE OUTCOMES (COs)	
CO1	To learn about various diagnostic strategies to detect large deletions in chromosomes.
CO2	It also gives knowledge on efficient utilization of changes in gene expression at RNA and protein level.
CO3	It deals with protein truncation.
CO4	It imparts determination of splicing variants
CO5	Molecular pharmacology
CO6	Transgeneic animals study

U18PEGE32	**MICROBIAL GENETICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Cell biology, Genetics, and Basic Biology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To learn various types of physical organization of bacterial genomes; genotype and phenotype.				

MODULE I: INTRODUCTION (9 Periods)

Eukaryotic and prokaryotic Genetics; physical organization of bacterial genomes; genotype and phenotype; dominance and recessive characters, molecular biology of bacterial cell division and plasmid replication.

MODULE II: GENE TRANSFER METHODS (9 Periods)

Molecular mechanism of transformation, conjugation and transduction; consequences of recombination; gene mapping; mosaic genes and chromosome plasticity.

MODULE III: MOVABLE GENETIC ELEMENTS (9 Periods)

Plasmids: structure, properties, functions and stability; transposons; mechanism of transposition; phase variation; CRISPR.

MODULE IV: REGULATION OF GENE EXPRESSION (9 Periods)

Induction and repression; operon model of gene expression; transcriptional control; promoter, terminator, attenuator and anti-terminator; two component regulatory pathway. Bacteriophage structure; ssDNA bacteriophage; RNA containing phages; dsDNA phages; genetics and molecular biology of λ (lambda) phage.

MODULE V: GENETICS OF YEAST (9 Periods)

Yeast as a model organism; advantages, life cycle, mating type switching in yeast; transformation and recombination; yeast artificial chromosome; yeast two-hybrid systems.

COURSE OUTCOMES (COs)	
CO1	Understand the steps in dominance and recessive characters
CO2	Explain the features of various types of Gene transfer
CO3	mechanism of transposition
CO4	gene expression; transcriptional control;
CO5	Plasmid expression vectors- restriction and modification
CO6	To gain knowledge on various Genetics of yeast and their applications.

U18PEGE33	**HERBAL DRUGS AND GENOMICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Herbal studies, Principles of genomics, Plant biology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To learn various types of physical organization of Medicinally important Plants				

MODULE I: INTRODUCTION TO HERBAL DRUGS (9 Periods)

Introduction to Medicinally important Plants. Plant parts: Fruits, Leaves, Stem and its modifications. Plant identification – Herbarium techniques. Medicinal plants – role in human health care.

MODULE II: SCOPE OF ETHNOMEDICINE (9 Periods)

Ethnomedicine – definition, history and its scope – Traditional knowledge and utility of some medicinal plants in Tamilnadu – Solanum trilobatum, Cardiospermum halicacabum, Adathoda vasica, Azadirachta indica, Phyllanthus fraternus and Boerhaavia diffusa.

MODULE III: PHARMOCOGNOSY (9 Periods)

History, Definition and scope of pharmacognosy; Systems of Indian Medicines – Siddha, Unani, Ayurveda, Homeopathy; Terminologies. Ayurveda, Traditional Chinese medicine and Korean medicines. Chemistry of drugs and its evaluation.

MODULE IV: HERBAL MEDICINE GENOMICS (9 Periods)

Introduction to Herbal medicine genomics, Pharmacogenomics of Herbal drugs, application of Bioinformatics tools in Herb- drug interactions and their influence in gene expression, Herbal drugs used for Asthma, cancer , genetic disorders,antimicrobials, acute and chronic diseases.

MODULE V: GENE EXPRESSION METHODS (9 Periods)

Ayugenomics, Plant medicine genomics, case studies on herbal medicines and their effects in gene expression. Psychoactive drugs –Depressants, Stimulants, hallucinogens – sources, effects, basic mechanism of action.

COURSE OUTCOMES (COs)	
CO1	Understand the steps in Herbarium techniques

CO2	Explain the Current approaches for drug discovery from herbal medicines.
CO3	Definition and scope of pharmacognosy
CO4	Chemistry of drugs and its evaluation
CO5	drug interactions and their influence in gene expression
CO6	To gain knowledge on various Psychoactive drugs

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

U18PEGE41	**PHARMACOGENOMICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Pharmacology, Principles of genomics,				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To learn various Pharmaceutical industry & development of drugs.				

MODULE I: INTRODUCTION (9 Periods)

Pharmaceutical industry & development of drugs; types of therapeutic agents and their uses; economics and regulatory aspects. Various steps in new drug developments andpreparation.

MODULE II: DRUG ACTION, METABOLISM AND PHARMACOKINETICS (9 Periods)

Mechanism of drug action; physico-chemical principles of drug metabolism; radioactivity; Pharmacology, Pharmacogenomics and pharmaco kinetics.

MODULE III: MANUFACTURE OF DRUGS, PROCESS AND APPLICATIONS (9 Periods)

Types of reaction process and special requirements for bulk drug manufacture. Toxicology. Fermentation technology. Bioprocess technologies.

MODULE IV: PRINCIPLES OF DRUG MANUFACTURE (9 Periods)

Compressed tablets; dry and wet granulation; slugging or direct compression; tablet presses; coating of tablets; capsule preparation; oval liquids – vegetable drugs – topical applications; preservation of drugs; analytical methods and other tests used in drug manufacture; packing techniques; quality management; GMP.

MODULE V: BIOPHARMACEUTICALS (9 Periods)

Various categories of therapeutics like Vaccines, life saving drugs, antibodies, vitamins, laxatives, analgesics, contraceptives, antibiotics, hormones and biologicals.

TEXT BOOKS

1. Gareth Thomas, Medicinal Chemistry. An introduction by .John Wiley. 2000.
2. Katzung B.G., Basic and Clinical Pharmacology, Prentice Hall of Intl. 1995.

U18PCGE42	PROTEIN ENGINEERING	L	T	P	C
	Total Contact Hours - 60	3	1	0	4
	Prerequisite – Genomics and Proteomics, System Biology				
	Course Designed by – Department of Genetic Engineering				
OBJECTIVES	1. To understand the principle of nucleic acid isolation. 2. To understand the principles of PCR and their uses in genetic engineering.				

MODULE I: INTRODUCTION TO PROTEIN ENGINEERING (12 Periods)

Introduction to proteins. Genes and proteins. Proteomics. Basics of protein synthesis. Types and classification of proteins. Primary structure, secondary structure, tertiary structure, quaternary structure, Ramachandran plot.

MODULE II: PROTEIN STRUCTURE PREDICTION (12 Periods)

Strategies for design of novel proteins-strategies for the design of structure and function, computer methods in protein modelling. Bioinformatics tools in protein studies.

MODULE III: PRODUCTION OF NOVEL PROTEINS (12 Periods)

Site and strategies for heterologous expressions, methods for expressing recombinant proteins in yeast, in vitro mutagenesis. Yeast two Hybrid system.

MODULE IV: CHARACTERIZATION OF PROTEINS (12 Periods)

Traditional and advanced methods in protein characterizations. NMR spectroscopy, crystallography, spectroscopic and calorimetric methods.

MODULE V: APPLICATIONS OF PROTEIN ENGINEERING (12 Periods)

Application of protein engineering in industries. Design of polymeric biomaterials, nicotinic acetylcholine receptors as a model for a super family of ligand - gated ion channel proteins

TEXT BOOK:

1. Protein engineering and design by Paul R. Carey, academic press, 1996, 361 pages
2. Baxevanis A.D. and Oullette, B.F.F. A Practical Guide to the Analysis of Genes and Proteins, 2nd ed., John Wiley, 2002
3. Models of Proteins and Nucleic Acids. Cambridge University Press, 1998

REFERENCE BOOKS

1. Proteomics from protein sequence to function: Edited by S.R.Pennington and M.J.Dunn,Taylor and Francis Group, 2001.

3. http://nptel.ac.in/courses/102103017/pdf/lecture%2022.pdf

COURSE OUTCOMES (COs)	
CO1	This course imparts the knowledge on the principles on nucleic acid isolation and purification.
CO2	It also gives knowledge on history and latest methods of DNA sequencing..
CO3	It deals with the protein – protein interaction.
CO4	It imparts protein sequencing methods.
CO5	To gain a thorough knowledge about nucleic acid hybridization.
CO6	To learn history of DNA sequencing and current methods and gene synthesis.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

U18PEGE43	BIOCONFINEMENT OF GENETICALLY MODIFIED ORGANISMS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Biology, Plant and animal biotechnology and rDNA Technology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	Gain knowledge on basic developmental aspects of plant that can be transformed into research application.				

MODULE I: INTRODUCTION TO BIOCONFINEMENT (9 Periods)

History of Confinement – Applications of Genetically modified organisms in medicine and Agriculture. Methods of Bio confinement, International Aspects -Social Acceptability of Bio confinement Methods.

MODULE II: NEED FOR BIOCONFINEMENT (9 Periods)

Risk factors - Effects on Non-target Species - Delaying the Evolution of Resistance - Food Safety and Other Issues - Need for Bio confinement.

MODULE III: BIOCONFINEMENT OF PLANTS AND ANIMALS (9 Periods)

Genetically Engineered Trees - Transgenic Grasses - Transgenic Algae-Effectiveness at Different Spatial and Temporal Scales - Monitoring and Managing Confinement Failure -bio confinement of fish, and insects.

MODULE IV: BIOCONFINEMENT OF VIRUSES (9 Periods)

Introduction - Potential Effects or Concerns, and Need for Bio confinement in Viruses, Fungi, and Bacteria.

MODULE V: BIOLOGICAL AND OPERATIONAL CONSIDERATIONS FOR BIOCONFINEMENT (9 Periods)

Execution of Confinement - International Aspects - Bio confinement - Bio confinement Research

TEXT BOOK

1. Biological confinement of genetically engineered organisms by national research council: National Academic press.
2. Piefzer F.M. Food Microbiology, Academic Press, 1989.

REFERENCE BOOKS

1. Sasson A, Biotechnologies and Development, UNESCO Publications

COURSE OUTCOMES (COs)	
CO1	The course imparts advanced knowledge on genetically modified organisms.
CO2	It also gives knowledge on efficient utilization of the principles of bioconfinement.
CO3	It deals with transgenic algae.
CO4	It imparts determination of bioconfinement research.

CO5	To apply the modular approach and regulatory networks present in a cell.
CO6	To Possess requisites for plant signal transduction research.

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEGE51	**STEM CELL BIOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basics of Genetic Engineering, rDNA Technology				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To enable understanding chemical principles governing biochemical reactions				

MODULE I: STEM CELL BASICS (9 Periods)

Unique properties of stem cells – embryonic stem cells - adult stem cells – umbilical cord stem cells – similarities and differences between embryonic and adult stem cells. Properties of stem cells.

MODULE II: EMBRYONIC STEMCELLS (9 Periods)

Invitro fertilization – human embryonic stem cells – blastocyst – innercell mass – growing ES cells in lab – laboratory tests to identify ES cells – stimulation ES cells for differentiation – properties of ES cells – human ES cells – Monkey and Mouse ES cells.

MODULE III: ADULT STEM CELLS (9 Periods)

Somatic stem cells – test for identification of adult stem cells – adult stem cell differentiation – trans differentiation – plasticity – different types of adult stem cells.

MODULE IV: STEM CELL IN DRUG DISCOVERY AND TISSUE ENGIEERING **(9 Periods)**

Target identification – Manipulating differentiation pathways – stem cell therapy Vs cell protection - stem cell in cellular assays for screening – stem cell based drug discovery platforms, drug screening and toxicology.

MODULE V: **GENETIC ENGINEERING AND THERAPEUTIC APPLICATION OF STEM CELLS** **(9 Periods)**

Stem cells and transgenic animals – Biomarkers in Cancer – Therapeutic applications – Neurological disorder – limb amputation – heart disease - spinal cord injuries – diabetes – burns.

TEXT BOOKS

1. Stem cells Hand Book by Stewart Sell
2. Stem cell Research by Nancy E. Snow

REFERENCE BOOKS

1. Human Embryonic Stem cells by Ann.A. Kiessling
2. Stem cell and future of regenerative medicine. National Academic press

5. www.ukaachen.de/.../division-of-**stem-cell-biology**-and-**cellular**-engineer

COURSE OUTCOMES (COs)	
CO1	Understand Unique properties of stem cells.
CO2	Invitrofertilization
CO3	Understand the Somatic stem cells
CO4	Understand the Target identification differentiation pathways.
CO5	understand the production of complete organ
CO6	Characteristics of application in stem cell theraphy

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

U18PEGE52	STRESS TOLERANCE IN PLANTS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Biology, Enzyme Technology and Bioreactors design				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To understand the basic concepts of filtration and agitation and mixing. To study the nature of fluids and flow characteristics.				

.**MODULE I: ABIOTIC AND BIOTIC STRESSES AND THEIR EFFECTS ON PLANTS (9 Periods)**

Salinity, drought, high temperature, cold stress, UV radiation, heavy metals, pathogens, pest infestation.

MODULE II: REACTIVE OXYGEN SPECIES AND ANTIOXIDANTS IN PLANTS (9 Periods)

ROS – generation and effects; Functions and metabolisms of antioxidants – glutathione, thiols, ascorbate, tocopherol, carotenoids, phenolics.

MODULE III: ENZYMES INVOLVED IN STRESS DEFENCE (9 Periods)

Catalase, ascorbate peroxidase, superoxide dismutase. Genetic engineering OF Stress tolerance: Case studies involving development of stress tolerant plants.

MODULE IV: STRESS SIGNALLING PATHWAYS (9 Periods)

Abiotic stress signalling and transduction pathways; Ethylene pathway; Ubiquitin and biotic stress tolerance; Ca2+ and calmodulin signal transduction; The ascorbate (AsA)-glutathione (GSH) pathway; Mitogen-activated protein kinase pathway.

MODULE V: STRESS TOLERANCE MECHANSIMS (9 Periods)

Heat shock proteins; Amino acids in plant responses and adaptation to heavy metal stress; Transcription factors in stress tolerance; Role of membrane transporters; Mechanisms of heavy metal detoxification and tolerance.

TEXTBOOKS:

1. Pareek A, Sopory S K and Bohnert H J (Eds), "Abiotic Stress Adaptation in Plants: Physiological, Molecular and Genomic Foundation", Springer, 2010.
2. Smirnoff N (Ed), "Antioxidants and Reactive Oxygen Species in Plants", Wiley-Blackwell, 2005.
3. Slater A, Scott N and Fowler M, "Plant Biotechnology- The genetic manipulation of plants", Oxford press, Oxford, 2003.

REFERENCE BOOKS:

1. Dreher K and Callis J, "Ubiquitin, Hormones and Biotic Stress in Plants", Annals of Botany 99: 787–822, 2007.
2. Fedoroff N, "Redox Regulatory Mechanisms in Cellular Stress Responses", Annals of Botany 98: 289–300, 2006.
3. Hall J L, "Cellular Mechanisms for Heavy Metal Detoxification and Tolerance", J. Exp. Bot. 53: 1 – 11, 2002.
4. Jonak C, Nakagami H and Hirt H, "Heavy Metal Stress. Activation of Distinct Mitogen-Activated Protein Kinase Pathways by Copper and Cadmium", Plant Physiol 136:3276-3283, 2004.

COURSE OUTCOMES (COs)	
CO1	To learn about biotic and abiotic stress in plants.
CO2	It also gives knowledge on ubiquitin hormones
CO3	It deals with modern regulatory mechaniss in plants
CO4	It imparts modeling of cellular mechanism in plants
CO5	To familiarize the mass transfer operations in production of plants
CO6	4. To understand the principles of heavy metal stress in plants

Mapping of Course Outcomes with PROGRAMME OUTCOMES (POs)

U18PEGE53	FOOD PROCESS TECHNOLOGY AND QUALITY CONTROL	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Biotechnology, Food Toxicology, microbiology, Food Engineering				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	Impart education in the field of Food processing Technologies in order to generate competent resources to meet the demands of the fast-growing Dairy and Food Industry.				

MODULE I : QUALITY CONTROL ANALYSIS (9 Periods)

Storage of cereals, Processing of rice and rice products. Milling of wheat and production of wheat products, Processing of tea, coffee and cocoa, Storage and handling of fresh fruits and vegetables.

MODULE II: PRESERVATION METHODS (9 Periods)

Classification of fresh water fish and marine fish; Commercial handling, storage and transport of raw fish; Average composition of fish; Freshness criteria and quality assessment of fish; Spoilage of Fish; Methods of Preservation of fish.

MODULE III: FERMENTATION TECHNOLOGY (9 Periods)

Meat cuts and portions of meat, muscle; Color of meat; Post mortem changes of meat; Meat processing - curing and smoking; Fermented meat products; Frozen meat & meat storage; By-products from meat industries and their utilization; Meat industries in India.

MODULE IV: FERMENTATION TECHNOLOGY (9 Periods)

Pasteurization of milk; HTST and UHT techniques; Packaging of milk; Fermentation of milk and fermented milk products. Manufacture of milk products like evaporated milk, powder milk, condensed milk.

MODULE V: EXTRACTION METHODS (9 Periods)

Importance of fats and oils in foods; Sources of fats and oils; Extraction of fats and oils – rendering, pressing, solvent extraction; Processing of oils – degumming, refining, bleaching, deodorization, fractionation.

TEXT BOOKS:

1. Food Science by Potter
2. Technology of Food Preservation by Desrosier
3. Principles of Food Science, Vol-I by Fennma Karrel
4. Preservation of Fruits & Vegetables by Girdhari Lal, Sidhapa and Tandon
5. Post Harvest Technology of cereal pulse and oil seeds by Chakraborty, AC 6. Food science by Mudambi.

REFERENCE BOOKS

COURSE OUTCOMES (COs)	
CO1	To gain knowledge on storage, preparation, preservation and packaging of food products and beverages
CO2	Understand the Food Laws, food rules and standards, Statistical Quality Control
CO3	To learn about commercial handling of fish
CO4	To gain knowledge on slaughtering techniques and meat products
CO5	Impart knowledge on dairy and food industry
CO6	Know about the importance and processing of oil

U18PEGE61	**Metabolism and Metabolomics**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Biopharmaceutical technology				
	Course Designed by – Dept of Genetics Engineering				
OBJECTIVES	1. This course provides the fundamental knowledge on upcoming field of metabolomics 2. The metabolic engineering in post genomic era.				

	3. Understand Regulation of metabolic pathways and examples of pathway manipulations **4.** Provides knowledge about the metabolic engineering in database.

MODULE I: INTRODUCTION (9 Periods)

Introduction to metabolic engineering-Metabolism- Stoichiometry, reaction rates and dynamic mass balances-Growth Energetic-Yield coefficients and linear rate equations.

MODULE II: METABOLIC PATHWAY REGULATION (9 Periods)

Regulation of metabolic pathways-Examples of pathway manipulations. Alteration of feedback regulation, limiting accumulation of end products. Induction-jacob & monod model, catabolic regulation.

MODULE III: METABOLIC FLUX ANALYSIS (9 Periods)

Metabolic flux analysis-Methods for the experimental determination of metabolic flux using isotope labelling-Applications of Metabolic flux labelling. Metabolic control analysis.

MODULE IV: BIOCONVERSIONS (9 Periods)

Advantages of bioconversions, specificity, yields, factors important to bioconversion, regulation of enzyme synthesis, mutation, permeability, co-metabolism, avoidance of product inhibition, mixed or sequential bioconversions.

MODULE V: PLANT METABOLIC ENGINEERING (9 Periods)

Metabolic Engineering in plants- Metabolomics and Metabolic engineering-Introduction to Databases on the web.

TEXT BOOKS

1.Fermentation and Enzyme Technology, John Wiley and Sons, 1980.
2.Stanbury P.F., and Whitaker A., "Principles of Fermention Technology", Pergamon Press, 1984.

REFERENCE BOOKS

1. Zubay G., "Biochemistry ", Macmillan Publishers, 1989.
2. Harper's review of biochemistry By David, W. Martin, Peter.A.Mayes, Victor.W. Rodwell, LANGE medical publications.
3. Practical Biochemistry – Principles & Techniques by Keith Wilson & John Walker. Oxford University press.
4. Gregory N. Stephanopoulos, Aristos A. Aristidou, Jens Neilsen, Metabolic engineering: Principles and Methodologies San Diege: Academic Press, 1998.

COURSE OUTCOMES (COs)	
CO1	Metabolic engineering
CO2	Comprehensive models cellular reactions
CO3	Metabolic flux analysis and its applications
CO4	Metabolomics and its study

CO5	Applications of metabolomics
CO6	Metabolism of Plants and animals

4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18PEGE62	**INDUSTRIAL MICROBIOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Bioprocess technology, Industrial Biotechnology				
	Course Designed by – Department of Genetic Engineering				
OBJECTIVES	1. To develop their practical skills in microbial fermentation techniques. 2. To evaluate enzyme kinetics.				

MODULE I: INTRODUCTION AND HISTORY (9 Periods)

Scope and Roles. Fundamentals and characteristics of microbes in bioprocess technology; nomenclature and classification of microbes; review of microbes commonly used in bioprocess industries.

MODULE II: MICROORGANISMS OF INDUSTRIAL IMPORTANCE (9 Periods)

Selection of Microorganisms; Screening, Selection and identification of strains; Types of stock culture, Strain Preservation of Industrial Microorganisms Medium requirements for fermentation process.

MODULE III: PRODUCTION OF PRIMARY AND SECONDARY METABOLITES (9 Periods)

Production of primary and secondary metabolites Processes for the production of commercially important Organic acids, Amino acids and Alcohols. Production process for various antibiotics.

MODULE IV: PRODUCTION OF COMMERCIALLY IMPORTANT ENZYMES AND PROTEINS (9 Periods)

Commercially important enzymes for food and pharmaceutical industries; Production of recombinant proteins in therapeutic and diagnostic applications; production of vaccines.

MODULE V: FERMENTATION (9 Periods)

Design of fermentor, fermentation media and substrates. Types of Fermentation Processes- Surface, Submerged and Solid state fermentation, Batch and Continuous fermentation.

TEXT BOOKS

1. L. E. Casida, Industrial Microbiology. Wiley Eastern Ltd., 1989
2. Text book of microbiology by Tortara, 2005

REFERENCE BOOK

1. G. Reed, Prescott and Dunn's Industrial Microbiology (4th Ed.).CBS Publishers, 1987.
2. H. J. Rehm, G. Reed and H. Pape (Eds.) Biotechnology (A Comprehensive Treatise vols. 1-8). VCH, 1986

4. http://www.sysmex-partec.com/applications/microbiology-industrial-applications.html

COURSE OUTCOMES (COs)	
CO1	Enables the student to develop their skills in the field of microbial fermentation technology.
CO2	It also gives knowledge on history and latest methods of enzyme kinetics.
CO3	It deals with the antibiotic production.
CO4	It imparts anaerobic fermentation methods.
CO5	To carry out enzyme immobilized reaction.
CO6	To develop the practical skills in solid substrate fermentation in wine production.

U18PEGE63	**PLANT PHYSIOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Cell biology, Genetics, Phytochemistry and Botany				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To learn various aspects of plant physiology, such as respiration, enzyme action, and water relations				

MODULE I: INTRODUCTION TO PLANT PHYSIOLOGY (9 Periods)

Biotechnology and its relevance in agriculture; Definitions, terminologies and scope in plant breeding. Generation of EDVs.

MODULE II: TISSUE CULTURE TECHNOLOGY (9 Periods)

Tissue culture- History, callus, suspension cultures, cloning; Regeneration; Somatic embryogenesis; Anther culture; somatic hybridization techniques; Meristem, ovary and embryo culture; cryopreservation.

MODULE III: RFLP ANALYSIS (9 Periods)

Techniques of DNA isolation, quantification and analysis; Sequencing techniques; Vectors, Biochemical and Molecular markers: morphological, biochemical and DNA-based markers mapping populations.

MODULE IV: MOLECULAR MAPPING METHODS (9 Periods)

Molecular mapping and tagging of agronomically important traits. Statistical tools in marker analysis, Robotics; Marker-assisted selection for qualitative and quantitative traits; Gene pyramiding.

MODULE V: CROP IMPROVEMENT METHODS (9 Periods)

Marker assisted selection and molecular breeding; Genomics and genoinformatics for crop improvement; Integrating functional genomics information on agronomically/economically important traits in plant breeding,

COURSE OUTCOMES (COs)	
CO1	To learn about plant breeding
CO2	To gain knowledge on tissue culture and hybridization techniques
CO3	Understand Genotyping and Sequencing techniques
CO4	To know about Molecular mapping and tagging of agronomical traits
CO5	To learn about Gene pyramiding
CO6	To gain knowledge on Genomics and genoinformatics for crop improvement.

OPEN ELECTIVES FROM GENETIC ENGINEERING

U18OEGE001	METAGENOMICS AND EPIGENOMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To learn various aspects of epigenetic characters of chromosomes				

MODULE I: TECHNIQUES AND STRATEGIES FOR METAGENOMIC ANALYSIS (9 Periods)

Tools used for identifying diversity, searching for novel genes and gene products, and investigating relationships among genes, mRNAs, and proteins in microbial communities. NGS for metagenome analysis.

MODULE II: APPLICATIONS OF METAGENOMICS (9 Periods)

Metagenomic applications in agriculture, environment and health. Applications of metagenomics in plant-microbe interactions, bioremediation, for industrial bioproducts.

MODULE III: EPIGENETIC AND EPIGENOME REGULATION (9 Periods)

Histone modifications and epigenetic information, transcription in chromatin environment, Techniques used in the study of transcription factor binding and DNA methylation.

MODULE IV: TECHNIQUES USED IN EPIGENOME ANALYSIS (9 Periods)

ChIP sequence, ChIP- PCR, bisulfate sequencing, enzyme based methods, Epigenome systems - Human epigenome, epigenomics in plants, fungi.

MODULE V: APPLICATIONS OF EPIGENOMICS (9 Periods)

Epigenetic regulation in stem cells, epigenetic of the immune system, epigenetics in neuronal diseases, Cancer epigenomics.

TEXT BOOKS:

1. Diana Marco, editor. Metagenomics: Theory, methods, and applications. Caister Academic Press, Norfolk, UK; 2010.
2. Nessa Carey, “The epigenetic regulation”, Columbia University Press, 2011.

REFERENCE BOOKS:

1. Robert A Myers, “Epigenetic regulation and Epigenomics”, Wiley- Blackwell, 2012.

COURSE OUTCOMES (COs)	
CO1	To learn about metagenomes
CO2	To gain knowledge on epigenetic regulation
CO3	Understand metagenomics theory and applications
CO4	To know about non coding RNA function
CO5	To learn about epigenomics in plants and fungi

CO6	To gain knowledge on cancer epigenomics

U18OEGE002	MOLECULAR GENETICS AND GENOMICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To learn various aspects of molecular genetics				

MODULE I - INTRODUCTION TO MOLECULAR GENETICS & GENOMICS

(9 Periods)

History of DNA molecule & discovery -Physical nature of DNA –Genes function at Molecular level – Replication, Transcription & Translation, post-transcriptional modification in Eukaryotes, The Genetic Code.

MODULE II - MOLECULAR BIOLOGY OF DNA REPLICATION

(9 Periods)

Multiple Origins & bi-directional DNA replication in Eukaryotes, Replication of Virus & Theta replication of Circular DNA molecules, Rolling Circle replication, Plasmid DNA using a Rolling Circle, initiation by a Primosome complex.

MODULE III - MOLECULAR BIOLOGY OF RECOMBINATION (9 Periods)

Molecular mechanisms of Recombination, Gene conversion, Mismatch repair, Single strand break & repair model. Regulation of Gene Expression – Regulation of gene expression at many levels.

MODULE IV - GENOMIC POSITION EFFECTS ON GENE EXPRESSION

(9 Periods)

Molecular mechanisms of Gene Regulation – Transcriptional regulation in Prokaryotes, Lactose metabolism & the Operon system of Gene regulation, regulation of Tryptophan operon, regulation in Bacteriophage Lambda.

MODULE V - RNA MOLECULES & RNA PROCESSING (9 Periods)

Gene structure, Structure & Processing of messenger RNA, transfer RNA, ribosomal RNA, small interfering RNAs & micro RNAs, regulation through RNA processing and mRNA stability.

TEXT BOOK

1. Joseph Sambrook, David William Russell "Molecular cloning". 3rd Edition, CSHL Press, 2001.

1) Daniel L. Hartl & Elizabeth W. Jones : Genetics – analysis of Genes & Genomes
2) Alan G. Atherly, Jack R. Girton & John F. McDonald: The Science of Genetics
3) Benjamin A. Pierce : genetics – a conceptual approach

COURSE OUTCOMES (COs)	
CO1	To learn about molecular genetics and genomics
CO2	To gain knowledge on DNA replication
CO3	Understand gene recombination
CO4	To know about transcriptional control unit
CO5	To learn about tryptophan operon
CO6	To gain knowledge on mRNA stability

U18OEGE003	PRINCIPLES OF MOLECULAR CELL BIOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES	To understand the significance of Molecular cloning mechanism				

MODULE I: RECOMBINANT DNA TECHNOLOGY AND MOLECULAR CLONING (9 Periods)

Cloning overview, Gene library, Hybridization, molecular cloning, construction of DNA library, Library screening, Expression libraries, Restriction mapping, RFLP, DNA sequencing.

MODULE II: PURIFICATION AND SEPARATION OF NUCLEIC ACIDS (9 Periods)

Extraction and Purification of nucleic acids, Detection and Quantitation of Nucleic acids, Gel Electrophoresis - Cutting and Joining DNA – Restriction Endonucleases, Ligation, Alkaline Phosphate, Double Digest, Modification of Restriction Fragments ends.

MODULE III: VECTORS (9 Periods)

Plasmid vectors, Vectors based on the lambda Bacteriophage, Cosmids, M13 vectors, Expression vectors, Vectors for cloning and expression in Eukaryotic cells, Super vectors: YACs and BACs.

MODULE IV : GENE RECOMBINATION AND GENE TRANSFER (9 Periods)

Bacterial Conjugation, Transformation, Transduction, Episomes, Plasmids, Microinjection, Electroporation, Microprojectile, Shot Gun method, Ultrasonication, Liposome fusion,

MODULE V: TOOLS FOR ANALYZING GENE EXPRESSION (9 Periods)

Reporter Genes – Commonly used reporter genes, Analysis of gene regulation Purification and detection tags. Analysis at the level of gene transcription – Northern blot, in situ hybridization, Rnase protection assay.

COURSE OUTCOMES (COs)	
CO1	To explain various types of molecular cloning method
CO2	Demonstrate about purification of nucleic acids
CO3	Apply, solve and interpret the super vectors
CO4	To interpret bacterial conjugation
CO5	Predict and understand reporter genes
CO6	To understand the fundamentals of gene expression tools

CURRICULUM AND SYLLABUS (R2018)
CHOICE BASED CREDIT SYSTEM
(Applicable to the students admitted from July 2018)
B.TECH – INDUSTRIAL BIO TECHNOLOGY
I – VIII SEMESTERS

	COMMUNICATIVE ENGLISH	**L**	**T**	**P**	**C**
U18HSEN101	Total Contact Periods – 45	2	0	2	3

	Prerequisite – School English
	Course Designed by – Department of English
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.

UNIT I SPEAKING 6

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations - introducing oneself – exchanging personal information- narrating events, - incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building - The concept of Word Formation

UNIT III LISTENING 6

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past-present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely

SOFTSKILL LABORATORY 15

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews & conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)

6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds - intonation.
12. Creative and critical thinking.

TEXT BOOKS:

1. English A Course book for Under Graduate Engineers and Technologists. Orient Black Swan Limited,Hyderabad:2015
2. Richards, C. Jack. Interchange Students' Book-2 New Delhi: CUP, 2015.

REFERENCES

6. **Remedial English Grammar. F.T. Wood. Macmillan.2007**
7. **On Writing Well. William Zinsser. Harper Resource Book. 2001**

COURSE OUTCOMES	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

MAPPING BETWEEN COURSE OUTCOMES&PROGRAMME OUTCOMES

U18BSMA102	**Mathematics I for Bio Engineering**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	The aim is to develop mathematical curiosity and use inductive and deductive reasoning when solving problems, and to develop the knowledge, skills and attitudes necessary to pursue further studies in				

	Mathematics and to become confident in using Mathematics to analyze and solve problems in real – life situations.

UNIT I THEORY OF EQUATIONS (9+3)

Fundamental theory of algebra – number of roots of polynomial equations – conjugate pairs theorem (without proof) – Descartes rules of signs- symmetric functions of the roots – formation of equations – diminish the roots of an equations- Multiple roots – reciprocal equation.

UNIT II DIFFERENTIAL CALCULUS – One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions-Beta, Gamma functions and their properties.

UNIT V MATRICES (9+3)

Characteristic Equations –Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth EditionAddison-Wesley, Pearson.
5. Narayanan S., ManickavachagamPillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers, 1992.

	COURSE OUTCOMES (COs)
CO1	Solve the equations (such as linear, factorable, quadratic and rational), applications and linear inequalities, to know the formation of equations.
CO2	Use both the limit definition and rules of differentiation to differentiate functions.The fallouts of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions

CO4	Compute definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gamma
CO5	Identify Eigen value problems from practical areas using transformations;

CO/PO Mapping:S – Strong, M – Medium, W – Weak

U18BSPH101	**Waves and Optics**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.					

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVE OPTICS 9

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS 9

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

3	Category	Basic Sciences (BS)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18BSCH101	**ENGINEERING CHEMISTRY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY 9

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis.NanocomSOsites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHMIC PROBLEM SOLVING **9**

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks

of algorithms (statements, state, control flow, functions), notation (pseudocode, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods;advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES 9

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems

CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

Mapping of Course Outcomes with Programme Outcomes (POs)

(S/M/W indicates strength of correlation) S-Strong, M-Medium, W-Weak

U18ESME101	**Engineering Graphics & Design (Theory & Lab.)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet des needs, using the techniques, skills, and modern engineering tools necessary engineering practice				

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM).

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypocycloid and Involute of circle.

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of Points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to oneplane – Parallel to one plane and inclined to other plane – Inclined to both the planes;Projections of planes inclined to either HP or VP.

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

MODULE 4:SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple Position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students willgetExposure to basics of building construction

CO4	Students willgetExposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.

	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib

	Total Contact Hours - 45	**0**	**0**	**3**	**1.5**
	Prerequisite – Wave Optics and Bio Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To impart knowledge of practical Physics to the students					

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Biophysics – Bio-Engineering branches

1. Determination of optical rotation using polarimeter
2. Determination of diffusion potential of biological sample
3. Analysis of viscosity of different biological sample using viscometer
4. Analysis of protein concentration using calorimeter
5. Quantification of DNA using UV-Vis spectrophotometer
6. Analysis of absorption maxima for an unknown sample

Course Outcome (CO's)	
CO1	Understand the fundamental concept of optics

CO2	Understand the concept of production of ultrasonic waves												
CO3	Understand the estimation and functions of Biomolecules

	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a Polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.
2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base andConductometric Precipitation titration.

CO4	Student will be able to analyze Determination of Molecular weight of a Polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

U18HSEN201	**TECHNICAL ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	1	0	3
	Prerequisite – I semester English				
	Course Designed by – Department of English				

OBJECTIVES

To gain fundamental knowledge of English language and its usage in day to day life.

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a

meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

TEXT BOOKS:

1. Fluency in English A Course book for Engineering and Technology.OrientBlackswan, Hyderabad: 2016
2. Sudharshana.N.P and Saveetha. C. English for Technical Communication. Cambridge University Press: New Delhi, 2016.

3. Kumar, Suresh. E. Engineering English. Orient Blackswan: Hyderabad,2015
4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)

Upon completion of the course, the students will be able to	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

	Mathematics II for Bio Engineering (Common to IBT, Genetics and Agricultural Bio Tech)	**L**	**T**	**P**	**C**
U18BSMA202	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	To make the students learn Mathematics in order to formulate and solve problems effectively in their respective fields of engineering.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT III VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Integration of vector function - Green's theorem in a plane – Gauss divergence theorem and Stoke's theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT IV ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions,Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	Apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO3	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO4	To understand the analytic functions, conformal mapping and complex integration

	and their applications.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES:

To impart theories and methods of Physics to understand the functioning of Biological system

UNIT 1 ATOMIC PHYSICS **9**

Atom model - Vector atom model - Pauli's exclusion principle - explanation of periodic table - various quantum numbers - angular momentum and magnetic moment - spatial quantisation - Bohr magneton - Stern and Gerlach experiment.

UNIT 2 NUCLEAR PHYSICS **9**

Nuclear size, shapes and forces: Nuclear size determination - Electron scattering method-electric moments - magnetic moments - Nuclear forces - Models of nuclei – Liquid drop model of nuclei- Atomic masses and its significance.

UNIT 3 RADIATION BIOPHYSICS **9**

Basics of Radiation Physics Atomic structure models, Constituents of atomic nuclei, Isotopes, Isobars, Isotones, Radioactivity, law of Radioactivity, General properties of alpha, beta and gamma radiations, Radiation units: Units of measurement of radioactivity. Curie, Becquerel., Interaction of radiation with matter: Excitation and ionization, Photo electric effect, Compton Effect, pair production, Characteristic radiation.

UNIT 4 MEMBRANE BIOPHYSICS **9**

Membrane potentials Cell surface charge, Resting membrane potential, Action potential, Ionic transport during Action Potential, properties of action potential, Nernst equation, Hodgkin-Huxley equation, Membrane impedance and capacitance, Transmembrane potential, total electrochemical potential.

UNIT 5 MOLECULAR BIOPHYSICS 9

Nucleic acids – Purine and Pyrimidine bases, nucleosides, nucleotides basic difference in structures and functions of DNA and RNA

Proteins– Amino acids – types, planarity of peptide bond – Ramachandran map - Primary, secondary, tertiary and quarternary structures of proteins.

U18BSGE201	**CYTOLOGY AND GENETICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES: To provide a basic understanding of cell, its structure, function, types and about its culture					

UNIT I CELL STRUCTURE AND ORGANELLES 6

Cells - definition - eukaryotic cell and prokaryotic cell- Relationship and evolution of eukaryotic cell and prokaryotic cell- plant cells and animal cells - Cell Organelles, Structure and function – Nucleus- Endoplasmic reticulum - Golgi complex- lysosomes- cell membranes- chloroplast- mitochondria.Cell cycle-Mitosis and meiosis

UNIT II CELLULAR TRANSPORT 6

Transport across cell membranes – classification – Active and passive transport. Active – Na+ K+ ATPase Pump - Lysosomal and Vacuolar pumps - Endocytosis and Exocytosis transport across prokaryotic membrane - Cotransport–Symport, antiport.

UNIT III CELL SIGNALING AND SIGNAL TRANSDUCTION 6

Cell signaling – various kinds of Receptors and ligands –Different modes of action of ligands- different modes of signal transduction and amplification with examples- signaling through G-Proteins (Monomeric and trimeric), signaling for growth factors- secondary messengers- protein kinases- Caions and cAMP molecule in signaling.

UNIT IV BASICS OF GENETICS AND CHROMOSOMES 6

Mendelian Laws - Mendel's experiment - monohybrid cross-phenotype – genotype - Dihybrid inheritance - Chromosome structure and organization in prokaryotes and eukaryotes - chromosome banding - chromosome abnormalities

UNIT V ALLELES 6

Classical concepts of Pleomorphism - Multiple alleles, ABO blood groups - Rh factor - sex linkage in Drosophila- mechanism of sex determination- sex differentiation

U18ESEE101	**BASIC ELECTRICAL & ELECTRONICS ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

MODULE 1 : DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamental Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems,Maximum Power Transfer Theorem.

MODULE 2: AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance.Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS **9**

Principles of operation and characteristics of; DC machines,Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency,all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS **9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS **6**

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

U18BSCH201	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I -NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS **9**

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION **9**

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION **9**

Definition, Causes, effects and control measures of Air Pollution, Water pollution, Soil Pollution, Marine Pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - Pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION **9**

Social issues: Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and Control of Pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel – oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder- Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.

Human population: Population growth, variation among nations, population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

TEXT BOOKS:

1. Gilbert M. Masters, Introduction to Environmental Engineering and Science‘, 2nd edition, Pearson Education 2004.
2. Benny Joseph, Environmental Science and Engineering‘, Tata McGraw-Hill, New Delhi, 2006.

3. R.K. Trivedi, Handbook of Environmental Laws, Rules, Guidelines, Compliances and Standards', Vol. I and II, Enviro Media.
4. Rajagopalan, R, Environmental Studies-From Crisis to Cure', Oxford University Press 2005.
5. K.V.B. Raju and R.T. Ravichandran, "Basics of Civil Engineering".

COURSE OUTCOMES	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

U18ESME1L2	**WORKSHOP/MANUFACTURING PRACTICES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

SYLLABUS

Lectures & videos: (15 hours)

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice

2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.

3. Carpentry **(9 hours)**
   a) Preparation of Lap joints.
   b) Mortise and Tenonjoints.
   c) Cross Half joints.
   d) Dove Tail joints.

1. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
Preparation of butt joints, lap joints and Tee joints

2. Sheet Metal working **(9 hours)**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints

3. Demonstration **(6 Hours)**
Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

1. HajraChoudhury S.K., HajraChoudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and publishers Private Limited, Mumbai.
2. Kalpakjian S. And Steven S. Schmid, "Manufacturing Engineering and Technology",4th edition, Pearson Education India Edition, 2002.
3. Gowri P. Hariharan and A. Suresh Babu,"Manufacturing Technology – I" Pearson Education, 2008.
4. Roy A. Lindberg, "Processes and Materials of Manufacture", 4th edition, Prentice Hall India, 1998.

5. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGraw Hill House, 2017.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING PRACTICES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronics Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				

OBJECTIVES:

To enhance the practical knowledge on basics of electrical and electronics components and circuits.

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers

3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier.

REFERENCE BOOKS:

1. S. K. Bhattacharya, "Basic Electrical and Electronics Engineeing", Pearson Education India,2011

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipments and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits .
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flops

4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18PCBT301	**INTRODUCTION TO MOLECULAR BIOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Basic concepts in Biology, Microbiology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of molecular level of DNA and their applications from the perspective of engineers

UNIT I DNA STRUCTURE 6

DNA as the vehicle of inheritance-structure of DNA-forms of DNA-nucleic acid biosynthesis-experimental evidence: Griffith, McLeod, McCarty and Avery, Hershey–Chase experiments-Definition of gene-organization of genes and non coding DNA in prokaryotes- Eukaryotes–

unique, moderately repetitive and highly repetitive DNA sequence-satellite DNA- Cot value-DNA binding proteins

UNIT II DNA REPLICATION 6

DNA replication in prokaryotes and eukaryotes- modes of replication-semi continuous and semi discontinuous replication- Okazaki fragments- RNA primers – enzymes of replication – DNA polymerases I, II, III, -DNA modifying enzymes: topoisomerases-helicases- binding proteins and ligases- replication in E.coli–replisomes-events at OriC (initiation), events on the replication fork (elongation) and termination- Fidelity of replication-Sigma or rolling circle mode of replication in Φ x 174-Inhibitors of replication.

UNIT III DNA REPAIR 6

Repair of DNA–types of damages- repair by direct reversal of damage- excision repair-recombination repair- SOS repair-Mutation: definition-type of mutations (spontaneous and induced) point mutation-Gene mutation and chromosomal aberrations- Cause of mutations-chemical and physical agent

UNIT IV TRANSCRIPTION 6

Transcription in prokaryotes and eukaryotes: RNA polymerases–enzyme structure- role of sigma factor- promoter-closed and open promoter complexes-Initiation-elongation and termination of RNA synthesis-Post transcriptional modification in prokaryotes and eukaryotes-transcription factors

UNIT V GENETIC CODE 6

Genetic code–Basic features of genetic code-Deciphering of genetic code-Wobble hypothesis-Protein biosynthesis-activation of amino acids- initiation-elongation and termination of translation in prokaryotes and eukaryotes-Post translational modifications-Inhibitors of translation.-Regulation of gene expression in prokaryotes and eukaryotes- operon concept

COURSE OUTCOMES (COs)													
CO1	to understand the fundamentals of central dogma of biological systems												
CO2	to know the concept of cell replication, transcription and translation												
CO3	to comprehend DNA and its role in functioning of a cell												
CO4	to know the functioning of regulatory factors and its application in maintaining cell activity												
CO5	to get a basic knowledge of the DNA and RNA

U18PCBT302	**PRINCIPLES OF CHEMICAL ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Engg Mathematics-I, Engg Mathematics -II, basics about unit operations				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To provide a basic knowledge of Process engineering

UNITI BASIC STOICHIOMETRY 9

Basic stoichiomentric calculations: mole, molar mass, normality, molarity, molality, mole fraction, mass fraction, Ideal gas law, Raoult's law, Average molecular weight.

UNIT II MATERIAL BALANCES 9

Unit operation & Process - Law of conservation of mass – material balances without reaction: drying, evaporation, distillation, extraction, mixing, Material balances with chemical reactions: limiting and excess reactant-conversion -Yield – Selectivity.

UNIT III ENERGY BALANCES 9

Energy - Forms of energy- Energy balances –Heat capacity- heat capacity of gases and liquids- heat capacity of gaseous mixtures -Latent heat and sensible heat- Hess's law- Standard heat of Reactions.

UNIT IV FLUID MECHANICS 9

Fluids –Types of fluid - Nature of flow – Derivation of Bernoullis equation - Flow meters: Manometers - types of manometers —Venturi meter and orifice meter.

UNITVAGITATION AND TRANSPORTATION OF FLUIDS 9

Mixing and Agitation –Agitation equipment- Impellers and types - Prevention of swirling - Power requirement for mixing – Pumps: single acting and double acting pump -Work of consumption.

COURSE OUTCOMES (COs)	
CO1	to understand the various unit operations involved in industry
CO2	to know the material balance for a process.

CO3	to know the energy balance for a process.
CO4	to get an idea about fluid mechanics.
CO5	to know about agitation and the types of agitators

Mapping of Course Outcomes with Program outcomes (POs)

	BIOCHEMISTRY	**L**	**T**	**P**	**C**
U18PCBT303	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Chemistry and Biology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic knowledge about biomolecules

UNIT I CARBOHYDRATES 9

Significance and classification of carbohydrates – Structure and properties of monosaccharides: glucose, fructose, galactose; oligosaccharides: sucrose, lactose, maltose, raffinose; polysaccharides: storage, structural, homo, hetero polysaccharides – starch, cellulose, hyaluronic acid.

UNIT II LIPIDS 9

Fatty acids: Structure, properties and classification – Lipids – Classification – Structure and functional properties of phospholipids,sphingolipids, glycolipids and steroids.

UNIT III PROTEINS 9

Structure and properties of aminoacids – classification based on side chains and nutritional requirements – Peptides: Chemistry and its significance – Proteins: Various levels of structures – n classification based on composition and function.

UNIT IV NUCLEIC ACIDS 9

Structure of purine and pyrimidine bases – Nucleosides – Nucleotides – Watson-crick model of DNA – various levels of organization of DNA – superhelical DNA – Structure and functions of mRNA, tRNA and rRNA.

UNIT V METABOLISM 9

Metabolism – Glycolysis, TCA cycle and Hexose Mono Phosphate pathway;Biosynthesis and β oxidation offattyacids.Biosynthesis of aromatic amino acid and catabolism of amino acids: Urea cycle– Biosynthesis and degradation of purines and pyrimidines.

COURSE OUTCOMES (COs)													
CO1	to understand the fundamentals of biomolecules, their classification, structure												
CO2	to apply the basic concept of carbohydrates, proteins ,lipids, nucleicacids and enzymes in metabolism.												
CO3	to know the application of biomolecules in functioning of biological system												
CO4	to get a basic knowledge of macromolecules in living organism and its energetic												
CO5	To know basic concepts of enzymes												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCBT304	**MICROBIOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic concepts in biology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of microbes and their applications from the perspective of engineers

UNIT I INTRODUCTION TO MICROBIOLOGY 9

Definition-Scope and history of microbiology-prokaryotic and eukaryotic cell- different types of classification-Nomenclature-fermentation-pasteurization-role of microorganisms in pharmaceutical, food, agro and cosmetic industries-bioremedial applications-illustrations of genetically engineered strains

UNIT II GENERAL FEATURES OF MICROORGANISMS 9

Bacteria: diversity-classification-morphology-life cycle-Fungi: diversity-classification-morphology-life cycle-Algae: diversity-classification-morphology-life cycle-virus: diversity-classification-morphology-life cycle

UNIT III MICROSCOPY 9

Introduction- numerical aperture, resolving power-magnification- fixation, dyes and simple staining, differential staining- gram staining, acid-fast staining, Staining specific structures-negative staining, endospore staining, flagella staining-simple-compound-dark field-phase contrast-polarizing-fluorescent-laser optics-electron microscopy-scanning electron microscope-transmission electron microscope, specimen preparation-inverted microscope

UNIT IV MICROBIAL NUTRITION AND GROWTH 9

Common nutrient requirements-nutritional types of microorganisms, growth factors-uptake of nutrients by cells- culture media: synthetic or defined media-commonly used media-Types of media-selective-differential-enrichment media-aseptic techniques: disinfection-sterilization-cultivation of microbes: bacteria-fungi-viruses-pure culture: concept of pure culture-methods of pure culture of microorganisms–spread plate, streak plate and pour plate–microbial growth curve-factors affecting growth of microorganisms-measurement of growth

UNIT V MICROBIAL PATHOGENS AND DISEASES 9

Bacterial pathogens: *Staphylococcus aureus*-*Enterobacteriaceae*-Shigellosis-Fungal pathogens: superficial mycosis: -candidiasis- Mycetoma-subcutaneous phycomycosis: Cryptococcosis-opportunistic systemic mycosis-mycotic poisons-Viral pathogens: Pox virus, AIDS virus, influenza virus.

COURSE OUTCOMES (COs)

CO1	to understand the source of microbes and their role in biotechnology												
CO2	to get the knowledge of microbial diversity classification and morphology												
CO3	to know the visualization of microbes by different microscopes												
CO4	to know the cause, symptoms, diagnosis and treatment of diseases causing pathogens												
CO5	to get a basic knowledge of the microbial nutrition and growth												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCBT305	**INSTRUMENTATION FOR BIOTECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – basic principles in instrumentation				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES To provide a basic knowledge of the working principle of instruments and their applications from the perspective of engineers					

UNIT I RADIATION TECHNIQUES 6

Sources of radiation- absorptivity-Lambert Beers law, deviations, detectors, photometric accuracy, Rayleigh scattering, Fourier transform, calibration and standardization, atomisation, flame atomisation, turbidimetric and nephlometric titrations -scattering in gases.

UNIT II ELECTROCHEMICAL TECHNIQUES 6

Principles: redox potential-pH electrode-ion selective and gas sensing electrodes-Clarke oxygen electrode and its application-biosensors.

UNIT III SPECTROSCOPIC TECHNIQUES 6

Colorimetry-UV-visible spectrophotometry-ORD-CD-X-ray spectroscopy-IR spectroscopy-ESR spectroscopy-NMR spectroscopy-Mass spectroscopy

UNIT IV SEDIMENTATION TECHNIQUES 6

Centrifugation principles-centrifuges and its types-differential and density gradient centrifugation-analysis of subcellular fractions-assessment of purity and determination of relative molecular mass

UNITV RADIOISOTOPE TECHNIQUES 6

Nature of radioactivity-Detection and measurement of radioactivity-GM counter-Scintillation counting-photographic emulsions-radiotracer techniques-autoradiography

COURSE OUTCOMES (COs)													
CO1	to understand the fundamentals of instruments and their different mode of applications												
CO2	to know the principle, working concept and its applications												
CO3	to find the various laboratory work based on instruments												
CO4	to know the different types of instruments based on various parameters												
CO5	to get a basic knowledge of equipments and their role in biological systems in relevant industries

U18BSMA305	TRANSFORMS AND NUMERICAL METHODS	L	T	P	C
	Total Contact Hours - 60	3	1	0	4
	Prerequisite – Mathematics I & II				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms.

UNIT I FOURIER SERIES **12**

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II FOURIER TRANSFORMS **12** Fourier integral theorem (without proof) – Fourier transform pairs – Fourier sine and cosine transform – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT III SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS 12

Fixed Point Iteration methods - Newton - Raphson method and Regula-Falsi method for single variable - solutions of linear system of equations by Gaussian, Gauss-Jordan ,Jacobian and Gauss-Siedel methods.

UNIT IV FINITE DIFFERENCES AND INTERPOLATION **12**

Finite differences -Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals-Newton's Divided difference formula, Lagrange's Interpolation formula.

UNIT V NUMERICAL DIFFERNTIATION AND INTEGRATION **12**

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's both $1/3^{rd}$ and $3/8^{th}$ rules. Double integration using Trapezoidal rule and Simpson rule.

COURSE OUTCOMES (COs)	
CO1	Expand given function using the knowledge of Fourier Series and frequently needed practical harmonic analysis that an engineer may have to make from discrete data.
CO2	Solve many problems in automobile, medicine, electronic engineering by applying Fourier transform with the possible special cases with attention to their applications.
CO3	Students will gain knowledge for solving equations by Newton-Raphson and Regula-Falsi methods and system of linear equations by various methods.
CO4	Students will be able to interpolate the value of a dependent variable in the given data by Newton's forward and backward difference formulae and also unequal intervals.
CO5	Understanding the concept of numerical differentiation and integration using Trapezoidal and Simpson's rules.

	BIOCHEMISTRY LAB I	**L**	**T**	**P**	**C**
U18PCBT3L1	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Basic concepts in chemistry and biology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic knowledge of biochemical components and its functions and their Applications from the perspective of engineers

LIST OF EXPERIMENTS

1. Preparation of normal, molar and percent solutions.
2. Preparation of different buffer solution and measure pH.
3. Qualitative analysis of Unknown sugar- Monosaccharides,disaccharides and polysaccharides.
4. Estimation of sugar- Benedicts method.
5. Qualitative of unknown protein- Albumin,casein and gelatin.
6. Quantitative test for aminoacids- Ninhydrin method.
7. Quantitative test for protein – Biuret method.
8. Quantitative test for protein –Lowry method.
9. Quantitative test for protein – Bradford method
10. Spectrophotometric analysis of DNA.

.

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of biomolecules, their classification,structure and functions
CO2	to apply the basic concept of carbohydrates, proteins,lipids, nucleicacids and enzymes in metabolism

CO3	to know the application of biomolecules in functioning of biological system
CO4	to get a basic knowledge of macromolecules in living organism and its energetics
CO5	To know basic concepts of enzymes

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	H					H			H	H	L
	CO2	H				M		H			H	H	
	CO3		H	M				H	L			H	
	CO4	H	H					H			H	H	
	CO5	H					M	H			H	H	
3	Category	PC											
4	Approval	Academic Council, Aug 2018											

U18PCBT3L2	**CELL BIOLOGY LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – basic cell biology				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To provide a basic knowledge about cell biology					

LIST OF EXPERIMENTS

1. Study of Microscope
2. Spotters
3. Permanent Slide preparation
4. Killing and Fixing
5. Mitosis on onion root tip
6. Cryopreservation
7. Preparation of Blood smear
8. Separation of plasma and serum from blood sample
9. Total RBC and WBC Count
10. Osmosis
11. Extraction of pigments

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of instruments and their different mode of applications
CO2	to get idea about slide preparation
CO3	to know about blood grouping
CO4	to get knowledge about mitosis
CO5	to get a basic knowledge of extraction of plant pigments

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H		H	H			H					
	CO2	H	H					H	M

	CO4	H						H					
	CO5	H						H					
3	Category	PC											
4	Approval	Academic Council, Aug 2018											

U18MCAB305 Learning an Art Form **0 0 2 0**

Cultivation of arts is an integral part of the development of human beings since the arts are what make us most human, most complete as people. They offer us the experience of wholeness because they touch us at the deepest levels of mind and personality. They come into being not when we move beyond necessity but when we move to a deeper necessity, to the deeper human need to create order, beauty and meaning out of chaos. They are the expressions of deepest human urges, imperatives and aspirations.

While enriching the process of learning through enhanced perceptual and cognitive skills, learning of arts promotes self-esteem, motivation, aesthetic awareness, cultural exposure, creativity, improved emotional expression, as well as social harmony and appreciation of diversity. They promote an understanding and sharing of culture, and equip the learners with social skills that enhance the awareness and respect of others. Each institution will offer a range of introductory courses in different art forms: music, dance, theatre, painting, and other art forms. Care should be taken to give adequate representation to local and regional art forms in which our culture abounds. For example, Banaras has local traditions in vocal music like *Chaiti*, *Hori*, *Kajri* and *Birha*.

An institution in Banaras area can offer courses on these art forms apart from regular classical and semi-classical vocal music forms. Similar local art tradition can be utilized in different cities and regions. This will, in turn, also ensure wider community involvement/interaction with the institution. Students will be given an option to choose a particular art form, and learn and practice it under an artist -instructor. At the end of the course, a student should be able to demonstrate basic proficiency in that particular art form. Contact hours per week should be 3-4 hours.

Towards the end of the course, the institution can organize a function/program in which all the students publicly demonstrate their skills.

U18MCAB306Intangible Cultural Heritage (Festivals, Food ways, Local Games) 0 0 2 0

As part of our rich intangible cultural heritage, foodways, fares and festivals, local games and sports are important sources for discovering the social and cultural values of our people and understanding the inner dynamics of our society, as these are sites where we witness the most significant and intimate representations of our society's self-perception—how our society perceives itself. These traditions have shaped and strengthened our social and cultural identities, and also the notion of community at the local, regional, and national levels. They have played a significant role in the making of our social life, and through them we have constructed for ourselves, individually and collectively, a sense of shared lived past and group identity. They facilitate the transmission of a culture's most deeply held values, from one generation to another and their continuity or discontinuity helps us to understand the changing social structure and culture of a society. For example, each community has its own foodways, and their overall health, well-being and cultural continuity are directly related to their ability to eat traditional foods and continue their traditional food practices. These traditional foods and food practices are deeply intertwined with their cultures and value systems, and play an important role in religious ceremonies and spirituality. Similar is the case with fares and festivals, and local games and sports. These traditions are bound up with rituals, customs, beliefs, and often also with trade, craft and professions. They are not mere superstitious rituals often condemned and denounced as being regressive, stagnant and backward, but repositories of our indigenous knowledge and wisdom which have evolved over centuries, and they still continue to serve social and cultural functions. This knowledge has been the basis for agriculture, food preparation, health care, education, conservation and the wide range of other activities that sustain societies in many parts of the world.

Most of these traditions are either on the verge of extinction or undergoing drastic changes due to globalization, acculturation, migration, questions of identity related to social mobility to confirm to a higher social order or simply because the context in which these traditions originated or were conceived no longer exist and their effectiveness or need seems no longer relevant. For example, while the agro-ecological and food systems offer some signs of resilience and adaptation, a range of factors are increasingly threatening these systems and peoples' well-being. The knowledge and skills of elders concerning traditional food preparation, and the use of traditional herbs and plants for healing purposes have not been passed on to the next generation and is at risk of being lost and disappearing altogether from reservation life and culture.

The course aims at exposing students to these traditions, and making them aware of the veritable treasure house of indigenous knowledge which can be utilized as resource for realizing a vision of sustainable future.

Each locality/region our Indian sub-continent abounds in a rich variety of food-ways, fares and festivals, games and sports. Students should be asked to identify one of these traditions and study them in detail. For example, the following guidelines can be adopted in the study of food-ways:

To study and document the indigenous knowledge and wisdom of everyday food habits and food items consumed;

To study and document the prevalent social practices and beliefs regarding traditional foods;

To study and document the feasts on religious and social occasions of different communities;
To identify and document the food items consumed by different communities and determine their nutritional values;
To conduct chemical analysis of food ingredients;

To identify and document the kitchen generated health ingredients used by different communities;
To find out the uses of leftover food stuff of different communities;

To develop hygienic food chart for people ailing and suffering from different metabolic disorders; and
To develop suitable communication strategies to effectively disseminate traditional knowledge regarding food habits.

Similarly, in the case of fares and festivals, and games and sports one could study how these traditions create a sense of community bonding and lead to the rules of commensality and social interaction and behavior. Suitable guidelines along the lines of foodways can be developed and adopted for such a study.

At the end of the course, students will be required to submit a detailed project report. Options should be given to the students to make short documentaries and films on these traditions.

U18PCBT401	**PLANT BIOTECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – General biology, Cell biology, Microbiology				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic knowledge about plant tissue culture and its applications					

UNIT I PLANT MOLECULAR BIOLOGY 9

Plant genome organization – mitochondrial genome – cytoplasmic male sterility – chloroplast genome – post transcriptional and translational modifications – transcription factors – gene silencing – regulation of gene expression – transposable elements

UNIT II PLANT GENETIC ENGINEERING 9

Vectors: viral vectors –Ti plasmid vectors – promoters– methods of gene transfer:direct and indirect-biolostics-Agrobacterium mediated gene transfer–newer methods of gene transfer in plants– selection of transformants/recombinants – RFLP, RAPD – plant pathogen interactions.

UNIT III PLANT TISSUE CULTURE 9

Basic terminologies – requirements of a plant tissue culture laboratory – Types of culture – selection of explants – sterilization techniques – Types of media – direct and indirect regeneration – micropropagation – haploid culture – protoplast culture – somatic hybridization and cybridization – embryo rescue – artificial seeds.

UNIT IV BIOFERTILIZERS,BIOCONTROL AND BIOREMEDIATION 9

Biofertilizers and its applications: Rhizobium-BGA-Frankia-VAM-applications–biocontrol of insect pests–genetic engineering of biocontrol agents–Biopesticides-Bioremediation– effluent treatment and using plant materials (Phytoremediation).

UNIT V APPLICATIONS 9

Transgenic plants for insect, disease, stress & herbicide resistance – edible vaccines and antibodies – methods of crop improvement through genetic engineering - DNA finger printing – production of secondary plant metabolites through suspension cultures.

COURSE OUTCOMES (COs)													
CO1	to understand basic concepts in organization of plant genome												
CO2	to know about the genetic engineering concepts involved in plant												
CO3	to know about plant tissue culture												
CO4	Toknow about bioremediation.												
CO5	to understand the various applications of plant tissue culture												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	M	H	M		M	H	M	L	L	H
	CO2	H	M	M	H		H	M	H	H	M	H	H
	CO3	H			H	H	H	M	M	M	L	L	M
	CO4	H	M	H		H	M	M	L		L	M	H
	CO5	H	M	M	H	H	M	M	M	M	H	L	M
3	Category	PC											
4	Approval	Academic Council, Aug 2018											

TEXT BOOKS

U18PCBT402	**PRINCIPLES OF CHEMICAL THERMODYNAMICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Basic concepts in chemical engineering				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To provide a basic knowledge of thermodynamics					

UNITI BASIC CONCEPTS IN THERMODYNAMICS 9

Scope and limitations- Definitions and Fundamental concepts - Calculation of force, pressure and energy - Phase rule -Zeroth law- Heat reservoirs & Heat engine -First law- First law for non-flow process- enthalpy- First law for flow process.

UNIT II PVT BEHAVIOUR AND FIRST LAWOF THERMODYNAMICS 9

PVT behavior of pure liquids - Equations of state- Constant volume process , constant pressure process and constant temperature process- Vander Waals equation- Virial equation.

Second law- Mathematical statement of second law- Kelvin and Clausius statement- Clausius inequality

UNIT III THERMODYNAMIC PROPERTIES OF PURE LIQUIDS 9

Classification of properties- Helmholtz free energy - Gibb's free energy-Fundamental property relations- Maxwell equations - Clapeyron equation -Relationship between Cp and Cv- Fugacity and fugacity coefficient- Effect of temperature and pressure on fugacity- Activity and Activity coefficient-Effect of temperature and pressure on Activity.

UNIT IVCHEMICAL REACTION EQUILIBRIUM 9

Reaction stoichiometry -Equilibrium constant and standard free energy change - Effect of temperature on equilibrium constant- Evaluation of equilibrium constant - Effect of pressure on equilibrium - Other factors affecting equilibrium conversion.

UNITV APPLICATIONS OF THE LAWS OF THERMODNAMICS 9

Energy equation - Ejectors - Throttling process - Compressors - Adiabatic and Isothermal compression - Refrigeration - Choice of refrigerant -Absorption refrigeration- COP- Carnot cycle- Heat pumps.

COURSE OUTCOMES (COs)	
CO1	to understand the basic concepts in thermodynamics
CO2	to know the properties of fluid
CO3	to know to get an idea about application of thermodynamics in various field
CO4	to get knowledge about reaction equilibrium
CO5	to know about applications of thermodynamics law
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low	

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H		H				H	M				M
	CO2	H				L		H			H		
	CO3	H			L			H	H	H	H	H	
	CO4						L						L
	CO5	H	H		H			H					
3	Category	PC											
4	Approval	Academic Council, Aug 2018

U18PCBT403	UNIT OPERATIONS	L	T	P	C
	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Engg Mathematics-I& III, Principles of Chemical Engineering				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To give a knowledge of heat and mass transfer					

UNIT IHEAT TRANSFER **9**

Modes of heat transfer- Derivation of Heat transfer through compound walland cylinder-Definition of Boiling, condensation and its types.

UNIT IIHEAT EXCHANGERS AND EVAPORATOR **9**

Heat exchanger- Theory of Shell and Tube heat exchanger and double pipe heat exchanger-Derivation of Overall heat transfer coefficient - LMTD.

Evaporator- Types: falling film- Climbing film. Forced circulation and Agitated film evaporator-Methods of feeding

UNIT IIIMASS TRANSFER **9**

Outline of Mass transfer operations- Derivation of Diffusion in Gases, Liquids & Solids. Distillation- Theory of Simple, Flash, Steam and Azeotropic distillation-McCabeThiele method

UNIT IVLEACHING **9**

Leaching- Theory of Moving bed leaching and Dispersed solid leaching. Liquid extraction- Mixer settler- Spray and packed extraction tower-Agitated extraction tower.

UNITVDRYING AND SIZE REDUCTION 9

Drying- Drying equipment: Tray, Screen-conveyor, Rotary and Spray dryer-Selection of drying equipment.

Size reduction -Laws- Work index-Size reduction equipment: Jaw crusher. Smooth roll crusher-Tumbling mill - Fluid energy mill - Knife cutters-open and Closed circuit operation

COURSE OUTCOMES (COs)													
CO1	to understand the basic concepts in heat transfer												
CO2	to know basic concepts of evaporation												
CO3	to know about mass transfer operations												
CO4	to know about leaching and extraction												
CO5	to know about various drying												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCBT404	**INTRODUCTION TO INDUSTRIAL BIOTECHNOLOGY**	**L**	**T**	**P**	**C**

	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Basic cell biology, genetics and biology				
	Course Designed by – Dept. of Industrial Biotechnology				

UNIT I INTRODUCTION 6

Introduction to Industrial Biotechnology - Objectives and Scope of IBT - Characteristics and comparison of bioprocessing with chemical processing – Isolation, screening, preservation and improvement of industrial microorganisms

UNIT II PRODUCTION OF PRIMARY METABOLITES 6

Process Technology, Industrial production of primary metabolites: ethanol, acetone-butanol, citric acid, acetic acid (vinegar), L-glutamic acid, vitamin B_{12}

UNIT III PRODUCTION OF SEONDARY METABOLITES 6

Microbial production of secondary metabolites: penicillin, streptomycin, tetracyclines, carotenoids, riboflavin

UNIT IV PRODUCTION OF INDUTRIAL ENZYMES AND OTHER PRODUCTS 6

Microbial production of industrial enzymes - glucose isomerase, proteases- Mushroom culture – Biofertilizer: bacteria, cyanobacteria, mycorrhizal fungal inoculants – Micropesticides: bacterial, viral, mycopesticides

UNITV APPLICATIONS OF BIOTECHNOLOGY 6

Human health care products: insulin, human growth hormone, interferon, monoclonal antibodies- Development of vaccines for immunity

COURSE OUTCOMES (COs)													
CO1	to understand the objective and scope of biotechnology												
CO2	to know the concept of cell culture techniques												
CO3	to comprehend DNA and its role in functioning of a cell												
CO4	to know the microbial production												
CO5	to get an idea about the applications of biotechnology

U18PCBT405	**BIOORGANIC CHEMISTRY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Basics of biochemistry				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of biochemical reactions, mechanisms and their applications from the perspective of engineers

UNITI INTRODUCTION TO BIOORGANIC CHEMISTRY 6

Basic considerations, Proximity effect, Molecular adaptation, Molecular recognition, supramolecular chemistry, Chemistry of living cells, Analogy between biochemical transformations and bioorganic reactions.

UNIT II BIOORGANIC CHEMISTRY OF AMINO ACIDS AND PEPTIDES 6

Chemistry of Peptide bond synthesis- Asymmetric synthesis of amino acids - different models, Transition state analogous, chemical mutations, site specific mutagenesis, Molecular recognition and drug design, Catalytic antibodies.

UNIT III ENZYME CHEMISTRY 6

Introduction to enzymes, Types of enzymes- Immobilized enzyme- Semi synthetic enzymes- Mechanism of enzyme action- Allosteric regulatory enzymes.

UNIT IVMETAL IONS IN BIOLOGICAL SYSTEMS 6

Metal ions in proteins -Role on Zinc in carboxy peptidase- Iron and oxygen transport in Haemoglobin- Metal ion act as co-enzymes & Co factors in a biological reaction & Respiratory chain

UNIT V MEMBRANE CHEMISTRY 6

Structure- Active & Passive transport- ATP driven pumps – Ligand gated channels – Voltage gated channels.

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of biochemical reactions in living organism
CO2	to apply the concept of structural relationship between chemical and biochemical reactions
CO3	to create the drug formulation and its structural analogs in living systems comprehend genetics and the immune system
CO4	to know the role of metal ions in biological components and their importance in living systems
CO5	to get a basic knowledge of membrane transport and their permeability

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCBT406	IMMUNOLOGY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – basics of immune system				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of biological defense mechanisms and their applications from the perspective of engineers

UNIT I **9**

THE IMMUNE SYSTEM

Introduction - antigens &their classification, complement and their biological functions, types of immune responses, Primary and secondary lymphoid organs-thymus, bone marrow and spleen

UNIT II **9**

HUMORAL IMMUNITY

B-lymphocytes and their maturation, activation &differentiation, structure and function of immunoglobulin, immunoglobulin classes, antibody mediated immune response and major histocompatibility complex.

UNIT III **9**

CELLULLAR IMMUNOLOGY

T -Lymphocytes their classification, maturation, activation & differentiation, antigen presenting, cells (APC), macrophages, langerhans cells, their origin and function, mechanisms of phagocytosis,Cell mediated immune response

UNIT IV **9**

ANTIGEN - ANTIBODY INTERACTION

Principle and application: Precipitation- Immuno diffusion &widal test, Agglutination reactions, Radio ImmunoAssay, ELISA, Immuno fluorescence technique, Immunoelecctrophoresis

UNITV **9**

TRANSPLANTATION AND AUTO IMMUNITY

Graft rejection, mechanisms of graft rejection and its prevention –hypersensitivity- Auto antibodies in humans,diseases- treatment of auto immune disorders

COURSE OUTCOMES (COs)													
CO1	to understand the fundamentals of immune system												
CO2	to apply the techniques for antigen and antibody reaction												
CO3	to give the mechanism of immune response against antigens												
CO4	to know the natural barrier against pathogens												
CO5	to get a basic knowledge of the applications of immunology in transplantation												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCBT407	RECOMBINANT DNA TECHNOLOGY	L	T	P	C
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Molecular biology, Cell biology, Microbiology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of recombinant mechanisms and their applications from the perspective of engineers

UNIT I CLONING 6

Introduction to Genetic engineering- Restriction enzymes, Restriction sites, Linkers and adapters. Markers for screening. Vectors- Characteristics- plasmid: EcoIi -.pBR 322, Cosmid-Shuttle vectors, Pblue script vectors ,Expression vectors, BAC, YAC, MAC. Characterizationof recombinant clones by Southern, Northern, Western Blotting

UNIT II CONSTRUCTION OF LIBRARIES AND NUCLEIC ACID LABELLING 6 Polymease Chain Reaction – types and applications. Semi quantitative and Real time PCR . Construction of genomic and cDNA libraries, Nucleic acid sequencing methods-Maxam Gilbert, Sanger dideoxy sequencing, Nick translation, RNA labeling and Fluorescent labeling. Genome mapping.

UNIT III APPLICATION OF rDNA TECHNOLOGY IN PLANTS 6

Method of gene transfer to plants- agrobacterium mediated / chemical mediated, Biolistics. Transgenic plants- Ri and Ti plasmids, Screening of recombinants-Direct and indirect methods, Single cell proteins using fungi.

UNIT IV APPLICATION OF rDNA TECHNOLOGY IN ANIMALS 6

Animal cloning, Ethical aspects of animal cloning,-Transgenic animals- sheep, goat, cattle, fish etc-Methods of gene transfer to animals-embryo transfer.

UNITV APPLICATIONS OF rDNA TECHNOLOGY IN INDUSTRY 6

Health care: Vaccines- DNA Vaccine, Recombinant vaccine. Hormones- insulin, Growth Hormone. Antibiotics - Streptomycin, Pencillin. Industrial enzymes – Amylase, protease

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of genetic engineering
CO2	to apply the concept of recombinant DNA IN plant, animal and microbial systems and growth in real life situations
CO3	to get the knowledge of molecular scissors and its role in creating transgenic products
CO4	Toknow the techniques related to screen the recombinant products
CO5	to get a basic knowledge of the applications of transgenes in agriculture, health care and biological products in relevant industries

U18MCTH402 Constitution of India – Basic features and fundamental principles 2 0 0 0

The Constitution of India is the supreme law of India. Parliament of India can not make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the "basic structure" of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of "Constitutionalism" – a modern and progressive concept historically developed by the thinkers of "liberalism" – an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state. The historic revolutions in France, England, America and particularly European Renaissance and Reformation movement have resulted into progressive legal reforms in the form of "constitutionalism" in many countries. The Constitution of India was made by borrowing models and principles from many countries including United Kingdom and America.

The Constitution of India is not only a legal document but it also reflects social, political and economic perspectives of the Indian Society. It reflects India's legacy of "diversity". It has been said that Indian constitution reflects ideals of its freedom movement, however, few critics have argued that it does not truly incorporate our ownancient legal heritage and cultural values. No law can be "static" and therefore the Constitution of India has also been amended more than one hundred times. These amendments reflect political, social and economic developments since the year 1950. The Indian judiciary and particularly the Supreme Court of India has played an historic role as the guardian of people. It has been protecting not only basic ideals of the Constitution but also strengthened the same through progressive interpretations of the text of the Constitution. The judicial activism of the Supreme Court of India and its historic contributions has been recognized throughout the world and it gradually made it "as one of the strongest court in the world".

Course content

Meaning of the constitution law and constitutionalism
Historical perspective of the Constitution of India

Salient features and characteristics of the Constitution of India

Scheme of the fundamental rights

The scheme of the Fundamental Duties and its legal status

The Directive Principles of State Policy – Its importance and implementation

Federal structure and distribution of legislative and financial powers between the Union and the States

Parliamentary Form of Government in India – The constitution powers and status of the President of India

Amendment of the Constitutional Powers and Procedure

The historical perspectives of the constitutional amendments in India

Emergency Provisions : National Emergency, President Rule, Financial Emergency

Local Self Government – Constitutional Scheme in India

Scheme of the Fundamental Right to Equality

Scheme of the Fundamental Right to certain Freedom under Article 19

Scope of the Right to Life and Personal Liberty under Article 21

U18PCBT4L1	**MICROBIOLOGY LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite- Microbiology, Molecular biology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of microbes and their applications from the perspective of engineers

LIST OF EXPERIMENTS

1. Laboratory rules and regulations
2. Isolation of Bacteria Soil
3. Motility of Bacteria
4. Staining techniques
5. Streak Plate techniques
6. Antibiotic sensitivity test
7. Isolation of Fungi
8. Water analysis by MPN
9. Milk Analysis
10. Biochemical Analysis

COURSE OUTCOMES (COs)	
CO1	to understand the source of microbes and their role in biotechnology
CO2	to get the knowledge of microbial diversity classification and morphology
CO3	to know the visualization of microbes by different microscopes
CO4	to know the cause, symptoms, diagnosis and treatment of diseases causing pathogens

CO5	to get a basic knowledge of the microbial nutrition and growth												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1		M		L					H		H	
	CO2	H						H					M
	CO3	H	H			H						H	
	CO4									L	H		
	CO5			M			L						L
3	Category	PC											
4	Approval	Academic Council, Aug 2018											

U18PCBT4L2	**BIOCHEMISTRY LAB II**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Biochemistry, Bioorganic chemistry				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of biochemical reactions, mechanisms and their applications from the perspective of engineers

LIST OF EXPERIMENTS

1. Preparation of casein from milk.
2. Separation of starch from potato.
3. Extraction of chlorophyll in plant tissue.
4. Extraction of lactose from milk.
5. Estimation of glucose from grapes.
6. Extraction of fructose from honey
7. Extraction of lycopene from tomato.
8. Acetylation of D-glucose.
9. Preparation of methyl salicylate from aspirin.
10. Preparation of aspirin from salicylic acid.

COURSE OUTCOMES (COs)													
CO1	to understand the fundamentals of biochemical reactions in living organism												
CO2	to apply the concept of structural relationship between chemical and biochemical reactions												
CO3	to create the drug formulation and its structural analogs in living systemscomprehend genetics and the immune system												
CO4	to know the role of metal ions in biological components and their importance in living systems												
CO5	to get a basic knowledge of membrane transport and their permeability												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	H	H	H		H	H				H

	CO2		H	H			M					M	
	CO3	H		M	M	H					M		
	CO4		L	L				L	L	L			L
	CO5			H	H		M			H		M	M

4	Approval	Academic Council, Aug 2018											

U18MCAB407Literature, Cinema and Media (workshop, reading multiple news sources,analyze ads**)**
0 0 2 0

The objective is to inculcate the habit of active (or interactive) consumption of the best content available in literature, films and media, rather than passive consumption. Description.
Literature is perhaps as old as history or may be older and it is difficult to think of a fully educated person without any exposure to the best of the world literature (not justthe literature of their own country or in their own language). Cinema is more recent and mass media is even more recent, but all these have a vital role in today's society. The problem is that the content available easily to most people (partly due to extensive promotion) caters to the lowest common denominator. Engineering students should be encouraged to read the best of the world literature and watch the best of the world cinema (regardless of their viewpoints). They should also be made aware that news is best collected from different sources, which don't necessarily agree, so that they can understand the true meaning of democracy and also learn to form educated opinions about various topics based on the information from diverse sources. They should learn that being opinionated without being properly informed (say, by relying only on one source of news on TV based on TRPs) is not the right way to be a good citizen. They should get the experience of their opinion being contradicted by the most reliable evidence, so that they realize that there is no shame in changing a wrong opinion in the light of overwhelming evidence. For that, they will also have to learn how to find out the degree of reliability of different sources. One way to achieve this is to conduct workshops where students, aided by invited experts, read news from different sources, watch the best cinema and read or watch different media sources. They can then discuss these with their peers and with the invited experts and learn to talk peacefully with people of different viewpoints, as well as learn to form their own opinions. They should then be encouraged to write about their takeaways from these discussions or their opinions and their reasons for forming those opinions. Such activities can counter the current culture of being 'trolls' on the social media, for example. Instead, we should have citizens who give due respect to their fellow citizens and learn to analyze, discuss and reach conclusions in an agreeable manner, without unnecessary feelings of bitterness and enmity.

Another related exercise could be to read or watch advertisements and then analyze them in terms of the biases they promote (such as the desirability of fair skin) or the deception they indulge in to psychologically compel consumers to buy things they don't really need. Some advertisements even promote the habit of treating fellow human beings with contempt for being different from them (even in terms of possessing the products they are promoting). A well-educated citizen should be less susceptible to such practices in advertisements. Advertisements are just one example. Something similar could be done with all kinds of propaganda material

U18MCAB408 Literature & Media Group Reading (saamuhikvaachan) of classics 0 0 2 0
This will make group to read one or two books during a semester.
Process: An hour may be fixed for a small group for a particular classic. Group sitsand each person reads aloud (if possible with proper modulation) taking turns. This if done properly for an hour one may complete 30-40 pages in an hour. A normal classic can be finished in 15 to 20 days. If serious books on philosophy etc. are taken up a discussion can be held after every idea is complete.

U18BSMA501	STATISTICS FOR BIOSCIENCE	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Engg Mathematics-I &II				
	Course Designed by – Dept. of Mathematics				

OBJECTIVES

To provide a basic knowledge of probability and statistics

UNIT I - INTRODUCTION TO BIO-STATISTICS (numerical problems only) 9

Introduction to Biostatistics - Applications of Biostatistics. Handling univariate and bivariate data – Measures of central tendency – Measures of dispersion –Skewness& Kurtosis – Correlation and Regression.

UNIT II - PROBABILITY & THEORETICAL DISTRIBUTIONS 9 Probability concepts – conditional probability – Bayes' theorem – one dimensional random variables – expectation, variance, moments. Theoretical distributions: Binomial, Poisson, Normal (Problems only).

UNIT III - TESTING OF HYPOTHESIS 9 Large sample tests based on normal distribution - Test for single mean, difference between means, proportion, difference between proportions, standard deviation, difference between standard deviation. Chi-square test for goodness of fit, independence of attributes.

UNIT IV - ANALYSIS OF VARIANCE 9

Small sample tests based on t and F distribution - Test for, single mean, difference between means, Paired t-test, test for equality of variances, ANOVA – one way classification, Two-way classification.

UNIT V- STATISTICAL QUALITY CONTROL AND RELIABILITY 9

Process control – control charts for variables - $\bar{X}$ and R, $\bar{X}$ and s charts. Control charts for attributes: p chart, np chart, c chart, Stability and Capability.

Reliability concepts, Failure rate analysis-calculation of MTFR and MTPR.

COURSE OUTCOMES (COs)	
CO1	Understand the computation of basic measures in Statistics
CO2	Understand the importance and the application of Probability in Engineering.
CO3	Various tools for testing the parameters based on samples.
CO4	How Design of Experiments are to be analysed.
CO5	Concepts of Process Control and various Charts to control the quality of products.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18HSBA502	**ORGANIZATIONAL BEHAVIOR**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite :				
	Course Designed by: Dept of Management Studies				

OBJECTIVES

1. Knowledge on theories of Personality
2. Clear sight on the Decision Making in Groups
3. Analyse the behaviour of individuals and groups in organizations in terms of the key factors that influence organizational behaviour. Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behaviour

UNIT **9**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

UNIT II **9**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behaviour.

UNIT III **9**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

UNIT IV **9**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

UNIT V **9**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

COURSE OUTCOMES (COs)													
CO1	Familiarity with the knowledge of Frame work of Organizational Behaviour												
CO2	Knowledge of the Interpersonal perception												
CO3	Awareness of the Merits and Demerits of Group decision making.												
CO4	Understanding of the Sources of power												
CO5	Familiarity with the knowledge of types of Conflicts												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18PCBT501	**PRINCIPLES OF BIOPROCESS TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Engg Mathematics-I, Engg Mathematics –II, Principles of chemical Engineering.				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To provide a basic knowledge of Process techniques in industries

UNIT I INTRODUCTION TO BIOPROCESSES 9

Historical development of bioprocess technology, Biotechnology & Bioprocess engineering- outline of Unit Operations involved in Upstream and downstream processing, generalized process flow sheets.

UNIT II GROWTH MEDIA AND STERILIZATION 9

Medium requirements for fermentation, Carbon, Nitrogen, Minerals, Vitamins, and other complex nutrients, medium formulation – Media- Types of media – Sterilization: Batch and continuous heat sterilization of liquid media- filter sterilization of liquid media- Sterilization kinetics- Del factor.

UNIT III STOICHIOMETRY OF MICROBIAL GROWTH 9

Stoichiometry of Cell growth and product formation- elemental balances- degrees of reduction of substrate and biomass-available electron balances-yield coefficients of biomass and product formation

UNIT IV INSTRUMENTATION AND CONTROL OF PROCESS PARAMETERS 9

Main parameters to be monitored and controlled in fermentation processes: Temperature, pressure, pH, flow, dissolved oxygen, dissolved CO_2- cell mass, cell number.

UNITV INDUSTRIAL BIOPROCESSES

Bioprocesses: Production of lactic acid, sugar, baker's yeast, High fructose corn syrup, bioethanol, biodiesel, biogas, Pharma product: penicillin, aspirin

COURSE OUTCOMES (COs)													
CO1	to understand the development of bioprocess techniques.												
CO2	to know about the instrumentation and control for bioprocess operations												
CO3	to get idea about media formulations												
CO4	to know about stoichiometry of bioprocess.												
CO5	to know about various bioreactors												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	M	H		H	H	H	H	M	L	M
	CO2	H	M	M	H							L	M
	CO3	H				H			H	L

U18PCBT502	CHEMICAL REACTION ENGINEERING	L	T	P	C
	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Engg Mathematics-I &II, Unit operations				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To provide a basic knowledge of Reaction engineering					

UNITI KINETICS OF HOMOGENEOUS REACTIONS 9

Scope of chemical kinetics, various types of reaction Basic terms and Definition: Rate, Rate law, Order, Molecularity , Elementary and Non Elementary reaction. Testing kinetic model for Non Elementary reaction theories of chemical reaction- temperature dependency theories.

UNIT II INTERPRETATION OF BATCH REACTOR DATA 9

Arrhenius law, Calculation of Activation energy, Rate, Rate constant-Constant Volume Batch reactor – Integral and Differential method of analysis- Analysis of total pressure data in constant volume system- Rate Equation: Irreversible Unimolecular I and II order and irreversible bimolecular II order (Equimolar and Non equimolar) .

UNIT III DESIGN OF SINGLE IDEAL REACTORS 9

Half-life period – Variable volume batch reactor .Constant Density & Changing Density Batch and Flow system – Design of ideal batch reactor – Space time and Space velocity – Design of MFR & PFR calculation of X_A, $\tau_{MFR,}$,τ_{PFR}

UNIT IV MULTIPLE REACTOR SYSTEM FOR SINGLE REACTIONS 9

Significance of choice of reactor system- Comparison of MFR with PFR I order & II order – Reactor in series: CSTR in series –Unequal size CSTR in series, Equal size CSTR in series – PFR in series. Non ideal reactors.

UNITV BIOREACTOR 9

Biochemical reaction: Bioprocess &Bio reaction- Cell multiplication kinetics- types of bioreactors- Some industrial application of bioprocess: Aerobic and anaerobic bioprocess.

TEXT BOOK:

1. K.A.Gavhane, 2009, "Chemical Reaction Engineering I" NiraliPrakasham Publications, 19th.

3	Category	PC											
4	Approval	Academic Council, Aug 2018											

U18MCTH503 UNIVERSAL HUMAN VALUES **2 0 0 0**

The objective of the course is four fold:

Sensitization of student towards self, family (relationship), society and nature.

Understanding (or developing clarity) of nature, society and larger systems, on the basis of human relationships and resolved individuals.

Strengthening of self reflection.

Development of commitment and courage to act.

At the end of the course, students are expected to become more aware of their surroundings, society, social problems and their sustainable solutions, while keeping human relationships and human nature in mind. They would have better critical ability. They would also become sensitive to their commitment towards what they believe in (humane values. humane relationships and humane society). It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction.

	MOLECULAR BIOLOGY AND GENETIC ENGINEERING LAB	**L**	**T**	**P**	**C**
U18PCBT5L1	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Molecular biology,rDNATechnology,Microbiology.				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of recombinant mechanisms and their applications from the perspective of engineers

LIST OF EXPERIMENTS

1. Extraction of plant genomic DNA by Dellaporta method.
2. Extraction of animal DNA.
3. Extraction of bacterial genomic DNA.
4. Isolation of plasmid DNA by alkaline lysis method.
5. Extraction of fungal DNA.
6. Quantitative estimation of DNA.
7. Effect of UV radiation on bacterial survival.
8. Agarose gel electrophoresis.
9. Restriction digestion and ligation of DNA.
10. DNA amplification by PCR.

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of genetic engineering
CO2	to apply the concept of recombinant DNA IN plant, animal and microbial systems and growth in real life situations
CO3	to get the knowledge of molecular scissors and its role in creating transgenic products
CO4	to know the techniques related to screen the recombinant products.
CO5	to get a basic knowledge of the applications of transgenes in agriculture, health care and biological products in relevant industries

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18PCBT5L2	**CHEMICAL ENGINEERING LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – principles of chemical engg,chemical reaction engg,mechanicaloperations, Mass&Heat Transfer				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES:To provide a knowledge about heat, mass transfer and reaction kinetics					

LIST OF EXPERIMENTS

1. Batch Reactor I& II
2. Multiple reactor system
3. Drying studies in Tray dryer
4. Simple Leaching
5. Adsorption
6. Heat transfer through Natural convection
7. Heat transfer through Forced convection
8. Heat transfer through composite wall
9. Size reduction and Sieve Shaker Analysis

10. Magnetic Separator
11. Analysis of chloride content in Cement
12. Analysis of chlorine content in Bleaching Powder

COURSE OUTCOMES (COs)													
CO1	to get knowledge about reactor kinetics												
CO2	to know about drying equipment												
CO3	to get idea about heat transfer												
CO4	to know about mass transfer operations												
CO5	to understand about mechanical operations												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

Self Development

U18MCAB509 SPIRITUAL, MINDFULNESS AND MEDITATION 0 0 2 0

The human mind especially among the youth needs to transcend its preoccupation with negative experiences such as fear, anxiety, anger and obsession and to become more comfortable with the experience of compassion, acceptance and forgiveness. The student's attitude of acceptance towards negativity, aggression and turbulent emotions should be diffused with the practice of mindfulness. Rather than suppressing emotions or by indulging in them, the student be taught to handle such vibes with acceptance and generosity and with the observation of the self.

A mindful state has to be achieved when negative thoughts and experiences are becoming more personalized and do not serve as dictators of subsequent feelings and activities (e.g. suicide attempts, violence etc.). Both concentrative and insight meditation techniques may be practiced for 10-day sessions during every two months. Behavioral techniques of self monitoring should also be practiced to observe the stream of consciousness from the perspective of a vigilant but detached observer.

The students should be trained to practice different models of mindfulness and meditation so as to elicit a state of deep physical and behavioral relaxation. They may work on selectively influencing or changing the symmetry in hemispheric brain activity. Positive addiction, meta -cognitive practices etc. are exercised to make the students experience the universal human capacity through spiritual experiences.

The students may learn to turn-off or bypass the cognitive processing of usual daily pre-occupations and concerns, allowing access to mindful, spiritual and meditative state of self realization.

Activities:

Reading (10 books/ narrations)

Exercises (Mindfulness based Stress Reduction (MBSR) and 10 more) Sessions:
multiple 10-day sessions may be organized over a semester.

U18MCAB510 RELIGION AND INTER-FAITH 0 0 2 0

The objective is to gain knowledge about the beliefs and philosophies of different religions on issues like environment, gender equality, unity, financial equality etc.

The scholars of different religious and philosophical sects should be invited to talk about the issues mentioned above. Efforts should be made to ensure that such talks and discourses should stay clear-off making a critical study on these areas.

Following activities must be included.

Reading of books on religious texts of different faiths by famous authors. (Reading methods may be as suggested under 'book reading'.)

Organizing lecture on interfaith issues covering philosophies and chronology and contemporary situations world over at a given time.

U18PCBT601	**ANIMAL BIOTECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Molecular biology, Genetic engineering, Microbiology, Immunology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of biological mechanisms and their applications from the perspective of engineers

UNIT I INTRODUCTION 9

History of animal cell and organ culture-requirements for animal cell and organ culture-characteristics of animal growth in culture-substrates for cell culture and its treatment-culture media-natural and synthetic media- sterilization of glassware, equipment and culture media.

UNIT II ANIMAL CELL CULTURE 9

Equipment required for animal cell culture-isolation of animal material- disaggregation of tissue by physical and enzymatic methods- establishment of cell culture-evolution of cell lines-primary and secondary cell culture-types of cell lines-factors affecting subculture in vitro.

UNIT III SUSPENSION CULTURE 9

Cultivation of animal cells in bioreactor-Suspension cultures-methods of scaling up of cell culture-roller bottle-spinner culture-immobilized cell culture-insect cell culture-somatic and organ cell culture- organ culture on plasma clots, agar and liquid medium-whole embryo culture-production of commercially valuable products obtained from animal and insect cell culture-hybridoma technology.

UNIT IV MANIPULATION OF REPRODUCTION 9

Manipulation of reproduction in animals-artificial insemination-semen collection and storage-ovulation control-embryo transfer-multiple ovulation and embryo transfer-embryo splitting and sexing-in vitro fertilization-nuclear transplantation-problems related to test tube babies-infertility in humans.

UNIT V TRANGENICS 9

Techniques of gene transfer in animals-transgenic animals- transgenic sheep and fish-knockout mice-animal bioreactor and molecular farming-diagnosis, elimination and breeding strategies of genetic diseases-PCR based markers-xenotransplantation-mapping of human genome-bioethics in animal genetic engineering.

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of animal cells and culture
CO2	to apply the techniques for animal cell culture and its types
CO3	to comprehend genetics system
CO4	to know the large scale of cell cultures in a bioreactor
CO5	To know about the immune system

U18PCBT602	**ENZYME ENGINEERING AND TECHNOLOGY**	**L**	**T**	**P**	**C**

	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Biochemistry, Unit operation, Chemical reaction engg.				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a knowledge about enzymes and its kinetics

UNITI INTRODUCTION **9**

Introduction- chemical nature of enzyme, coenzyme, cofactor, holoenzyme - Naming and classification- advantages and disadvantages of enzyme catalysis- historical highlights- application of enzymes in Pharma, food and other industries.

UNITIIENZYME KINETICS **9**

Mechanism of enzymatic reaction – Michaelis -Menten Kinetics, Briggs-Haldane approach – Lineweaver-Burk plot, Eadie-Hofstee and Hanes plot - Enzyme inhibition – kinetics of competitive and non-competitive inhibition-un competitive inhibition.

UNIT III CELL GROWTH

Typical growth characteristics of microbial cells: Phase of growth curve, factors affecting growth- Monod model.

UNIT IV IMMOBILIZATION OF ENZYME AND CELL **9**

Immobilization Of Enzymes: Carrier binding: physical adsorption, ionic binding, covalent binding – cross linking method- Entrapping of enzyme- Uses of immobilized enzymes. Immobilization of cell.

UNIT V PRODUCTION AND PURIFICATION

Fermentation-Types: submerged fermentation, solid state fermentation, advantages and disadvantages- scale up – scale down. Purification: precipitation, drying, crystallization.

COURSE OUTCOMES (COs)	
CO1	to understand the applications of enzymes in various fields
CO2	to know about enzyme inhibition
CO3	to know about kinetics of enzyme
CO4	to know about immobilization and its applications
CO5	to get knowledge about transport in cell

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18HSBT601	**BIOENTREPRENEURSHIP DEVELOPMENT**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Professional Courses				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide basic knowledge about Entrepreneurship					

UNIT I ENTREPRENEURSHIP FUNDAMENALS 9

Entrepreneur – Entrepreneurship – Enterprise – Writing good business plan – operations and management.

UNITII DECISION MAKING AND TIME MANAGEMENT 9

Entrepreneur psychology – personal decision making style – Decision making process – setting personal and Business goals – Setting time priorities – Business person working at home.

UNIT III FINANCE AND ECONOMIC FEASIBILITY 9

Financing the business– Raising venture capital – Financing sources – Pricing the product (or) Service – operating expenses Economic Analysis – Basic financial Analysis worksheets

UNIT IV COMPANY LAWS AND REGULATIONS 9

Forming company – Types of companies – Types of market – Proprietary information: Intellectual property, copy right, ownerships, Trademark, Patent – International Trade

UNIT V ENTREPRENEURSHIP IN BIOTECHNOLOGY 9

Various business opportunities in Biotechnology – Development of Biotech companies in India – Case studies on Biotech companies and its growth

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of Entrepreneurship
CO2	to know about time management
CO3	to explore the avenues for financing a business venture
CO4	to know about various company laws
CO5	to understand Entrepreneurship in biotechnology
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low	

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

TEXT BOOK

1. Exploring Entrepreneurship: D. Allan Barefield and George F. Smith, Ettmae Westbrook, Tennesse State University, 2006

REFERENCE BOOK

1. Entrepreneurship fundamentals by ZobiasKollmann International journal of Technology management,2007

U18PCBT603	BIOPROCESS ENGINEERING	L	T	P	C
	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Chemical reaction engg., Unit operation, Animal biotechnology, Plant biotechnology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES:

To provide a knowledge about various bioprocesses and the designing of reactor

UNIT I MASS TRANSFER IN BIOPROCESS SYSTEM 9

Role of diffusion in bioprocess- Film theory- Oxygen uptake in cell culture, factors affecting cellular Oxygen demand, Oxygen transfer from gas bubble to cell, Measuring DO concentration, measurement of K_La .

UNIT II DESIGN AND ANALYSIS OF BIOPROCESSES 9

Methods of on-line and off-line biomass estimation; microbial calorimetre; Flow injection analysis- -Biosensor.-PIDcontrol, computers in Bioprocess control. Homogeneous Reaction: Production kinetics in cell culture-Substrate Uptake rate-Effect of culture condition on cell kinetics-determination of cell kinetic parameters from batch data

UNIT III MIXED CULTURE IN BIOPROCESS 9

Introduction: competition, neutralism, mutalism, commensalism, predation, parasitism- mixed culture in nature- industrial utilization of mixed culture: waste water treatment, advanced waste water treatment process – conversion of waste water to useful product

UNIT IV MODERN BIOTECHNOLOGICAL PROCESSES 9

Modelling of recombinant bacterial cultures; Bioreactor strategies for maximizing product formation; Bioprocess design considerations for plant and animal cell cultures.

UNITV MODELLING AND SIMULATION OF BIOPROCESSES 9

Study of Structured models for analysis of various bioprocesses; Computer based data acquisition, Monitoring and control- Lab view software, MATLAB-SIMULINK

COURSE OUTCOMES (COs)													
CO1	to know basic concepts in bioprocess engineering												
CO2	to know different types of plant and animal cell bioreactors												
CO3	to understand basic concepts in transport phenomena in bioprocessing												
CO4	to get knowledge about bioreactor design												
CO5	to know about modern biotechnological processes												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18MCTH604 Essence of Indian knowledge Tradition 2 0 0 0

Outcome: Ability to understand, connect up and explain basics of Indian traditional knowledgein modern scientific perspective.

U18PCBT6L1	**BIOPROCESS ENGINEERING LAB 1**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Bioprocess Engg., Unit Operation				

	Course Designed by – Dept. of Industrial Biotechnology
OBJECTIVES: To provide basic knowledge about bioprocessing	

LIST OF EXPERIMENTS

1. Culturing of different types of microorganism
2. Estimation of biomass production.
3. Enzyme kinetics.
4. Effect of temperature on enzyme activity.
5. Effect of pH on enzyme activity.
6. Effect of substrate concentration on growth of *E.coli.*
7. Immobilization of enzyme.
8. Estimation of k_La by sulphite oxidation method.
9. Thermal death kinetics of yeast.
10. Thermal death kinetics of bacteria.

COURSE OUTCOMES (COs)													
CO1	to get knowledge on biomass												
CO2	to know about enzyme kinetics												
CO3	to understand about immobilization of enzyme												
CO4	to get idea about mass transfer												
CO5	to know about death kinetics

U18PCBT6L2	**PLANT AND ANIMAL BIOTECHNOLOGY LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Plant biotechnology, Animal biotechnology, Genetic engineering				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of plant and animal cell culture techniques					

LIST OF EXPERIMENTS

1. Sterilization techniques.
2. Plant tissue culture techniques.
3. Preparation of culture medium
4. Callus induction in *Daucuscarota.*
5. Nodal bud culture.
6. Micropropagation of rose.
7. Rooting and hardening of regenerated shoots.
8. Isolation and purification of protoplast from *Aloe vera*leaf mesophyll cells.
9. Determination of protoplast viability using Evan's blue staining.
10. Protoplast fusion using PEG.
11. Preparation of synthetic seeds.
12. Isolation of Rhizobium from ground nut nodules.
13. Preparation of Rhizobialbiofertilizer.
14. Aseptic techniques for animal cell culture.
15. Establishment of a primary culture.
16. Resuscitation of frozen cell lines.
17. Subculture of adherent cell lines.

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of plant biotechnology
CO2	to know about sterilization techniques
CO3	to know about plant tissue culture
CO4	to know about animal cell culture
CO5	to get a basic knowledge of the applications using plant biotechnology

Mapping of Course Outcomes with Program outcomes (POs)

U18PCBT6L3	**IMMUNOLOGY LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Immunology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES
To provide a basic understanding of biological defense mechanisms and their applications from the perspective of engineers

LIST OF EXPERIMENTS

1. SDS- Slab gel electrophoresis of immunoglobulins
2. Western blotting
3. Immunoelectrophoresis
4. Countercurrent Electrophoresis
5. Rocket Immunoelectrophoresis
6. Single radial immunodiffusion
7. Double immunodiffusion
8. Dot- ELISA
9. DEAE cellulose chromatography for IgG.
10. Affinity chromatography for antiserum purification.

COURSE OUTCOMES (COs)													
CO1	to understand the fundamentals of immune system												
CO2	to apply the techniques for antigen and antibody reaction												
CO3	to give the mechanism of immune response against antigens												
CO4	to know the natural barrier against pathogens												
CO5	to get a basic knowledge of the applications of immunology in transplantation												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	M	H	M		M	H	M	M		L

U18MCAB611 SOCIAL AWARENESS (Artisans-relates to engg., visit to hospitals, orphanages, policestation, courts, trauma centers, consumer forums) **0 0 2 0**

Human beings live in relationship with their family members and with others in the society. As a society, mankind strives to achieve ordered and organized life through which an environment of cooperation and coexistence is expected. A healthy society creating an environment of fearlessness is a key for the mankind to achieve higher goals because it is society which makes us most human, most complete as people.

Although as a society, our expectation is fearlessness, but due to lack of understanding of our role in a society, we fail to fulfill the expectation. The social awareness activity shall promote an understanding and sharing of issues of societal problem through exposure to variety of artisans and different kind of organizations. It is expected that this exposure will enable the learners to appreciate social issues, problems and challenges.

Each institution will offer a range of introductory activity based courses focusing on local artisans related to engineering so that students are sensitized to appreciate their problems and can take up some of the problems to solve while they do their regular studies. This course shall also include visits to visit to hospitals, orphanages, police station, courts, trauma centers, consumer forums so that they get exposed to different facets of societal problems. Care should be taken to give adequate representation to local and regional organizations and artisans. For example, Banaras has local traditions in *BanarasiSaari*, Toy making, etc and has almost all types of organizations. An institution in Banaras area can offer courses on these artisans. This will, in turn, also ensure wider community involvement/interaction with the institution. At the end of the course/semester, a student should be able to identify a social issue, prepare project report and give presentation on the selected issues. Contact hours per week should be 3 -4 hours. Towards the end of the course, the institution can organize an exhibition in which all the students publicly demonstrate findings of their reports and their future plan of actions.

U18MCAB612 SOCIAL SERVICE (teach in neighborhood, adopt an underprivileged school, villagestay / visit (NSS), cleanliness drive, and skill transfer**)** **0 0 2 0**

U18PCBT701	DOWNSTREAM PROCESSING	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Unit Operation, Bioprocess engineering				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide basic knowledge about various separation techniques in bioprocesses

UNIT I ROLE OF DOWNSTREAM PROCESSING IN BIOTECHNOLOGY 9

Role and Importance of downstream processing in biotechnological processes- Problems and requirements of bioproduct purification-Economics of downstream processing in Biotechnology, cost - cutting strategies, characteristics of biological mixtures, Downstream processing steps for various classes of bioproducts (high volume, low value products and lowvolume, high value products), physico- chemical basis of bioseparation processes.

UNIT II PRIMARY SEPARATION AND RECOVERY PROCESSES 9

Cell distribution methods for intracellular products, removal of insolubles, biomass (and particulate debris) separation techniques, flocculation and sedimentation, centrifugation and filtration methods.Basic problems to calculate time of filtration, medium and cake resistance – centrifugation problem.

UNIT III ENRICHMENT OPERATIONS 9

Membrane separations (micro and ultrafiltration theory, and configuration of membrane separation equipment) applications, precipitation methods - extractive separations, aqueous two phase extraction, supercritical extraction- *insitu* product removal, integrated bioprocessing.

UNIT IV PRODUCT RESOLUTION/FRACTIONATION 9

Adsorptive chromatographic separation processes, electrophoretic techniques.

UNIT V PRODUCT POLISHING 9

Gel Permeation Chromatography, dialysis, Crystallization: nucleation, crystal growth and crystallization equioment.

COURSE OUTCOMES (COs)	
CO1	to understand the unit operations involved in downstream
CO2	to know about various separation processes
CO3	to know about the product recovery and purification techniques
CO4	to understand the unit operations involved in downstream
CO5	to know about various separation processes

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCBT702	RESEARCH METHODOLOGY AND INSTRUMENTATION	L	T	P	C
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Biochemistry, Instrumental method of analysis, Downstream processing				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide basic knowledge about various instrumentation techniques and data documentation

UNIT I BASIC PRINCIPLES FOR BIOCHEMICAL ANALYSIS 9

Introduction – preparation of organ and tissue samples for analysis – cell disruption methods – physiological solutions: buffers and growth media for plants, animals and microbes –cell sorting, isolation and enumeration techniques – cryopreservation – elucidating metabolic pathways by tracer studies.

UNIT II SPECTROSCOPIC AND MICROSCOPY TECHNIQUES 9

Introduction – UV – visible spectroscopy – NMR spectroscopy – IR and Raman spectroscopy – atomic spectroscopy - Introduction to microscopy – Electron microscopy –ultramicrotome- phase contrast microscopy – Fluorescent and confocal microscopy.

UNIT III SEPARATION TECHNIQUES 9

Introduction to chromatography and electrophoresis – gel filtration – ion exchange – affinity – GC – HPLC - partition chromatography – electrophoresis of proteins and nucleic acids – immune precipitation techniques – ELISA.

UNIT IV ETHICAL ISSUES IN BIOTECHNOLOGY 9

Legal and socio economic impacts of biotech research – bio safety regulation – r-DNA guidelines- issues involved in experimenting with animals – Experimental protocol approvals – impact of GM organisms and GM foods – IPR and patents.

UNIT V DATA ANALYSIS AND DOCUMENTATION 9

Sampling concepts for statistical analysis – Mean, median, standard deviation, standard error – ANNOVA – Guidelines for thesis writing: literature collection methods – writing of abstract, introduction and review of literature – results, discussion and summary – guidelines to publish articles in journals.

COURSE OUTCOMES (COs)													
CO1	to understand the biochemical analysis												
CO2	to know about spectroscopic and microscopic techniques												
CO3	to know about the separation techniques												
CO4	to get ideas about ethical issues related to research												
CO5	to know about data documentation												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18PCBT703	**NANOBIOTECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Biotechnology, Molecular biology				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide basic knowledge about nanoscience involved in biotechnology					

UNIT I INTRODUCTION 9

Introduction to nanobiotechnology –Synthesis & characterization of nanoscale molecules – Nanoarchitecture – Fabrication technologies – Self-assembly systems

UNIT II NANODEVICES 9

Inorganic nanoscale systems – Properties of fullerene carbon nano tubes – Quantum dots – Gold nanoparticles – Magnetic nanoparticles – Nanopores.

UNIT III NANOBIOMATERIALS 9

Interaction of nanomaterial and biomolecule: Classification of biomaterial – Bone cement – Biointeractive hydrogels – Nanobiomaterials: Collagen, Dextran, Hydroxyapetite – Role of nanoparticles in blood clotting – Nanomotors.

UNIT IV MICROBIAL NANOTECHNOLOGY 9

Nanotechnology and microorganisms: PHA – Magnetosomes – Cyanophycin inclusions – Alginates – Bacteriophages – Bacterial spores – S-layer proteins – Bacteriorhodopsin.

UNIT V NANOMEDICINE 9

Nanotechnology in drug delivery – Nanoscale devices for drug delivery: Micelles, Nanocapsules, Lipososmes, Dendrimers –Nanobiosensors – Nanotechnology for cancer diagnosis & treatment.

COURSE OUTCOMES (COs)													
CO1	to understand the various nano devices												
CO2	to know about nano molecules												
CO3	to learn the applications of nanotechnology in proteins, lipids and nucleic acids												
CO4	to know about the applications of nanotechnology in microbiology												
CO5	to know about nano technology involved in drug delivery system												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCBT7L1	**BIOPROCESS ENGINEERING LAB II**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Microbiology, Bioprocess Engineering, Biochemistry				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To provide knowledge about production of bioproducts					

LIST OF EXPERIMENTS

1. Plate assay
2. Media optimization by Plackett-Burmann method
3. Solid state fermentation.
4. Production of wine
5. Estimation of alcohol concentration in wine.
6. Estimation of acid concentration in wine.
7. Production of soap and analyze its properties.
8. Production of biodiesel and analyze its properties.
9. Production of citric acid
10. Production of biofertilizer.

COURSE OUTCOMES (COs)													
CO1	to know about media formulation												
CO2	to know about media sterilization												
CO3	to understand about Solid State Fermentation												
CO4	to get basic idea about production of natural wine and biofuel												
CO5	to get basic idea about production of soap												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Downstream Processing, Microbiology, Unit Operation				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To provide knowledge about purification of bioproducts					

LIST OF EXPERIMENTS

1. Isoelectric precipitation
2. Settling characteristics
3. Flocculation (Jar Test)
4. Solids Recovery by Centrifugation
5. Paper chromatography
6. Thin Layer Chromatography
7. Ion –Exchange Chromatography
8. Affinity Chromatography
9. Gel Filtration
10. Desalting of Protein Sample by Gelfiltration
11. Sonication
12. Crystallization
13. Aqueous Two Phase Extraction Of Proteins
14. Enzyme Purification by Salt precipitation Method.

COURSE OUTCOMES (COs)													
CO1	to know about precipitation technique												
CO2	to understand about flocculation and settling												
CO3	to get basic idea about chromatographic techniques												
CO4	to get basic idea cell disruption												
CO5	to know about extraction												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18MCAB713 Behavioral and Interpersonal skills (non-verbal skills / behaviours, non-aggression**)**

0 0 2 0

Each individual has behavior patterns that are shaped by the context of his or her past. Most often, adapting the behaviour to the changing context of the reality a person lives in becomes difficult which may lead to the reduction in personal effectiveness and natural self-expression. The main focus of this course is to equip the students with useful approaches to help in the deeper understanding of self and help individuals empower themselves to be the source of their own growth and development. The course will help students to learn effective communication skills, Group and team building skills and will help them learn the goal setting process and thus become more effective in achieving their goals.

The broader objective of this course is to make the students aware about the different facets of self and to help them learn skills to strengthen their inner capacities. So that they are able to understand themselves, think and act effectively, to be able to communicate in an effective manner and to learn to lead and to form an effective team. The specific objectives, however, are as following.

To help the students to understand their real self by recognizing different

aspects of their self-concept that will lead to an increased self-confidence.

To train the students for communicating effectively in both formal as well as in informal settings.

To help the students to understand the importance of non-verbal aspects of effective communication.

To help the students to understand Emotion and emotional intelligence, Managing ones' own emotional reservoirs, effective dealing with emotions at work

To facilitate the students in understanding the formation and function of group and team and to help them to learn the skills of a successful leader.

To help the students in understanding and practicing the goal setting process by recognizing the importance of each step involved in goal setting. The activities involved are designed to facilitate their career goal decision making.

The activities to achieve the above objectives can be suggested as follows.

Motivational lectures

Group Discussions/activities

Case Study

Games/Stimulation Exercises

Role-Playing
Mindfulness training.

U18MCAB714NATURE CLUB (bird watching, recognizing plants at institute/at home, recognizinglocal animals, appreciating biodiversity) **0 0 2 0**

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.
Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place.

Making high resolution big photographs of small creatures (bees, spiders, ants. mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants).

Videography/ photography/ information collections on specialties/unique features of different types of common creatures.

Search and explore patents and rights related to animals, trees etc. Studying miracles of mechanisms of different body systems.

U18MCAB815INNOVATION **0 0 2 0**

Project based – Sc., Tech, Social, Design & Innovation

Many students, when they enter engineering, are full of enthusiasm to understand new areas, to build systems and to experiment and play with them. This enthusiasm is to be tapped and to direct it to exploration and sustained pursuit by the student which may result in development of a working system, a prototype, or a device or material, etc. They are not required or even expected to produce research or an innovation.
Students may be encouraged to take up projects which are aimed at providing solutions to societal problems, reduce drudgery and improving efficiency in rural work, green technologies, utilization of rural and urban waste, sanitation and public health, utilizing non -conventional energy sources, technologies for the benefit of the differently abled people and technologies ready to be implemented in the Institute.
Two types of activities may be undertaken under this

Exposure to social problems (which are amenable to technological solutions)

Design & Innovation (to address above problems)

After this students be encouraged to undertake technology projects of social relevance.

PROFESSIONAL ELECTIVE I

U18PEBT011	**BASIC HUMAN NUTRITION**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Biotechnology, Biochemistry				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of genomics and proteomics using software and their applications from the perspective of engineers

UNIT I NUTRITIONAL SCIENCE 9

Nutritional science – historical perspective, Importance and functions of food, Food constituents : carbohydrates, proteins, lipids

UNIT II IMPORTANCE AND FUNCTION OF FOOD 9

Importance and functions of food minerals and vitamins-their role and functions, dietary requirements of food for infants, pre-school children, adults, Pregnant and nursing mothers. Under nutrition and malnutrition.

UNIT III NUTRITION AND GENETICS 9

Nutrition and aging, Nutrition and human genetics– genetic determinants of nutrient needs, genetic abnormalities, racial differences in nutrient needs.

UNIT IV NUTRITION AND IMMUNE SYSTEM 9

Nutritional processing, the frequency of genetic abnormalities, gene stability, genetic change and carcinogenesis, genetic basis of obesity, nutrition and immune system, nutritional disorders, Food in relation to health and diseases.

UNIT V FOOD POLICIES 9

Inborn errors of metabolism.Losses of vitamins and minerals due to food processing.Food pattern. Food policies – applied nutrition programme.

COURSE OUTCOMES (COs)	
CO1	To know about importance of food
CO2	To give knowledge about functions of food
CO3	To understand about human nutrition and genetics
CO4	To give knowledge about food and immune system
CO5	To understand about various policies about food

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	M	H	M		M	M		L		M
	CO2	H		M	H	H		M			L	L	M
	CO3		M		H	H	H	M		M	L	L	M
	CO4	H	M		H	H		M	L		L	L	
	CO5	H	M	M	H	H		M		L	L		M

3	Category	PC
4	Approval	Academic Council, Aug 2018

TEXT BOOK

1. Text Book of Human Nutrition by Bamji M.S., Oxford IBH.

REFERENCE BOOKS

1. Human Nutrition and Dietetics by Garrow, J.S., James, W.P. T. and Ralph, A. 2000. Churchill Livingstone, Edinburgh.
2. Human Nutrition by Barasai.
3. Food Science and Human Nutrition by Swaminathan Vol.1-2.

U18PEBT012	**MEDICAL BIOTECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Immunology, physiology, animal biotechnology				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of biological systems and their applications from the perspective of engineers

UNIT I HUMAN GENETICS 9

Genes and Chromosome- structure, function and inheritance- Repetitive DNA in human genome-Alu, LINE and SINE repeats- Congenital abnormalities, Clinical aspects of autosomal and sex chromosomal disorders. Gene therapy and its types

UNIT II HUMAN PHYSIOLOGY 9

Structure, types and functions of tissues and muscles-Biological functions and abnormalities of digestive system, circulatory system, excretory system and central nervous system

UNIT III HORMONES 9

Hormones- structure, classification, biosynthesis and circulation in blood- Synthesis transport and biological functions of pituitary hormones, thyroid hormones and pancreatic hormones

UNIT IV CLINICAL BIOCHEMISTRY 9

Blood sugar level in diabetes mellitus- Blood pressure and cholesterol level in heart attack-Clinical significance of diagnostic enzymology- Evaluation of renal, pancreatic, liver and intestinal function

UNIT V GERM LINE ENGINEERING 9

Characteristics and diagnostic applications ofstem cell culture, organ culture, embryo culture – Artificial blood- Genetic counseling-Artificial insemination, IVF and embryo transfer in humans- Egg and sperm Preservation banks

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of genetics and their relationship to hereditary disorders
CO2	to apply the concept of plant, animal and microbial systems in discovery of medicine
CO3	to comprehend genetics and the immune system
CO4	to know the cause, symptoms, diagnosis and treatment of common diseases
CO5	to know the cause, symptoms, diagnosis and treatment of common diseases
Mapping of Course Outcomes with Program outcomes (POs)	

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	ENVIRONMENTAL BIOTECHNOLOGY	L	T	P	C
U18PEBT013	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Biochemistry, Microbiology, Environmental Studies				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide basic knowledge about environmental issues related to bioprocess and its remedial measures

UNIT I MICROBIOLOGY OF AIR AND WATER 9

Microbial Contamination of air-Enumeration of bacteria in air-Air Sampling devices-Air Sanitation and purification methods-Determination of Water quality-Bacteriological examination of water-indicator organisms-Water borne pathogens

UNIT II MICROBIOLOGY OF SOIL 9

Microbial flora of soil, Growth, Ecological adaptation, Interaction among soil microorganisms-Microorganisms involved in nitrogen fixation, Positive and negative role of microbes.

UNIT III DETOXIFICATION 9

Detoxification of Hazardous chemicals-Biocatalyst for pesticide Detoxification- Bioremediation: Bioremediation of Persistent chemicals-Improving catabolic processes, Biosorption of Heavymetals-Bioremediation of oil spills, Bio deterioration of paper, Textile, sugar distilleries, diary industries.

UNIT IV BIOWASTE UTILIZATION 9

Biotechnology for biowaste conversion in to bioresources-Single cell protein, Mushroom, Algal growth for fisheries, and Aqua culture- Industrial waste recycling -Waste fueled furnaces.

UNIT V BIOSAFETY AND IPR 9

Intellectual Property, Rights in bioremediation, Biosafety-Microbiology. Medical Laboratory-Medical waste- Bioharzardous waste-Sharps-Pathological waste-Rules and Regulations-Biosafety protocol

COURSE OUTCOMES (COs)

CO1	to understand the microbiological concepts in air
CO2	to know about various bioremediation techniques
CO3	to know about biosafety
CO4	to know about microbiology of water
CO5	to get idea about microbiology of soil

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

PROFESSIONAL ELECTIVE II

U18PEBT021	**DAIRY TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Bioprocess, Food process engineering				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To explore the different techniques involved in diary science

UNIT I INTRODUCTION 9

Market milk – market milk industry in India – Collection, Transportation of milk- milk reception – Clarification- Chilling – Homogenization – Sterilization- Pasteurization – UHT processing of fluid milk – aseptic packaging – Special milk – Clean Milk Production – Grading of Milk.

UNIT II DAIRY PRODUCTS 9

Fat rich Dairy products – Cream, preparation, types, defects – Butter preparation, types, defects – Butter Spreads- Preparation of Ghee , defects in ghee- AGMARG standards- Frozen dairy products – Manufacture of Ice Cream: Ingredients and their role, types and defects, Judging and grading of Cream, Butter and Ice Cream. Concentrated and dried milk Products- Condensed milk – Evaporated milk – BIS standards –defects- Manufacture of milk powder- whole milk, skim milk powder- spray drying – whey powder- whey protein concentrates- biodiesel from whey.

UNIT III CHEESE AND FERMENTED PRODUCTS 9

Cheese and fermented products- Classification- preparation of cheddar, cottage, mozzarella and processed cheese- cheese spreads- ripening – accelerated ripening- action of rennet – microbial rennet – milk coagulating enzymes – defects in cheese, causes and control measures- fermented milk products – Manufacture of Dahi- yogurt- shrikhand- therapeutic effects of fermented milk products- functional foods- probiotics - prebiotic -symbiotic.

UNIT IV INDIGENOUS MILK PRODUCTS 9

Indigenous milk products and by products – Channa – Chana based products – preparation of Khoa and Khoa based products – peda- Gulabjamun – Rasagolla – preparation of paneer – kulfi – utilization of skim milk – butter milk – whey.

UNIT V QUALITY CONTROL AND QUALITY ASSURANCE 9

Introduction- Cleaning and Sanitation – Sterilization agent- Can Washing- Manual & Mechanical washing – Washing treatments – Cleaning in Place Programmes (CIP) – Packaging of milk & Milk Products – Function- Packaging Material – Filling system – Aseptic Packaging

COURSE OUTCOMES (COs)	
CO1	To study the process involved in the marketing of milk
CO2	To learn about the processing of butter and skim milk powder
CO3	To understand the steps involved in cheese making
CO4	To learn to prepare milk sweets
CO5	To explore the quality control methods involved

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18PEBT022	**CANCER BIOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Biotechnology, Molecular biology, Genetic engineering				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of biological mechanisms and their applications from the

perspective of engineers

UNIT I INTRODUCTION 9

Fundamentals of Cancer Biology- Cell Cycle- regulation of cell cycle, modulation in cell cycle in cancer, Changes in signaling molecules- Effects on receptors, signal switches, Classification of stages of cancer- metasis, Metastatic cascade, common features of cancer cells, Tumor suppressor genes, Cancer genetics.

UNIT II CARCINOGENESIS 9

Principles of Carcinogenesis- Carcinogens- Targets of carcinogens, Chemical carcinogenesis, Physical carcinogenesis- X-ray radiation and radiation carcinogenesis, Viruses and Cancer, Diet and cancer

UNIT III MOLECULAR BIOLOGY OF CANCER 9

Molecular biology of cancer- Oncogenes, Identification of oncogenes, Retroviruses and oncogenes, growth factors and Growth factor receptors as oncogenes.

UNIT IV TYPES OF CANCER 9

Different sites and forms of cancer, Lung, Liver, Breast, Cervical, Blood, Prostrate, Ovarian cancers- Epidemology, causes, mutations, and features

UNIT V CANCER THERAPY 9

Cancer therapy- Cancer Immunology, Different forms of cancer therapy- Chemotherapy, radiation, Detection of cancers, advances in cancer detection and therapy, Gene therapy.

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of cancer cells and its constituents
CO2	to find the environmental factors related to cancer
CO3	to know the concept of carcinogenesis and carcinogenic agents
CO4	to know the cause, symptoms, diagnosis and treatment of cancer
CO5	to give a basic knowledge of the different types of cancer

Mapping of Course Outcomes with Program outcomes (POs)

U18PEBT023	FERTILIZER TECHNOLOGY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Bioprocess technology				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To provide basic technologies involved in food processing					

UNIT I NITROGENOUS FERTILIZER 9

Introduction – production of fertilizer- nitrogenous fertilizer, phosphatic fertilizer - feed stock materials for nitrogenous and phosphatic fertilizer.

UNIT II FERTLIZER PRODUCTS 9

Production of fertilizer products: Ammonia by steam reforming process, Nitric acid by ammonia oxidation process – Sulfuric acid by double absorption process – phosphoric acid.

UNIT III PROCESS AND STORAGE 9

Manufacturing, handling and storage of Ammonium nitrate, Ammonium sulfate, Calcium ammonium nitrate, Urea, Ammonium chloride -single super phosphate – Triple super phosphate.

UNIT IV POTASIC FERTILIZER 9

Manufacture of Potasic fertilizer – potassium sulfate – complex fertilizer – ammonium phosphate fertilizer – urea ammonium phosphate.

UNIT V BIOFERTILIZER 9

Developments in the technology of complex fertilizer production – pipe reaction – granulation process – fertilizer mixtures – biofertilizers.

TEXT BOOK

1. "Hand book on Fertilizer Technology" Tata McGraw Hill , III Ed, 2004

COURSE OUTCOMES (COs)	
CO1	To know about nitrogenous fertilizer
CO2	to understand about fertilizer products
CO3	to know about process and storage of fertilizer
CO4	to know about potassic fertilizer
CO5	to know about biofertilizer

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

3	Category	PC											
4	Approval	Academic Council, Aug 2018											

PROFESSIONAL ELECTIVE III

U18PEBT031	FOOD PROCESS TECHNOLOGY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3

	Prerequisite – Bioprocess technology, Heat and mass transfer
	Course Designed by – Dept. of Industrial Biotechnology
OBJECTIVES: To provide basic technologies involved in food processing	

UNIT I PHYSICAL TREATMETN OF FOOD 9

Thermal, electrical and rheological properties- Heat processing- Methods of applying heat to food - sterilization - Thermo bacteriology- dehydration and drying - free moisture - equilibrium moisture content- water activity- classification of dryers- tray, and freeze dryers, osmotic dehydration - foam mat drying- extrusion coking.

UNIT II BLENDING METHODS 9

Mixing of solids, Pastes and liquids - Characteristics of mixtures-Blending -emulsification-equipments - liquid, pastes, and plastic masses - dry powders - criteria of mixer effectiveness-mixing index

UNIT III PRESERVATION OF FOOD 9

Concentration - freeze concentration - freezing and storage of frozen products - low temperature preservation - irradiation of food products - microwave heating - dielectric heating of foods.

UNIT IV DAIRY FOODS 9

Physics and chemical properties of milk and their effect on design - heaters - coolers -heat exchange equipments - storage tanks - can washers - pasteurization - principles and methods - equipments - LTLT - HTST - UHT pasteurization - CIP unit -Homogenization - Theory and working of homogenizers - bottle fillers and cappers -cream separation - principles - types of separator - classifiers - butter churns - cheese plant equipments - ice cream freezers - drying equipments - drum drier and spray drier -membrane concentration equipments.

UNIT V FOOD MICROBIOLOGY 9

Food microbiology: food spoilage, food borne diseases, infections, intoxifications, utilization of microorganisms in food industries, Nutraceuticals. Quality control, Case studies on biotechnology in the evaluation of food quality.

COURSE OUTCOMES (COs)	
CO1	To know about preservation techniques
CO2	to understand basic concepts in sterilization of food products
CO3	to know about various dryers
CO4	to know about the mixing equipment for various products
CO5	to know about various preservation techniques for food products

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEBT032	PROTEOGENOMICS AND BIOINFORMATICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Bioorganic chemistry, Basic Biotechnology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of genomics and proteomics using software and their applications from the perspective of engineers

UNIT I BIO INFORMATICS **9**

Introduction to bioinformatics – Biological Databases,-Sequence databases-Structural databases – Data mining and Applications –Sequence Database search – FASTA – BLAST.

UNIT II GENOMICS **9**

Genome – Organization ofEukaryotic genome – Mapping strategies – Genetic mapping and physical mapping – Genome mapping – Human genome project – Gene expression – Microarrays

UNIT III SEQUENCE TECHNOLOGIES **9**

Alignment of multiple sequences – Methods and applications – Tools for sequence alignment. Gene identification Methods and applications – Tools for gene prediction – Methods and applications

UNIT IV PROTEOMICS **9**

Lifecycle of protein – Classification and structure visualization techniques – Protein databases – Prediction of primary and secondary structure – Prediction of 2D and 3D structure

UNIT V TOOLS OF PROTEOMICS **9**

Separation of proteins by SDS-PAGE, IEF – Mass spectrometry –MALDITOF – Peptide mass finger printing – Peptide sequence analysis – SALSA and TMS.

COURSE OUTCOMES (COs)	
CO1	to understand the classification of biological databases and its role in research
CO2	to apply the concept of genomics of different organism, gene expression and mapping situations
CO3	to know the tools for gene identification and prediction
CO4	to know the structural elucidation and prediction of proteins
CO5	to get a basic knowledge of techniques related to proteomics
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low	

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18PEBT033	WASTE MANAGEMENT TECHNOLOGY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic of waste and its disposal				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To give a basic knowledge of waste handling and utilization

UNIT I INTRODUCTION 9

Introduction: Definition and Classification- Disposal methods: Land fill and Incineration – Recycling methods: biological reprocessing and Energy recovery-. Avoidance and Reduction Methods- Waste handling and Transport – Waste management Concepts

UNIT II AGRICULTURAL WASTE 9

Introduction- Waste Consistency- Waste Management Function: Production ,Collection, Storage, Treatment , Transfer, Utilization- Waste Management system Design – Waste Management System: Dairy Waste, Beef Waste, Swine Waste, Poultry Waste, Other animal – Municipal and Industrial Sludge- Food Processing – Agri-Chemical Waste Management- Handling.

UNIT III BIOMEDICAL WASTE 9

Introduction- Overview – Characterization of Medical Waste- Waste Generation Methodology – Sterilization- Chemical Disinfection – Thermal Inactivation- Irradiation- Microwave Treatment – Grinding and Shredding – Compaction- Current Practice – Standards .

UNIT IV INDUSTRIAL WASTE MANAGEMENT 9

Paper and Pulp Industry – Leather Industry – Cement Industry – Chemical Industry – fertilizer Industry – Pharmaceutical Industry – Textile industry – Iron and Steel industry – Mining Industry – Lignite industry – Petroleum Industry – Nuclear Industry.

UNIT V REMEDIAL MEASURES 9

Bioremediation – Phyto-remediation- Recycling of Plastic and Paper

COURSE OUTCOMES (COs)	
CO1	to understand the various types of waste
CO2	to know the various technologies to handle the waste material

CO3	to know the remedial measures for waste disposal												
CO4	To get idea about industrial waste management												
CO5	To know about bioremediation of waste												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

PROFESSIONAL ELECTIVE IV

	FOOD SAFETY AND QUALITY CONTROL	L	T	P	C
U18PEBT041	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Food process engineering, Microbiology, Bioprocess Engineering, Biochemistry				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To know about the safety regulations of food industries					

UNIT I FOOD SAFETY REGULATIONS 9

History of food regulations in India- Legislations- Prevention of Food Adulteration act 1954, Food product order (1955), Solvent Extracted Oil, De-oiled Meal and Edible Flour (Control) Order, 1967, Meat Food Products Order (1973),Edible Oils Packaging, 1998, Edible Oils Packaging, 1998, Vegetable Oil Products Order, 1998, Milk & Milk Product Amendment Regulations – 2009.

UNIT II FOOD SAFETY MANAGEMENT 9

Introduction to concepts of food quality, food safety, food quality assurance and food quality management; objectives, importance and functions of quality control, Current challenges to food safety Food adulteration, nature of adulterants, methods of evaluation of food adulterants and toxic constituents.

UNIT III FOOD QUALITY MANAGEMENT 9

Principles of food quality assurance, total quality management (TQM)–good manufacturing/management practices, good hygienic practices, good lab practices, general awareness and role of management practices in quality control Food safety management, applications of HACCP in food safety, concept of food traceability for food safety,

UNIT IV MICROBIAL CONTAMINATION 9

Microbial quality control: determination of microorganisms in foods by cultural, microscopic, physical, chemical methods. Statistical quality control in food industry Food safety and Standards Act 2006: salient provision and prospects

UNIT V FOOD SAFETY STANDARDS 9

Role of national and international regulatory agencies, Bureau of Indian Standards (BIS), AGMARK, Food Safety and Standards Authority of India (FSSAI), Introduction to WTO agreements: SPS and TBT agreements, Codex alimentarious commission, USFDA, International organization for standards (ISO) and its standards for food quality and safety (ISO 9000 series, ISO 22000, ISO 15161, ISO 14000)

COURSE OUTCOMES (COs)													
CO1	To study the history of food safety regulations												
CO2	to know about food adulteration												
CO3	to understand about food management practices												
CO4	to get basic idea about food hygiene												
CO5	to get basic idea about microbial quality control												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEBT042	**STEM CELL AND TISSUE ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Animal Biotechnology, G3enetic Engineering, Molecular Biology				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of stem cells and their applications from the perspective of engineers					

UNIT I ORIGIN AND CHARACTERISTICS OF HUMAN STEM CELLS 9

Origin and characteristics of human stem cell, plasticity of human somatic stem cells research, Novel stem cell based therapies, Scientific and technical obstacles to overcome before realizing the potential clinical uses of novel human stem cell based therapy, Cord blood,-Stem cell marker.

UNIT II HUMAN EMBRYONIC STEM CELL RESEARCH 9

Possible sources for human embryonic stem cell, growing human ESC in laboratory, Current advantages and limitations of hESC and human somatic cells-Examining the need for new hES cell lines, Developments regarding establishment of human stem cell banks and registries.

UNIT III ISOLATION AND IDENTIFICATION OF STEM CELLS 9

Preparation of complete human neuroculture, Culturing and subculturing human neurospheres, Differentiation of cells from human, neurospheres into neurons, astrocytes and oligodendrocytes; Immunolabelling procedures

UNIT IV GENE THERAPY 9

Possibilities to overcome immuno-rejection responses in stem cell therapy, Haematopoietic stem cell transplantation - A new therapy for autoimmune disease, Prenatal diagnosis of genetic abnormalities using fetal CD34+ stem cells, Stem cells in treatment for major diseases and reparative medicine, ESC a promising tool for cell replacement therapy, germ line therapy.

UNIT V TISSUE ENGINEERING 9

Basic principles and consideration - Cell type and source, Metabolic requirements of cells, Reconstruction of connective tissues, Reconstruction of epithelial or endothelial surfaces - cells embedded in extracellular matrix material, Culture on a single surface and sandwich configuration, Bioreactor design on tissue engineering - Hollow fiber systems, Microcarrier based systems-Tissue engineering of the liver.

COURSE OUTCOMES (COs)													
CO1	to understand the fundamentals of stem cells and its types												
CO2	to apply the techniques for preservation of stem cells												
CO3	to give the information about embryonic stem cell research												
CO4	to know the role of stem cells in medicine												
CO5	to get a basic knowledge of the applications of stem cells in gene therapy												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18PEBT043	**BIOFUEL TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Biotechnology, Bioprocess				

	Course Designed by – Dept of Industrial Biotechnology

OBJECTIVES:

To provide a basic understanding of fuel and biofuel concepts and its production techniques

UNIT I INTRODUCTION 9

Introduction – Potential of biomass – biofuel policies: Policy in EU – Biofuel standardization – International Trade of biofuel-Biofuel Life Cycle – Energy balance -& Efficiency of biofuel – Biofuel emission: Greenhouse gas emission – Vehicle emission standards – other environmental Impacts of Biofuel – economy of biofuel – Consideration of Co-Products.

UNIT II BIOETHANOL 9

BioEthanol – Feed stock production: sugar Crops, Starch crops , Cellulosic feed stock – Bioethanol Production : Sugar to ethanol Process, Starch to ethanol process, Cellulose to Ethanol Process – Distillation & Dehydration process – Properties – Application –standardization – Energy balance – Bioethanol Emission : Greenhouse gas emission, toxic exhaust emission – Other environmental impacts: water issues, land use & biodiversity, human Health.

UNIT III LIPID BIOFUELS 9

Lipid derived Biofuel – Feed stock production -: Oil seed crops, Micro algae , Animal fats, waste oils – Fuel production : Oil Extraction , Oil Refining, Transesterification – Properties & Use : Properties of Pure Plant Oil (PPO) , Properties of Biodiesel – Application – Energy balance – Emissions of lipid biofuel – Other Environmental Impacts – Economy.

UNITIV BtL FUELS 9

BtL Fuel: Feed Stock production – BtL production – Gasification, Gas Cleaning – Synthesis process-Biohydrogen: Processing – Use – The Future of Biofuel.

UNIT V BIOMETHANE 9

Biomethane – Feed stock Production- BioMethane Production : Digestion Process- Digester types- biogas Purification – Properties & Use – Application – Standardization – BioMethane Emission – Other Environmental Effects – Economy.

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of biofuel
CO2	to know the various source for biofuel
CO3	to apply the technique in large scale
CO4	to study about lipid derived biofuel
CO5	to give a basic knowledge of the applications biofuel

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

PROFESSIONAL ELECTIVE V

U18PEBT051	**BIOREACTOR DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Biotechnology, Fermentation Techniques, Chemical reaction engineering, Bioprocess engineering				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES To provide knowledge about the designing of reactor					

UNIT I REACTOR ENGINEERING 9

Reactor engineering in Perspective- Mechanical aspect of bioreactor design: Guidelines for configurations:- Batch Bioreactor- Fluidized bed reactor- Air lift bioreactor- Trickle bed bioreactor- Hollow fibre reactor- and wave bioreactor (Disposable bioreactor) Practical considerations for bioreactor construction

UNIT II BIOREACTORS AND DESIGN CONSIDERATIONS 9

Batch reactors; Continuous Stirred Tank Bioreactors (Chemostat); Enzyme Catalysis in Chemostat; Age Distribution Models; Fed Batch Reactors; Recycle Systems, Design of airlift bioreactors

UNIT IIISELECTION, SCALE-UP, OPERATION AND CONTROL 9

Process scale up - general considerations-Simple calculation for scale up and scale down.Strategies for bioreactor design for cost-determining factors

Fermentation Control Introduction to control: control loop, analogue and digital control, control algorithm-PID control, time-proportional control. Physical control of fermentation

UNIT IV MODELING AND SIMULATION OF FERMENTATION PROCESSES 9

Unstructured Non-Segregated Model-substrate limited growth-Models with growth inhibitors-Logistic equation-growth models for filamentous organism.

Modeling, digital simulation, digital simulation programming languages, ISIM(interactive simulation language)

UNIT V PLANT AND ANIMAL CELL BIOREACTORS 9

Introduction, plant cells: plant cell bioreactors, characteristics of plant cell suspensions, plant cell bioreactor requirements, plant cell bioreactor design, plant cell bioreactor operation, alternative cultures for plant cells. Animal cells: Animal cell bioreactors, animal cell bioreactor operation, animal cell bioreactor design

U18PEBT052	DEVELOPMENTAL BIOLOGY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Biotechnology, Molecular biology				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES:
To provide basic knowledge about biology of human system
To provide knowledge about the designing of reactor

UNIT I INTRODUCTION **9**

Developmental biology: its scope, history and special fields-Germ cells: origin of germ cells, its migration and fate-Spermatogenesis: cells in seminiferous tubes, spermiotelosis, nuclear control of spermiotelosis, ultramicroscopic structure of mammalian sperm, types of sperm.

UNIT II OOGENESIS **9**

Oogenesis: growth of oocyte, maturation of ovum, formation of yolk, accessory cells, egg cortex and its importance, egg membrane-Fertilization: significance of sperm-egg interaction, acrosome reaction, sperm penetration, behaviour of pronuclei, syngamy, polyspermy, activation of egg-Parthenogenesis: natural and artificial.

UNIT III CLEAVAGE **9**

Cleavage: definition, early history and concept, geometry of cleavage, types of cleavage, cleavage patterns and factors governing them, laws of cleavage, theories of cytokinesis-Gastrulation: morphogenetic movements, selective affinity and adhesiveness of cells, mechanism of the change of shape of cell during morphogenesis-Embryonic induction: Spemann's primary organizer, nature of induction mechanism of action of inducing substances.

UNIT IV EMBRYO DEVELOPMENT **9**

Organization of the early embryo: polarity, symmetry, regulative development and physiological gradients, mosaic development- Differentiation: equivalence of nuclei, cytoplasmic control of nuclear activity, genetic control of differentiation, isozymes, mass effects-Metamorphosis: insect metamorphosis, amphibian metamorphosis, metamorphosis and evolution.

UNIT V REGENERATION OF TISSUES AND ORGANS **9**

Regeneration: regeneration in amphibians and planarian, stimulation and suppression of regeneration, histological processes concerned in regeneration, gradient concept, neural and endocrine influences- Developmental aspects of immunology- Teratology: factors inducing abnormal development of tissues and organs.

COURSE OUTCOMES (COs)	
CO1	to understand the history and scope of developmental biology
CO2	to know about fertilization
CO3	to know basic concepts on cleavage
CO4	to know about regeneration
CO5	to study the various processes involved in regeneration
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low	

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

U18PEBT053	**INDUSTRIAL WASTE TREATMENT AND DISPOSAL**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Environmental biotechnology, Waste management				
	Course Designed by – Dept of Civil Engineering				

OBJECTIVES

To provide knowledge on sources and characteristics of industrial wastewater, techniques and approaches for minimizing the generation and application of physio chemical and biological treatment methods for recovery, reuse and disposal

UNIT I INTRODUCTION 9

Effects of industrial wastes on streams, land and air, waste water treatment plants, water quality criteria – effluent standards : Process modification, method and material changes, housekeeping etc., to reduce water discharges and strength of the waste and established recovery methods for bye products within the plant operations.

UNIT II CHARACTERISTICS OF WASTE 9

Characteristics of major industrial waste water (liquid wastes) Chemical Industries: Petrochemicals & refineries, pharmaceuticals. Apparel Industries: Textile, synthetic fibres, leather, paper-Agro Industries: Fertilizer Food Industries: Heat – packing pickles, canning poultry and eggs, distillers, sugar. Metallurgical Industries: Thermal power station, nuclear power plants.

UNIT III WASTE TREATMENT 9

Conventional methods of treatment and disposal of industrial wastes-Equalization and neutralization, separation of solids – sedimentation and filtrations

UNIT IV BIOLOGICAL TREATMENT 9

Removal of organic contents: Biological treatment methods, aerobic and anaerobic, digestion, tickling filters, stabilization ponds, activated sludge process – oxidation ditch.

UNIT V PHYSICOCHEMICAL TREATMENT 9

Physico Chemical Treatment Method – Neutralization, coagulation, flocculation, adsorption and precipitation. Combined treatment of industrial and municipal wastes.

COURSE OUTCOMES (COs)	
CO1	Have a fundamental knowledge of the effluent discharge standards and waste minimization technology
CO2	Have a well-founded knowledge of characteristics of industrial wastewaterand treatment methods
CO3	Acquire knowledge about conventional methods of treatment for industrial waste
CO4	Understand various biological treatment methods
CO5	Have a fundamental knowledge of combined treatment of industrial and municipal wastes

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

PROFESSIONAL ELECTIVE VI

U18PEBT061	**FERMENTATION TECHNOLOGY AND APPLICATION**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Process engineering in biotechnology, Microbiology				
	Course Designed by – Dept. of Agricultural Biotechnology				

OBJECTIVES:

To provide a basic knowledge of Biological processes.

UNIT I INTROCTION TO FERMENTATION

History of fermentation - medium optimization - Media sterilization, Batch Process (thermal death kinetics), continuous sterilization process; sterilization of fermenter and other ancillaries, filter sterilization of air and media.

UNIT II INSTRUMENTATION AND CONTROL OF PROCESS PARAMETERS 9

Main parameters to be monitored and controlled in fermentation processes: Temperature, pressure, pH, flow, dissolved oxygen, dissolved CO_2- cell mass, cell number, solid-substrate fermentation and its applications.

UNIT III FERMENTATION TECHNIQUES 9

Fermentation- Definition & types - Submerged and Solid state. Fermentors& its types (Tower, cylindroconical& airlift) – Batch fermentation – Continuous fermentation.

UNIT IV FERMETATION PRODUCT 9

Production of beverages – beer and wine- vitamin B12–Antibiotics- penicillin - Bakers yeast, Details of mushroom development-Oyster (Pleurotus) and Button (Agaricus) mushroom.

UNIT V DOWNSTREAM PROCESSING 9

Downstream process- Intercellular and extracellular- Centrifugation, filtration, Floatation-solvent extraction, precipitation- cell disruption- physical and Chemical methods.

COURSE OUTCOMES (COs)													
CO1	To understand the development of bioprocess techniques.												
CO2	To know about the instrumentation and control for bioprocess operations												
CO3	To get idea about media formulations												
CO4	To know about stoichiometry of bioprocess.												
CO5	To know about various bioreactors												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO2	H	M	M	H	H		M		M	L		M
	CO3	H			H	H	M	H	H			L	M
	CO4	H	M		H			M			L		
	CO5	H	M	M	H	H		M	M	M	L		M
3	Category	PC											
4	Approval	Academic Council, Aug 2018											

TEXT BOOK

1. Stanbury P T and Whitaker 1984, Principles of Fermentation Technology,
Pergamon Press. NY

REFERENCE BOOKS

1. Casida, L E JR 1968 Industrial Microbiology. New Age International Publishers.
2. Prescott and Rehm 1979. Industrial Microbiology.Wiley and Sons.

U18PEBT062	**BIOPHARMACEUTICAL TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Biochemistry, Bioorganic chemistry, Basic biotechnology				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES:					

To provide a basic understanding of pharmaceutics and their applications from the perspective of engineers

UNIT I INTRODUCTION **9**

Introduction to bio pharmaceutics – Various route of drug administration- drug absorption, factors influencing drug absorption from the gastrointestinal tract.

UNIT II FORMULATION OF DRUGS **9**

Manufacturing Principles - Compressed tablets - wet granulation - Dry granulation or slugging - Direct compression - Tablet presses formulation - Coating - Pills - Capsules - Parental solutions - injections

UNIT III PHARMACODYNAMICS **9**

Binding of drugs to blood components - tissue binding of drugs - factors affecting protein drug binding - significance of protein/tissue binding of drugs - kinetics of protein-drug binding

UNIT IV BIOTRANSFORMATION **9**

Biotransformation - drug metabolizing enzymes - phase I reactions - phase II reactions - first pass effect - factors affecting biotransformation of drugs - bio activation and tissue toxicity.

UNITV PRODRUGS **9**

Bio precursor prodrugs - carrier prodrugs - application of prodrug design: - enhancement of bioavailability - site specific drug delivery - limitations of prodrug design.

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of drugs and its absorption
CO2	to know the manufacturing process of drugs and its bioavailability
CO3	to comprehend drugs and its binding mechanism
CO4	to know the drug metabolism and biotransformation
CO5	to get a basic knowledge of the applications of prodrugs in biological systems

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEBT063	**BIOREMEDIATION TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3

	Prerequisite – Bioprocess technology, Microbiology
	Course Designed by – Dept. of Industrial Biotechnology

OBJECTIVES:
To provide basic knowledge about the bioremediation techniques

UNIT I BIOREMEDIATION **9**

Types of Bioremediation, Factors affection Bioremediation.Bioremediation Mechanisms.Limitations of Bioremediations. Microbes for Bioremediation :EssentialChararcteristics of Microbes for Bioremediation, Microbial Adapadation for Adverse conditions. Microbes involved in Bioremediation. Metabolic process involved in bioremediation. Bioremediation Techniques :Insitu&Exsitu bioremediation techniques. Phytoremediation

UNIT II SPECIFIC BIOREMEDIATION TECHNOLOGIES **9**

Application, specific advantages and disadvantages of specific bioremediation technologies - land farming, prepared beds, biopiles, composting, bioventing, biosparging, pump and treat method, constructed wet lands, use of bioreactors for bioremediation.

UNIT III BIOREMEDIATION OF CHLORINATED COMPOUNDS **9**

Bioremediation of phenols, chlorinated phenols, chlorinated aliphatic compounds, heterocyclic compounds, cyanides, dyes; Rhizoremediation: a beneficial plant-microbe interaction; Molecular techniques in bioremediation- Enhanced biodegradation through pathway engineering; Biodegradation of polyhalogenated compounds by genetically engineered bacteria.

UNIT IV NUCLEAR WASTE BIOREMEDIATION **9**

Spent fuel characterisation, storage and disposal; Partitioning, transmutation and conditioning; Measurement of Radioactivity in the environment; Basic actinide research.

UNIT V HEAVY METAL AND OIL SPILL BIOREMEDIATION **9**

Heavy metal pollution & sources; Microbial interactions with heavy metals - resistance &tolerance ;Microbial transformation; Accumulation and concentration of metals. Biosorption of heavy metals by microbial biomass and secondary metabolites – Biosurfactants. Advantages of biosurfactants over chemical surfactants- Biotechnology and oil spills; Improved oil recovery.

COURSE OUTCOMES (COs)	
CO1	To know about the types of bioremediation
CO2	to understand basic techniques in bioremediation
CO3	to know about bioremediation of chlorinated compounds
CO4	to know about the nuclear waste bioremediation
CO5	to know about remediation of oil spills

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

OPEN ELECTIVE OFFERED BY THE DEPARTMENT OF IBT FOR OTHER DEPARTMENT

	CHEMICAL PROCESS INDUSTRIES	L	T	P	C
U18OEBT001	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Bioprocess Engineering, Principles of chemical engineering				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of chemical process industries

UNIT IFERTILIZER AND BIOFERTILIZER INDUSTRIES 9

Major Components of Fertilizer industries – Nitrogen industries, ammonia, nitric acid, urea – Phosphorus industries - Phosphorus, Phosphoric acid, Super Phosphate – Potassium chloride, Potassium Sulphate- Biofertilizer.

UNIT II PULP AND PAPER INDUSTRIES 9

Pulp – Methods of production: sulphite and sulphate- Comparison of pulping processes. Paper – types of paper products, Raw materials, Methods of production- wet process.

UNIT III SUGAR AND STARCH INDUSTRIES 9

Sugar – Methods of production – by products of the Sugar industry – Starch – Methods of production, Starch derivatives: dextrin.

UNIT V OIL, SOAPS AND DETERGENTS INDUSTRIES 9

Oil- constitution, extraction and expression of vegetable oils, refining and hydrogenation of oils- Soap: definitions- continuous process for the production of fatty acids, glycerine and soap- production of detergents- Enzymes in detergent.

UNIT V DYES AND PIGMENT INDUSTRIES 9

Introduction- types of dyes- classification-Production: azo dyes, natural dye- Pigments

COURSE OUTCOMES (COs)	
CO1	to understand the fundamentals of process industries
CO2	to apply the concept biotechnology in process
CO3	to classify the chemical process industry into industrial categories of base, intermediate end-products and specialty chemicals manufacturers.
CO4	to know the production processes

CO5	to know the biotechnology processes												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18OEBT002	**BIOPROCESS ECONOMICS AND PLANT DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours -45	3	0	0	3
	Prerequisite – Basic Biotechnology, Chemical Reaction Engineering, Bioreactors				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To provide knowledge about process economics and plant design

UNIT I PROCESS DESIGN DEVELOPMENT 9

Technical feasibility survey, process development, flow diagrams, equipment design and specifications

UNIT II GENERAL DESIGN CONSIDERATION 9

Marketability of the product, availability of technology, raw materials, equipment, human resources, land and utilities, site characteristics, waste disposal, government, regulations and other legal restrictions, community factors and other factors affecting investment and production cost.

UNIT III COST ESTIMATION 9

Capital investment-fixed capital investments including land, building, equipment and utilities, installation cost(including equipment, instrumentation, piping, electrical installation and other utilities), working capital investment.

UNIT IV COST ESTIMATION 9

Manufacturing costs-Direct Production cost(including raw materials, human resources, maintenance and repair, operating supplies, power and other utilities, royalties etc) fixed charges (including depreciation, taxes insurance, rental cost etc).,

UNIT V LIABILITIES 9

Plant overheads-Administration, safety and auxiliary services, payroll overheads, ware house and storage facilities etc. Profitability Analysis-return on original investment, interest rate of return, accounting for uncertainty and variations and future developments- Optimization techniques-Linear and Dynamic programming, Optimization strategies

COURSE OUTCOMES (COs)	
CO1	To understand basic principles of process design
CO2	To know about marketing of products
CO3	To know about capital and fixed cost
CO4	To study the cost involved in human resources
CO5	To understand about the administration of a plant

Mapping of Course Outcomes with Program outcomes (POs)

	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To give in depth knowledge on Beer Production

UNIT I OUTLINE OF BREWING **9**

Introduction – Malts – Brewing liquors – Milling and Mashing- Processing of Beer – types of beer – malting – water, effluents and wastes.

UNIT II SCIENCE OF MASHING **9**

Introduction – Mashing schedules – Altering Mashing Conditions – Mashing Biochemistry – Mashing and Beer flavour – Spent Grains – Preparation of grists – Mashing technology.

UNIT III WORT BOILING **9**

Introduction – Chemistry of wort boiling – Clarification, Cooling and Aeration.

UNIT IV WORT FERMENTATION **9**

Basic principles – Bottom and top Fermentation Systems – Continuous Fermentation – Fermentation Control Systems, Beer Maturation– flavour and aroma changes - Stabilization against nonbiological haze – Carbonation – Clarification and filtration – Special beer treatments.

UNIT V CHEMICAL AND PHYSICAL PROPERTIES OF BEER 9

Chemical Composition – Nutritive value – Colour – Haze – Viscosity – foam Characteristics – gurtingflavour – Semors analysis – Packaging.

COURSE OUTCOMES (COs)													
CO1	To make the students to understand brewing												
CO2	To know about wort boiling												
CO3	To know about mashing												
CO4	To make the students to get knowledge about wort fermentation												
CO5	To make them to understand the physical and chemical properties of beer and packaging												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	M		M	H				L		M
	CO2	H			H	H		M		M	L	L	
	CO3		M				H		H			L	M
	CO4	H			H			M		M	L		
	CO5		M	M			M	M	H			L	M
3	Category	PC											
4	Approval	Academic Council, Aug 2018											

TEXT BOOK:

1. Brewing – Science and Practice by Dennis E. Briggs, Chris A. Boulton, Peter A. Brookers and Roger Sterens, Wood head Publishing Limited, 2004.

U18OEBT004	**BIOMINING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Biotechnology, Bioprocess, Microbiology				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To create basic awareness about biomining

UNIT I BIOLEACHING 9

Introduction, Copper processing technologies- in situ leaching, smelting, concentrate leaching, Heap and dump leaching. Thermophilic Heap bioleaching – Basic heap design and importance of heat generation, sulfur availability, microbial activity, inoculation, pH, inhibitory factors, heat retention, air-flow rate and irrigation rate.

UNIT II GEOBIOTICS 9

Introduction, the GEOCOAT AND GEOLEACH technologies, complementary Geobiotics technologies, the GEOCOAT process, advantages of the GEOCOAT process, the Agnes mine GEOCOAT project, developing technologies.

UNIT III BIOMINING MICROORGANISMS 9

Introduction, Biooxidation of minerals, General chemistry of mineral biooxidation, advantages of biooxidation, types of organisms, general physiology of mineral-degrading bacteria, autotrophy, nitrogen, phosphate and trace elements. Energy production- iron, sulfur oxidation, adaptability of biomining microorganisms, metal tolerance and resistance.

UNIT IV ACIDOPHILIC MICROORGANISMS 9

Biodiversity of acidophilic microorganisms, techniques for detecting and quantifying microbial life in mineral oxidizing environments, cultivation dependent approaches, PCR based microbial identification and community analysis, PCR independent molecular detection and identification of acidophiles, future perspectives on molecular techniques for detection and identification of acidophiles.

UNIT V GENETICS OF BIOLEACHING 9

Introduction, relevant biochemical and chemical reactions, Genetics of bioleaching microorganisms, Iron and sulfur oxidation and reduction in Acidithiobacillusferrooxidans, sulfur oxidation, ferric iron and sulfur reduction in Acidiothiobacillusferrooxidans. Iron oxidation in other bioleaching microorganisms – Ferroplasma spp., Leptospirillumspp, Metallosphaerasedula, sulfur oxidation in other bioleaching microorganisms.

COURSE OUTCOMES (COs)													
CO1	To introduce biomining												
CO2	To know basics of geobiotics												
CO3	To create complete knowledge about the bioleaching of copper												
CO4	To learn about biodiversity microorganisms												
CO5	To know about bioleaching microorganisms												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	M		M	H				L		M
	CO2	H			H	H		M		M	L	L	
	CO3		M				H		H			L	M
	CO4	H			H			M		M	L		
	CO5		M	M			M	M	H			L	M
3	Category	PC											
4	Approval	Academic Council, Aug 2018											

TEXT BOOK

1. NaginaParmar and Ajay Singh, "Geomicrobiology and Biogeochemistry" Spinger publications.

REFERENCE BOOK

1. Douglas E. Rawlings, D. Barrie Johnson, "Biomining" Springer Science & Business Media, 18-Dec-2006.

U18OEBT005	**INDUSTRIAL SAFETY ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Bioprocess, Enzyme Engineering & Technology, Basic Biotechnology				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES

To provide a basic knowledge about Safety engineering

UNIT I INDUSTRIAL HAZARDS 9

Safety in Process Plants – Hazard Analysis – Types of Hazard – hazard Identification techniques Hazard Evaluation – Important Factories Act.

UNIT II CHEMICAL HAZARD 9

Hazards in work place: safety in the use of chemicals at work – Chemical hazard - Air-Borne Contaminants – particulate matter – Hazard and safety methods – hazards and Safety measures in Refineries , Paper and Pulp Industries- Safety Conditions in tanneries –Hazards of Pesticide – Sugar industry.

UNIT III SAFETY MANAGEMENT AND FIRE SAFETY 9

Introduction- Safety policy- Safety in electrical installation: Electrical shock and prevention-safety precautions for residential and commercial installation - Case study-Four stages of Fire-types of Fire Detectors – Fire safety in Industry – chemistry of fire- Types of Combustion- Fire Triangle- Fire extinguishing Technique – Engineering consideration for safety consideration

UNIT IV INDUSTRIAL ACCIDENTS 9

Industrial accidents – Classification – prevention – accident cost – Steps of investigation – Analysis of Accidents – Remedial Measures – Methods of Prevention – Safety Slogans – Case study

UNIT V PROTECTIVE EQUIPMENTS 9

Personal protective Equipment and personal Protection – Aim – Need – Types: Non Respiratory Protective equipment- Respiratory typeFirst aid – principles and methods – First aid training – Scope of first aid – Golden rules– First aid treatment : for wounds and Hemorrage , Shock , respiration :Schafer's Method, Shock. Fractures, Burns and Scalds, Unconsciousness, Heat exhaustion and Stroke– First aid Kit box A and B.

COURSE OUTCOMES (COs)													
CO1	to understand basic concepts in hazard analysis												
CO2	to know about safety and its management												
CO3	to know about accidents and its preventive measures												
CO4	to understand various personal protective equipment and first aid												
CO5	to know about personal protective equipment												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	M	H	M		M	M		L		M
	CO2	H	M	M	H	H		M			L	L	M

	CO4	H	M		H	H		M	L		L	L	
	CO5	H	M	M	H	H		M		L	L		M
3	Category	PC											
4	Approval	Academic Council, Aug 2018											

TEXT BOOK

1. Nicholas, 2008, "Practical Guidance to Industrial Safety" 3rd ed
2. Prof.M.H.Fulekar, 2007, "Industrial Hygiene & chemical Safety" 2nd ed

REFERENCE BOOKS

1. Rudd,2005, "Strategy of process engineering" Willey
2. Wang, Shannmas Hung, 2008, "Advanced hazardous industrial waste treatment" CRC Press.

U18OEBT006	BIODIVERSITY MANAGEMENT	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite- Botany, Environmental studies				
	Course Designed by – Department of Industrial biotechnology				

OBJECTIVES

To learn about the conservation of biodiversity

UNIT I TYPES, FUNCTIONS AND BENEFITS OF BIODIVERSITY 9

Types of Biodiversity: Species, Genetic and Ecosystem diversity – Alpha, beta, and gamma diversity – Biodiversity and ecosystem function – Megadiversity zones and Biodiversity Hot Spots in India – Ecologically Sensitive Areas (ESA) in India - Use of Biodiversity: Source of food, medicine, raw material, aesthetic and cultural uses – Biodiversity Prospecting: Significance of Indigenous Knowledge Systems

UNIT II THREATS TO BIODIVERSITY 9

Natural and anthropogenic threats to biodiversity – Human-Animal conflict with special reference to elephants and tigers - IUCN Threat Categories – Red Data Book – Wildlife exploitation - Species extinctions – Endangered and endemic species of flora and fauna in India - Over-harvesting and Climate change on biodiversity - Causes and Impacts of Invasive species to biodiversity

UNIT III CONSERVATION STRATEGIES 9

Current practices in conservation: Habitat or Ecosystem Approaches - Species-based Approaches - Social Approaches: Chipko Movement – In-situ conservation: Afforestation, Social Forestry, Agro-forestry, Botanical gardens, Zoos, Biosphere Reserves, National Parks, Sanctuaries, Protected Area Network, Sacred Groves and Sthalavrikshas – Ex-situ conservation: Cryopreservation, Gene Banks, Seed Banks, Pollen Banks, Sperm Banks, DNA Banks, Tissue Culture and Biotechnological Strategies

UNIT IV SUSTAINABLE MANAGEMENT OF BIORESOURCES 9

National Biodiversity Authority (NBA) – Functions of State Biodiversity Board (SBB) and Biodiversity Management Committee's (BMC) – The role of WWF, FAO, UNESCO, UNDP and UNEP for biodiversity conservation – An elementary account on WTO, GAAT and TRIPS – Biopiracy rights of farmers, breeders and indigenous people –Biodiversity informatics with special reference to plant genetic resources

UNIT V POLICIES, PROGRAMMES AND ACTS FOR CONSERVATION 9

Status and protection of species in National and International levels – Role of CITES and IUCN – Convention on Biological Diversity (CBD) – Nagoya Protocol – Man and Biosphere Programme (MAB) – Policies implemented by MoEF for biodiversity conservation – Salient features of Biological Diversity Act 2002 – Ecosystem restoration

COURSE OUTCOMES (COs)	
CO1	to understand what is diversity
CO2	to learn about the threats to diversity
CO3	to know the methods of conservation of diversity
CO4	to learn the sustainable methods of diversity
CO5	to have a knowledge about various policies

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

CURRICULUM AND SYLLABUS (R2018)

B-FACT

(Applicable to the students admitted from July 2018)

B.TECH – BIO TECHNOLOGY SPECIALIZATION IN AGRICULTURAL BIOTECHNOLOGY

I – VIII SEMESTERS

SEMESTER I								
S. No.	**Course Code**	**Category**	**Course Title**	**Contact Period**	**L**	**T**	**P**	**C**
THEORY								
1	U18HSEN101	HS	Communicative English	4	2	0	2	3
2	U18BSMA101	BS	Mathematics –I for Bio Engineering	4	3	1	0	4
3	U18BSPH101	BS	Waves and Optics	3	3	0	0	3
4	U18BSCH101	BS	Engineering Chemistry	3	3	0	0	3
5	U18ESCS101	ES	Problem Solving and Python Programming	3	3	0	0	3
6	U18ESME101	ES	Engineering Graphics & Design	5	1	0	4	3
PRACTICAL								
7	U18ESCS1L1	ES	Problem Solving and Python Programming Lab	3	0	0	3	1.5
8	*U18BSPH2L3	BS	Waves and Optics and Biophysics Lab	3	0	0	3	0
9	*U18BSCH2L4	BS	Chemistry Lab	3	0	0	3	0
PHYSICAL ACTIVITY BASED COURSES								
10	18MCAB101	MC	Physical health – Sports & Games	2	0	0	2	0
11	18MCAB102	MC	Gardening & Tree Plantation	2	0	0	2	0
Total				35	15	1	19	20.5

***Laboratory Classes will be conducted on alternative weeks for Physics and Chemistry.**
The Lab Practical Examinations will be held only in the second semester (including the first semester experiments).

SEMESTER II								
S.No	**Code No.**	**Category**	**Course Title**	**Contact Periods**	**L**	**T**	**P**	**C**

LIST OF ELECTIVES

PROFESSIONAL ELECTIVE I						
COURSE CODE	**SPECIALIZATION**	**COURSE NAME**	**L**	**T**	**P**	**C**
U18PEAC011	Crop production	Fundamentals of Agronomy	3	0	0	3
U18PEAC012	Farming systems	Farming System & Sustainable Agriculture	3	0	0	3
U18PEAC013	Food Science	Principles of food science and nutrition	3	0	0	3
PROFESSIONAL ELECTIVE II						
U18PEAC021	Crop production	Principles of Seed Technology	3	0	0	3
U18PEAC022	Farming systems	Post-Harvest and Food Engineering	3	0	0	3

U18PEAC023	Food Science	Dairy Process Technology	3	0	0	3
PROFESSIONAL ELECTIVE III						
U18PEAC031	Crop production	Introductory Agro-meteorology & Climate Change	3	0	0	3
U18PEAC032	Farming systems	Principles of organic farming	3	0	0	3
U18PEAC033	Food Science	Nutraceutical and functional foods	3	0	0	3
PROFESSIONAL ELECTIVE IV						
U18PEAC041	Crop production	Crop Improvement	3	0	0	3
U18PEAC042	Farming systems	Farm Management, Production & Resource Economics	3	0	0	3
U18PEBT031	Food Science	Food Process Technology	3	0	0	3
PROFESSIONAL ELECTIVE V						
U18PEAC051	Crop production	Bioremediation Technology	3	0	0	3
U18PEAC052	Farming systems	Greenhouse Technology	3	0	0	3
U18PEBT041	Food Science	Food safety and Quality control	3	0	0	3
PROFESSIONAL ELECTIVE VI						
U18PEAC061	Crop production	Soilless crop production	3	0	0	3
U18PEAC062	Farming systems	Nanotechnology in Agriculture	3	0	0	3
U18PEAC063	Food Science	Food industry waste management	3	0	0	3
OPEN ELECTIVE OFFERED BY DEPARTMENT OF BIOTECHNOLOGY SPECIALIZATION IN AGRICULTURAL BIOTECHNOLOGY						
U18OEAC001	Geo-informatics and Precision Farming		3	0	0	3
U18OEAC002	Livestock and Poultry Management		3	0	0	3
U18OEAC003	Extension methodologies and transfer of Agricultural Technologies		3	0	0	3
U18OEAC004	Soil and Water Conservation Engineering		3	0	0	3

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMESALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18OEBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations
20 U18OECE003-Road Safety
21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics
38. U18OEAE003- Unmanned Aerial Vehicle
39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion

41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance
43. U18OEEE003-Energy Conservation Techniques
44. U18OEEE004-PLC and SCADA for Industrial
45. U18OEEC-001-Communication Systems
46. U18OEEC-002-VLSI circuits
47. U18OEEC-003-Image Processing Techniques
48. U18OEEC-004-Communication Networks
49. U18OEEC-005-An Introduction to DSP
50. U18OEEC-006-Basics of IoT

SEMESTER I

U18HSEN101	**COMMUNICATIVE ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	0	2	3
	Prerequisite – School English				
	Course Coordinator & Dept Designed by: ……Department of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6 hours

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations - introducing one self – exchanging personal information- narrating events, - incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6 hours

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -
The concept of Word Formation

UNIT III LISTENING 6 hours

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6hours

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past-present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6hours

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures-

Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely.

SOFTSKILL LABORATORY
LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews &conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds- intonation.
12. Creative and critical thinking.

COURSE OUTCOMES		**Revised Bloom's Taxonomy Level**
CO1	The student will be able to comprehend the text with clarity	
CO2	The capacity to read and listen will improve	
CO3	Writing technical report will be learnt properly	
CO4	Speaking skills will be acquired	
CO5	Overall communication skills will make them employable	
CO6

6														
Category	Humanities and Social Studies (HS)													
Approval	47th Meeting of Academic Council held in Aug 2018													

U18BSMA102	**MATHEMATICS I FOR BIO ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	➢ The aim is to develop mathematical curiosity and use inductive and deductive reasoning when solving problems. ➢ Develop the knowledge, skills and attitudes necessary to pursue further studies in Mathematics and to become confident in using Mathematics to analyze and solve problems in real – life situations.				

UNIT I THEORY OF EQUATIONS (9+3)

Fundamental theory of algebra – number of roots of polynomial equations – conjugate pairs theorem (without proof) – Descartes rules of signs- symmetric functions of the roots – formation of equations – diminish the roots of an equations- Multiple roots – reciprocal equation.

UNIT II DIFFERENTIAL CALCULUS – One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions-Beta, Gamma functions and their properties.

UNIT V MATRICES (9+3) Characteristic Equations –Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton

Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth EditionAddison-Wesley, Pearson.
5. Narayanan S., Manickavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers, 1992.

COURSE OUTCOMES (COs)	
CO1	Solve the equations (such as linear, factorable, quadratic and rational), applications and linear inequalities, to know the formation of equations.
CO2	Use both the limit definition and rules of differentiation to differentiate functions.The fallouts of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions
CO4	Compute definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gamma
CO5	Identify Eigen value problems from practical areas using transformations;

CO/PO Mapping:S – Strong, M – Medium, W – Weak

Category	Basic Science (BS)											
Approval	47th Academic Council Meeting held in Aug, 2018											

U 18BSPH101	**WAVES AND OPTICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVE OPTICS 9

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS 9

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

TEXT BOOKS

Course Outcomes (COs)	
CO1	Understand the basic concept of waves and lights

CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing												
CO3	Understand the propagation of light and geometrical optics												
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves												
CO5	Understand the concept of laser and its applications												
Mapping of Course Outcomes with Programme Outcomes (POs) S – Strong, M – Medium, W – Weak

3	Category	Basic Sciences (BS)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18BSCH101	**ENGINEERING CHEMISTRY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY 9

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. Nanocomposites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.

CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Maths				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudocode, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and

methods;advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES **9**

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

TEXT BOOKS:

COURSE OUTCOMES (COs)													
CO1	Develop algorithmic solutions to simple computational problems												
CO2	Demonstrate programs using simple Python statements and expressions.												
CO3	To gain knowledge regarding control flow and functions associated with python												
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound												
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems												
Mapping of Course Outcomes with Programme Outcomes (POs) (S/M/W indicates strength of correlation) S-Strong, M-Medium, W-Weak

U18ESME101	ENGINEERING GRAPHICS & DESIGN (THEORY & LAB.)	L	T	P	C
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice				

Traditional Engineering Graphics:
Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:
Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM).

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)
Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypocycloid and Involute of circle.

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)
Principles of Orthographic Projections; Conventions; Projections of Points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to oneplane – Parallel to one plane and inclined to other plane – Inclined to both the planes;Projections of planes inclined to either HP or VP.

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)
Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

MODULE 4:SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)
Sectional view of Prism, Cylinder, Pyramid, Cone (simple Position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS:

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students willgetExposure to basics of building construction
CO4	Students willgetExposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.

U18ESCS1L1	PROBLEM SOLVING AND PYTHON PROGRAMMINGLABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Problem Solving and Python Programming				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib

U18BSPH2L3	**WAVE OPTICS AND BIO PHYSICS LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**0**	**0**	**3**	**1.5**
	Prerequisite – Wave Optics and Bio Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To impart knowledge of practical Physics to the students					

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Biophysics – Bio-Engineering branches

1. Determination of optical rotation using polarimeter
2. Determination of diffusion potential of biological sample
3. Analysis of viscosity of different biological sample using viscometer
4. Analysis of protein concentration using calorimeter
5. Quantification of DNA using UV-Vis spectrophotometer
6. Analysis of absorption maxima for an unknown sample

Course Outcome (CO's)	
CO1	Understand the fundamental concept of optics
CO2	Understand the concept of production of ultrasonic waves
CO3	Understand the estimation and functions of Biomolecules

Mapping of Course Outcomes with Programme Outcomes (POs)

U18BSCH2L4	CHEMISTRY LABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a Polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.
2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Student will be able to analyze Determination of Molecular weight of a Polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

U18HSEN201	**TECHNICAL ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	1	0	3
	Prerequisite – I semester English				
	Course Designed by – Department of English				
OBJECTIVES To gain fundamental knowledge of English language and its usage in day to day life.					

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports - Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

TEXT BOOKS:

1. Fluency in English A Course book for Engineering and Technology.OrientBlackswan, Hyderabad: 2016

4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)

Upon completion of the course, the students will be able to	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

	MATHEMATICS II FOR BIO ENGINEERING	**L**	**T**	**P**	**C**
U18BSMA202	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	➢ To make the students learn Mathematics in order to formulate. ➢ To Solve problems effectively in their respective fields of engineering				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT III VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Integration of vector function - Green's theorem in a plane – Gauss divergence theorem and Stoke's theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT IV ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions,Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.

2. Bali .N.P and Manish Goyal, A Text book of Engineering Mathematics, Eighth Edition, Laxmi Publications Pvt Ltd., 2011.
3. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	Apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO3	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO4	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To impart theories and methods of Physics to understand the functioning of Biological system					

UNIT 1 ATOMIC PHYSICS **9**

Atom model - Vector atom model - Pauli's exclusion principle - explanation of periodic table - various quantum numbers - angular momentum and magnetic moment - spatial quantisation - Bohr magneton - Stern and Gerlach experiment.

UNIT 2 NUCLEAR PHYSICS **9**

Nuclear size, shapes and forces: Nuclear size determination - Electron scattering method-electric moments - magnetic moments - Nuclear forces - Models of nuclei – Liquid drop model of nuclei- Atomic masses and its significance.

UNIT 3 RADIATION BIOPHYSICS **9**

Basics of Radiation Physics Atomic structure models, Constituents of atomic nuclei, Isotopes, Isobars, Isotones, Radioactivity, law of Radioactivity, General properties of alpha, beta and gamma radiations, Radiation units: Units of measurement of radioactivity. Curie, Becquerel., Interaction of radiation with matter: Excitation and ionization, Photo electric effect, Compton Effect, pair production, Characteristic radiation.

UNIT 4 MEMBRANE BIOPHYSICS **9**

Membrane potentials Cell surface charge, Resting membrane potential, Action potential, Ionic transport during Action Potential, properties of action potential, Nernst equation, Hodgkin-Huxley equation, Membrane impedance and capacitance, Transmembrane potential, total electrochemical potential.

UNIT 5 MOLECULAR BIOPHYSICS **9**

Nucleic acids – Purine and Pyrimidine bases, nucleosides, nucleotides basic difference in structures and functions of DNA and RNA

Proteins– Amino acids – types, planarity of peptide bond – Ramachandran map - Primary, secondary, tertiary and quarternary structures of proteins.

U18BSGE201	**CYTOLOGY AND GENETICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Genetic Engineering				
OBJECTIVES: To provide a basic understanding of cell, its structure, function, types and about its culture					

UNIT I CELL STRUCTURE AND ORGANELLES 6

Cells - definition - eukaryotic cell and prokaryotic cell- Relationship and evolution of eukaryotic cell and prokaryotic cell- plant cells and animal cells - Cell Organelles, Structure and function – Nucleus- Endoplasmic reticulum - Golgi complex- lysosomes- cell membranes- chloroplast- mitochondria.Cell cycle-Mitosis and meiosis

UNIT II CELLULAR TRANSPORT 6

Transport across cell membranes – classification – Active and passive transport. Active – Na+ K+ ATPase Pump - Lysosomal and Vacuolar pumps - Endocytosis and Exocytosis transport across prokaryotic membrane - Cotransport – Symport, antiport.

UNIT III CELL SIGNALING AND SIGNAL TRANSDUCTION 6

Cell signaling – various kinds of Receptors and ligands –Different modes of action of ligands- different modes of signal transduction and amplification with examples- signaling through G-

Proteins (Monomeric and trimeric), signaling for growth factors- secondary messengers- protein kinases- Ca ions and cAMP molecule in signaling.

UNIT IV BASICS OF GENETICS AND CHROMOSOMES 6

Mendelian Laws - Mendel's experiment - monohybrid cross-phenotype – genotype - Dihybrid inheritance - Chromosome structure and organization in prokaryotes and eukaryotes - chromosome banding - chromosome abnormalities

UNIT V ALLELES 6

Classical concepts of Pleomorphism - Multiple alleles, ABO blood groups - Rh factor - sex linkage in Drosophila- mechanism of sex determination- sex differentiation

U18ESEE101	**BASIC ELECTRICAL & ELECTRONICS ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

MODULE 1 : DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamental Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems,Maximum Power Transfer Theorem.

MODULE 2: AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS **9**

Principles of operation and characteristics of; DC machines,Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency,all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS **9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS **6**

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

COURSE OUTCOMES (COs)													
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.												
CO2	To gain knowledge regarding fundamentals of AC circuits.												
CO3	To gain knowledge regarding electrical machines and transformers.												
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.												
CO5	To gain knowledge on principles of digital electronics systems.												
Mapping of Course Outcomes with Programme Outcomes (POs) (S/M/W indicates strength of correlation) S-Strong, M-Medium, W- Weak													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	S	W			M				S		W	
	CO2	S	W			M				S		W	W
	CO3	S	M			M				S		W	
	CO4	S	W			M				S		W	M
	CO5	S	W			M				S		W

4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18BSCH201	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I -NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS **9**

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION 9

Definition, Causes, effects and control measures of Air Pollution, Water pollution, Soil Pollution, Marine Pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - Pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and Control of Pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder-Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.
Human population: Population growth, variation among nations, population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

2. Dharmendra S. Sengar, Environmental law', Prentice hall of India PVT LTD, New Delhi, 2007.

COURSE OUTCOMES	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

U18ESME1L2	**WORKSHOP/MANUFACTURING PRACTICES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

SYLLABUS
Lectures & videos: (15 hours)

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**

- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice

2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.

3. Carpentry **(9 hours)**
   a) Preparation of Lap joints.
   b) Mortise and Tenon joints.
   c) Cross Half joints.
   d) Dove Tail joints.

1. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
Preparation of butt joints, lap joints and Tee joints

2. Sheet Metal working **(9 hours)**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints

3. Demonstration **(6 Hours)**
Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

1. Hajra Choudhury S.K., Hajra Choudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and publishers Private Limited, Mumbai.
2. Kalpakjian S. And Steven S. Schmid, "Manufacturing Engineering and Technology",4th edition, Pearson Education India Edition, 2002.
3. Gowri P. Hariharan and A. Suresh Babu,"Manufacturing Technology – I" Pearson Education, 2008.
4. Roy A. Lindberg, "Processes and Materials of Manufacture", 4th edition, Prentice Hall India, 1998.
5. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGraw Hill House, 2017.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.

CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

Mapping of Course Outcomes with Programme Outcomes

(S/M/W indicates strength of correlation) S-Strong, M-Medium, W-Weak

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO2			S	M							S	
	CO3		M										S
	CO4	S			W							S	
3	Category	Engg Sciences (ES)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING PRACTICES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronics Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				

OBJECTIVES:

To enhance the practical knowledge on basics of electrical and electronics components and circuits.

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS

5. Applications of Operational Amplifier.

REFERENCE BOOKS:

COURSE OUTCOMES (COs)													
CO1	To handle basic electrical equipments and verify current and voltage law												
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits .												
CO3	To understand domestic wiring procedures practically.												
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator												
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor												
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flops												
Mappingof Course Outcomes (COs) with Programme Outcomes (POs) (S/M/W indicates strength of correlation) S- Strong, M-Medium, W- Weak

UNIT I CEREALS 9

Rice, Maize, Wheat, Oat, Barley, Rye and Triticale - Origin, geographic distribution, economic importance, soil and climatic requirements, varieties, cultural practices (from land preparation to harvest) and yield

UNIT II MILLETS 9

Sorghum, Pearl millet, Small millets - Finger millet, Foxtail millet, little millet, Kodo millet, Barnyard millet and Proso millet - Origin, geographic distribution, economic importance, soil and climatic requirement, varieties, cultural practices and yield

UNIT III PULSES 9

Redgram, Blackgram, Greengram, Bengalgram, Horsegram, Cowpea, Soybean and Lentil - Origin, geographic distribution, economic importance, soil and climatic requirement, varieties, cultural practices and yield

UNIT IV OILSEEDS (KHARIF) 9

Groundnut, sesame, sunflower, castor, Origin, and geographic distribution, economic importance, soil and climatic requirement, varieties, cultural practices, yield.

UNIT V OILSEEDS (RABI) 9

Rape seed and mustard, safflower, Linseed, Niger - Origin, geographic distribution, economic importance, soil and climatic requirement, varieties, cultural practices, yield

UNITI INTRODUCTION 9

Bentham and Hooker's classification of plant kingdom — International code of nomenclature and its major guidelines – author citation – Agricultural classification of crops; General morphology: Life span, habit, root, stem, leaf - petiole, leaf margin, leaf apex, leaf shape,

venation and phyllotaxy; Modification of roots and leaf; Floral morphology: Kinds of bracts, inflorescence; Structure of flower, androecium, gynoecium, placentation, types of fruits.

UNIT II ECONOMIC USES OF POEACEAE 9

List of cultivated crops, economic parts, chromosome number and family description of Poaceae: Key botanical features of Rice, Wheat, Sorghum, Maize, Pearl millet, Finger millet, list of small millets, Guinea grass, Napier grass, and Sugarcane

UNIT III ECONOMIC USES OF PAPILIONACEAE 9

List of cultivated crops, economic parts, chromosome number and family description of Papilionaceae: Key botanical features of Red gram, Soybean, Black gram, Green gram, Cowpea, Lablab, and Groundnut.

UNIT IV ECONOMIC USES OF OTHER PLANTS 9

List of cultivated crops, economic parts, chromosome number and family description of the following families and Key botanical features of the crops given against them: Pedaliaceae - Gingelly; Asteraceae- Sunflower, Safflower, Euphorbiaceae: Castor; Jatropha and Tapioca; Arecaceae: Coconut; Solanaceae: Tobacco, Potato, Chilli

UNITVECONOMIC USES OF FIBRE CROPS 9

List of cultivated crops, economic parts, chromosome number and family description of the following families and key botanical features of the crops given against them ,Malvaceae: Cotton, Mesta and Bhendi.

	PLANT BIOCHEMISTRY	L	T	P	C
U18PCAC303	Total Contact Hours - 45	2	0	0	2
	Prerequisite – Basic Chemistry and Biology				

	Course Designed by – Dept. of Agricultural Biotechnology

COURSE OUTCOMES (COs)

CO1	to understand the fundamentals of biomolecules, their classification, structure
CO2	to apply the basic concept of carbohydrates, proteins ,lipids, nucleicacids and enzymes in metabolism.
CO3	to know the application of biomolecules in functioning of biological system
CO4	to get a basic knowledge of macromolecules in living organism and its energetic
CO5	To know basic concepts of enzymes

Mapping of Course Outcomes with Program outcomes (POs)

					√				
4	Approval	Academic Council, July 2018							

UNIT I CARBOHYDRATES 9

Introduction- Carbohydrates: classification and functions of carbohydrates- structure of monosaccharides: Glucose, Fructose, Oligosaccharides: Sucrose, Lactose, Polysaccharides: Starch, Cellulose-Metabolism- Glycolysis, TCA.

UNIT II LIPIDS 9

Lipids: classification- Structure and function of Simple lipid: Fats and waxes, Complex lipid: Phospholipids -Biosynthesis and β oxidation of fatty acid

UNIT III AMINO ACIDS AND PROTEINS 9

Aminoacids: Structure and classification- proteins: structures – properties – classification based on structure, function and nature. Biosynthesis of aromatic amino acid and Urea cycle

UNIT IV NUCLEIC ACIDS 9

Nucleosides- Nucleotides – Secondary structure of DNA –structure of mRNA, tRNA and rRNA- Biosynthesis and degradation of purines and pyrimidines

UNIT V ENZYMES **9**

Classification of enzymes- active site -Factors affecting enzyme activity- Enzyme specificity- Mechanism of enzyme action- Enzyme kinetics related to Michaelis-Menten equation.

U18PCAC304	AGRICULTURAL MICROBIOLOGY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic concepts in biology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of microbes and their applications from the perspective of engineers

COURSE OUTCOMES (COs)

CO1	to understand the source of microbes and their role in biotechnology
CO2	to get the knowledge of microbial diversity classification and morphology
CO3	to know the visualization of microbes by different microscopes
CO4	to know the cause, symptoms, diagnosis and treatment of diseases causing pathogens
CO5	to get a basic knowledge of the microbial nutrition and growth

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

					√				
4	Approval	Academic Council, July 2018							

UNIT I INTRODUCTION TO MICROBIOLOGY 9

Definition-Scope and history of microbiology-prokaryotic and eukaryotic cell- different types of classification-Nomenclature-fermentation-pasteurization-role of microorganisms in agro industries-illustrations of genetically engineered strains

UNIT II GENERAL FEATURES OF MICROORGANISMS 9

Bacteria: diversity-classification-morphology-life cycle-Fungi: diversity-classification-morphology-life cycle-Algae: diversity-classification-morphology-life cycle-virus: diversity-classification-morphology-life cycle

UNIT III MICROSCOPY 9

Introduction- numerical aperture, resolving power-magnification- fixation, dyes and simple staining, differential staining- gram staining, acid-fast staining, Staining specific structures-negative staining, endospore staining, flagella staining-simple-compound-dark field-phase contrast-polarizing-fluorescent-laser optics-electron microscopy-scanning electron microscope-transmission electron microscope, specimen preparation-inverted microscope

UNIT IV MICROBIAL NUTRITION AND GROWTH 9

Common nutrient requirements-nutritional types of microorganisms, growth factors-uptake of nutrients by cells- culture media: synthetic or defined media-commonly used media-Types of media-selective-differential-enrichment media-aseptic techniques: disinfection-sterilization-cultivation of microbes: bacteria-fungi-viruses-pure culture: concept of pure culture-methods of pure culture of microorganisms–spread plate, streak plate and pour plate–microbial growth curve-factors affecting growth of microorganisms-measurement of growth

UNIT V MICROBIAL PATHOGENS AND DISEASES 9

Some bacterial diseases of agricultural crops -pathogens, symptoms and control measures with reference to paddy, cotton, maize, tomato, citrus, mango and potato. Plant protection – phenolics – phytoalexins and related compounds. Bioinsecticides – viral, bacterial and fungal- a brief note.

U18PCAC305	PRINCIPLES OF PLANT BREEDING	L	T	P	C
	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Biochemistry, Microbiology, Environmental Studies				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide basic knowledge about plant breeding

COURSE OUTCOMES (COs)

CO1	to understand the basic principles in breeding
CO2	to know about linkage and its importance
CO3	to study about population genetics
CO4	to know about gene structure
CO5	to get idea about mutation and its significance in breeding

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

UNIT I: INTRODUCTION **9**

Beginning of genetics; Cell structure and cell division; Early concepts of inheritance, Mendel's laws; Discussion on Mendel's paper, Chromosomal theory of inheritance.-Multiple alleles,Gene interactions.

UNIT II: SEX DETERMINATION AND LINKAGE

Sex determination, Sex differentiation and sex-linkage, Sex-influenced and sex-limited traits; Linkage- Coupling and repulsion detection, estimation; Recombination and genetic mapping in eukaryotes

UNIT III: POPULATION GENETICS 9

Population - Mendelian population – Random mating population - Frequencies of genes and genotypes-Causes of change: Hardy-Weinberg equilibrium-Structural and numerical changes in chromosomes; Nature, structure and replication of the genetic material; Genetic code

UNIT IV: GENE STRUCTURE 9

Genetic fine structure analysis, , Split genes, Transposable genetic elements, Overlapping genes, Pseudogenes, Oncogenes, Gene families and clusters- Regulation of gene activity in prokaryotes; Bacterial plasmids, insertion (IS) and transposable (Tn) elements

UNIT V: MODERN CONCEPT OF GENETICS AND MUTATION 9

Methods of studying polymorphism at biochemical and DNA level; Transgenic bacteria and bioethics; Gene silencing; - Concepts of Eugenics, Epigenetics, Genetic disorders and Behaviouralgenetics , types of mutation

U18BSMA301	**TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	3	1	0	4
	Prerequisite – Engineering Mathematics I & II				
	Course Designed by – Department of Mathematics				
OBJECTIVES Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms.Learn techniques of solving the standard types of first order and second order partial differential equations.Learn solving wave and heat equation using Fourier series.Understand the problems using Fourier transform and their properties. Understand the problems using Z - transform and their properties.					
COURSE OUTCOMES (COs)					

CO1	to expand given function using the knowledge of Fourier Series and frequently needed practical harmonic analysis that an engineer may have to make from discrete data
CO2	to solve PDE and higher order with constant coefficients and physically interpret the results
CO3	to analyze solutions to two-point boundary value problems, boundary value problems for partial differential equations
CO4	to solve many problems in automobile, medicine, electronic engineering by applying Fourier transform with the possible special cases with attention to their applications
CO5	to apply the basics of Z – Transform in its applicability to discretely varying functions, gained the skill of formulate certain problems in terms of difference equations and solve them using the Z – Transform techniques

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	Academic Council, July 2018							

UNIT I FOURIER SERIES (9+3)Hrs Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS (9+3)Hrs Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS (9+3)Hrs

Classifications second order linear partial differential equations – Solution of one dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation – Fourier Series solutions in Cartesian coordinates.

UNIT IV FOURIER TRANSFORMS (9+3)Hrs Fourier integral theorem (without proof) – Fourier transform pairs – Fourier sine and cosine transform – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT V Z – TRANSFORMS AND DIFFERENCE EQUATIONS (9+3)Hrs

Z – Transform – Elementary properties – Inverse Z – Transform – Convolution theorem – Formation of difference equations – Solution of difference equations using Z – Transform.

U18PCAC3L1	PLANT BIOCHEMISTRY LAB	L	T	P	C
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Basic concepts in chemistry and biology				
	Course Designed by – Dept. of Agricultural Biotechnology				

OBJECTIVES

To provide a basic knowledge of biochemical components and its functions and their Applications from the perspective of engineers

COURSE OUTCOMES (COs)

CO1	to understand the fundamentals of biomolecules, their classification,structure and functions
CO2	to apply the basic concept of carbohydrates, proteins,lipids, nucleicacids and enzymes in metabolism
CO3	to know the application of biomolecules in functioning of biological system
CO4	to get a basic knowledge of macromolecules in living organism and its energetics
CO5	To know basic concepts of enzymes

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	H	H	H			H			H	H	
	CO2	H	H	H	H			H			H	H

	CO4	H	H	H	H			H			H	H	
	CO5	H		H				H			H	H	
3	Category	Humanities	Basic Engg.	Professional Core	Non Open						Project		
					√								
4	Approval	Academic Council, July 2018											

LIST OF EXPERIMENTS

1. Preparation of normal, molar and percent solutions.
2. Preparation of different buffer solution and measure pH.
3. Qualitative analysis of Unknown sugar- Monosaccharides,disaccharides and polysaccharides.
4. Estimation of sugar- Benedicts method.
5. Qualitative of unknown protein- Albumin,casein and gelatin.
6. Quantitative test for aminoacids- Ninhydrin method.
7. Quantitative test for protein – Biuret method.
8. Quantitative test for protein –Lowry method.
9. Quantitative test for protein – Bradford method
10. Spectrophotometric analysis of DNA.

U18PCAC3L2	CELL BIOLOGYLAB	L	T	P	C
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – basic cell biology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES: To provide a basic knowledge about cell biology

COURSE OUTCOMES (COs)

CO1	to understand the fundamentals of instruments and their different mode of applications
CO2	to get idea about slide preparation
CO3	to know about blood grouping
CO4	to get knowledge about mitosis
CO5	to get a basic knowledge of extraction of plant pigments

LIST OF EXPERIMENTS

1. Study of Microscope
2. Spotters
3. Permanent Slide preparation
4. Killing and Fixing
5. Mitosis on onion root tip
6. Cryopreservation
7. Preparation of Blood smear
8. Separation of plasma and serum from blood sample
9. Total RBC and WBC Count
10. Osmosis
11. Extraction of pigments

U18MCAB305 Learning an Art Form 0 0 2 0

Cultivation of arts is an integral part of the development of human beings since the arts are what make us most human, most complete as people. They offer us the experience of wholeness because they touch us at the deepest levels of mind and personality. They come into being not when we move beyond necessity but when we move to a deeper necessity, to the deeper human need to create order, beauty and meaning out of chaos. They are the expressions of deepest human urges, imperatives and aspirations.

While enriching the process of learning through enhanced perceptual and cognitive skills, learning of arts promotes self-esteem, motivation, aesthetic awareness, cultural exposure, creativity, improved emotional expression, as well as social harmony and appreciation of diversity. They promote an understanding and sharing of culture, and equip the learners with social skills that enhance the awareness and respect of others. Each institution will offer a range of introductory courses in different art forms: music, dance, theatre, painting, and other art forms. Care should be taken to give adequate representation to local and regional art forms in which our culture abounds. For example, Banaras has local traditions in vocal music like *Chaiti*, *Hori*, *Kajri* and *Birha*.

An institution in Banaras area can offer courses on these art forms apart from regular classical and semi-classical vocal music forms. Similar local art tradition can be utilized in different cities and regions. This will, in turn, also ensure wider community involvement/interaction with the institution. Students will be given an option to choose a particular art form, and learn and practice it under an artist -instructor. At the end of the course, a student should be able to demonstrate basic proficiency in that particular art form. Contact hours per week should be 3-4 hours.

Towards the end of the course, the institution can organize a function/program in which all the students publicly demonstrate their skills.

U18MCAB306Intangible Cultural Heritage (Festivals, Food ways, Local Games) 0 0 2 0

As part of our rich intangible cultural heritage, foodways, fares and festivals, local games and sports are important sources for discovering the social and cultural values of our people and understanding the inner dynamics of our society, as these are sites where we witness the most significant and intimate representations of our society's self-perception—how our society perceives itself. These traditions have shaped and strengthened our social and cultural identities, and also the notion of community at the local, regional, and national levels. They have played a significant role in the making of our social life, and through them we have constructed for ourselves, individually and collectively, a sense of shared lived past and group identity. They facilitate the transmission of a culture's most deeply held values, from one generation to another and their continuity or discontinuity helps us to understand the changing social structure and culture of a society. For example, each community has its own foodways, and their overall health, well-being and cultural continuity are directly related to their ability to eat traditional foods and continue their traditional food practices. These traditional foods and food practices are deeply intertwined with their cultures and value systems, and play an important role in religious ceremonies and spirituality. Similar is the case with fares and festivals, and local games and sports. These traditions are bound up with rituals, customs, beliefs, and often also with trade, craft and professions. They are not mere superstitious rituals often condemned and denounced as being regressive, stagnant and backward, but repositories of our indigenous knowledge and wisdom which have evolved over centuries, and they still continue to serve social and cultural functions. This knowledge has been the basis for agriculture, food preparation, health care, education, conservation and the wide range of other activities that sustain societies in many parts of the world.

Most of these traditions are either on the verge of extinction or undergoing drastic changes due to globalization, acculturation, migration, questions of identity related to social mobility to confirm to a higher social order or simply because the context in which these traditions originated or were conceived no longer exist and their effectiveness or need seems no longer relevant. For example, while the agro-ecological and food systems offer some signs of resilience and adaptation, a range of factors are increasingly threatening these systems and peoples' well-being. The knowledge and skills of elders concerning traditional food preparation, and the use of traditional herbs and plants for healing purposes have not been passed on to the next generation and is at risk of being lost and disappearing altogether from reservation life and culture.

The course aims at exposing students to these traditions, and making them aware of the veritable treasure house of indigenous knowledge which can be utilized as resource for realizing a vision of sustainable future.

Each locality/region our Indian sub-continent abounds in a rich variety of food-ways, fares and festivals, games and sports. Students should be asked to identify one of these traditions and study them in detail. For example, the following guidelines can be adopted in the study of food-ways:

To study and document the indigenous knowledge and wisdom of everyday food habits and food items consumed;

To study and document the prevalent social practices and beliefs regarding traditional foods;

To study and document the feasts on religious and social occasions of different communities;

To identify and document the food items consumed by different communities and determine their nutritional values;

To conduct chemical analysis of food ingredients;

To identify and document the kitchen generated health ingredients used by different communities;

To find out the uses of leftover food stuff of different communities;

To develop hygienic food chart for people ailing and suffering from different metabolic disorders; and

To develop suitable communication strategies to effectively disseminate traditional knowledge regarding food habits.

Similarly, in the case of fares and festivals, and games and sports one could study how these traditions create a sense of community bonding and lead to the rules of commensality and social interaction and behavior. Suitable guidelines along the lines of foodways can be developed and adopted for such a study.

At the end of the course, students will be required to submit a detailed project report. Options should be given to the students to make short documentaries and films on these traditions.

SEMESTER IV

U18PCAC401	**PLANT MOLECULAR BIOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basics of Cell biology and biochemistry				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of molecular level of DNA and their applications from the perspective of engineers

COURSE OUTCOMES (COs)

CO1	to understand the fundamentals of central dogma of biological systems
CO2	to understand the concept of DNA replication
CO3	to learn the methods involved in transcription
CO4	to know the functioning of regulatory factors and its application in maintaining cell activity
CO5	To remember the method of protein synthesis
CO6	to analyze the role of nucleic acids in understanding the genetic code

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

UNIT I DNA STRUCTURE 9

DNA as the vehicle of inheritance-structure of DNA-forms of DNA-nucleic acid biosynthesis-experimental evidence: Griffith, McLeod, McCarty and Avery, Hershey–Chase experiments-Definition of gene-organization of genes and non coding DNA in prokaryotes- Eukaryotes–mitochondrial and chloroplast genome-cytoplasmic male sterility-unique, moderately repetitive and highly repetitive DNA sequence-satellite DNA- Cot value-maize transposable elements-DNA binding proteins

UNIT II DNA REPLICATION 9

DNA replication in prokaryotes and eukaryotes- modes of replication-semi continuous and semi discontinuous replication- Okazaki fragments- RNA primers – enzymes of replication – DNA polymerases I, II, III, -DNA modifying enzymes: topoisomerases-helicases- binding proteins and ligases-events at OriC (initiation), events on the replication fork (elongation) and termination-Fidelity of replication

UNIT III DNA REPAIR 9

Repair of DNA–types of damages- repair by direct reversal of damage- excision repair-recombination repair- SOS repair-Mutation: definition-type of mutations (spontaneous and induced) point mutation-Gene mutation and chromosomal aberrations- Cause of mutations-chemical and physical agent

UNIT IV TRANSCRIPTION 9

Transcription in prokaryotes and eukaryotes: RNA polymerases–enzyme structure- role of sigma factor- promoter-closed and open promoter complexes-Initiation-elongation and termination of RNA synthesis-Post transcriptional modification in prokaryotes and eukaryotes-transcription factors

UNIT V GENETIC CODE 9

Genetic code–Basic features of genetic code-Deciphering of genetic code-Wobble hypothesis-Protein biosynthesis-activation of amino acids- initiation-elongation and termination of translation in prokaryotes and eukaryotes-Post translational modifications-Inhibitors of translation.-Regulation of gene expression in prokaryotes and eukaryotes- operon concept-lac operon

UNIT I PLANT WATER RELATIONS **9**

Importance of Crop Physiology in Agriculture .Structure and role of water –water potential and its components – diffusion – osmosis – imbibition - plasmolysis – Field Capacity and Permanent Wilting Point- Mechanisms of water absorption – Pathways of water movement – Apoplast and symplast - Transpiration – significance – structure of stomatal pore- mechanisms of stomatal opening and closing – guttation – antitranspirants

UNIT II PLANT MINERAL NUTRITION **9**

Criteria of essentiality - classification of nutrients – macro, micro, mobile, beneficial elements and immobile – mechanism of nutrient uptake- Physiological functions, deficiencies and disorders of macro and micro nutrients – Hidden hunger- Foliar nutrition- root feeding and fertigation

UNIT III PHOTOSYNTHESIS AND RESPIRATION **9**

Light reaction – Photosystems- red drop and Emerson enhancement effect- Photolysis of water and photophosphorylation - Z scheme - Photosynthetic pathways – C_3 and C_4, CAM – difference between three pathways

UNIT IV GROWTH AND DEVELOPMENT **9**

Growth – phases of growth - Factors affecting growth – Hormones- classifications - Biosynthetic pathway and role of auxins - Biosynthetic pathway and role of gibberellins and cytokinins- Biosynthetic pathway and role of ethylene and ABA- Growth retardants- Photoperiodism - short, long and day neutral plants.

UNIT V STRESS PHYSIOLOGY **9**

Classification of stresses - Physiological changes and adaptations to drought, flooding, high and low temperature, salinity and UV radiation

UNITI ENZYMES **9**

Classification of enzyme-Characteristics of enzymes, enzyme substrate complex- Concept of active centre, binding sites, stereo specificity and ES complex formation-Activation energy-Enzyme activity, specific activity, turnover number-Applications of enzymes in agricultural sectors

UNIT II ENZYME CATALYSIS **9**

Enzyme catalysis-Factors affecting catalytic efficiency - proximity and orientation effects, acid - base catalysis. Isoenzymes and multiple forms of enzymes-Allosteric enzymes, Allosteric

regulation- Brief account of coenzymes, multienzyme complexes, metal-dependent, metalloenzymes

UNIT III ENZYME KINETICS 9

Michaelis - Menten Equation - form and derivation- steady state enzyme kinetics-Significance of Vmax and Km, L-Burk plot, Eadie- Hofstee plot-Bisubstrate reactions-Enzyme inhibition- irreversible and reversible, competitive, noncompetitive

UNITIV MICROBIAL KINECTICS AND IMMOBILIZATION 9

Typical growth characteristics of microbial cells: Phase of growth curve, factors affecting growth- Monod Model - Effect of temperature, pH and substrate concentration on reaction rate. Immobilization of enzymes: methods of immobilization, applications and advantages.

UNITV BIOREACTORS 9

Classification- Stirred tank reactor, Bubble column- Air lift rector- Packed bed- fluidized bed- Trickle bed reactor- Industrially important reactor: Photo bio reactor, membrane bio reactor.

UNITI BASIC STOICHIOMETRY AND UNIT OPERATION 9

Basic stoichiometric calculations: mole, molar mass, normality, molarity, molality, mole fraction, mass fraction, Ideal gas law, Raoult's law, Dalton's law, Amagat's law, Average molecular weight and density. Unit operations: Milling, dehusking, polishing, evaporation, drying, mixing, extraction, filtration and centrifugation.

UNIT II STOICHIOMETRY OF BIOPROCESS 9

Unit operation & Process - Stoichiometry of Cell growth and product formation- elemental balances- degrees of reduction of substrate and biomass-available electron balances-yield coefficients of biomass and product formation-

UNIT III HEAT & MASS TRANSFER 9

Modes of heat transfer- Heat transfer through compound wall- Heat flow through cylinder-Heat exchanger- Theory of Shell and Tube heat exchanger and double pipe heat exchanger- Mass

transfer: Derivation of Diffusion of A through non diffusing B in gases and Liquids and Equimolar counter diffusion.

UNIT IV FLUID MECHANICS 9

Fluids –Types of fluid - Nature of flow – Reynold's experiment- Bernoulli's equation - Flow meters: Manometers - types of manometers —notches-Pumps: single acting and double acting pump -Centrifugal Pump.

UNIT V BIOREACTOR

Fermentor - types of bioreactor: Batch and continuous reactor, trickle bed reactor, Air lift bioreactor, fluidized bed bioreactor, photobioreactor.

UNIT I: **INTRODUCTION** **9**

Horticulture – Origin, definitions – role of fruit crops in national economy - nutritive value of horticultural crops – classification of horticultural crops – Cropping systems - planting methods –Crop geometry- intercultural operations– training, pruning, and special practices - off season production – Basics of protected cultivation – Propagation– definition – methods - merits and demerits – propagation through seeds - dormancy and methods of overcoming dormancy – vegetative propagation – merits and demerits – cutting, layering, grafting and budding – rootstock influence – stock / scion relationship– micro propagation.

UNIT II: CROP PRODUCTION TECHNIQUES IN FRUIT CROPS **9**

Scope and importance of fruit crops – classification of fruit crops – area, production, productivity and export potential. Climate and soil requirements – varieties – propagation - planting density and systems of planting -cropping systems - after care - training and pruning - water, nutrient and weed management –fertigation - special horticultural techniques - plant growth regulation - important disorders – maturity indices and harvest- post harvest management. **Crops**: Mango, Banana, Grapes, Citrus (sweet orange, mandarin, acid lime), Papaya, Indian goose berry (Aonla)**,** Sapota, pomegranate, Guava, Pineapple, Jack, Apple, Pear, Plum, Peaches.

UNIT III: CROP PRODUCTION TECHNIQUES OF PLANTATION CROPS **9**

Scope and Importance of plantation crops - area and production- export potential- classification of plantation crops- planting and cropping systems - principles of canopy management and growth regulation. Climate and soil requirements- varieties- propagation- nursery management- planting density and systems of planting- cropping systems- after care- training and pruning- water, nutrient and weed management- shade management-intercropping - mulching-cover cropping -harvest- post harvest management and processing-**Crops:** Tea, coffee, rubber, coconut, arecanut, oil palm, palmyrah

UNIT IV: CROP PRODUCTION TECHNIQUES OF VEGETABLES, AND SPICES CROPS 9

Importance of vegetable and spices–area and production of vegetables in India and Tamil Nadu-Nutritive value of vegetables –classification of vegetables and spices –types of vegetable growing –Climate and soil – varieties and hybrids – propagation and planting– nutrient management – irrigation and fertigation management – weed management – cropping systems in vegetable crops - vegetable production under protected structures – maturity indices – harvest – post harvest. **Crops:** Tomato, chilli, capsicum, brinjal, bhendi, onion, gourds, potato, cassava, sweet potato, carrot, radish, beetroot, cabbage, cauliflower, amaranthus,moringa, Black pepper, cardamom, turmeric, ginger, garlic, coriander, fenugreek, cumin, fennel, clove, nutmeg, cinnamon, tamarind and vanilla.

UNIT V: CROP PRODUCTION TECHNOLOGIES OF FLOWER, MEDICINAL AND AROMATIC CROPS 9

Importance, scope, constraints and future prospects – area and production – floriculture industry - export potential of commercial flowers – protected cultivation of - Loose flowers - Soil and climate – varieties – propagation – nursery practices – planting methods – pinching, training and pruning - nutrient and water management – role of growth regulators – harvest– post-harvest management – grading and packaging, extraction of secondary metabolites. **Crops**: rose, jasmine, chrysanthemum, tuberose, crossandra,marigold,, carnation, gerbera, senna, periwinkle, glory lily, ashwagandha, medicinal coleus, aloe, Isabgol, phyllanthus, medicinal dioscorea and medicinal solanum, ocimum, mint, lemon grass, citronella, geranium, eucalyptus, palmarosa and vetiver

UNIT I INTRODUCTION 9

History-organization of tissue culture lab-sterilization methods-lab requirements: equipments, culture vessels-culture media: constitution, types of media, preparation: MS medium, White's, Gamborg, Nitsch medium-plant growth hormones-Auxins - Cytokinins – Gibbrellins -Abscissic acid - Ethylene – Polyamines

UNIT II TISSUE CULTURE AND VARIATION 9

Tissue culture as a source of genetic variability: somoclonal and gametoclonal variation, sources and causes of variation, selection of variants-micropropagation as a tool of in vitro multiplication

UNIT III TYPES OF CULTURE 9

General terms in Tissue culture-embryogenesis and organogenesis-cytodifferentiation-callus culture-anther culture-haploid culture-embryo culture-meristem culture-single cell culture

UNIT IV PROTOPLAST CULTURE 9

Protoplast isolation, culture and fusion-selection of hybrid cells –regeneration of hybrid plants-somatic hybridization and cybridization–somatic embryogenesis and artificial seeds

UNIT V APPLICATIONS OF TISSUE CULTURE 9

Production of plants for crop improvement-secondary metabolite production through plant cell cultures-presentation of plant genetic resources-Gene conservation bank-application in plant pathology

UNIT I: INTRODUCTION ANDPATHOGENESIS 9

Plant Pathology-Definition-History of plant Pathology-causes of plant diseases-Biotic and abiotic; Pathogenesis-Mode of infection-pre penetration, penetration and post penetration; Effect of pathogen on physiological functions of the plants; Role of enzymes and toxins on disease development-Plant defense mechanisms.

UNIT II: FUNGAL DISEASES IN PLANTS 9

General characters of fungi-structure, Reproduction – outline of asexual and sexual reproduction ; Molecular phylogeny of fungi; Fungal diseases- Damping off, Downy mildews, White Rusts, Powdery Mildew, Rots, smuts, Bunt, Rust, Wilt, Head blight, Root rots, Leaf spots, Leaf blights, Anthracnoses, Galls-Symptoms-causative organisms –Pathogenesis.

UNIT III: BACTERIAL DISEASES IN PLANTS 9

General characters of Phytopathogenic bacteria ;Bacterial diseases-Blight, Leaf streak, Citrus canker, Black rot, Wilt, Brown rot, Yellow ear rot, Black leg, Fire blight of Apples and pears, Crown gall, Stalk rot, scab, Ratoon stunting of sugarcane-Angular leaf spot-Symptoms-causative organisms –Pathogenesis.

UNIT IV: VIRAL DISEASES IN PLANTS AND OTHER CAUSATIVE AGENTS 9

Viral diseases –Mosaic disease, Leaf roll, Leaf curl, Bunchy disease-Tristeza of citrus -symptoms-causative organisms-pathogenesis; General characters and symptoms of candidatus phytoplasma – spiroplasma-algae-viroids-Phanerogamic parasites, Vectors -types and Mode of spread.

UNIT V: PLANT DISEASE MANAGEMENT 9

Principles and Methods of plant disease management –Avoidance-Exclusion-Eradication of pathogens-Protection –Resistance; Management of plant diseases –Regulatory-cultural-biological-physical-chemical strategies; Seed health certification system –Resistance Breeding - Integrated disease management.

U18MCTH401Constitution of India – Basic features and fundamental principles 2 0 0 0

The Constitution of India is the supreme law of India. Parliament of India can not make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the "basic structure" of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of "Constitutionalism" – a modern and progressive concept historically developed by the thinkers of "liberalism" – an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state. The historic revolutions in France, England, America and particularly European Renaissance and Reformation movement have resulted into progressive legal reforms in the form of "constitutionalism" in many countries. The Constitution of India was made by borrowing models and principles from many countries including United Kingdom and America.

The Constitution of India is not only a legal document but it also reflects social, political and economic perspectives of the Indian Society. It reflects India's legacy of "diversity". It has been said that Indian constitution reflects ideals of its freedom movement, however, few critics have argued that it does not truly incorporate our ownancient legal heritage and cultural values. No law can be "static" and therefore the Constitution of India has also been amended more than one hundred times. These amendments reflect political, social and economic developments since the year 1950. The Indian judiciary and particularly the Supreme Court of India has played an historic role as the guardian of people. It has been protecting not only basic ideals of the Constitution but also strengthened the same through progressive interpretations of the text of the Constitution. The judicial activism of the Supreme Court of India and its historic contributions has been recognized throughout the world and it gradually made it "as one of the strongest court in the world".

Course content

Meaning of the constitution law and constitutionalism
Historical perspective of the Constitution of India

Salient features and characteristics of the Constitution of India

Scheme of the fundamental rights

The scheme of the Fundamental Duties and its legal status

The Directive Principles of State Policy – Its importance and implementation

Federal structure and distribution of legislative and financial powers between the Union and the States

Parliamentary Form of Government in India – The constitution powers and status of the President of India

Amendment of the Constitutional Powers and Procedure

The historical perspectives of the constitutional amendments in India

Emergency Provisions : National Emergency, President Rule, Financial Emergency

Local Self Government – Constitutional Scheme in India

Scheme of the Fundamental Right to Equality

Scheme of the Fundamental Right to certain Freedom under Article 19

Scope of the Right to Life and Personal Liberty under Article 21

U18PCAC4L1	**AGRICULTURAL MICROBIOLOGY LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	2	1
	Prerequisite- Microbiology, Molecular biology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES-

To provide a basic understanding of microbes and their applications from the perspective of engineers

COURSE OUTCOMES (COs)

CO1	to understand the source of microbes and their role in biotechnology
CO2	to get the knowledge of microbial diversity classification and morphology
CO3	to know the visualization of microbes by different microscopes
CO4	to know the cause, symptoms, diagnosis and treatment of diseases causing pathogens
CO5	to get a basic knowledge of the microbial nutrition and growth
CO6	To understand about various identification methods of microorganisms

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

					√				
4	Approval	Academic Council, July 2018							

LIST OF EXPERIMENTS

1. Microscopes – handling light microscope.
2. Micrometry- measurement of microorganisms.
3. Sterilization – equipment and apparatus used for sterilization.
4. Media preparation for bacteria, fungi and actinomycetes.
5. Isolation of microorganisms-serial dilution plate technique.
6. Purification and preservation of bacteria
7. Purification and preservation of fungi.
8. Staining techniques- simple and negative staining.
9. Differential staining - Gram-staining
10. Structural staining - spore staining.
11. Morphology of bacteria- cell arrangement.
12. Growth of bacteria - turbidometric method.
13. Physiological characters of bacteria.
14. Biochemical characters of bacteria.
15. Identification of bacteria.
16. Identification of fungi

U18PCAC4L2	PROCESS ENGINEERING LAB	L	T	P	C
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Bioprocess engg., Unit Operation				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES;
To provide basic knowledge about bioprocessing

COURSE OUTCOMES (COs)

CO1	to get knowledge on biomass
CO2	to know about enzyme kinetics
CO3	to understand about immobilization of enzyme
CO4	to get idea about mass transfer
CO5	to know about death kinetics
CO6	to know about product optimization

Mapping of Course Outcomes with Program outcomes (POs)

					√				
4	Approval	Academic Council, July 2018							

LIST OF EXPERIMENTS

1. Estimation of biomass production
2. Plate assay for amylase enzyme.
3. Enzyme kinetics
4. Immobilization of enzyme.
5. Solid state fermentation.
6. Production of soap and analyse its properties.
7. Production of biodiesel and analyse its properties.
8. Production of biofertilizer and analyse plant growth.
9. Leaching.
10. Study of shell and tube heat exchanger.

U18MCAB407Literature, Cinema and Media (workshop, reading multiple news sources,analyze ads**)**

0 0 2 0

The objective is to inculcate the habit of active (or interactive) consumption of the best content available in literature, films and media, rather than passive consumption. Description.

Literature is perhaps as old as history or may be older and it is difficult to think of a fully educated person without any exposure to the best of the world literature (not justthe literature of their own country or in their own language). Cinema is more recent and mass media is even more recent, but all these have a vital role in today's society. The problem is that the content available easily to most people (partly due to extensive promotion) caters to the lowest common denominator. Engineering students should be encouraged to read the best of the world literature and watch the best of the world cinema (regardless of their viewpoints). They should also be made aware that news is best collected from different sources, which don't necessarily agree, so that they can understand the true meaning of democracy and also learn to form educated opinions about various topics based on the information from diverse sources. They should learn that being opinionated without being properly informed (say, by relying only on one source of news on TV based on TRPs) is not the right way to be a good citizen. They should get the experience of their opinion being contradicted by the most reliable evidence, so that they realize that there is no shame in changing a wrong opinion in the light of overwhelming evidence. For that, they will also have to

learn how to find out the degree of reliability of different sources. One way to achieve this is to conduct workshops where students, aided by invited experts, read news from different sources, watch the best cinema and read or watch different media sources. They can then discuss these with their peers and with the invited experts and learn to talk peacefully with people of different viewpoints, as well as learn to form their own opinions. They should then be encouraged to write about their takeaways from these discussions or their opinions and their reasons for forming those opinions. Such activities can counter the current culture of being 'trolls' on the social media, for example. Instead, we should have citizens who give due respect to their fellow citizens and learn to analyze, discuss and reach conclusions in an agreeable manner, without unnecessary feelings of bitterness and enmity.

Another related exercise could be to read or watch advertisements and then analyze them in terms of the biases they promote (such as the desirability of fair skin) or the deception they indulge in to psychologically compel consumers to buy things they don't really need. Some advertisements even promote the habit of treating fellow human beings with contempt for being different from them (even in terms of possessing the products they are promoting). A well-educated citizen should be less susceptible to such practices in advertisements. Advertisements are just one example. Something similar could be done with all kinds of propaganda material

U18MCAB408 Literature & Media Group Reading (saamuhikvaachan) of classics 0 0 2 0

This will make group to read one or two books during a semester.

Process: An hour may be fixed for a small group for a particular classic. Group sitsand each person reads aloud (if possible with proper modulation) taking turns. This if done properly for an hour one may complete 30-40 pages in an hour. A normal classic can be finished in 15 to 20 days. If serious books on philosophy etc. are taken up a discussion can be held after every idea is complete.

SEMESTER V

U18BSMA502	**Applied Agriculture Statistics** **(For B. Tech - Agriculture Engg. admitted from July 2018)**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	**3**	**1**	**0**	**4**
	Prerequisite Course – Basic knowledge in probability and statistics				
	Course Coordinator Name & Department– P. Bhathmanaban& Department of Mathematics				
COURSE OBJECTIVE	➢ This course aims at providing the required skill to apply the statistical tools in engineering problems.				

COURSE OUTCOMES (COs)	
CO1	Understand the importance and the application of Probability in Engineering.
CO2	Summarise the Discrete and Continuous Random variables, Random Processes, and their Applications.
CO3	Apply various tools for testing the parameters based on samples
CO4	Analyse the sampling and testing the parameters.
CO5	Evaluate and analyse the variance in experiments.
CO6	Describe the basic knowledge of Statistics and its Applications.

Mapping of Course Outcomes with Program outcomes (POs)

4	**Approval**	47th Academic Council Meeting held in Aug, 2018													

UNIT I PROBABILITY AND RANDOM VARIABLES (9+3) Hrs

Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions. – Simple problems.

UNIT II TWO DIMENSIONAL RANDOM VARIABLES (9+3) Hrs

Joint distributions - Marginal and Conditional distributions – Expectation and conditional expectations. Transformation of Random Variable, Central limit theorem (for independent and identically distributed random variables)

UNIT III BASIC STATISTICS (9+3)Hrs

Measures of central tendency – Measures of dispersion – Moments, Skewness & Kurtosis – Correlation, Rank Correlation and Regression.

UNIT IV TESTING OF HYPOTHESIS (9+3) Hrs

Large sample tests based on normal distribution - Test for single mean, difference between means, standard deviation, difference between standard deviation. Tests based on t, Chi square and F distributions for mean, variance and proportion - Contingency table (test for independent) - Goodness of fit.

UNIT V DESIGN OF EXPERIMENTS (9+3) Hrs

Design of experiments Basic principles of experimental designs - Analysis of variance: ANOVA - one-way, Two-way classifications - Completely randomized design – Randomized block design - Latin square design - 2^2 Factorial Design.

U18HSBA502	**ORGANIZATIONAL BEHAVIOR**	L	T	P	C
	Total No. of contact hours: 45	3	0	0	3
	Pre-requisite:				
	Course Designed by: Dept of Management Studies				

Course Objectives	1. Understanding the basic approaches in organization 2. Knowledge on theories of Personality 3. Clear sight on the Decision Making in Groups 4. Analyse the behaviour of individuals and groups in organizations in terms of the key factors that influence organizational behaviour. Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behaviour.

COURSE OUTCOMES (COs)	
CO1	Familiarity with the knowledge of Frame work of Organizational Behaviour
CO2	Knowledge of the Interpersonal perception
CO3	Awareness of the Merits and Demerits of Group decision making.
CO4	Understanding of the Sources of power
CO5	Familiarity with the knowledge of types of Conflicts
Category	HS
Approval	47th Academic Council Meeting held in Aug, 2018

Unit I **9 hours**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

Unit II **9 hours**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behaviour

Unit III **9 hours**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

Unit IV **9 hours**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

Unit V **9 hours**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

U18PCAC501	PLANT GENETIC ENGINEERING	L	T	P	C

	Total Contact Hours - 45	2	1	0	3
	Prerequisite – Molecular biology, Cell biology, Microbiology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide a basic understanding of recombinant mechanisms and their applications from the perspective of engineers

COURSE OUTCOMES (COs)

CO1	to understand the fundamentals of genetic engineering
CO2	to apply the concept of recombinant DNA in plant, animal and microbial systems and growth in real life situations
CO3	to get the knowledge of molecular scissors and its role in creating transgenic products
CO4	Toknow the techniques related to screen the recombinant products
CO5	to get a basic knowledge of the applications of transgenes in agriculture, health care and biological products in relevant industries

UNIT I CLONING 9

Introduction to Genetic engineering.-Restriction enzymes, Restriction sites, Linkers and adapters. Markers for screening- Vectors- Characteristics-plasmid:EcoIi -.pBR 322, Cosmid-Shuttle vectors, pblue script vectors, Expression vectors, BAC, YAC, MAC. Characterizationof recombinant clones by Southern, Northern, Western Blotting

UNIT IICONSTRUCTION OF LIBRARIES 9

Overlapping and Non overlapping DNA fragments, Genomic library- Purification and Separation of RNA. cDNA library construction, Genome mapping, Polymerase Chain Reaction– methods, types and Applications. Semi quantitative and Real time PCR,

UNIT IIINUCLEIC ACID SEQUENCING AND LABELLING 9

Nucleic acid sequencing methods-Maxam Gilbert chemical sequencing, Sanger dideoxy enzymatic method- DNA Labelling: Nick translation, RNA labeling and Fluorescent labeling and non-isotopic labeling methods

UNIT IV GENE TRANSFER IN PLANTS 9

Method of gene transfer to plants- agrobacterium mediated / chemical mediated, Biolistics. Transgenic plants- Ri and Ti plasmids, Screening of recombinants-Direct and indirect methods, Single cell proteins using fungi.

.

UNIT VAPPLICATIONS 9

Transgenic plants for insect, disease, stress & herbicide resistance – edible vaccines and plantibodies – methods of crop improvement through genetic engineering –Fruit ripening-Antisense RNA technology

UNIT I HISTORY AND IMPORTANCE 9

History of Entomology in India; Position of insects in the animal kingdom and their relationship with other classes of Arthropoda; Reasons for insect dominance

UNIT II MORPHOLOGY 9

General organisation of insect body wall - structure and function, cuticular appendages, moulting; Body regions - insect head, thorax and abdomen, their structure and appendages

UNIT III ANATOMY AND PHYSIOLOGY 9

Digestive, excre

tory, respiratory, circulatory, nervous and reproductive systems in insects, sense organs and their functions, exocrine and endocrine glands; Embryonic and post embryonic development.

UNIT IV TAXONOMY OF APTERYGOTA AND EXOPTERYGOTA 9

Insect systematics; distinguishing characters of agriculturally important orders and families of Hexapoda-Apterygota (Thysanura, Diplura, Protura and Collembola);Exopterygota (Ephemeroptera, Odonata, Orthoptera, Phasmida, Dictyoptera, Embioptera, Dermaptera, Hemiptera, Isoptera, Psocoptera, Mallophaga, Thysanoptera and Siphunculata)

UNITV TAXONOMY OF ENDOPTERYGOTA 9

Distinguishing characters of agriculturally important families of Lepidoptera, Coleoptera, Diptera, Hymenoptera, Siphonaptera, Neuroptera and Strepsiptera

U18MCTH502UNIVERSAL HUMAN VALUES **2 0 0 0**

The objective of the course is four fold:

Sensitization of student towards self, family (relationship), society and nature.

Understanding (or developing clarity) of nature, society and larger systems, on the basis of human relationships and resolved individuals.
Strengthening of self reflection.
Development of commitment and courage to act.

At the end of the course, students are expected to become more aware of their surroundings, society, social problems and their sustainable solutions, while keeping human relationships and human nature in mind. They would have better critical ability. They would also become sensitive to their commitment towards what they believe in (humane values. humane relationships and humane society). It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction.

U18PCAC5L1	**PLANT MOLECULAR BIOLOGY AND GENETIC ENGINEERING LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours -45	0	0	2	1
	Prerequisite – Molecular Biology, genetic engineering				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES
To gain practical knowledge on nucleic acid isolation and its genetic manipulation

COURSE OUTCOMES (COs)

CO1	to understand the fundamentals of central dogma of biological systems
CO2	to know the procedure for DNA isolation from various sources
CO3	to study about electrophoresis
CO4	to understand the concept of restriction and ligation practically
CO5	to get a basic knowledge of transformation and mutation

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	H	H	H		H	H				H
	CO2		H	H			M					M

					√				
4	Approval	Academic Council, July 2018							

LIST OF EXPERIMENTS

1. Extraction of plant genomic DNA.
2. Extraction of Bacterial genomic DNA
3. Extraction of Animal DNA
4. Agarose gel electrophoresis.
5. Restriction Digestion of DNA.
6. Ligation of E-CoR1 digest of λDNA
7. Isolation of plasmid DNA by alkaline lysis
8. Effect of UV radiation on bacterial survival (induced mutagenesis.
9. Transformation.
10. Poly acrylamide –SDS slab gel electrophoresis of proteins

U18PCAC5L2	PLANT CELL AND TISSUE CULTURE LAB	L	T	P	C
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Biochemistry, Microbiology, Environmental Biotechnology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES: To provide knowledge about tissue culture and its applications

COURSE OUTCOMES (COs)

CO1	to know about the basic concepts of PTC
CO2	to understand about the sterilization methods
CO3	to get basic idea about preparation of media
CO4	to know about surface sterilization and inoculation
CO5	to get basic idea about synthetic seeds

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

							√						
4	Approval	Academic Council, July 2018											

LIST OF EXPERIMENTS

1. Tissue culture lab practices
2. Sterilization techniques for tissue culture
3. Preparation of culture medium
4. Callus culture using *Daucus carota*
5. Invitro propagation of Rose
6. Micropropagation of Rose
7. Rooting and hardening
8. Preparation of Synthetic seeds
9. Embryo culture
10. Anther culture

Self Development

U18MCAB611SPIRITUAL, MINDFULNESS AND MEDITATION 0 0 2 0

The human mind especially among the youth needs to transcend its preoccupation with negative experiences such as fear, anxiety, anger and obsession and to become more comfortable with the experience of compassion, acceptance and forgiveness. The student's attitude of acceptance towards negativity, aggression and turbulent emotions should be diffused with the practice of mindfulness. Rather than suppressing emotions or by indulging in them, the student be taught to handle such vibes with acceptance and generosity and with the observation of the self.

A mindful state has to be achieved when negative thoughts and experiences are becoming more personalized and do not serve as dictators of subsequent feelings and activities (e.g. suicide attempts, violence etc.). Both concentrative and insight meditation techniques may be practiced for 10-day sessions during every two months. Behavioral techniques of self monitoring should also be practiced to observe the stream of consciousness from the perspective of a vigilant but detached observer.

The students should be trained to practice different models of mindfulness and meditation so as to elicit a state of deep physical and behavioral relaxation. They may work on selectively influencing or changing the symmetry in hemispheric brain activity. Positive addiction, meta -cognitive practices etc. are exercised to make the students experience the universal human capacity through spiritual experiences.

The students may learn to turn-off or bypass the cognitive processing of usual daily pre-occupations and concerns, allowing access to mindful, spiritual and meditative state of self realization.

Activities:

Reading (10 books/ narrations)

Exercises (Mindfulness based Stress Reduction (MBSR) and 10 more) Sessions:
multiple 10-day sessions may be organized over a semester.

U18MCAB612 RELIGION AND INTER-FAITH 0 0 2 0

The objective is to gain knowledge about the beliefs and philosophies of different religions on issues like environment, gender equality, unity, financial equality etc.

The scholars of different religious and philosophical sects should be invited to talk about the issues mentioned above. Efforts should be made to ensure that such talks and discourses should stay clear-off making a critical study on these areas.

Following activities must be included.

Reading of books on religious texts of different faiths by famous authors. (Reading methods may be as suggested under 'book reading'.)

Organizing lecture on interfaith issues covering philosophies and chronology and contemporary situations world over at a given time.

SEMESTER VI

U18PCAC601	**FERMENTATION TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	2	0	0	2
	Prerequisite –Microbiology				

	Course Designed by – Dept. of Industrial Biotechnology

OBJECTIVES: To provide a basic knowledge of Biological processes.	
COURSE OUTCOMES (COs)	
CO1	To understand the development of bioprocess techniques.
CO2	To know about the instrumentation and control for bioprocess operations
CO3	To get idea about media formulations
CO4	To know about stoichiometry of bioprocess.
CO5	To know about various bioreactors

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

UNIT –I INTRODUCTION TO FERMENTATION

History of fermentation - Media sterilization, Batch Process (thermal death kinetics), continuous sterilization process; sterilization of fermenter and other ancillaries, filter sterilization of air and media- Upstream process.

UNIT II INSTRUMENTATION AND CONTROL OF PROCESS PARAMETERS 9

Main parameters to be monitored and controlled in fermentation processes: Temperature, pressure, pH, flow, dissolved oxygen, dissolved CO_2- cell mass, cell number, solid-substrate fermentation and its applications.

UNIT III FERMENTATION TECHNIQUES 9

Fermentation- Definition & types - Submerged and Solid state. Fermentors& its types (Tower, cylindroconical & airlift) – Batch fermentation – Continuous fermentation.

UNIT –IV FERMETATION PRODUCT 9

Production of beverages – beer and wine- vitamin B12–Antibiotics- penicillin - Bakers yeast, Details of mushroom development- Oyster (Pleurotus) and Button (Agaricus) mushroom.

UNIT –V DOWNSTREAM PROCESSING 9

Downstream process- Intercellular and extracellular- Centrifugation, filtration, Floatation-solvent extraction, precipitation- cell disruption- physical and Chemical methods.

UNIT I SYMBIOTIC NITROGEN FIXERS **9**

Introduction-history-symbiotic and non symbiotic nitrogen fixation-Symbiotic N2 fixers: Rhizobium - Isolation, characteristics, types, inoculum production and field application-Frankia biofertilizer

UNIT II NON SYMBIOTIC NITROGEN FIXERS **9**

Free living Azotobacter- free isolation, characteristics, mass inoculums, production and field application; Azospirillum isolation, characteristics, mass production-blue green algae biofertilizers-Azolla-green manuring

UNIT III MYCORRHIZAL BIOFERTILIZERS **9**

Importance of mycorrizal inoculum, types of mycorrhizae and associated plants, Mass inoculum production of VAM, field applications of Ectomycorrhizae and VAM.

UNIT IV PHOSPHATE SOLUBILIZERS **9**

Phosphate solubilizing microbes - Isolation, characterization, mass inoculum production, field Application

UNIT V BIOPESTICIDES **9**

Biocontrol-agents of biocontrol-antagonism-biopesticides vs chemical pesticides-bacterial pesticides; *Bacillus thuringiensis*, production, Field applications-mycopesticides-viral pesticides-biological control of weeds

UNIT I ENTREPRENEURSHIP FUNDAMENALS 9

Entrepreneur – Entrepreneurship – Enterprise – Writing good business plan – operations and management.

UNITII DECISION MAKING AND TIME MANAGEMENT 9

Entrepreneur psychology – personal decision making style – Decision making process – setting personal and Business goals – Setting time priorities – Business person working at home.

UNIT III FINANCE AND ECONOMIC FEASIBILITY 9

Financing the business– Raising venture capital – Financing sources – Pricing the product (or) Service – operating expenses Economic Analysis – Basic financial Analysis worksheets

UNIT IV COMPANY LAWS AND REGULATIONS 9

Forming company – Types of companies – Types of market – Proprietary information: Intellectual property, copy right, ownerships, Trademark, Patent – International Trade

UNIT V ENTREPRENEURSHIP IN BIOTECHNOLOGY 9

Various business opportunities in Biotechnology – Development of Biotech companies in India – Case studies on Biotech companies and its growth

Unit I

Soil as a natural body, Pedological and edaphological concepts of soil. Components of soil. Soil genesis: Composition of Earth's crust- soil forming rocks and minerals – Primary and secondary minerals. Weathering of rocks and minerals. Factors of soil formation. Soil forming processes. Soil Profile.

Unit II

Soil physical properties: Soil texture, structure, density and porosity, soil colour, consistence and plasticity. Soil water retention, movement and availability. Soil air, composition, gaseous exchange-problem and its effect on crop growth. Source, amount and flow of heat in soil, Soil temperature and crop growth.

Unit III

Soil physico chemical and chemical properties: Soil reaction-pH, soil acidity and alkalinity, buffering, effect of pH on nutrient availability. Electrical conductivity. Soil colloids - inorganic and organic. Silicate clays: constitution and properties, sources of charge, ion exchange, cation and anion exchange capacity and base saturation.

Unit IV

Soil organic matter: composition, properties and its influence on soil properties. Humic substances - nature and properties. Soil Biology: Soil organisms : macro and micro organisms, their beneficial and harmful effects. Soil enzymes.

UNIT V

Soil pollution – Types and behaviour of pesticides. Inorganic contaminants. Prevention and mitigation of soil pollution.

ESSENCE OF INDIAN KNOWLEDGE TRADITION-Pt-1

भारतीयविद्यासार - 1

Course Objective

- The course aims at imparting basic principles of thought process, reasoning and inferencing. Sustainability is at the core of Indian Traditional Knowledge Systems connecting society and nature. Holistic life style of yogic science and wisdom capsules in Sanskrit literature are also important in modern society with rapid technological advancements and societal disruptions. Part-1 focuses on introduction to Indian Knowledge Systems, Indian perspective of modern scientific world-view, and basic principles of Yoga and holistic health care system.

Course contents

- Basic Structure of Indian Knowledge System: अष्टादश विद्या – ४ वेद, ४ उपवेद (आयुर्वेद, धनुर्वेद, गान्धर्व वेद, स्थापत्य आदि), ६ वेदांग (शिक्षा, कल्प, निरुक्त, व्याकरण, ज्योतिष, छंद), ४उपाङ्ग (न्याय शास्त्र, मीमांसा, पुराण, तर्कशास्त्र)
- Modern Science and Indian Knowledge System
- Yoga and Holistic Health Care
- Case studies

U18MCTH604 Essence of Indian knowledge Tradition 2 0 0 0

Behavioral techniques of self monitoring should also be practiced to observe the stream of consciousness from the perspective of a vigilant but detached observer.

The students should be trained to practice different models of mindfulness and meditation so as to elicit a state of deep physical and behavioral relaxation. They may work on selectively influencing or changing the symmetry in hemispheric brain activity. Positive addiction, meta -cognitive practices etc. are exercised to make the students experience the universal human capacity through spiritual experiences.

The students may learn to turn-off or bypass the cognitive processing of usual daily pre-occupations and concerns, allowing access to mindful, spiritual and meditative state of self realization.

Activities:

Reading (10 books/ narrations)

Exercises (Mindfulness based Stress Reduction (MBSR) and 10 more) Sessions:
multiple 10-day sessions may be organized over a semester.

U18MCAB612 RELIGION AND INTER-FAITH 0 0 2 0

The objective is to gain knowledge about the beliefs and philosophies of different religions on issues like environment, gender equality, unity, financial equality etc.

The scholars of different religious and philosophical sects should be invited to talk about the issues mentioned above. Efforts should be made to ensure that such talks and discourses should stay clear-off making a critical study on these areas.

Following activities must be included.

Reading of books on religious texts of different faiths by famous authors. (Reading methods may be as suggested under 'book reading'.)

Organizing lecture on interfaith issues covering philosophies and chronology and contemporary situations world over at a given time.

SEMESTER VII

U18PCAC701	**BIOTECHNOLOGY OF BIOTIC AND ABIOTIC STRESS TOLERANCE**									**L**	**T**	**P**	**C**
	Total Contact Hours - 45									3	0	0	3
	Prerequisite – Agricultural Botany												
	Course Designed by – Dept of Industrial Biotechnology												
OBJECTIVES: To provide a basic knowledge on abiotic and biotic factors and their effect on plants													
COURSE OUTCOMES (COs)													
CO1	to understand the stress factors in plants												
CO2	to know about the insect pest resistance in plants												
CO3	to understand about plant pathogen interactions												
CO4	to study the various aspects of biotic stress tolerence												
CO5	to understand the abiotic stress tolerence												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	H	M	M	H		H	H	H	H	M	L	M
	CO2	H	M	M	H							L	M
	CO3	H				H			H	L			
	CO4	H	M				M	M				L	
	CO5	H	M	M		H				M	L		
3	Category	Humanities & Social Studies (HS)		Basic Sciences (BS)		Engg Sciences (ES)	Professional Core (PC)		Core Elective (CE)		Non-Major Elective (NE)	Open Elective (OE)	Project/ Term paper Seminar/ Internship (PR)
							√						

4	Approval	Academic Council, July 2018

UNIT I INTRODUCTION 9

Prospects & Perspective of Biotic & abiotic stress resistant plants, Genetics of host-pathogen interactions, Mechanism of plant resistance- Role of jasmonates and salicylic acid in systematic resistance induction on wounding

UNIT II INSECT PEST RESISTANCE 9

Insect pest resistance – Structural/ morphological changes; Protease and amylase inhibitors; polyphenol oxidases; peroxidases; lectins; chitinase; seed proteins; their limitations and significance in multi-gene pyramiding. Vertical and Horizontal resistance to pathogens

UNIT III HOST PATHOGEN INTERACTIONS 9

Hypersensitive host response (HRGP) and apoptosis in relation to plant defense- Virulence-Avirulence in host–pathogens interaction- Race specific Resistance Gene Analogues (RGAs)-Pathogenesis related proteins – groups with examples (Glucanases; chitinases; osmotin, chitin binding proteins; thaumatin like proteins; micropeptidal defensins; phytoallexins) and their role.

UNIT IV BIOTIC STRESS TOLERANCE 9

Role of Phenylalanine ammonia lyase, callose synthases, detoxification for pathogen resistance- RIP-Field testing of transgenic for fungal, bacterial, viral and pest resistance-Prospects and perspectives- Biopesticides-Developing antagonistic strains suitable for varying stress conditions.

UNIT V ABIOTIC STRESS TOLERENCE 9

Biochemical basis of abiotic stresses namely osmotic (drought, salinity), temperature, heavy metals, air and water pollutants, synthesis and functions of proline and glycine betaine in stress tolerance interaction between biotic and abiotic stresses; stress adaptation. Reactive oxygen species and biotic and abiotic stress, antioxidants, enzymes defense system- Role of calcium, nitric oxide and salicylic acid in plant development- Molecular strategies for imparting tolerance against biotic and abiotic stress

U18PCBT702	RESEARCH METHODOLOGY AND INSTRUMENTATION	L	T	P	C
	Total Contact Hours - 45	2	0	0	2
	Prerequisite – Biochemistry, microbiology, molecular biology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES

To provide basic knowledge about various instrumentation techniques and data documentation

COURSE OUTCOMES (COs)

CO1	to understand the biochemical analysis
CO2	to know about spectroscopic and microscopic techniques
CO3	to know about the separation techniques
CO4	to get ideas about ethical issues related to research
CO5	to know about data documentation

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO2	H	M	M	H	H		H			L	L	
	CO3	H	M	H	H	H		M	H		M		M
	CO4	H	M	H	H	H	H	H		M		M	H
	CO5	H	M	M	H	H		M	H		L	L	M
	CO6	H	H	H	H	H		H		M	L		

3	Category	Humanities & Social Studies (HS)	Basic Sciences (BS)	Engg Sciences (ES)	Professional Core (PC)	Core Elective (CE)	Non-Major Elective (NE)	Open Elective (OE)	Project/ Term paper Seminar/ Internship (PR)
					√				
4	Approval	Academic Council, July 2018							

UNIT I BASIC PRINCIPLES FOR BIOCHEMICAL ANALYSIS 9

Introduction – preparation of organ and tissue samples for analysis – cell disruption methods – physiological solutions: buffers and growth media for plants, animals and microbes – Medium standardization - cell sorting, isolation and enumeration techniques – cryopreservation – elucidating metabolic pathways by tracer studies.

UNIT II SPECTROSCOPIC AND MICROSCOPY TECHNIQUES 9

Introduction – UV – visible spectroscopy – NMR spectroscopy – IR and Raman spectroscopy – atomic spectroscopy - Introduction to microscopy – Election microscopy –ultramicrotome- phase contrast microscopy – Fluorescent and confocal microscopy.

UNIT III SEPARATION TECHNIQUES 9

Introduction to chromatography and electrophoresis – gel filtration – ion exchange – affinity – GC – HPLC - partition chromatography – electrophoresis of proteins and nucleic acids – immune precipitation techniques – ELISA.

UNIT IV ETHICAL ISSUES IN BIOTECHNOLOGY 9

Legal and socio economic impacts of biotech research – bio safety regulation – r-DNA guidelines- issues involved in experimenting with animals – Experimental protocol approvals – contaminant levels and environmental effects- impact of GM organisms and GM foods – IPR and patents.

UNIT V DATA ANALYSIS AND DOCUMENTATION 9

Sampling concepts for statistical analysis – Mean, median, standard deviation, standard error – ANNOVA – Guidelines for thesis writing: literature collection methods – writing of abstract, introduction and review of literature – results, discussion and summary – guidelines to publish articles in journals.

U18PCAC702	FOOD BIOTECHNOLOGY	L	T	P	C

	Total Contact Hours – 45	3	0	0	3
	Prerequisite – microbiology, pathology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES: The students understand concepts involved in microbial contamination of food and methods to control the food preservation

COURSE OUTCOMES (COs)

CO1	To understand the factors responsible for food spoilage
CO2	To investigate the microbes involved in the food spoilage
CO3	To analyze the techniques by which the food is preserved
CO4	To study the different toxins produced by the bacteria and fungi
CO5	To study the different food products by using the microbes as a source

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/Pos	a	b	c	d	e	f	G	h	I	j	k	l
2	CO1	H		M	H	M	M	M				L	
	CO2	H	M	M	H	H		M		M	L	L	M
	CO3	H	M	M	H	H	L		H		L		M
	CO4	H	M			H		M			L	L	M
	CO5	H	M	M	H	H		M		M	L	L	M
	CO6

								√	

4	Approval	Academic Council, July 2018

UNIT I INTRODUCTION **9**

Food and Microorganisms – Important microorganisms in food (Bacteria, Mold and yeasts); Factors affecting the growth of microorganisms in food – pH, moisture, oxidation – Reduction potential , Nutrient content and Inhibitory substances and biological structure.

UNIT II FOOD PRESERVATION **9**

Principles of food preservation – General principles and application methods – Asepsis – Techniques of removal – use of temperature (low & high) - Drying, radiation and chemical preservatives

UNIT III FOOD SPOILAGE AND ITS CAUSES 9

Spoilage of food – cereals, vegetables, fruits, egg and milk – canned foods and sea foods.

UNIT IV FERMENTED FOODS 9

Fermented food – pickled cucumber, Sauerkraut- soysauce, Bread, Idli – Fermented dairy products – Yoghurt and cheese.

UNIT V FOOD BORNE DISEASES 9

Food borne diseases & Food Quality control Measures – Food poisoning and Food borne infections – Bacterial and Mycotoxins- Investigation of food poisoning outbreaks- food standards, quality control- HACCP, FDA, WHO

4	Approval	Academic Council, July 2018											

LIST OF EXPERIMENTS

1. Isolation, identification of storage microflora from food stuffs/vegetable/fruit
2. Food colorants from microbes and their separation by HPTLC
3. Estimation of carotenes and xanthophylls from fruits/vegetables
4. Extraction and estimation of antioxidant in vegetables/fruits/food
4. Extraction and Characterization of Gluten
5. Extraction and Characterization of chitin
6. Estimation of caffeine from tea/coffee
7. Estimation of phytic acid from grains
8. Estimation of trypsin inhibitor
9. Estimation of capsaisin
10. Extraction of alginate from red algae

U1LPCAC7L2	**CROP PRODUCTIONLAB- HORTICULTURAL CROPS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – crop production ofHorticultural crops				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To provide knowledge about production of crops					
COURSE OUTCOMES (COs)					
CO1	to know about land preparation				
CO2	to know about nursery preparation				
CO3	to understand about fertilizer and pesticide application				
CO4	to get basic idea about harvesting and post harvesting				

CO5	to get basic idea about yield calculation												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

							√						
4	Approval	Academic Council, July 2018											

LIST OF EXPERIMENTS

11. Tillage and land configuration
12. Seed treatment and sowing
13. Nursery preparation
14. Fertilizer schedule calendar
15. Weeding
16. Pesticide application
17. Harvesting
18. Post harvesting
19. Storage
20. Yield calculation

U18MCAB713 Behavioral and Interpersonal skills (non-verbal skills / behaviours, non-aggression**)**

0 0 2 0

Each individual has behavior patterns that are shaped by the context of his or her past. Most often, adapting the behaviour to the changing context of the reality a person lives in becomes difficult which may lead to the reduction in personal effectiveness and natural self-expression. The main focus of this course is to equip the students with useful approaches to help in the deeper understanding of self and help individuals empower themselves to be the source of their own growth and development. The course will help students to learn effective communication skills, Group and team building skills and will help them learn the goal setting process and thus become more effective in achieving their goals.

The broader objective of this course is to make the students aware about the different facets of self and to help them learn skills to strengthen their inner capacities. So that they are able to understand themselves, think and act effectively, to be able to communicate in an effective manner and to learn to lead and to form an effective team. The specific objectives, however, are as following.

To help the students to understand their real self by recognizing different

aspects of their self-concept that will lead to an increased self-confidence.

To train the students for communicating effectively in both formal as well as in informal settings.
To help the students to understand the importance of non-verbal aspects of effective communication.
To help the students to understand Emotion and emotional intelligence, Managing ones' own emotional reservoirs, effective dealing with emotions at work

To facilitate the students in understanding the formation and function of group and team and to help them to learn the skills of a successful leader.
To help the students in understanding and practicing the goal setting process by recognizing the importance of each step involved in goal setting. The activities involved are designed to facilitate their career goal decision making.

The activities to achieve the above objectives can be suggested as follows.

Motivational lectures

Group Discussions/activities

Case Study

Games/Stimulation Exercises

Role-Playing
Mindfulness training.

U18MCAB714NATURE CLUB (bird watching, recognizing plants at institute/at home, recognizinglocal animals, appreciating biodiversity) **0 0 2 0**

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.

Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place.

Making high resolution big photographs of small creatures (bees, spiders, ants. mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants).

Videography/ photography/ information collections on specialties/unique features of different types of common creatures.

Search and explore patents and rights related to animals, trees etc. Studying miracles of mechanisms of different body systems.

U18MCAB815INNOVATION **0 0 2 0**

Project based – Sc., Tech, Social, Design & Innovation

Many students, when they enter engineering, are full of enthusiasm to understand new areas, to build systems and to experiment and play with them. This enthusiasm is to be tapped and to direct it to exploration and sustained pursuit by the student which may result in development of a working system, a prototype, or a device or material, etc. They are not required or even expected to produce research or an innovation.

Students may be encouraged to take up projects which are aimed at providing solutions to societal problems, reduce drudgery and improving efficiency in rural work, green technologies, utilization of rural and urban waste, sanitation and public health, utilizing non -conventional energy sources, technologies for the benefit of the differently abled people and technologies ready to be implemented in the Institute.

Two types of activities may be undertaken under this

Exposure to social problems (which are amenable to technological solutions)

Design & Innovation (to address above problems)

After this students be encouraged to undertake technology projects of social relevance.

PROFESSIONAL ELECTIVE I

U18PEAC011	**FUNDAMENTALS OF AGRONOMY**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Immunology, Life Science				
	Course Designed by : Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of biological defense mechanisms and their applications from the perspective of engineers					
COURSE OUTCOMES (COs)					
CO1	to understand the fundamentals of immune system				
CO2	to apply the techniques for antigen and antibody reaction				

CO3	to give the mechanism of immune response against antigens
CO4	to know the natural barrier against pathogens
CO5	to get a basic knowledge of the applications of immunology in transplantation

Unit - I:

Agriculture - Definition - Importance and scope - Branches of agriculture - Evolution of man and agriculture - History of agricultural development in the World and India.

Unit - II:

Agriculture heritage - Agriculture in ancient India - Chronological agricultural technology development in India - Kambar Aer Ezhupathu - Development of scientific Agriculture - National and International Agricultural Research Institutes in India - Indian agriculture.

Unit - III:

Agronomy - Definition - Importance - Meaning and scope - Agro-climatic zones of Tamil Nadu - Agro ecological zones of India - Crops and their classification - Economic and agronomic

- Major crops of India and Tamil Nadu - Major soils of Tamil Nadu - Factors affecting crop production - climatic - edaphic - biotic - physiographic and socio economic factors.

Unit - IV:

Tillage - Definition - Types - Objectives - Modern concepts of tillage - Main field preparations - Seeds - seed rate - sowing methods - Crop establishment methods - Planting geometry and its effect on growth and yield - After cultivation -Thinning - Gap filling - Weeds - Definition - Weed control methods.

Unit - V:

Manures and fertilizers (organic, in-organic, green manure) - time and method of application - Irrigation - Principles and concepts - Cropping patterns and cropping systems - Sustainable agriculture - integrated farming systems - Organic agriculture - Principles and concepts - Dry farming - Principles and concepts.

U18PEAC012	**FARMING SYSTEM AND SUSTAINABLE AGRICULTURE**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite- microbiology				
	Course Designed by – Department of industrial biotechnology				

OBJECTIVES: To study the applications of microbiology in industries

COURSE OUTCOMES (COs)

CO1	To learn about bioreactors
CO2	To study the maintenance of microbial cells
CO3	To study the downstream processing of microbial products
CO4	To know the enzymes produced by microbes
CO5	To study about microbial fuel cells

Mapping of Course Outcomes with Program outcomes (POs)

Unit I:Principles of Food Science and Nutrition

Food Science - definition – classification of foods – functional and nutritional classification. Food groups and food pyramid. Methods of cooking - moist, dry and microwave - principles, merits and demerits. Importance and scope of nutrition – relation of nutrition to health.

Unit -II:Carbohydrate, Protein and Fat

Carbohydrate – classification, functions, digestion and absorption, sources and Recommended Dietary allowance (RDA). Energy value of foods – determination. Protein – classification, functions digestion and absorption, sources and requirements. Protein quality of foods – supplementary value of protein. Fat - classification functions, digestion and absorption, sources and requirements. Rancidity – types of rancidity and prevention. Deficiency states of protein, carbohydrate and fat nutrition – signs and symptoms.

Unit III:Vitamin and Mineral Nutrition

Fat Soluble vitamins – A, D, E and K- functions, sources, requirements and deficiency. Water soluble vitamins – thiamine , riboflavin , niacin, pyridoxine, folic acid, cyanacobalamin, biotin, pantothenic acid ascorbic acid – functions, sources, deficiency and requirements. Minerals - calcium, iron, phosphorus, iodine, magnesium, zinc, sodium, potassium, fluorine and chlorine – functions, sources, deficiency and requirements. Importance of water – maintenance of electrolyte balance. Dietary fibre - importance, health benefits, sources and requirements.

Unit IV:Food Preservation and Processing

Introduction – preservation by sugar - processing of jam, squash, jelly, marmalade and beverages. Preservation by using salt, chemicals, dehydration technology, canning technology, preservation by low temperature and irradiation techniques. Processing of puffed, flaked and extruded products. Quality control of raw and processed products.

Unit V:Food Quality and Safety

Food packaging materials – requirements – methods – nutrition labeling. Food adulterants and their detection methods. Food laws and regulations and quality control standards - FSSAI, ISO, EU standards, FDA, HACCP and Codex Alimentarius Commission.

UNIT I - INTRODUCTION TO SEED AND SEED QUALITY 9

Seed - definition - Seed structure - Seed development and maturation - Germination -phases of seed germination - Dormancy - types of seed dormancy - Seed senescence - causes of seed

senescence - Seed quality characteristics - significance - Classes of seed - Generation system of seed multiplication in seed supply chain .

UNIT II - PRINCIPLES OF SEED PRODUCTION 9

Seed replacement rate and varietal replacement - Seed Multiplication Ratio - Seed renewal period - Causes of varietal deterioration and maintenance - Genetic and agronomic principles of seed production - Factors affecting quality seed production - Methods of seed production of varieties and hybrids.

UNIT III - SEED PRODUCTION TECHNIQUES OF AGRICULTURAL CROPS 9

Floral biology and pollination behavior - seed production techniques of rice, maize, sorghum and bajra varieties and hybrids - redgram varieties and hybrids - blackgam and greengram varieties - groundnut and sesame varieties - sunflower, castor and cotton varieties and hybrids – Bt cotton.

UNIT IV - SEED PRODUCTION TECHNIQUES OF VEGETABLE CROPS 9

Floral biology and pollination behavior - seed production techniques of tomato, chillies, brinjal, bhendi, onion, snakegourd, bittergourd, pumpkin, ashgourd, ribbedgourd and bottlegourd varieties and hybrids.

UNIT V - POST HARVEST SEED HANDLING TECHNIQUES 9

Threshing - methods - Drying - methods of seed drying - advantages and disadvantages -Seed processing – definition - importance - Seed cleaning and grading - upgrading - equipments - working principles - Seed treatment - importance - types - Seed invigouration techniques - seed hardening - seed fortification - seed priming - Seed enhancement techniques - seed coating - seed pelleting.

U18PEAC022	**POST-HARVEST AND FOOD ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – General biology, Cell biology, Agrl. Botany				
	Course Designed by – Dept of Biotechnology				
OBJECTIVES: To provide a basic knowledge about seeds its quality, handling and production methods					

COURSE OUTCOMES (COs)	
CO1	to understand basic concepts of seed and its quality
CO2	to know about the seed production principles
CO3	to know about production of seeds of agricultural crops
CO4	to know about production of seeds of vegetable crops
CO5	to understand the post harvest handling of seeds

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

UNIT I: POST HARVEST LOSSES **9**

Post harvest losses – causes and estimates – unit operations of crop processing – moisture content – methods of estimation - engineering properties of grains – mass, volume, density, porosity, sphericity – Thermal properties- applications .

Unit II: Threshing, cleaning and grading

Threshing – threshers for different crops - parts, terminology – operational safety and maintenance - winnowing – manual and power operated winnowers- cleaning, grading and sorting - types of screens - air screen cleaners- construction and operation-care and maintenance –Screen effectiveness-construction and working principles of spiral separator, magnetic separator, specific gravity separator, colour sorter and inclined belt separator.

Unit III: Shelling, drying and storage

Shelling equipments - maize sheller, husker sheller, hand and power operated groundnut decorticator - construction and working – performance evaluation - grain drying – principles - advantages - types - batch and continuous, mixing and non mixing – LSU drier – construction

and operation - performance of dryers - storage of food grains – factors affecting storage, traditional and improved methods - modified atmosphere storage.

Unit IV: Cereals, pulses and oilseed processing

Rice processing – Parboiling- traditional and modern methods - , modern rice milling – Size reduction – principles- equipment used- wheat milling – process flow chart – roller flour mill - construction and operation - pulse milling - wet, dry and CFTRI methods of pulse milling – equipment – construction and operation - oilseed processing – methods and machineries used – ghani, rotary and expeller - filter press – construction and operation – solvent extraction process.

Unit V: Material handling and Food Plant layout

Material handling equipments – bucket elevator, screw conveyor, belt conveyor – construction and operation –Food plant location – selection- layout-types- Food Packaging- requirements- types- Packaging of raw and processed foods.

U18PEAC023	**DAIRY PROCESS TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Microbiology				
	Course Designed by – Agricultural Biotechnology				

OBJECTIVES

To learn the techniques involved in the processing of dairy products

COURSE OUTCOMES (COs)

CO1	To remember the ways to preserve milk
CO2	To understand the different types of processing of milk and its products
CO3	To analyze the presence of different contaminants in milk products
CO4	To understand the methods to produce powdered milk products
CO5	To analyze ways to increase the shelf life of milk and its products
CO6	To remember the ways to sanitize the dairy equipments

Mapping of Course Outcomes with Program outcomes (POs)

UNIT I PRESERVATION OF MILK **9**

Preservation of raw milk: effects on physicochemical, microbial and nutritional properties of milk and milk products, preservation of raw milk by chemical preservatives; thermal processing for preservation.

UNIT II PROCESSING OF MILK **9**

Methods of determining lethality of thermal processing, UHT processed milk products, their properties and prospects, types of UHT plants, aseptic fillers, heat stability and deposit formation aspects, effect on milk quality; techno- economic considerations; retort processing.

UNIT III BACTOFUGATION AND BACTOTHERM **9**

Principles and equipment for bactofugation and Bactotherm processes, Microfluidization of milk: Principle, equipment, effects and applications, Homogenization and their applications in dairy industry.

UNIT IV DRYING OF MILK **9**

Dehydration: advances in drying of milk and milk products; freeze concentration, freeze dehydration: physicochemical changes during freeze drying and industrial developments.

UNIT V SHELF LIFE OF MILK PRODUCTS **9**

Sorption behaviour of milk foods, control of water activity of different milk products in relation to their chemical; microbiological and textural properties; hurdle technology and its application in development of shelf-stable and intermediate-moisture foods, Use of carbonation in extending the shelf life of dairy products-Cleaning and sanitization of dairy equipment: biological; detergents; Automation; Ultrasonic techniques in cleaning; bio-detergents, development of sanitizers- heat; chemical; radiation, mechanism of fouling and soil removal; Bio-films, assessing the effectiveness of cleaning and sanitization of dairy products.

Text Books

U18PEAC051	**BIOREMEDIATION TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Bioprocess technology, Microbiology				
	Course Designed by – Dept. of Industrial Biotechnology				

OBJECTIVES: To provide basic knowledge about the bioremediation techniques

COURSE OUTCOMES (COs)

CO1	To know about the types of bioremediation
CO2	to understand basic techniques in bioremediation
CO3	to know about bioremediation of chlorinated compounds
CO4	to know about the nuclear waste bioremediation
CO5	to know about remediation of oil spills

Mapping of Course Outcomes with Program outcomes (POs)

UNIT I BIOREMEDIATION **9**

Types of Bioremediation, Factors affection Bioremediation.BioremediationMechanisms.Limitations of Bioremediations. Microbes for Bioremediation :EssentialChararcteristics of Microbes for Bioremediation, Microbial Adapadation for Adverse conditions. Microbes involved in Bioremediation. Metabolic process involved in bioremediation. Bioremediation Techniques :Insitu&Exsitu bioremediation techniques. Phytoremediation

UNIT II SPECIFIC BIOREMEDIATION TECHNOLOGIES 9

Application, specific advantages and disadvantages of specific bioremediation technologies - land farming, prepared beds, biopiles, composting, bioventing, biosparging, pump and treat method, constructed wet lands, use of bioreactors for bioremediation.

UNIT III BIOREMEDIATION OF CHLORINATED COMPOUNDS 9

Bioremediation of phenols, chlorinated phenols, chlorinated aliphatic compounds, heterocyclic compounds, cyanides, dyes; Rhizoremediation: a beneficial plant-microbe interaction; Molecular techniques in bioremediation- Enhanced biodegradation through pathway engineering; Biodegradation of polyhalogenated compounds by genetically engineered bacteria.

UNIT IV NUCLEAR WASTE BIOREMEDIATION 9

Spent fuel characterisation, storage and disposal; Partitioning, transmutation and conditioning; Measurement of Radioactivity in the environment; Basic actinide research.

UNIT V HEAVY METAL AND OIL SPILL BIOREMEDIATION 9

Heavy metal pollution & sources; Microbial interactions with heavy metals - resistance &tolerance ;Microbial transformation; Accumulation and concentration of metals. Biosorption of heavy metals by microbial biomass and secondary metabolites – Biosurfactants. Advantages of biosurfactants over chemical surfactants- Biotechnology and oil spills; Improved oil recovery.

UNIT I PHYSICAL TREATMENT OF FOOD 9

Thermal, electrical and rheological properties- Heat processing- Methods of applying heat to food - sterilization - Thermo bacteriology- dehydration and drying - free moisture - equilibrium moisture content- water activity- classification of dryers- tray, and freeze dryers, osmotic dehydration - foam mat drying- extrusion coking.

UNIT II BLENDING METHODS 9

Mixing of solids, Pastes and liquids - Characteristics of mixtures-Blending -emulsification- equipments - liquid, pastes, and plastic masses - dry powders - criteria of mixer effectiveness- mixing index

UNIT III PRESERVATION OF FOOD 9

Concentration - freeze concentration - freezing and storage of frozen products - low temperature preservation - irradiation of food products - microwave heating - dielectric heating of foods.

UNIT IV DAIRY FOODS 9

Physics and chemical properties of milk and their effect on design - heaters - coolers -heat exchange equipments - storage tanks - can washers - pasteurization - principles and methods - equipments - LTLT - HTST - UHT pasteurization - CIP unit -Homogenization - Theory and working of homogenizers - bottle fillers and cappers -cream separation - principles - types of separator - classifiers - butter churns - cheese plant equipments - ice cream freezers - drying equipments - drum drier and spray drier -membrane concentration equipments.

UNIT V FOOD MICROBIOLOGY 9

Food microbiology: food spoilage, food borne diseases, infections, intoxifications, utilization of microorganisms in food industries, Nutraceuticals. Quality control, Case studies on biotechnology in the evaluation of food quality.

Total No. of Periods: 45

UNIT I INTRODUCTION 9

Types of green house, importance, functions and features of greenhouse- Scope and development of green house technology

UNIT II GREENHOUSE DESIGN 9

Location, planning of various components of green house- Design criteria and calculation- Construction material, covering material and its characteristics, growing media, green house irrigation system- nutrient management

UNIT III GREENHOUSE ENVIRONMENT 9

Greenhouse heating, cooling and shedding and ventilation system, Computer controlled environment.

UNIT IV GROWING PLANTS 9

Phytotrons, fertigation, roof system, containers and benches-Growing of ornamentals and vegetables under protected environment, physiology of plants in green house, pest and disease control.

UNIT V REQUIREMENTS AND PRACTICES 9

Various containers used for protected cultivation of vegetable and flower, special horticultural practices i.e. training, dis-budding, de-shooting, supporting and bending.

U18PEBT041	**FOOD SAFETY AND QUALITY CONTROL**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Food process engineering, Microbiology, Bioprocess Engineering, Biochemistry				
	Course Designed by – Dept. of Industrial Biotechnology				
OBJECTIVES: To know about the safety regulations of food industries					
COURSE OUTCOMES (COs)					
CO1	To study the history of food safety regulations				
CO2	to know about food adulteration				
CO3	to understand about food management practices				
CO4	to get basic idea about food hygiene				

CO5	to get basic idea about microbial quality control
CO6	to get basic idea about food safety standards

UNIT I FOOD SAFETY REGULATIONS 9

History of food regulations in India- Legislations- Prevention of Food Adulteration act 1954, Food product order (1955), Solvent Extracted Oil, De-oiled Meal and Edible Flour (Control) Order, 1967, Meat Food Products Order (1973),Edible Oils Packaging, 1998, Edible Oils Packaging, 1998, Vegetable Oil Products Order, 1998, Milk & Milk Product Amendment Regulations – 2009.

UNIT II FOOD SAFETY MANAGEMENT 9

Introduction to concepts of food quality, food safety, food quality assurance and food quality management; objectives, importance and functions of quality control, Current challenges to food safety Food adulteration, nature of adulterants, methods of evaluation of food adulterants and toxic constituents.

UNIT III FOOD QUALITY MANAGEMENT 9

Principles of food quality assurance, total quality management (TQM)–good manufacturing/management practices, good hygienic practices, good lab practices, general awareness and role of management practices in quality control Food safety management, applications of HACCP in food safety, concept of food traceability for food safety,

UNIT IV MICROBIAL CONTAMINATION 9

Microbial quality control: determination of microorganisms in foods by cultural, microscopic, physical, chemical methods. Statistical quality control in food industry Food safety and Standards Act 2006: salient provision and prospects

UNIT V FOOD SAFETY STANDARDS 9

Role of national and international regulatory agencies, Bureau of Indian Standards (BIS), AGMARK, Food Safety and Standards Authority of India (FSSAI), Introduction to WTO agreements: SPS and TBT agreements, Codex alimentarious commission, USFDA, International organization for standards (ISO) and its standards for food quality and safety (ISO 9000 series, ISO 22000, ISO 15161, ISO 14000)

UNIT I INTRODUCTION 9

Introduction to nanobiotechnology – nanodevices& techniques – micro &nanosystems – synthesis & characterization of nanoscale molecules – nanoarchitecture – fabrication technologies – self-assembly systems

UNIT II NANODEVICES 9

Inorganic nanoscale systems – properties of fullerene carbon nano tubes – quantum dots & wires – gold nanoparticles – nanopores.

UNIT III NANOMOLECULES 9

Nanomolecules in proteins, lipids RNA & DNA – peptide coupled nanoparticles – proteins nanodevices – cell nanotechnology – cell motility – nanomotors& cellular navigation – chemotaxis – transmembranesignaling – nanoscale artificial platform.

UNIT IV MICROBIAL NANOTECHNOLOGY 9

Nanotechnology and microorganisms – PHA – magnetosomes – cyanophycin inclusions – alginates – bacteriophages – bacterial spores – S – layer proteins – bacteriorhodopsin.

UNIT V NANOMEDICINE 9

Nanotechnology in drug delivery – nanoscale devices for drug delivery – micelles – protein targeting – protein interaction with other molecule – microarray – genomic chips – nanobiosensors – nanobiochips – Nanotechnology for cancer diagnosis & treatment.

UNIT I

External trade in Agricultural products, Present status, policy and prospects under WTO regime, Export import policy, Regulation of Agricultural marketing system

UNIT II

Infrastructural facilities for exporting efficiency, Biotechnological Products in India, Quality parameters and quarantine procedures of export- Market integration: Types and effects Marketing costs margins and price spread.

UNIT III

Biotech industries & institutes in India & world, Concepts of Biotech park/ Biotech Hub to different small scale and large scale Agro-based products. Study the production techniques of biotech products.

UNIT IV

Collecting the information on export import data on biotech products, quality standards for export and their potential-Analyze data in relation to demand supply.

UNIT V

Comparison between non biotechnological products and biotechnological products. Safety and licensing for import and export of biotechnological products.

Principles of Marketing by Kotlar and Armstrong 1997, Prentice-Hall, N. Delhi.

OPEN ELECTIVES

U18OEAC001 GEO-INFORMATICS AND PRECISION FARMING 3 0 0 3

UNIT I REMOTE SENSING 9

Remote sensing: Concepts - Electromagnetic radiation: principles and theories- Energy interaction: atmosphere and earth surface features- Spectral reflectance of earth features- Platforms and sensors: types and characteristics. Image Processing and Interpretation – Digital image processing: Image Classification - Optical, Microwave and Drones

UNIT II GIS 9

GIS: Definition, Components and functions- Raster and vector data models and non-spatial data types - Raster Data Analysis: Local, Neighborhood and Regional Operations- Vector Data Analysis: Querying, Buffering, Overlay

UNIT III GLOBAL POSITIONING SYSTEM 9

Geodesy and its basic principles -Global Positioning System – components and its functions- GPS survey methods- Error sources - DEM – Sources, Generation and application.

UNIT IV PRECISION AGRICULTURE 9

Precision agriculture: concepts and techniques; their issues and concerns –STCR / VRT approach for precision agriculture - Soil moisture, Pest and Disease incidence – nutrient deficiencies – linking with VRT using Geospatial Technologies

UNIT V YIELD MONITORING 9

Crop discrimination and Yield monitoring, soil mapping; fertilizer recommendation using geospatial technologies-Introduction to crop Simulation Models and their uses for optimization of Agricultural Inputs – Drones for precision agriculture

U18OEAC002 LIVESTOCK AND POULTRY MANAGEMENT 3 0 0 3

UNIT I INTRODUCTION TO LIVESTOCK MANAGEMENT 9

Significance of Livestock and Poultry in Indian Economy – Livestock and Poultry census – Different livestock development programs of Government of India and Tamil Nadu- Various systems of livestock production-extensive – semi intensive - intensive- mixed- Integrated and specialized farms.

UNIT II DAIRY CATTLE MANAGEMENT 9

Important White and Black cattle breeds-classification-indigenous and exotic – Breed characteristics – Breeding - Cross breeding- Upgrading - Economic traits of cattle –Culling - Estrus Cycle – Artificial Insemination – Introduction to Embryo transfer – Housing – Space requirement calf and adult stock – System and types of housing - Feeding and Management of Calf, Heifer, Pregnant, Milch animal and working animals – Nutrition – Ration – Balanced Ration - Characteristics of ration and classification of feed and fodder –Total Mixed Ration **–** composition of concentrate mixture for different stage - Milking methods - Clean milk production – Factors affecting milk composition – Common diseases of cattle – classification – symptoms - preventing and control measures.

UNIT III SHEEP AND GOAT MANAGEMENT 9

Breeds - Sheep and goat classification — Economic traits - system of rearing - Housing Management – Floor space requirement - Care and Management of young and adult stock – Nutrition – Feed and fodders of Small ruminants – Flushing - Common diseases – prevention and control.

UNIT IV MANAGEMENT OF SWINE 9

Classification of breeds – Economic traits - Housing - Nutrition – creep feeding - Care and Management of Adult and Young Stock - Common disease- prevention and control.

UNIT V POULTRY MANAGEMENT 9

Classification of breeds - Commercial Strains of broilers and layers – Housing – brooding – deep litter and cage system – care and Management of broilers and layers -Nutrition of Chick, grower, Layer and broiler – Incubation and Hatching of Eggs - Common Diseases - Control and prevention.

U18OEAC003 EXTENSION METHODOLOGIES AND TRANSFER OF AGRICULTURAL TECHNOLOGIES 30 0 3

UNIT I EXTERNAL TRADE 9

External trade in Agricultural products, Present status, policy and prospects under WTO regime, Export import policy, Regulation of Agricultural marketing system

UNIT II EXPORT PROCEDURES 9

Infrastructural facilities for exporting efficiency, Biotechnological Products in India, Quality parameters and quarantine procedures of export- Market integration: Types and effects Marketing costs margins and price spread

UNIT III BIOTECH INDUSTRIES 9

Biotech industries & institutes in India & world, Concept of Biotech park/ Biotech Hub to different small scale and large scale Agro-based products. Study the production techniques of biotech products

UNIT IV EXPORT IMPORT DATA 9

Collecting the information on export import data on biotech products, quality standards for export and their potential- Analyze data in relation to demand supply

UNIT V LICENSING FOR EMPORT AND IMPORT 9

Comparison between non biotechnological products and biotechnological products- Safety and licensing for import and export of biotechnological products

Text/Reference books:

2. Agriculture Marketing in India by Acharya and Agrawal 1999, Oxford IBH, N. Delhi.
3. Principles of Marketing by Kotlar and Armstrong 1997, Prentice-Hall, N. Delhi

U18OEAC004 SOIL AND WATER CONSERVATION ENGINEERING 3 0 0 3

UNIT I SURVEYING 9

Surveying and levelling – chain and compass – levelling – land measurement – difference in elevation.

UNIT II SOIL EROSION 9

Soil Erosion – causes and evil effects of soil erosion – geologic and accelerated erosion – universal soil loss equation - water erosion - causes - stages of water erosion - splash, sheet, rill and gully erosion - ravines - landslides – wind erosion - factors influencing wind erosion - mechanics of wind erosion – suspension, saltation, surface creep

UNIT III SOIL CONSERVATION AND WATERSHED MANAGEMENT 9

Erosion control measures for agricultural lands – biological measures – contour cultivation – strip cropping – cropping systems – vegetative barriers - windbreaks and shelterbelts - shifting cultivation - mechanical measures – contour bund – graded bund – broad beds and furrows – basin listing – random tie ridging – mechanical measures for hill slopes – contour trench – bench terrace – contour stone wall – Rain water harvesting — Runoff computation - rational formula - water harvesting – farm ponds and percolation ponds - watershed concept – integrated approach and management

UNIT IV IRRIGATION AND DRAINAGE 9

Irrigation - measurement of flow in open channels - velocity area method - rectangular weir - Cippoletti weir - V notch - orifices - Parshall flume - duty of water - irrigation efficiencies - conveyance of irrigation water - surface irrigation methods - borders, furrows and check basins - drip and sprinkler irrigation component– agricultural drainage - surface and sub-surface drainage systems - drainage coefficient

UNIT V WELLS AND PUMPS 9

Types of wells– pump types – reciprocating pumps – centrifugal pumps – turbine pumps – submersible pumps – jet pumps – airlift pumps

PROFESSIONAL ELECTIVE (PE) - VI							
U18PEBM061	Radiological Equipments	Biological Effects of Radiation	3	3	0	0	3
U18PEBM062	Medical Physics	Biomedical laser Instrumentation	3	3	0	0	3
U18PEBM063	Physics	Bio-photonics	3	3	0	0	3

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMES

ALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18OEBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations
20 U18OECE003-Road Safety
21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics
38. U18OEAE003- Unmanned Aerial Vehicle
39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion
41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance
43. U18OEEE003-Energy Conservation Techniques
44. U18OEEE004-PLC and SCADA for Industrial

45. U18OEEC-001-Communication Systems
46. U18OEEC-002-VLSI circuits
47. U18OEEC-003-Image Processing Techniques
48. U18OEEC-004-Communication Networks
49. U18OEEC-005-An Introduction to DSP
50. U18OEEC-006-Basics of IoT
51. U18OEBM001-Medical Radiation Safety Engineering
52. U18OEBM002-Medical Waste Management
53. U18OEBM003-Quality Control in Healthcare
54. U18OEBM004-Wearable Technology
55. U18OEEI001-Analytical Methods and Instrumentation
56. U18OEEI002-Introduction to process Data Analytics
57. U18OEEI003-Reliability and Safety in Process industries
58. U18OEEI004-Multi sensor data fusion
59. U18OEBT001- Bioprocess Economics & Plant Design
60. U18OEBT002-Brewing technology
61. U18OEBT003-Biomining
62. U18OEBT004-Industrial Safety Engineering
63. U18OEAC001-Geo- informatics for Precision Farming
64. U18OEAC002-Livestock and poultry management
65. U18OEAC003-Extension methodologies and transfer of Agricultural Technologies
66. U18OEAC004-Soil and Water Conservation Engineering
67. U18OEIT001-Block Chain Technology
68. U18OEIT002-Semantic Web
69. U18OEIT003-Entrepreneurship Development
70. U18OEIT004-Ethical Hacking Techniques
71. U18OECS004-Mobile Application Development
72. U18OECS005-System Modelling and Simulation
73. U18OECS006-Web Programming
74. U18OECS007-Virtual Reality
75. U18OECS008- E Commerce
76. U18OEGE001-Metagenomics and Epigenomics
77. U18OEGE002-Molecular Genetics and Genomics
78. U18OEGE003-Principles of Molecular cell biology

U18HSEN101	**COMMUNICATIVE ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	2	0	2	3
	Prerequisite – School English				
	Dept Designed by: epartment of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6 hours

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing one self – exchanging personal information- narrating events, -incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6 hours

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -The concept of Word Formation

UNIT III LISTENING 6 hours

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6hours

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development-synonyms-antonyms- phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6 hours

Writing short essays – developing an outline- identifying main and subordinate ideas-dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures-Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely.

SOFTSKILL LABORATORY **30hours**

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews & conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds- intonation.
12. Creative and critical thinking.

TEXT BOOKS:

1. English A Course book for Under Graduate Engineers and Technologists. Orient Black Swan Limited, Hyderabad: 2015
2. Richards, C. Jack. Interchange Students' Book-2 New Delhi: CUP, 2015.

6. Remedial English Grammar. F.T. Wood. Macmillan.2007
7. On Writing Well. William Zinsser. Harper Resource Book. 2001

COURSE OUTCOMES (COs)	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

3	Category	Humanities and Social Studies (HS)													
4	Approval	47th Meeting of Academic Council													

U18BSMA101	**ENGINEERING MATHEMATICS – I**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	4	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	➢ To familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. ➢ To equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines				

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3)

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. Narayanan S., Manicavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers,
5. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth Edition Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO3	H				M				L			
	CO4	H	M			M				L			
	CO5	H		H		M				M	L		
3	Category	Basic Science (BS)											
4	Approval	47th Meeting of Academic Council											

U18BSPH101	**WAVES AND OPTICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.					

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION **9**

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – etection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVE OPTICS 9

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS 9

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

TEXT BOOKS

3. BrijLal and Subramanian,"Optics", S.Chand Publishers 2006
4. Ian G. Main, "Vibration and waves in physics", Cambridge University Press, 1978
5. H.J. Pain, "The physics of vibrations and waves", 6th edition, Wiley 2006
6. Ajoy Ghatak, "Optics", Tata McGraw-Hill publishing company, New Delhi, 2009
7. O. Svelto, "Principles of Lasers", Springer, 2010
8. Online reference Wikipedia.org

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Understand the basic concept of waves and lights
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing
CO3	Understand the propagation of light and geometrical optics
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves
CO5	Understand the concept of laser and its applications

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO2	L	H	M	M	H			M		L	H	L
	CO3	H	L			L			M	M		M	H
	CO4	H	L			L			M	M		M	H
	CO5	H	M	M	M				M		H	W	H
3	Category	Basic Sciences (BS)											
4	Approval	47th Meeting of Academic Council											

U18BSCH101	**ENGINEERING CHEMISTRY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY **9**

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS **9**

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES **9**

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS **9**

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane

number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. Nanocomposites – sensors and electronic devices.

TEXT BOOKS:

1. P.C.Jain and Monica Jain, "Engineering Chemistry" Dhanpat Rai Pub, Co., New Delhi (2002).
2. S.S.Dara "A text book of Engineering Chemistry" S.Chand & Co.Ltd., New Delhi (2006).
3. P. J. Lucia, M. Subhashini, "Engineering Chemistry, Volume 1", Crystal Publications, Chennai, (2007).
4. S. Vairam, P. Kalyani and Suba Ramesh, ―Engineering Chemistry‖, Wiley India PVT, LTD, New Delhi, 2013.
5. G. B. Sergeev, Nano chemistry, Elsevier Science, New York, 2006.

REFERENCES:

1. B.K.Sharma "Engineering Chemistry" Krishna Prakasan Media (P) Ltd., Meerut (2001).
2. Sivasankar "Engineering Chemistry" Tata McGraw-Hill Pub.Co.Ltd, New Delhi (2008).

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESEE101	BASIC ELECTRICAL & ELECTRONICS ENGINEERING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

MODULE 1 : DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamental Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transfer Theorem.

MODULE 2: AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS **9**

Principles of operation and characteristics of; DC machines, Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS **9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS **6**

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

TEXT BOOKS:

1. John Bird, Electrical Circuit Theory & Technology, Taylor & Francis Ltd, 6th, edition. 2017.
2. Smarajit Ghosh, Fundamentals of Electrical and Electronics Engineering, Second Edition, PHI Learning, 2007.
3. L. S. Bobrow, “Fundamentals of Electrical Engineering”, Oxford University Press, 2011.
4. E. Hughes, “Electrical and Electronics Technology”, Pearson, 10th Edition, 2011.
5. V. D. Toro, “Electrical Engineering Fundamentals”, Pearson, 2nd Edition, 2015.

3. Jacob Millman and Christos C-Halkias,"Electronic Devices and Circuits", Mcgraw Higher Ed, 4th Edition, 2015.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.
CO2	To gain knowledge regarding fundamentals of AC circuits.
CO3	To gain knowledge regarding electrical machines and transformers.
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.
CO5	To gain knowledge on principles of digital electronics systems.

Mapping of Course Outcomes with Program Outcomes (POs)

U18BSBT101	**BIOLOGY FOR ENGINEERS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level in Physical & Life Sciences signaling				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector					

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System -types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation- nucleic acids as a genetic material-central dogma - immunity- antigens - antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines -cloning- bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

TEXT BOOKS:

1. A Text book of Biotechnology, R. C. Dubey, S. Chand Higher Academic Publications, 2013
2. Diseases of the Human Body, Carol D. Tamparo and Marcia A. Lewis, F.A. Davis Company, 2011.
3. Biomedical instrumentation, Technology and applications, R. Khandpur, McGraw Hill Professional, 2004

REFERENCE BOOKS

1. Biology for Engineers, Arthur T. Johnson, CRC Press, Taylor and Francis, 2011
2. Cell Biology and Genetics (Biology: The unity and diversity of life Volume I), Cecie Starr, Ralph Taggart, Christine Evers and Lisa Starr, Cengage Learning, 2008
3. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)													
The student will be able													
CO1	To understand the basic concepts of the cell and its structure												
CO2	To understand about biodiversity and its conservation												
CO3	To know the fundamentals of genetics and the immune system												
CO4	To create an awareness about human diseases												
CO5	To give a basic knowledge of the applications of transgenic												
Mapping of Course Outcomes with Program Outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Semiconductor Physics – Circuit branches

1) Determination of Band Gap
2) Zener diode characteristics
3) p-n junction diode Characteristics
3) Transistor Characteristics
5) V-I characteristics using LDR circuit
6) Carey Foster's Bridge

U18BSCH2L4	CHEMISTRY LABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				

OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry

3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.
2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Student will be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

U18ESME1L2	**WORKSHOP/MANUFACTURING PRACTICES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

SYLLABUS

Lectures & videos: (15 hours)

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice

2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fitting models.

3. Carpentry **(9 hours)**
   a) Preparation of Lap joints.
   b) Mortise and Tenon joints.
   c) Cross Half joints.
   d) Dove Tail joints.

4. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**

Preparation of butt joints, lap joints and Tee joints

5. Sheet Metal working **(9 hours)**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints

6. Demonstration **(6 Hours)**

Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

1. Hajra Choudhury S.K., Hajra Choudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and publishers Private Limited, Mumbai.
1. Kalpakjian S. And Steven S. Schmid, "Manufacturing Engineering and Technology",4th edition, Pearson Education India Edition, 2002.

3. Roy A. Lindberg, "Processes and Materials of Manufacture", 4th edition, Prentice Hall India, 1998.
4. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGraw Hill House, 2017.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronics Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier

REFERENCE BOOKS:

1. S. K. Bhattacharya, "Basic Electrical and Electronics Engineeing", Pearson Education India,2011

COURSE OUTCOMES (COs)	
The student will be able	
CO1	To handle basic electrical equipment and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits .
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flaps

4	Approval	47th Meeting of Academic Council											

U18HSEN201	**TECHNICAL ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	1	0	3
	Prerequisite – I semester English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of English language and its usage in day to day life.				

UNIT I LISTENING **9**

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)	
The student will be able	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

U18BSMA201	**ENGINEERING MATHEMATICS II**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	The objectives of this course are to equip the students of Engineering and Technology with techniques in ➢ Ordinary equations, vector calculus, complex variables. ➢ Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.

4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
The student will be able	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

Mapping of Course Outcomes with Program Outcomes (POs)

U18BSPH202	**SEMICONDUCTOR PHYSICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES

- To develop physics and engineering strategies of semiconductor materials and to discuss their functionalities in modern electronic and optoelectronic devices

UNIT 1 INTRODUCTION AND ELECTRONIC STATES OF SEMICONDUCTORS 9

Introduction to solid state materials - crystal structure - Reciprocal lattice - Brillouin zone and rules for band (k - space) representation. Dynamics of electrons in periodic potential:Kronig - penny and nearly free electron models - Real methods for band structure calculations; Band gaps in semiconductors - Holes and effective mass concept - Properties of conduction and valance bands

UNIT 2 CARRIERS AND DOPING 9

Fermi distribution and energy - Density of states - Valance and conduction band density of states - intrinsic carrier concentration – intrinsic Fermi level. Extrinsic semiconductors: n and p type doping - Densities of carriers in extrinsic semiconductors and their temperature dependence - extrinsic semiconductor Fermi energy level - Degenerate and non - degenerate semiconductors - Band gap engineering

UNIT 3 ELECTRICAL TRANSSORT 9

Scattering Mechanism: electron - electron and electron – phonon scattering. Macroscopic transport: Carrier transport by Diffusion - Carrier transport by Drift: Low field, High field and very high field.

UNIT 4 OPTICAL TRANSSORT 9

Electron - hole pair generation and recombination: band to band (direct and indirect band gap transitions) and intra band (impurity related) transitions, free - carrier & phonon transitions. Excitons: Origin, electronic levels and properties. Carrier transport - continuity equations. Optical constants: Kramers - Kronig relations.

UNIT 5 SEMICONDUCTOR AS DEVICES AND RECENT ADVANCES 9

Processing of Semiconductor devices (Brief), p - n Semiconductor as device and Semiconductor junctions - Homo and hetero Junctions. Active and passive optoelectronic devices: performance and response enhancement (photo processes)**.**

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Understand the difference between metals, semiconductors and insulators
CO2	Understand the importance of doping to charge carrier density
CO3	Understand the electrical transport in semiconductors
CO4	Understand the difference between direct and indirect semiconductors
CO5	Understand the concept of semiconductor optoelectronic devices.

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	47th Meeting of Academic Council											

U18BSCH201	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I -NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS **9**

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION **9**

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION **9**

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION **9**

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder- Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.

Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES (COs)	
The student will be able to	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHMIC PROBLEM SOLVING **9**

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS **9**

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

MODULE 3: CONTROL FLOW, FUNCTIONS **9**

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES **9**

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES **9**

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

COURSE OUTCOMES (COs)	
The student will be able to	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	Gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	Ggain knowledge on files, exception, modules and packages in Python for solving problems

Detailed contents

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM).

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle.

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP.

MODULE3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

MODULE4: SECTIONSOF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS:

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students will get Exposure to basics of building construction
CO4	Students will get Exposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.

Mapping of Course Outcomes with Program Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18ESCS1L1	**PROBLEM SOLVING AND PYTHON PROGRAMMINGLABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Maths and Physical Science				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. Exponentiation (Power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

COURSE OUTCOMES (COs)	
The student will be able	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab,NumPy and Matplotlib

PLATFORM NEEDED

1. Python 3 interpreter for Windows/Linux and Scilab

U18BSMA301	TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS	L	T	P	C
	Total Contact Hours – 60	3	1	0	4
	Prerequisite course – Engineering Mathematics-II				
	Course Designed by:- Department of Mathematics				

COURSE OBJECTIVES:-

- Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms.
- Learn techniques of solving the standard types of first order and second order partial differential equations.
- Learn solving wave and heat equation using Fourier series.
- Understand the problems using Fourier transform and their properties. Understand the problems using Z - transform and their properties

UNIT I FOURIER SERIES (9+3)

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS (9+3)

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS (9+3)

Classifications second order linear partial differential equations – Solution of one-dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation – Fourier Series solutions in Cartesian coordinates.

UNIT IV FOURIER TRANSFORM (9+3)

Fourier integral theorem (without proof) – Fourier transform pairs – Fourier sine and cosine transform – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT V Z – TRANSFORM AND DIFFERENCE EQUATIONS (9+3)

Z – Transform – Elementary properties – Inverse Z – Transform – Convolution theorem – Formation of difference equations – Solution of difference equations using Z – Transform.

TEXT BOOKS

1. S. J. Farlow, Partial Differential Equations for Scientist and Engineers, Dover Publications 1993.
2. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.

REFERENCE BOOKS

1. R. Haberman, Elementary Applied partial differential equations with Fourier Series and Boundary Value Problems, 4th Ed., Prentice Hall, 1998.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36th Edition, 2001.
3. Manish Goya and .N.P Bali l, Transforms and Partial Differential Equations, University Science Press, Second Edition, 2010.

COURSE OUTCOMES	
CO1	To Solve PDE and higher order with constant coefficients and physically interpret the results.
CO2	To Expand given function using the knowledge of Fourier Series and frequently needed practical harmonic analysis that an engineer July have to make from discrete data.
CO3	To Boundary Value Problems and Differential Equations will be knowledgeable about and will be able to analyze solutions to two-point boundary value problems, boundary value problems for partial differential equations.
CO4	To Solve many problems in automobile, medicine, electronic engineering by applying Fourier transform with the possible special cases with attention to their applications.
CO5	To Apply the basics of Z – Transform in its applicability to discretely varying functions.
CO6	To Gain the skill of formulate certain problems in terms of difference equations and solve them using the Z – Transform techniques.

U18PCBM301	ANATOMY AND PHYSIOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Biology for Engineers				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To recall the basic terminologies, cells, tissues and organs of human body.
- To explain about the positioning and functioning of the various organ systems.
- To differentiate the relation between the various physiological processes.
- To outline the various sense organs and relate the functions of hormones with physiological process.

UNIT I BASIC ELEMENTS OF HUMAN BODY 9

Anatomical terms of Location, Position and Planes. Structure and functions of Cell and organelles. Tissues of the human body: epithelial, connective, muscular and nervous tissues. Overview of organ systems. Membrane-Transport across membrane, Origin of cell membrane potential, Action potential. Blood-Properties and functions, Cellular Components: RBC, WBC, platelets, Blood Groups.

UNIT II CARDIOVASCULAR AND RESPIRATORY SYSTEMS 9

Structure of heart, Blood vessels, Conduction system of heart, Physiology of Cardiac Muscle, Cardiac cycle, Heart Sound, Cardiac output – Coronary and Peripheral Circulation, Blood pressure and its regulation. Respiratory Organs, Mechanism of respiration, Carbon dioxide and oxygen transport, Regulation of respiration, Volumes and capacities of lung.

UNIT III NERVOUS SYSTEM AND MUSCULOSKELETAL SYSTEM: 9

Neurons, Synapse and neurotransmitters, Central nervous system: Structure and functions of brain, Meninges, ventricles of brain and cerebrospinal fluid, Spinal cord anatomy. Peripheral nervous system: Classification of peripheral nervous system, Autonomic nervous system, Reflex action. Muscular System: Classification of muscles, Anatomy and Physiology of skeletal muscle. Bone: Types, Functions, Anatomy of long bone – Formation, growth and repair, Structural and functional classification of joints.

UNIT IV DIGESTIVE AND EXCRETORY SYSTEM 9

Anatomy of the gastro-intestinal tract, Accessory organs of Digestion - Salivary glands, Liver, Pancreas, Gall Bladder. Movement of gastrointestinal tract, Digestion and absorption at various parts of the system, Defecation. Anatomy of Urinary System, Physiology of urine formation, physiology of micturition, Composition of Urine. Skin and Sweat Gland – Temperature regulation.

UNIT V SPECIAL ORGANS AND ENDOCRINE GLANDS 9

Anatomy of Eye and Physiology of Vision, Structure of Ear and Physiology of Hearing, Sense of Smell, Sense of Taste. **Endocrine system:** Structure and functions of Pituitary gland, Thyroid gland, Parathyroid gland, Adrenal gland, Pancreas, Pineal gland, Thymus, Ovaries and Testes.

TEXT BOOKS:

1. Arthur C. Guyton, John E. Hall, "Textbook of Medical Physiology", W.B. Saunders Company, Twelfth Edition, 2006.
2. Stuart I. Fox, "Human Physiology", Tata McGraw Hill, 9th Edition,2006.

2. Ranganathan, T.S. "Text Book of Human Anatomy", S.Chand & Co. Ltd., Delhi,1996.

COURSE OUTCOMES (COs)															
CO1	To Define the basic terminologies and outline the different tissues and organ systems.														
CO2	To Describe the various organ systems and their functions														
CO3	To Illustrate the cardiovascular, respiratory, digestive, excretory and other organ systems														
CO4	To Explain the nervous and musculoskeletol system														
CO5	To Compare and identify the relation between cardiovascular and respiratory, digestive and excretory system.														
CO6	To Demonstrate the special organs and functions of endocrine glands														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCBM302	**ANALOG AND DIGITAL INTEGRATED CIRCUITS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Basic Electrical and Electronics Engineering				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To understand the number systems and their conversions, Boolean expressions, Boolean postulates and Karnaugh map method.
- To impart the design knowledge of various combinational logic circuits and sequential circuits.
- To bring out the analysis and design procedures for synchronous and asynchronous Sequential circuits.
- To get familiarized with operational amplifiers and its characteristics design and the working of waveform generators, regulators, filters and timers circuits.
- To design and the working of waveform generators, regulators, filters and timers circuits

UNIT I NUMBER SYSTEMS AND LOGIC GATES 9

Decimal, Binary, Octal and Hexadecimal Numbers.-Conversion between these number systems- 1's and 2's complements - subtraction using complements – Encoding numbers and characters using Binary digits. –Binary coded Decimal –Gray code - Binary to Gray code conversion –ASCII Code. Logic gates – Truth tables – NOT, AND, OR, NOR, NAND, XOR, XNOR - Boolean Laws and theorems – Solving Boolean expressions, Truth Tables and Logic circuits – The Karnaugh Map – half adder, full adder, Multiplexers and Demultiplexers - Decoders and encoders.

UNIT II REGISTERS AND COUNTERS 9

Flip Flops – RS, D, T, JK Flip Flops – Characteristic equations, exciting tables – JK Master – Slave flip-flop – Universal shift register, ripple counters, synchronous counters.

UNIT III OPERATIONAL AMPLIFIERS 9

The characteristics of Ideal Operation – slew rate, offset voltage, bias current, CMRR, bandwidth - equivalent circuit of an op-Amp – virtual ground concept – inverting and noninverting amplifier, adder, Subtracter, Instrumentation Amplifier, voltage to current converter – current to voltage converter — differentiator and integrator.

UNIT IV ACTIVE FILTERS AND SIGNAL GENERATOR 9

Active filters (first and second order) – Low pass, high pass, band pass filters, band reject filters (notch filters), Oscillators - RC Phase shift and Wein-bridge, Waveform generators - Triangular and Saw tooth.

UNIT V TIMER, PLL, A/D AND D/A CONVERTERS 9

555 Timer-Functional Block Diagram) – monostable multivibrator, astable multivibrator. Phase locked Loop (565 - block diagram approach), DAC – Binary weighted DAC and R-2R DAC, ADC – single slope and dual slope ADCs, successive approximation ADC.

COURSE OUTCOMES (COs)															
CO1	To define the principles of Boolean algebra to manipulate and minimize logic Expressions														
CO2	To Design various sequential circuits using flip flops (counters, shift registers, etc.,)														
CO3	To illustrate the Operational Amplifier with its characteristics														
CO4	To outline the functions of filters and waveform generators														
CO5	To relate the concepts of PLL and its applications														
CO6	To extend the knowledge in the operation of ADC,DAC and its applications

U18PCBM303	**MICROPROCESSOR AND MICROCONTROLLERS IN BIOMEDICAL APPLICATIONS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Basic Electrical and Electronics Engineering				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce the relevance of this course to the existing technology through demonstrations, case studies, simulations, contributions of scientist, national/international policies with a futuristic vision along with socio-economic impact and issues
- To study the architecture of 8086 and 8051
- To study the addressing modes and instruction set of 8086 and 8051
- To introduce the need and use of interrupt structure in 8086 8051.
- To develop skill in simple program writing for 8086 and 8051 applications.
- To introduce commonly used peripheral / interfacing ICs.

UNIT I: OVERVIEW OF 8086 MICROPROCESSOR 9

Evolution of Microprocessor and its importance in biomedical domain, Architecture and signal description of 8086, Minimum and maximum mode, addressing modes, Instruction set

UNIT II: 8086 SYSTEM BUS STRUCTURE 9

8086 signals – Basic configurations – System bus timing –System design using 8086 – IO programming – Introduction to Multiprogramming – System Bus Structure

UNITIII: 8051 Microcontroller 9

Introduction to 8 bit microcontroller, signal descriptions of 8051- Architecture of 8051 - Register set of 8051 - Instruction set - Addressing mode

UNITIV: I/O INTERFACING 9

Timer-serial communication-interrupts programming - Interfacing to external memory - Basic techniques for reading & writing from I/O port pins - Interfacing 8051 to ADC - Liquid crystal display (LCD), keyboard - Stepper motor

UNIT V: 8086 APPLICATIONS AND OVERVIEW OF HIGHER PROCESSORS 9

8086 applications-stepper motor speed control- keyboard and display interfacing-introduction to PIC processor- Design of pulse oximeter circuit using ARM microcontroller

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	To define the basics of microprocessor
CO2	To label the different addressing modes
CO3	To design and develop microprocessor architecture.
CO4	To develop microprocessor and microcontroller systems for entertainment, communication and medical applications.
CO5	To demonstrate the troubleshooting of microprocessor and microcontroller systems.
CO6	To recall the basics of microcontroller systems and its applications

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PCBM304	**ELECTRONIC DEVICES AND CIRCUITS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Basic Electrical and Electronics Engineering				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- Understand the structure of basic electronic devices.
- Be exposed to active and passive circuit elements.
- Familiarize the operation and applications of transistor like BJT and FET.
- Explore the characteristics of amplifier gain and frequency response.
- Learn the required functionality of positive and negative feedback systems.

UNIT I PN JUNCTION DEVICES **9**

Intrinsic and Extrinsic semiconductor - PN junction diode –structure, operation and V-I characteristics, diffusion and transient capacitance - Display devices- LED, Laser diodes, Zener diode-characteristics.

UNIT II TRANSISTORS **9**

BJT, JFET, MOSFET- structure, operation, characteristics and Biasing UJT, Thyristor and IGBT - Structure and characteristics.

UNIT III AMPLIFIERS **9**

BJT small signal model – Analysis of CE, CB, CC amplifiers- Gain and frequency response – MOSFET small signal model– Analysis of CS and Source follower – Gain and frequency response

UNIT IV RECTIFIERS **9**

Half and full wave, ripple factor calculations for C, L, L-C.

UNIT V POWER SUPPLIES **9**

SMPS, linear electronic voltage regulators, power control using SCR. voltage controlled oscillators and phase locked loop

COURSE OUTCOMES (COs)	
CO1	To Explain the structure and working operation of basic electronic devices.
CO2	To classify and differentiate both active and passive elements
CO3	To outline the characteristics of different electronic devices such as diodes and transistors
CO4	To Choose and adapt the required components to construct an amplifier circuit.
CO5	To apply the acquired knowledge in design and analysis of oscillators
CO6	To define basics of power supply's and its applications

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCBM305	**BIOSENSORS AND MEASUREMENTS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Basic Electrical and Electronics Engineering				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce the relevance of this course to the existing technology through demonstrations, case studies, simulations, contributions of scientist, national/international policies with a futuristic vision along with socio-economic impact and issues
- To understand the purpose of measurement, the methods of measurements, errors associated with measurements.
- To know the principle of transduction, classifications and the characteristics of different transducers and study its biomedical applications.
- To know the different display and recording devices.

UNIT I SCIENCE OF MEASUREMENT 9

Measurement System – Instrumentation – Classification and Characteristics of Transducers – Static and Dynamic – Errors in Measurements – Calibration – Primary and secondary standards.

UNIT II TYPES OF TRANSDUCERS 9

Resistive Transducers - Potentiometer, Strain Gauge, Thermometer, Thermocouple, Inductive transducer – LVDT, Capacitive Transducer - Displacement & Pressure transducers, Piezoelectric transducer , Biomedical applications.

UNIT III PHOTOELECTRIC AND PIEZO ELECTRIC SENSORS 9

Phototube, scintillation counter, Photo Multiplier Tube (PMT), photovoltaic, Photo conductive cells, photo diodes, phototransistor, comparison of photoelectric transducers, spectrophotometric applications of photo electric transducers. Piezoelectric active transducer and biomedical applications as pressure & Ultrasound transducer

UNIT IV SIGNAL CONDITIONING & SIGNAL PROCESSOR 9

Digital voltmeter – Multi meter – CRO – block diagram, CRT – vertical & horizontal deflection system, DSO, LCD monitor, PMMC writing systems, servo recorders, photographic recorder, magnetic tape recorder, Inkjet recorder, thermal recorder.

UNIT V BIOSENSORS APPLICATIONS 9

Biosensors - Working Principle and Types. Chemical Biosensor-ISFET, IMFET, electrochemical sensor, chemical fibro sensors. Bananatrode, Blood glucose sensors, UREASE Biosensor Applications.

COURSE OUTCOMES (COs)	
CO1	To define the purpose and methods of measurements
CO2	To outline the characteristics of different sensor
CO3	To Interpret the characteristics of different transducers
CO4	To list different Piezo electric sensors
CO5	To classify different signal conditioners
CO6	To recall basics applications of the biosensors

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCBM3L1	**ANATOMY AND PHYSIOLOGY LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	0	0	2	1
	Prerequisite course – Biology for Engineers				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To Provide exposure to the fundamentals of human anatomy and physiology.
- To Analyse the methods for measurement of blood pressure and ECG.
- To learn the methods for identification and estimation of blood components.

LIST OF EXPERIMENTS

1. Study on Upper Extremity of bone.
2. Study on Lower Extremity of bone
3. Study of ECG.
4. Study of Microscope
5. Study of Haemocytometer
6. Blood Pressure Monitoring.
7. RBC Count
8. WBC Count
9. Differential count of WBC'
10. Hemoglobin Estimation.

11. ESR Estimation.
12. Blood group identification
13. Separation of Plasma and Serum
14. Determination of CT and BT

COURSE OUTCOMES (COs)	
CO1	To outline the bonesof upper and lower extremities
CO2	To Explain the working principle of Electrocardiogram
CO3	To Analyze the Total count of blood and Hemoglobin Estimation.
CO4	To Analyze the process of Blood Pressure Monitoring
CO5	To outline the haemocytometer and microscope
CO6	To identify the different Types of Blood groups.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PCBM3L2	**MICROPROCESSORS AND MICROCONTROLLERS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	0	0	2	1
	Prerequisite course – – Basic Electrical and Electronics Engineering Practices Laboratory				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- Study the Architecture of 8086 microprocessor
- Learn the design aspects of I/O and Memory Interfacing circuits
- Study about communication and bus interfacing
- Study the Architecture of 8051 microcontroller

LIST OF EXPERIMENTS:

1. Familiarization of 8086 microprocessor kit.
2. Familiarization of 8051 microcontroller kit
3. 8086 assembly language programming exercises
4. 8051 assembly language programming exercises
5. Interfacing of switches and display devices
6. Interfacing of D/A convertors
7. Interfacing of A/D converters
8. Interface of key board and display using programming controllers
9. Interface of programmable timer
10. Stepper motor control using microprocessor

COURSE OUTCOMES (COs)															
CO1	To explain 8086 microprocessor														
CO2	To Design and implement programs on 8086 microprocessor														
CO3	To Demonstrate Memory Interfacing circuits.														
CO4	To Design and implement 8051 microcontroller based systems.														
CO5	To infer the instruction sets and interfacing														
CO6	To Demonstrate the instruction sets and programming for microprocessor														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PCBM3L3	**BIOSENSORS AND MEASUREMENTS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	0	0	2	1
	Prerequisite course – – Basic Electrical and Electronics Engineering Practices Laboratory				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- Understand the purpose of measurement, the methods of measurements, errors associated with measurements.
- Know the principle of transduction, classifications and the characteristics of different transducers and study its Biomedical applications.
- Know the different display and recording devices.

LIST OF EXPERIMENTS:

1. Characteristics of Strain Gauge
2. Characteristics of LVDT.
3. Characteristics of LDR
4. Characteristics of Thermistor.
5. Characteristics of Potentiometric Transducer.
6. Characteristics of Photodiode.
7. Characteristics of Load cell
8. Characteristics of Phototransistor.
9. Study of Multimeter.
10. Study of Digital tachometer.

COURSE OUTCOMES (COs)	
CO1	To Analyze the characteristics of different sensor
CO2	To Analyze the characteristics of Potentiometric Transducer

CO3	To Analyze the characteristics of thermistor
CO4	To Analyze the characteristics of LVDT
CO5	To explain the working principle of Digital tachometer.
CO6	To demonstrate the Multimeter and usage

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

4	Approval	48th Meeting of the Academic Council													

U18MCAB305	**LEARNING AN ART FORM**	**L**	**T**	**P**	**C**
		2	0	0	0

Cultivation of arts is an integral part of the development of human beings since the arts are what make us most human, most complete as people. They offer us the experience of wholeness because they touch us at the deepest levels of mind and personality. They come into being not when we move beyond necessity but when we move to a deeper necessity, to the deeper human need to create order, beauty and meaning out of chaos. They are the expressions of deepest human urges, imperatives and aspirations.

While enriching the process of learning through enhanced perceptual and cognitive skills, learning of arts promotes self-esteem, motivation, aesthetic awareness, cultural exposure, creativity, improved emotional expression, as well as social harmony and appreciation of diversity. They promote an understanding and sharing of culture, and equip the learners with social skills that enhance the awareness and respect of others. Each institution will offer a range of introductory courses in different art forms: music, dance, theatre, painting, and other art forms. Care should be taken to give adequate representation to local and regional art forms in which our culture abounds. For example, Banaras has local traditions in vocal music like Chaiti, Hori, Kajri and Birha.

An institution in Banaras area can offer courses on these art forms apart from regular classical and semi-classical vocal music forms. Similar local art tradition can be utilized in different cities and regions. This will, in turn, also ensure wider community involvement/interaction with the institution. Students will be given an option to choose a particular art form, and learn and practice it under an artist -instructor. At the end of the course, a student should be able to demonstrate basic proficiency in that particular art form. Contact hours per week should be 3-4 hours.

Towards the end of the course, the institution can organize a function/program in which all the students publicly demonstrate their skills.

U18MCAB306	INTANGIBLE CULTURAL HERITAGE (FESTIVALS, FOOD WAYS, LOCAL GAMES)	L	T	P	C
		2	0	0	0

As part of our rich intangible cultural heritage, foodways, fares and festivals, local games and sports are important sources for discovering the social and cultural values of our people and understanding the inner dynamics of our society, as these are sites where we witness the most significant and intimate representations of our society's self-perception—how our society perceives itself. These traditions have shaped and strengthened our social and cultural identities, and also the notion of community at the local, regional, and national levels. They have played a significant role in the making of our social life, and through them we have constructed for ourselves, individually and collectively, a sense of shared lived past and group identity. They facilitate the transmission of a culture's most deeply held values, from one generation to another and their continuity or discontinuity helps us to understand the changing social structure and culture of a society. For example, each community has its own foodways, and their overall health, well-being and cultural continuity are directly related to their ability to eat traditional foods and continue their traditional food practices. These traditional foods and food practices are deeply intertwined with their cultures and value systems, and play an important role in religious ceremonies and spirituality. Similar is the case with fares and festivals, and local games and sports. These traditions are bound up with rituals, customs, beliefs, and often also with trade, craft and professions. They are not mere superstitious rituals often condemned and denounced as being regressive, stagnant and backward, but repositories of our indigenous knowledge and wisdom which have evolved over centuries, and they still continue to serve social and cultural functions. This knowledge has been the basis for agriculture, food preparation, health care, education, conservation and the wide range of other activities that sustain societies in many parts of the world.

Most of these traditions are either on the verge of extinction or undergoing drastic changes due to globalization, acculturation, migration, questions of identity related to social mobility to confirm to a higher social order or simply because the context in which these traditions originated or were conceived no longer exist and their effectiveness or need seems no longer relevant. For example, while the agro-ecological and food systems offer some signs of resilience and adaptation, a range of factors are increasingly threatening these systems and peoples' well-being. The knowledge and skills of elders concerning traditional food preparation, and the use of traditional herbs and plants for healing purposes have not been passed on to the next generation and is at risk of being lost and disappearing altogether from reservation life and culture.

The course aims at exposing students to these traditions, and making them aware of the veritable treasure house of indigenous knowledge which can be utilized as resource for realizing a vision of sustainable future.

Each locality/region our Indian sub-continent abounds in a rich variety of food-ways, fares and festivals, games and sports. Students should be asked to identify one of these traditions and study them in detail. For example, the following guidelines can be adopted in the study of food-ways:

To study and document the indigenous knowledge and wisdom of everyday food habits and food items consumed;

- To study and document the prevalent social practices and beliefs regarding traditional foods;

- To study and document the feasts on religious and social occasions of different communities;
- To identify and document the food items consumed by different communities and determine their nutritional values;
- To conduct chemical analysis of food ingredients;
- To identify and document the kitchen generated health ingredients used by different communities;
- To find out the uses of leftover food stuff of different communities;
- To develop hygienic food chart for people ailing and suffering from different metabolic disorders; and
- To develop suitable communication strategies to effectively disseminate traditional knowledge regarding food habits.

Similarly, in the case of fares and festivals, and games and sports one could study how these traditions create a sense of community bonding and lead to the rules of commensality and social interaction and behavior. Suitable guidelines along the lines of foodways can be developed and adopted for such a study.

At the end of the course, students will be required to submit a detailed project report. Options should be given to the students to make short documentaries and films on these traditions.

U18BSMA402	**PROBABILITY STATISTICS AND NUMERICAL METHODS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite course – Engineering Mathematics				
	Course Designed by:- Department of Mathematics				

COURSE OBJECTIVES:-

- Learn basics of probability, Baye's Theorem. Understand the concept of random variable, moment generating functions and their properties; learn standard distributions in discrete and continuous cases.
- Learn measures of central tendency and correlation and regressions, rank correlation, statistical intervals for single sample and test of hypothesis for a small and large sample.
- Ability to apply knowledge of mathematics, science and engineering.
- Ability to analyze and interpret data
- Identify, formulate and solve equations by various methods

UNIT 1 PROBABILITY DISTRIBUTION 12

Probability – Axioms of probability – Conditional probability – Baye's theorem Random variables – Binomial – Poisson – Geometric – Uniform – Exponential and normal distribution and their properties.

UNIT II STATISTICS AND TESTING OF HYPOTHESIS 12

Measures of central tendency – Moments – Skewness and kurtosis – Correlation and Regression – Rank correlation – Test of significance: Large sample test for single proportion, difference of proportions – Chi Square test for goodness fit and independence of attributes.

UNIT III SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS 12

Bisection method, Newton-Raphson method and Regula-Falsi method for single variable-solutions of linear system of equations by Gaussian, Gauss-Jordan, Jacobian and Gauss-Siedal methods.

UNIT IV FINITE DIFFERENCE AND INTERPOLATION 12

Finite differences -Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals-Newton's Divided difference formula, Lagrange's Interpolation formula.

UNIT V NUMERICAL DIFFERNTIATION AND INTEGRATION 12

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's both $1/3^{rd}$ and $3/8^{th}$ rules. Double integration using Trapezoidal rule and Simpson rule.

TEXT BOOKS

3. Veerarajan T. "Probability Statistics and Random Process" Tata McGraw Hill, New Delhi 2003.

COURSE OUTCOMES (COs)	
CO1	To Evaluate the probability using addition and multiplication theorem. Apply Baye's Theorem for practical problems to find the probability. Apply the discrete and continuous distribution for solving practical problems. Evaluates the moments of distributions using moment generating functions.
CO2	To Know the principle of transduction, classifications and the characteristics of different transducers and study its biomedical applications.
CO3	To Know the different display and recording devices for various bio signals
CO4	To Know the measurement techniques for blood flow measurement and cell counting
CO5	To Learn the uses of pH, spectrometers and auto-analyzer
CO6	To learn numerical approximation of definite integrals

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

	CO4					3		3		1			1		
	CO5	3	3						2		3	2			
	CO6														
3	Category	Professional Course (PC)													
4	Approval	47th Meeting of Academic Council													

U18PCBM401	MEDICAL INSTRUMENTATION I	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Biosensors and Measurements				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- The students will be exposed to electrical and non-electrical physiological measurements and bio amplifiers.
- To know the various Bio potential amplifiers.
- To study about various Physiological measurements.
- To study about clinical laboratory instruments and blood cell counters.

UNIT I BIO POTENTIAL ELECTRODES 9

Origin of bio potential and its propagation. Electrode-electrolyte interface, electrode–skin interface. Types of electrodes - surface, needle and micro electrodes and their equivalent circuits.

UNIT II ELECTRODE CONFIGURATIONS 9

Bio signals characteristics – frequency and amplitude ranges- ECG – Einthoven's triangle. EEG – 10-20 electrode system, unipolar, bipolar and average mode. EMG, ERG and EOG – unipolar and bipolar mode.

UNIT III BIO AMPLIFIER 9

Need for bio-amplifier - single ended bio-amplifier, differential bio-amplifier – right leg driven ECG amplifier. Band pass filtering, isolation amplifiers - Chopper amplifier.

UNIT IV MEASUREMENT OF NON-ELECTRICAL PARAMETER 9

Temperature, respiration rate and pulse rate measurements. Blood flow and cardiac output measurement: Indicator dilution, thermal dilution and dye dilution method, Electromagnetic and ultrasound blood flow measurement.

UNIT V BIO-CHEMICAL MEASUREMENT 9

Biochemical sensors - pH, pO2 and pCo2, Blood glucose sensors - Blood gas analyzers, colorimeter, flame photometer, spectrophotometer, blood cell counter.

TEXT BOOKS:

2. Scott / Mathur "Textbook of Biomedical Instrumentation" CBS Publishers. Chennai 2007.

COURSE OUTCOMES (COs)	
CO1	To explain the purpose of measurement, the methods of measurements, errors associated with measurements.
CO2	To define the principle of transduction, classifications and the characteristics of different transducers and study its biomedical applications.
CO3	To classify the different display and recording devices for various bio signals
CO4	To Relate the measurement techniques for blood flow measurement and cell counting
CO5	To Demonstrate the uses of pH, spectrometers and auto-analyzer
CO6	To Explain non-invasive diagnostic parameters

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PCBM402	**FUNDAMENTALS OF BIOCHEMISTRY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Biology for Engineers				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To get a clear idea of biomolecules and their functions
- To know the significance of biomolecules in biological systems
- To understand the metabolic pathways in normal and pathological conditions.

UNIT-1 INTRODUCTION TO BIOCHEMISTRY 9

Introduction to Biochemistry, water as a biological solvent, weak acid and bases, pH, buffers, physiological buffers in living systems, Energy in living organism. Properties of water and their applications in biological systems. Introduction to Biomolecules, Biological membrane, Clinical application of Electrolytes and radioisotopes.

UNIT-II CARBOHYDRATE 9

Carbohydrate classification, Structure and Properties of Mono-di and Polysaccharides with its clinical importance .Biological importance of carbohydrates metabolism – Glycolysis, TCA cycle, Glycogenesis, ,Uronic acid pathway, metabolism of fructose, Sorbitol pathway, metabolism of galactose and its dysfunction.

UNIT-III PROTEIN 9

Classification of amino acids – characteristics of amino acids – Zwitterions, Iso-electric point. Protein classification. Structure of proteins, primary, secondary, tertiary and quaternary structure. Biological importance of polypeptides. Metabolism of ammonia, Urea cycle ,Metabolic disorders of glycine, Phenyl alanine, Tyrosine, Tryptophan. Metabolic defects of branched chain amino acids -maple syrup urine disease.

UNIT-IV LIPIDS 9

Classification of lipids. Structure and properties of compound lipids, Derived lipids - Biosynthesis of cholesterol ,Bile acids and its importance. β- oxidation of fatty acids. Ketogenesis .Disorder of lipid metabolism. Atherosclerosis, hypercholesterolemia and Fattyliver diseases.

UNIT-V ENZYMES, HARMONES AND NUCLEIC ACID 9

Enzymes – chemical nature. Classification of enzymes, apoenzyme, coenzyme, holoenzyme and cofactors. Factors affecting enzymatic activity: temperature, pH, substrate concentration and enzyme concentration. Hormones – chemical nature, properties of hormones and hormonal disorders. Structure of purines and pyrimidines, nucleoside, nucleotide, chargoffs rule. Watson and crick model of DNA. Structure of RNA and its types.

COURSE OUTCOMES (COs)	
CO1	Classify the biomolecules according to their structure and applications.
CO2	Define the functions and properties of carbohydrates.
CO3	Distinguish different types of amino acids and proteins based on the biological aspects
CO4	Assess the significance of bio molecules in biological systems
CO5	To explain about all the enzyme activities.
CO6	Analyze the etiology and biological parameters in metabolic diseases

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PCBM403	MEDICAL PHYSICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Semi Conductor Physics				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To Study effects of sound and light in human body
- To study effects of radiation in matter and how isotopes are produced
- To examine the somatic effects of radiation
- To correlate the genetic effects of radiation

UNIT I ELECTROMAGNETIC SPECTRUM AND ITS MEDICAL APPLICATION 9

Light - Physics of light, Intensity of light, limits of Vision and color vision Sound – Physics of sound , Normal sound levels – Ultrasound fundamentals- Generation of ultrasound (Ultrasound Transducer) – Interaction of Ultrasound with Materials-Reflection and Refraction – Absorption and Scattering Non- ionizing Electromagnetic Radiation Tissue as a leaky dielectric – Relaxation Processes – Overview of non – ionizing radiation effects -Low Frequency Effect – Higher frequency effect.

UNIT II RADIOACTIVE DECAY 9

Radioactive Decay – Spontaneous Emission – Isometric Transition - Gamma ray emission, alpha, beta, positron decay, electron capture Principles of Nuclear Physics – Natural radioactivity, Decay series, Half life period, type of radiation and their applications. Production of radionuclides – Cyclotron produced Radionuclide - Reactor produced Radionuclide – fission and electron Capture reaction, Radionuclide Generator – Milking Process - Linear accelerator , Radionuclide used in Medicine and technology.

UNIT III INTERACTION OF RADIATION WITH MATTER 9

Interaction of charged particles with matter – Specific ionization , linear energy Transfer Range, Bremsstrahlung , Annihilation Interaction of Gamma radiations with matter – Photoelectric effect, Compton Scattering , pair Production, Attenuation of Gamma Radiation, Interaction of neuron with matter

UNIT IV PHYSICS OF CARDIOPULMONARY SYSTEM 9

The Airways, - blood and lung interaction – measurement of lung volume – pressure air flow volume relationships of lungs – physics of alveoli – the breathing mechanism – Major components of cardiovascular system – O2 and CO2 exchange in the capillary system – Physical activity of heart – transmural pressure – Bernolli's principles applied to cardiovascular system - Blood flow – laminar and turbulent

UNIT V RADIATION EFFECTS 9

Acute Radiation Effects - The concept of LD 50 – Radiation syndromes- Central nervous system syndrome - Gastro-intestinal syndrome –Bone Marrow syndrome Delayed Effects of Radiation - Stochastic and Deterministic effects – Late Deterministic effect in different organs and tissues.

U18PCBM404	**ANALOG AND DIGITAL COMMUNICATION SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Basic Electrical and Electronics Engineering Analog and Digital Integrated Circuits				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce the relevance of this course to the existing technology through demonstrations, case studies, simulations, contributions of scientist, national/international policies with a futuristic vision along with socio-economic impact and issues
- To study the various analog and digital modulation techniques
- To study the principles behind information theory and coding
- To study the various digital communication techniques

UNIT I ANALOG COMMUNICATION 9

Introduction to Communication Systems: Modulation – Types - Need for Modulation. Theory of Amplitude Modulation - Theory of Frequency and Phase Modulation – Comparison of various Analog Communication System (AM – FM – PM).

UNIT II PULSE MODULATION 9

Low pass sampling theorem – Quantization – PAM,PWM,PPM – Line coding – PCM, DPCM, DM, and ADPCM And ADM, Channel Vocoder - Time Division Multiplexing, Frequency Division Multiplexing

UNIT III DIGITAL MODULATION AND TRANSMISSION 9

Phase shift keying – BPSK, DPSK, QPSK – Principles of M-array signalling M-array PSK & QAM – Comparison, ISI – Eye pattern, equalizers

UNIT IV INFORMATION CODING AND DECODING 9

Coding for error detection and correction, Block coding – coding, Hadamard code, Hamming code, Cyclic Codes, Convolution coding and decoding

UNIT V MULTIPLE ACCESS TECHNIQUES 9

Multiplexing: definition, purpose - Frequency division multiple access (FDMA) - Time division multiple access (TDMA) - Code-division multiple access (CDMA) - Comparison of multiple access techniques - Differences between multiple access and multiplexing - Wireless communication systems - Propagation issues in mobile radio

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	To list the different analog modulation schemes.
CO2	To demonstrate different pulse modulation techniques.
CO3	To define the different Digital Modulation Techniques.
CO4	To identify the error detection and correction mechanism

CO5	To outline the various Multiple Access Techniques														
CO6	To Understand the wireless communication														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

3	Category	Professional Course (PC)													
4	Approval	48th Meeting of the Academic Council													

U18PCBM405	**BIOMATERIALS AND ARTIFICIAL ORGANS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Human Anatomy and Physiology				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- Learn characteristics and classification of Biomaterials
- Understand different metals and ceramics used as biomaterials
- Learn polymeric materials and combinations that could be used as a tissue replacement implants
- Know the various artificial organs developed using these materials

UNIT I BIOMATERIALS AND BIOCOMPATIBILITY 9

Biocompatibility and hemo-compatibility, Overview of Biomaterials used as medical devices, Classification of biomaterials, Impact and future of biomaterials, performance of implants, Interfacial phenomena and tissue response to biomaterials. Electro kinetic factors. Types of orthopaedic fixation devices- pins, screws and plates, IM nails.

UNIT II ARTIFICIAL JOINTS 9

Bioelectric effect, Wolff's law. Interface problems with artificial joints and various fixation methods. Failure of implantation materials- metallic corrosion, wear, metallic implant fractures and their impact on biological systems. Hard tissue replacements- total hip and knee joint replacements.

UNIT III METALS AND POLYMERS 9

Metals and alloys for orthopaedic implants- Stainless steel, Cobalt chromium alloy, Titanium and its alloys .Polymers in biomedical use, Hydrogels, silicone rubber, biodegradable polymers, microorganisms in polymeric implants and polymer sterilization. Biopolymers, Synthetic polymers.Composites- Types and Applications.

UNIT IV BIOCERAMICS 9

Bioceramics, types – bioactive, resorbable, non-resorbable. Stoichiomety and Ca/P ratio of various forms calcium phosphates, bioceramic coatings on metallic implants and bone bonding reactions on implantation. Hydroxyapatite –properties and applications. Bone cements and bio glasses.Dental implants- materials, types and designs.

UNIT VBIOMATERIAL TESTING AND ARTIFICIAL ORGANS 9

Testing of biomaterials: In-vitro, in-vivo preclinical tests- Standards on biomaterials.- Biological Tests- biocompatibility methods for improvement, surface modification of materials -. Artificial Heart, eye and ear implants, artificial pancreas, ophthalmic implantation, extracorporeal artificial organs, neural prostheses.

COURSE OUTCOMES (COs)															
CO1	To Analyze different types of Biomaterials and its classification**.**														
CO2	To experiment with combinations of materials that could be used as a tissue replacement implant.														
CO3	To label about the various polymeric materials used for medical applications														
CO4	To explain about bio-ceramics and its applications in medicine														
CO5	To interpret the applications and properties of materials in orthopaedics														
CO6	To Design biocompatible organs														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18MCTH502	UNIVERSAL HUMAN VALUES	L	T	P	C
		2	0	0	0

The objective of the course is four fold:

Sensitization of student towards self, family (relationship), society and nature.

Understanding (or developing clarity) of nature, society and larger systems, on the basis of human relationships and resolved individuals.

Strengthening of self reflection.

Development of commitment and courage to act.

At the end of the course, students are expected to become more aware of their surroundings, society, social problems and their sustainable solutions, while keeping human relationships and human nature in mind. They would have better critical ability. They would also become sensitive to their commitment towards what they believe in (humane values. humane relationships and humane society). It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction.

U18PCBM4L1	BIOCHEMISTRY LAB	L	T	P	C
	Total Contact Hours – 45	0	0	2	1
	Prerequisite course – Human Anatomy and Physiology Lab				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce the basics of Carbohydrates, Proteins and Amino acids.
- To identify the different Types of Carbohydrates-Monosaccharides, Disaccharides and Polysaccharides.
- To identify the Aminoacids.

LIST OF EXPERIMENTS:

1. Qualitative analysis of Carbohydrates.
2. Estimation of Glucose by Benedict's Method.
3. Estimation of Protein by Lowry's Method.
4. Estimation of Protein by Biuret's Method.
5. Estimation of DNA by Diphenyl amine method..
6. Isolation of Starch from Potato.
7. Estimation of Amino acid by Ninhydrin method.
8. Estimation of Creatinine by Jafe's method.
9. Abnormal Urine analysis (Glucose, Protein, Acetone, etc.)

COURSE OUTCOMES (COs)	
CO1	To Qualitative analysis of Carbohydrates
CO2	To Estimate the Biomolecules by different methods
CO3	To Isolate the Starch
CO4	To Estimate the DNA
CO5	To find the Abnormal constituents of blood
CO6	To find protein functions
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low	

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PCBM4L2	**ANALOG AND DIGITAL COMMUNICATION SYSTEM LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	2	1
	Prerequisite course – Basic Electrical and Electronics Engineering Lab				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce the relevance of this course to the existing technology through demonstrations, case studies, simulations, contributions of scientist, national/international policies with a futuristic vision along with socio-economic impact and issues
- To learn various analog modulation techniques
- To understand various digital modulation techniques

List of Experiments

1. Signal Sampling and reconstruction
2. Amplitude modulation and demodulation
3. Frequency Modulation and Demodulation
4. PAM, PWM, PPM
5. Delta and Adaptive Delta Modulation
6. Pulse code modulation
7. BPSK Modulation and Demodulation
8. BFSK Modulation and Demodulation
9. QPSK Modulation and Demodulation
10. TDM, FDM

COURSE OUTCOMES (COs)	
CO1	To explain different analog modulation techniques.
CO2	To Demonstrate Knowledge on frequency shift keying
CO3	To illustrate the concept of digital transmission.
CO4	To compare analog and digital communication techniques.
CO5	To interpret the BPSK transmission techniques.
CO6	To illustrate the TDM and FDM techniques.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18MCAB407	LITERATURE, CINEMA AND MEDIA (WORKSHOP, READING MULTIPLE NEWS SOURCES,ANALYZE ADS)	L	T	P	C
		0	0	2	0

The objective is to inculcate the habit of active (or interactive) consumption of the best content available in literature, films and media, rather than passive consumption. Description.

Literature is perhaps as old as history or may be older and it is difficult to think of a fully educated person without any exposure to the best of the world literature (not just the literature of their own country or in their own language). Cinema is more recent and mass media is even more recent, but all these have a vital role in today's society. The problem is that the content available easily to most people (partly due to extensive promotion) caters to the lowest common denominator. Engineering students should be encouraged to read the best of the world literature and watch the best of the world cinema (regardless of their viewpoints). They should also be made aware that news is best collected from different sources, which don't necessarily agree, so that they can understand the true meaning of democracy and also learn to form educated opinions about various topics based on the information from diverse sources. They should learn that being opinionated without being properly informed (say, by relying only on one source of news on TV based on TRPs) is not the right way to be a good citizen. They should get the experience of their opinion being contradicted by the most reliable evidence, so that they realize that there is no shame in changing a wrong opinion in the light of overwhelming evidence. For that, they will also have to learn how to find out the degree of reliability of different sources. One way to achieve this is to conduct workshops where students, aided by invited experts, read news from different sources, watch the best cinema and read or watch different media sources. They can then discuss these with their peers and with the invited experts and learn to talk peacefully with people of different viewpoints, as well as learn to form their own opinions. They should then be encouraged to write about their takeaways from these discussions or their opinions and their reasons for forming those opinions. Such activities can counter the current culture of being 'trolls' on the social media, for example. Instead, we should have citizens who give due respect to their fellow citizens and learn to analyze, discuss and reach conclusions in an agreeable manner, without unnecessary feelings of bitterness and enmity.

Another related exercise could be to read or watch advertisements and then analyze them in terms of the biases they promote (such as the desirability of fair skin) or the deception they indulge in to psychologically compel consumers to buy things they don't really need. Some advertisements even promote the habit of treating fellow human beings with contempt for being different from them (even in terms of possessing the products they are promoting). A

well-educated citizen should be less susceptible to such practices in advertisements. Advertisements are just one example. Something similar could be done with all kinds of propaganda material

U18MCAB408	LITERATURE & MEDIA GROUP READING (SAAMUHIKVAACHAN) OF CLASSICS.	L	T	P	C
		2	0	0	0

This will make group to read one or two books during a semester.

Process: An hour may be fixed for a small group for a particular classic. Group sitsand each person reads aloud (if possible with proper modulation) taking turns. This if done properly for an hour one may complete 30-40 pages in an hour. A normal classic can be finished in 15 to 20 days. If serious books on philosophy etc. are taken up a discussion can be held after every idea is complete.

U18PCBM501	BIOCONTROL SYSTEMS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Basic Electrical and Electronics Engineering				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To design the physiological systems
- To analyze the systems in time and frequency domain and to understand the concept of stability.
- To apply mathematical modelling principles in understanding the various fundamental biological systems.

UNIT I: SYSTEM CONCEPTS 9

Basic structure of control system -Types of systems - Open loop systems, closed loop systems, Effects of feedback, Block diagram & Signal flow graph, conversion of block diagram to signal flow graph, reduction of block diagram and signal flow graph.

UNIT II: TIME RESPONSE ANALYSIS OF CONTROL SYSTEMS 9

Step and Impulse responses of first order and second order systems, Determination of time domain specifications of first and second order systems from its output responses.

UNIT III: THE CONCEPT OF STABILITY & ROOT LOCUS TECHNIQUE 9

Concept of stability, Routh stability criterion qualitative stability and conditional stability. The Root locus concept, Construction of root locus.

UNIT IV: FREQUENCY RESPONSE ANALYSIS 9

Frequency response, Nyquist stability criterion, Nyquist plot and determination of closed loop stability, definition of gain margin and phase margin, Bode plot, Determination of gain margin and phase margin using Bode plot.

UNIT V: BIOMEDICAL APPLICATIONS 9

Cardiovascular Control System, Endocrine Control Systems, Pupil Control System, Skeletal Muscle, Servomechanism, Neuro muscular system, Respiratory system, occulomotor system.

TEXT BOOKS:

1. M. Gopal "Control Systems Principles and design", Tata McGraw Hill ,2002
2. Benjamin C. Kuo, "Automatic control systems", Prentice Hall of India, 1995
3. Michael C K Khoo, "Physiological control systems", IEEE press, Prentice –Hall of India, 2001.

REFERENCES

1. John Enderle, Susan Blanchard, Joseph Bronzino "Introduction to Biomedical Engineering" second edition, Academic Press, 2005.
2. Richard C. Dorf, Robert H. Bishop," Modern control systems",Pearson, 2004

COURSE OUTCOMES (COs)	
CO1	To know about the process of neurophysiology.
CO2	To gain knowledge about the neural networking process such as back propagation
CO3	To have a fundamental knowledge of pattern recognition
CO4	To have skills about the manipulating, transforms using classifiers theorems.
CO5	To acquire the skills cluster analysis and feature extraction
CO6	To Learn about all the human control system

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

	CO5		3	2							3	3	2		
	CO6	3			3	2			2			1			
3	Category	Professional Course (PC)													
4	Approval	48th Meeting of the Academic Council													

U18PCBM502	**MEDICAL INSTRUMENTATION II**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Medical instrumentation- 1				
	Course Designed by:-Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- Gather basic knowledge about measurements of parameters related to respiratory system
- Learn measurement techniques of sensory responses
- Understand different types and uses of diathermy units.
- Know ultrasound imaging technique and its use in diagnosis
- Know the importance of patient safety against electrical hazard

UNIT-I HEART LUNG MACHINE AND CARDIAC ASSIST DEVICES 9

Condition to be satisfied by the H/L system, different type of Oxygenators, pumps- Blood handling system, Synchronous counter pulsation, right ventricular bypass pump, left ventricular bypass pump, Intra aortic balloon pumping and veno arterial pumping.

UNIT II RESPIRATORY MEASUREMENT STSTEM 9

Instrumentation for measuring the mechanics of breathing – Spiro meter, – Airway resistance measurement, Whole body plethysmography, Intra-Alveolar and Thoracic pressure measurements, Apnea Monitor. Types of Ventilators – Pressure, Volume, and Time controlled. Flow, Patient Cycle Ventilators, Humidifiers, Nebulizers, Inhalators.

UNIT-III ARTIFICIAL KIDNEY AND SENSORY MEASUREMENT 9

Indication and Principle of Hemodialysis, different types of dialysis, monitoring systems, artificial kidney,Psycho Physiological Measurements-for testing sensory Responses, Electro occulograph, Audiometer-Pure tone, Speech. EGG (Electrogastrograph), galvanic skin resistance (GSR), polygraph.

UNIT IV PATIENT MONITORING AND BIOTELEMETRY 9

Patient monitoring systems, ICU/CCU Equipment, Infusion pumps, bed side monitors, Central consoling controls. Radio Telemetry (single, multi), Portable and Landline Telemetry unit, Applications in ECG and EEG Transmission.

UNIT V - DIAGNOSTIC EQUIPMENTS 9

Endoscopy – Laparoscopy – thermograph- Lithotripsy -Cryogenic Equipment - Automated drug delivery system – Components of drug infusion system – Implantable infusion systems. Physiological effects of electricity – important susceptibility parameters – Macro shock, Micro shock hazards, Patient‘s electrical environment.

TEXTBOOKS:

	CO3	2			3						2	2			
	CO4					3	2	3	2			1			
	CO5	3	2	1				3	1		3	3	2		
	CO6	3			2	3		2			2	3			
3	Category	Professional Course (PC)													
4	Approval	48th Meeting of the Academic Council													

U18PCBM503	DIGITAL SIGNAL PROCESSING FOR BIO ENGINEERS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Partial Differential Equation and Transformation				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To learn discrete concepts of Signals and Systems
- To Understand Concepts of Z Transform and its properties
- To learn discrete Fourier transform and its properties
- To know the characteristics of FIR filters
- To know the characteristics of IIR filters

UNIT I CLASSIFICATION OF SIGNALS AND SYSTEMS 9

Continuous time signals (CT signals) - Discrete time signals (DT signals) - Step, Ramp, Pulse, Impulse, Sinusoidal, Exponential, Classification of CT and DT signals - Periodic & Aperiodic signals, Deterministic & Random signals, Energy & Power signals - CT systems and DT systems Classification of systems – Static & Dynamic, Linear & Nonlinear, Time-variant & Time-invariant, Causal & Noncausal, Stable & Unstable.

UNIT II DISCRETE TIME SYSTEMS - Z TRANSFORM 9

Z transform and its properties-Convolution, Inverse Z transform-Discrete Fourier series Properties-Sampling the Z transform-Discrete Fourier transform-Properties for frequency domain analysis-Linear Convolution using discrete Fourier transform-Overlap save method.

UNIT III DISCRETE FOURIER TRANSFORMS 9

Discrete Signals and Systems- A Review – Introduction to DFT – Properties of DFT – Circular Convolution - Filtering methods based on DFT – FFT Algorithms –Decimation in time Algorithms, Decimation in frequency Algorithms – Use of FFT in Linear Filtering.

UNIT IV FIR FILTER DESIGN 9

FIR design-Fourier Series Method –Window function Method, triangular window, rectangular window, Hamming window, Hanning window functions, Kaiser window. Applications of Signal Processing in Biomedical Engineering.

UNIT V IIR FILTER DESIGN 9

Classification-Reliability constraints-IIR design-Butterworth and Chebyshev Filters, Bilinear Transform Method-Impulse Invariant Method-Step Invariance Method.

U18HSBA401	**ORGANIZATIONAL BEHAVIOR**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Basic Knowledge on Managements				
	Course Designed by:- Department of Management Studies				

COURSE OBJECTIVES:-

- Understanding the basic approaches in organization
- Knowledge on theories of Personality
- Clear sight on the Decision Making in Groups
- Analyse the behaviour of individuals and groups in organizations in terms of the key factors that influence organizational behaviour.
- Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behaviour.

UNIT I **9 hours**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

UNIT II **9 hours**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behaviour.

UNIT III **9 hours**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

UNIT IV **9 hours**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

UNIT V **9 hours**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

4. Stephen Robbins, Organizatonal Behavior, Pearson Education
5. RS Diwedi, Human Relations and Organizational Behavior, Mac Millan

COURSE OUTCOMES (COs)	
CO1	Familiarity with the knowledge of Frame work of Organizational Behaviour
CO2	Knowledge of the Interpersonal perception
CO3	Awareness of the Merits and Demerits of Group decision making.
CO4	Understanding of the Sources of power
CO5	Familiarity with the knowledge of types of Conflicts
CO6	Understanding the Concept of management Culture

U18MCTH401 CONSTITUTION OF INDIA – BASIC FEATURES AND FUNDAMENTAL PRINCIPLES

The Constitution of India is the supreme law of India. Parliament of India can not make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the "basic structure" of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of "Constitutionalism" – a modern and progressive concept historically developed by the thinkers of "liberalism" – an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state. The historic revolutions in France, England, America and particularly European Renaissance and Reformation movement have resulted

into progressive legal reforms in the form of "constitutionalism" in many countries. The Constitution of India was made by borrowing models and principles from many countries including United Kingdom and America.

The Constitution of India is not only a legal document but it also reflects social, political and economic perspectives of the Indian Society. It reflects India's legacy of "diversity". It has been said that Indian constitution reflects ideals of its freedom movement, however, few critics have argued that it does not truly incorporate our own ancient legal heritage and cultural values. No law can be "static" and therefore the Constitution of India has also been amended more than one hundred times. These amendments reflect political, social and economic developments since the year 1950. The Indian judiciary and particularly the Supreme Court of India has played an historic role as the guardian of people. It has been protecting not only basic ideals of the Constitution but also strengthened the same through progressive interpretations of the text of the Constitution. The judicial activism of the Supreme Court of India and its historic contributions has been recognized throughout the world and it gradually made it "as one of the strongest court in the world".

Course content

- Meaning of the constitution law and constitutionalism
- Historical perspective of the Constitution of India
- Salient features and characteristics of the Constitution of India
- Scheme of the fundamental rights
- The scheme of the Fundamental Duties and its legal status
- The Directive Principles of State Policy – Its importance and implementation
- Federal structure and distribution of legislative and financial powers between the Union and the States
- Parliamentary Form of Government in India – The constitution powers and status of the President of India
- Amendment of the Constitutional Powers and Procedure
- The historical perspectives of the constitutional amendments in India
- Emergency Provisions : National Emergency, President Rule, Financial Emergency
- Local Self Government – Constitutional Scheme in India
- Scheme of the Fundamental Right to Equality
- Scheme of the Fundamental Right to certain Freedom under Article 19
- Scope of the Right to Life and Personal Liberty under Article 21

U18PCBM5L1	MEDICAL INSTRUMENTATION LAB	L	T	P	C
	Total Contact Hours – 45	0	0	2	1
	Prerequisite course – Biosensors and Measurements lab				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- Gather basic knowledge about measurements of parameters related to respiratory system
- Learn measurement techniques of sensory responses
- Understand different types and uses of diathermy units.
- Know ultrasound imaging technique and its use in diagnosis
- Know the importance of patient safety against electrical hazard

LIST OF EXPERIMENTS:

1. ECG recording and Analysis.
2. EEG recording and analysis.
3. Respiratory Analysis.
4. Blood Pressure Measurement System.
5. Nerve Conduction Study.
6. Digital Heart Monitor.
7. EOG system
8. Study of ESU – cutting and coagulation modes
9. pH Measurement and conductivity test.
10. Spectrophotometer.
11. Flame photometer.
12. ELIZA.
13. Plotting of human auditory response using audiometer
14. Analysis of bio signals using FFT Spectrum Analyser
15. Ultra Sound Dopplers.
16. Defibrillators and Pacemakers (Demo)

COURSE OUTCOMES (COs)	
CO1	To learn recording systems of EEG and ECG
CO2	To Acquire knowledge on diathermy units
CO3	To determine concentration of certain metal ions in chemical components
CO4	To determine the quantitative analysis of molecules
CO5	Able to detect antibodies in our blood
CO6	Learns pH measurement

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**
2	CO1	3			2	3		2			2	3			3
	CO2		1	2			3	3	3				1		
	CO3	2			3						2	2			
	CO4					3	2	3	2			1			
	CO5	3	2	1				3	1		3	3	2		
	CO6	3			2	3		2			2	3			
3	Category	Professional Course (PC)													
4	Approval	48th Meeting of the Academic Council													

U18PCBM5L2	**DIGITAL SIGNAL PROCESSING FOR BIO ENGINEERS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	2	1
	Prerequisite course – Partial Differential Equation and Transformation				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To gain the practical knowledge about the various bio signals and its characteristics

LIST OF EXPERIMENTS

1. Representation of basic discrete time signals
2. Computation of convolution –linear convolution
3. Response of a difference equation to initial conditions; stability
4. DFT and FFT computation
5. FIR filter design using windowing techniques
6. IIR filters design-digital Butterworth filter
7. IIR filters design-digital Chebyshev filter
8. Analysis of ECG signals.
9. Analysis of EEG signals
10. Analysis of EMG signals

COURSE OUTCOMES (COs)	
CO1	To represent the basic discrete time signals and analyze it
CO2	To represent time series signal and convolve them
CO3	To compute the DFT and FFT
CO4	To design the IIR and FIR filter
CO5	To analyze various types of bio signals and study its characteristics
CO6	To learn window techniques for filtering signals

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**
2	CO1	3			2	3		2			2	1			3

U18MCAB509	**SOCIAL AWARENESS (ARTISANS-RELATES TO ENGG., VISIT TO HOSPITALS, ORPHANAGES, POLICESTATION, COURTS, TRAUMA CENTERS, CONSUMER FORUMS)**	**L**	**T**	**P**	**C**
		0	0	2	0

Human beings live in relationship with their family members and with others in the society. As a society, mankind strives to achieve ordered and organized life through which an environment of cooperation and coexistence is expected. A healthy society creating an environment of fearlessness is a key for the mankind to achieve higher goals because it is society which makes us most human, most complete as people.

Although as a society, our expectation is fearlessness, but due to lack of understanding of our role in a society, we fail to fulfill the expectation. The social awareness activity shall promote an understanding and sharing of issues of societal problem through exposure to variety of artisans and different kind of organizations. It is expected that this exposure will enable the learners to appreciate social issues, problems and challenges.

Each institution will offer a range of introductory activity based courses focusing on local artisans related to engineering so that students are sensitized to appreciate their problems and can take up some of the problems to solve while they do their regular studies. This course shall also include visits to visit to hospitals, orphanages, police station, courts, trauma centers, consumer forums so that they get exposed to different facets of societal problems. Care should be taken to give adequate representation to local and regional organizations and artisans. For example, Banaras has local traditions in BanarasiSaari, Toy making, etc and has almost all types of organizations. An institution in Banaras area can offer courses on these artisans. This will, in turn, also ensure wider community involvement/interaction with the institution. At the end of the course/semester, a student should be able to identify a social issue, prepare project report and give presentation on the selected issues. Contact hours per week should be 3 -4 hours. Towards the end of the course, the institution can organize an exhibition in which all the students publicly demonstrate findings of their reports and their future plan of actions.

U18MCAB510	SOCIAL SERVICE / NSS	L	T	P	C
		0	0	2	0
(Teach in neighborhood, adopt an underprivileged school, village stay / visit (NSS), cleanliness drive, and skill transfer)					

U18PCBM601	PATHOLOGY AND MICROBIOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Biology for Engineers				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- Gain a knowledge on the structural and functional aspects of living organisms.
- Know the etiology and remedy in treating the pathological diseases
- To learn about the cell structure and its disorders
- To gain knowledge about the fundamental structure of virus, bacteria and its causes
- Empower the importance of public health.

UNIT I CELL DEGENERATION, REPAIR AND NEOPLASIA 9

Cell injury - Reversible cell injury and Irreversible cell injury and Necrosis, Apoptosis, Intracellular accumulations, Pathological calcification- Dystrophic and Metastatic. Inflammation and Repair including fracture healing, Neoplasia, Classification, Benign and Malignant tumours, carcinogenesis, spread of tumours Autopsy and biopsy.

UNIT-II FLUID AND HAEMODYNAMIC DERANGEMENTS 9

Edema, Hyperemia/Ischemia, normal hemostasis, thrombosis, disseminated intravascular coagulation, embolism, infarction, shock, Chronic venous congestion. Hematological disorders-Bleeding disorders, Leukaemias, Lymphomas, Haemorrhage.

UNIT V MICROBIOLOGY 9

Structure of Bacteria and Virus. Routes of infection and spread; endogenous and exogenous infections, Morphological features and structural organization of bacteria and virus, growth curve, identification of bacteria , culture media and its types , culture techniques and observation of culture. Disease caused by bacteria, fungi, protozoan, virus and helminthes.

UNIT V MICROSCOPES 9

Light microscope – bright field, dark field, phase contrast, fluorescence, Electron microscope (TEM & SEM). Preparation of samples for electron microscope. Staining methods – simple, gram staining and AFB staining

UNIT V IMMUNOPATHOLOGY 9

Natural and artificial immunity, types of Hypersensitivity, antibody and cell mediated tissue injury: opsonization, phagocytosis, inflammation, Secondary immunodeficiency including HIV infection. Auto-immune disorders: Basic concepts and classification, SLE.Antibodies and its types, antigen and antibody reactions, immunological techniques: immune diffusion, immuno electrophoresis, RIA and ELISA, monoclonal antibodies.

TEXT BOOKS:

1. Ramzi S Cotran, Vinay Kumar & Stanley L Robbins, ―Pathologic Basis of Diseases‖, 7th edition,WB Saunders Co. 2005 (Units I & II).
2. Ananthanarayanan&Panicker, ―Microbiology‖ Orientblackswan, 2017 10th edition. (Units III,IV and V).

COURSE OUTCOMES (COs)															
CO1	To have a Fundamental Knowledge about the cell and concepts of tumor.														
CO2	To have to learn about the fluid present in the body and hemodynamic derangement														
CO3	To discuss the importance of public health and describe methods involved in treating the pathological diseases														
CO4	To have knowledge about basic concepts of infection and immunity of the human body														
CO5	To acquire the fundamental knowledge of structure of Bacteria, virus and its causes.														
CO6	To know the uses of various microbiology based techniques														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

	CO5	3					3		2		3				
	CO6	3	1		2	3	3	2			2				
3	Category	Professional Course (PC)													
4	Approval	48th Meeting of the Academic Council													

U18PCBM602	DIAGNOSTIC AND THERAPEUTIC EQUIPMENT	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Medical Instrumentation I & II				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- Gain knowledge about measurements of parameters related to respiratory system
- Learn measurement techniques of sensory responses
- Understand different types and uses of diathermy units.
- Know ultrasound imaging technique and its use in diagnosis
- Know the importance of patient safety against electrical hazard

UNIT I CARDIAC EQUIPMENT 9

Electrocardiograph, Normal and Abnormal Waves, Heart rate monitor, Holter Monitor. Cardiac Pacemaker- Internal and External Pacemaker– Batteries, AC and DC Defibrillator- Internal and External.

UNIT II NEUROLOGICAL EQUIPMENT 9

Multi channel EEG recording system, Clinical significance of EEG- Epilepsy, Evoked Potential Signals–, EEG Bio Feedback Instrumentation, MEG (Magneto Encephalo Graph) - sensing principle and instrumentation (Block diagram)

UNIT III SKELETAL MUSCULAR EQUIPMENT 9

Generation of EMG, recording and analysis of EMG waveforms, fatigue characteristics, Muscle stimulators, nerve stimulators, Nerve conduction velocity measurement, EMG Bio Feedback Instrumentation.

UNIT IV DIATHERMY 9

IR and UV lamp - application. Need for different diathermy units, Short wave diathermy, ultrasonic diathermy, Microwave diathermy. Electro surgery machine - Current waveforms, Tissue Responses, Electro surgical current level.

UNIT V ULTRASONIC TECHNIQUE & PATIENT SAFETY 9

Diagnosis: Tissue Reaction, Basic principles of Echo technique, display techniques A, B and M mode, B Scan, Application of ultrasound as diagnostic tool – Echocardiogram, Echoencephalogram, abdomen, obstetrics and gynecology, ophthalmology. Electrical safety codes and standards, Basic Approaches to protection against shock, Protection equipment design, Electrical safety analyzer – Testing the Electrical safety of medical equipment.

COURSE OUTCOMES (COs)	
CO1	o apply different medical devices in the measurement of parameters related to cardiology
CO2	To explain the recording method of EEG
CO3	To measure and analyse signals generated by muscles
CO4	To analyse different types of diathermy units
CO5	To list the applications of ultrasound in medical field
CO6	To differentiate the diagnostic and therapeutic equipment's

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCBM603	**RADIOLOGICAL EQUIPMENTS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Medical Instrumentation I& II				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To know the techniques used for visualizing various sections of the body.
- To learn the principles of different radio diagnostic equipment in Imaging
- To discuss the radiation therapy techniques and radiation safety

UNIT I: X – RAYS **9**

Principle and production of soft X – Rays, Selection of anodes, heel pattern, Scattered Radiation, Porter Bucky systems, Cooling System, Testing for various parameters of the unit, principles of Angiography and Fluoroscopic Techniques, Image Intensifiers, Single plane and bi plane recording units, digital subtraction angiography, dental X- ray units.

UNIT II: COMPUTER TOMOGRAPHY **9**

Principle, Plane of Movement, Multi section Radiography, Computerised Axial Tomography, Type of Detection, image reconstruction, Spiral CT, Transverse Tomography.

UNIT III: MAGNETIC RESONANCE IMAGING **9**

Principle of MRI, MRI instrumentation, Imaging Different Sections of the Body, Tissue Characterisation, MR Spectroscopy, Functional MRI.

UNIT IV: EMISSION IMAGING **9**

Alpha, Beta, Gamma Emission, different types of Radiation Detectors, G.M. & Proportional Counters, Pulse Height Analysers, Isotopic, Scanners, Isotopic Diagnosis of RBC Destruction Rate, GI Bleedings Iron Concentration, Liver Functions, Functions of Gamma Camera, PET, SPECT.

UNIT V: RADIATION THERAPY USING X – RAYS AND ISOTOPES **9**

Direct and Indirect effects of high energy radiation, Units for radiation Exposer, Depth Dose curves, Linear Accelerator Betatron, Cobalt and Cesium Therapy, Computation of Absorbed Dose Level, Automatic Treatment Planning, Hazardous Effects of Radiation, Radiation measuring units, Allowed Levels, ICRP regulation Protection Methods.

TEXT BOOKS:

1. Steve Webb, ―The Physics of Medical Imaging‖, Adam Hilger, Philadelpia, 1988 (Units I, II, III & IV).

4. P.Ragunathan, ―Magnetic Resonance Imaging and Spectroscopy in Medicine Concepts and Techniques‖, Paperback – Import, 2007

COURSE OUTCOMES (COs)	
CO1	To describe the working principle of X ray machine and its application
CO2	To illustrate the principle computed tomography
CO3	To interpret the technique used for visualizing various sections of the body using magn resonance imaging
CO4	To demonstrate the applications of radio nuclide imaging
CO5	To outline the methods of radiation safety.
CO6	To learn radiation hazards and precaution steps

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PCBM604	TELEMEDICINE	L	T	P	C
	Total Contact Hours – 30	2	0	0	2
	Prerequisite course – Analog and Digital Communication				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce telemedicine advancements in telemedicine .Benefits of telemedicine , Functional Block of a telemedicine system, Tele healthcare and E-medicine.
- To study Communication infrastructure for telemedicine LAN and WAN technology Satellite communication Mobile hand held devices and mobile communication Internet technology and telemedicine using World Wide Web Video and audio conferencing.
- Introduction to Network Configuration , circuit and packet switching.
- To learn Ethical and legal issues of Telemedicine - Confidentiality and the law – Patient rights and consent - Access to medical Records.

UNIT I - FUNDAMENTALS OF TELEMEDICINE 6

History of telemedicine, definition of telemedicine, tele-health, tele-care, scope, Telemedicine Systems, benefits &limitations of telemedicine.

UNIT II -TYPE OF INFORMATION & COMMUNICATION INFRASTRUCTURE FOR TELEMEDICINE 6

Audio, video, still images, text and data, fax-type of communications and network: PSTN, POTS, ANT, ISDN, internet, air/ wireless communications, GSM satellite, micro wave, Mobile health and ubiquitous healthcare.

UNIT III ETHICAL AND LEGAL ASPECTS OF TELEMEDICINE 6

Confidentiality, patient rights and consent: confidentiality and the law, the patient-doctor relationship, access to medical records, consent treatment - data protection & security, jurisdictional issues, intellectual property rights.

UNIT IV PICTURE ARCHIVING AND COMMUNICATION SYSTEM 6

Introduction to radiology information system and ACS, DICOM, PACS strategic plan and needs assessment, technical issues, PACS architecture.

UNIT V APPLICATIONS OF TELEMEDICINE 6

Teleradiology, telepathology, telecardiology, teleoncology, teledermatology, telesurgery, eHealth and Cyber Medicine.

TEXT BOOK

COURSE OUTCOMES (COs)	
CO1	To learn about the telemedicine
CO2	To study about the communication and networking system in telemedicine
CO3	To have a knowledge about the standards of telemedicine and encryption
CO4	To get knowledge about uses of telemedicine
CO5	To aware about laws of telemedicine
CO6	To learn about broadband technologies

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCBM6L1	**PATHOLOGY AND MICROBIOLOGY LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	2	1
	Prerequisite course – Anatomy and Physiology Lab				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To learn about the morphology of Cells
- To gain knowledge about the cultivation and identification of microbes

LIST OF EXPERIMENTS:

1. Peripheral smear study
   (i) Morphology.
   (ii) Different count
   (iii) Total count.
2. Study on inclusion bodies.
3. Antigen-Antibody reaction Immuno electrophoresis.
4. Simple staining.
5. Gram staining.
6. Acid-fast staining.
7. IMVIC test.
8. Oxidase-Citrate.

9. Hydrogen sulphide test.
10. Sterilisation of Media.
11. Preparation of Media (solid & Liquid Media)
12. Cultivation of microbes (pour plate, Streak plate, Spread Plate method)
13. Antibiotic sensitivity test

COURSE OUTCOMES (COs)	
CO1	To have a Fundamental Knowledge about the culture techniques.
CO2	To have knowledge about basic concepts of Media and Culture of Microbes.
CO3	To acquire the fundamental knowledge of antibiotic Sensitivity.
CO4	To know the uses of various microbiology based techniques
CO5	To have a Fundamental Knowledge about the culture techniques.
CO6	To Learn about morphology of different microorganisms

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PCBM6L2	**VIRTUAL MODELING LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	2	1
	Prerequisite course – Digital Signal Processing Lab for Bio Engineers				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To gain the practical knowledge about the various bio signals and its characteristics with Lab view
- To understand the concepts of virtualization and virtual machines
- To gain expertise in server, network and storage virtualization

LIST OF EXPERIMENTS

1. Basic arithmetic operations
2. Boolean operations
3. Sum of ‘n’ numbers using ‘for’ loop
4. Factorial of a give number using for loop
5. Array maximum and minimum
6. Flat and stacked sequence
7. Median filter
8. Discrete cosine transform
9. Convolution of two signals

10. Windowing technique
11. Instrumentation of an amplifier to acquire an ECG signal
12. Acquire, analyse and present an EEG using virtual instrumentation

COURSE OUTCOMES (COs)	
CO1	To represent the Basic arithmetic operations and analyze it
CO2	To analyze the Discrete cosine transform
CO3	To analyze various types of Windowing technique
CO4	To acquire ECG signal
CO5	To represent EEG using virtual instrumentation
CO6	To execute datas in a availed frame

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18MCAB611	**SPIRITUAL, MINDFULNESS AND MEDITATION**	**L**	**T**	**P**	**C**
		0	0	2	0

The human mind especially among the youth needs to transcend its preoccupation with negative experiences such as fear, anxiety, anger and obsession and to become more comfortable with the experience of compassion, acceptance and forgiveness. The student's attitude of acceptance towards negativity, aggression and turbulent emotions should be diffused with the practice of mindfulness. Rather than suppressing emotions or by indulging in them, the student be taught to handle such vibes with acceptance and generosity and with the observation of the self.

A mindful state has to be achieved when negative thoughts and experiences are becoming more personalized and do not serve as dictators of subsequent feelings and activities (e.g. suicide attempts, violence etc.). Both concentrative and insight meditation techniques may be practiced for 10-day sessions during every two months. Behavioral techniques of self monitoring should also be practiced to observe the stream of consciousness from the perspective of a vigilant but detached observer.

The students should be trained to practice different models of mindfulness and meditation so as to elicit a state of deep physical and behavioral relaxation. They may work on selectively influencing or changing the symmetry in hemispheric brain activity. Positive addiction, meta -cognitive practices etc. are exercised to make the students experience the universal human capacity through spiritual experiences.

The students may learn to turn-off or bypass the cognitive processing of usual daily pre-

occupations and concerns, allowing access to mindful, spiritual and meditative state of self realization.

Activities:
Reading (10 books/ narrations)
Exercises (Mindfulness based Stress Reduction (MBSR) and 10 more)
Sessions: multiple 10-day sessions may be organized over a semester.

U18MCAB612	RELIGION AND INTER-FAITH	L	T	P	C
		0	0	2	0

The objective is to gain knowledge about the beliefs and philosophies of different religions on issues like environment, gender equality, unity, financial equality etc.
The scholars of different religious and philosophical sects should be invited to talk about the issues mentioned above. Efforts should be made to ensure that such talks and discourses should stay clear-off making a critical study on these areas.
Following activities must be included.

- Reading of books on religious texts of different faiths by famous authors. (Reading methods may be as suggested under 'book reading'.)
- Organizing lecture on interfaith issues covering philosophies and chronology and contemporary situations world over at a given time.

U18PCBM701	DIGITAL AND MEDICAL IMAGE PROCESSING	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Digital signal processing for bioengineers				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- The aim of the courses to show how to extract, model, and analyze information from medical data
- To understand application in order to help diagnosis, treatment and monitoring of diseases through computer sciences.

UNIT-I DIGITAL IMAGE FUNDAMENTAL 9

Fundamental steps in DIP, Components of digital image processing system, Structure of human eye, Image formation in the eye, Brightness adaptation and discrimination, light, Image sensing and acquisition, Image formation model, Pixels, Basic relationship between pixels, coordinate conventions, Imaging Geometry, sampling and quantization, Basic geometric transformations.

UNIT-II IMAGE TRANSFORM 9

Definition of image transforms, Need for transforms, applications, Two dimensional Fourier transform, properties, Walsh, Hadamard, Discrete Cosine Transform, Haar, Karhunen – Loeve transforms

UNIT-III IMAGE RESTORATION 9

Image Restoration - degradation model, Properties, Noise models – Mean Filters – Order

Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering

UNIT-IV IMAGE SEGMENTATION 9

Edge detection, Edge linking via Hough transform – Thresholding - Region based segmentation – Region growing – Region splitting and merging – Morphological processing-erosion and dilation, Segmentation by morphological watersheds – basic concepts – Dam construction – Watershed segmentation algorithm.

UNIT-V RECONSTRUCTION OF MEDICAL IMAGES 9

Image reconstruction from projections - Radon transforms, inverse radon transform - Filter back projection algorithm, Fourier reconstruction of MRI Images- Reconstruction of PET, SPECT and fMRI images

COURSE OUTCOMES (COs)															
CO1	To have a Fundamental Knowledge of digital image processing with Fourier transforms														
CO2	To acquire knowledge about the image sampling, Modelling and quantization														
CO3	To have a fundamental knowledge of image enhancement, its process and types of filters used in image processing														
CO4	To have knowledge about image analysis, classification and reconstruction of act and MRI images														
CO5	To acquire the skills in the transmission of biological images.														
CO6	To reconstruct radiological images														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCBM702	ROBOTICS AND NANOTECHNOLOGY IN MEDICINE	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Medical Instrumentation I & II				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce about basic principle of robotics and nanotechnology
- To understand the basics of Robotics, Kinematics.
- To explore various applications of Robots in Medicine.

UNIT I: INTRODUCTION **9**

Geometric configuration of robots - manipulators - drive systems - internal and external sensors – end effectors - control systems - robot programming languages and applications - Introduction to robotic vision

UNIT II: ROBOTIC SURGERY **9**

Surgical robots-types, advances and advantages. Technologies involved in robotic surgery-sensors, actuators, micromechanics, communication control, virtual reality and artificial intelligence.

UNIT III: MOBILE ROBOTICS **9**

Architecture for advanced mobile robotics, actuator design, navigation, obstacle avoidance, sensors and vision systems. Legged robotic devices, control of mobile robots in semi structured environment

UNIT IV: ADVANCES IN MICROMECHATRONICS **9**

Robot force control strategies, autonomous mobile multi jointed systems. Development of specialized sensors for online monitoring of biological parameters, computer assisted surgery, rehabilitation robotics in virtual environment, applications in unstructured environment.

UNIT V: BIOMEDICAL APPLICATIONS **9**

Nerve cell repair using micro mechatronics, micro and Nano devices for targeted delivery of medicines to tumour sites . Surgeries performed using robotic systems TECAB, mitral valve surgery, bariatric surgery, minimally invasive surgeries. Surgical procedures in general surgery, neurology, urology, gasteroenterology, cardiology, Orthopedics, paediatrics and radio surgery

2. Tony Hyland, Scientific and Medical Robotics, Smart Apple Media Publishers, 2007.
3. Hari Singh Nalwa, "*Nanostructured Materials and Nanotechnology*", Academic Press, 2002.

COURSE OUTCOMES (COs)	
CO1	To study about Definition and origin of robotics
CO2	To learn about Hydraulic, pneumatic and electric drives determination
CO3	To introduce about Construction of manipulators – manipulator dynamics
CO4	To learn about basic concepts of Nano science and technology
CO5	To study about material processing by Sol – Gel method
CO6	To design robotic arms

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCBM703	**HEALTH, HOSPITAL AND EQUIPMENT MANAGEMENT**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Medical Instrumentation				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To learn about the Health, Hospital and Equipment management.
- To understand the overview of Hospital Organization and Planning.
- To study about various types of communication and safety aspects in Hospital.

UNIT-I HEALTH SYSTEM 9

Health organization of the country, the state, the cities and the region, Health Financing System, Organisation of Technical Section.

UNIT-II HOSPITAL ORGANISATION AND MANAGEMENT 9

Management of Hospital Organization. Nursing section Medical Sector, Central Services, Technical Department, Definition and Practice of Management by Objective, Transactional Analysis Human relation in Hospital. Importance to Team Work, Legal aspect in Hospital Management

UNIT-III REGULATORY REQUIREMENT AND HEALTH CARE CODES 9

FDA Regulation, joint commission of Accreditation for Hospitals, National Fire Protection Association Standard, IRPC.

UNIT-IV EQUIPMENT MAINTENANCE MANAGEMENT 9

Organizing Maintenance Operations, Paperwork Control, Maintenance Job, Planning Maintenance Work Measurement and Standards, Preventive Maintenance, Maintenance Budgeting and Forecasting, Maintenance Training, Contract Mainframe.

UNIT-V TRAINED TECHNICAL PERSONNEL 9

Function of Clinical Engineer, Role to be performed in Hospital, Man power Market, Professional Registration, Structure in Hospital.

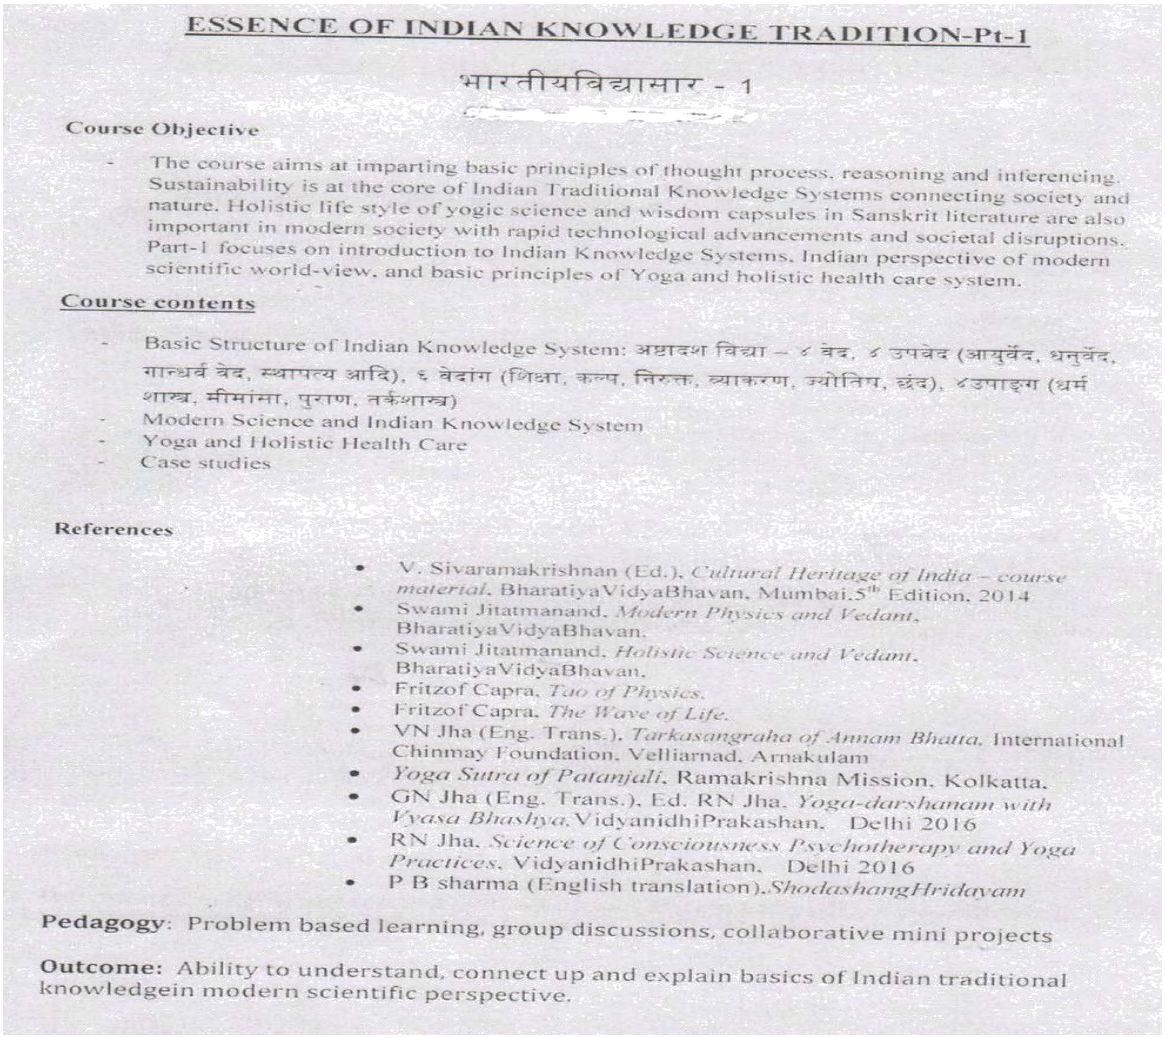
U18MCTH603	ESSENCE OF INDIAN KNOWLEDGE TRADITION	L	T	P	C
		2	0	0	0



ESSENCE OF INDIAN KNOWLEDGE TRADITION-Pt-1

भारतीयविद्यासार - 1

Course Objective

- The course aims at imparting basic principles of thought process, reasoning and inferencing. Sustainability is at the core of Indian Traditional Knowledge Systems connecting society and nature. Holistic life style of yogic science and wisdom capsules in Sanskrit literature are also important in modern society with rapid technological advancements and societal disruptions. Part-1 focuses on introduction to Indian Knowledge Systems, Indian perspective of modern scientific world-view, and basic principles of Yoga and holistic health care system.

Course contents

- Basic Structure of Indian Knowledge System: अष्टादश विद्या – ४ वेद, ४ उपवेद (आयुर्वेद, धनुर्वेद, गान्धर्व वेद, स्थापत्य आदि), ६ वेदांग (शिक्षा, कल्प, निरुक्त, व्याकरण, ज्योतिष, छंद), ४उपाङ्ग (धर्म शास्त्र, मीमांसा, पुराण, तर्कशास्त्र)
- Modern Science and Indian Knowledge System
- Yoga and Holistic Health Care
- Case studies

Pedagogy: Problem based learning, group discussions, collaborative mini projects

Outcome: Ability to understand, connect up and explain basics of Indian traditional knowledgein modern scientific perspective.

U18PCBM7L1	IMAGE PROCESSING LAB	L	T	P	C
	Total Contact Hours – 45	0	0	2	1
	Prerequisite course – Digital Signal Processing Lab for Bioengineers				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To practice the basic image processing techniques.
- To analyze various types of bio image and study its characteristics.
- To enhance the medical images by applying various filters.

LIST OF EXPERIMENTS:

1. Display of Grayscale Images.
2. Histogram Equalization.
3. Spatial filtering
4. Non-linear Filtering.
5. Edge detection using Operators.

6. 2-D DFT and DCT.
7. Filtering in frequency domain.
8. Display of color images.
9. Conversion between color spaces.
10. DWT of images.
11. Segmentation using watershed transform.
12. Study of DICOM standards.
13. Medical Image Compression techniques.
14. Medical image fusion

COURSE OUTCOMES (COs)															
CO1	To understand the fundamentals of digital image and its properties														
CO2	To enhance the medical images by applying various filters														
CO3	To segment the region of interest using various image processing algorithms														
CO4	To study on DICOM standards														
CO5	To analyze different fusion techniques.														
CO6	To learn filtering methods														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18MCAB713	**BEHAVIORAL AND INTERPERSONAL SKILLS (NON-VERBAL SKILLS / BEHAVIOURS, NON-AGGRESSION)**	**L**	**T**	**P**	**C**
		0	0	2	0

Each individual has behavior patterns that are shaped by the context of his or her past. Most often, adapting the behaviour to the changing context of the reality a person lives in becomes difficult which may lead to the reduction in personal effectiveness and natural self-expression. The main focus of this course is to equip the students with useful approaches to help in the deeper understanding of self and help individuals empower themselves to be the source of their own growth and development. The course will help students to learn effective communication skills, Group and team building skills and will help them learn the goal setting process and thus become more effective in achieving their goals.

The broader objective of this course is to make the students aware about the different facets of self and to help them learn skills to strengthen their inner capacities. So that they are able to understand themselves, think and act effectively, to be able to communicate in an effective manner and to learn to lead and to form an effective team. The specific objectives, however, are as following.

- To help the students to understand their real self by recognizing different aspects of their self-concept that will lead to an increased self-confidence.
- To train the students for communicating effectively in both formal as well as in informal settings.
- To help the students to understand the importance of non-verbal aspects of effective communication.
- To help the students to understand Emotion and emotional intelligence, Managing ones' own emotional reservoirs, effective dealing with emotions at work
- To facilitate the students in understanding the formation and function of group and team and to help them to learn the skills of a successful leader.
- To help the students in understanding and practicing the goal setting process by recognizing the importance of each step involved in goal setting. The activities involved are designed to facilitate their career goal decision making.

The activities to achieve the above objectives can be suggested as follows.

- Motivational lectures
- Group Discussions/activities
- Case Study
- Games/Stimulation Exercises
- Role-Playing
- Mindfulness training.

U18MCAB714	NATURE CLUB	L	T	P	C
		0	0	2	0

Nature club (bird watching, recognizing plants at institute/at home, recognizing local animals, appreciating biodiversity

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.
Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place.

- Making high resolution big photographs of small creatures (bees, spiders, ants. mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants).
- Videography/ photography/ information collections on specialties/unique features of different types of common creatures.
- Search and explore patents and rights related to animals, trees etc.
  Studying miracles of mechanisms of different body systems.

U18EEBM8C1	COMPREHENSION	L	T	P	C
	Total Contact Hours : Test will be conducted at the end of the semester	0	0	0	1
	Prerequisite – All the courses up to seventh semester				
	Course Designed by – Dept of Biomedical Engineering				

OBJECTIVES

- To provide a complete review of Bio Medical Engineering topics covered up to fifth semesters, so that a comprehensive understanding is achieved.
- It will also help students to face job interviews, competitive examinations and also to enhance the employment potential.
- To provide overview of all topics covered and to assess the overall knowledge level up to fifth semester.

U18MCAB815	INNOVATION PROJECT BASED – SC., TECH, SOCIAL, DESIGN & INNOVATION	L	T	P	C
		0	0	2	0

Many students, when they enter engineering, are full of enthusiasm to understand new areas, to build systems and to experiment and play with them. This enthusiasm is to be tapped and to direct it to exploration and sustained pursuit by the student which may result in development of a working system, a prototype, or a device or material, etc. They are not required or even expected to produce research or an innovation.

Students may be encouraged to take up projects which are aimed at providing solutions to societal problems, reduce drudgery and improving efficiency in rural work, green technologies, utilization of rural and urban waste, sanitation and public health, utilizing non -conventional energy sources, technologies for the benefit of the differently abled people and technologies ready to be implemented in the Institute.

Two types of activities may be undertaken under this

Exposure to social problems (which are amenable to technological solutions)

Design & Innovation (to address above problems)

After this students be encouraged to undertake technology projects of social relevance.

PROFESSIONAL ELECTIVE

U18PEBM011	BIOFLUID AND BIOMECHANICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Anatomy and Physiology				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- An understanding on the physiology and anatomy of studied systems,
- A capability to analyze cardiac, respiratory mechanics
- Explain about soft tissue and orthopedic mechanics

UNIT-I BIOMECHANICS 9

Newton's law, Stress, Strain, Hookes-law, Elasticity, Shear, Tension, Compression, Bone – Cancellous and cortical bone, structure, Mechanical Properties and mechanical testing of bone, UTM, creep and Fatigue.

UNIT II BIOFLUID MECHANICS 9

Viscosity, Newtonian fluid, Non-Newtonian fluid, Viscoelastic, Vascular tree, Flow properties of Blood, Physical, Chemical and Rheological properties of blood, Apparent and Relative and Viscosity, Problems associated with extra corporeal blood flow

UNIT-III BIOSOLID MECHANICS **9**

Constitutive equation of viscoelasticity –Maxwell &Voight models, anisotropy, Hard Tissues –Structure, blood circulation, elasticity and strength, viscoelastic properties, functional adaptation, Skeletal Muscle –Muscle action, Hill's models, mathematical modeling, Bone fracture mechanics, Implants for bone fractures.

UNIT IV SOFT TISSUE MECHANICS **9**

Tissue Mechanics-Mechanical Properties of Tissues, Biological materials, Pseudo elasticity, nonlinear stress-strain relationship, viscoelasticity, structure, function and mechanical properties of skin, ligaments and tendons.

UNIT V ORTHOPAEDIC MECHANICS **9**

Mechanical properties of cartilage, diffusion properties of articular cartilage, kinetics and kinematics of joints, lubrication of joints analysis of force in orthopaedic implants. Biomechanics of Elbow Shoulder hip and Knee.

COURSE OUTCOMES (COs)	
CO1	Outline the fundamental concepts and definitions related to Biomechanics
CO2	Demonstrate the Cardiovascular and pulmonary system in human body
CO3	Identify the different blood properties, especially the anatomy and physiology of blood vessels.
CO4	Able to explain the laws concerning bio-fluid mechanics
CO5	Develop the model for orthopedic device
CO6	Explain the mechanism of human physiology

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PEBM012	HUMAN ASSIST DEVICES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Medical Instrumentation-I				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To know the various Bio- potential recordings for enabling students to record various signals.
- To know the various functional blocks present in cardiac care units so that the students can handle these equipments with care and safety.
- To develop an understanding of the physiotherapy and diathermy equipment so that the student can learn to operate.
- To study the concept of various Human Assist Devices so as to enable the students to develop new devices with innovative technology.
- To introduce the recent trends in the field of Diagnostic and Therapeutic Equipments.

UNIT I HEART LUNG MACHINE AND ARTIFICIAL HEART 9

Condition for H/L System, Different types of Oxygenators, Pumps, Pulsatile and Continuous Types, Monitoring Process, Shunting, The Indication for Cardiac Transplant, Driving Mechanism, Blood Handling System, Functioning and different types of Artificial Heart, Mock test setup for assessing its Functions

UNIT II CARDIAC ASSIST DEVICES 9

Synchronous Counter pulsation, Assisted through Respiration Right Ventricular Bypass Pump, Left Ventricular Bypass Pump, Open Chest and closed Chest type, Intra Aortic Balloon Pumping Veno Arterial Pumping, Prosthetic Cardio Valves, Principle and problem, Biomaterials for implantable purposes, its characteristics and testing.

UNIT III ARTIFICIAL KIDNEY 9

Indication and Principle of Haemodialysis, Membrane, Dialysate, Different types of heamodialysers, Monitoring Systems, Wearable Artificial Kidney, Implanting Type.

UNIT IV PROSTHETIC AND ORTHODIC DEVICES 9

Hand and Arm Replacement - Different Types of Models Externally Powered Limb Prosthesis Feedback in Orthodic System, Functional Electrical Stimulation, Sensory Assist Devices, Materials for Prosthetic and orthodic devices, Haptic Devices

UNIT V RESPIRATORY AND HEARING AIDS 9

Intermittent positive pressure, Breathing Apparatus Operating Sequence, Electronic IPPB unit with monitoring for all respiratory parameters, Types of Deafness, Hearing Aids, Construction and Functional Characteristics.

TEXT BOOK

COURSE OUTCOMES (COs)	
CO1	To Discuss about the working principle of Heart Lung Machine and Artificial Heart
CO2	To Able to categorize the different classes of Cardiac assist devices and its Applicatio
CO3	To Identify the suitable requirements for Haemodialysis and performance analysis of Dialysers
CO4	To Able to choose the suitable materials and model for Rehabilitation
CO5	To analyse the mechanism for Audiometer and the common Hearing aids
CO6	To Explain the mechanism of Human Assist Devices

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PEBM013	**MEDICAL INFORMATICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Medical Instrumentation				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To learn about the historical information of hospitality and recent trends in the Hospital information system.
- To know about the basic concepts of artificial intelligence and expert systems.
- To study the hospital management information systems and computer assisted patient education.

UNIT-I INTRODUCTION 9

Structure of Medical Informatics, Internet and Medicine, Security issues, Computer based medical information retrieval, Hospital management and information system, Functional capabilities of a computerized HIS, e-health services, Health Informatics, Medical Informatics, Bioinformatics

UNIT-II COMPUTERIZED PATIENT RECORD 9

History taking by computer, Dialogue with the computer, Components and functionality of CPR, Development tools, Intranet, CPR in Radiology, Application server provider, Clinical information system, Computerized prescriptions for patients

UNIT-III COMPUTERS IN CLINICAL LABORATORY AND MEDICAL IMAGINING 9

Automated clinical laboratories-Automated methods in hematology, cytology and histology, Intelligent Laboratory Information System, Computerized ECG, EEG and EMG, Computer assisted medical imaging- nuclear medicine, ultrasound imaging ultrasonography-computed X-ray tomography, Radiation therapy and planning, Nuclear Magnetic Resonance

UNIT-IV COMPUTER ASSISTED MEDICAL DECISION-MAKING 9

Neuro-computers and Artificial Neural Networks application, Expert system, General model of CMD, Computer-assisted decision support system, production rule, system cognitive model, semester networks, decisions analysis in clinical medicine, computers in the care of critically patients, computer assisted surgery, designing.

UNIT-V RECENT TRENDS IN MEDICAL INFORMATICS 9

Virtual reality applications in medicine, Computer assisted surgery, Surgical simulation, Telemedicine, Tele surgery computer aids for the handicapped, computer assisted instrumentation in Medical Informatics, Computer assisted patient education and health, Medical education and health care information.

U18PEBM021	TROUBLESHOOTING OF MEDICAL INSTRUMENTS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Electronic Devices and Circuits				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To provide the knowledge of planning, designing and safety management in hospital services.
- To know the Fundamental Troubleshooting Testing Procedures.
- To understand the Fault Diagnosis in Analog & Digital Integrated Circuits.

UNIT I - FUNDAMENTAL TROUBLESHOOTING TESTING PROCEDURES 9

Equipment failure and its causes, Functional block diagram of a troubleshooting system, Troubleshooting process & fault finding aids, Troubleshooting techniques and their correction action, Testing of active and passive components: resistor,capacitor, inductor, BJT, JFET & MOSFET.

UNIT II - FAULT DIAGNOSIS IN ANALOG & DIGITAL INTEGRATED CIRCUITS 9

Characteristics of ideal op-amps, typical op-amp based medical circuits, Fault diagnosis in op-amp circuits, Digital troubleshooting methods, Digital IC Troubleshooters, logic clip, logic probe, logic pulser, logic current tracer, logic comparator, Circuit board Troubleshooting.

UNIT III - BIOMEDICAL EQUIPMENT TROUBLESHOOTING 9

Troubleshooting- ECG Machine, EEG Machine, defibrillator, electrosurgical unit, anesthesia machine, autoclaves & sterilizers, endoscope, incubators, nebulizer, oxygen concentrators, sphygmomanometers, suction machine, X-ray machine.

UNIT IV - MEDICAL DEVICE DESIGN QUALITY 9

Definition of quality, essence of quality, Quality operating system and the device life cycle, Evolution of quality, Business excellence: a value proposition, Health care quality.

UNIT V - DESIGN FOR SIX SIGMA AND MEDICAL DEVICE REGULATION 9

Global Perspective on medical device regulations, medical device classification (USA, Europe & GHTF), Medical device safety, medical device quality management systems requirements, Medical device regulation throughout the product development life cycle, Purpose of ISO 9001:2001&ISO 13485.

COURSE OUTCOMES (COs)	
CO1	To Outline the trouble shooting basic procedure
CO2	To Infer the various analog and digital circuits trouble shooting procedures
CO3	To Apply the trouble shooting procedures to various biomedical equipments
CO4	To Develop the quality procedure for healthcare equipment
CO5	To Relate the various regulations for biomedical devices
CO6	To explain briefly about analog and digital integrated circuits

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PEBM022	**REAL TIME PROCESSOR AND BIOMEMS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Microprocessor and Microcontroller in Biomedical Applications				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To learn about the Digital Signal Processing and BIOMEMS in the real time.
- To provide knowledge in PSOC
- To Know about working principle of MEMS and Microsystems

UNIT-I INTRODUCTION TO DIGITAL SIGNAL PROCESSING DEVICES 9

Architecture of TMS 320C54XX Digital Signal Processor-18. Addressing Modes and Instruction sets of TMS 320C54XX DSP-19. TMS 320VC5416 Assembly Language Programming-. Interfacing and Real Time C Programming with TMS 320C54XX- TMS 320C6713 Floating Point Processor Architecture and Real Time C Programming

UNIT-II PROGRAMMABLE EMBEDDED SYSTEM-ON-CHIP (PSOC) PROCESSOR 9

Architecture- Designer- Developing tools- biomedical applications

UNIT-III INTRODUCTION TO REAL-TIME IMAGING 9

Basic Hardware Architecture.-Linear Image Processing Algorithms-Compression by Matrix Transforms-Nonlinear Image Processing Algorithms-Parallel Architectures-Programming Languages-Optimization Techniques

UNIT IV MEMS AND MICROSYSTEMS 9

Working principle of Microsystems, materials for MEMS and Microsystems, micromachining, System modeling and properties of materials

UNIT V BIOMEMS 9

Drug delivery, micro total analysis systems (MicroTAS) detection and measurement methods, microsystem approaches to polymerase chain reaction (PCR), DNA hybridization, Electronic nose, Bio chip.

COURSE OUTCOMES (COs)	
CO1	To Infer the architectures of various processors and programming
CO2	To Develop the biomedical devices using PSOC
CO3	To Classify the various Nonlinear Image Processing Algorithms
CO4	To Interpret the working principle of Microsystems.
CO5	To Outline the applications of MEMS in biomedical field
CO6	To Able to Develop programming languages for image processing

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PEBM023	**CLINICAL ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Health Hospital and Equipment Management				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To educate on the basic concepts of laboratory animal care and ethical requirements and to introduce the principles of biological standardization.
- To provide the basic knowledge in clinical trials
- To understand about phase of conducting clinical trials

UNIT I REGULATION FOR LABORATORY ANIMAL CARE AND ETHICAL REQUIREMENTS 9

Introduction to commonly used experimental animals and their limitations in biological screening. Guidelines for care and handling of laboratory animals CPCSEA (including IAEC), OECD, ICH, GLP and ICMR Guidelines. Proforma (s) for performing experiments on animals as per various guidelines. Maintenance and Breeding techniques for laboratory animals. Organization of screening: Pharmacological activity of new substances and safety assessment tests. Toxicity studies: acute, subacute (Repeated dose), subchronic and chronic toxicity.

UNIT II PRINCIPLES OF BIOLOGICAL STANDARDIZATION 9

Methods of biological assay, principles of biological assays, official bioassays of some important drugs (Digitalis, insulin, nor adrenaline and histamine).Modern Techniques and New Approaches in drug evaluations: Animal cell lines and their uses, Radiological and binding assay

UNIT III INTRODUCTION TO CLINICAL TRIALS 9

Glossary of terms in clinical trials, history, requirements, new drug development process, need for new drug, selection of a chemical compound as a potential drug, screening of chemical compounds, translation medicine, assessment of preclinical data, Goals of clinical trials- Target population and patient selection.

UNIT IV PHASES OF CLINICAL TRIALS AND LEGAL ISSUES IN CLINICAL TRIALS 9

Phase 1, Phase 2, Phase 3 studies, Phase 4,Drug regulations- National- good clinical practice and schedule Y, Critical evaluation of literature- Systematic review and meta analysis, evidence based medicine

UNIT V PROCESS OF CONDUCTING A CLINICAL TRIAL 9

Drug development ,The process of ethical approval ,pre-study organization, protocol design, case Report Form (CRF) design ,Informed consent ,ethics approval, monitoring & Source Data Verification (SDV) ,safety Assessment - Good Clinical Practice Guidelines (GCP) & adverse events ,essential documentation, audit & inspections.

TEXTBOOK

1 Friedman LM, Furberg CD, DeMets DL**.** *Fundamentals of Clinical Trials*. 4th ed. New York, NY: Springer; 2010.Additional Reading Parmigiani, G. (2002).

COURSE OUTCOMES (COs)	
CO1	To Outline the various regulations and ethical requirements for animal care
CO2	To Infer the basics of principles of biological standardization
CO3	To List the drug development process
CO4	To Relate the phases of clinical trials and legal issues in clinical trials
CO5	To Build the process of conducting a clinical trial
CO6	To Design protocols for ethical acceptance

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEBM031	NUCLEAR MEDICINE	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Radiological Equipments				
	Course Designed by:-Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To understand the fundamentals of Nuclear Medicine and learn about the instruments involved in production techniques and therapeutic uses of Nuclear Medicine.
- To learn about various nuclear medicine instrumentation
- To educate radiation safety

UNIT I - BASICS OF NUCLEAR MEDICINE **9**

Radioactivity and interaction of radiation; Alpha, Beta and gamma emission, Laws of radioactive decay, Mechanisms of radioactive delay, Radiation intensity and exposure, Decay schemes and energy levels, Compton scattering, Pair productions, Particle interactions

UNIT II - RADIOPHARMACEUTICALS **9**

Radionuclide production, 99Mo/99mTc generator, Mechanism of localization, Types of radiopharmaceuticals, characteristics of radio pharmaceuticals, Radiopharmaceuticals for diagnosis and treatments in human, Dispensing of radio pharmaceuticals, RIA radiopharmaceuticals and kits production.

UNIT III - NUCLEAR MEDICINE INSTRUMENTATION **9**

Construction and principle operation of Gamma camera, Rectilinear scanner, Basic principles of pulse height analyser, Radiation detectors-Ionization chamber, Geiger Muller counter, Semiconductor detectors, Scintillation detectors, Electronic Instrumentation for radiation detection system,

UNIT IV - DIAGNOSTIC AND THERAPEUTIC APPLICATIONS OF RADIONUCLID **9**

PET-CT, Single photon emission computed tomography (SPECT), Radio iodine therapy for Thyrotoxicosis , Differentiated thyroid cancers, Palliative treatment for bone metastasis - 32P and 89 Strontium Dosage, Intravascular particulate radio nuclide Therapy, Receptor targeted therapy, 131I- MIBG Therapy, Targeted internal radiation in HCC: 90 Y, Radio-synovectomy using Yttrium

UNIT V - RADIATION SAFETY **9**

Radiation protection indifferent nuclear isotope therapy procedures, Management of radiation accidents, Radiation effect on pregnancy and fertility, Diagnosis, evaluation and treatment of radiation overexposure, Instruments used in radiation survey & monitoring, Handling of radioactive patients, Role of national and international bodies in radiation safety, ICRP recommendations, BARC regulations regarding limits of radiation exposure.

COURSE OUTCOMES (COs)															
CO1	To Label the basics of nuclear medicine														
CO2	To Interpret the construction and principle of operation of various nuclear medicine Instruments.														
CO3	To Infer the characteristics and mechanisms of Radiopharmaceuticals														
CO4	To Identify the diagnostics and therapeutic applications of nuclear medicine.														
CO5	To List the radiation safety procedures and regulations.														
CO6	To recall about radiation safety precautions														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PEBM032	MODELLING OF PHYSIOLOGICAL SYSTEM	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Bio-control System				
	Course Designed by:-Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To design the physiological systems
- To analyze about control system
- To learn about various human systems, frequency analysis and modelling of physiological control systems

UNIT I INTRODUCTION TO PHYSIOLOGICAL CONTROL SYSTEMS 9

Introduction to modeling methodology- need for models-approaches to modeling, simulation, model identification- model validation- Engineering control system versus physiological control system-generalized system properties.

UNIT II ANALYSIS OF CONTROL SYSTEM 9

Open loop versus closed loop - Determination of steady state operating point for simple model of muscle stretch reflex - Regulation of glucose-insulin - Chemical regulation of ventilation.

UNIT III HUMAN SYSTEMS 9

Respiratory system: Modeling oxygen uptake by RBC and pulmonary capillaries, mass balancing by lungs, gas transport mechanism of lungs, oxygen and carbon dioxide transport in blood and tissues.

UNIT IV FREQUENCY ANALYSIS 9

Frequency response analysis – response to sinusoidal inputs – Closed loop and open loop response – Relationship between transient and frequency response – Graphical representation of Frequency response – Pupillary Retinal system .

UNIT V MODELING PHYSIOLOGICAL CONTROL SYSTEM 9

Identification of physiological control systems – Parametric and non-parametric identification methods – Identification of closed loop systems – minimal model of blood glucose regulation – Model based approaches – Neural network for control systems

TEXT BOOKS:

1. Advanced Methods of Physiological System Modelingby V.Z. Marmarelis
2. Applied mathematical model in Human Physiology, by Johnny T. Ottesen, Mette S. Olufsen, Jesper K.Larsen.

REFERENCE BOOKS:

2. Pharmacokinetic and Pharmaco dynamic Data Analysis: Concepts and Applications**,** By Daniel (Weiner, Johan Gabrielsson).
3. http://physiology.arizona.edu/people/secomb/472-572lecturenotes09

COURSE OUTCOMES (COs)	
CO1	To Extend Knowledge about the physiological process in the biological system

CO2	To Compare the open and closed loop system with physiological system
CO3	To Interpret the working of various physiological
CO4	To Develop the frequency response analysis of Pupillary Retinal system
CO5	To Modelling of various physiological control system
CO6	To explain about gas transportation mechanism

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

3	Category	Professional Course (PC)													
4	Approval	49th Meeting of the Academic Council													

U18PEBM033	**TISSUE ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Biomaterials and artificial organs				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To understand about the different types of tissues.
- To illustrate the aspects of cell culture.
- To illustrate the molecular aspects and biomaterials for tissue engineering.
- To analyze the case study and regulatory issues in tissue engineering.

UNIT I INTRODUCTION 9

Basic definition, Structural and organization of tissues: Epithelial, connective; vascularity and angiogenesis, basic wound healing, cell migration, current scope of development and use in therapeutic and in-vitro testing.

UNIT II CELL CULTURE 9

Different cell types, progenitor cells and cell differentiations, different kind of matrix, cell-cell interaction. Aspects of cell Culture: cell expansion, cell transfer, cell storage and cell characterization, Bioreactors.

UNIT III MOLECULAR BIOLOGY ASPECTS 9

Cell signaling molecules, growth factors, hormone and growth factor signaling, growth factor delivery in tissue engineering, cell attachment: differential cell adhesion, receptor-ligand binding, and Cell surface markers.

UNIT IV SCAFFOLD AND TRANSPLANT 9

Engineering biomaterials for tissue engineering, Degradable materials (collagen, silk and polylactic acid), porosity, mechanical strength, 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver. Basic transplant immunology stems cells: introduction, hepatopoiesis.

UNIT-V CASE STUDY AND REGULATORY ISSUES 9

Case study of multiple approaches: cell transplantation for liver, musculoskeletal, cardiovascular, neural, visceral tissue engineering. Ethical, FDA and regulatory issues of tissue engineering.

TEXT BOOK:

1. Bernhard O. Palsson, Sangeeta N. Bhatia, **"Tissue Engineering"**, Pearson Publishers2009.

2. Ed. Joseph D. Bronzino, **"The Biomedical Engineering Hand Book"**, Second Edition, CRC Press LLC,200

COURSE OUTCOMES (COs)	
CO1	To Infer the structure and organization of tissues.
CO2	To List the different cell types and aspects of cell culture.
CO3	To Analyze the molecular aspects in tissue engineering
CO4	To List the types of biomaterials used for development of tissue
CO5	To Interpret the different case studies of physiological modeling
CO6	To Design biocompatible materials for organ transplant

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

	CO3	2	1		3				2		2				
	CO4			3	1	3	2	3		2					
	CO5	3	2						2		3	3	2		
	CO6	3	2		2	3		2	1		2	1			
3	Category	Professional Course (PC)													
4	Approval	49th Meeting of the Academic Council													

U18PEBM041	**NEURAL NETWORKS AND PATTERN RECOGNITION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Digital and Medical Image Processing				
	Course Coordinator Name & Department:- Ms.Vinodhini R. & Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- This course makes the students to understand the neurological systems and some simple neural networks.
- To understand the types of neural networks and its applications.
- To provide the knowledge about pattern recognition and classification

UNIT I INTRODUCTION AND SIMPLE NEURAL NET 9

Elementary neurophysiology and biological neural network-Artificial neural network – Architecture, biases and thresholds, Hebb net, Perceptron, Adaline and Madaline.

UNIT II BACK PROPOGATION AND ASSOCIATIVE MEMORY 9

Back propogation network, generalized delta rule, Bidirectional Associative memory, Hopefield network

UNIT III NEURAL NETWORKS BASED ON COMPETITION 9

Kohonen Self organising map, Learning Vector Quantisation, counter propogation network.

UNIT IV UNSUPERVISED LEARNING AND CLUSTERING ANALYSIS 9

Patterns and features, training and learning in pattern recognition, discriminant functions, different types of pattern recognition. Unsupervised learning- hierarchical clustering, partitional clustering. Neural pattern recognition approach – perceptron model 58

UNIT V SUPERVISED LEARNING USING PARAMETRIC AND NON PARAMETRIC APPROACH 9

Bayesian classifier, non parametric density estimation, histograms, kernels, window estimators, k-nearest neighbour classifier, estimation of error rates.

COURSE OUTCOMES (COs)	
CO1	To Outline the fundamentals of neurophysiology
CO2	To List the various artificial neural network
CO3	To Infer about the Self organizing maps and competitive networks
CO4	To Recall the fundamentals of pattern recognition
CO5	To Classify the different supervised learning algorithm
CO6	To Differentiate unrecognized and recognized data

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEBM042	REHABILITATION ENGINEERING	L	T	P	C
	Total Contact Hours – 45	**3**	**0**	**0**	**3**
	Prerequisite course –Biomaterials and artificial organs				
	Course Coordinator Name & Department:- Ms.Geetha S. & Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To understand the rehabilitation concepts.
- To understand the Engineering Concepts of Sensory & Motor rehabilitation.
- To study different types of Therapeutic Exercise Techniques.
- To Understand the different types Hearing aids, visual aids and their application in biomedical field.
- To study the various orthotic devices and prosthetic devices to overcome orthopedic problems.

UNIT-I INTRODUCTION TO REHABILITATION 9

What is Rehabilitation, Epidemiology of Rehabilitation, Health, Levels of Prevention, Preventive Rehabilitation, Diagnosis of Disability, Functional Diagnosis, Importance of Psychiatry in Functional diagnosis, Impairment disability handicap, Primary & secondary Disabilities, Rehabilitation team Classification of members, The Role of Psychiatrist, Occupational therapist, Physical therapist, Recreation therapist, Prosthetist - Orthotist, Speech pathologist, Rehabilitation nurse, Social worker, Corrective therapist, Psychologist, Music therapist, Dance therapist & Biomedical engineer.

U**NIT-II PRINCIPLES OF REHABILITATION 9**

Introduction, The Human Component, Principles of Assistive Technology Assessment, Principles of Rehabilitation Engineering-Key Engineering Principles, Key Ergonomic Principles -Practice of Rehabilitation and Assistive Technology.

UNIT III THERAPEUTIC EXERCISE TECHNIQUE 9

Co-ordination exercises, Frenkels exercises, Gait analyses-Pathological Gaits, Gait Training, Relaxation exercises-Methods for training Relaxation, Strengthening exercise-Strength training, Types of Contraction, Mobilization exercises, Endurance exercises.

UNIT IV MANAGEMENT OF COMMUNICATION 9

Impairment-introduction to communication, Aphasia, Types of aphasia, Treatment of aphasic patient, Augmentative communication-general form of communication, types of visual aids, Hearing aids, Types of conventional hearing aid, Writing aids.

UNIT V ORTHOTIC, PROSTHETIC DEVICES & RESTORATION TECHNIQUES 9

General orthotics, Classification of orthotics-functional & regional, General principles of Orthosis, Calipers-FO, AFO, KAFO, HKAFO. Prosthetic devices: Hand and arm replacement, Body powered prosthetics; Myoelectric controlled prosthetics and Externally

powered limb prosthetics. Functional Electrical Stimulation systems-Restoration of hand function, restoration of standing and walking, Hybrid Assistive Systems(HAS).

TEXT BOOKS:

4. Rory A Cooper (Editor), HisaichiOhnabe (Editor), Douglas A. Hobson (Editor), "An Introduction to Rehabilitation Engineering (Series in Medical Physics and Biomedical Engineering", CRC Press,2006.

COURSE OUTCOMES (COs)	
CO1	To Outline the rehabilitation concepts.
CO2	To Label the principles of rehabilitation.
CO3	To Compare the types of therapeutic exercise techniques.
CO4	To Extend the knowledge in different communication management
CO5	To Outline the various orthotic devices and prosthetic devices to overcome orthopedic problems.
CO6	To design orthopedic devices

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

	CO2			2					2	2			1		
	CO3	2			3		3			3	2				
	CO4		2			3		3	2			2			
	CO5	3					3			3	3	3	2		
	CO6	3	3		2	3	3	2			2	1			
3	Category	Professional Course (PC)													
4	Approval	49th Meeting of the Academic Council													

U18PEBM043	**BRAIN CONTROL INTERFACE**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Biosensors and Measurements				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To know the techniques used for visualizing various sections of the body.
- To learn the principles of different radio diagnostic equipment in Imaging
- To discuss the radiation therapy techniques and radiation safety

UNIT-I INTRODUCTION TO BRAIN CONTROL INTERFACE FUNDAMENTALS OF BCI 9

Structure of BCI system – Classification of BCI: Invasive, Non-invasive and Partially invasive BCI Brain signal acquisition, Signal Preprocessing, Artifacts removal .

UNIT-II ELECTROPHYSIOLOGICAL SOURCES SENSORIMOTOR ACTIVITY 9

Neuronal activity in motor cortex and related areas- Electric and magnetic fields produced by the brain- signals reflecting brain metabolic activity- Mu rhythm, Movement Related Potentials – Slow Cortical Potentials - P300 Event related potential - Visual Evoked Potential - Activity of Neural Cells - Multiple Neuromechanisms

UNIT-III FEATURE EXTRACTION METHODS TIME/SPACE METHODS 9

Fourier Transform, Wavelets, AR, MA, ARMA models, Bandpass filtering, Template matching, Kalman filter, PCA, Laplacian filter – Linear and Non-Linear Features

UNIT-IV FEATURE TRANSLATION METHODS LINEAR DISCRIMINANT ANALYSIS 9

Nearest neighbours, Support Vector Machines - Regression – Learning Vector Quantization – Gaussian Mixture Modeling – Hidden Markov Modeling – Neural Networks

UNIT-V APPLICATIONS OF BCI 9

Dataset I, II, III, IV and V, Functional restoration using Neuroprosthesis - Functional Electrical Stimulation, Visual Feedback and control - External device controllers.

4. Ali Bashashati, MehrdadFatourechi, Rabab K Ward, Gary E Birch," A survey ofsignal Processing algorithms in brain–computer interfaces based on electrical brain signals" JOURNAL OF NEURAL ENGINEERING, VOL.4, 2007, PP.32-57

COURSE OUTCOMES (COs)	
CO1	To Outline the fundamentals of brain control interface
CO2	To Interpret the different measuring parameters of EEG
CO3	To Recall the various feature extraction methods
CO4	To Infer about the feature translational methods
CO5	To Extend about the BCI applications
CO6	To Explains about functional datasets

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEBM051	BIOPROCESS TECHNOLOGY	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Biochemistry				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce Bioprocess Technology and Enzyme based actions in Medical Applications
- To understand the bioreactors design
- To learn about bioprocess estimation

UNIT I INTRODUCTION OF BIOPROCESS TECHNOLOGY 9

Introduction to bioprocess technology, Screening, preservation and improvement of industrially important microorganisms, Raw material and media formulation for fermentation process, Influence of environmental factors on growth and product formation.

UNIT II BIOREACTORS 9

Bioreactor design.Batch, fed batch and continuous cultivation.Solid state cultivation.Sterilization of media reactor and air.Agitation and aeration and mass transfer of oxygen.Inoculum development, addition and sampling.

UNIT III GROWTH RATE ANALYSIS 9

Growth rate parameters : Specific growth rate, doubling time, validity of exponential growth law, growth yield, metabolic quotient, Effect of substrate concentration, Monod Kinetics, Determination of Ks, Definition of lag period.

UNIT IV ENZYME TECHNOLOGY 9

Kinetics and thermodynamics of enzyme-catalyzed reactions, techniques of enzyme immobilisation, basic design and configuration of immobilised enzyme reactors, applications of immobilised enzyme technology.

UNIT V BIOPROCESS ESTIMATIONS 9

Methods of on-line and off-line biomass estimation; Flow injection analysis for measurement of substrates.Product and other metabolites; State and parameter estimation techniques for biochemical processes; Computer-based data acquisition, monitoring and control-LABVIEW Software.

TEXT BOOK

1. Principles of Fermentation Technology : Whitekar&Stanbury
2. Industrial Microbiology – Casida.

REFERENCE BOOKS

1. Shule and Kargi, " Bioprocess Engineering ", Prentice Hall, 1992.
http://www.slideshare.net/yongkangbirdnest/lecture-5-bioprocess-technology-operation-mode-and-scale

COURSE OUTCOMES (COs)	
CO1	To Recall the basic principle of bioprocess
CO2	To Demonstrate the Bioreactor design, Batch, fed batch and continuous cultivation
CO3	To Extend the knowledge in growth rate parameters
CO4	To Outline the fundamentals of enzyme technology
CO5	To Recall about Methods of biomass estimation
CO6	Recalls configuration of immobilization enzyme reactors

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

	CO5	3	2						2		3	3			
	CO6	3			2	3		2	1		2				
3	Category	Professional Course (PC)													
4	Approval	49th Meeting of the Academic Council													

U18PEBM052	**VLSI DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Analog and Digital IC's				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce NMOS, PMOS, CMOS devices and their characteristics
- To design principles, design layout rules, construction of multiplexers
- To gain the knowledge in Verilog HDL

UNIT I : MOS TRANSISTOR THEORY AND PROCESS TECHNOLOGY 9

NMOS and PMOS transistors - Threshold voltage - Body effect - Design equations - Second order effects -MOS models and small signal AC characteristics - Basic CMOS technology.

UNIT II: INVERTERS AND LOGIC GATES 9

NMOS and CMOS Inverters - Stick diagram - Inverter ratio - DC and transient characteristics –switching times - Super buffers - Driving large capacitance loads - CMOS logic structures - Transmission gates -Static CMOS design - Dynamic CMOS design.

UNIT III: CIRCUIT CHARACTERISATION AND PERFORMANCE ESTIMATION 9

Resistance estimation - Capacitance estimation - Inductance - Switching characteristics – Transistor sizing- Power dissipation and design margining - Charge sharing - Scaling.

UNIT IV: VLSI SYSTEM COMPONENTS CIRCUITS 9

Multiplexers - Decoders - comparators - Priority encoders - Shift registers - Arithmetic circuits -Ripple carry adders - Carry look ahead adders - High-speed adders - Multipliers- Physical design -Delay modelling -Cross talk - Floor planning - Power distribution - Clock distribution - Basics of CMOS testing.

UNIT V: VERILOG HARDWARE DESCRIPTION LANGUAGE 9

Overview of digital design with Verilog HDL - Hierarchical modeling concepts - Modules and port definitions- Gate level modeling - Data flow modeling – Behavioralmodeling - Task & functions -Test Bench.

TEXT BOOK

3. https://www.wto.org/english/tratop_e/trips_e/intel1_e.html

COURSE OUTCOMES (COs)	
CO1	To Understand the characteristics of different metal oxide semiconductor
CO2	To Interpret the knowledge in working principle of inverters and logic gates
CO3	To Understand the performance characteristics of transistor
CO4	To Relate the different circuits used in VLSI system
CO5	To Understand the VHDL model for combinational networks
CO6	To recall Hierarchical modeling concepts

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEBM053	**VIRTUAL INSTRUMENTATION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Digital and Medical Image Processing				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To introduce Historical perspectives, advantages, block diagram and architecture of a virtual instrument, data flow techniques.
- To study CAN bus characteristics. Bus interface for R8422 and RS485.

- To study Principles of PAL's PLD's GAL's CPLD and their design considerations.
- To study Principles and design considerations of specific PROM, EPROM, SRAM, SDRAM. Dual ported memories, FIFO's flash memories
- To study Multiphase clock generators, LCD display controller.

UNIT-1: REVIEW OF VIRTUAL INSTRUMENTATION 9

Historical perspectives, advantages, block diagram and architecture of a virtual instrument, data flow techniques. Graphical programming in data flow, comparison with conventional programming.

UNIT-2 : VIRTUAL INSTRUMENTATION PROGRAMMING TECHNIQUES 9

VIS and subVIS loops and charts, arrays, clusters and graphs, case and sequence structures, formula nodes, local and global variables, string and file I/O.

UNIT-3: DATA ACQUISITION BASICS 9

ADC, DAC, DIO, counters and timers. PC hardware structure, timing, interrupts, DMA, software and hardware installation.

UNIT-4: COMMON INSTRUMENT INTERFACES 9

Current loop, RS232C/RS485, GPIB, system buses, interface buses: USB, PCMCIA, VXI, SCXI, PXI etc., networking basics for office and industrial applications, visa and IVI, image acquisition and processing, motion control.

UNIT-5: USE OF ANALYSIS TOOLS 9

Fourier transforms, power spectrum correlation methods, windowing uttering, VI application in various fields.

COURSE OUTCOMES (COs)	
CO1	To Understand the review of virtual instrumentation
CO2	To Outline the programming techniques for virtual instrumentation
CO3	To Infer the basics of data acquisition
CO4	To List the various interfaces and its applications
CO5	To Relate the analysis tools and its use
CO6	To Recall programming techniques

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEBM061	BIOLOGICAL EFFECTS OF RADIATION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Radiological Equipments				
	Course Coordinator Name & Department:- Dr.Vasuki R & Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To learn about the effects of Radiation in living cells
- To know about the Genetic effects of Radiation
- To study about Microwave, RF and UV radiation
- To acquire knowledge about Ionising and Non- ionising Radiation

UNIT – I ACTION OF RADIATION IN LIVING CELLS **9**

Various theories related to radiation at cellular level. DNA and chromosomal damages.

UNIT – II SOMATIC APPLICATION OF RADIATION **9**

Radio sensitivity protocols of different tissues of human. LD50/30 effective radiation on skin, Bone marrow, eye, endocrine glands, and basis of radio therapy.

UNIT – III GENETIC EFFECTS OF RADIATION **9**

Threshold and linear dose, gene control hereditary diseases effect of dose.

UNIT – IV EFFECT OF MICROWAVE AND RF WITH MATTERS **9**

Effects of various human organs and systems, Wavelength in tissue, non thermal interaction Standards of protection, national, and international standards and precautions.

UNIT – V UV RADIATION **9**

Classification of sources, measurement, photo medicine, UV radiation, safety visible and infrared Radiation.

TEXTBOOK

REFERENCE

1. SteveForshier, Essential of Radiation Biology and Protection, Delmar Publishers (2008).
2.

COURSE OUTCOMES (COs)	
CO1	To Understand the Theories related to Radiation in the living cell.
CO2	To Recall the Somatic application of Radiation.
CO3	To Understand the Genetic effects of Radiation
CO4	To Infer the effect of Microwave and RF with human organs
CO5	To Outline the sources of UV radiation and methods to protect from this Radiation
CO6	To learn International Standards and Precautions

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PEBM062	**BIOMEDICAL LASER INSTRUMENTATION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Semiconductor Physics				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To understand the fundamentals optical properties of of laser,
- To know the operations of laser and types of laser.
- To gain the knowledge of applications in medical field.

UNIT I - OPTICAL PROPERTIES OF TISSUES **9**

Scattering- Absorption- Refractive Index - Light transport inside the tissue - Interaction of light with matter - quantum behavior of light - Light interaction with tissues - Optothermal interaction – Fluorescence Speckles

UNIT II - BASIC THEORY OF LASER **9**

LASER action : stimulated & spontaneous emission- Molecular energy level - characteristics of laser- population inversion - Pumping methods and levels of pumping- Optical cavity configurations –Amplification - Optical resonator and gain - Q-switching - Mode locking- LASER modes - Line broadening

UNIT III - TYPES OF LASER **9**

Solid state, Ruby, Nd:YAG, Tunable solid state, Alexandrite, Titanium-sapphire Gas lasers: Helium-Neon, Argon, Co2 - Tunable dye – Semiconductor

UNIT IV - HOLOGRAPHY AND ITS MEDICAL APPLICATIONS **9**

Holography – Basic principle- methods of Holographic interferometry – applications - Holography for non-destructive testing –applications of LASER holography in medicine: Dentistry, Ophthalmology, Otology, Orthopedics.

UNIT V - MEDICAL APPLICATIONS OF LASER **9**

Photo-chemical interaction- Thermal interaction- Photoablation - Plasma induced ablation – photo-disruption- Applications: Ophthalmology, Dentistry, Urology, Neurosurgery, Dermatology, Orthopedics, Angioplasty, Cardiology, and Surgery- Diffused optical tomography.

REFERENCES

1. John E, Harry, "Industrial lasers and their applications", Second edition,McGraw Hill, 1974.
2. John F Ready, "Industrial applications of lasers", Second edition, AcademicPress, 1978

COURSE OUTCOMES (COs)	
CO1	To Understand the concept of optical properties of tissue
CO2	To Illustrate the laser action and the characteristics of laser
CO3	To List applications of lasers in medical field
CO4	To Outline the holography and its applications
CO5	To Relate the applications of laser in medical field
CO6	To study holography applications in medicine field

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PS02**

U18PEBM063	**BIOPHOTONICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –Medical Physics				
	Course Designed by:- Department of Biomedical Engineering				

COURSE OBJECTIVES:-

- To impart adequate knowledge on various optical systems used in sensing and Imaging of biological elements.
- To know the principle of bio imaging
- To understand the various optical biosensors

UNIT I - LIGHT - MATTER INTERACTION & PRINCIPLE OF OPTICS 9

Light matter interaction: Interaction of light with bulk matter- Types of spectroscopy: Electronic absorption-, Electronic luminescence-, Vibration-, and Fluorescence-spectroscopy.

UNIT II - BIO-IMAGING: PRINCIPLES AND TECHNIQUES 9

Introduction of optical imaging, Types of microscopy: Transmission-, Fluorescence-, Scanning- and Multi-photon- microscopy- Advantages and disadvantages of optical imaging- Applications of optical imaging

UNIT III - OPTICAL BIOSENSORS 9

Principles of Optical biosensing, Immobilization of bio-recognition elements, Types of optical biosensor: Fiber optic-, Planar waveguide-, Evanescent-, Interferometric-, and Surface plasmon resonance- biosensor- Advantages and disadvantages- Applications

UNIT IV - FLOW CYTOMETRY 9

Flow cytometry: Basis, Components, and Flourochromes- Data manipulation and presentation

UNIT V - PHOTODYNAMIC THERAPY 9

Photodynamic therapy: Mechanism, and light irradiation- Photo-hemotheraphy- PUVA Technique- Applications.

LIST OF PROFESSIONAL ELECTIVE COURSES

PROFESSIONAL ELECTIVE –I (PE –I)

S.No	Course Code	Specialization	Subject Name	L	T	P	C
1.	U18PECE011	Transportation Engineering	Infrastructure planning and design	3	0	0	3
2.	U18PECE012	Construction Engineering & Management	Repairs and Rehabilitation of Structures	3	0	0	3
3.	U18PECE013	Environmental Engineering	Rural Water Supply and Onsite Sanitation System.	3	0	0	3
4.	U18PECE014	Hydraulic Engineering	Environmental Fluid Mechanics	3	0	0	3
5.	U18PECE015	Hydraulic Engineering	Design of Hydraulic Structures/Irrigation Engineering.	3	0	0	3
6.	U18PECE016	Structural engineering	Concrete Technology	3	0	0	3
7.	U18PECE017	Geotechnical Engineering	Advanced Soil Mechanics	3	0	0	3
8.	U18PECE018	Transportation Engineering	Geometric Design of Highways	3	0	0	3

PROFESSIONAL ELECTIVE –II (PE –II)

S.No	Course Code	Specialization	Subject Name	L	T	P	C
1	U18PECE021	Transportation Engineering	Urban Transportation & Planning	3	0	0	3
2	U18PECE022	Construction Engineering & Management	Construction Cost Analysis	3	0	0	3
3	U18PECE023	Environmental Engineering	Transport of Water and Wastewater	3	0	0	3
4	U18PECE024	Hydraulic Engineering	Open Channel flow	3	0	0	3
5	U18PECE025	Hydrology & Water Resources Engineering	Ground Water Engineering	3	0	0	3
6	U18PECE026	Structural engineering	Design of Concrete Structures	3	0	0	3
7	U18PECE027	Geotechnical Engineering	Ground Improvement Techniques	3	0	0	3
8	U18PECE028	Transportation Engineering	Public Transportation Systems	3	0	0	3

PROFESSIONAL ELECTIVE –III (PE-III)

S.No	Course Code	Specialization	Subject Name	L	T	P	C
1.	U18PECE031	Transportation Engineering	Remote Sensing & GIS	3	0	0	3
2.	U18PECE032	Construction Engineering & Management	Construction Productivity	3	0	0	3
3.	U18PECE033	Environmental Engineering	Biological Process for Contaminant Removal	3	0	0	3

4.	U18PECE034	Hydraulic Engineering	Surface Hydrology	3	0	0	3
5.	U18PECE035	Hydrology & Water Resources Engineering	Remote Sensing and GIS for Hydrology and Water Resource Management	3	0	0	3
6.	U18PECE036	Structural engineering	Pre stressed Concrete	3	0	0	3
7.	U18PECE037	Geotechnical Engineering	Geotechnical Design	3	0	0	3
8.	U18PECE038	Construction Engineering & Management	Construction Equipment & Automation	3	0	0	3

PROFESSIONAL ELECTIVE –IV (PE –IV)

S.No	Course Code	Specialization	Subject Name	L	T	P	C
1.	U18PECE041	Transportation Engineering	Traffic Engineering and Management	3	0	0	3
2.	U18PECE042	Construction Engineering & Management	Sustainable Construction Methods	3	0	0	3
3.	U18PECE043	Environmental Engineering	Solid and Hazardous Waste Management	3	0	0	3
4.	U18PECE044	Hydraulic Engineering	Pipeline Engineering	3	0	0	3
5.	U18PECE045	Hydrology & Water Resources Engineering	Urban Hydrology and Hydraulics	3	0	0	3
6.	U18PECE046	Structural engineering	Metal Structure Behaviors	3	0	0	3
7.	U18PECE047	Structural engineering	Industrial Structures	3	0	0	3
8.	U18PECE048	Geotechnical Engineering	Environmental Geo-technology	3	0	0	3

PROFESSIONAL ELECTIVE –V (PE –V)

S.No	Course Code	Specialization	Subject Name	L	T	P	C
1	U18PECE051	Transportation Engineering	Pavement Design	3	0	0	3
2	U18PECE052	Construction Engineering & Management	Construction Engineering Materials	3	0	0	3
3	U18PECE053	Environmental Engineering	Air and Noise Pollution and Control	3	0	0	3
4	U18PECE054	Hydraulic Engineering	Transient in closed conduits	3	0	0	3
5	U18PECE055	Environmental Engineering	Water & Waste water Treatment	3	0	0	3
6	U18PECE056	Structural engineering	Earthquake Engineering	3	0	0	3
7	U18PECE057	Geotechnical Engineering	Rock Mechanics	3	0	0	3
8	U18PECE058	Structural engineering	Structural Dynamics	3	0	0	3

PROFESSIONAL ELECTIVE –VI (PE –VI)

S.No	Course Code	Specialization	Subject Name	L	T	P	C
1.	U18PECE061	Transportation Engineering	Railway Engineering	3	0	0	3
2.	U18PECE062	Construction Engineering & Management	Construction Project Planning and Systems	3	0	0	3
3.	U18PECE063	Environmental Engineering	Environmental Impact Assessment and Life Cycle Analyses	3	0	0	3
4.	U18PECE064	Hydraulic Engineering	Basics of Computational Hydraulics	3	0	0	3
5.	U18PECE065	Hydraulic Engineering	River Engineering	3	0	0	3
6.	U18PECE066	Structural engineering	Engineering Materials for sustainability	3	0	0	3
7.	U18PECE067	Geotechnical Engineering	Offshore Engineering	3	0	0	3
8.	U18PECE068	Structural engineering	Masonry Structures	3	0	0	3

PROFESSIONAL ELECTIVE –VII (PE –VII)

S.No	Course Code	Specialization	Subject Name	L	T	P	C
1	U18PECE071	Transportation Engineering	Airport Planning and Design	3	0	0	3
2	U18PECE072	Construction Engineering & Management	Contract Management	3	0	0	3
3	U18PECE073	Environmental Engineering	Environmental Laws and Policy	3	0	0	3
4	U18PECE074	Hydraulic Engineering	Hydraulic Modeling	3	0	0	3
5	U18PECE075	Hydrology & Water Resources Engineering	Water Resources Field Methods	3	0	0	3
6	U18PECE076	Structural engineering	Bridge Engineering	3	0	0	3
7	U18PECE077	Geotechnical Engineering	Structural Geology	3	0	0	3
8	U18PECE078	Environmental Engineering	Ecological Engineering	3	0	0	3

SEMESTER I

U18HSEN101	**COMMUNICATIVE ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	0	2	3
	Prerequisite – School English				
	Course Designed by – Department of English				

OBJECTIVES: To gain fundamental knowledge of language and the uses in daily life.

UNIT I SPEAKING **6**

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing oneself – exchanging personal information- narrating events, -incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING **6**

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -The concept of Word Formation

UNIT III LISTENING **6**

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING **6**

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT **6**

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely

SOFTSKILL LABORATORY

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews & conversations

4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds - intonation.
12. Creative and critical thinking.

TEXT BOOKS:

1. English A Course book for Under Graduate Engineers and Technologists. Orient Black Swan Limited,Hyderabad:2015
2. Richards, C. Jack. Interchange Students' Book-2 New Delhi: CUP, 2015.

COURSE OUTCOMES (COs)	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	Meeting of Academic Council, May 2018													

U18BSMA101	Engineering Mathematics – I (Common to B.Tech - Mech, Mechatronics, Automobile, Aero, Aerospace, EEE, EIE, ECE, CSE, IT, Civil & Bio Medical)	L	T	P	C
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				

OBJECTIVES: The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3)

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10^{th} edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9^{th} edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. Narayanan S., Manicavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2^{nd} edition), S.Viswanathan Printers and Publishers,
5. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth Edition Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions.Also they will have a basic understanding of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	Meeting of Academic Council, May 2018													

U18BSPH101	Waves and Optics	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.

UNIT I NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT II ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT III THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations,

reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT IV WAVE OPTICS **9**

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT V LASERS **9**

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

COURSE OUTCOMES (COs)	
CO1	Understand the basic concept of waves and lights
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing
CO3	Understand the propagation of light and geometrical optics
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves
CO5	Understand the concept of laser and its applications

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low														
1	COs/Pos	a	b	c	d	e	f	g	h	i	j	k	l	PSO 1	PSO 2
2	CO1	H	H	M	H	M			M	H	H			H	
	CO2	L	H	M	M	H			M		L	H	M	H	
	CO3	H	L			L			M	M		M		H	
	CO4	H	L			L			M	M		M	L	H	
	CO5	H	M	M	M				M		H	L		H	
3	Category	Basic Science (BS)													
4	Approval	Meeting of Academic Council, May 2018													

U18BSCH101	ENGINEERING CHEMISTRY	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				

OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications

UNIT I WATER TECHNOLOGY 9

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES & STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by

Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				

OBJECTIVES: To gain fundamental knowledge of algorithmic problem solving and python programming.

MODULE 1 :ALGORITHIMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart,programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list;variables, expressions, statements, tuple assignment, precedence of operators, comments; modulesand functions, function definition and use, flow of execution, parameters and arguments; Illustrativeprograms: exchange the values of two variables, circulate the values of n variables, distance betweentwo Points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, listparameters;Tuples: tuple assignment, tuple as return value; Dictionaries: operations andmethods;advanced list,Processing list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

MODULE 5: FILES, PACKAGES 9

Files and exception: text files, reading and writing files, errors and exceptions, handlingexceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18ESME101	**Engineering Graphics & Design (Theory & Lab.)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				

OBJECTIVES: To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice

Traditional Engineering Graphics:
Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:
Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM)

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle;

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to oneplane – Parallel to one plane and inclined to other plane – Inclined to both the planes;Projections of planes inclined to either HP or VP;

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

MODULE4:SECTIONSOF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planesperpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone;

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings,Symbols, Conventions and Abbreviations.Drawing of residential single and two storied buildingswith detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles;Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top viewand side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS:

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students willgetExposure to basics of building construction
CO4	Students willgetExposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18BSPH2L1	WAVE OPTICS AND MECHANICS LABORATORY (Common to B.Tech-Civil, Mech, Mechatronics, Aero, Aerospace, Auto & Nano Tech)	L	T	P	C
	Total Contact Hours - 45	**0**	**0**	**3**	**1.5**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To impart knowledge practical physics to the students

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Mechanics

1) Torsional Pendulum – without symmetrical mass
2) Torsional Pendulum – With symmetrical mass
3) Young's Modulus – Non-uniform bending
4) Young's Modulus – Uniform Bending
5) Compound Pendulum
6) Coefficient of viscosity of the given liquid – Poiseuille method

COURSE OUTCOMES (COs)	
CO1	Understand the fundamental concept of optics
CO2	Understand the concept of production of ultrasonic waves
CO3	Understand the basic concept of Mechanics

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low														
1	COs/Pos	a	b	c	d	e	f	g	h	i	j	k	l	PSO 1	PSO 2
2	CO1	H		H	H						H	L		H	
	CO2	H	H	L								L	M	H	
	CO3	H	H	L								M		H	
3	Category	Basic Sciences (BS)

U18BSCH2L4	CHEMISTRY LABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				

OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.
2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystalliza and as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method

CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base andConductometric Precipitation titration.
CO4	Student will be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

	Course Designed by – Department of Computer Science & Engineering				

OBJECTIVES: To enhance the practical knowledge on writing programs using Python

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. ExSOnentiation (SOwer of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

SEMESTER II

U18HSEN201	**TECHNICAL ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	1	0	3
	Prerequisite – I semester English				
	Course Designed by – Department of English				

OBJECTIVES: To gain fundamental knowledge of English language and its usage in day to day life.

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

TEXT BOOKS:

1. Fluency in English A Course book for Engineering and Technology. Orient Blackswan, Hyderabad: 2016
2. Sudharshana.N.P and Saveetha. C. English for Technical Communication. Cambridge University Press: New Delhi, 2016.

4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage

Learning, USA: 2007

COURSE OUTCOMES (COs)	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18BSMA201	Engineering Mathematics II (Common to B.Tech - Mech, Mechatronics, Automobile, Aero, Aerospace, EEE, EIE, ECE, CSE, IT, Civil & Bio Medical)	L	T	P	C
	Total Contact Periods - 60	4	0	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				

OBJECTIVE: The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables and Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.

REFERENCE BOOKS

1. Venkataraman. M. K, Engineering Mathematics, National Publishing Company, 2000.
2. Bali .N.P and Manish Goyal, A Text book of Engineering Mathematics, Eighth Edition, Laxmi Publications Pvt Ltd., 2011.
3. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

U18BSPH201	**INTRODUCTION TO MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To impart basic knowledge of mechanics involving 1D, 2D and 3D motions ofa rigid body

UNIT 1 **9**

Forces in Nature; Newton's laws and its completeness in describing particle motion; Solving Newton's equations of motion in polar coordinates; Problems including constraints and friction; Extension to cylindrical and spherical coordinates

UNIT 2 **9**

Potential energy function; F = - Grad V, equipotential surfaces and meaning of gradient; Conservative and non-conservative forces, curl of a force field; Central forces; Conservation of Angular Momentum; Energy equation and energy diagrams; Elliptical and parabolic orbits;

UNIT 3 **9**

Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and lightly-damped oscillators; Forced oscillations and resonance

UNIT 4 **9**

Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion, Kinetic energy of a rotating body

UNIT 5 **9**

Introduction to three-dimensional rigid body motion — only need to highlight the distinction from two-dimensional motion in terms of (a) Angular velocity vector, and its rate of change and (b) Moment of inertia tensor; Three-dimensional motion of a rigid body wherein all points move in a coplanar manner: e.g. Rod executing conical motion with center of mass fixed

COURSE OUTCOMES (COs)	
CO1	Understand and solve the various equation of motions in different coordinates
CO2	Understand the conservation of energy and angular momentum
CO3	Understand the concept of harmonic motion in different damped conditions
CO4	Understand the rigid body motion in different criteria
CO5	Understand the rigid body motion in 3D

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18BSCH201	ENVIRONMENTAL SCIENCE	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				

OBJECTIVES: To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.

UNIT I -NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS **9**

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL SOLLUTION 9

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN SOPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder-Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.
Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES (COs)	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems

CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

U18BSBT101	**BIOLOGY FOR ENGINEERS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System -types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation- nucleic acids as a genetic material-central dogma - immunity-antigens-antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines-cloning-bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

TEXT BOOKS:

1. A Text book of Biotechnology, R.C.Dubey, S. Chand Higher Academic Publications,

3. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)	
CO1	To understand the basic concepts of the cell and its structure
CO2	To understand about biodiversity and its conservation
CO3	To know the fundamentals of genetics and the immune system
CO4	To create an awareness about human diseases
CO5	To give a basic knowledge of the applications of transgenics

U18ESEE101	**BASIC ELECTRICAL & ELECTRONICS ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				

OBJECTIVES: To gain fundamental knowledge of Electrical and Electronics Engineering and its applications

MODULE 1 : DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamentals Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems,Maximum Power Transformations Theorem.

MODULE 2: AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real

power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS 9

Principles of operation and characteristics of; DC machines,Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency,all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS 6

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

COURSE OUTCOMES (COs)	
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.
CO2	To gain knowledge regarding fundamentals of AC circuits.
CO3	To gain knowledge regarding electrical machines and transformers.
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.
CO5	To gain knowledge on principles of digital electronics systems.

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18ESME1L2	**Workshop/Manufacturing Practices Lab (Theory & Lab.)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				

OBJECTIVES: To educate the students on common manufacturing processes employed in Industries.

Lectures & videos: **(15 hours)**

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice
2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.
3. Carpentry **(9 hours)**
   a) Preparation Lap joints.
   b) Mortise and Tenonjoints.
   c) Cross Half.
   d) Dove Tail.
4. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
   Preparation of butt joints, lap joints and tee joints
5. Sheet Metal working **(9 hours)**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints

6. Demonstration **(6 Hours)**
Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

1. Hajra Choudhury S.K., Hajra Choudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and publishers Private Limited, Mumbai.

5. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGrawHill House, 2017.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONIC ENGINEERING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronic Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				

OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws

2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipment and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits .
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor

SEMESTER III

U18BSMA306	**TRANSFOR AND PARTIAL DIFFERENTIAL EQUATIONS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	2	1	0	3
	Prerequisite – Engineering Mathematics I & II				
	Course Designed by – Dept of Civil Engineering				
	➢ Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms. ➢ Learn techniques of solving the standard types of first order and second order partial differential equations. ➢ Learn solving wave and heat equation using Fourier series. Understand the problems using Fourier transform and their properties				

UNIT I FOURIER SERIES **12**

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS **12**

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS **12**

Classifications second order linear partial differential equations – Solution of one dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation.

UNIT IV FOURIER TRANSFORMS **9**

Fourier integral theorem (without proof) – Fourier transform pairs – Fourier sine and cosine transform – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

COURSE OUTCOMES (COs)	
CO1	Expand given function using the knowledge of Fourier Series.
CO2	Solve PDE and higher order with constant coefficients and physically interpret the results.
CO3	Boundary Value Problems and Differential Equations will be knowledgeable about and will be able to analyze solutions to two-point boundary value problems, boundary value problems for partial differential equations.
CO4	Solve many problems in automobile, medicine, electronic engineering by applying Fourier transform with the possible special cases with attention to their applications.

U18ESCE301	**COMPUTER- AIDED CIVIL ENGINEERING DRAWING**	**L**	**T**	**P**	**C**
	Total Contact Hours: 30	**2**	**0**	**0**	**2**
	Prerequisite: Engineering graphics and design				
	Course Coordinator Name & Department: Ms.Thendral, Civil Engineering				

COURSE OBJECTIVES: Develop Parametric design and the conventions of formal engineering drawing. Produce and interpret 2D & 3D drawings. Communicate a design idea/concept graphically/ visually.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Understand the benefits of computer aided design	U
CO2	Knowledge of symbols and sign conventions.	R
CO3	To Understand the arrangement bonds.	U
CO4	Students learn 2D modeling	Ap
CO5	Students learn modeling 3d Drawings	Ap
CO6	To learn the pictorial view of the buildings	Ap

UNIT I INTRODUCTION 6

Introduction to concept of drawings, Interpretation of typicaldrawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, co-ordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards.

UNIT II SYMBOLS AND SIGN CONVENTIONS 6

Materials, Architectural, Structural,Electrical and Plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards

UNIT III MASONRY BONDS 6

Masonry, Types of Masonry, Brickwork, Bond**,** English Bond and Flemish Bond – Corner wall and Crosswalls - One brick wall and one and half brick wall

UNIT IV BUILDING DRAWING 6

Terms, Elements of planning, building, drawing, Methodsof making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings & fixtures, finishes. Use of Notes to improve clarity

UNIT V PICTORIAL VIEW 6

Principles of isometrics and perspective drawing. Perspectiveview of building. Fundamentals of Building Information Modeling (BIM)

	Prerequisite: Wave Optics and Mechanics				
	Course Coordinator Name & Department: Mr.S.Vinothkumar, Civil Engineering				

COURSE OBJECTIVES: The objective of this Course is to provide an introductory treatment of Engineering Mechanics to all the students of engineering, with a view to prepare a good foundation for taking up advanced courses in the area in the subsequent semesters. A working knowledge of statics with emphasis on force equilibrium and free body diagrams.

	COURSE OUTCOMES (COs):	**Revised Bloom's Taxonomy**
CO1	Use scalar and vector analytical techniques for analysing forces in statically determinate structures	An
CO2	Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple, practical problems, Apply basic knowledge of math and physics to solve real-world problem	Ap
CO3	Apply basic knowledge of math and physics to solve real-world problems	Ap
CO4	Understand basic dynamics concepts – force, momentum, work and energy	U
CO5	Understand and be able to apply Newton's laws of motion	U
CO6	To learn about beams and its types	Ap

UNIT I INTRODUCTION TO ENGINEERING MECHANICS 12

Force Systems Basic concepts,Particle equilibrium in 2-D & 3-D; Rigid Body equilibrium; System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant- Moment of Forces and its Application; Couples and Resultant of Force System, Equilibrium of System of Forces, Free body diagrams, Equations of Equilibrium of Coplanar Systems and Spatial Systems; Static Indeterminacy

UNIT II FRICTION, BASIC STRUCTURAL ANALYSIS, 12

Types of friction, Limiting friction, Laws of Friction, Staticand Dynamic Friction; Motion

of Bodies, wedge friction, screw jack & differential screw jack; Equilibrium in three dimensions; Method ofSections; Method of Joints; determinination of member is in tension or compression; Simple Trusses; Zero force members; Beams & types of beams; Frames & Machines; Area moment of inertia.

UNIT III VIRTUAL WORK AND ENERGY METHOD 12

Virtual displacements, Centroid and Centre of Gravity covering principle of virtualwork for particle and ideal system of rigid bodies, degrees of freedom. Active force diagram, systems with friction, mechanical efficiency. Conservative forces and potential energy (elastic and gravitational), energy equation for equilibrium. Applications of energy method for equilibrium. Stability of equilibrium. Rectilinear motion.

UNIT IV INTRODUCTION TO KINETICS OF RIGID BODIES 12

Basic terms, general principlesin dynamics; Types of motion, Instantaneous centre of rotation in plane motion and simple problems; D'Alembert's principle and its applications in plane motion and connected bodies; Work energy principle and its application in plane motion of connected bodies; Kinetics of rigid body rotation

UNIT V MECHANICAL VIBRATIONS 12

Basic terminology, free and forced vibrations,resonance and its effects; Degree of freedom; Derivation for frequency and amplitude of free vibrations without damping and single degree of freedom system, simple problems, types of pendulum, use of simple, compound and torsion pendulums.

	Prerequisite: Environmental Sciences				
	Course Coordinator Name & Department: Dr.Venkata Krishnaiah, Civil Engineering				
COURSE OBJECTIVES: The objective of this Course is to focus on the core activities of engineering geologists – site characterization and geologic hazard identification and mitigation. Through lectures, labs, and case study					

examination student will learn to couple geologic expertise with the engineering properties of rock and unconsolidated materials.		
COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Site characterization and how to collect, analyze, and report geologic data using standards in engineering practice	An
CO2	Rock mass characterization and the mechanics of planar rock slides and topples.	C
CO3	Evaluate rock-mass quality and perform a kinematic analysis.	C
CO4	To Apply the method of slices and factor of safety equation to solve rotational slide problem.	Ap
CO5	The mechanics of soils and fluids and their influence on settlement, liquefaction, and soil slope stability.	C
CO6	To learn about different seismic zones in India	Ap

UNIT 1 GENERAL GEOLOGY 9

Introduction-Branches of geology useful to civil engineering, scope of geologicalstudies in various civil engineering projects,Weathering. Department dealing with this subject in India and their scope of work- GSI, Granite Dimension Stone Cell, NIRM.Mineralogy-Mineral, Origin and composition. Physical properties of minerals, susceptibility of minerals to alteration, basic of optical mineralogy, SEM, XRD.

UNIT II PETROLOGY 9

Classification of rocks, distinction between Igneous, Sedimentary and Metamorphic rocks Engineering properties of rocks. Description, occurrence, engineering properties, distribution and uses of Granite, Dolerite, Basalt, Sandstone, Limestone, Laterite, Shale, Quartzite, Marble, Slate, Gneiss and Schist.

UNIT III STRUCTURAL GEOLOGY AND GEOPHYSICAL METHODS 9

Geological maps – attitude of beds, study of structures – folds, faults and joints – relevance to

civil engineering. Geophysical methods – Seismic and electrical methods for subsurface investigations

UNIT IV GEOLOGICAL HAZARDS 9

Rock Instability and Slope movement: Concept of slidingblocks. Different controlling factors. Types of landslide. Prevention by surface drainage, slope reinforcement by Rock bolting and Rock anchoring, retaining wall, Slope treatment. Pervious & impervious rocks and ground water. Lowering of water table and Subsidence. Earthquake: Magnitude and intensity of earthquake. Seismic sea waves. Revelation from Seismic Records of structure of earth.

UNIT V GEOLOGICAL INVESTIGATION 9

Remote sensing for civil engineering applications; Geological conditions necessary for design and construction of Dams, Reservoirs, Tunnels, and Road cuttings.Coastal protection structures. Investigation of Landslides and earthquakes - causes and mitigation , seismic zonation – seismic zones of India.

UNIT I INTRODUCTION 9

Specifications, details and sequence of activities and construction co-ordination – Site Clearance – Marking – Earthwork - masonry – stone masonry – Bond in masonry - concrete hollow block masonry – flooring – damp proof courses – construction joints – movement and expansion joints – pre cast pavements – Building foundations – basements – temporary shed – centering and shuttering – slip forms – scaffoldings – de-shuttering forms.

UNIT II FABRICATION AND ERECTION 9

Fabrication and erection of steel trusses – frames – braced domes – laying brick — weather and water proof – roof finishes – acoustic and fire protection;

UNIT III CONSTRUCTION TECHNIQUES 9

Sub Structure Construction- Techniques of Box jacking – Pipe Jacking -under water construction of diaphragm walls and basement-Tunneling techniques – Piling techniques - well and caisson - sinking cofferdam - cable anchoring and grouting-driving diaphragm walls, sheet piles - shoring for deep cutting - well points -Dewatering and stand by Plant equipment for underground open excavation;

UNIT IV SUPER STRUCTURE CONSTRUCTION 9

Super Structure Construction- Launching girders, bridge decks, off shore platforms – special forms for shells - techniques for heavy decks – in-situ pre-stressing in high rise structures,

UNIT V CONSTRUCTION EQUIPMENTS 9

Material handling - erecting light weight components on tall structures - Support structure for heavy Equipment and conveyors - Erection of articulated structures, braced domes and space decks;

UNIT I: BASICS OF CIVIL ENGINEERING & HISTORY OF ARCHITECTURE 9

Broad disciples of Civil Engineering / Infrastructure, Scopes for career. Construction and development over time. Material developments, Construction methods Eminent works. Construction industries, 5-year plan outlay, Budgets for Infrastructures. Aesthetics in Civil Engineering - Fundamentals of architectural design, town planning; Building System (HVAC, LEED) ratings – Smart Cities.

UNIT II: BUILDING MATERIALS AND CONSTRUCTION MANAGEMENT 9

Stones, bricks, mortars, Plain- Reinforced and prestressed Concrete. Chemicals in Construction. Structural Steels, High tensile Steel, Carbon Composites, Plastics, Recycling and disposal of Demolition wastes. Temporary structures in Construction, Costruction methods for various structure, Contrction Equipments, Management System; Importance of Costruction Management. Repairs & Rehabilitation of Structures: Basics of corrosion phenomena and otherstructural distress mechanisms; simple systems of rehabilitation of structures.

UNIT III CIVIL ENGINEERING - I 9

Environmental Engineering & Sustainability: Water, Effluenttreatment treatment systems; Solid waste management;

Geotechnical Engineering:, rock mechanics and geology;various types of foundations; basics of rock mechanics & tunnelling

Hydraulics, Hydrology &Water Resources Engineering: Fundamentals of fluid flow,basics of water supply systems; Underground Structures; Underground Structures

Ocean Engineering: Basics of Wave and Current Systems; Sediment transport systems;Ports & Harbours and other marine structures

Surveying & Geomatics: Basic surveying techniques, Total Stations,
GPS, LIDAR;

UNIT IV CIVIL ENGINEERING - II 9

Traffic & Transportation Engineering: Development and challenges in integrated transport development in India: road, rail, air. Intelligent Transport Systems; Urban Public and Freight Transportation; Road Safety under heterogeneous traffic;

Power Plant Structures: Chimneys, Natural & Induced Draught Cooling towers, coal handling systems, ash handling systems; nuclear containment structures; hydro power projects

Structural Engineering: Types of buildings; tall structures; various types of bridges;
Water retaining structures; Other structural systems;
Wind tunnel studies;

UNIT V COMPUTATIONAL METHODS IN CIVIL ENGINEERING 9

Computational Methods, IT in Civil Engineering: Typical software used in CivilEngineering-Finite Element Method, Computational Fluid Dynamics; Computational Geotechnical Methods; Highlighting typical available software systems (SAP, STAAD, ABAQUS, MATLAB, ETAB, NASTRAN, NISA, MIKE 21, MODFLOW, REVIT, TEKLA,

AUTOCAD,…GEOSTUDIO, EDUSHAKE, MSP, PRIMAVERA, ArcGIS, VisSIM, …). Industrial lectures: Case studies of large civil engineering projects by industryprofessionals, covering comprehensive planning to commissioning;

UNIT I INTRODUCTION TO SURVEYING 9

Principles, Linear, angular and graphical methods, Survey stations, Survey lines- ranging, Bearing of survey lines, Levelling: Plane table surveying, Principles of levelling- booking and reducing levels; differential, reciprocal leveling, profile levelling and cross sectioning. Digital and Auto Level, Errors in levelling; contouring: Characteristics, methods, uses; areas and volumes.Triangulation and Trilateration.

UNIT II THEODOLITE SURVEY AND CURVE 9

Theodolite survey: Instruments, Measurement ofhorizontal and vertical angle; Horizontal and vertical control - methods -triangulation - network- Signals. Baseline - choices - instruments and accessories - extension of base lines - corrections - Satellite station - reduction to centre - Intervisibility of height and distances - Trigonometric leveling - Axis single correctionsElements of simple and compound curves – Method of settingout– Elements of Reverse curve - Transition curve – length of curve – Elements of transition curve - Vertical curves

UNIT III MODERN FIELD SURVEY SYSTEMS 9

Principle of Electronic DistanceMeasurement, Modulation, Types of EDM instruments, Distomat, Total Station – Parts of a Total Station – Accessories –Advantages and Applications, Field Procedure for total station survey, Errors in Total Station Survey; Global Positioning Systems- Segments, GPS measurements, errors and biases, Surveying with GPS, Co-ordinate transformation, accuracy considerations.

UNIT IV PHOTOGRAMMETRYSURVEYING 9

Introduction, Basic concepts, perspectivegeometry of aerial photograph, relief and tilt displacements, terrestrial photo grammetry, flight planning; Stereoscopy, ground control extension for photographic mapping- aerial triangulation, radial triangulation, methods; photographic mapping- mapping using paper prints, mapping using stereo plotting instruments, mosaics, map substitutes.

UNIT V REMOTESENSING 9

Introduction –Electromagnetic Spectrum, interactionof electromagnetic radiation with the

atmosphere and earth surface, remote sensing data acquisition: platforms and sensors; visual image interpretation; digital image processing.

LIST OF EXPERIMENTS

1. a) Simple chain survey - problems involving instruments such as optical and prism Square - cross staff.
   b) Overcoming obstacles in chaining and ranging.
2. a) Measurement of bearing of survey lines by prismatic compass.
   b) Running closed and open compass traverse.
   c) Plotting and Adjustments of traverse.
3. a) Plane table survey of building or a park or a road by different methods. ‘
   b) Field solution of two and three point problems.
   c) Problems in leveling.
4. Traversing using total station.
5. Contouring using total station.
6. Determination of remote height using total station.
7. Stake out using total station. Distance, gradient ,diff, height between two inaccessible points using total station.

U18ESCE3L3	**ENGINEERING GEOLOGY LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours: 30	**0**	**0**	**2**	**1**
	Prerequisite: Environmental Sciences				
	Course Coordinator Name & Department: Mr.Vinothkumar, Civil Engineering				

COURSE OBJECTIVES: Engineering geology is an applied geology discipline that involves the collection, analysis, and interpretation of geological data and information required for the safe development of civil works. Engineering geology also includes the assessment and mitigation of geologic hazards such earthquakes, landslides, flooding; the assessment of timber harvesting impacts; and groundwater remediation and resource evaluation.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Site characterization and how to collect, analyze, and report geologic data using standards in engineering practice	A
CO2	Rock mass characterization and the mechanics of planar rock slides and topples.	M
CO3	Evaluate rock-mass quality and perform a kinematic analysis.	A
CO4	To Apply the method of slices and factor of safety equation to solve rotational slide problems.	COR
CO5	The mechanics of soils and fluids and their influence on settlement, liquefaction, and soil slope stability.	P
CO6	To learn the Use of clinometers compass and Burton compass	COR

LIST OF EXPRIEMENTS:

1. Study of Physical properties of minerals
2. Identification of rocks forming silicate and ore minerals
3. Recognition of rocks
4. Use of clinometers compass and Burton compass for measurement dip and strike of formations.

5. Geological cross sections and study of geological maps.
6. Study of models of geological structures and out crops patterns of different types of rocks and land forms

UNIT I: CONCEPT OF CULTURE 6

Culture, food you eat, the clothes you wear, the language you speak in aspects of culture, Art, music, literature, architecture, sculpture, philosophy, religion and science in aspects of culture.

UNIT II: CULTURE AND CIVILIZATION 6

Culture and civilization, Culture different from civilization, Humans: physical, mental and spiritual, social and political civilization.

UNIT III: CULTURE AND HERITAGE 6

Cultural development is a historical process, ancestors, cultural heritage, human heritage, architectural creations, monuments, material artifacts, the intellectual achievements, philosophy, and treasures of knowledge, scientific inventions and discoveries

UNIT IV: GENERAL CHARACTERISTICS OF CULTURE 6

Culture is learned and acquired, Culture is shared by a group of people, Culture is cumulative, Culture changes, Culture is dynamic, Culture gives us a range of permissible behavior patterns, Culture is diverse, and Culture is ideational.

UNIT V: IMPORTANCE OF CULTURE IN HUMAN LIFE 6

Culture and life, traditions, beliefs, way of life, fundamental element of culture, religious belief and its symbolic expression, three eternal and universal values of Truth, Beauty and Goodness are closely linked with culture, philosophy and religion.

UNIT I: CHARACTERISTICS OF INDIAN CULTURE 6

Indian culture, physical and social environment, continuity and change, variety and unity, secular outlook, universalism, materialistic and spiritualistic.

UNIT II: CULTURAL IDENTITY, RELIGION, REGION AND ETHNICITY 6

Religion and region, cultural influences, Cultural synthesis, spirituality, Adaptability as a characteristic of Indian culture, unity in diversity.

UNIT III: FESTIVALS, HOLIDAYS, CELEBRATIONS 6

Diwali, Holi, Rakhi, Lohri, Eid, Christmas, Indian Independence DayIndian Republic Day and Gandhi Jayanti.

UNIT IV: FOOD 6

Indian foods,traditional foods,traditional food practices,food preparation, Indian food systems, food-ways, food habits, food ingredients land of spices, Mughlai food, regional foods, beverages, types of beverages

UNIT V: TRADITIONAL SPORTS OF INDIA 6

Traditional sports in India, Festival sports, social and cultural values in sports, Chaupar/

Pachisi, Kabaddi, Kho-Kho Mallakhamb, Gilli-Danda, Jallikattu, Kalaripayattu

SEMESTER IV

U18BSMA402	PROBABILITY, STATISTICS AND NUMERICAL METHODS	L	T	P	C
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Basic knowledge in probability and statistics and Engineering Mathematics I & II				
	Course Designed by – Dept of Mathematics				
OBJECTIVES	➢ The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. ➢ It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT 1 PROBABILITY DISTRIBUTION (9+3)Hrs

Probability – Axioms of probability – Conditional probability – Baye's theorem – Random variables – Binomial – Poisson – Geometric – Uniform – Exponential and normal distribution and their properties.

UNIT II STATISTICS AND TESTING OF HYPOTHESIS (9+3)Hrs

Measures of central tendency – Moments – Skewness and kurtosis – Correlation and Regression – Rank correlation – Test of significance: Large sample test for single proportion, difference of proportions – Chi Square test for goodness fit and independence of attributes.

UNIT III SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS (9+3)Hrs

Fixed Point Iteration methods - Newton-Raphson method and Regula-Falsi method for single variable-solutions of linear system of equations by Gaussian, Gauss-Jordan, Jacobian and Gauss-Siedel methods.

UNIT IV FINITE DIFFERENCE AND INTERPOLATION (9+3)Hrs

Finite differences -Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals-Newton's Divided difference formula, Lagrange's Interpolation formula.

UNIT V NUMERICAL DIFFERNTIATION AND INTEGRATION (9+3)Hrs

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's both $1/3^{rd}$ and $3/8^{th}$ rules. Double integration using Trapezoidal rule and Simpson rule.

TEXT BOOKS

1. Sastry. S. S "Introductory Numerical Methods" PHI, 2010.
2. Jain K.K. Iyengar, S.R.K and Jain, R.K. "Numerical Methods for Scientific and Engineering Computation" 4rd edition, 2005.
3. S.C.Gupta&V.K.Kapoor, "Fundamentals of Mathematical Statistics", Sultan Chand and Sons, New Delhi, 2003.

REFERENCEBOOKS

1. Grewal, B.S. "Higher Engineering Mathematics (42nd edition)" Khanna Publication Delhi, 2016.

3. Veerarajan T. "Probability Statistics and Random Process" Tata McGraw Hill, New Delhi 2003.

COURSE OUTCOMES (COs)	
CO1	Evaluate the probability using addition and multiplication theorem. Apply Baye's Theorem for practical problems to find the probability. Apply the discrete and continuous distribution for solving practical problems. Evaluates the moments of distributions using moment generating functions.
CO2	Learn the basic idea of statistics including measures of central tendency Identify the appropriate hypothesis testing procedure based on type of outcome variable and number of samples
CO3	Gain knowledge for solving equations by Newton-Raphson and Regula-Falsi methods and system of linear equations by various methods.
CO4	Interpolate the value of a dependent variable in the given data by Newton's forward and backward difference formulae and also unequal intervals.
CO5	Understand the concept of numerical differentiation and integration using Trapezoidal and Simpson's rules.

UNIT I INTRODUCTION 9

Concrete - Properties of ingredients, properties of fresh concrete, defects in concrete and influence of other factors - study and strength behavior of concrete – Introduction to working stress method – design of singly and doubly reinforced beams.

UNIT II WORKING STRESS METHOD 9

Design of continuous beams and slabs – axially and eccentrically loaded column footings for individual columns and combined rectangular footings for two columns.

UNIT III LIMIT STATE DESIGN OF BEAMS 9

Introduction to Limit state method - Limit state design of rectangular T and L shaped beams for flexure, shear, bond torsion, - design of one way slab, two way slab – Lintels – sun shades.

UNIT IV DESIGN OF COLUMNS 9

Limit state design of short rectangular and circular columns for axial and eccentric loads using SP- 16 design of long columns.

UNIT V DESIGN OF FOOTING 9

Limit state design of square / rectangular footings for axially and eccentrically loaded columns combined rectangular footings for two columns.

U18PCCE402	**INTRODUCTION TO FLUID MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**2**	**0**	**0**	**2**
	Prerequisite: Introduction to Mechanics				
	Course Coordinator Name & Department: Mr.Rajesh, Civil Engineering				

COURSE OBJECTIVES: The objective of this course is to introduce the concepts of fluid mechanics useful in Civil Engineering applications A training to analyze engineering problems involving fluids – such as those dealing with pipe flow, open channel flow, jets, turbines and pumps, dams and spillways, culverts, river and groundwater flow - with a mechanistic perspective is essential for the civil engineering students.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To learn about the basics of fluid mechanics and various properties of fluids	Ap
CO2	Understand the broad principles of fluid statics	U
CO3	To have a clear understanding about fluid kinematics	U
CO4	Understand the broad principles of fluid dynamics	U
CO5	To apply the continuity, momentum and energy principles	Ap
CO6	To learn the basic concepts of design flow	Ap

UNIT I BASICS OF FLUID MECHANICS 6

Basic Concepts and Definitions – Distinction between a fluid and a solid;Density, Specific weight, Specific gravity, Kinematic and dynamic viscosity; variation of viscosity with temperature, Newton law of viscosity; vapour pressure, boiling point, cavitation; surface tension, capillarity, Bulk modulus of elasticity, compressibility.

UNIT II FLUID STATICS 6

Fluid Pressure: Pressure at a point, Pascals law, pressure variationwith temperature, density and altitude. Piezometer, U-Tube Manometer, Single Column Manometer, U-Tube Differential Manometer, Micromanometers. pressure gauges, Hydrostatic pressure and force: horizontal, vertical and inclined surfaces.Buoyancy and stability of floating bodies.

UNIT III BASIC CONCEPTS OF FLUID FLOW 6

Classification of fluid flow : steady and unsteady flow; uniformand non-uniform flow; laminar and turbulent flow; rotational and irrotational flow; compressible and incompressible flow; ideal and real fluid flow; one, two and three dimensional flows; Stream line, path line, streak line and stream tube; stream function, velocity potential function. One-, two- and three -dimensional continuity equations in Cartesian coordinates

UNIT IV DYNAMICS 6

Fluid Dynamics- Surface and body forces; Equations of motion - Euler's equation;Bernoulli's equation – derivation; Energy Principle; Practical applications of Bernoulli's equation : venturimeter, orifice meter and pitot tube.

UNIT V MOMENTUM PRICIPLES OF FLUDIS 6

Momentum principle; Forces exerted by fluid flow on pipe bend; Vortex Flow – Free and Forced; Dimensional Analysis and Dynamic Similitude - Definitions of Reynolds Number, Froude Number, Mach Number, Weber Number and Euler Number; Buckingham's π-Theorem.

U18PCCE403	**INTRODUCTION TO SOLID MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours: 30	**2**	**0**	**0**	**2**
	Prerequisite: Introduction to Mechanics				
	Course Coordinator Name & Department: Ms. Anitha, Civil Engineering				

COURSE OBJECTIVES: The objective of this Course is to introduce to continuum mechanics and material modeling of engineering materials based on first energy principles: deformation and strain; momentum balance, stress and stress states; elasticity and elasticity bounds; plasticity and yield design.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To apply the fundamental concepts of stress and strain in the design of various structural components and machines	Ap
CO2	To determine the bending, shear stresses and deflection produced in a beam subjected to system of loads	E
CO3	To study about the Shear stress distribution across varioussections	U
CO4	To determine deflection at any point on a beam subjected to a combination of loads; solve for stresses and deflections	E
CO5	To solve torsion problems in bars and thin walled members	An
CO6	To get knowledge in bending and shear stresses	Ap

4	Approval	Meeting of Academic Council, May 2018								

UNIT I CONCEPTS OF SIMPLE STRESSES AND STRAINS 6

Stress and strain at a point – Tension, Compression, Shear Stress – Hooke's Law –

Relationship among elastic constants – Stress Strain Diagram for Mild Steel, TOR steel, Concrete – Ultimate Stress – Yield Stress – Factor of Safety – Thermal Stresses – Thin Cylinders and Shells – Strain Energy due to Axial Force – Resilience – Stresses due to impact and Suddenly Applied Load – Compound Bars.

UNIT II BENDING MOMENT AND SHEAR FORCE 6

Beams and Bending- Types of loads, supports, Bending moment and Shear Force diagrams for cantilevers, simply supported and fixed beams with or without overhangs. Calculation of maximum BM and SF and the point of contra flexure under concentrated loads, uniformly distributed loads over the whole span or part of span, combination of concentrated loads and uniformly distributed loads, uniformly varying loads, application of moments.

UNIT III STRESSES AND SIMPLE BENDING 6

Derivation of bending equation - Neutral axis – Determination of bending stresses – Section modulus of rectangular and circular sections (Solid and Hollow), I,T, Angle and Channel sections – Design of simple beam sections. Shear Stresses- Derivation of formula –Shear stress distribution across variousbeam sections like rectangular, circular, triangular, I, T angle sections.

UNIT IV SLOPE DEFLECTION AND TORSION 6

Relationship between moment, slope and deflection,Moment area method, Macaulay's method. Use of these methods to calculate slope and deflection for determinant beams. Torsion- Derivation of torsion equation and its assumptions. Applications of theequations. Combined torsion and bending of circular shafts, principal stress and maximum shear stresses under combined loading of bending and torsion. Analysis of close-coiled-helical springs.

UNIT V THIN CYLINDERS AND SPHERES 6

Thin Cylinders and Spheres- Derivation of formulae and calculations of hoopstress, longitudinal stress in a cylinder, and sphere subjected to internal pressures.

Course Coordinator HOD

U18PCCE404	BUILDING MATERIALS & TESTING METHODS	L	T	P	C
	Total Contact Hours: 30	1	1	0	2
	Prerequisite: Construction Technology				
	Course Coordinator Name & Department: Ms.Arunya.A, Civil Engineering				

COURSE OBJECTIVES: The objective of this Course is to deal with an experimental determination and evaluation of mechanical characteristics and advanced behavior of metallic and non-metallic structural materials. The course deals with explanation of deformation and fracture behavior of structural materials.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To study about the materials used in engineering	U
CO2	To envisage the properties of materials used in engineering	R
CO3	To know about the testing of various materials	R
CO4	To evaluate the behavioral properties of engineering materials	E
CO5	To know the testing procedures for Civil engineering materials	R
CO6	To get knowledge in fracture mechanics for different materials	Ap

UNIT I INTRODUCTION TO ENGINEERING MATERIALS 6

Introduction to Engineering Materials –Manufacturing of bricks, Cements, M-Sand, Various types of concrete , Ceramics, and Refractories, Bitumen and asphaltic materials, Timbers, Glass and Plastics, Structural Steel and other Metals, Paints and Varnishes.

UNIT II MATERIAL PROPERTIES 6

Introduction to Material,Mechanical behavior and mechanical characteristics; Elasticity – principle and characteristics; Plastic deformation of metals. Tensile test – standards for different material (brittle, quasi-brittle, elastic and so on)

UNIT III BEHAVIOUR OF MATERIALS 6

True stress - Strain interpretation of tensile test; hardness tests; Bending and torsion test; strength of ceramic; Internal friction, creep – fundaments and characteristics; concept of fatigue materials; Introduction to brittle material behaviors.

UNIT IV EVALUATION OF MATERIALS 6

Discussion about mechanical testing; Naming systems for various irons, steels and nonferrous metals; IS code; Discussion about elastic deformation; Plastic deformation; Impact test and transition temperatures; Fracture Mechanics – background;Hardness testing on different materials.

UNIT V MATERIAL TESTING 6

Testing of bricks, Fine aggregate, coarse aggregate, concrete. Testing of special materials - Acoustical material and geo-textiles, rubber and asbestos, laminates and adhesives, Graphene, Carbon composites and other engineering materials including properties.

Course Coordinator **HOD**

U18PCCE405	GEOTECHNICAL ENGINEERING	L	T	P	C
	Total Contact Hours: 30	2	0	0	2
	Prerequisite: Engineering Geology				
	Course Coordinator Name & Department: Mr.P.Dayakar, Civil Engineering				

COURSE OBJECTIVES: The objective of this Course is to explain what Geotechnical Engineering is and how it is important to civil engineering, to explain how three phase system is used in soil and how are soil properties estimated using three phase system, to explain role of water in soil behavior and how soil stresses, permeability and quantity of seepage including flow net are estimated, to determine shear parameters and stress changes in soil due to foundation loads and to estimate the magnitude and time-rate of settlement due to consolidation.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Carry out soil identification, index properties and soil classification	U
CO2	Solving any practical problems related to soil stresses estimation, permeability and seepage including flow net diagram.	An
CO3	Understand the principles of compaction and solve practical problems related to consolidation settlement	Ap

CO4	Identify shear strength parameters for field conditions	E
CO5	Understand the basic concept of analysis of slope stability	An
CO6	Understand the methods of site exploration and preparation of soil investigation report	U

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I INTRODUCTION 6

Types of soils and their formation and deposition, Scope of soil engineering. Soil as three-phase system, Basic Definitions and phase relationships-, Determination of Index Properties, Plasticity Characteristics of Soil - consistency limits- Classification of Soils-Introduction of soil classification: particle size classification, Indian standard soil classification system.

UNIT II SOIL WATER AND WATER FLOW 6

Soil water - Capillary rise in soils, Permeability of Soil - Darcy's law, Determination of coefficient of permeability: Laboratory and Field methods: Permeability of stratified soils, factors affecting permeability of soil. Seepage Analysis- characteristics of flow nets, Effective stress Concept in Soils, quick sand condition, Stress distribution in soil media –Boussinesq Formula- Use of influence charts

UNIT III COMPACTION AND CONSOLIDATION OF SOIL 6

Introduction, theory of compaction, laboratory determination of optimum moisture content and maximum dry density, Field compaction control, comparison between compaction and consolidation, Components of settlement - Immediate and consolidation settlement - Terzaghi's one dimensional consolidation theory.

UNIT IV SHEAR STRENGTH OF SOIL 6

Mohr circle and its characteristics, principal planes, relation between major and minor principal stresses, Mohr-Coulomb theory, types of shear tests: direct shear test, merits of direct shear test, triaxial compression tests, test behavior of UU, CU and CD tests, pore-pressure measurement, computation of effective shear strength parameters. Unconfined compression test, vane shear test.

UNIT V SLOPE STABILITY AND SOIL EXPLORATION 6

Introduction, types of slopes and their failure mechanisms, factor of safety, analysis of finite and infinite slopes, Swedish circle method, Friction circle method, stability numbers and charts. Methods of site exploration and soil investigation, methods of boring, soil samplers, sampling procedures, trail pits, borings, penetrometer tests, borehole logs, geophysical methods.

Course Coordinator **HOD**

U18MCTH401	CONSTITUTION OF INDIA	L	T	P	C
	Total Contact Hours: 30	2	0	0	0
	Prerequisite: +2 Level				
	Course Coordinator Name & Department: Ms.Mariasubhashini, Civil Engineering				

COURSE OBJECTIVES: To educate the students on the basic concepts of Indian Constitution and various organs created by the constitution including their functions.

	COURSE OUTCOMES (COs):	**Revised Bloom's Taxonomy**
CO1	To Understand the functions of the Indian government.	U
CO2	To Understand and abide the rules of the Indian constitution.	R
CO3	To Understand central and state government functionalities in India.	U
CO4	To Understand Constitutional Amendments.	R
CO5	To Understand the Indian Society.	U
CO6	To Understand the Constitutional functionaries and assesments of the Indian government.	R

UNIT I INTRODUCTION 6

Historical Background – Constituent Assembly of India – Philosophical foundations of the Indian Constitution – Preamble – Fundamental Rights – Directive Principles of State Policy – Fundamental Duties – Citizenship – Constitutional Remedies for citizens.

UNIT II STRUCTURE AND FUNCTION OF CENTRAL GOVERNMENT 6

Union Government – Structures of the Union Government and Functions – President – Vice President – Prime Minister – Cabinet – Parliament – Supreme Court of India – Judicial Review.

UNIT III STRUCTURE AND FUNCTION OF STATE GOVERNMENT 6

State Government – Structure and Functions – Governor – Chief Minister – Cabinet – State Legislature – Judicial System in States – High Courts and other Subordinate Courts.

UNIT IV CONSTITUTION FUNCTIONS 6

Indian Federal System – Center – State Relations – President‟s Rule – Constitutional Amendments – Constitutional Functionaries - Assessment of working of the Parliamentary System in India.

UNIT V INDIAN SOCIETY 6

Society : Nature, Meaning and definition; Indian Social Structure; Caste, Religion, Language in India; Constitutional Remedies for citizens – Political Parties and Pressure Groups; Right of Women, Children and Scheduled Castes and Scheduled Tribes and other Weaker Sections.

LIST OF EXPERIEMENTS

1. Field Density using Core cutter method.
2. Field Density using Sand replacement method.
3. Natural moisture content using Oven drying method.
4. Field identification of Fine grained soils.
5. Specific gravity of soils.
6. Grain size distribution by Sieve analysis.
7. Grain size distribution by Hydrometer analysis.
8. Consistency limits by Liquid limit test.
9. Consistency limits by Plastic limit test.
10. Consistency limits by Shrinkage limit test.
11. Permeability test using Constant-head method.
12. Permeability test using Falling-head method.
13. Compaction test: Standard Proctor test.
14. Compaction test: Modified Proctor test.
15. Relative density.
16. Consolidation test.
17. Triaxial shear test (UU)
18. Vane shear test
19. Direct shear test
20. Unconfined Compression Strength test.

UNIT I INTRODUCTION TO MASS MEDIA 6

Understanding mass media. Characteristics of mass media. Effects of mass media on individual, society and culture-basic issues. Power of mass media. Media in Indian society. Definition, nature and scope. Function of mass media.

UNIT II AUDIENCE ANALYSIS 6

Media Audience analysis (mass, segmentation, product etc, social uses). Audience making. Active Vs Passive audience: Some theories of audience-Uses and Gratification, Uses and Effects.

UNIT III MEDIAANALYSIS 6

Media as text. Approaches to media analysis Marxist, Semiotics, Sociology, Psychoanalysis. Media and realism-class, gender, race, age, minorities, children .

UNIT IV MULTI FACE APPROACH OF MASS MEDIA 6

Media as consciousness Industry. Social construction of reality by media. Rhetoric of the image, narrative etc. Media myths (representation, stereotypes etc.) - Cultural Studies approach to media, audience as textual determinant, audience as readers, audience positioning, establishing critical autonomy.

UNIT V SOCIOLOGY AND MEDIA 6

Media and Popular culture-commodities, culture and sub-culture, popular texts, popular discrimination, politics popular culture, popular culture Vs people's culture, celebrity industry-personality as brand name, hero-worship etc. Acquisition and transformation of popular culture

TEXT BOOKS

UNIT I ORGANIZATIONAL BEHAVIOR 6

Behavior in media Organization and Organizational Behavior. Nature and Structure of different Media Organizations-AIR/DD, Private Satellite Channels, Production Houses, employment opportunities in Indian Media industry, Group Behavior, Innovation and Creativity, Culture of organization.

UNIT II INTERPERSONAL COMMUNICATION IN MEDIA 6

Theories and Models-Transactional analysis.Ideation and Creative Thinking-Lateral Thinking. Group communication: Theories and Models-Decision making process, leadership, team work communication patterns group context.

UNIT III MEDIA WORKSHOP 6

Workshop style classes: Write commercials and news script for broadcast use.Five different script writing assignments. Submit a record of news stories written by you for a newspaper, a feature for a magazine, a script for a radio Programme, a script for a TV programme and an online content for an e-zine, e-newspaper or blog.

UNIT IV MEDIA INFORMATION SYSTEM 6

Information society – concepts and theories of information society – information super highway – knowledge society and knowledge gap theory – Technological determinism and Global village.

UNIT V ARTICULATION AND PUBLICATION 6

Elements and Principles of publication design. Page-makeup & Layout. Types of Layout-Books, Magazines, Brochures, Catalogues etc. Typography, copy fitting, communication through typography. Special designs .

Course Coordinator HOD

SEMESTER V

U18PCCE501	STRUCTURAL ANALYSIS – I	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Introduction to Solid Mechanics				
	Course Coordinator Name & Department: Ms.Thendral.S, Civil Engineering				

COURSE OBJECTIVES: To introduce the students about the advanced theory and concepts of structural analysis and the classical methods for the analysis of structures and also gives an introduction to finite element methods.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Introduction to Energy Principles	R
CO2	To learn the principles of virtual work method.	An
CO3	To Understand analysis of indeterminate flexibility matrix method.	U &An
CO4	To analyse the continuous beam using stiffness matrix method.	An
CO5	Introduction to the finite element method for plane stress and plane strain	A
CO6	To learn the analysis of determinate and indeterminate structures.	An

UNIT I ENERGY PRINCIPLES 9

Introduction to static and Kinematic Indeterminacy - Conservative and non-conservative systems – Strain energy and complimentary energy – Beam in bending – Shear and torsion - Castigliano's first theorem, Engesser's theorem, castigliano's second theorem, Maxwell's theorem.

UNIT II PRINCIPLE OF VIRTUAL WORK METHOD 9

2 D State of Stress – 2 D Normal and Shear Stresses on any plane – Principal Stresses and Principal Planes – Mohr's circle – Plane trusses: Analysis of plane trusses – method of joints –

method of sections – virtual work method

UNIT III FLEXIBILITY METHOD 9

Introduction to Slope Deflection Method - Equilibrium and compatibility – Determinate vs Indeterminate structures – Indeterminacy - Primary structure – Compatibility conditions – Analysis of indeterminate pin-jointed plane frames, continuous beams, rigid jointed plane frames.

UNIT IV STIFFNESS METHOD 9

Element and global stiffness matrices – Analysis of continuous beams – Co-ordinate transformations – Rotation matrix – Transformations of stiffness matrices, load vectors and displacements vectors – Analysis of pin-jointed plane frames and rigid frames.

UNIT V FINITE ELEMENT METHOD 9

Introduction to the finite element method for plane stress and plane strain - numerical analysis of plane trusses, grids and frames - Introduction – Discretisation of a structure – Displacement functions – Truss element – Beam element – Plane stress and plane strain - Triangular elements.

TEXT BOOKS:

U18PCCE502	**HYDRAULIC ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours: 30	**3**	**0**	**0**	**3**
	Prerequisite: Introduction to Fluid Mechanics				
	Course Coordinator Name & Department: Mr.Rajesh, Civil Engineering				

COURSE OBJECTIVES: To introduce the students about the advanced theory and concepts of structural analysis and the classical methods for the analysis of structures and also gives an introduction to finite element methods.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Be able to apply their knowledge of fluid mechanics in addressing problems in Pipes.	Ap

CO2	To apply their knowledge of fluid mechanics in addressing problems in Laminar and Turbulent Flow.	Ap
CO3	They will have knowledge in Open Channel Flow.	U
CO4	They will have knowledge in measurement of Discharge and Velocity	U
CO5	They will have knowledge in Dimensional Analysis.	U
CO6	To know the concept of boundary layer theory.	R

UNIT I FLOW THROUGH PIPES 6

Flow through Pipes: Loss of head through pipes, Darcy-Wiesbatch equation, minor losses, total energy equation, hydraulic gradient line, Pipes in series, equivalent pipes, pipes in parallel, flow through laterals, flows in dead end pipes, siphon, power transmission through pipes, nozzles. Analysis of pipe networks.

UNIT II LAMINAR FLOW AND TURBULENT FLOW 6

Laminar flow through: circular pipes, annulus and parallel plates. Stoke's law, Measurement of viscosity. Turbulent Flow- Reynolds experiment,. Definition of turbulence, scale and intensity, Causes of turbulence, instability, mechanism of turbulence and effect of turbulent flow in pipes. Reynolds stresses, semi-empirical theories of turbulence, Moody's diagram.

UNIT III OPEN CHANNEL FLOW 6

Introduction- Comparison between open channel flow and pipe flow, geometrical parameters of a channel, classification of open channels, classification of open channel flow, Velocity Distribution of channel section, Uniform Flow-Continuity Equation, Energy Equation and Momentum Equation, Characteristics of uniform flow, Chezy's formula, Manning's formula. Factors affecting Manning's Roughness Coefficient, Most economical section of channel.

UNIT IV VARIED FLOW 6

Non-Uniform Flow- Specific energy, Specific energy curve, critical flow, discharge curve Specific force Specific depth, and Critical depth. Channel Transitions. Measurement of Discharge and Velocity Venturi Flume, Standing Wave Flume, Parshall Flume, Gradually

Varied Flow-Dynamic Equation of Gradually Varied Flow, Hydraulic Jump – Type of Jump, Location of Jumps – Energy losses in Jumps – Surges in Canal – Types of Surges.

UNIT V PUMPS AND TURBINES 6

Rotodynamic Machinery Pumps: Classification of pumps –Centrifugal Pumps – Casing – Impellor – Work done and Efficiency . Reciprocating pump – Work done – Air Vessel – Indicator Diagram

Rotodynamics Machinary Turbines: Classification of turbines -Work done - Efficiency of Turbines, Pelton Wheel, Francis turbine, Kaplan and propeller turbines. Similarity laws and specific speed. Performance of turbines.

U18PCCE503	**FOUNDATION ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours: 30	**3**	**0**	**0**	**3**
	Prerequisite: Geotechnical Engineering				
	Course Coordinator Name & Department: Mr.P.Dayakar, Civil Engineering				

COURSE OBJECTIVES: To impart knowledge on common method of sub soil investigation and design of foundation and to acquire the capacity to investigate the soil condition and to select and design a suitable foundation.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Select type of foundation required for the given soil condition.	R
CO2	Design the type of foundation for different types of soil	C
CO3	To determine the dimensions and settlements of pile foundations	E
CO4	Carryout earth pressure and stability analysis of retaining walls	An
CO5	To check the stability of slopes	U
CO6	To learn the concepts of Coloumb's wedge theory and Graphical method .	R

	CO3	3			3				3		2	2		3	
	CO4	3	1				3		2	2	3			3	
	CO5	2									2				2
	CO6	2	3	3		2		2					2		3

3	Category	Humanities & Social Sciences including Management Courses (HS)	Basic Sciences (BS)	Engg. Sciences (ES)	**Professional Core (PC)**	Professional Core Elective (PE)	Open Elective (OE)	Massive Open Online Course(MOOC)	Employment Enhancement Courses (EEC)	Mandatory Courses (MC)
4	Approval	Meeting of Academic Council, May 2018								

UNIT I BEARING CAPACITY 9

Introduction – Location and depth of foundation – codal provisions – bearing capacity of shallow foundation on homogeneous deposits – bearing capacity from in-situ tests – Factors influencing bearing capacity – codal provisions – Settlement – Components of settlement – Settlement of foundations on granular and clay deposits – Allowable and maximum differential settlements of buildings – Codal provision – Methods of minimizing settlement.

UNIT II DESIGN OF FOOTING 9

Types of foundation – structural design of spread footing – Design aspects of combined and mat foundation – Codal provisions.

UNIT III PILE FOUNDATION 9

Types of piles – Factors influencing the selection of pile – Carrying capacity in granular and cohesive soils – Static and dynamic formulae – Capacity from in-situ tests– Piles subjected to uplift – Negative skin friction – Group capacity – Settlement of pile groups – Interpretation of pile load test – Pile caps – Codal provisions

UNIT IV RETAINING WALLS 9

Earth pressure theory – Plastic equilibrium in soils – active and passive states – Rankine's theory – Coloumb's wedge theory – Classical and limit equilibrium solution – Earth pressure on retaining walls of simple configurations – pressure on the wall due to single line load alone – Graphical method (Culmann's method alone) – Stability of retaining wall.

UNIT V SLOPE AND UNDERGROUND STRUCTURES 9

Slope failure mechanisms - Types - Infinite slopes - Finite slopes - Total stress analysis for saturated clay - Method of slices - friction circle method - Use of stability number - Slope protection measures.

4	Approval	Meeting of Academic Council, May 2018								

UNIT I HYDROMETEOROLOGY 9

Hydrological cycle -Hydro meteorological factors -water-budget equation, history of hydrology, sources of data-types of precipitation- Forms for precipitation- Density and Adequacy of rain gauges – Recording and non-recording gauges, mean precipitation over an area, depth area- duration relationships, maximum intensity/depth-duration-frequency relationship, Probable Maximum Precipitation (PMP), rainfall data in India.

UNIT II PRECIPITATION AND ABSTRACTIONS 9

Spatial distribution – Consistency analysis – Frequency analysis – Intensity, duration, frequency relationships- Evaporation, measurement of evapotranspiration, evapotranspiration equations, potential evapotranspiration over India, actual evapotranspiration, interception, depression storage, infiltration, infiltration capacity, measurement of infiltration, modelling infiltration capacity, classification of infiltration capacities, infiltration indices

UNIT III GROUND WATER AND WELL HYDROLOGY 9

Runoff - runoff volume, SCS-CN method of estimating runoff volume, flow duration curve, flow-mass curve, hydrograph, factors affecting runoff hydrograph, components of hydrograph, base flow separation, effective rainfall, unit hydrograph surface water resources of India, environmental flows. Forms of subsurface water, saturated formation, aquifer properties, geologic formations of aquifers, well hydraulics: steady state flow in wells.

UNIT IV DISTRIBUTION SYSTEMS 9

Canal systems, alignment of canals, canal losses, estimation of design discharge. Design of channels- rigid boundary channels, alluvial channels, Kennedy's and Lacey's theory of regime channels. Canal outlets: non-modular, semi-modular and modular outlets. Water logging: causes, effects and remedial measures. Lining of canals, types of lining. Drainage of irrigated lands: necessity, methods.

UNIT V DAMS AND SPILLWAYS 9

Embankment dams: Classification, design considerations, estimation and control of seepage, slope protection. Gravity dams: forces on gravity dams, causes of failure, stress analysis, elementary and practical profile. Arch and buttress dams. Spillways: components of spillways, types of gates for spillway crests; Reservoirs- Types, capacity of reservoirs, yield of reservoir, reservoir regulation, sedimentation, economic height of dam, selection of suitable site.

UNIT-I PLANNING FOR WATER SUPPLY AND SEWERAGE SYSTEMS 9

Public water supply System and Sewerage system – Design Period – Prediction of population during design period –

Selection of Sources of Water supply – Conveyance of Raw Water - Treatment site – Piped Flow – Open Channel Flow – Layout of Water Treatment Plant.

UNIT-II WATER TREATMENT SYSTEMS 9

Raw water Quality – Impurities in Water – Water Quality Standards – Plain Sedimentation - Pumping to Chemical House – Coagulation – Hydraulic Jump / Flash Mixer - Clariflocculator – Rapid Sand Filtration – Iron & Manganese Removal - Post Chlorination – Clear Water Tank – Pumping to Overhead Tank.

UNIT-III WATER DISTRIBUTION SYSTEM 9

Water Distribution Layout – Service Reservoirs – Hydraulics of Flow in Pipes – Appurtenances – Construction Operation and maintenance – Leak Detection – Strom Water Network – Plumbing Work in Houses.

UNIT-IV COLLECTION AND CONVEYANCE OF DOMESTIC SEWAGE 9

Sewer Pipe Network – Sewage Treatment Site – Activated Sludge Process – Aeration Tank Design – Design of Secondary Settling Tank – Sludge Digester – Sludge Drying Beds – Re-Use of Treated Effluent – Selection of Pumps.

UNIT-V SOLID WASTE MANAGEMENT 9

Collection and Conveyance of Solid Wastes – Segregation of Solid Wastes – Sanitary Land Fill Incineration – Recycling and Re-use Concepts – Disposal of Electronic Wastes.

Course Coordinator **HOD**

	ORGANIZATIONAL BEHAVIOR	**L**	**T**	**P**	**C**
U18HSBA501	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Nil				
	Course Coordinator Name & Department: Mr.C.Anish, Civil Engineering				

COURSE OBJECTIVES:

1. Understanding the basic approaches in organization
2. Knowledge on theories of Personality
3. Clear sight on the Decision Making in Groups

4. Analyse the behaviour of individuals and groups in organizations in terms of the key factors that influence organizational behaviour. Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behaviour.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Familiarity with the knowledge of Frame work of Organizational Behaviour	Ap
CO2	Knowledge of the Interpersonal perception	Ap
CO3	Awareness of the Merits and Demerits of Group decision making.	R
CO4	Understanding of the Sources of power	U
CO5	Familiarity with the knowledge of types of Conflicts	Ap
CO6	To learn the Power and Authority.	U

4	Approval	Meeting of Academic Council, May 2018								

UNIT I **9**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

UNIT II **9**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behaviour.

UNIT III **9**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

UNIT IV **9**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

UNIT V **9**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

U18MCTH502	**UNIVERSAL HUMAN VALUES**	**L**	**T**	**P**	**C**
	Total Contact Hours: 30	**2**	**0**	**0**	**0**
	Prerequisite: Nil				
	Course Coordinator Name & Department: Mr.K.Venkatraman, Civil Engineering				

COURSE OBJECTIVES: The objective of the course is four fold:Sensitization of student towards self, family (relationship), society and nature.Understanding (or developing clarity) of nature, society and larger systems, on the basis of Human relationships and resolved individuals. Strengthening of self- reflection.Development of commitment and courage to act.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Students are expected to become more aware of their surroundings, society, social problems	An
CO2	Keep human relationships and human nature in mind	R
CO3	They would also become sensitive to their commitment towards what they believe in.	Ap
CO4	It is hoped that they would be able to apply what they have learnt	Ap
CO5	A beginning would be made in the direction to handle social problems and sustainable solutions	An
CO6	T o understand holistic perception of harmony at all levels of existence	U

UNIT I COURSE INTRODUCTION **6**

Understanding the need, basic guidelines, content and process for Value Education. Self Exploration–- its content and process; 'Natural Acceptance' and Experiential Validation- as the mechanism for self exploration - Continuous Happiness and Prosperity- A look at basic Human Aspirations - Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority - Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario - Method to fulfill the above human aspirations: understanding and living in harmony at various levels.

UNIT II: UNDERSTANDING HARMONY **6**

Understanding human being as a co-existence of the sentient 'I' and the material 'Body', needs of Self ('I') and 'Body' - Sukh and Suvidha-the Body as an instrument of 'I' (I being the doer, seer and enjoyer). Understanding the characteristics and activities of 'I' and harmony in 'I', the harmony of I with the Body: Sanyam and Swasthya; correct appraisal of Physical needs, meaning of Prosperity in detail Programs to ensure Sanyam and Swasthya.

UNIT III: HARMONY IN THE FAMILY AND SOCIETY **6**

Values in human-human relationship; meaning of Nyaya and program for its fulfillment to ensure Ubhay-tripti; Trust (Vishwas) and Respect (Samman) as the foundational values of relationship. Understanding the meaning of Vishwas; Difference between intention and competence - the meaning of Samman, Difference between respect and differentiation; the other salient values in relationship, the harmony in the society (society being an extension of family): Samadhan, Samridhi, Abhay, Sah-astitva as comprehensive Human Goals.

UNIT IV HARMONY IN THE NATURE AND EXISTENCE **6**

Understanding the harmony in the nature - interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature. existence as co-existence (*sah-astitva*) of mutually interacting units in all-pervasive space. holistic perception of harmony at all levels of existence

UNIT V HOLISTIC UNDERSTANDING OF HARMONY ON PROFESSIONAL ETHICS 6

Natural acceptance of human values - Definitiveness of Ethical Human Conduct - Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in professional ethics: Ability to utilize the professional competence for augmenting universal human order Ability to identify the scope and characteristics of people-friendly and eco-friendly production systems, Ability to identify and develop appropriate technologies and management patterns for above production systems.

Course Coordinator **HOD**

U18PCCE5L1	HYDRAULIC ENGINEERING LABORATORY	L	T	P	C
	Total Contact Hours: 30	0	0	2	1
	Prerequisite: Fluid Mechanics Laboratory				
	Course Coordinator Name & Department: Mr.Rajesh, Civil Engineering				

COURSE OBJECTIVES: Students should be able to verify the principles studied in theory by performing the experiments in lab.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To measure theoretical discharge in pipes, Venturimeter, orificemeter and notches	M
CO2	To measure discharge in Uniform Flow and Gradually Varied Flow.	M
CO3	To measure Discharge and Energy loses in Hydraulic Jump.	M
CO4	To find minor and major losses in pipe	M
CO5	To measure venture flume and standing wave flume	M
CO6	To understand the turbulent and lamiar flow in pipes.	M

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

4	Approval	Meeting of Academic Council, May 2018								

LIST OF EXPERIMENTS

1. Flow Visualization
2. Studies in Wind Tunnel
3. Boundary Layer
4. Flow around an Aerofoil / circular cylinder
5. Uniform Flow
6. Velocity Distribution in Open channel flow
7. Venturi Flume
8. Standing Wave Flume
9. Gradually Varied Flow

10. Hydraulic Jump
11. Flow under Sluice Gate
12. Flow through pipes
13. Turbulent flow through pipes
14. Laminar flow through pipes
15. Major losses / Minor losses in pipe

UNIT I **6**

Theory and evidence behind the idea of mind-body medicine. Introduction to the basics of Mindfulness based stress Reduction (MBSR), including mindful eating, mindful breathing, and the body scan exercise.

UNIT II **6**

Spiritual meditation - Mindfulness meditation - Movement meditation - Focused Meditation- Visualization meditation-Chanting Meditation.

UNIT III **6**

Introduction toapplication of mindful practice to stressful situations - unhealthy or self-defeating patterns of thought, emotion, and behavior.

UNIT IV **6**

Interpersonal mindfulness, which applies to person-to-person communications, situations that can be accompanied by stress, anxiety, or other difficult emotions - practice of mindfulness into everyday life.

UNIT V **6**

Methods to develop optimism and balanced mindset. Exercise for Positive emotions.

	Total Contact Hours: 30	**0**	**0**	**2**	**0**
	Prerequisite: +2 Level Education				
	Course Coordinator Name & Department: Ms.R.Chitra, Civil Engineering				

COURSE OBJECTIVES: To gain knowledge about the beliefs and philosophies of different religions on issues like environment, gender equality, unity, financial equality etc.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To study about different religious faiths.	O
CO2	To know about philosophies issues.	M
CO3	To know about chronology issues.	M
CO4	To study the interfaith issues including contemporary situations worldwide.	GR
CO5	To acquire religious knowledge from scholars speech.	COR
CO6	To know about Reconciliatory Approaches.	O

UNIT I **6**

A snapshot survey of World Religions; antiquity, diversity and graphical locations; Opening Questions related to the study of World Religions; critical methods; ambivalent, contradictory

and complementary paradigms.

UNIT II **6**

The Origin of Religion / The Evolutionists Approaches; Anthropological and Sociological Approaches; Reductive and Functionalist Approaches.

UNIT III **6**

Experiential Approaches: Phenomenological; Approaches to Mysticism; Psychoanalytical Approaches.

UNIT IV **6**

Symbolic Approaches; Exegetical and Hermeneutical Approaches.

UNIT V **6**

Feminism and Religion; Inter-faith dialogue and Reconciliatory Approaches.

SEMESTER VI

U18PCCE601	STRUCTURAL ANALYSIS – II	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Structural Analysis-I				
	Course Coordinator Name & Department: Ms.Hemapriya, Civil Engineering				

COURSE OBJECTIVES: To learn about the advanced theory and concepts of structural analysis and methods for the analysis of framed structures, indeterminate beams. To learn the concept of moving loads and influence line diagrams.

	COURSE OUTCOMES (COs):	**Revised Bloom's Taxonomy**
CO1	Analysis of continuous beams and Plane rigid frames with and without sway using Moment Distrubution Method.	An
CO2	Application to simple problems of beams and frames using stiffness matrix method	An
CO3	Application to simple problems of beams and frames using flexibility matrix method	An
CO4	Moving loads and Influence lines for determinate beams	Ap
CO5	Influence lines for Arches	C
CO6	To understand Influence lines for shear force and bending moment in beam sections	U

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

4	Approval	Meeting of Academic Council, May 2018								

UNIT I MOMENT DISTRIBUTION METHOD 9

Distribution and carryover of moments – Stiffness and carry over factors – Analysis of continuous beams – Plane rigid frames with and without sway – Neylor‟s simplification

UNIT II FRAME ANALYSIS 9

Analysis of building frames - Kani's, moment distribution and other methods like substitute frame method and moment distribution method and other approximate methods.

UNIT III MATRIX METHODS 9

Compatibility conditions – Analysis of indeterminate pin-jointed plane frames, continuous beams, rigid jointed plane frames by using flexibility and stiffness matrix methods

UNIT IV MOVING LOADS AND INFLUENCE LINES 12

Influence lines for reactions in statically determinate structures – influence lines for member forces in pin-jointed frames – Influence lines for shear force and bending moment in beam sections – Calculation of critical stress resultants due to concentrated and distributed moving loads. Muller Breslau‟s principle – Influence lines for continuous beams and single storey rigid frames – Indirect model analysis for influence lines of indeterminate structures.

UNIT V ARCHES 6

Arches as structural forms – Examples of arch structures – Types of arches – Analysis of three hinged, two hinged and fixed arches, parabolic and circular arches – Settlement and temperature effects.

U18PCCE602	**ESTIMATION & COSTING**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**2**	**1**	**0**	**3**
	Prerequisite: Introduction to Civil Engineering				
	Course Coordinator Name & Department: Dr.A.Mani, Civil Engineering				

COURSE OBJECTIVES: To provide the student with the ability to estimate the quantities of item of works involved in buildings, water supply and sanitary works, road works and irrigation works, and also to equip the student with the ability to do rate analysis, valuation of properties and preparation of reports for estimation of various items.

COURSE OUTCOMES (COs):		**Revised Bloom’s Taxonomy**
CO1	Able to use methods and type of estimates for calculating various items of works, required materials, quantities and cost of building estimate.	U

CO2	Preparing specification as per standards, calling and processing tenders.	Ap
CO3	Prepare contract documents with required contract conditions and to conduct arbritration to solve the disputes.	Ap
CO4	Calculate the rate for different items of works, recording measurements and preparing bills.	An
CO5	Assess the value of property, adopting price escalation and auditing	E
CO6	Drafting tender documents, preparing reports for estimation and publishimg notice inviting tendors.	An

4	Approval	Meeting of Academic Council, May 2018								

UNIT I ESTIMATION **9**

Purpose – Methods of estimation – advantages – types of estimates – detailed estimates of residential buildings – single storied and multistoried buildings – earthwork – foundations – Super structure – Fittings including sanitary and electrical fittings – paintings.

UNIT II SPECIFICATIONS AND TENDERS **9**

Specifications – Detailed and general specifications – construction specifications – sources – types of specifications – Tender notices – types – corrigendum notice – tender procedures – Drafting model tenders

UNIT III CONTRACTS **9**

Contract – types of contracts – formation of contract – contract conditions – contract problems – contract for labor, material, design and construction – drafting of contract documents – construction contracts – arbitration and legal requirements.

UNIT IV RATE ANALYSIS AND PREPARATION OF BILLS **9**

Data – Rate analysis – abstract estimate – report to accompany estimate – measurement book – bills – types

UNIT V VALUATION **9**

Basic – Principles of valuation – Value and Cost – value engineering – value analysis – phases in value engineering – information – function – escalation – evaluation – recommendation implementation – Audit

UNIT-I INTRODUCTION 9

Pollutants in water and wastewater – characteristics, standards for performance – significant and need for physico – chemical treatment

UNIT-II PHYSICAL TREATMENT PRINICIPLES 9

Principles of screening – mixing, equalizations –sedimentation – filtration –backwashing – Adsorption-isotherms-principles - membrane separation, reverse osmosis, nano filtration- ultra filtration and hyper filtration – electro dialysis.

UNIT-III CHEMICAL TREATMENT PRINCIPLES 9

Principles of chemical treatment – coagulation -flocculation - Neutralisation - precipitation – floatation – disinfection -Ion exchange - advanced oxidation / reduction.

UNIT-IV CONVENTIONAL TREATMENT PLANTS 9

Conventional water treatment units –Screening – Types of aerators–chemical feeding – Methods - Mixing Devices - flocculation –clarifier – filters –rapid sand filter, slow sand filter, pressure filter-chlorinators.

UNIT-V INDUSTRIAL WATER TREATMENT AND RECLAMATION 9

Selection of process –design of softeners – demineralisers –wastewater reclamation –reverse osmosis plants –residue management – Operation and Maintenance aspects –recent advances .

U18PCCE604	DESIGN OF STEEL STRUCTURES	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Building Materials & Testing Methods				
	Course Coordinator Name & Department: Dr.S.J.Mohan, Civil Engineering				

COURSE OBJECTIVES: This course deals with some of the special aspects with respect to civil engineering structures in industries.

	COURSE OUTCOMES (COs):	**Revised Bloom's Taxonomy**
CO1	Design of plate girders, web and flange design, curtailment of flange plates.	C
CO2	Design of simple and built up columns subject to combined bending and axial loads	C
CO3	Design of flexural and compression members, Design of self supporting steel chimneys.	C
CO4	Design of overhead rectangular, cylindrical and pressed steel tanks	C
CO5	To study shape factor, plastic hinge ,plastic moment , plastic analysis of beams.	E
CO6	To understand the design concepts of gantry girders.	U

UNIT I INTRODUCTION 9

Properties of materials - loads and stresses - Design of semi-rigid, rigid and moment resistant connections.

UNIT II TENSION MEMBERS 9

Design of tension members - Built-up sections subjected to axial tension and bending -splicing of tension member.

UNIT III COMPRESSION MEMBERS 9

Design of compression members -Design of simple and built up columns subject to combined bending and axial loads - design of column base and connections to foundation – Beam-column.

UNIT IV BEAMS 9

Design of columns and their bases - Design of flexural members and Plate girder - loads, specification - Design Industrial buildings – Introduction to plastic analysis.

UNIT V ROOF TRUSSES AND INDUSTRIAL STRUCTURES 9

Loads, design of purlins, trusses, bracings - Gantry girders - All design steps/process to as per the most recent BIS code of practices

	ESSENCE OF INDIA KNOWLEDGE TRADITION	L	T	P	C
U18MCTH603	Total Contact Hours: 30	**2**	**0**	**0**	**0**
	Prerequisite: Nil				
	Course Coordinator Name & Department: Ms.Chitra, Civil Engineering				

COURSE OBJECTIVES: It will also focus on Indian philosophical, linguistic and artistic traditions, along with yoga and Indian perspective of modern scientific worldview. The course aims at imparting basic principles of thought process, reasoning and inferencing.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To develop the physical and social contexts in traditional knowledge	C

CO2	To understand the need for protecting traditional knowledge	U
CO3	The know Scheduled Tribes and Other Traditional Forest Dwellers	U
CO4	To get knowledge on Legal concepts for the protection of tradition	U & R
CO5	To learn the Importance of conservation and sustainable development of environment	U
CO6	To learn the differences in traditional knowledge Vs western knowledge	U

UNIT I: INTRODUCTION TO TRADITIONAL KNOWLEDGE 6

Define traditional knowledge, nature andcharacteristics, scope and importance, kinds of traditional knowledge, the physical and social contexts in which traditional knowledge develop, the historical impact of social change on traditional knowledge systems. Indigenous Knowledge (IK), characteristics, traditional knowledge vis-à-vis indigenous knowledge, traditional knowledge Vs western knowledge traditional knowledge vis-à-vis formal knowledge

UNIT II: PROTECTION OF TRADITIONAL KNOWLEDGE 6

Protection of traditional knowledge: the need for protecting traditional knowledge Significance of TK Protection, value of TK in global economy, Role of Government to harness TK.

UNIT III: LEGAL FRAME WORK AND TK 6

A: The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006, Plant Varieties Protection and Farmer's Rights Act, 2001 (PPVFR Act);

B: The Biological Diversity Act 2002 and Rules 2004, the protection of traditional knowledge bill, 2016. Geographical indicators act 2003.

UNIT IV: TRADITIONAL KNOWLEDGE AND INTELLECTUAL PROPERTY 6

Traditional knowledge and intellectual property: Systems of traditional knowledge protection, Legal concepts for the protection of traditional knowledge, Certain non IPR mechanisms of traditional knowledge protection, Patents and traditional knowledge, Strategies to increase

protection of traditional knowledge, global legal FORA for increasing protection of Indian Traditional Knowledge.

UNIT V: TRADITIONAL KNOWLEDGE IN DIFFERENT SECTORS 6

Traditional knowledge in different sectors: Traditional knowledge and engineering, Traditional medicine system, TK and biotechnology, TK in agriculture, Traditional societies depend on it for their food and healthcare needs, Importance of conservation and sustainable development of environment, Management of biodiversity, Food security of the country and protection of TK.

Course Coordinator **HOD**

	ESTIMATION & COSTING LABORATORY	**L**	**T**	**P**	**C**
U18PCCE6L1	Total Contact Hours: 30	**0**	**0**	**2**	**1**
	Prerequisite: Computer aided Civil Engineering DrawingLaboratory				
	Course Coordinator Name & Department: Mr.Meikandaan, Civil Engineering				

COURSE OBJECTIVES: To provide the student with the ability to estimate the quantities of item of works involved in buildings, water supply and sanitary works, road works and irrigation works, and also to equip the student with the ability to do rate analysis, valuation of properties and preparation of reports for estimation of various items.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Will have a basic knowledge on application of quantity estimation software.	COR
CO2	Will have the knowledge of rate analysis of different items of work.	COR
CO3	Will have the knowledge of detailed estimation of residential buildings	COR
CO4	Will have the knowledge of bill of quantities	COR
CO5	Will able to value a property, price escalation recommendations and auditing	COR & GR
CO6	To learn estimation for long and short wall method	COR

LIST OF EXPERIMENTS

1. Estimation of Compound wall.
2. Estimation of building by using long wall method.
3. Estimation of building by using short wall method.
4. Rate Analysis of Earthwork Excavation.
5. Rate Analysis of PCC.
6. Rate analysis of Brickwork.
7. Rate analysis of RCC work in Beams.
8. Rate analysis of RCC work in Slabs.
9. Rate analysis of RCC work in Columns.
10. Rate Analysis of Plastering.

UNIT I SOCIAL WORK 6

Concept, Definition, Objectives and Scope – Basic Concepts in Social Work : Social Service, Social Welfare, Social Assistance, Social Development, Social Security, Social Justice, Social Reform, Social Defense, Social Policy, Social Legislation, Social Education, Social Inequality, Social Organization and Social Disorganization.

UNIT II HISTORICAL DEVELOPMENT OF SOCIAL WORK IN UK, USA AND INDIA 6

Social Work Literature - Contribution of Indian Social Reformers to Social Welfare – Contribution of Social Reformers to Social Welfare in Tamil Nadu - Social Movements – Religio - Philosophical foundation of Social Work Practice in India. - Gandhi an Philosophical Foundation to Social Work in India.

UNIT III SOCIAL WORK PROFESSION 6

Origin and Growth of Social Work in India - Principles, Philosophy and values and Code of Ethics of Social Work Profession - Social work profession as a change agent-Integrated social work and place in social work practice - Fields and Methods of Social Work – Roles and Skills of Social Worker. Social Work Education: Evolution of Social Work Education- Social Work Curriculum.

UNIT IV INDIAN CONSTITUTION & ITS IMPLICATION OF SOCIAL WELFARE 6

Fundamental Rights Part -III, Fundamental Duties Part-IV A, Directive principles of State Policy Part-IV, Human Rights**,** According to U.N Charter and Indian Constitution.

UNIT V VOLUNTARY ORGANIZATION 6

Role of Voluntary Organizations and emerging trends - Voluntary Social Work: Role of Government and Voluntary Organizations in promoting Social Welfare - Changing trends in social work and the role of social worker and the government in promotingsocial work profession in India.

UNIT I: NATIONAL SERVICE SCHEME 6

History and its Objectives-Organizational structure of N.S.S. at National, State, University and College Levels-Advisory committee and their functions with special reference to college principal, Programme officer, N.S.S. group leader and N.S.S. volunteers in the implementation**.**

UNIT II: NATIONAL INTEGRATION 6

Need of National integration-Various obstacles in the way of National Integration; such as caste, religion, language and provisional problems etc.

UNIT III: SPECIAL PROGRAMME 6

Legal awareness-Health awareness-First-aid-Career guidance-Leadership training - cum - Cultural Programme-Globalization and its Economic Social Political and Cultural impacts,

UNIT IV: SPECIAL CAMPING PROGRAMME 6

Nature and its objectives-Selection of camp site and physical arrangement-Organization of N.S.S. camp through various committees and discipline in the camp-Activities to be undertaken during the N.S.S. camp-Use of the mass media in the N.S.S. activities.

UNIT V: N.S.S. REGULAR ACTIVITIES 6

Traffic regulation-Working with Police Commissioner's Office-Working with Corporation of Chennai-Working with Health Department-Blind assistance-Garments collection-Non-formal education-Environmental Education, Awareness and Training (EEAT)'-Blood donation.

SEMESTER VII

U18PCCE701	DISASTER PREPAREDNESS & PLANNING MANAGEMENT	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Environmental Engineering				
	Course Coordinator Name & Department: Mr.P.Dayakar, Civil Engineering				

COURSE OBJECTIVES: The overall aim of this course is to provide broad understanding about the basic concepts of Disaster Management with preparedness as a Civil Engineer. Further, the course introduces the various natural hazards that can pose risk to property, lives, and livestock, etc.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To Understand basic concepts in Disaster Management	U
CO2	To Understand Definitions and Terminologies used in Disaster Management	U
CO3	To Understand Types and Categories of Disasters	U
CO4	To Understand the Challenges posed by Disasters	U
CO5	To understand Impacts of Disasters Key Skills	U
CO6	To gain knowledge on sustainable and environmental friendly development methods	Ap

4	Approval	Meeting of Academic Council, May 2018

UNIT 1: INTRODUCTION **9**

Introduction-Concepts and definitions: disaster, hazard, vulnerability, risks-severity, frequency and details, capacity, impact, prevention, mitigation).

UNIT II: **DISASTERS CLASSIFICATION** **9**

Disasters-Disasters classification; natural disasters (floods, draught, cyclones,volcanoes, earthquakes, tsunami, landslides, coastal erosion, soil erosion, forest fires etc.); manmade disasters (industrial pollution, artificial flooding in urban areas, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.); hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility.

UNIT III: **DISASTER IMPACTS** **9**

Disaster Impacts-Disaster impacts (environmental, physical, social, ecological,economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.

UNIT IV: DISASTER MANAGEMENT **9**

Disaster Risk Reduction (DRR)-Disaster management cycle – its phases;prevention, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Post-disaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications); Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR programmes in India and the activities of National Disaster Management Authority.

UNITV: DISASTER RECOVERY **9**

Disasters, Environment and Development-Factors affecting vulnerability such asimpact of developmental projects and environmental modifications (including of dams, land-use changes, urbanization etc.), sustainable and environmental friendly recovery; reconstruction and development methods.

TEXT BOOKS:

4	Approval	Meeting of Academic Council, May 2018								

UNIT I PROFESSIONAL PRACTICE & ETHICS 6

Respective roles of various stakeholders: Government,Standardization Bodies (ex. BIS, IRC) professional bodies (ex. Institution of Engineers(India), Clients/ owners, Developers Consultants Contractors, Manufacturers/ Vendors/ Service agencies,Definition of Ethics, Professional Ethics, Business Ethics,Corporate Ethics, Engineering Ethics, Personal Ethics; Code of Ethics as defined in the website of Institution of Engineers (India);

Profession, Professionalism, Professional Responsibility, Gift Vs Bribery, Environmental breaches, Negligence, Deficiencies in state-of-the-art; Vigil Mechanism, Whistle blowing,

protected disclosures.

UNIT II GENERAL PRINCIPLES OF CONTRACTS MANAGEMENT 6

Indian Contract Act, 1972 andamendmentscovering General principles of contracting; Contract Formation & Law; Privacyof contract; Various types of contract and their features; Valid & Voidable Contracts; Prime and sub-contracts; Joint Ventures & Consortium;; Tenders, Request For Proposals, Bids & Proposals; Cost escalation; Delays, Suspensions & Terminations; Time extensions & Force Majeure; Delay Analysis; Liquidated damages & Penalties; Insurance & Taxation; Contract documentation; Contract Notices.

UNIT III ARBITRATION 6

Arbitration – meaning, scope and types - Arbitration and expert determination; International commercial arbitration; Arbitration agreements – essential and kinds, validity, reference and interim measures by court; Arbitration tribunal – appointment, challenge, jurisdiction of arbitral tribunal, powers, grounds of challenge, procedure and court assistance; Award including Form and content, Grounds for setting aside an award, Enforcement,Appeal and Revision; Enforcement of foreign awards – New York and Geneva Convention Awards; Distinction between conciliation, negotiation, mediation and arbitration, confidentiality.

UNIT IV LABOUR & OTHER CONSTRUCTION-RELATED LAWS 6

Role ofLabour in Civil Engineering; Methods of engaging labour- on rolls, labour sub-contract, piece rate work; Industrial Disputes Act, 1947; Collective bargaining; Industrial Employment (Standing Orders) Act, 1946; Workmen's Compensation Act, 1923; Building & Other Construction Workers (regulation of employment and conditions of service) Act (1996) and Rules (1998); RERA Act 2017, NBC 2017

UNIT V LAW RELATING TO INTELLECTUAL PROPERTY 6

Meaning of intellectualproperty, main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets; Law relating to Copyright in India including Historical evolution of Copy Rights Act, 1957, Meaning of copyright, Ownership of copyrights and assignment, Law relating to Patents under Patents Act, 1970 including Concept and historical perspective of patents law in India, Process of obtaining patent – application, examination, opposition and sealing of patents,Rights and obligations of patentee, Duration of patents – law and policy considerations, Infringement and related remedies;

UNIT I HIGHWAY DEVELOPMENT AND PLANNING 6

Significance of highway planning – Modal limitations towards sustainability - History of road development in India – Classification of highways – Locations and functions – Factors influencing highway alignment – Soil suitability analysis - Road ecology - Engineering surveys for alignment, objectives, conventional and modern methods.

UNIT II GEOMETRIC DESIGN OF HIGHWAYS 6

Typical cross sections of Urban and Rural roads — Cross sectional elements - Sight distances – Horizontal curves, Super elevation, transition curves, widening at curves – Vertical curves - Gradients, Special consideration for hill roads - Hairpin bends – Lateral and vertical clearance at underpasses.

UNIT III TRAFFIC ENGINEERING & CONTROL 6

Traffic Characteristics, traffic engineering studies,traffic flow and capacity, traffic regulation and control; design of road intersections; design ofparking facilities; highway lighting; problems,Intelligent Transport System For Traffic Management, Enforcement And Education.

UNIT IV PAVEMENT MATERIALS 6

Materials used in Highway Construction- Soils, Stone aggregates, bituminous binders, bituminous paving mixes; Portland cement and cement concrete: desirable properties, tests, requirements for different types of pavements. Problems

UNIT V DESIGN OF PAVEMENTS 6

Introduction; flexible pavements, factors affecting design and performance; stresses in flexible pavements; design of flexible pavements as per IRC; rigid pavements- components and functions; factors affecting design and performance of CC pavements; stresses in rigid pavements; design of concrete pavements as per IRC; problems

Mini Project will have mid semester presentations and end semester presentation. Mid semester presentation will include identification of the problem based on the literature review on the topic referring to latest literature available.

End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals' contribution.

Continuous assessment ofMini Project at Mid Sem and End Sem will be monitored by the departmental committee.

SYLLABUS

The student shall submit a brief report on the training undergone and a certificate from the organization concernedat the end of Industrial / Practical training / internship / Summer Project. The evaluation will be made based on this report and a Viva-Voce Examination, conducted internally by a three member Departmental Committee constituted by the Head of the Department. Certificates (issued by the Organization) submitted by the student shall be attached to the mark list and sent to the Controller of Examinations by the Head of the Department.

SYLLABUS **30**

Each individual has behavior patterns that are shaped by the context of his or her past. Most often, adapting the behaviour to the changing context of the reality a person lives in becomes difficult which may lead to the reduction in personal effectiveness and natural self-expression. The main focus of this course is to equip the students with useful approaches to help in the deeper understanding of self and help individuals empower themselves to be the source of their own growth and development. The course will help students to learn effective communication skills, Group and team building skills and will help them learn the goal setting process and thus become more effective in achieving their goals.

SYLLABUS **30**

Many students, when they enter engineering, are full of enthusiasm to understand new areas, to build systems and to experiment and play with them. This enthusiasm is to be tapped and to direct it to exploration and sustained pursuit by the student which may result in development of a working system, a prototype, or a device or material, etc. They are not required or even expected to produce research or an innovation.

UNIT I BASICS OF INFRASTRUCTURE 9

Introduction – Definition of basic terminologies, role of infrastructure in economic development, types of infrastructure, measurement of infrastructure capacity - bases for quantification of demand and supply of various types of infrastructure - Indian scenario – adequacy and quality, Infrastructure planning – goals & objectives.

UNIT II DEMAND FOR INFRASTRUCTURE 9

Identification and quantification – demand for infrastructure – application of techniques to estimate supply – use of econometric, social and land use indicators – forecast on demand and service of infrastructure – impact on land use.

UNIT III FORECASTING TECHNIQUES IN INFRASTRUCTURE 9

Views in forecasting techniques - identify and prioritize areas of development, Integration of strategic planning – infrastructure at urban, regional and national levels – case studies in infrastructure planning.

UNIT IV: EVALUATION OF INFRASTRUCTURE INVESTMENTS 9

Infrastructure Management: Concepts, Common aspects of urban and rural infrastructure management systems; pavement and bridge management systems, Integrated infrastructure management.

UNIT V CASE STUDIES 9

Emerging trends in infrastructure: Overview of Public-Private Sector Participation in infrastructure projects, Understanding stakeholders' concerns, regulatory framework, risk management in infrastructure projects, public policy for infrastructure Sectoral Overview: Highways, railways, waterways, airports, urban and rural infrastructure: roads, housing, water supply, sanitation – case study examples.

UNIT I MAINTENANCE AND REPAIR STRATEGIES 9

Maintenance and Repair Strategies Maintenance, Repair and Rehabilitation, Facets of Maintenance, importance of Maintenance, Various aspects of Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration;

UNIT II STRENGTH AND DURABILITY OF CONCRETE 9

Strength and Durability Of Concrete- Quality assurance for concrete – Strength, Durability and Thermal properties, of concrete – Cracks, different types, causes – Effects due to climate, temperature, Sustained elevated temperature, Corrosion – Effects of cover thickness;

UNIT III SPECIAL CONCRETES

Special Concretes- Polymer concrete, Sulphur infiltrated concrete, Fibre reinforced concrete, High strength concrete, High performance concrete, Vacuum concrete, Self-compacting concrete, Geopolymer concrete, Reactive powder concrete, Concrete made with industrial wastes;

UNIT IV TECHNIQUES FOR REPAIR AND PROTECTION METHODS 9

Techniques for Repair and Protection Methods- Non-destructive Testing Techniques, Epoxy injection, Shoring, Underpinning, Corrosion protection techniques – Corrosion inhibitors, Corrosion resistant steels, Coatings to reinforcement, cathodic protection; Repair, Rehabilitation and Retrofitting of Structures- Evaluation of root causes; Underpinning & shoring; some simple systems of rehabilitation of structures; Guniting, shotcreting;

UNIT VREPAIR, REHABILITATION AND RETROFITTING OF STRUCTURES 9

Non-Destructive testing systems; Use of external plates, carbon fibre wrapping and carbon composites in repairs. Strengthening of Structural elements, Repair of structures distressed due to corrosion, fire, Leakage, earthquake – Demolition Techniques – Engineered demolition methods – Case studies.

UNITI NEED FOR WATER TREATMENT 9

Attributes of water supply systems, drinking water quality. Relationships between diseases and water quality, hygiene and sanitation. Need for water treatment.

UNITII WATERTREATMENT 9

Point of use water treatment systems, filters, bio-sand filters, disinfection systems for rural areas, chlorination, Solar disinfection systems, removal of arsenic, fluoride and iron. Onsite sanitation systems.

UNITIII SANITATION 9

Basic requirement of sanitation; Decentralized / onsite wastewater management; small bore / settled effluent sewer system – Design and operation.

UNITIV SEWAGE TREATMENT 9

Nexus between water quality and sanitation. Importance of hydrogeology on selection of onsite sanitation systems, Design of Septic tanks, single pit and double pit toilets. Small bore systems, bio digesters, reed beds, constructed wetlands, sludge/septage management systems.

UNITV SEWAGE DISPOSALAND REUSE 9

Methods of disposal, Land disposal, sewage farms – Artificial recharge of ground water; Recycle and Reuse of sewage – Grey water Harvesting – Salt water intrusion and remediation – Ground water pollution and remediation.

U18PECE014	**ENVIRONMENTAL FLUID MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Introduction to Fluid Mechanics				
	Course Coordinator Name & Department: Civil Engineering				

COURSE OBJECTIVES: To understand the basic properties of the fluid, fluid kinematics, fluid dynamics and to analyze and appreciate the complexities involved in solving the fluid flow problems. To introduce the basics of hydrostatic forces involved in fluid mechanics and also to acquaint the students to learn about the theorems on Pascal's law and buoyancy.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To learn about the basics of fluid mechanics and various properties of fluids	U
CO2	To learn about the various forces on plane and curved surfaces and the concepts of buoyancy	U
CO3	To have a clear understanding about fluid kinematics and dynamics	U
CO4	To study the basics of boundary layer flow and flow through pipes	R
CO5	To study about various models like distorted models and various dimensionless numbers	R
CO6	To understand the concepts of Rayleigh's method and Buckingham PI-Theorem	R

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	2	3	4	5	6	7	8	9	10	11	12	PSO 1	PSO 2
2	CO1	3					3			2			3		3
	CO2		2								1			2	
	CO3	2	3		2		3			2		2			3
	CO4		3				2			2	2		3	3	2
	CO5	3	1	2		3			2		3	2		2	2
	CO6	1		2				3			1		1
