4	Approval	Meeting of Academic Council, May 2018								

UNIT I DEFINITIONS &FLUID PROPERTIES 8

Definitions – Fluid and Fluid Mechanics – Dimensions and units – Fluid properties continuum Concept of system and control volume.

UNIT II FLUID STATICS 8

Pascal's law and hydrostatic equation – Forces on plane and curved surfaces – Buoyancy-Pressure measurement.

UNIT III FLUID DYNAMICS & KINEMATICS 11

Fluid Kinematics - Stream, steak and path lines, Classification of flows-continuity equation, Stream and Potential functions, Flow nets, Velocity measurement. Euler and Bernoulli's equations- Application of Bernoulli's equation-Discharge measurement-laminar flows through pipes and between plates – Hagen Poisuille equation – Turbulent flow, DancyWeisbach formula - moody Diagram – Momentum Principle- Impact of jets on plane and curved plates.

UNIT IV BOUNDARY LAYER AND FLOW THROUGH PIPES 9

Definition of boundary layer – Thickness and classification - Displacement and momentum thickness. Development of laminar and Turbulent flows in circular pipes, Major and Minor losses of Flow in Pipes in series and in parallel pipe network.

UNIT V SIMILITUDE AND MODEL STUDY 9

Dimensional analysis – Rayleigh's method – Buckingham PI-Theorem- Similitude and Models – Scale effect and distorted models.

Course Coordinator HOD

U18PECE015	**DESIGN OF HYDRAULIC STRUCTURES / IRRIGATION ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**

	Prerequisite: Introduction to Fluid Mechanics
	Course Coordinator Name & Department: Civil Engineering

COURSE OBJECTIVES: To present the basic theory and practice for various areas of Agricultural Engineering, application of engineering to the problems of agricultural production.To train the students and develop basic understanding of soil water plant relationship and select and design appropriate method of water application in varied situations.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To gain knowledge on soil water conservation, irrigation engineering and farm structures.	Ap
CO2	To understand the basic requirements of irrigation and various irrigation techniques, requirements of the crops.	U
CO3	To understand the basics of design of unlined and lined irrigation canals design.	U
CO4	To apply math, science, and technology in the field of water resource Engineering.	Ap
CO5	To design the Hydraulic structures.	C
CO6	To know about Participatory Irrigation Management	U

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I IRRIGATION AS A SCIENCE 9

Definition, Need, Benefit, Historical Development, Scope in the country and the state - Sources for irrigation, wells, springs, rivers, streams, tanks, reservoirs - Flow and Lift irrigation. Methods of flow irrigation - Devices and equipments for lift irrigation - Duty, different concepts of duty and factors affecting duty.

UNIT II CROP WATER REQUIREMENTS 9

Soil – plant – water relationship - Evapotranspiration – consumptive use - Perennial, Annual and Seasonal crops - Principal irrigated, dry and wet irrigated crops - Assessment of crop water requirements - Effective rainfall - Net irrigation requirements for principal crops - Irrigational quality - Salt resistant crops - Water logging, remedial measures.

UNIT III CONVEYANCE &DISTRIBUTION OF IRRIGATION WATER 9

Head works – Diversion and storage structures -Canals unlined and lined. Canal alignments - contour ridge, Branch canals, minors, water course and notches - Control structures - drops, escapes, shutters and operating devices, division boxes - Cross drainage structures- undertunnels, aqueducts, siphons, siphon aqueducts - Cross masonry structures - road and railway bridges.

UNIT IVIRRIGATION WATER MANAGEMENT 9

Need for optimization of water use - Management and productivity - Minimizing irrigation water losses - Operational rules for regulation - physical structures for management on farm development works - Participatory Irrigation Management (PIM) - Water Users Associations (WUA) - Training the water users.

UNIT VDESIGN OF IRRIGATION STRUCTURES 9

Sluices and surplus weirs in tanks - Earthdam section, homogenous and zoned. Anicuts and weirs on solid and permeable foundation - Head regulators, canal drops, canal syphones and aqueducts, undertunnels - Simple design of masonry and earthdams- Designing channels- Computer aided designs.

U18PECE016	CONCRETE TECHNOLOGY	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Building Materials & Testing Methods				
	Course Coordinator Name & Department: Civil Engineering				

COURSE OBJECTIVES: To impart knowledge to the students on the properties of materials for concrete by suitable tests, mix design for concrete and special concretes.

	COURSE OUTCOMES (COs):	**Revised Bloom's Taxonomy**
CO1	To study about the various properties of concrete materials	U
CO2	To understand the behavior of fresh and hardened concrete	U
CO3	To identify the design concrete mixes as per IS and ACI codes	Ap
CO4	To understand the need for special concretes	U
CO5	To knowthe concept of concreting methods	U

CO6	To learn the special concreting methods.	U

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I CONCRETE MAKING MATERIALS 9

Concrete; Properties of ingredients, tests, Grades of cement - Chemical composition, Hydration of cement - Production of concrete, mixing, compaction curing - Properties of fresh concrete

UNIT II CONCRETE 9

Properties of fresh concrete, Hardened concrete - Defects in Concrete, Concrete additivesBehavior of concrete in tension and compression, shear and bond - Influence of various factors on test results - Time dependent behavior of concrete - Creep, shrinkage and fatigue

UNIT III MIX DESIGN 9

Concrete mix design - Proportioning of concrete mixes, basic considerations, cost specifications, factors in the choice of mix proportion, different method of mix design. Quality control, Behavior of concrete in extreme environment

UNIT IV SPECIAL CONCRETE 9

Light Weight concrete, Fly ash concrete, Fibre reinforced concrete, Polymer Concrete, Super plasticized concrete, Epoxy resins and screeds for rehabilitation - Properties and Applications- High performance concrete.

UNIT V CONCRETING METHODS 9

Process of manufacturing of concrete, methods of transportation, placing and curing - Temperature problem in concreting, hot weather, cold weather and under water conditions, Resistance to freezing - special concreting method.

4	Approval	Meeting of Academic Council, May 2018								

UNIT I SLOPE STABILITY 9

Slope failure mechanisms - Types - Infinite slopes - Finite slopes - Total stress analysis for saturated clay - Method of slices - friction circle method - Use of stability number - Slope protection measures.

UNIT II EARTH PRESSURES 9

Earth pressure theory – Plastic equilibrium in soils – active and passive states – Rankine's theory – Coloumb's wedge theory – Classical and limit equilibrium solution – Earth pressure on retaining walls of simple configurations – pressure on the wall due to single line load alone.

UNIT III ANALYSIS OF RETAINING WALLS 9

Types of retaining walls- Analysis of retaining walls- Graphical method - Culmann's method – Rehbhan's method- Stability of retaining wall.

UNIT IV PILE FOUNDATION 9

Types of piles – Factors influencing the selection of pile – cuts and excavations - Sheet Piles – Codal provisions

UNIT V INSTRUMENTATION 9

Instrumentation in soil engineering, strain gauges, resistance and inductance type, load cells,earth pressure cells, settlement and heave gauges, pore pressure measurements – slopeindicators, sensing units, case studies.

UNIT 1 INTRODUCTION 9

Introduction - Classification of rural highways and urbanroads. Objectives and requirements of highway geometric design; Design Controls: Topography, vehicle characteristics and design vehicle, driver characteristics, speed, traffic flow and capacity, levels of service, pedestrian and other facilities, environmental factors.

UNIT II DESIGN OF AT GRADE INTERSECTIONS & INTERCHANGES 9

Design Of Intersections: Characteristics and design considerations of at-grade intersections; Rotary intersections; - Design of Parking lots - Principles of design, channelization, roundabouts, staggered intersections, Grade separations and interchanges: Design of interchanges - Major and minor interchanges, entrance and exit ramps, acceleration and deceleration lanes

UNIT III GEOMETRIC DESIGN 9

Geometric design provision for various transportation facilities as per IRC guidelines, geometric design of horizontal and vertical alignment, design of expressways/ high speed corridors - Facilities for non motorized traffic - Bicycles and pedestrian facility design, slow carriagewaysbuses and trucks, Pavement surface characteristics - types, cross slope, skid resistance, unevenness.

UNIT IV DESIGN COMPONENTS 9

Design Elements: Sight distances, Horizontal alignment - design considerations, stability at

curves, super elevation, widening, transition curves; curvature at intersections, vertical alignment - grades, ramps, Cross Section Elements: Right of way and width considerations, roadway, shoulders, kerbs traffic barriers, medians, frontage roads.

UNIT V DESIGN OF DRAINAGE FACILITIES 9

Design of summit and valley curves, combination of vertical and horizontal alignment including design of hair pin bends, design of expressways, IRC standards and guidelines for design problems; Importance,Principle, drainage of various geometric elements, surface and subsurface drainage.

UNIT I URBAN PLANNING AND DEVELOPMENT 9

Introduction-Definition of terms, Explanation of concepts, National policies and strategies on issues related to Urban development – Trends of Urbanization- Positive and Negative impacts of Urban development Principles of planning – Types and levels of Urban plans, Stages in the planning process.

UNIT II DEVELOPMENT PLANS, FORMULATION & EVALUATION 9

Scope and content of Regional Plan, Master Plan, Detailed Development Plan, Structure Plan, Sub Regional Plan, DCR planning and developments of industrial estates, SEZ, Development strategies, formulation and evaluation.

UNIT III PLAN IMPLEMENTATION AND URBAN MANAGEMENT 9

Constraints for plan implementation – Industrial, Financial and Legal Constraints, Institutional Arrangements for Urban Development – Financing of Urban Developments - Decision Support System for Urban Management – Involvement of public, private, NGO, CBO & Beneficiaries.

UNIT IV SUSTAINABLE URBAN AND TRANSPORT PRINCIPLES 9

Urban Environmental Sustainability, Urban Sustainable Development, Methods and Tools for Sustainable Appraisal, Sustainable Transportation – Principles, indicators and its implications Environment and Resources- Economic Benefits of Sustainable Transportation.

UNIT V URBAN REGION AND ENVIRONMENT 9

Sustainability Assessment, Future Scenarios, Shape of Urban Region, Managing the change, Integrated Planning, Sustainable Development- City Centre, Development Areas, Inner City Areas, Suburban Areas, Periurban and Country side, Economy and Society.

4	Approval	Meeting of Academic Council, May 2018								

UNIT I BASIC PRINCIPLES 9

Time Value of Money – Cash Flow diagram – Nominal and effective interest- continuous interest . Single Payment Compound Amount Factor (P/F,F/P) – Uniform series of Payments (F/A,A/F,F/P,A/P)– Problem time zero (PTZ)- equation time zero (ETZ). Constant increment to periodic payments – Arithmetic Gradient(G), Geometric Gradient (C).

UNIT II COMPARING ALTERNATIVES PROPOSALS 9

Comparing alternatives- Present Worth Analysis, Annual Worth Analysis, Future Worth Analysis, Rate of Return Analysis (ROR) and Incremental Rate of Return (IROR)Analysis,

Benefit/Cost Analysis, Break Even Analysis.

UNIT III EVALUATING ALTERNATIVE INVESTMENTS 9

Real Estate - Investment Property, Equipment Replace Analysis, Depreciation – Tax before and after depreciation – Value Added Tax (VAT) – Inflation.

UNIT IV FUNDS MANAGEMENT 9

Project Finance – Sources of finance - Long-term and short -term finance, Working Capital Management, Inventory valuation, Mortgage Financing - International financial management foreign currency management.

UNIT V FUNDAMENTALS OF MANAGEMENT ACCOUNTING 9

Management accounting, Financial accounting principles- basic concepts, Financial statements – accounting ratios - funds flow statement – cash flow statement.

UNIT I WATER SUPPLY SYSTEMS 9

Storage requirements, impounding reservoirs, intake structures, pipe, hydraulics, design of distribution systems, distribution and balancing reservoirs, pipe materials, appurtenances, design for external loads, maintenance and operation. Sanitary Sewerage Systems:

UNITII POPULATIONFORECASTING 9

Forecasting of population - Arithmatic Increase - Geometrical Increase - Incremental Increase - Graphical Methods - Logistic Curve Method - Per capita consumption - Design period - Variation in demand - Factors Affecting per capita consumption.

UNIT IIIDISTRIBUTION 9

Water transmission main design - pipe materials - economics - water distribution pipe networks - methods for analysis and optimization - Laying and maintenance, insitu lining - appurtenances.

UNIT IV - SANITARYSEWERAGE SYSTEMS 9

Flow estimation, sewer materials, hydraulics of flow in sewers, sewer layout, sewer transitions, materials for sewers, appurtenances, manholes, sewer design, conventional and model based design, sewage pumps and pumping stations, corrosion prevention, operation and maintenance, safety.

UNIT V STORM WATER 9

Drainage layouts, storm runoff estimation, hydraulics of flow in storm water drains, materials, cross sections, design of storm water drainage systems, inlets, storm water pumping, operation and maintenance

Course Coordinator **HOD**

U18PECE024	OPEN CHANNEL FLOW	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Hydraulics Engineering				
	Course Coordinator Name & Department: Civil Engineering				

COURSE OBJECTIVES: Application of principles of fluid mechanics to the solution of problems encountered in both natural and constructed water systems. Use of model studies and computers in solving a host of problems in hydraulic engineering.

	COURSE OUTCOMES (COs):	**Revised Bloom's Taxonomy**
CO1	The students will be apply their knowledge about fluid mechanics in addressing problems in open channels	Ap
CO2	They will develop skills to solve problems using software.	An
CO3	They will be able to make flow measurements in fields.	C
CO4	To design channels for sediment transport	C
CO5	To design hydraulic models	C
CO6	To learn the design concepts of stable channels and regime channels.	C

UNIT I BASIC PRINCIPLES 9

Basic concepts of uniform flow - computations. Specific energy and specific force concepts – applications.

UNIT II STEADY VARIED FLOWS IN OPEN CHANNELS 9

Dynamic equation for spatially varied flows. Flow profile computations. Introduction to HEC-RAS. Spatially varied flows and rapidly varied flows – applications.

UNIT III UNSTEADY FLOWS IN OPEN CHANNELS 9

Equations of motion. Uniformly progressive wave. Rapidly varied unsteady flow – positive and negative surges. Dam break problem. Flood routing in large channel networks, Flood routing in compound channels; Flood routing in channels with flood plains, Surface irrigation flow modeling

UNIT IV SEDIMENT TRANSPORT 9

Sediment properties – inception of sediment motion – bed forms. Bed load suspended load – Total sediment transport. Design of stable channels and regime channels. Reservoir sedimentation and trap efficiency.

UNIT V FLOW MEASUREMENTS AND HYDRAULIC MODELING 9

Sharp-Crested weirs, broad-crested weirs, critical depth flumes. Recent advancement in open channel flow measurements. Physical modeling in hydraulics. Dimensional analysis. Modeling closed flows and free surface flows. Distorted models. Design of physical models.

U18PECE025	GROUNDWATER ENGINEERING	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Foundation Engineering				
	Course Coordinator Name & Department: Civil Engineering				

COURSE OBJECTIVES: The objective of this course is enable to the student to understand the basic empirical knowledge of the residence and movement of groundwater, as well as a number of quantitative aspects.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Able to evaluate the aquifer parameters and groundwater resources for different hydro-geological boundary conditions	E
CO2	Formulate and solve conjunctive use of surface water and groundwater resource utilization problems	An
CO3	Identify sites for artificial recharge of groundwater	An
CO4	To imparts exposure towards well design and practical problems of ground water aquifers.	An
CO5	To study about groundwater quality and contamination	U
CO6	To understand the Evaluation of well loss parameters.	E

UNIT I GROUNDWATERBASICS 8

Introduction to Groundwater – Hydro meteorology – Groundwater in Hydrologic Cycle – Occurrence of groundwater – zone of Aeration and Saturation – Hydrogeology — Types of aquifers soil sample analysis - Water bearing materials – Aquifer parameters and its determination.

UNIT II GROUNDWATER HYDRAULICS 10

Groundwater Movement - Darcy's law and its limitations - Stream lines and flow net analysis – Potential flow theory – Discharge and draw down for various condition of groundwater flow - Principles of groundwater flow and its equation – Dupuit – Forchheimer assumptions – Influent and Effluent streams - Evaluation of well loss parameters – Partial penetration of

wells – Interference of wells

UNIT III PUMPING TEST ANALYSIS 10

Determining aquifer parameters for unconfined, leaky and non-leaky aquifers – steady and transient conditions - Slug test – Locating hydro geological boundaries – Image well theory – Determination of well characteristics and specific capacity of wells – Well characteristics of large diameter wells.

UNIT IV WELL DESIGN AND CONSTRUCTION 8

Well design criteria – Construction of wells – Well drilling methods – Filter design – Artificial and natural packing – Well casings and screens – Production test – Maintenance of production wells – Pumping Equipment – protection of wells and Rehabilitation – Horizontal wells - Collector wells and Infiltration galleries

UNIT V SPECIAL TOPICS 9

Methods of artificial groundwater recharge – Groundwater Basin Management and conjunctive use - Groundwater assessment and balancing – Seawater intrusion in coastal aquifers – Land Subsidence – Groundwater flow in Hard Rock System: conceptual models – structure and hydrodynamic properties of hard rock aquifers.

U18PECE026	**DESIGN OF CONCRETE STRUCTURES**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Reinforced Concrete Design				
	Course Coordinator Name & Department: Civil Engineering				

COURSE OBJECTIVES: To impart concepts of design of reinforced concrete structures such as, retaining walls water tanks, components of bridge.To make the students know the concepts of design of structures like prestressed concrete continuous beams.

COURSE OUTCOMES (COs):	**Revised Bloom's Taxonomy**

CO1	To design the reinforced concrete elements using limit state and working stress methods	C
CO2	To study about the design of types of reinforced concrete slab using limit state method	C
CO3	To understand the design concept of shear, bond, anchorage and torsion.	U
CO4	To know the limit state design of reinforced concrete column	An
CO5	To know he limit state design of reinforced concrete footing	An
CO6	To learn the detailing for earthquake resistant construction.	An

UNIT I RETAINING WALLS 9

Design of cantilever and counter-fort type retaining wall - All design steps/process to as per the most recent BIS code of practices

UNIT II WATER TANKS 9

Water tank and staging - Introduction, Design criteria - Design of rectangular and circular water tank - Design of Intze tank - Staging for overhead tank

UNIT III BRIDGES 9

Introduction to bridge engineering - Investigation for bridges, IRC loadings - Design of slab culvert

UNIT IV PRE STRESSED CONCRETE 9

Design of end block - Pre-stressed concrete - Introduction,Principles of Pre–stressing pre-stressing system - losses in pre-stress

UNIT V DESIGN OF BEAMS AND FRAMES 9

Design of continuous beams and building frames -Moment redistribution, Estimation of wind and seismic loads - Desirable features of earthquake resistant construction -Detailing for earthquake resistant construction.

U18PECE027	**GROUND IMPROVEMENT TECHNIQUES**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Geotechnical Engineering				
	Course Coordinator Name & Department: Civil Engineering				

COURSE OBJECTIVES: To develop an understanding of the ground improvement techniques and use of new materials and its behaviour for ground improvement techniques.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To develop an awareness of problematic soils and selection of ground improvement techniques based on soil conditions	U
CO2	To understand drainage, dewatering, grouting technique in ground improvement method	U
CO3	To understand the in situ densification of cohesion less and cohesive soils	U
CO4	To understand the applications of grouting and its materials	U
CO5	To get the awareness of the ground improvement techniques and to study the applications of geosynthetics.	An
CO6	To learn the procedures for piles-installation techniques.	Ap

4	Approval	Meeting of Academic Council, May 2018								

UNIT I GEOTECHNICAL PROBLEMS **9**

Ground improvement - Role of ground improvement infoundation engineering, Methods of ground improvement, Geotechnicalproblems in alluvial, lateritic and black cotton soils, Selection of suitable ground improvement techniquesbased on soil conditions

UNIT II DEWATEREING **9**

Dewatering Techniques - Well points, Vacuum and electro-osmotic methods, Seepage analysis for two dimensional flow - fully andpartially penetrated slots in homogeneous deposits (Simple cases only)

UNIT III METHODS OF GROUND IMPROVEMENT **9**

In-situ densification of cohesion-less soils andconsolidation of cohesive soils: Dynamic compaction Vibroflotation, Sand compactionpiles. Consolidation: Preloading with sand drains, and fabric drains, Stone columns, Lime piles-installation techniques only – relative meritsand limitations – deep soil mixing

UNIT IV GROUTING TECHNIQUE **9**

Grouting - Types of grouts – Suspension grouts - solutions grouts, Grouting equipment and method - Grouting with soil, Bentonite - cement mixes and asphalt – Grout monitoring schemes

UNIT V GEOSYNTHETICS APPLICATIONS **9**

Geosynthetics - Functions of Geotextiles – Separation – Filtration – Drainage - reinforcement - Geomembranes - Containments and barriers - Application to Ground Anchors.

U18PECE028	PUBLIC TRANSPORTATION SYSTEMS	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Surveying & Geomatics				
	Course Coordinator Name & Department: Civil Engineering				

COURSE OBJECTIVES: Student gains knowledge on various parts of public transport characteristics and the design considerations. Also get familiar with transit scheduling, components of scheduling Process, determination of service requirements.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Understand the importance of public transport activities.	U
CO2	To know about the transport travel characteristics.	U
CO3	To understand the concepts of trip.	U
CO4	To learn the ideas of transit network and scheduling	Ap
CO5	To know about transit system statistics	U
CO6	To understand the principles of good layout.	U

UNIT 1 INTRODUCTION **9**

Public Transport and Socioeconomic Activities, Historical Development of Transport, Transportation in the Cities, Freight Transportation, Future Developments, Urban Transportation System Planning - Conceptual Aspects - Transport Planning Process, Sequence

of Activities Involved in Transport analysis.

UNIT II TRANSPORT TRAVEL CHARACTERISTICS 9

Transport travel characteristics – Trip chaining, technology of bus, rail, rapid transit systems, basic operating elements, Trip Generation Analysis - Trip Production Analysis, Category Analysis, Trip Attraction Modelling. Trip Distribution Analysis - Presentation of Trip-Distribution Data, Basis of Trip Distribution, Gravity Model of Trip Distribution, Methods of Trip Distribution.

UNIT III TRANSIT NETWORK 9

Transit network planning – planning, objectives, principles, considerations, transit lines – types, geometry, transit routes and characteristics, timed transfer networks, prediction of transit usage, evaluation of network, accessibility considerations.

UNIT IV TRANSIT SCHEDULING 9

Components of scheduling process - determination of service requirements, scheduling procedure, marginal ridership, crew scheduling, transit agency and economics, organizational structure of transit agency, management and personnel, transit system statistics, performance and economic measures, operations, fare structure.

UNIT V DESIGN CONSIDERATIONS 9

Design of facilities – bus stops and terminals – principles of good layout, types of layout, depot location, twin depot concept, crew facilities and amenities.

U18PECE031	REMOTE SENSING AND GIS	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Surveying & Geomatics				
	Course Coordinator Name & Department: Civil Engineering				

COURSE OBJECTIVES: To introduce the students to the basic concepts and principles of various components of remote sensing. To provide an exposure to GIS and its practical applications in civil engineering.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To study the basic concepts of Remote Sensing.	U
CO2	To know about the how the EMR interactions with water, atmosphere and earth surface materials.	U
CO3	To study and apply various image interpretation, enhancement and classification techniques.	Ap
CO4	To acquire knowledge about History, development of GIS and concept of Data Entry, Storage & Maintenance of the DBMS in GIS.	Ap
CO5	To Apply Remote Sensing and GIS in applications in land use, disaster management, and resource information systems.	Ap
CO6	To understand the various components of GIS.	U

UNIT I REMOTE SENSING 9

Definition Historical Components of Remote Sensing Principles & methods of remote sensing - Active and Passive remote sensing - Remote Sensing platforms -Electromagnetic radiation- Spectrum- Block body radiation – Planks law – Stefan – Boltzmann law – satellites

classification – based on orbit- sun synchronous and Geosynchronous based on purpose Earth Resources satellites, communication satellite Weather satellites Spy satellites Sensors Description of sensor in landscape, spot, IRS series and current satellites- Radar-SLAR and SAR.

UNIT II EMR INTERACTIONS 9

EMR Interaction with atmosphere- Scattering -Rayleigh, Mie, Non Selective and Raman Scattering, Back scattering- EMR Interaction with water and Ozone- Atmospheric windows and its significance -EMR interaction with the earth surface materials- Radiance, irradiance, Absorbed and Transmitting energy – Reflectance - Specular and diffuse surface, Spectral signature and curves, EMR interaction with soil- Resolution- Spectral, Spatial, Radiometric, and Temporal.

UNIT III DIGITAL IMAGE PROCESSING 9

Visual Interpretation of Satellite Images – Elements of Interpretation - Interpretation Keys - Characteristics of Digital Satellite Image – Image enhancement – Filtering – Classification – Supervised and Unsupervised Classification-DEM- Types, Sources of digital Elevation data-Shuttle Radar Topographic Mission (SRTM) data.

UNIT IV GEOGRAPHIC INFORMATION SYSTEM 9

GIS – Components of GIS – Hardware, Software and Organisational Context – Data – Spatial and Non-Spatial – Maps – Types of Maps – Projection – Types of Projection - Data Input – Digitizer, Scanner – Editing – Raster and Vector data structures – Comparison of Raster and Vector data structure – Analysis using Raster and Vector data – Retrieval, Reclassification, Overlaying, Buffering – Data Output – Printers and Plotters.

UNIT V REMOTE SENSING AND GIS APPLICATIONS 9

Integration of GIS and Remote Sensing – Applications - Urban Applications-– Water resources – Watershed Management – Rainfall-Runoff Modeling- Flood Mapping-Resources Information Systems and other applications.

UNIT I INTRODUCTION 9

Definition of Productivity, Impact of productivities on construction duration and costs, Factors Impacting Construction Productivity, role of productivity in the construction. Constructability and Off-site Construction.

UNIT II PRODUCTIVITY IN CONSTRUCTION 9

Tools to measure productivity in Construction, variousmeasuring productivities of construction equipment, Staff and Labour and typical benchmarks for the same, method of measuring the construction productivity, Factors Affecting Labor Productivity.

UNIT III PRODUCTIVITY ANALYSIS 9

Productivity analysis from Daily Progress Reports; what is Productivity?, Lean Construction concepts of Value Adding activities, Non-Value Adding Activities and Non-Value Adding but Necessary Activities;

UNIT IV FRAMEWORK AND MEASUREMENT 9

Framework for Productivity Improvement in Construction, Productivity measurements by special Lean Construction-oriented field methods such as Work Sampling, Techniques for Measuring and Improving Productivity at Construction Sites, Takt time analysis, Foreman Delay Surveys;

UNIT V PRODUCTIVITY MANAGEMENT 9

Productivity improvement measures such as Value Stream Mapping, Location-Based management Systems, 5S, good Housekeeping, etc.; use of specialist software such as Vico for productivity studies.

UNIT-I INTRODUCTION 9

Understanding of basics of microbiology, metabolism and energetic, bio kinetic parameter, reactors and reactor analyses. Characterization of waste. Aerobic, anaerobic and anoxic systems. Suspended and attached growth biological systems.

UNIT-II AEROBIC TREATMENT OF WASTEWATER 9

Activated Sludge processand process modifications, Process design considerations, Treatment Ponds and aerated Lagoons, aerobic pond, facultative pond, anaerobic ponds, polishing ponds, constructed wet lands etc. Attached Growth Biological Treatment Systems, Trickling Filters, Rotating Biological Contactors. Activated Biofilters, Moving bed biological reactor (MBBR), Sequential Batch reactors (SBR), Membrane Biological Reactors (MBR)

UNIT-III ANAEROBIC TREATMENT OF WASTEWATER 9

Anaerobic processes, Process fundamentals, Standard, high rate and hybrid reactors, Anaerobic filters, Expanded /fluidized bed reactors, Upflow anaerobic sludge blanket reactors, Performance and design aspects, Expanded granular bed reactors, Two stage/phase anaerobic reactors. Sludge Digestion, anaerobic digestion, aerobic digestion

UNIT-IV SLUDGE TREATMENT AND DISPOSAL 9

Design of sludge management facilities, slude thickening, sludge digestion, biogas generation, sludge dewatering (mechanical and gravity)- upgrading existing plants-ultimate residue disposal- recent advances.

UNIT-V OPERATIONS,MAINTENANCE, MANAGEMENT AND CASE STUDIES 9

Operational problems-trouble shooting, planning, organizing and controlling of plants operations- capacity building, case studies on sewage treatment plants- sludge management facilities.

UNIT I HYDROMETEOROLOGY 9

Hydrological cycle -Hydro meteorological factors -Cloud formation- Winds and their movement -types of precipitation.- Forms for precipitation- Density and Adequacy of rain

gauges – Recording and non-recording gauges.

UNIT II PRECIPITATION AND ABSTRACTIONS 9

Spatial distribution – Consistency analysis – Frequency analysis – Intensity, duration, frequency relationships- Evaporation –Infiltration- Norton's equation Infiltration indices – Types of streams – Stage discharge relationships – Flow measurements – Currents meter method for velocity measurements.

UNIT III HYDROGRAPH ANALYSIS 9

Factors affecting the shape of hydrograph- Components of DRH. Baseflow- Unit hydrograph - Scurve hydrograph- Synthetic unit hydrograph.

UNIT IV GROUND WATER HYDROLOGY 9

Occurrence of ground water – Types of aquifer – Dupuifs assumptions – Darcy's law – Estimation of aquifer parameters – Pump tests.

UNIT V FLOOD ANALYSIS 9

Flood estimation – Gumbel's method – log Pearson types III method – Reservoir flood routing, Channel routing, Other methods of routing.

UNIT I FUNDAMENTALS OF HYDROLOGY 9

Hydrological cycle – estimation of various components of hydrological cycle – clouds – rainfall – runoff – evaporation – transpiration – evapotranspiration – interception – depression storage – spectral properties of water – case studies.

UNIT II DRAINAGE BASIN ASSESSMENT 9

Watershed divide – stream networks – Delineation and codification of watersheds – basin morphometric analysis – linear, aerial, relief aspects – Rainfall - runoff modeling – urban hydrology –flood forecasting, risk mapping, damage assessment - soil moisture area – drought forecasting and damage assessment – mitigation- GIS applications for hydrological disaster studies.

UNIT III IRRIGATION AND WATER QUALITY 9

Project investigation – implementation - maintenance stage - location of storage / diversion works – canal alignment – depth - area capacity curve generation - water quality parameters – physical, chemical, biological properties - water quality mapping and monitoring – correlation model for pollution detection and suspended sediment concentration– case studies.

UNIT IV - GROUND WATER RESOURCES APPLICATIONS 9

Types of Aquifers- Formations -confined and unconfined aquifers -Assessment of Groundwater potential zones and Groundwater mapping -Site selection for recharge structures- Hydrogeological Mapping -GIS applications to ground water studies.

UNIT V - SURFACE WATER RESOURCES APPLICATIONS 9

Surface water bodies- lakes, reservoirs, ponds, rivers, channels- mapping- change detection- Water harvesting structures, in-situ and Ex-situ, Mapping and monitoring of catchment and command area, Water logging and salt affected area mapping, Reservoir Sedimentation,

sedimentation control-GIS applications to surface water studies

UNIT I INTRODUCTION – THEORY AND BEHAVIOUR 9

Basic concepts – Advantages – Materials required – Systems and methods of prestressing - Study of strength, behavior - design of prestressed reinforced concrete members - structures, with primary emphasis on pretensioned - precast construction emphasis on the necessary coordination between design and construction techniques in prestressing.

UNIT II DESIGN OF END BLOCK 9

Flexural strength – Simplified procedures as per codes – strain compatibility method – Basic concepts in selection of cross section for bending – stress distribution in end block- Design of anchorage zone reinforcement – Limit state design criteria – Partial prestressing - Applications.

UNIT III DEFLECTION AND DESIGN OF ANCHORAGE ZONE 9

Factors influencing deflections – Short term deflections of uncracked members – Prediction of long term deflections due to creep and shrinkage – Check for serviceability limit state of deflection. Determination of anchorage zone stresses in post-tensioned beams by Magnel‟s method, Guyon‟s method and IS1343 code – design of anchorage zone reinforcement – Check for transfer bond length in pre-tensioned beams.

UNIT IV DESIGN FOR FLEXURE AND SHEAR 9

Basic assumptions for calculating flexural stresses – Permissible stresses in steel and concrete as per I.S.1343 Code – Design of sections of Type I and Type II post-tensioned and pre-tensioned beams – Check for strength limit based on I.S. 1343 Code – Layout of cables in post-tensioned beams – Location of wires in pre-tensioned beams – Design for shear based on I.S. 1343 Code.

UNIT V PRESTRESSED CONCRETE BRIDGES 9

General aspects pretensioned prestressed bridge decks - Post tensioned prestressed bridge decks - Advantages over R.C.bridges - Principles of design only.

UNIT I INTRODUCTION 9

Factors affecting selection of equipment and methods – Technical and economic – Construction engineering fundamentals – Analysis of production and output costs;Conventional construction methods, Mechanized methods comparison of construction and Mechanized methods and advantages of latter;

UNIT II EQUIPMENT FOR EARTHWORK 9

Advanced manual and automated Equipment used for Earthmoving, Dewatering; Concrete mixing, transporting & placing; Fundamentals of Earth Work Operations - Earth Moving operations-Types of Earthwork Equipment - Tractors, Motor Graders, Scrapers, Front end Loaders, Earth Movers – capacity calculations.

UNIT III OTHER CONSTRUCTION EQUIPMENT 9

Advanced and latest technology adopted in the plastering machines; Prestressing jacks and grouting equipment; Equipment for Dredging, Trenching, Tunneling, Drilling and Blasting. Equipment for compaction - Types of pumps used in Construction - Equipment for Grouting - Pile Driving Equipment- Equipment of Erection and demolition.

UNIT IV MATERIAL HANDLING EQUIPMENT 9

Heavy lifting equipments in the construction, Cranes, Hoists and other equipment for lifting; Equipment for transportation of materials. Forklifts and related equipment - Portable Material Bins - Conveyors - equipment used in demolition – Chain Pulley Blocks. Crushers – Feeders - Screening Equipment - Batching and Mixing Equipment – Hauling equipment - Pouring and Pumping Equipment – Ready mixed concrete carriers.

UNIT V AUTOMATION IN CONSTRUCTION 9

Automation in construction, objective of automation, advantage and disadvantage of

Automation in construction. Equipment Productivities; Use of Drones for spread out sites; Use of robots for repetitive activities.

UNIT I: TRAFFIC PLANNING AND CHARACTERISTICS **9**

Road Characteristics – Road user characteristics – PIEV theory – Vehicle – Performance characteristics – Fundamentals of Traffic Flow – Urban Traffic problems in India – Integrated planning of town ,country ,regional and all urban infrastructure – Towards Sustainable approach – land use & transport and modal integration.

UNIT II: **TRAFFIC SURVEYS** **9**

Traffic Surveys – Speed, journey time and delay surveys – Vehicles - Volume Survey including non-motorized transports – Methods and interpretation – Origin Destination Survey – Methods and presentation – Parking Survey – Accident analyses -Methods, interpretation and presentation – Statistical applications in traffic studies and traffic forecasting – Level of service – Concept, applications and significance

.

UNIT III: **TRAFFIC DESIGN AND VISUAL AIDS** **9**

Intersection Design - channelization, Rotary intersection design – Signal design – Coordination of signals — Grade separation - Traffic signs including VMS and road markings – Significant roles of Traffic control personnel - Networking pedestrian facilities & cycle tracks.

UNIT IV: **TRAFFIC SAFETY AND ENVIRONMENT9**

Road accidents – Causes, effect, prevention, and cost – Street lighting – Traffic and environment hazards – Air and Noise Pollution, causes, abatement measures – Promotion and integration of public transportation – Promotion of non-motorized transport.

UNIT V: **TRAFFIC MANAGEMENT** **9**

Area Traffic Management System - Traffic System Management (TS) with IRC standards – Traffic Regulatory Measures-Travel Demand Management (TDM) – Direct and indirect methods Congestion and parking pricing – All segregation methods- Coordination among different agencies– Intelligent Transport System for traffic management, enforcement and education.

U18PECE042	**SUSTAINABLE CONSTRUCTION METHODS**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Design of Steel Structures				
	Course Coordinator Name & Department:				

COURSE OBJECTIVES: To introduce the different concepts of sustainable design and green building techniques and how they may be synthesized to best fit a specific construction project.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To learn the Modular construction methods for repetitive works.	U
CO2	To know about the Precast concrete construction methods.	U
CO3	To learn to Identify cutting edge sustainable construction materialsand technologies.	U
CO4	To learn about highly successful recent green construction projects.	U
CO5	To know about the design, evaluation, and production of green construction materials.	C & E
CO6	To learn the Preparation for the LEED Green Associate professional licensing exam.	U & R

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I INTRODUCTION 9

Types of foundations and construction methods; Basics of Formwork and Staging; Common building construction methods (conventional walls and slabs; conventional framed structure with blockwork walls); Modular construction methods for repetitive works;

UNIT II SUSTAINABLE METHODS OF CONSTRUCTION 9

Precast concrete construction methods; Basics of Slip forming for tall structures; Basic construction methods for steel structures; Basics of construction methods for Bridges;

UNIT III TECHNIQUES AND EVELUATION 9

Identification of cutting edge sustainable construction materials, technologies, and project management strategies for use in the construction industry and evaluation of their potential to reduce the negative environmental impacts of construction activity.

UNIT IV GREEN BUILDING CONCEPTS 9

Examination of the current LEED for New Construction rating system, and case study analysis of highly successful recent "green construction projects" through student team assignments and presentations. Preparation for the LEED Green Associate professional licensing exam.

UNIT V ENVIRONMENTAL IMPACT 9

Environmental impact of materials; life-cycle assessment; material selection to optimize performance; design, evaluation, and production of green construction materials.

Course Coordinator HOD

U18PECE043	**SOLID AND HAZARDOUS WASTE MANAGEMENT**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Environmental Engineering				
	Course Coordinator Name & Department:				

COURSE OBJECTIVES: To educate the students on the principles involved in the management of municipal solid waste and hazardous wastes- from source identification up to final disposal.

COURSE OUTCOMES (COs):		**Revised Bloom’s Taxonomy**
CO1	Understand the fundamentals Types and Sources of solid and hazardous wastes.	U
CO2	Understand about Waste generation rates and variation-Composition, physical, chemical and	U

	biological properties of solid wastes	
CO3	Understand the Handling and segregation of wastes at source- storage and collection of municipal solid wastes.	U
CO4	Improve the Objectives of waste processing- material separation and processing technologies.	Ap
CO5	Know the Waste disposal options- Disposal in landfills.	R
CO6	To understand the Need for transfer and transport.	U

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

	CO6	3	2		2			1		2	3		2		3

3	Category	Humanities & Social Sciences including Management Courses (HS)	Basic Sciences (BS)	Engg. Sciences (ES)	Professional Core (PC)	**Professional Core Elective (PE)**	Open Elective (OE)	Massive Open Online Course(MOOC)	Employment Enhancement Courses (EEC)	Mandatory Courses (MC)
4	Approval	Meeting of Academic Council, May 2018								

UNIT I INTRODUCTION 9

Types and Sources of solid and hazardous wastes-Need for solid and hazardous waste management- Elements of integrated waste management and roles of stakeholders- Salient features of Indian legislations on management and handling of municipal solid wastes, hazardous wastes, biomedical wastes, lead acid batteries, plastics and fly ash,financing waste management.

UNIT II WASTE CHARACTERIZATION AND SOURCE REDUCTION 9

Waste generation rates and variation-Composition, physical, chemical and biological properties of solid wastes- Hazardous Characteristics- TCLP tests- waste sampling and characterization plan- source reduction of wastes- Recycling and reuse- waste exchange.

UNIT III STORAGE, COLLECTION AND TRANSPORT OF WASTES 9

Handling and segregation of wastes at source- storage and collection of municipal solid wastes- Analysis of collection systems- Need for transfer and transport- Transfer stations Optimizing Waste allocation- compatibility, storage, labeling and handling of hazardous wastes- hazardous waste manifests and transport.

UNIT IV WASTE PROCESSING TECHNIQUES 9

Objectives of waste processing- material separation and processing technologies- biological and chemical conversion technologies-method and controls of composting- thermal conversion technologies and energy recovery- incineration- solidification and stabilization of hazardous wastes- treatment of biomedical wastes.

UNIT V WASTE DISPOSAL 9

Waste disposal options- Disposal in landfills- Landfill Classification, types and methods- site selection- design and operation of sanitary landfills, secure landfills and landfill bioreactors- leachate and landfill gas management- landfill closure and environmental monitoring- closure of landfills- landfill remediation.

UNIT I WATER SUPPLY SYSTEMS 9

Water requirement – sources of water – water demand – reservoir storage – nodal hydraulic gradient level values - water supply consideration, Types of water supply systems- piping system- distribution network- labeling- network components – Network models – design – optimization in practice.

UNIT II HYDRAULIC PRINCIPLES AND NETWORK PARAMETERS 10

Energy and hydraulic gradient lines – head loss in links – equivalent pipes – series – parallel pipes – path head loss and loop head loss – analysis of water distribution network- static node, dynamic node – network performance – flow analysis - Layout – in situ lining - pipes material – appurtenances – minimization of water losses – leak detection.

UNIT III STORM WATER DISTRIBUTION AND BURIED PIPES 9

Planning – runoff estimation – rainfall data analysis – storm water drain design Introduction to Buried pipes – external loads – gravity flow design, pressurized flow- rigid and flexible pipes – installation – trenchless technology

UNIT IV RELIABILITY ASSESSMENT AND DESIGN 8

Uncertainty and reliability – affecting events- assessment – reliability parameters- configurations. Design methodology - strengthening and expansion

UNIT V FLUID TRANSIENTS 9

Basic equations of unsteady flows through closed conduits. Method of characteristics. Transients caused by centrifugal pumps and hydroelectric power plants.

U18PECE045	**URBAN HYDROLOGY AND HYDRAULICS**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Hydraulic Engineering				
	Course Coordinator Name & Department:				

COURSE OBJECTIVES: The primary objective is the demonstration and understanding of the fundamental concepts and processes associated with the hydraulic and water quality design, operation and performance aspects of urban drainage systems.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To develop understanding in current urban pollution problems, and to identify mitigation/rehabilitation measures	U
CO2	Students will gain a sound understanding of the modelling tools, which can be used to aid decision-making in urban water and urban pollution management	U
CO3	To get experience in the use of modelling tools through applications within the Integrated Project case studies	Ap
CO4	Students will be familiar with human influences on the quantity and quality of stormwater runoff from urban catchment	Ap
CO5	Able to apply continuity, energy and momentum principles to the analysis of flows and design of stormwater infrastructure	Ap
CO6	To understand the Computer models for urban storm water modeling in software applications.	Ap

3	Category	Humanities & Social Sciences including Management Courses (HS)	Basic Sciences (BS)	Engg. Sciences (ES)	Professional Core (PC)	**Professional Core Elective (PE)**	Open Elective (OE)	Massive Open Online Course(MOOC)	Employment Enhancement Courses (EEC)	Mandatory Courses (MC)
4	Approval	Meeting of Academic Council, May 2018								

UNIT I URBANIZATION 9

Introduction - Urbanization -Stormwater runoff quantity and quality issues – Rainfall design for urban catchments – Hydrologic and probabilistic description of rainfall – Design rainfall – Methods for construction of design storm hyetographs – Rainfall excess calculations – Computation of abstractions –Combined loss models. Calculation of runoff rates-basic concepts – elements of urban runoff hydrographs – Time of Concentration –Definition and calculation by various methods – Unit hydrograph method – NRCS method

UNIT II OPEN CAHNNEL FLOW 9

Open-channel flow – Definitions - States of open channel flows – Open Channel flow equations – Steady Gradually varied flow – Normal flow – Open channel rating curve – Overland flow – Kinematic wave model – overland flow on impervious and pervious surfaces – Channel flow routing– simplified and numerical models

UNIT III DESIGN OF DRAINAGE STRUCTURES 9

Design of storm water drainage structures –Drainage design for street pavements – Storm sewer systems – Culverts – Surface drainage channels Urban flooding and associated issues – Detention basins – Stage-discharge relationship - Detention basin design - Infiltration structures- Infiltration basins, Trenches

UNIT IV STORM WATER MODELS 9

Strom water quality control - Concepts of Best management Practices(BMP)and Low Impact developments(LID) – Advantages – Computer models for urban storm water modelling – Public domain and general packages of HEC-HMS, HEC-GeoHMS, EPASWMM.

UNIT V HYDRAULIC ANALYSIS OF DRAINAGE STRUCTURES 9

Hydraulic analysis and design of urban, highway, airport, and small rural watershed drainage problems;runoff for highways, airports, and urban areas; design of drainage gutters, channels, sewer networks, and culverts.

UNIT 1 COMBINED BENDING AND AXIAL LOADS 9

Design of simple and built up columns subject to combined bending and axial loads - design of column base and connections to foundation.

UNIT II PLATE GIRDER 9

Design of plate girders – web and flange design – curtailment of flange plates – Design of stiffeners and splices – tension field action- Design of gantry girder.

UNIT – III DESIGN OF CONNECTIONS 9

Types of connections – Design of framed beam connection – Seated beam connections – Unstiffened, Stiffened seat connections. Continuous beam-to-beam connections and continuous beam-to-column connection both welded and riveted.

UNIT IV PLASTIC THEORY 9

Introduction – shape factor – Moment redistribution – Static, Kinematic and Uniqueness theorems – Combined mechanism – Analysis of single bay and two bay portal frames – Methods of plastic moment distribution – Effect of axial force and shear force on plastic moments – Connections Moment resisting connection – Design of continuous beams.

UNIT V LIGHT GAUGE STEEL SECTIONS 9

Introduction to cold formed steel member geometric properties – Flat width – Effective width concepts, stiffened and un-stiffened compression elements and their stress distribution across the section. Behavior – Design of flexural and compression members.

UNIT I **9**

Industrial steel building frames - Types of frames, bracing, crane girders and columns, workshop sheds, trussed bents, Pressed steel tank, circular tank

UNIT II **9**

Transmission and Communication towers - Types and configuration - Analysis and design - Chimneys - Loads and stresses in chimney shaft, Earthquake and wind effect - Stresses due to temperature difference, combined effect of loads and temperature, temperature - Design of chimney

UNIT III **9**

Silos and Bunkers - Jassen's theory, Airy's theory, Shallow and deep bins, Rectangular bunkers with slopping bottom, Rectangular bunkers with high side walls - Steel stacks.

UNIT IV **9**

Introduction, force acting on a steel stack, design consideration, design example of stacks - Concrete Shell Structures - Folded plate and cylindrical shell structures - Introduction, structural behaviour of long and short shells, beam and arch action - Analysis and design of cylindrical shell structures - Analysis and design of folded plates.

UNIT V **9**

Machine foundations – Introduction to machine vibration - Structural design of foundation to rotary machines, impact machines, vibration characteristics - Design consideration of foundation to impact machine, grillage, pile and raft foundation.

UNIT I INTRODUCTION **9**

Introduction to environmental geotechnology , Environmental cycles & interaction, Soil water environment interaction, Causes of soil pollution, Factors governing soil pollutant interaction

UNIT II SOURCES OF WASTES ANDCONTAMINANT TRANSPORT9

Waste characteristics - Sources and types of wastes, Contaminant transport in sub surface : advection, diffusion, dispersion, Contaminant transformation : sorption, biodegradation, ion exchange, precipitation, Ground water pollution : pollution of aquifers bymixing of liquid waste – protecting aquifers.

UNIT III WASTE DISPOSAL METHODS **9**

Objectives of waste disposal facilities – site selection, criteria for waste disposal, Methods of disposal: surface impoundment systems, Sub-surface disposal, passive containment systems, landfills.

UNIT IV: LANDFILLS **9**

Landfill – types, requirements, components – Siteselection, Leachate and gas generation – primary and secondary, leachate, Leachate collection and removal system– gas collection and removal system, Landfill liners – compacted clay liners, geosyntheticclay liners, geomembrane liners.Landfill cover system – end uses of closed landfills.

UNIT V:GROUNDREMEDIATIONTECHNOLOGIES **9**

Soil remediation technologies: soil washing, Electrokinetic remediation, Soil vapour extraction, bioremediation, stabilization, and solidification, Ground water remediation technologies, Pump and treat, insitu flushing, bioremediation, air sparging, reactive well.

UNIT I: TYPE OF PAVEMENT AND STRESS DISTRIBUTION 8

Introduction – Pavement as layered structure – Pavement types rigid and flexible. Resilient modulus - Stress and deflections in pavements under repeated loading.

UNIT II DESIGN OF FLEXIBLEPAVEMENTS 10

Flexible pavement design factors influencing design of flexible pavement, Empirical - Semi empirical and theoretical methods – Design procedure as per IRC guidelines Design and specification of rural roads.

UNITIII DESIGN OF RIGID PAVEMENTS 9

Cement concrete pavements factors influencing CC pavements Modified Westergaard approach – Design procedure as per IRC guidelines – Concrete roads and their scope in India.

UNITIV PERFORMANCE EVALUATION &MAINTENANCE 9

Pavement Evaluation - causes of distress in rigid and flexible pavements – Evaluation based on Surface Appearance, Cracks, Patches and Pot Holes, Undulations, Raveling, Roughness, Skid Resistance. Structural - Evaluation by Deflection Measurements Pavement Serviceability index - Pavement maintenance (IRC Recommendations only).

UNIT V STABILIZATION OFPAVEMENTS 8

Stabilization with special reference book to highway pavements – Choice of stabilizers – Testing and field control Stabilization for rural roads in India – use of Geosynthetics in roads.

UNIT I BUILDING MATERIALS 9

Stone as building material; Requirement of good building stones, Deterioration and Preservation of stone work. Bricks; Classification, Manufacturing of clay bricks, Requirement of good bricks. Field and laboratory tests on bricks; Mortar: types and requirements.Concretes, - High Strength and High Performance Concrete – Fibre Reinforced Concrete- Light weight concrete - Polymer concrete - Self compacting concrete – Vaccum concrete - Alternate Materials to concrete

UNIT II METALS 9

Steels – New Alloy Steels – Aluminum and its Products –Coatings to reinforcement – anticorrosive polymer coating, anticorrosive treatment inhibited cement slurry coating, cement polymer composite coating and epoxy coated reinforcement – Applications.

UNIT III COMPOSITES 9

Composition – Constitutents – mouldings methods – tooling materials and their selection - Plastics – Representative polymers - Reinforced Polymers – Fibre reinforced polymer (FRP) – Fibre process and moulding process – Application of carbon fibre reinforced polymers and

glass fibre reinforced polymers.

UNIT IV OTHER MATERIALS 9

Polymers in Civil Engineering-Structural Plastics And Composites- Polymer MembranesCoatings-Adhesives, Non - Weathering Materials-Flooring And Facade Materials-Glazed Brick, Photo Catalytic Cement, Acid Etched Copper And Composite Fiber. Precast Flat Panel System, 3d Volumetric Construction, Tunnel Boring Methods, Precast Foundations. Fabrication of Pre Cast And Pre Stressed Components.3 D printing, Recycling of Construction and Demolition wastes.

UNIT V SMART AND INTELLIGENT MATERIALS 9

Smart and Intelligent Materials for intelligent buildings - Matrix tool for assessing the performance of intelligent buildings –Intelligent buildings technology – Thermal comfort , Visual comfort and Indoor air quality – climate , building-climate interaction - Energy Management systems – Smart BuildingsEvalution Tool.

U18PECE053	**AIR , NOISE POLLUTION AND CONTROL**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Environmental Sciences				
	Course Coordinator Name & Department:				

COURSE OBJECTIVES: This subject covers the sources, characteristics and effects of air and noise pollution and the methods of controlling the same. The student is expected to know about source inventory and control mechanism.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To make them understand the fundamentals characteristics and effects of air and noise pollution and the methods of controlling the same	U
CO2	To understand about the ambient air quality standards and air quality monitoring	
CO3	To know the Removal of gaseous pollutants by adsorption, absorption, reaction and other methods	R

CO4	To improve the knowledge Basics of acoustics and specification of sound	R
CO5	To know about the Psychoacoustics and noise criteria, effects of noise on health, annoyance rating schemes	R
CO6	To learn the Biological air pollution control technologies.	U

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

4	Approval	Meeting of Academic Council, May 2018								

UNIT I INTRODUCTION 9

Air pollutants, Sources, classification, Combustion Processes and pollutant emission, Effects on Health, vegetation, materials and atmosphere, Reactions of pollutants in the atmosphere and their effects-Smoke, smog and ozone layer disturbance, Greenhouse effect..

UNIT II AMBIENT AIR QUALITY STANDARDS AND AIR QUALITY MONITORING 9

Air sampling and pollution measurement methods, principles and instruments, Ambient air quality and emission standards, Air pollution indices, Air Act, legislation and regulations, control principles

UNIT III REMOVAL OF AIR POLLUTANTS 9

Removal of gaseous pollutants by adsorption, absorption, reaction and other methods. Particulate emission control, settling chambers, cyclone separation, Wet collectors, fabric filters, electrostatic precipitators and other removal methods like absorption, adsorption, precipitation etc. Biological air pollution control technologies.

UNIT IV NOISE POLLUTION 9

Noise pollution: Basics of acoustics and specification of sound; sound power, sound intensity and sound pressure levels; plane, point and line sources, multiple sources; outdoor and indoor noise propagation;

UNIT V NOISE POLLUTION CONTROL 9

Psychoacoustics and noise criteria, effects of noise on health, annoyance rating schemes; special noise environments: Infrasound, ultrasound, impulsive sound and sonic boom; noise standards and limit values; noise instrumentation and monitoring procedure. Noise indices.

Noise control methods.

U18PECE054	**TRANSIENTS IN CLOSED CONDUITS**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Hydrology and Water Resources Engineering				
	Course Coordinator Name & Department:				

COURSE OBJECTIVES: To equip the students with the comprehensive knowledge of concepts of unsteady closed conduit flow by building on their steady flow understanding of the subject which was introduced to them in their undergraduate curriculum. Emphasis should be on use of computer programs for transient analysis.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	Solve simple and varied hydraulic problems related to surge problems.	E
CO2	Formulation of boundary conditions for transient analysis.	E
CO3	Transient analysis for penstocks of hydroelectric schemes.	An
CO4	Design of air chambers, air valves, pressure regulating valves for transient loads.	C
CO5	To create software awareness for transient analysis.	C
CO6	To get awareness about commercially available software for transient analysis.	U

UNIT 1 INTRODUCTION TO PIPE HYDRAULICS 9

Pipes – Hydraulic of pressure flow. Steady state and unsteady state-Darcy's equation for flow thro' pipes. Analysis and design of pipe systems like pipes in series and parallel.

UNIT II PIPE NETWORKS 9

Design of pipes. Pipe networks - Analysis and design using various methods. Use of softwares in design. Practical examples, difficulties and solutions.

UNIT III UNSTEADY FLOW MEASUREMENTS 9

Flow measurements. Concepts of unsteady flow - Basic differential equations of unsteady flow in closed conduits – Solutions by method of characteristics – Algebraic and graphical water hammer. Additional boundary conditions and systems elements.

UNIT IV POWER PLANT HYDRAULICS 9

Methods for controlling transients in closed conduits. Application in Lift Irrigation, Hydropower, Urban and Rural water supply – Power Plant Hydraulics.

UNIT V FLUID TRANSIENTS 9

Formulation of boundary conditions; transients in pumping mains (power failure; pump start up); transients in penstocks of hydro-electric schemes; analysis for transient control using surge tanks;

UNIT I TRANSPORT OF WATER 9

Transportation through conduits and open channel and use of same for the design, operation and maintenance of these systems. - Unit operations and processes - Principles, functions and design of flash mixers, floculators, sedimentation tanks and filters. Disinfection - Aeration – iron and manganese removal, defluoridation and demineralization – Water softening.

UNIT II WATER SUPPLY SYSTEM 9

Storage requirements, impounding reservoirs, intake structures, pipe hydraulics, design of distribution system, distributing and balancing reservoirs, pipe materials, appurtenances, design for external loads, maintenance and operations.

UNIT III SANITARY SEWERAGE SYSTEMS 9

Flow estimation, sewer material, hydraulics of flow in sewer, sewer layout, sewer transitions, materials of sewer, appurtenances, manholes, sewer design, conventional and model based

design sewer pumps and pumping stations, corrosion prevention, operation and maintenance and safety.

UNIT IV SEWAGE TREATMENT

Primary Treatment– Unit Operations & Processes – Principles, functions and design of screen, grit chambers and primary sedimentation tanks.Secondary Treatment – Activated Sludge Processes and Trickling filter, Other treatment method. Stabilisation of Ponds and Septic tanks. Advances in Sewage Treatment.Removal of organic contents : Biological treatment methods, aerobic and anaerobic, digestion, tickling filters, stabilization ponds, activated sludge process – oxidation ditch.

UNIT V STORM WATER DRAINAGE SYSTEMS 8

Drainage lay-out, storm-run-off estimation hydraulics of flow in storm water drains, materials, cross sections, design of storm water drainage systems, inlets, storm water pumping, operation and maintenance.

UNIT I THEORY OF VIBRATIONS **9**

Theory of Vibrations; Concept of inertia and damping - Types of Damping - Difference between static forces and dynamic excitation - Degrees of freedom -SDOF idealization - Equations of motion of SDOF system for mass as well as base excitation Free vibration of SDOF system

UNIT II MULTIPLE DEGREE OF FREEDOM SYSTEM **9**

Response to harmonic excitation - Impulse and response tounit impulse - Duhamel integral; Multiple Degree of Freedom System; Two degree of freedom system - Normal modes of vibration - Natural frequencies - Mode shapes -Introduction to MDOF systems - Decoupling of equations of motion – Concept of mode superposition (No derivations); Elements of Seismology; Causes of Earthquake – Geological faults

UNIT III ELEMENTS OF SEISMOLOGY **9**

Tectonic plate theory - Elastic rebound – Epicentre - Hypocentre - Primary, shear and Raleigh waves - Seismogram - Magnitude and intensity of earthquakes - Magnitude and Intensity scales - Spectral Acceleration - Information on some disastrous earthquakes;

UNIT IV DESIGN SPECTRA **9**

Response of Structures to Earthquake- Response and design spectra - Design earthquake - concept of peak acceleration - Site specific response spectrum – Effect of soil properties - damping - Liquefaction of soils - Importance of ductility.

UNIT V DESIGN METHODOLOGY **9**

Methods of introducing ductility into RC structures Design Methodology IS 1893, IS 13920 and IS 4326 - Codal provisions -Design as per the codes - Base isolation techniques - Vibration control measures – Importantpoints in mitigating effects of earthquake on structures

UNIT I - INDEX PROPERTIES OF ROCK **9**

Introduction , Physical Properties of Rocks, Mechanical Properties of Rocks, Elastic Parameters of Rocks, Dynamic Property of Rocks, Static and Dynamic Module

UNITII - ROCK STRENGTH **9**

Types of Waves –Compressive – Measurements, Theory of Wave Propagation, Factors influencing Wave Velocity in Rock Mass, Modest of Rock Failure, Strength of Rock, Shear – Tensile – strength measurements, Compressive – strength Measurements.

UNIT III - DEFORMABILITY OF ROCKS AND STRESS **9**

Stress-Strain Behavior, Initial Stress, Influence of Joints, Distribution of Stresses, Measurements of Initial Stresses

UNIT IV -ROCK GROUTING **9**

Introduction, Grouting, Types of Grouting, Grouting materials, Operations and equipments, Pre grouting , Rock Bolt -Types – Systems, Testing of Rock Bolts.

UNIT V - ROCK ENGINEERING **9**

Introduction, Application, Merits and Demerits, Tunneling, Rock Openings, Rocks for Mining Subsidence, Dam and reservoir, Road Cuts, Slabs and Foundations.

Course Coordinator **HOD**

U18PECE058	**STRUCTURAL DYNAMICS**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Structural Analysis II				
	Course Coordinator Name & Department:				

COURSE OBJECTIVES: To impart knowledge to establish the equations of motion and for the determination of structural response from dynamic loads and experience in the modeling and calculation of dynamic response for simple structural systems.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To study about the discrete single-degree freedom system and calculation of the free and forced response of these systems	U & E
CO2	To study about the discrete multiple-degree freedom system and calculation of the free and forced response of these systems	U & E
CO3	To understand about the elements of seismology technique	U & R
CO4	To learn about the different methods for response of structures to earthquake	R
CO5	To know the earthquake design of structures using IS code method	C

CO6	To get knowledge on Detailing for earthquake resistant construction.	U & C

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT–ITHEORY OF VIBRATIONS 9

Concept of inertia and damping – Types of Damping – Degrees of freedom – SDOF idealisation – Equations of motion of SDOF system for mass as well as base excitation – Free vibration of SDOF system – Analysis of the dynamic response of structures and structural components to transient loads and foundation excitation - response spectrum concepts; simple inelastic structural systems- single-degree-of-freedom.

UNIT II MULTIPLE DEGREE OF FREEDOM SYSTEM 9

Two degree of freedom system – Normal modes of vibration – Natural frequencies - Mode shapes - Introduction to MDOF systems – Decoupling of equations of motion – Concept of mode superposition (No derivations).

UNIT III RESPONSE OF STRUCTURES TO EARTHQUAKE 9

Response and design spectra – Design earthquake – concept of peak acceleration – Site specific response spectrum – Effect of soil properties and damping – Liquefaction of soils – Importance of ductility –Methods of introducing ductility into RC structures. Detailing for earthquake resistant construction – ductility criteria.

UNIT IV ELEMENTS OF SEISMOLOGY 9

Causes of Earthquake – Geological faults – Tectonic plate theory – Elastic rebound – Epicentre – Hypocentre– Seismogram – Magnitude and intensity of earthquakes – Magnitude and Intensity scales – Spectral Acceleration - Information on some disastrous earthquakes - Introduction to systems with distributed mass and flexibility.

UNIT V INTRODUCTION TO EARTHQUAKE ENGINEERING

IS 1893, IS 13920 and IS 4326 – Codal provisions – Design as per the codes – Base isolation techniques – Vibration control measures – Important points in mitigating effects of earthquake

on structures.

UNIT I INTRODUCTION TO RAILWAY 9

Role of railway in transportation- historical development of railways in India classification in Indian railways-technical terms used in railway engineering-the permanent way-sub grade and

embankments- ballast- sleepers.

UNIT II COMPONENTS OF RAILWAY TRACK 9

Rail- rail joints and welding of rails-track fittings and fastenings- coning of wheels - stresses in railway track- creep of rails-track alignment- surveying.

UNIT III GEOMETRIC DESIGN 9

Necessity of geometric design of railway track-gradient and grade compensation speed of train-radius of curvature-super elevation-curves-realignment of curves by string line method-widening of gauge on curves.

UNIT IV AMENITIES OF RAILWAY TRACK 9

Points and crossing- track junctions-stations and yards-equipment in station yards- signaling and control systems-interlocking of signals-construction of track

UNIT V MODERN TRENDS IN RAILWAYS 9

Track drainage-conventional maintenance of track-modern methods track maintenance-underground railwaysand tunneling-safety in railways- signaling and interlocking facilities – high speed trains - modern development in railways.

U18PECE062	**CONSTRUCTION PROJECT PLANNING & SYSTEMS**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	**3**	**0**	**0**	**3**
	Prerequisite: Estimation & Costing				
	Course Coordinator Name & Department:				

COURSE OBJECTIVES: To study and understand the concept of planning, scheduling, cost and quality control, safety during construction, organization and use of project information necessary for construction project.

COURSE OUTCOMES (COs):		**Revised Bloom's Taxonomy**
CO1	To know about Stages of project planning andprocess of development of plans and schedules.	U
CO2	To know about the Techniques of planning like CPM and PERT.	U
CO3	To learn the Control & monitoring of Construction methods.	U

CO4	To understand the basic concepts of planning and organizing.	U
CO5	To understand the Basics of Modern Project management systems.	U
CO6	Tounderstand the Automation & Robotics in Construction.	U

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

	CO5	2	2				2			3			2		3
	CO6			2					3		2			3	2

3	Category	Humanities & Social Sciences including Management Courses (HS)	Basic Sciences (BS)	Engg. Sciences (ES)	Professional Core (PC)	**Professional Core Elective (PE)**	Open Elective (OE)	Massive Open Online Course(MOOC)	Employment Enhancement Courses (EEC)	Mandatory Courses (MC)
4	Approval	Meeting of Academic Council, May 2018								

UNIT I CONSTRUCTION PLANNING 9

Definition of Projects; Stages of project planning: pre-tender planning, pre-construction planning, detailed construction planning, role of client and contractor, level of detail. Process of development of plans and schedules, work break-down structure, activity lists, assessment of work content, concept of productivities, estimating durations, sequence of activities, activity utility data.

UNIT II SCHEDULING PROCEDURES AND TECHNIQUES 9

Techniques of planning- basic terminology, types of precedence relationships, preparation of CPM networks, computation of float values, critical and semi critical paths, calendaring networks.PERTAssumptions underlying PERT analysis, determining three time estimates, analysis, slack computations, calculation of probability of completion. Allocation of Resources.

UNIT III COST CONTROL MONITORING AND ACCOUNTING 9

Control & monitoring; Temporary Structures in Construction; Construction Methods for various types of Structures; Major Construction equipment; Automation & Robotics in Construction, Importance of Contracts Management;

UNIT IV ORGANIZATION AND USE OF PROJECT INFORMATION 9

Planning and organizing construction site and resources- Site: site layout including enabling structures, developing site organization, Documentation at site; Manpower: planning, organizing, staffing, motivation; Materials: concepts of planning, procurement and inventory control; Equipment: basic concepts of planning and organizing; Funds: cash flow, sources of funds; Histograms and S-Curves.

UNIT V QUALITY CONTROL AND SAFETY DURING CONSTRUCTION 9

Supervision, record keeping, periodic progress reports, periodical progress meetings. Basics of Modern Project management systems such as Lean Construction; Use of Building Information Modelling (BIM) in project management; Quality control: concept of quality, quality of constructed structure, use of manuals and checklists for quality control, role of inspection, basics of statistical quality control. Safety, Health and Environment on project sites: accidents; their causes, effects and preventive measures, costs of accidents, occupational health problems in construction, organizing for safety and health.

UNIT I INTRODUCTION 9

Evolution of EIA: Concepts of EIA methodologies, Screening and scoping; Rapid EIA and Comprehensive EIA; General Framework for Environmental Impact Assessment, Characterization and site assessment. Environmental Risk Analysis, Definition of Risk.

UNIT II COMPONENTS AND METHODS 9

Components of EIA – Processes – screening – scoping – setting – analysis - mitigation. Matrices-Networks –Checklists – connections and combinations of processes – Cost benefit analysis - Analysis of alternatives - Software packages for EIA-Expert systems in EIA.

UNITIII PREDICTION, ASSESSMENT OF IMPACTS AND REPORTING 9

Matrix Method. Checklist method, Fault tree analysis, Consequence Analysis; Socioeconomic aspects, measures of effectiveness of pollution control activities. Environmental Legislation; Introduction to Environmental Management Systems; Environmental Statement - procedures

UNIT IV ENVIRONMENTAL MANAGEMENT PLAN 9

Environmental Management Plan-preparation, implementation and review- Mitigation and Rehabilitation Plans-Policy and guidelines for planning and monitoring programmes - post project audit-Ethical and Quality aspects of Environmental Impact Assessment.

UNIT V LIFE CYCLE ASSESEMENT CASE STUDIES 9

Environmental Audit: Cost Benefit Analysis; Life Cycle Assessment; Resource Balance, Energy Balance & Management Review; Operational ControlCase studies related to the following sectors-Infrastructure-Mining-industrial-Thermal Power –River valley and Hydroelectric-Nuclear Power.

UNIT 1 INTRODUCTION TO EULER MODELS 9

Eulerian and Lagrangian models. Classification of partial differential equations, Types of differential equations governing flow - Laplace Equation for irrotational flow, diffusion equation in groundwater flow, St.Venant's equations for one-dimensional flow in channels, modified Navier-Stokes equations for two-dimensional flow problems, .

UNIT II INTRODUCTION TO ODE AND FINITE VOLUME METHODS 9

Numerical techniques to solve ordinary differential equations, overview of solution techniques for partial differential equations - finite difference, finite element and finite volume methods - Finite difference methods applied to steady state and transient flow problems – formulation and solution.

UNIT III FINITE ELEMENT METHODS 9

Basics of FEM, different formulations, variational, weighted residual and Galerkin methods, appropriateness of these formulations to different problems, domain discretisation - different types of elements, integral equations for element matrices, derivations of boundary conditions, sources and sinks, finite difference in time domain, matrix equations, solution techniques, examples.

UNIT IV HYDRAULIC MODELS 9

Solution of the advection-dispersion equation for solute transport by Eulerian and Lagrangian methods.Models for flow routing in reservoirs and channels. Models of coastal circulation and sediment transport.

UNIT V INTRODUCTION TO CFD 9

Computational Fluid Dynamics (CFD) software for three-dimensional turbulent flow modeling, Software for sub-surface flow simulation

UNIT I RIVER FUNCTIONS 8

Primary function of a river – River uses and measures – Water and Sediment loads of river –

Rivers in India, Himalaya and Peninsular.

UNIT II RIVER HYDRAULICS 10

Physical Properties and Equations – Steady flow in rivers – uniform and non uniform – Turbulence and velocity profiles – resistance coefficients – Boundary conditions and back waters – Transitions – Rating Curve – Unsteady flow in rivers : Propagative of surface waves – Characteristics, flood waves – kinematic and diffusion analogy – velocity of propagation of flood waves – Flood wave –Maximum

UNIT III RIVER MECHANICS 9

River Equilibrium : Stability of Channel – regime relations – river bend equilibrium – hydraulic geometry of downstream - Bars and meandering - River dynamics – degradation and aggradations of river bed – Confluences and branches – River Data base.

UNIT IV RIVER SURVEYS AND MODEL 9

Mapping – Stage and Discharge Measurements – Sediments – Bed and suspended load Physical hydraulic Similitude – Rigid and mobile bed – Mathematical – Finite one dimensional – multi – dimensional – Water Quality and ecological model

UNIT V RIVER MANAGEMENT 9

River training works and river regulation works – -Diversion and Coffer dams-Flood plain management – waves and tides in Estuaries - Interlinking of rivers – River Stabilization-Dredging and disposal-River restoration

UNIT I **9**

An Introduction to Sustainability Concepts and Life Cycle Analysis(LCA) - Introduction, Material flow and waste management - Risk and Life Cycle Framework for Sustainability.

UNIT II **9**

Engineering Materials for Sustainability. Environmental impact of materials - life-cycle assessment - Material selection to optimize performance - Design, evaluation, and production of green construction materials.

UNIT III **9**

Environmental Data Collection and LCA Methodology (Environmental Data Collection Issues, Statistical Analysis of Environmental Data, Common Analytical Instruments, Overview of LCA Methodology - Goal Definition, Life Cycle Inventory, Life Cycle Impact Assessment, Life Cycle Interpretation, LCA Software tools).

UNIT IV **9**

Design for Sustainability - Environmental Design for Sustainability: Economic, Environmental Indicators, Social Performance Indicators, Sustainable Engineering Design Principles and Environmental Cost Analysis.

UNIT V **9**

Case Studies: Odour removal for organics treatment plant, Comparison of hand drying methods, Biofuels for transportation, etc.

UNIT I: INTRODUCTION OF OIL AND GAS FIELD **9**

Introduction to offshore structures; Oil and gas field development Options: Platform types, marine riser systems, current design trends anddeep-water challenges.

UNIT II: RISER SYSTEMS **9**

Flexible pipe structure and material, typical configurations, top tensioned vertical risers, hybrid risers.Flow assurance: multi-phase flow, deposition of solids, thermal management, corrosion. Riser analysis:governing equations, boundary conditions, natural frequency.

UNIT III: MOORING SYSTEM **9**

Mooring lines -Typical mooring configuration, material and construction, anchors and ancillary equipment,static mooring analysis.

UNIT IV: VORTEX INDUCED VIBRATION **9**

Vortex induced vibration: drag, vortex shedding, surface roughness, lift, Strouhal number, VIVassessment, fatigue life calculation.

UNIT V: REMOTELY OPERATED VEHICLES **9**

Remotely operated vehicles: ROV categories- Micro, mini, general, Light work class, Heavy work class,AVUs ROV-handling systems, construction and materials, navigation and control, ,

UNIT –I INTRODUCTION 9

Introduction to analysis, design and construction of masonry structures, Mechanical properties of clay and concrete masonry units, mortar, and grout.

UNIT -II STRENGTH OF MASONRY IN COMPRESSION: 9

Compressive, tensile, flexural, and shear behavior of masonry structural components, Strength and behavior of unreinforced bearing walls - Behaviour of Masonry under compression.

UNIT -III FLEXURAL SHEAR AND BOND 9

Bond between masonry unit and mortar, tests for determining flexural and shear bond strengths, factors affecting bond strength, effect of bond strength on compressive strength, orthotropic strength properties of masonry in flexure, shear strength of masonry, test procedures for evaluating flexural and shear strength. Permissible stresses:

UNIT -IV DESIGN OF LOAD BEARING MASONRY BUILDINGS 10

Design of load bearing masonry for buildings up to 3 to 8 storey's using BIS codal provisions. Detailed design of reinforced masonry beams, columns, structural walls with and without openingsand complete lateral-force resisting building systems.

UNIT -V EARTHQUAKE RESISTANT MASONRY BUILDINGS 8

Behaviour of masonry during earthquakes, concepts and design procedure for earthquake resistant masonry, BIS codal provisions.

UNIT I AIRPORT PLANNING 9

Airport – Accessibility – Transport Connections – Road and Rail, Expansion – Feasibility Studies – Environmental and Social Issues – Forecasting Future Traffic – Airfield Capacity and Delay - Aircraft characteristics – Airport Site Selection

UNIT II AIRPORT COMPONENTS 9

Airport Classification, Planning of Airfield Components – Runway, Taxiway, Apron, Hanger, Passenger Terminals, drainage, cargo terminals. Air traffic control – surveillance facilities.

UNIT III AIR ROUTE PLANNING AND EVALUATION 9

Demand driven dispatch – Airline Fleet Planning Models – Network Revenue Management – Airport Performance, Slot Issues, Hub Operation, Demand Management, Multi-airport Systems

UNIT IV PASSENGER CHOICE, SCHEDULING AND FLEET ASSIGNMENT 9

Load Factor Analysis, Airline Schedule Development, Introduction to PODS Passenger Choice Models, Decision Window Model, Fleet Assignment

UNIT V AIRLINE ECONOMICS 9

Pricing – Privatization and Deregulation, Willingness to pay and Competitive Revenue Management – Case study on air traffic management and navigational aids.

UNIT I INTRODUCTION 9

Contract Management – Introduction, Importance of Contracts, Overview of Contract Management, Overview of Activities in Contract Management; Planning and People-Resource Management;

UNIT II CONSTRUCTION CONTRACT 9

Types of Contracts, Parties to a Contract; Contract Formation, Formulation of Contract, Contract Start-Up, Managing Relationships; Common contract clauses (Notice to proceed, rights and duties of various parties, notices to be given, Contract Duration and Price.

UNIT III CONTRACT PROCESS 9

Performance parameters; Delays, penalties and liquidated damages; Force Majeure, Suspension and Termination. Changes & variations, Notices under contracts; Conventional and Alternative Dispute Resolution methods.

UNIT IV CONTRACT ACTS 9

Various Acts governing Contracts; Contract Administration and Payments- Contract

Administration, Payments; Contract Management in Various Situations- Contract Management in NCB Works, Contract Management in ICB Works Contracts, Contract of Supply of GoodsDesign, Supply and Installation Contracts, Contract Management in Consultancy,;

UNIT V CONTRACT MANAGEMENT 9

Managing Risks and Change- Managing Risks, Managing Change; Contract Closure and ReviewEnding a Contract, Post-Implementation Review; Legal Aspects in Contract ManagementContract Management Legal View, Dispute Resolution, Integrity in Contract Management; Managing Performance- Introduction, Monitoring and Measurement.

UNIT 1 INTRODUCTION **9**

Basics of Hydraulic Modelling (similarity mechanics, model laws, distinction between numerical and hydraulic models, classification of hydraulic modelling, materials used in the

model, scale effect, design, construction, operation and interpretation of the results)

UNIT II INTRODUCTION TO PHYSICAL MODELS 9

Development of physical models – dimensional analysis and principles of similitude, nondimensional numbers employed in hydraulic modelling, tools and procedures. Role of instrumentation and data processing; Gravity dominated models (modelling of energy dissipaters, overflow spillways, siphon spillways, bridge piers, vortex formation, cavitation, flow induced vibrations);

UNIT III OPEN CHANNEL SYSTEM 9

Modelling of open channel systems, closed conduit systems and urban drainage systems.Environmental modelling of open channel systems.Gravity friction models: (pumped flow models, ship models, surge tank models); Friction dominatedmodels

UNIT IV RIVER MODELS 9

River models with fixed and mobile bed; Basin and reservoir models; Tidal models with fixed and mobile bed; estuarine models; harbor and breakwater models, models of offshore structures Modelling of estuaries, coastal processes, nearshore structures, and hydraulics structures.

UNIT V HYBRID MODELS 9

Hybrid and Analogue models; Scope and limitations of hydraulic modelling, complementary aspects of numerical and hydraulic modeling.

UNIT WATER QUALITY 9

Chemical composition of water - Hydrological processes and water quality – Suspended and dissolved loads - Sediments and their composition – Eutrophication and its impacts - – Water quality standards. Sources and Types of water pollution – Organic and inorganic pollutants -- BOD – DO relationships — NPS pollution – Waste water treatment - TMDL Concepts – Water quality models.

UNIT II GROUNDWATER HYDRAULICS 9

Groundwater Movement - Darcy‟s law and its limitations - Stream lines and flow net analysis – Potential flow theory – Discharge and draw down for various condition of groundwater flow - Principles of groundwater flow and its equation – Dupuit – Forchheimer assumptions – Influent and Effluent streams - Evaluation of well loss parameters – Partial penetration of wells – Interference of wells

UNIT III PUMPING TEST ANALYSIS 9

Determining aquifer parameters for unconfined, leaky and non-leaky aquifers – steady and transient conditions - Slug test – Locating hydro geological boundaries – Image well theory – Determination

UNIT IV STREAMFLOW MEASUREMENT 9

Stage and Velocity Measurement – Gauges – Current meter and Doppler flow velocity meter - Discharge measurement – Area Velocity method - Area Slope method – Discharge Measuring Structures - Dilution Technique – Stage Discharge relationship – Selection of a Stream Gauging Site. **.**

UNIT V RUNOFF AND WATER CONSERVATION 9

Concept of catchment – Linear, Areal and Relief Aspects – Detailed study of Runoff process – Factors affecting Runoff – Hydrograph – Unit Hydrograph – Synthetic Hydrograph –Runoff estimation - Strange and SCS methods – Water Conservation – Rain water and Runoff Harvesting in Rural and Urban Areas - Reservoir Sedimentation.

UNIT I INTRODUCTION **9**

General - classification of bridges- site selection- geometric and hydraulic design consideration,- Loading standards for highway - railway bridge

UNIT II DESIGN OF RC AND PSC BRIDGES **9**

General design consideration; optimum spans- Concrete bridges culverts- Slab- T-beam - Pre-stressed Concrete bridges

UNIT III TYPES OF BRIDGES **9**

Box girder bridges- balanced cantilever bridge - cable stayed bridge - extrados bridges - arch bridge - Special requirements for Steel bridges- plate Girder Bridge - truss bridge – Introduction to suspension Cable Bridge - cable stayed bridge

UNIT IV BRIDGE COMPONENTS

Substructures - design of piers and abutments - pile and well foundations -Bearings and expansion joints- special wearing coats - seismic design considerations

UNIT V STABILITY CONSIDERATIONS **9**

Aerodynamic stability considerations- special durability measures -provisions for inspection – maintenance.

TEXTBOOKS:

1.Design of Bridges by N.Krishnam Raju, Oxford & IBH, Publishing Company Pvt.ltd., Delhi.

UNIT I STRUCTURE AND TOPOGRAPHY **9**

Description, classification, and origin of earth structures, Ways in which the continental crust can deform; Effects of topography on structural features, Topographic and structural maps; Importance representativefactors of the map; link scales of structure from the field, hand specimen,

UNIT II STRESS AND STRAIN IN ROCKS **9**

Concept of rock deformation: Stress and Strain in rocks, Strain ellipses of different types and

theirgeological significance, Planar and linear structures;Theoretical and meso to microscale analysis of structures developed through a linked series of lectures and practicals; Concept of dip and strike; Outcrop patterns of different structures. practical 2D strain analysis; 3D strain concepts; incremental strain,kinematics and polyphase deformations;

UNIT III FOLDS **9**

Fold morphology; fold construction and classes; Geometric and genetic classification of folds; Introduction to the mechanics of folding: Buckling, Bending, Flexural slip and flow folding

UNIT IV FOLIATION AND LINEATION **9**

Description and origin of foliations: axial plane cleavage and its tectonic significance
Description and origin of lineation and relationship with the major structures; current concepts in plate tectonics

UNIT V FRACTURES AND FAULTS **9**

Geometric and genetic classification of fractures and faults; Effects of faulting on the outcropsGeologic/geomorphic criteria for recognition of faults and fault plane solutions;fault evolution and section balancing; fault rock microstructures; fault and fold mechanics

UNIT I ECOLOGY&ENVIRONMENT 9

Aim, scope and applications of ecology - Development and evolution of ecosystems -Energy flow and material cycling in ecosystems - productivity in ecosystems, classification of systems - Structural and functional interactions of environmental systems - Environmental systems as energy systems

UNIT IIECOLOGICALENGINEERING. 9

Characteristics of rivers and lakes which affect the management of domestic and industrial wastewaters. chemical hazards assessment, surveillance and biomonitoring, and review of regulations governing effluents Modelling and ecotechnology - Elements of modeling - Modeling procedure - Classification of ecological models - Applications of models in ecotechnology - Ecological economics.

UNIT III STREAM ECOLOGY 9

Description of physical, chemical, and biological characteristics in streamsand rivers including an integrated treatment of the environmental factors affecting the composition and distribution of biota; emphasizes the application of ecological engineering Principles in aquatic ecosystem protection

UNIT IV APPLICATION OFECOLOGICALENGINEERING 9

Ecosanitation - Principles and operation of soil infiltration systems - Wetlands and ponds - Source separation systems - Aquacultural systems - Detritus based treatment for solid wastes - Applications of ecological engineering for marine systems.

UNIT V CASE STUDIES INECOLOGICALENGINEERING 9

Case studies of Integrated Ecological Engineering Systems and their commercial prospects.

OPEN ELECTIVE FROM CIVIL

U18OECE001	**METRO SYSTEMS AND ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Any course in Engineering				
	Course Designed by – Dept of Civil Engineering				
	Category – OPEN ELECTIVE (OE)				
	Approval - Meeting of Academic Council, May 2018				

OBJECTIVES: To know about the urban transport problems, planning, construction and operation.

UNIT I INTRODUCTION **15**

Overview and construction methods for: Elevated and underground Stations; Viaduct spans and bridges; Underground tunnels; Depots; Commercial and Service buildings. Initial Surveys & Investigations

UNIT II MASS TRANSIT SYSTEMS **15**

Mass Transit concepts- Trip interchanges and assignments ; Urban transportation problems, Modes of masstransit- their planning, construction and operation, Case studies of existing mass transit systems ; Technical andeconomic evaluation of mass transit projects

UNIT III TRAFFIC INTEGRATION **15**

Basics of Construction Planning & Management, Construction Quality & Safety Systems. Traffic integration, multimodal transfers and pedestrian facilities; Environmental and social safeguards; Track systems-permanent way. Facilities Management

TEXTBOOKS:

1. C. S. Papacostas, P. D. Prevedouros, Transportation Engineering and Planning, PHI Publication, 3rd edition,2002

	POLLUTION REGULATIONS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Any course in Engineering				
U18OECE002	Course Designed by – Dept of Civil Engineering				
	Category – OPEN ELECTIVE (OE)				
	Approval - Meeting of Academic Council, May 2018				

OBJECTIVES: To know about various Act of pollution and control of pollution Acts for water, air and in general environmental protection.

UNIT I: INTRODUCTION **10**

Introduction - Introduction - Functions - Constitution - Organisational set up - Environmental Legislations - Monitoring of Industries - Procedure for Issue of Consent - Address of the Offices and Laboratories.

UNIT II: WATER (P&CP) ACT **10**

The Water (Prevention and Control of Pollution) Act, as amended in 1978 and 1988 - Standards for Discharge of Trade Effluent - Standards for Discharge of Sewage - Drinking Water – Specification (IS 10500:1991) - Tolerance Limits for Inland Surface - Waters subject to Pollution IS : 2296 – 1982 - Consent Fee Applicable under the Water (P&CP) Act - Parameters to be analyzed for the Industrial Effluent Samples - Rate of Cess on the Basis of Water Consumption - Cess Return Format

UNIT III: AIR (P&CP) ACT, **10**

The Air (Prevention and Control of Pollution) Act, as Amended in 1987 - Consent Fee applicable under the Air (P&CP) Act – National Ambient Air Quality Standards - Standards for Chlorine Emission.

UNIT IV:ENVIRONMENT (PROTECTION) ACT **15**

The Environment (Protection) Act, 1986 (No. 29 of 1986) - The Environment (Protection) Rules - Standard Prescribed under Environment (Protection) Rules,
Waste Water Generation Standards - Environmental Statement - The Bio-Medical Waste Management Rules, 2016

TEXTBOOK

1. Tamilnadu Pollution Control Board, January 2017.

	ROAD SAFETY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Any course in Engineering				
U18OECE003	Course Designed by – Dept of Civil Engineering				
	Category – OPEN ELECTIVE (OE)				
	Approval - Meeting of Academic Council, May 2018				

OBJECTIVES: To learn about nature of road safety, management, uses of crash data, countermeasure selection and evaluation.

UNIT I: NATURE OF ROAD SAFETY **9**

Defining Road Safety - Road Safety – a Complex Field - Science-based Road Safety Research - Road Safety Demographics - Crash Contributing Factors and Interactions - Road User Decisions - Intervention Tools and Countermeasures

UNIT II: INSTITUTIONAL SETTINGS OF ROAD SAFETY MANAGEMENT **9**

The Foundation for Road Safety Management Policy - Safety Management Roles and Responsibilities - The Influence of Interest Groups - Road Safety Education Opportunities - Road Safety and Other Transportation Priorities

UNIT III: ORIGINS, CHARACTERISTICS AND USES OF CRASH DATA **9**

Using Data to Identify Safety Problem - State and Local Data Systems - Crash Data Collection - National Road Safety Databases

UNIT IV: CONTRIBUTING CRASH FACTORS, COUNTERMEASURE SELECTION, AND EVALUATION **9**

Problem Identification Using Scientific Methods - High Risk Entities - Countermeasure Identification - Countermeasure Identification - Diversity Analysis - Cost Effectiveness of Alternative Countermeasures.

UNIT V: ROAD SAFETY PROGRAM MANAGEMENT **9**

The Importance of Scientific Management Techniques - Strategies for Integrating and Amplifying Safety in the - Transportation Planning Processes - Organizational Leadership and Support Needs - Effective Multidisciplinary - Collaborative Relationships - Coalition Building Communications Strategies - Current Research Supporting Road Safety Management - Stimulating Change - Funding Sources and Requirements -Leveraging Resources - Outreach and Public Involvement

U18OECE004	**INFRASTRUCTURE DEVELOPMENT**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Any course in Engineering				
	Course Designed by – Dept of Civil Engineering				
	Category – OPEN ELECTIVE (OE)				
	Approval - Meeting of Academic Council, May 2018				

OBJECTIVES: To know about infrastructure development related to sanitation, storm water, municipal wastes, power and fire.

UNIT I: ROLE OF INFRASTRUCTURE IN DEVELOPMENT **10**

Elements of Infrastructure (physical, social, utilities and services); Basic definitions, concepts, significance and importance; Data required for provision and planning of urban networks and services; Resource analysis, provision of infrastructure, and land requirements; Principles of resource distribution in space; Types, hierarchical distribution of facilities, Access to facilities, provision and location criteria, Norms and standards.

UNIT II: PLANNING AND MANAGEMENT OF WATER, SANITATION AND STORM WATER **10**

Water – sources of water, treatment and storage, transportation and distribution, quality, networks, distribution losses, water harvesting, recycling and reuse, norms and standards of provision, institutional arrangements, planning provisions and management issues; Sanitation – points of generation, collection, treatment, disposal, norms and standards, grey water disposal, DEWATS, institutional arrangements, planning provisions and management issues. Storm water – rainfall data interpretation, points of water stagnation, system of natural drains, surface topography and soil characteristics, ground water replenishment, storm water collection and disposal, norms and standards, institutional arrangements, planning provisions and management issues;

UNIT III: PLANNING AND MANAGEMENT OF MUNICIPAL WASTES, POWER AND FIRE 10

Municipal and other wastes – generation, typology, quantity, collection, storage, transportation, treatment, disposal, recycling and reuse, wealth from waste, norms and standards, institutional arrangements, planning provisions and management issues. Power – Sources of power procurement, distribution networks, demand assessment, norms and standards, planning provisions and management issues. Fire – History of fire hazards, vulnerable locations, methods of fire fighting, norms and standards, planning provisions and management issues.

UNIT IV: TRANSPORT INFRASTRUCTURE PLANNING, MANAGEMENT AND DESIGN 15

Role of transport, types of transport systems, evolution of transport modes, transport problems and mobility issues**;** Urban form and Transport patterns, land use – transport cycle, concept of accessibility; Hierarchy, capacity and geometric design elements of roads and intersections**;** Basic principles of Transport infrastructure design; Traffic and transportation surveys and studies, traffic and travel characteristics; Urban transport planning process – stages, study area, zoning, data base, concept of trip generation Transport, environment and safety issues; principles and approaches of traffic management, transport system management.

TEXTBOOKS:

1. Crisis in road transport Konark Publishers Pvt. Ltd. , Mohinder Sing and L.R. Kadiyali, New Delhi, 1989
2. Traffic engineering and transportation planning, L. R. Kadiyali, Khanna Publishers, New Delhi, 2007.

REFERENCES:

2. Infrastructure and Governance , Sameer Kochhar, Deepak B. Phatak, H. Krishnamurthy, Gursharan Dhanjal, (eds), Academic Foundation, New Delhi, 2008.

	PROJECT SAFETY MANAGEMENT	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Any course in Engineering				
U18OECE005	Course Designed by – Dept of Civil Engineering				
	Category – OPEN ELECTIVE (OE)				
	Approval - Meeting of Academic Council, May 2018				

OBJECTIVES: To study relationship between Projects and Planning at various Levels. To study Management, Implementation and Evaluation of Projects.

UNIT I:PROJECT PLANNING **10**

Introduction to Projects; Nature of planning projects; Project Life Cycle; Identification of projects

UNIT II: PROJECT FORMULATION AND APPRAISAL **10**

Relationship between projects and planning issues including sectoral policy at: Local, State and National levels Project appraisal: Market analysis – Macro environment survey, survey methods, market characterization, demand forecasting; Technical Analysis – Magnitude, processes, materials, equipment, factors of production availability, implementation schedule; suitability of the plans, layout and design, location of the project; location analysis; supporting infrastructurerequirements- Capital Budgeting – Estimation of costing of components; developing over project cost; Social cost benefit analysis – UNIDO, Merles, ZOPP/GOPP, etc.

UNIT III: PROJECT MANAGEMENT AND IMPLEMENTATION, AND PROJECT EVALUATION AND MONITORING **10**

Project characteristics - pitfalls in management of a project; Techniques of management; Planning milestones - responsibility charts and principle responsibility, principles of activity planning; Project Implementation – methods, hurdles, facilitative factors; Project culture: line management, steering committee, role of project manager; Project Control: cost and time, quality - ISI standards and its application to Indian context; Introduction to Project Management Software (Ms Projects) and its usage. Types of evaluation - concurrent, ex-ante and ex-post. Methods of evaluation, techniques of evaluation, end results, Presentation of evaluation findings, Techniques of Monitoring of Development Works.

UNIT IV: REGULATORY FRAMEWORKS GOVERNING PROJECTS **15**

National Rehabilitation and Resettlement Policy (2007) - Social Impact mitigation; National Environmental Policy (2006) – Environmental Impact Assessment (EIA) and Environmental Management Plan (EMP).

TEXTBOOKS:

1. Projects reports, Prasanna Chandra McGraw Hill, New Delhi, 2009.
2. Brilliant Project Management, Barker, Stephenand Cole, Rob. Pearson Education Limited, UK, 2007.

U18OECE006	**ENVIRONMENT, HEALTH AND SAFETY IN INDUSTRIES**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Any course in Engineering				
	Course Designed by – Dept of Civil Engineering				
	Category – OPEN ELECTIVE (OE)				
	Approval - Meeting of Academic Council, May 2018				

OBJECTIVES: To study about the factory safety norms, environmental policies, storage and import of hazardous chemical rules and other rules and regulations.

UNIT I: FACTORIES ACT – 1948 **9**

Stuatutory authorities – inspecting staff, health, safety, provisions relating to hazardous processes, welfare, working hours, employment of young persons – special provisions – penalties and procedures-Tamilnadu Factories Rules 1950 under Safety and health chapters of Factories Act 1948

UNIT II ENVIRONMENT ACT – 1986 **9**

General powers of the central government, prevention, control and abatement of environmental pollution-Biomedical waste (Management and handling Rules, 1989-The noise pollution (Regulation and control) Rules, 2000-The Batteries (Management and Handling Rules) 2001- No Objection certificate from statutory authorities like pollution control board. Air Act 1981 and Water Act 1974: Central and state boards for the prevention and control of air pollution-powers and functions of boards – prevention and control of air pollution and water pollution – fund – accounts and audit, penalties and procedures.

UNIT III MANUFACTURE, STORAGE AND IMPORT OF HAZARDOUS CHEMICAL RULES 1989 **9**

Definitions – duties of authorities – responsibilities of occupier – notification of major accidents – information to be furnished – preparation of offsite and onsite plans – list of hazardous and toxic chemicals – safety reports – safety data sheets.

UNIT IV OTHER ACTS AND RULES **9**

Indian Boiler Act 1923, static and mobile pressure vessel rules (SMPV), motor vehicle rules, mines act 1952, workman compensation act, rules – electricity act and rules – hazardous wastes (management and handling) rules, 1989, with amendments in 2000- the building and other construction workers act 1996., Petroleum rules, Gas cyclinder rules-Explosives Act 1983-Pesticides Act.

UNIT V INTERNATIONAL ACTS AND STANDARDS **9**

Occupational Safety and Health act of USA (The Williames-Steiger Act of 1970) – Helath and safety work act (HASAWA 1974, UK) – OSHAS 18000 – ISO 14000 – American National Standards Institute (ANSI).

TEXTBOOKS

1. The Factories Act 1948, Madras Book Agency, Chennai, 2000
2. The Environment Act (Protection) 1986, Commercial Law Publishers (India) Pvt.Ltd., New Delhi.
3. Water (Prevention and control of pollution) act 1974, Commercial Law publishers (India) Pvt.Ltd., New Delhi.
4. Air (Prevention and control of pollution) act 1981, Commercial Law Publishers (India) Pvt.Ltd., New Delhi.

REFERENCES

1. The Indian boilers act 1923, Commercial Law Publishers (India) Pvt.Ltd., Allahabad.
2. The Mines Act 1952, Commercial Law Publishers (India) Pvt.Ltd., Allahabad.

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMES

ALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18OEBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations
20 U18OECE003-Road Safety
21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics
38. U18OEAE003- Unmanned Aerial Vehicle
39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion
41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance
43. U18OEEE003-Energy Conservation Techniques
44. U18OEEE004-PLC and SCADA for Industrial

45. U18OEEC-001-Communication Systems
46. U18OEEC-002-VLSI circuits
47. U18OEEC-003-Image Processing Techniques
48. U18OEEC-004-Communication Networks
49. U18OEEC-005-An Introduction to DSP
50. U18OEEC-006-Basics of IoT
51. U18OEBM001-Medical Radiation Safety Engineering
52. U18OEBM002-Medical Waste Management
53. U18OEBM003-Quality Control in Healthcare
54. U18OEBM004-Wearable Technology
55. U18OEEI001-Analytical Methods and Instrumentation
56. U18OEEI002-Introduction to process Data Analytics
57. U18OEEI003-Reliability and Safety in Process industries
58. U18OEEI004-Multi sensor data fusion
59. U18OEBT001- Bioprocess Economics & Plant Design
60. U18OEBT002-Brewing technology
61. U18OEBT003-Biomining
62. U18OEBT004-Industrial Safety Engineering
63. U18OEAC001-Geo- informatics for Precision Farming
64. U18OEAC002-Livestock and poultry management
65. U18OEAC003-Extension methodologies and transfer of Agricultural Technologies
66. U18OEAC004-Soil and Water Conservation Engineering
67. U18OEIT001-Block Chain Technology
68. U18OEIT002-Semantic Web
69. U18OEIT003-Entrepreneurship Development
70. U18OEIT004-Ethical Hacking Techniques
71. U18OECS004-Mobile Application Development
72. U18OECS005-System Modelling and Simulation
73. U18OECS006-Web Programming
74. U18OECS007-Virtual Reality
75. U18OECS008- E Commerce
76. U18OEGE001-Metagenomics and Epigenomics
77. U18OEGE002-Molecular Genetics and Genomics
78. U18OEGE003-Principles of Molecular cell biology

U18HSEN101	**COMMUNICATIVE ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	3	0	0	3
	Prerequisite – School Level English				
	Dept Designed by: ……Department of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6 hours

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing one self – exchanging personal information- narrating events, -incidents , speaking about one‘s friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6 hours

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building - The concept of Word Formation

UNIT III LISTENING 6 hours

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6 hours

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past-present continuous and past continuous- Vocabulary development- synonyms-antonyms-phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6 hours

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely.

SOFTSKILL LABORATORY 30

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews &conversations
4. Reading different genres of texts

5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds- intonation.
12. Creative and critical thinking.

TEXT BOOKS:

1. English A Course book for Under Graduate Engineers and Technologists. Orient Black Swan Limited, Hyderabad: 2015
2. Richards, C. Jack. Interchange Students' Book-2 New Delhi: CUP, 2015.

*

COURSE OUTCOMES	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

Category	**HS**														
Approval	47th Meeting of Academic Council														

	ENGINEERING MATHEMATICS – I	L	T	P	C
U18BSMA101	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by – Department of Mathematics				
OBJECTIVES	➢ The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. ➢ It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT I THEORY OF EQUATIONS (9+3)Hours

Fundamental theory of algebra – number of roots of polynomial equations – conjugate pairs theorem (without proof) – Descartes rules of signs- symmetric functions of the roots – formation of equations – diminish the roots of an equations- Multiple roots – reciprocal equation.

UNIT II DIFFERENTIAL CALCULUS – One Variable (9+3) Hours

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle‘s Theorem – Mean Value Theorem – Taylor‘s and Maclaurin‘s Theorem with remainders

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3) Hours

Partial derivatives –Euler‘s theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian–Maxima and minima of two variables.

UNIT IV INTEGRAL CALCULUS - One Variables (9+3) Hours

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions-Beta, Gamma functions and their properties.

UNIT V MATRICES (9+3) Hours

Characteristic Equations –Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas‘ Calculus ,Twelfth Edition, Addison-Wesley, Pearson.
5. Narayanan S., Manickavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for

Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers, 1992.

COURSE OUTCOMES (COs)	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSPH101	**WAVES AND OPTICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.

UNIT1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9 hours

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9 hours

Production of ultrasonics by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection

modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9 hours

Fermat‘s principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster‘s angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVES OPTICS 9 hours

Huygens‘ principle, superposition of waves and interference of light by wavefront splitting and amplitude splitting; Young‘s double slit experiment, Newton‘s rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS 9 hours

Einstein‘s theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

TEXT BOOKS

1) M.N. Avadhanulu and P.G. Kshirsagar, ―A Textbook of Engineering Physics‖ S.Chand Publishers, 2016 (for UNITs 1,3,4 & 5)
2) G.Senthil Kumar, ―Engineering Physics‖, VRB publishers, Chennai, 2015 (for UNIT 2)

REFERENCE BOOKS

COURSE OUTCOMES (COs)	
CO1	Understand the basic concept of waves and lights
CO2	Understand the importance of Ultrasonic waves and Non-DestructiveTesting
CO3	Understand the propagation of light and geometrical optics
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves
CO5	Understand the concept of laser and its applications

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

COs\ POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PS 01**	**PS 02**	**PS 03**
CO1	3							1	2			2		2	3

CO2	3							1	2					2	
CO3	2							3	2			2		2	
CO4	3							1	2			2		2	
CO5	3							1	2			2		2	
Category	Basic Sciences (BS)														
Approval	47th Meeting of Academic Council														

U18BSCH101	**ENGINEERING CHEMISTRY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY 9 hours

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9 hours

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson‘s Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9 hours

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for Power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9 hours

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane

number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9 hours

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. Nano composites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles,Nanochemistry in biology and medicines.

U18ESEE101	BASIC ELECTRICAL & ELECTRONICS ENGINEERING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

UNIT 1 DC CIRCUITS 12 hours

Electrical circuit elements, voltage and current sources, Fundamentals Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems,,Maximum Power Transfer Theorem.

UNITII AC CIRCUITS 9 hours

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

UNITIII ELECTRICAL MACHINES & TRANSFORMERS 9 hours

Principles of operation and characteristics of; DC machines,Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency,all day efficiency and auto-transformer .

UNIT 4 SEMICONDUCTOR DEVICES AND APPLICATIONS 9 hours

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

UNIT 5 DIGITAL ELECTRONICS 6 hours

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

U18BSBT101	**BIOLOGY FOR ENGINEERS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector					

UNIT I INTRODUCTION TO LIFE 6 hours

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6 hours

Plant System: basic concepts plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System -types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6 hours

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity-antigens-antibody-immune response.

UNIT IV HUMAN DISEASES 6hours

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6hours

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines-cloning-bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

TEXT BOOKS:

1. A Text book of Biotechnology, R.C.Dubey, S. Chand Higher Academic Publications, 2013

	Total Contact Hours - 45	0	0	2	0
	Prerequisite – Higher Secondary School Physics				
	Course Designed by – Department of Physics				
OBJECTIVES: To impart knowledge of practical Physics to the students					

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Semiconductor Physics – Circuit branches

1) Determination of Band Gap
2) Zener diode characteristics
3) p-n junction diode Characteristics
3) Transistor Characteristics
5) V-I characteristics using LDR circuit
6) Carey Foster's Bridge

COURSE OUTCOMES (COs)	
CO1	To Understand the fundamental concept of optics
CO2	To Understand the concept of production of ultrasonic waves
CO3	To Understand the functions of semiconductor

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

	Total Contact Hours – 45	0	0	2	0
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, ―Practical Chemistry‖, Devi Publications 2014.
2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and and Conductometric Precipitation titration.
CO4	Student will be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18ESME1L2	**WORKSHOP/MANUFACTURING PRACTICES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				

OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.

SYLLABUS

Lectures & videos: 15 hours

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **3 lecture**
- CNC machining, Additive manufacturing **2 lecture**
- Fitting operations &power tools **2 lecture**
- Carpentry **2 lecture**
- Plastic moulding, glass cutting **2 lecture**
- Metal casting **2 lecture**
- Welding (arc welding & gas welding), brazing **2 lecture**

WORKSHOP PRACTICE:

1. Machine shop **6 hours**
   a) Facing
   b) Turning
   c) Drilling Practice

2. Fitting shop **6 hours**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.

3. Carpentry **9 hours**
   a) Preparation Lap joints.
   b) Mortise and Tenonjoints.
   c) Cross Half.
   d) Dove Tail.

4. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) 9 hours**

Preparation of butt joints, lap joints and tee joints

5. Sheet Metal working **9 hours**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints

6. Demonstration **6 hours**

Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONIC ENGINEERING PRACTICESLABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	4	2
	Prerequisite – School Level Physics & Basic Electrical and Electronic Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff‘s Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.

8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipment and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flaps

Mapping of Course Outcomes (COs) with Programme Outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO5	3	3	2			1			2		3	1
	CO6	3	3	2			1			2		3	1
3	Category	Engg Science (ES)											
4	Approval	47th Meeting of Academic Council											

U18HSEN201	**TECHNICAL ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – I semester English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of English language and its usage in day to day life.				

UNIT I LISTENING 9 hours

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9 hours

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9 hours

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9 hours

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9 hours

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

U18BSMA201	**ENGINEERING MATHEMATICS – II**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by – Department of Mathematics				
OBJECTIVES	➢ The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables. ➢ Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3) hours

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3) hours

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)hours

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : = + , , 1/ and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3) hours

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3) hours

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.

REFERENCE BOOKS

1. Venkataraman. M. K, Engineering Mathematics, National Publishing Company, 2000.
2. Bali .N.P and Manish Goyal, A Text book of Engineering Mathematics, Eighth Edition, Laxmi Publications Pvt Ltd., 2011.
3. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas‘ Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green‘s, Stoke‘s and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy‘s integral formula and Residue theorem.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

U18BSPH202	**SEMICONDUCTOR PHYSICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To develop physics and engineering strategies of semiconductor materials and to discuss their functionalities in modern electronic and optoelectronic devices

UNIT 1 INTRODUCTION AND ELECTRONIC STATES OF SEMICONDUCTORS **9 hours**

Introduction to solid state materials - crystal structure - Reciprocal lattice - Brillouin zone and rules for band (k - space) representation. Dynamics of electrons in periodic potential:Kronig - penny and nearly free electron models - Real methods for band structure calculations; Band gaps in semiconductors - Holes and effective mass concept - Properties of conduction and valance bands

UNIT 2 CARRIERS AND DOPING **9 hours**

Fermi distribution and energy - Density of states - Valance and conduction band density of states - intrinsic carrier concentration – intrinsic Fermi level. Extrinsic semiconductors: n and p type doping - Densities of carriers in extrinsic semiconductors and their temperature dependence - extrinsic semiconductor Fermi energy level - Degenerate and non - degenerate semiconductors - Band gap engineering

UNIT 3 ELECTRICAL TRANSSORT **9 hours**

Scattering Mechanism: electron - electron and electron – phonon scattering. Macroscopic transport: Carrier transport by Diffusion - Carrier transport by Drift: Low field, High field and very high field.

UNIT 4 OPTICAL TRANSSORT **9 hours**

Electron - hole pair generation and recombination: band to band (direct and indirect band gap transitions) and intra band (impurity related) transitions, free - carrier & phonon transitions. Excitons: Origin, electronic levels and properties. Carrier transport - continuity equations. Optical constants: Kramers - Kronig relations.

UNIT 5 SEMICONDUCTOR AS DEVICES AND RECENT ADVANCES **9 hours**

Processing of Semiconductor devices (Brief), p - n Semiconductor as device and Semiconductor junctions - Homo and hetero Junctions. Active and passive optoelectronic devices: performance and response enhancement (photo processes)**.**

COURSE OUTCOMES (COs)	
CO1	Understand the difference between metals, semiconductors and insulators
CO2	Understand the importance of doping to charge carrier density
CO3	Understand the electrical transport in semiconductors
CO4	Understand the difference between direct and indirect semiconductors
CO5	Understand the concept of semiconductor optoelectronic devices.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

Approval	47th Meeting of Academic Council														

U18BSCH201	**ENVIRONMENTAL SCIENCES**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I NATURAL RESOURCES 9 hours

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II ECOSYSTEMS 9 hours

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III BIODIVERSITY AND ITS CONSERVATION 9 hours

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographically classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL SOLLUTION 9 hours

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste

Management: Causes, effects and control measures of urban and industrial wastes - Role ofan individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V SOCIAL ISSUES AND HUMAN SOPULATION 9 hours

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder-Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes. Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES (COs)	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

UNITI ALGORITHIMIC PROBLEM SOLVING 9 periods

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart ,programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

UNIT II DATA, EXPRESSIONS, STATEMENTS 9 Periods

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

UNIT III CONTROL FLOW, FUNCTIONS 9 Periods

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNITIV LISTS, TUPLES, DICTIONARIES 9 periods

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

UNIT V FILES, PACKAGES 9 Periods

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

U18ESME101	**ENGINEERING GRAPHICS & DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	3	0	0	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice				

UNIT I TRADITIONAL ENGINEERING GRAPHICS

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

UNITII COMPUTER GRAPHICS

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM)

***(*Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)**

UNITIII INTRODUCTION TO ENGINEERING DRAWING (9+2Hrs)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle;

UNIT IV ORTHOGRAPHIC PROJECTIONS (10+2 Hrs)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to oneplane – Parallel to one plane and inclined to other plane – Inclined to both the planes;Projections of planes inclined to either HP or VP;

UNIT V PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3Hrs)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

UNITVI SECTIONSOF SOLIDS AND DEVELOPMENT OF SURFACE (10+3Hrs)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planesperpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone;

UNITVII BUILDING DRAWING (9+2Hrs)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings,Symbols, Conventions and Abbreviations.Drawing of residential single and two storied buildingswith detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections

UNITVIII OVERVIEW OF COMPUTER GRAPHICS (12+3 Hrs)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of **UNIT**s and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles;Create basic drawing of objects such as polygon and general multi-line figures;

Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top viewand side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students will get Exposure to basics of building construction
CO4	Students will get Exposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

	Total Contact Hours – 45	0	0	4	2
	Prerequisite – **PROBLEM SOLVING AND PYTHON PROGRAMMING**				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton_s method)
3. ExSOnentiation (Sower of a number)
4. Find the maximum of a list of numbers

5. Linear search and Binary search

6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (Cos)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab,NumPy and Matplotlib

Mapping of Course Outcomes with Program outcomes (Pos)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSMA304	**PROBABILITY AND QUEUING THEORY**	**L**	**T**	**P**	**C**
	Total Contact Periods- 60	**3**	**1**	**0**	**4**
	Prerequisite – Basic knowledge in probability and statistics				
	Course Designed by : Department of Mathematics				
OBJECTIVE	➢ To develop analytical capability and to impart knowledge in Statistical methods and Queuing theory and their applications in Engineering and Technology. ➢ To develop the knowledge of Statistical methods and its applications so as to appreciate them for solving real world problems.				

UNIT I RANDOM VARIABLES (9+3)

Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions.

UNIT II TWO – DIMENSIONAL RANDOM VARIABLES (9+3)

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Linear regression – Transformation of random variables.

UNIT III RANDOM PROCESSES (9+3)

Classification – Stationary process – Markov process – Poisson process – Discrete parameter Markov chain – Chapman Kolmogorov equations – Limiting distributions.

UNIT IV QUEUING MODELS (9+3)

Markovian queues – Birth and Death processes – Single and multiple server queueing models – Little's formula – Queues with finite waiting rooms – Queues with impatient customers: Balking and reneging.

UNIT V ADVANCED QUEUING MODELS (9+3)

Finite source models – M/G/1 queue – PollaczekKhinchin formula – M/D/1 and M/EK/1 as special cases – Series queues – Open Jackson networks.

COURSE OUTCOMES (Cos)	
CO1	Understand the notations various types of random variables and probability distributions.
CO2	Apply the concepts of two dimensional random variables.
CO3	Explain the concepts of random processes.
CO4	Describe the basic concepts of queuing models
CO5	Analyze the extended models in advanced queuing models.
CO6	Apply probabilistic theory for real time problems.

U18ESIT302	PRINCIPLES OF COMMUNICATION SYSTEMS	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite –Wave optics and Basic Electrical and Electronics system				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To Introduce Different Methods Of Analog Communication And Their Significance
- To Introduce Digital Communication Methods For High Bit Rate Transmission
- To Introduce The Concepts Of Source And Line Coding Techniques For Enhancing Rating Of Transmission Of Minimizing The Errors In Transmission.
- To Introduce MAC Used In Communication Systems For Enhancing The Number Of Users.
- To Introduce Various Media For Digital Communication

UNIT I ANALOG COMMUNICATION 9

Signals – Analog and Digital, Modulation Techniques- AM – Frequency Spectrum – Vector Representation – Power Relations – Generation Of AM – DSB, DSB/SC, SSB, VSB AM Transmitter & Receiver; FM And PM Techniques – Frequency Spectrum – Power Relations : Generation Of FM NBFM& WBFM, Amstrong Method & Reactance Modulations.

UNIT II DIGITAL COMMUNICATION 9

Concepts Of Sampling And Sampling Theorems, Pulse Modulations:- PAM, PWM, PPM, PTM, Quantization And Coding : DCM, DM, Slope Overload Error. ADM, DPCM, OOK Systems – ASK, FSK, PSK, BSK, QPSK, QAM, MSK, GMSK, Applications Of Data Communication.

UNIT III INFORMATION THEORY 9

Primary Communication – Entropy, Properties, BEC, Source Coding :Shannon Fano, Huffman Coding : Noiseless Coding Theorem, BW – SNR Trade Off Codes: NRZ, RZ, AMI, HDBP, ABQ, Efficiency Of Transmissions, Error Control Codes And Applications: Convolutions & Block Codes.

UNIT IV SPREAD SPECTRUM AND MULTIPLE ACCESS METHODS 9

FDMA, TDMA, CDMA, SDMA , **Spread Spectrum and Multiple Access Methods for wireless system engineering**

UNIT V OPTICAL FIBER , SATELLITE, POWERLINE- SCADA 9

Fibers – Types: Sources, Detectors Used, Digital Filters, Optical Link - Orbits Types Of Satellites Frequency Used Link Establishment, MA Techniques Used In Satellite Communication, Earth Station; Aperture Actuators Used In Satellite – Intelsat and Insat, Power Line Carrier Communications-SCADA.

4. B.P.Lathi –Modern Digital And Analog Communication Systems‖ Oxford University Press, 1998.
5. Frenzel 4th edn Electronic Communication Systems.

COURSE OUTCOMES (COs)	
CO1	Understand the basic working of communication systems
CO2	Apply Analog modulation techniques and their comparative analysis and applications suitability
CO3	Evaluate process of modulation and demodulation, characterization and performance parameters of transmission channels
CO4	Understand Analog to digital conversion and Digital data transmission, Multiplexing Techniques.
CO5	Summarize the multiple access techniques used in satellite communication
CO6	Outline the fibre optical system used in communication

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT303	**DATABASE MANAGEMENT SYSTEMS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Computer fundamentals				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To learn the fundamentals of data models and to represent a database system using ER diagrams.
- To study SQL and relational database design.
- To understand the internal storage structures using different file and indexing techniques which will help in physical DB design.
- To understand the fundamental concepts of transaction processing- concurrency control techniques and recovery procedures.
- To have an introductory knowledge about the Storage and Query processing Techniques

UNIT I RELATIONAL DATABASES 10

Purpose of Database System – Views of data – Data Models – Database System Architecture – Introduction to relational databases – Relational Model – Keys – Relational Algebra – SQL fundamentals – Advanced SQL features – Embedded SQL– Dynamic SQL

UNIT II DATABASE DESIGN 8

Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping – Functional Dependencies – Non-loss Decomposition – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form

UNIT III TRANSACTIONS 9

Transaction Concepts – ACID Properties – Schedules – Serializability – Concurrency Control – Need for Concurrency – Locking Protocols – Two Phase Locking – Deadlock – Transaction Recovery – Save Points – Isolation Levels – SQL Facilities for Concurrency and Recovery.

UNIT IV IMPLEMENTATION TECHNIQUES 9

RAID – File Organization – Organization of Records in Files – Indexing and Hashing –Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing – Query Processing Overview – Algorithms for SELECT and JOIN operations – Query optimization using Heuristics and Cost Estimation.

UNIT V ADVANCED TOPICS 9

Distributed Databases: Architecture, Data Storage, Transaction Processing – Object-based Databases: Object Database Concepts, Object-Relational features, ODMG Object Model, ODL, OQL – XML Databases: XML Hierarchical Model, DTD, XML Schema, XQuery – Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems.

TEXT BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, ―Database System Concepts‖, Sixth Edition, Tata McGraw Hill, 2011.
2. Ramez Elmasri, Shamkant B. Navathe, ―Fundamentals of Database Systems‖, Sixth Edition, Pearson Education, 2011.

3. G.K.Gupta,‖Database Management Systems‖, Tata McGraw Hill, 2011.4.

COURSE OUTCOMES (COs)	
CO1	Analyze the modern and futuristic database applications based on size and complexity
CO2	Apply queries using normalization criteria and optimize queries
CO3	Understand the transactions concepts and concurrency
CO4	Explain the indexing strategies in different database systems
CO5	Discuss the key challenges of advanced database systems

CO6	Evaluate how advanced databases differ from traditional databases

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT304	**DATA STRUCTURES AND ALGORITHMS**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Fundamentals of Programming Language				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand the concepts of ADTs
- To learn linear data structures – lists, stacks, and queues
- To understand sorting, searching and hashing algorithms
- To apply Tree and Graph structures

UNIT I LINEAR DATA STRUCTURES – LIST 12

Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation —singly linked lists- circularly linked lists- doubly-linked lists – applications of lists –Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).

UNIT II LINEAR DATA STRUCTURES – STACKS, QUEUES 12

Stack ADT – Operations – Applications – Evaluating arithmetic expressions- Conversion of Infix to postfix expression – Queue ADT – Operations – Circular Queue – Priority Queue – deQueue –applications of queues.

UNIT III NON LINEAR DATA STRUCTURES – TREES 12

Tree ADT – tree traversals – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT –Threaded Binary Trees- AVL Trees – B-Tree – B+ Tree – Heap – Applications of heap.

UNIT IV NON LINEAR DATA STRUCTURES – GRAPHS 12

Definition – Representation of Graph – Types of graph – Breadth-first traversal – Depth-first traversal – Topological Sort – Bi-connectivity – Cut vertex – Euler circuits – Applications of graphs.

UNIT V SEARCHING, SORTING AND HASHING TECHNIQUES 12

Searching- Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort – Radix sort. Hashing- Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.

TEXT BOOKS:

3. Stephen G. Kochan, –Programming in C‖, 3rd edition, Pearson Education.
4. Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, –Fundamentals of Data Structures in C‖, Second Edition, University Press, 2008

COURSE OUTCOMES (COs)	
CO1	Understand linear data structures linked list and their applications.
CO2	Demonstrate the linear data structures such as stacks, queues and their applications.
CO3	Apply the non-linear data structures such as trees, graphs in real time applications.
CO4	Analyze the various searching techniques
CO5	Evaluate the various sorting algorithms and hashing technique
CO6	Describe the overview of hashing techniques

U18PCIT305	**OBJECT ORIENTED ANALYSIS AND DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Fundamentals				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To learn the basics of OO analysis and design skills.
- To learn the UML design diagrams.
- To learn to map design to code.
- To be exposed to the various testing techniques.

UNIT I UML DIAGRAMS 9

Introduction to OOAD – Unified Process – UML diagrams – Use Case – Class Diagrams– Interaction Diagrams – State Diagrams – Activity Diagrams – Package, component and

Deployment Diagrams.

UNIT II DESIGN PATTERNS 9

GRASP: Designing objects with responsibilities – Creator – Information expert – Low Coupling – High Cohesion – Controller – Design Patterns – creational – factory method – structural – Bridge – Adapter – behavioural – Strategy – observer.

UNIT III CASE STUDY 9

Case study – the Next Gen POS system, Inception -Use case Modeling – Relating Use cases – include, extend and generalization – Elaboration – Domain Models – Finding conceptual classes and description classes – Associations – Attributes – Domain model refinement – Finding conceptual class Hierarchies – Aggregation and Composition.

UNIT IV APPLYING DESIGN PATTERNS 9

System sequence diagrams – Relationship between sequence diagrams and use cases Logical architecture and UML package diagram – Logical architecture refinement – UML class diagrams – UML interaction diagrams – Applying GoF design patterns.

UNIT V CODING AND TESTING 9

Mapping design to code – Testing: Issues in OO Testing – Class Testing – OO Integration Testing – GUI Testing – OO System Testing.

TEXT BOOK:

4. Paul C. Jorgensen, –Software Testing:- A Craftsman‘s Approach‖, Third Edition, Auerbach Publications, Taylor and Francis Group, 2008

COURSE OUTCOMES (COs)	
CO1	Explain OOAD concepts and various UML diagrams
CO2	Understand the object-oriented approach to analyze and select the appropriate design patterns
CO3	Illustrate about domain models and conceptual classes
CO4	Use Unified modeling Language notations to apply effective and efficient system design patterns.
CO5	Formulate the problem and designing solutions for real time projects
CO6	Compare and contrast the various testing techniques

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT306	**COMPUTER ARCHITECTURE**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Fundamentals				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To learn the basic structure and operations of a computer.
- To learn the arithmetic and logic unit and implementation of fixed-point and floating point arithmetic unit.
- To learn the basics of pipelined execution.
- To understand parallelism and multi-core processors.
- To understand the memory hierarchies, cache memories and virtual memories.
- To learn the different ways of communication with I/O devices.

UNIT I BASIC STRUCTURE OF A COMPUTER SYSTEM 9

Functional Units – Basic Operational Concepts – Performance – Instructions: Language ofthe Computer – Operations, Operands – Instruction representation – Logical operations – decision making – MIPS Addressing.

UNIT II ARITHMETIC FOR COMPUTERS 9

Addition and Subtraction – Multiplication – Division – Floating Point Representation – Floating Point Operations – Subword Parallelism

UNIT III PROCESSOR AND CONTROL UNIT 9

A Basic MIPS implementation – Building a Data path – Control Implementation Scheme – Pipelining – Pipelined data path and control – Handling Data Hazards & Control Hazards – Exceptions.

UNIT IV PARALLELISIM 9

Parallel processing challenges – Flynn_s classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures – Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors – Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.

UNIT V MEMORY & I/O SYSTEMS 9

Memory Hierarchy – memory technologies – cache memory – measuring and improving cache performance – virtual memory, TLB_s – Accessing I/O Devices – Interrupts – Direct Memory Access – Bus structure – Bus operation – Arbitration – Interface circuits – USB.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	Understand the fundamental organization of computer system, operations and instructions.
CO2	Design arithmetic and logic unit in computer architecture.
CO3	Explain the concepts of pipelined execution and design control unit.
CO4	Understand parallel processing architectures and GPU.
CO5	Describe the various memory systems and its hierarchies.
CO6	Demonstrate the different ways of communication with I/O devices

OBJECTIVES

- To understand data definitions and data manipulation commands
- To learn the use of nested and join queries
- To understand functions, procedures and procedural extensions of data bases
- To be familiar with the use of a front end tool
- To understand design and implementation of typical database applications

LIST OF EXERCISES:

1. Data Definition Commands, Data Manipulation Commands for inserting, deleting, updating and retrieving Tables and Transaction Control statements
2. Database Querying – Simple queries, Nested queries, Sub queries and Joins
3. Views, Sequences, Synonyms
4. Database Programming: Implicit and Explicit Cursors
5. Procedures and Functions
6. Triggers

7. Exception Handling
8. Database Design using ER modeling, normalization and Implementation for any application
9. Database Connectivity with Front End Tools
10. Case Study using real life database applications

COURSE OUTCOMES (COs)	
CO1	Construct data definitions and manipulation commands.
CO2	Design applications to test Nested and Join Queries
CO3	Implement simple applications that use the concept of Views
CO4	Design applications that require a Front-end Tool, ER Modelling
CO5	Analyze the use of Tables, Cursors, Views, Functions, Procedures and Triggers
CO6	Design and implement typical real time database applications

OBJECTIVES

- To build software development skills using java programming for real-world applications.
- To understand and apply the concepts of classes, packages, interfaces, arraylist, exception handling and file processing.
- To develop applications using generic programming and event handling.

LIST OF EXPERIMENTS

1. Develop a Java application to generate Electricity bill. Create a class with the following members: Consumer no., consumer name, previous month reading, current month reading, type of EB connection (i.e domestic or commercial). Compute the bill amount using the following tariff.

If the type of the EB connection is domestic, calculate the amount to be paid as follows:

- First 100 units – Rs. 1 per unit
- 101-200 units – Rs. 2.50 per unit

- 201 -500 units – Rs. 4 per unit
- 501 units – Rs. 6 per unit

If the type of the EB connection is commercial, calculate the amount to be paid as follows:

- First 100 units – Rs. 2 per unit
- 101-200 units – Rs. 4.50 per unit
- 201 -500 units – Rs. 6 per unit
- 501 units – Rs. 7 per unit

2. Develop a java application to implement currency converter (Dollar to INR, EURO to INR, Yen to INR and vice versa), distance converter (meter to KM, miles to KM and vice versa) , time converter (hours to minutes, seconds and vice versa) using packages.
3. Develop a java application with Employee class with Emp_name, Emp_id, Address, Mail_id, Mobile_no as members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club fund. Generate pay slips for the employees with their gross and net salary.
4. Design a Java interface for ADT Stack. Implement this interface using array. Provide necessary exception handling in both the implementations.
5. Write a program to perform string operations using ArrayList. Write functions for the following
   a. Append – add at end
   b. Insert – add at particular index
   c. Search
   d. List all string starts with given letter
6. Write a Java Program to create an abstract class named Shape that contains two integers and an empty method named print Area(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.
7. Write a Java program to implement user defined exception handling.
8. Write a Java program that reads a file name from the user, displays information about whether the file exists, whether the file is readable, or writable, the type of file and the length of the file in bytes.
9. Write a java program that implements a multi-threaded application that has three threads. First thread generates a random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.
10. Write a java program to find the maximum value from the given type of elements using a generic function.
11. Design a calculator using event-driven programming paradigm of Java with the following options.
    a) Decimal manipulations
    b) Scientific manipulations
12. Develop a mini project for any application using Java concepts.

COURSE OUTCOMES (COs)	
CO1	Construct Java programs for simple applications that make use of classes
CO2	Develop and implement Java programs for simple applications that make use of packages and interfaces.
CO3	Implement array list using Java
CO4	Design Java applications using generic programming, exception handling and multithreading

CO5	Implement the concept of file processing in Java
CO6	Develop real time applications using Java concepts

OBJECTIVES

- To implement linear and non-linear data structures
- To understand the different operations of search trees
- To implement graph traversal algorithms
- To get familiarized to sorting and searching algorithm

LIST OF EXPERIMENTS

1. Array implementation of Stack and Queue ADTs
2. Array implementation of List ADT
3. Linked list implementation of List, Stack and Queue ADTs
4. Applications of List, Stack and Queue ADTs
5. Implementation of Binary Trees and operations of Binary Trees
6. Implementation of Binary Search Trees
7. Implementation of AVL Trees
8. Implementation of Heaps using Priority Queues.
9. Graph representation and Traversal algorithms
10. Applications of Graphs
11. Implementation of searching and sorting algorithms
12. Hashing – any two collision techniques

COURSE OUTCOMES (Cos)	
CO1	Apply the concepts of linear data structures such as list, stacks, queues and linked list.
CO2	Implement non-linear data structure operations
CO3	Construct functions to implement Graph and Tree Traversal algorithms
CO4	Design programs based on the concept of sorting and searching techniques
CO5	Design and apply structures with Hashing techniques
CO6	Identify the appropriate data structure for any given problem

U18BSMA401	**DISCRETE MATHEMATICS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by:- Dept of Mathematics				
OBJECTIVES	Throughout the course, students will be expected to demonstrate their understanding of Discrete Mathematics by being able to do use mathematically correct terminology and notation, construct correct direct and indirect proofs, apply logical reasoning to solve a variety of problems and introduce simple concepts in graph theory.				

UNIT I MATHEMATICAL LOGIC (9+3)

Propositions and logic operators –Truth table – Equivalence – Implications – Tautologies – Laws of logic – Proofs in Propositional calculus – Inference theory – Predicate calculus.

UNIT II RELATION AND FUNCTIONS (9+3)

Different types of relations: Binary Relation – Partial Ordering Relation – Equivalence Relation – Sum and Product of Functions – bijective functions – Inverse and Composite Function

UNIT III RECURRENCE RELATIONS (9+3)

Recurrence relations – solving recurrence relation – Homogeneous and non–homogeneous recurrence relation – Generating Functions – Groups – Properties – cyclic groups and subgroups cosets – Lagrange‘s theorem.

UNIT IV GRAPH THEORY (9+3)

Introduction of Graphs – Graph terminology – Representation of Graphs – Connectivity – Euler and Hamilton path – Euler and Hamilton cycles – the Travelling sales man problem – Graph Isomorphism

UNIT V BOOLEAN ALGEBRA (9+3)

Boolean algebra – Partial order Relations on Boolean algebra – Boolean homomorphism – Disjunctive and conjunctive normal forms – Boolean functions.

TEXT BOOKS

3. T. Veerarajan, –Discrete Mathematics‖, Mc Graw Hill Publications, 2006.

COURSE OUTCOMES (COs)	
CO1	Define and analyze the fundamental Mathematical Concepts such as sets relations, and functions.
CO2	Learn the steps in proportional and Predicate logic.
CO3	Expose to the concept of recurrence relations, generating functions, group, and cyclic groups, subgroups.
CO4	Define the terminologies of graph and develop the given problems as graph networks and solve with techniques of graph theory.
CO5	Understand the terminologies of Boolean algebra and mathematical induction,
CO6	Evaluate Boolean functions and simplify expressions using the properties of Boolean algebra.

U18PCIT401	**WEB PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Internet Programming				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand the concepts and architecture of the World Wide Web.
- To understand and practice mark up languages
- To understand and practice embedded dynamic scripting on client side Internet Programming
- To understand and practice web development techniques on client-side

UNIT I SCRIPTING 9

Web page Designing using HTML - Scripting basics- Client side and server side scripting. Java Script-Object, names, literals, operators and expressions- statements and features- events -

windows - documents - frames - data types - built-in functions- Browser object model - Verifying forms.-HTML5- CSS3- HTML 5 canvas - Web site creation using tools.

UNIT II JAVA 9

Introduction to object oriented programming-Features of Java – Data types, variables and arrays – Operators – Control statements – Classes and Methods – Inheritance. Packages and Interfaces –Exception Handling – Multithreaded Programming – Input/Output – Files – Utility Classes – String Handling.

UNIT III JDBC 9

JDBC Overview – JDBC implementation – Connection class – Statements - Catching Database Results, handling database Queries. Networking– InetAddress class – URL class- TCP sockets - UDP sockets, Java Beans –RMI.

UNIT IV APPLETS 9

Java applets- Life cycle of an applet – Adding images to an applet – Adding sound to an applet. Passing parameters to an applet. Event Handling. Introducing AWT: Working with Windows Graphics and Text. Using AWT Controls, Layout Managers and Menus. Servlet – life cycle of a servlet. The Servlet API, Handling HTTP Request and Response, using Cookies, Session Tracking. Introduction to JSP.

UNIT V XML AND WEB SERVICES 9

Xml – Introduction-Form Navigation-XML Documents- XSL – XSLT- Web services-UDDI-WSDL-Java web services – Web resources.

TEXT BOOKS:

1. Harvey Deitel, Abbey Deitel, Internet and World Wide Web: How To Program 5th Edition.
2. Herbert Schildt, Java - The Complete Reference, 7th Edition. Tata McGraw- HillEdition.
3. Michael Morrison XML Unleashed Tech media SAMS.

3. http:// speckyboy.com/2015/01/12/free-**web**-design-**ebooks**-2014

COURSE OUTCOMES (COs)	
CO1	Acquire knowledge about functionalities of world wide web
CO2	Explore markup languages features and design interactive web pages using them
CO3	Experiment Client side validation using scripting languages
CO4	Implement Open source JavaScript library functions
CO5	Design front end web page and connect to the back end databases
CO6	Explain the functions of client and servers on Web.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT402	**OPERATING SYSTEM PRINCIPLES**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Organization and Architecture				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

To understand basic operating system controls the computing resources and provide services to the users. This course provides an introduction to the operating system functions, design and implementation.

UNIT I OPERATING SYSTEMS OVERVIEW 9

Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview-objectives and functions, Evolution of Operating System.- Computer System Organization-Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.

UNIT II PROCESS MANAGEMENT 9

Processes-Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication; Threads- Overview, Multicore Programming, Multithreading Models; Windows 7 - Thread and SMP Management. Process Synchronization - Critical Section Problem, Mutex Locks, Semophores, Monitors; CPU Scheduling and Deadlocks.

UNIT III STORAGE MANAGEMENT 9

Main Memory-Contiguous Memory Allocation, Segmentation, Paging, 32 and 64 bit architecture Examples; Virtual Memory- Demand Paging, Page Replacement, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.

UNIT IV I/O SYSTEMS 9

Mass Storage Structure- Overview, Disk Scheduling and Management; File System Storage- File Concepts, Directory and Disk Structure, Sharing and Protection; File System Implementation- File System Structure, Directory Structure, Allocation Methods, Free Space Management; I/O Systems.

UNIT V CASE STUDY 9

Linux System- Basic Concepts; System Administration-Requirements for Linux System Administrator, Setting up a LINUX Multifunction Server, Domain Name System, Setting Up Local Network Services; Virtualization- Basic Concepts, Setting Up Xen,VMware on Linux Host and Adding Guest OS

TEXT BOOK:

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, –Operating System Concepts‖, 9th Edition, John Wiley and Sons Inc., 2012.

5. https://www.free-**ebooks**.net/**ebook**/The-Easy-Guide-to-**Operating-Systems**

COURSE OUTCOMES (COs)	
CO1	Recall the fundamental components of a computer operating system, Basics of operating system principles and System calls. Define process state and scheduler. List mass storage devices. Recall the concepts of storage allocation strategies, files system and Linux System.
CO2	Describe, discuss, and explain the policies for scheduling, deadlocks, memory management, synchronization, system calls, file systems and virtualization concepts.
CO3	Demonstrate and execute basic system calls, Schedulers, Memory management systems, Virtual Memory and Paging systems.
CO4	Examine and Experiment the performance of scheduling algorithm, memory management strategies and disk storage structures
CO5	Design and develop Linux multifunction server and Local network services
CO6	Develop Virtualization Concept in OS by setting Up Xen, VMware on Linux Host and Adding Guest OS

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT403	**SOFTWARE ENGINEERING METHODOLOGIES**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Fundamentals of Computing and Programming				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To learn about generic models of software development process.
- To understand fundamental concepts of requirements engineering and Analysis Modeling.
- To understand the different design techniques and their implementation.
- To learn various testing and maintenance measures.

UNIT I SOFTWARE PROCESS AND PROJECT MANAGEMENT 9

Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models – Software Project Management: Estimation – LOC and FP Based Estimation,

COCOMO Model – Project Scheduling – Scheduling, Earned Value Analysis - Risk Management.

UNIT II REQUIREMENTS ANALYSIS AND SPECIFICATION 9

Software Requirements: Functional and Non-Functional, User requirements, System requirements, Software Requirements Document – Requirement Engineering Process: Feasibility Studies, Requirements elicitation and analysis, requirements validation, requirements management-Classical analysis: Structured system Analysis, Petri Nets- Data Dictionary.

UNIT III RE DESIGN 9

Design process – Design Concepts-Design Model– Design Heuristic – Architectural Design – Architectural styles, Architectural Design, Architectural Mapping using Data Flow- User Interface Design: Interface analysis, Interface Design –Component level Design: Designing Class based components, traditional Components.

UNIT IV TESTING AND IMPLEMENTATION 9

Software testing fundamentals-Internal and external views of Testing-white box testing -basis path testing-control structure testing-black box testing- Regression Testing – Unit Testing – Integration Testing – Validation Testing – System Testing And Debugging – Software Implementation Techniques: Coding practices-Refactoring.

UNIT V PROJECT MANAGEMENT 9

Estimation – FP Based, LOC Based, Make/Buy Decision, COCOMO II - Planning – Project Plan, Planning Process, RFP Risk Management – Identification, Projection, RMMM - Scheduling and Tracking –Relationship between people and effort, Task Set & Network, Scheduling, EVA - Process and Project Metrics.

COURSE OUTCOMES (COs)	
CO1	Explain the basic concept of Software engineering and Estimation models.
CO2	Understand the concepts of software requirements, analysis and specification.
CO3	Design various software models
CO4	Understand the basic concepts of testing and its implementation.
CO5	Implement and deploy the software.
CO6	Apply the project management in software engineering tasks.
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18ESIT404	**DIGITAL SYSTEM DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Basic Electrical and Electronics Engg				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES:

- To introduce the concept of digital and binary systems
- To design and analyze combinational logic circuits.
- To design and analyze sequential logic circuits.
- To understand the basic software tools for the design and implementation of digital circuits and systems.

UNIT I BOOLEAN ALGEBRA AND LOGIC GATES 9

Review of Number Systems – Arithmetic Operations – Binary Codes – Boolean Algebra and Theorems – Boolean Functions – Simplification of Boolean Functions using Karnaugh Map and Tabulation Methods – Logic Gates – NAND and NOR Implementations.

UNIT II COMBINATIONAL LOGIC 9

Combinational Circuits – Analysis and Design Procedures – Circuits for Arithmetic Operations, Code Conversion – Decoders and Encoders – Multiplexers and Demultiplexers – Introduction to HDL– HDL Models of Combinational circuits.

UNIT III SYNCHRONOUS SEQUENTIAL LOGIC 9

Sequential Circuits – Latches and Flip Flops – Analysis and Design Procedures – State Reduction and State Assignment – Shift Registers – Counters – HDL for Sequential Logic Circuits.

UNIT IV ASYNCHRONOUS SEQUENTIAL LOGIC 9

Analysis and Design of Asynchronous Sequential Circuits – Reduction of State and Flow Tables – Race-free State Assignment – Hazards.

UNIT V MEMORY AND PROGRAMMABLE LOGIC 9

RAM and ROM – Memory Decoding – Error Detection and Correction – Programmable Logic Array – Programmable Array Logic – Sequential Programmable Devices – Application Specific Integrated Circuits.

TEXT BOOK:

3. Donald D. Givone, –Digital Principles and Design‖, Tata Mcgraw Hill, 2003.
4. Kharate G. K., –Digital Electronics‖, Oxford University Press, 2010.

COURSE OUTCOMES (COs)	
CO1	Understand the basic concepts of Boolean algebra and to simplify the Boolean expression using K-Map and Tabulation techniques.
CO2	Demonstrate Boolean simplification techniques and to design a combinational hardware circuit.
CO3	Design and analyze given digital circuit – Synchronous sequential.
CO4	Experiment and analyze given digital circuit – Asynchronous sequential.
CO5	Describe memory and programmable logics.
CO6	Implement Application Specific Integrated Circuits

U18PCIT405	**DATA COMMUNICATION AND COMPUTER NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Fundamentals				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To get the idea of choosing the required functionality at each layer for a given application
- To trace the flow of information from one node to another node in the network.
- To understanding of division of network functionalities in to layers
- To understand the component required to build different types of networks
- To identify the solution for the functionalities in each layer.

UNIT I APPLICATION LAYER **9**

Network Architecture – Layers - HTTP – DNS – E-Mail (SMTP, MIME, POP3, IMAP, Web Mail), FTP, Telnet - SNMP.

UNIT II TRANSPORT LAYER **9**

User Datagram Protocol (UDP) – Transmission Control Protocol (TCP) – Flow Control – Congestion Control – Queuing - Discipline Introduction to Quality of services (QOS).

UNIT III NETWORK LAYER **9**

Circuit Switching - Packet Switching Virtual Circuit Switching – IP – ARP – DHCP – ICMP – Routing – RIP – OSPF – Subnetting – CIDR – Interdomain Routing – BGP – IPV6 Basic Features – Inter Domain Multicast – Congestion Avoidance in Network Layer.

UNIT IV DATA LINK LAYER **9**

Channel access on links – SDMA – TDMA – FDMA – CDMA – Hybrid Multiple Access Techniques – Issues in the Data Link Layer – Framing - Error correction and detection – Link Level Flow Control – Medium Access – Ethernet – Token Ring – FDDI – Wireless LAN – Bridges and Switches.

UNIT V DATA COMMUNICATIONS **9**

Data Transmission – Transmission Media – Signal Encoding Techniques – Multiplexing – Spread Spectrum.

TEXT BOOKS:

3 Behrouz A. Forouzan, ―Data communication and Networking‖, Tata McGraw-Hill, 2004.

COURSE OUTCOMES (COs)	
CO1	Understand basic concepts of computer network technology.
CO2	Explain Data Communications System and its components.
CO3	Classify the different types of network topologies and protocols.
CO4	Discuss the layers of the OSI model and TCP/IP and to explain the function(s) of each layer.
CO5	Understand the different types of network devices and their functions.
CO6	Apply signal Encoding techniques

U18PCIT4L1	**DATA COMMUNICATION AND COMPUTER NETWORKS LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	0	0	4	2
	Prerequisite – TCP/IP Principles and Architectures				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To analyze a communication system by separating out the different functions provided by the network;
- To understand that there are fundamental limits to any communications system;
- To understand the general principles behind multiplexing, addressing, routing, reliable transmission and other stateful protocols as well as specific examples of each;
- To understand what FEC is and how CRCs work;
- To compare communications systems in how they solve similar problems;
- To have an informed view of both the internal workings of the Internet and of a number of common Internet applications and protocols.

List of Experiments:

1. PC to PC Communication
2. Parallel Communication using 8 bit parallel cable
3. Serial communication using RS 232CEthernet LAN protocol
4. To create scenario and study the performance of CSMA/CD protocol through simulation
   Token bus and token ring protocols
5. To create scenario and study the performance of token bus and token ring protocols through simulation
6. Wireless LAN protocols
7. To create scenario and study the performance of network with CSMA / CA protocol and compare with CSMA/CD protocols.
8. Implementation and study of stop and wait protocol
9. Implementation and study of Goback-N and selective repeat protocols
10. Implementation of distance vector routing algorithm
11. Implementation of Link state routing algorithm
12. Implementation of Data encryption and decryption
13. Transfer of files from PC to PC using Windows / Unix socket processing

References:

1. http:// www.iconscope.net/**network-laboratory**-manual.pdf

COURSE OUTCOMES (COs)	
CO1	Use knowledge to implement client server applications.
CO2	Develop skills in UNIX socket programming.
CO3	Develop skills to use simulation tools.
CO4	Analyse the performance of network protocols and network traffic.

CO5	Analyse the performance of various network tools and network programming
CO6	Implement encryption and decryption techniques

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PCIT4L2	**WEB PROGRAMMING LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	0	0	4	2
	Prerequisite – Internet Programming				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand program basic functions in Javascript and DHTML
- To use Javascript and DHTML to create web pages with advanced interactivity
- To use variables, conditionals, and loops in Javascript and DHTML programs
- To use Javascript to control browser frames, windows and to create functional forms
- To use Cascading Style Sheets (CSS) to design web pages and to create web pages with specialized fonts and design elements

LIST OF EXPERIMENTS:

1. Write a html program for Creation of web site with forms, frames, links, tables etc
2. Design a web site using HTML and DHTML. Use Basic text Formatting, Images,
3. Create a script that asks the user for a name, then greets the user with "Hello" and the user name on the page
4. Create a script that collects numbers from a page and then adds them up and prints them to a blank field on the page.
5. Create a script that prompts the user for a number and then counts from 1 to that number displaying only the odd numbers.
6. Create a script that will check the field in Assignment 1 for data and alert the user if it is blank. This script should run from a button.
7. Using CSS for creating web sites
8. Creating simple application to access data base using JDBC Formatting HTML with CSS.
9. Program for manipulating Databases and SQL.
10. Program using PHP database functions.
11. Write a web application that functions as a simple hand calculator, but also keeps a "paper trail" of all your previous work
12. Install Tomcat and use JSP and link it with any of the assignments above
13. Reading and Writing the files using .Net
14. Write a program to implement web service for calculator application
15. Implement RMI concept for building any remote method of your choice.

References:

1. http:// docsfiles.com/**pdf_web_programming_lab**_manual.html

COURSE OUTCOMES (COs)	
CO1	Understand the basic concepts of the internet and insights of internet programming.
CO2	Demonstrate the important HTML tags for designing static pages.
CO3	Design web pages using Cascading Style Sheets.
CO4	Demonstrate HTML web pages accessing database using JDBC.
CO5	Select web application development software tools i.e. Ajax, PHP and XML etc.
CO6	Identify the environments currently available on the market to design web sites.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

Approval	48th meeting of the Academic Council														

U18PCIT4L3	**OPERATING SYSTEM DESIGN LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	0	0	4	2
	Prerequisite – Operating System				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- Understand the basics of operating systems like kernel,shell, types and views of operating systems
- Describe the various CPU scheduling algorithms and remove deadlocks.
- Explain various memory management techniques and concept of thrashing
- Use disk management and disk scheduling algorithms for better utilization of external memory.
- Recognize file system interface, protection and security mechanisms.
- Explain the various features of distributed OS like Unix, Linux, windows etc

LIST OF EXPERIMENTS:

1. Basics of UNIX commands.
2. Shell Programming.
3. Implement the following CPU scheduling algorithms
   a) Round Robin b) SJF c) FCFS d) Priority
4. Implement all file allocation strategies
   a) Sequential b) Indexed c) Linked
5. Implement Semaphores

6. Implement all File Organization Techniques
a) Single level directory b) Two level c) Hierarchical d) DAG
7. Implement Bankers Algorithm for Dead Lock Avoidance
8. Implement an Algorithm for Dead Lock Detection
9. Implement e all page replacement algorithms
   a) FIFO b) LRU c) LFU
10. Implement Shared memory and IPC
11. Implement Paging Technique of memory management.
12. Implement Threading & Synchronization Applications

Reference:

1. http://www.faadooengineers.com/threads/5366-**Operating-System-ebook**

COURSE OUTCOMES (COs)	
CO1	Demonstrate the basics of operating systems like kernel, shell, types and views of operating systems.
CO2	Implement the various CPU scheduling algorithms and remove deadlocks.
CO3	Analyse various memory management techniques and concept of thrashing
CO4	Explain disk management and disk scheduling algorithms for better utilization of external memory.
CO5	Evaluate file system interface
CO6	Evaluate protection and security Mechanisms

U18PCIT501	**DATA MINING**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Database Management System				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand data warehouse concepts, architecture, business analysis and tools
- To understand data pre-processing and data visualization techniques
- To study algorithms for finding hidden and interesting patterns in data
- To understand and apply various classification and clustering techniques using tools.

UNIT I DATA WAREHOUSING, BUSINESS ANALYSIS AND ON-LINE

ANALYTICAL PROCESSING (OLAP) **9**

Basic Concepts – Data Warehousing Components – Building a Data Warehouse – Database Architectures for Parallel Processing – Parallel DBMS Vendors – Multidimensional Data Model – Data Warehouse Schemas for Decision Support, Concept Hierarchies -Characteristics of OLAP Systems – Typical OLAP Operations, OLAP and OLTP.

UNIT II DATA MINING – INTRODUCTION **9**

Introduction to Data Mining Systems – Knowledge Discovery Process – Data Mining Techniques – Issues – applications- Data Objects and attribute types, Statistical description of data, Data Preprocessing – Cleaning, Integration, Reduction, Transformation and discretization , Data Visualization, Data similarity and dissimilarity measures.

UNIT III DATA MINING – FREQUENT PATTERN ANALYSIS **9**

Mining Frequent Patterns, Associations and Correlations – Mining Methods- Pattern Evaluation Method – Pattern Mining in Multilevel, Multi Dimensional Space – Constraint Based Frequent Pattern Mining, Classification using Frequent Patterns

UNIT IV CLASSIFICATION AND CLUSTERING **9**

Decision Tree Induction – Bayesian Classification – Rule Based Classification – Classification by Back Propagation – Support Vector Machines — Lazy Learners – Model Evaluation and Selection-Techniques to improve Classification Accuracy. Clustering Techniques – Cluster analysis -Partitioning Methods – Hierarchical Methods – Density Based Methods – Grid Based Methods – Evaluation of clustering – Clustering high dimensional data- Clustering with constraints, Outlier analysis-outlier detection methods.

UNIT V WEKA TOOL **9**

Datasets – Introduction, Iris plants database, Breast cancer database, Auto imports database – Introduction to WEKA, The Explorer – Getting started, Exploring the explorer, Learning algorithms, Clustering algorithms, Association–rule learners.

3. Ian H.Witten and Eibe Frank, ―Data Mining: Practical Machine Learning Tools and Techniques, Elsevier, Second Edition.

COURSE OUTCOMES (COs)	
CO1	Explain the basic concepts of data warehouse, business analysis and OLAP system
CO2	Implement suitable pre-processing and visualization techniques for data analysis
CO3	Demonstrate the frequent pattern and association rule mining techniques for data analysis
CO4	Interpret appropriate classification and clustering techniques for data analysis
CO5	Understand the roles that data mining plays in various fields and manipulate different data mining techniques

CO6	Apply data mining algorithms to build analytical applications

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT502	**MOBILE COMMUNICATION**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Networks				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand the basic concepts of mobile computing.
- To learn the basics of mobile telecommunication system .
- To be familiar with the network layer protocols and Ad-Hoc networks.
- To know the basis of transport and application layer protocols.
- To gain knowledge about different mobile platforms and application development.

UNIT I INTRODUCTION 9

Introduction to Mobile Computing – Applications of Mobile Computing- Generations of Mobile Communication Technologies- Multiplexing – Spread spectrum -MAC Protocols – SDMA- TDMA- FDMA- CDMA

UNIT II MOBILE TELECOMMUNICATION SYSTEM 9

Introduction to Cellular Systems – GSM – Services & Architecture – Protocols – Connection Establishment – Frequency Allocation – Routing – Mobility Management – Security – GPRS-UMTS – Architecture – Handover – Security

UNIT III MOBILE NETWORK LAYER 9

Mobile IP – DHCP – AdHoc– Proactive protocol-DSDV, Reactive Routing Protocols – DSR, AODV , Hybrid routing –ZRP, Multicast Routing- ODMRP, Vehicular Ad Hoc networks (VANET) –MANET Vs VANET – Security.

UNIT IV MOBILE TRANSPORT AND APPLICATION LAYER 9

Mobile TCP– WAP – Architecture – WDP – WTLS – WTP –WSP – WAE – WTA Architecture – WML

UNIT V MOBILE PLATFORMS AND APPLICATIONS 9

Mobile Device Operating Systems – Special Constraints & Requirements – Commercial Mobile Operating Systems – Software Development Kit: iOS, Android, BlackBerry, Windows Phone – MCommerce – Structure – Pros & Cons – Mobile Payment System – Security Issues

TEXT BOOKS:

1. Jochen Schiller, ―Mobile Communications‖, PHI, Second Edition, 2003.
2. Prasant Kumar Pattnaik, Rajib Mall, ―Fundamentals of Mobile Computing‖, PHI Learning Pvt.Ltd, New Delhi – 2012

REFERENCES

4. C.K.Toh, ―AdHoc Mobile Wireless Networks‖, First Edition, Pearson Education, 2002.
5. Android Developers : http://developer.android.com/index.html

COURSE OUTCOMES (COs)	
CO1	Eexplain the basics concepts of mobile telecommunication systems.
CO2	Describe generations of telecommunication systems in wireless network.
CO3	Examine the functionality of MAC, network layer and to Identify a routing protocol for a given Ad hoc network
CO4	Classify the functionality of Transport and Application layers
CO5	Sketch a mobile application using android/blackberry/ios/Windows SDK
CO6	Identify the limitations of 2G and 2.5G wireless mobile communication and use design of 3G and beyond mobile communication systems

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT503	**PRINCIPLES OF ARTIFICIAL INTELLIGENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer fundamentals				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand the various characteristics of Intelligent agents

- To learn the different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To understand the different ways of designing software agents
- To know about the various applications of AI.

UNIT I INTRODUCTION 9

Introduction–Definition – Future of Artificial Intelligence – Characteristics of Intelligent Agents–Typical Intelligent Agents – Problem Solving Approach to Typical AI problems.

UNIT II PROBLEM SOLVING METHODS 9

Problem solving Methods – Search Strategies- Uninformed – Informed – Heuristics – Local Search Algorithms and Optimization Problems – Searching with Partial Observations – Constraint Satisfaction Problems – Constraint Propagation – Backtracking Search – Game Playing – Optimal Decisions in Games – Alpha – Beta Pruning – Stochastic Games

UNIT III KNOWLEDGE REPRESENTATION 9

First Order Predicate Logic – Prolog Programming – Unification – Forward Chaining-Backward Chaining – Resolution – Knowledge Representation – Ontological Engineering-Categories and Objects – Events – Mental Events and Mental Objects – Reasoning Systems for Categories – Reasoning with Default Information

UNIT IV SOFTWARE AGENTS 9

Architecture for Intelligent Agents – Agent communication – Negotiation and Bargaining – Argumentation among Agents – Trust and Reputation in Multi-agent systems.

UNIT V APPLICATIONS 9

AI applications – Language Models – Information Retrieval- Information Extraction – Natural Language Processing – Machine Translation – Speech Recognition – Robot – Hardware – Perception – Planning – Moving

TEXT BOOKS:

1. S. Russell and P. Norvig, –Artificial Intelligence: A Modern Approach‖, Prentice Hall, Third Edition, 2009.
2. I. Bratko, ―Prolog: Programming for Artificial Intelligence‖, Fourth edition, Addison-Wesley Educational Publishers Inc., 2011.

3. William F. Clocksin and Christopher S. Mellish,‖ Programming in Prolog: Using the ISO Standard‖, Fifth Edition, Springer, 2003.

COURSE OUTCOMES (COs)	
CO1	Classify the basic concepts of AI and Problem Solving Approach to Typical AI problems
CO2	Operate the apt agent strategy to solve a given problem
CO3	Design software agents to solve a problem
CO4	Explain applications for NLP that use Artificial Intelligence

CO5	Describe the architecture for Intelligent Agents and agent communication
CO6	Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

Category	Professional Core (PC)														
Approval	48th meeting of the Academic Council														

U18PCIT504	**THEORY OF COMPUTATION**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Mathematics-set theory				
	Course Designed by:- Dr.A,Kumaravel, Dept of Information Technology				

OBJECTIVES

- To understand the language hierarchy
- To construct automata for any given pattern and find its equivalent regular expressions
- To design a context free grammar for any given language
- To understand Turing machines and their capability
- To understand un decidable problems and NP class problems.

UNIT I AUTOMATA FUNDAMENTALS 9

Introduction to formal proof – Additional forms of Proof – Inductive Proofs –Finite Automata – Deterministic Finite Automata – Non-deterministic Finite Automata – Finite Automata with Epsilon Transitions

UNIT II REGULAR EXPRESSIONS AND LANGUAGES 9

Regular Expressions – FA and Regular Expressions – Proving Languages not to be regular – Closure Properties of Regular Languages – Equivalence and Minimization of Automata.

UNIT III CONTEXT FREE GRAMMAR AND LANGUAGES 9

CFG – Parse Trees – Ambiguity in Grammars and Languages – Definition of the Pushdown Automata – Languages of a Pushdown Automata – Equivalence of Pushdown Automata and CFG, Deterministic Pushdown Automata.

UNIT IV PROPERTIES OF CONTEXT FREE LANGUAGES 9

Normal Forms for CFG – Pumping Lemma for CFL – Closure Properties of CFL – Turing Machines – Programming Techniques for TM.

UNIT V UNDECIDABILITY 9

Non Recursive Enumerable (RE) Language – Undecidable Problem with RE – Undecidable Problems about TM – Post_s Correspondence Problem, The Class P and NP.

TEXT BOOK:

1. J.E.Hopcroft, R.Motwani and J.D Ullman, ―Introduction to Automata Theory, Languages and Computations‖, Second Edition, Pearson Education, 2003.

2. J.Martin, ―Introduction to Languages and the Theory of Computation, Third Edition, TMH, 2003.
3. Micheal Sipser, ―Introduction of the Theory and Computation, Thomson Brokecole, 1997

COURSE OUTCOMES (COs)	
CO1	Create automata, regular expression for any pattern.
CO2	Design Context free grammar for any construct.
CO3	Construct Turing machines for regular language and non regular languages.
CO4	Select the decidable problems NP Hard Problems
CO5	Identify the concepts of normal forms and Programming Techniques for TM
CO6	Demonstrate advanced knowledge of formal computation and its relationship to languages

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT5L1	**DATA MINING LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	0	0	4	2
	Prerequisite – Database management system				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To be familiar with the algorithms of data mining,
- To be acquainted with the tools and techniques used for knowledge discovery in databases.
- To be exposed to web mining and text mining
-

LIST OF EXPERIMENTS:

- Creation of a Data Warehouse.
- Apriori Algorithm.

- FP-Growth Algorithm.
- K-Means Clustering.
- One Hierarchical Clustering Algorithm.
- Bayesian Classification.
- Decision Tree.
- Support Vector Machines.
- Applications of Classification for Web Mining.
- Case Study on Text Mining or Any Commercial Application.

COURSE OUTCOMES (COs)	
CO1	Demonstrate data mining techniques and methods to large data sets.
CO2	Compare and contrast the various classifiers use Data Mining Tools
CO3	Select association rules, Classification algorithms
CO4	Implement K-Means Clustering, one hierarchical clustering algorithm
CO5	Operate case Study on text mining or any commercial application
CO6	Execute the knowledge retrieved through solving problems

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

COs\ POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PS 01**	**PS 02**	**PS 03**

U18PCIT5L2	**IT- WORKSHOP LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	0	0	4	2
	Prerequisite – Matrix manipulation				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES
- To be familiar with the MATLAB GUI and basic tool boxes
- To be exposed to vector and matrix operations
- To be familiar with arithmetic, logical and relational operations on matrix

LIST OF EXPERIMENTS:
1. Introduction to SDK of MATLAB
2. Basic Syntax and scalar arithmetic operations and calculations
3. Working with formulas
4. Arithmetic operations in matrix data
5. Matrix operations (Inverse, Transpose)
6. Reading an image file
7. Reading from and writing to a text file
8. Introduction to toolboxes
9. Data visualization and plotting

10. Relational operators in data
11. Logical operation in data
12. Loops in MATLAB
13. Computing Eigen value for a matrix
14. Random number generation – Monte carlo methods

REFERENCES:

1. Holly Moore, ―MATLAB for Engineers‖ Third Edition – Pearson Publications
2. Stephen J. Chapman, ‒MATLAB Programming for Engineers‖ Fourth Edition –Thomson learning.

COURSE OUTCOMES (COs)	
CO1	Implement data handling in MATLAB environment and to solve simple matrix problems.
CO2	Operate built-in toolboxes and be familiar with arithmetic, logical and relational operations on matrix
CO3	Design to vector and matrix operations and be familiar with the MATLAB GUI and basic tool boxes
CO4	Recognize Knowledge in Data visualization and plotting
CO5	Report with Random number generation – Monte carlo methods
CO6	Formulate and control simple plot and user-interface graphics objects in MATLAB.

Approval	48th meeting of the Academic Council														

U18PCIT601	**GRID AND CLOUD COMPUTING**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Data Communication and Computer Networks				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To identify the technical foundations of cloud systems architectures. Analyze the problems and solutions to cloud application problems.
- To apply principles of best practice in cloud application design and management.
- To identify and define technical challenges for cloud applications and assess their importance

UNIT I INTRODUCTION 9

Evolution of Distributed computing: Scalable computing over the Internet – Technologies for network based systems – clusters of cooperative computers – Grid computing Infrastructures – cloud computing – service oriented architecture – Introduction to Grid Architecture and standards – Elements of Grid – Overview of Grid Architecture.

UNIT II GRID SERVICES 9

Introduction to Open Grid Services Architecture (OGSA) – Motivation – Functionality Requirements – Practical & Detailed view of OGSA/OGSI – Data intensive grid service models – OGSA services.

UNIT III VIRTUALIZATION 9

Cloud deployment models: public, private, hybrid, community – Categories of cloud computing: Everything as a service: Infrastructure, platform, software – Pros and Cons of cloud computing – Implementation levels of virtualization – virtualization structure – virtualization of CPU, Memory and I/O devices – virtual clusters and Resource Management – Virtualization for data center automation.

UNIT IV PROGRAMMING MODEL 9

Open source grid middleware packages – Globus Toolkit (GT4) Architecture , Configuration – Usage of Globus – Main components and Programming model – Introduction to Hadoop Framework – Map reduce, Input splitting, map and reduce functions, specifying input and output parameters, configuring and running a job – Design of Hadoop file system, HDFS concepts, command line and java interface, dataflow of File read & File write.

UNIT V SECURITY 9

Trust models for Grid security environment – Authentication and Authorization methods – Grid security infrastructure – Cloud Infrastructure security: network, host and application level – aspects of data security, provider data and its security, Identity and access management architecture, IAM practices in the cloud, SaaS, PaaS, IaaS availability in the cloud, Key privacy issues in the cloud.

TEXT BOOKS:

1. Kai Hwang, Geoffery C. Fox and Jack J. Dongarra, ―Distributed and Cloud Computing: Clusters, Grids, Clouds and the Future of Internet‖, First Edition, Morgan Kaufman Publisher, an Imprint of Elsevier, 2012.

REFERENCES:

1. Jason Venner, ―Pro Hadoop- Build Scalable, Distributed Applications in the Cloud‖, A Press, 2009
2. Tom White, ―Hadoop The Definitive Guide‖, First Edition. O‘Reilly, 2009
3. Bart Jacob (Editor), ―Introduction to Grid Computing‖, IBM Red Books, Vervante, 2005
4. Ian Foster, Carl Kesselman, ―The Grid: Blueprint for a New Computing Infrastructure‖, 2nd Edition, Morgan Kaufmann
5. Frederic Magoules and Jie Pan, ―Introduction to Grid Computing‖ CRC Press, 2009

COURSE OUTCOMES (COs)	
CO1	Implement grid computing techniques to solve large scale scientific problems.
CO2	Understand and apply the concept of virtualization.
CO3	Use the grid and cloud tool kits.
CO4	Apply the security models in the grid and the cloud environment.

CO5	Discuss about the basic concepts of Trust models for Grid security environment.
CO6	Describe the basic concepts of Trust models for Cloud Infrastructure security.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

Approval	48th meeting of the Academic Council														

U18PCIT602	**HUMAN COMPUTER INTERACTION**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Principles of Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To design, implement and evaluate effective and usable graphical computer interfaces.
- To describe and apply core theories, models and methodologies from the field of HCI.
- To describe and discuss current research in the field of HCI.
- To implement simple graphical user interfaces using the Java Swing toolkit.
- To describe special considerations in designing user interfaces for older adults.

UNIT I FOUNDATIONS OF HCI 9

The Human: I/O Channels – Memory – Reasoning And Problem Solving; The Computer: Devices – Memory – Processing And Networks; Interaction: Models – Frameworks – Ergonomics – Styles – Elements – Interactivity- Paradigms.

UNIT II DESIGN & SOFTWARE PROCESS 9

Interactive Design Basics – Process – Scenarios – Navigation – Screen Design – Iteration And Prototyping. HCI In Software Process – Software Life Cycle – Usability Engineering – Prototyping In Practice – Design Rationale. Design Rules – Principles, Standards, Guidelines, Rules. Evaluation techniques – Universal Design.

UNIT III MODELS AND THEORIES 9

Cognitive Models –Socio-Organizational Issues And Stake Holder Requirements – Communication And Collaboration Models-Hypertext, Multimedia And WWW.

UNIT IV MOBILE HCI 9

Mobile Ecosystem: Platforms, Application Frameworks- Types Of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements Of Mobile Design, Tools

UNIT V WEB INTERFACE DESIGN 9

Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays

And Virtual Pages, Process Flow - Case Studies.

TEXT BOOK

1. Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale, –Human Computer Interaction‖, 3rd Edition, Pearson Education, 2004 (UNIT I , II & III)
2. Brian Fling, –Mobile Design And Development‖, First Edition , O"Reilly Media Inc., 2009 (UNIT –IV)

COURSE OUTCOMES (COs)	
CO1	Apply effective dialog For Human Computer Interaction.
CO2	Implement HCI for common individuals and persons with disabilities.
CO3	Describe the importance of user feedback.
CO4	Explain the HCI implications for designing multimedia/ ecommerce/ e-learning web sites.
CO5	Design and develop appropriate user interface.
CO6	Develop context based user experience models.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT603	**DATA ANALYTICS**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Data Mining Techniques				
	Course Designed by:- Dr.A.Kumarvel, Dept of Information Technology				

OBJECTIVES

- To designing the tables and graphs that will be used to display the results before any numerical analysis is started can help focus the statistical work.
- To understand the combination of depths and times to compare between treatments, and include in the tables or graphs, may be fixed by the objectives.

UNIT I INTRODUCTION TO BIG DATA 8

Introduction to Big Data Platform – Challenges of Conventional Systems – Web Data – Evolution Of Analytic Scalability, Analytic Processes And Tools, Analysis Vs Reporting – Modern Data Analytic Tools, Statically Concepts: Sampling Distributions, Resampling, Statistical Inference, Prediction Error.

UNIT II DATA ANALYSIS 12

Regression Modeling, Multivariate Analysis, Bayesian Modeling, Inference And Bayesian Networks, Support Vector And Kernel Methods, Analysis Of Time Series: Linear Systems Analysis, Nonlinear Dynamics – Rule Induction – Neural Networks: Learning And Generalization, Competitive Learning, Principal Component Analysis And Neural Networks; Fuzzy Logic: Extracting Fuzzy Models From Data, Fuzzy Decision Trees, Stochastic Search Methods.

UNIT III MINING DATA STREAMS 8

Introduction To Streams Concepts – Stream Data Model And Architecture – Stream Computing, Sampling Data In A Stream – Filtering Streams – Counting Distinct Elements In A Stream – Estimating Moments – Counting Oneness In A Window – Decaying Window – Real-time Analytics Platform(RTAP) Applications – Case Studies – Real Time Sentiment Analysis, Stock Market Predictions.

UNIT IV FREQUENT ITEMSETS AND CLUSTERING 9

Mining Frequent Item sets – Market Based Model – Apriori Algorithm – Handling Large Data Sets In Main Memory – Limited Pass Algorithm – Counting Frequent Item sets In A Stream – Clustering Techniques – Hierarchical – K- Means – Clustering High Dimensional Data – CLIQUE And PROCLUS – Frequent Pattern Based Clustering Methods – Clustering In Non-Euclidean Space – Clustering For Streams And Parallelism.

UNIT V FRAMEWORKS AND VISUALIZATION 9

MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases – S3 – Hadoop Distributed File Systems – Visualizations – Visual Data Analysis Techniques, Interaction Techniques; Systems and Applications

TEXT BOOKS:

1. Michael Berthold, David J. Hand, Intelligent Data Analysis, Springer, 2007.
2. Anand Rajaraman And Jeffrey David Ullman, Mining Of Massive Datasets,Cambridge University Press, 2012.

3. Jiawei Han, Micheline Kamber ―Data Mining Concepts And Techniques‖, Second Edition, Elsevier, Reprinted 2008.

COURSE OUTCOMES (COs)	
CO1	Understand the concepts of Big Data framework.
CO2	Apply different ways of Data Analysis.
CO3	Apply stream data model.
CO4	Implement different data mining techniques.
CO5	Understand the technologies Map Reduce-Hadoop, MapR, Hive,NoSQL for big data analytics
CO6	Demonstrate visualization techniques.
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT6L1	**DATA ANALYTICS LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	0	0	4	2
	Prerequisite – Data mining techniques				
	Course Designed by:- Dr.A.Kumarvel, Dept of Information Technology				

OBJECTIVES

- To learn the probability distributions and density estimations to perform analysis of various kinds of data.
- To explore the statistical analysis techniques using Python and R programming languages.

LIST OF EXPERIMENTS:

1. *Install, Configure and Run Hadoop And Hdfs*
2. Implement Word Count / Frequency Programs Using Map reduce
3. Implement a Mr Program That Processes a Weather Dataset
4. Implement Linear and Logistic Regression
5. Implement Svm / Decision Tree Classification Techniques
6. Implement Clustering Techniques
7. Visualize Data Using Any Plotting Framework
8. Implement an Application That Stores Big Data In Hbase / Mongodb / Pig Using Hadoop

REFERENCES:

1. Bill Franks, Taming The Big Data Tidal Wave: Finding Opportunities In Huge Data Streams With Advanced Analystics, John Wiley & Sons, 2012.
2. Glenn J. Myatt, Making Sense Of Data, John Wiley & Sons, 2007 Pete Warden, Big Data Glossary, O‟Reilly, 2011.

COURSE OUTCOMES (COs)	
CO1	Understand single node and multi-node Hadoop Clusters
CO2	Develop Map Reduce programs.
CO3	Implement different data modeling techniques.
CO4	Implement different data mining techniques.
CO5	Experiment the data using plotting framework.
CO6	Demonstrate and execute application tools-Hbase, Mongodb, PIG.

U18PCIT6L2	**GRID AND CLOUD COMPUTING LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	0	0	4	2
	Prerequisite – Distributed System				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To exposed tool kits for grid and cloud environment.
- To familiar with developing web services/applications in grid framework
- To learn the run virtual machines of different configuration.
- To learn to use hadoop

LIST OF EXPERIMENTS:

1. Develop a new Web Service for Calculator.
2. Develop new OGSA-compliant Web Service.
3. Using Apache Axis develop a Grid Service.
4. Develop applications using Java or C/C++ Grid APIs
5. Develop secured applications using basic security mechanisms available in Globus Toolkit.
6. Develop a Grid portal, where user can submit a job and get the result. Implement it with and without GRAM concept.

COURSE OUTCOMES (COs)	
CO1	Develop a new Web Service for Calculator.
CO2	Execute New OGSA-Compliant Web Service.
CO3	Use Apache Axis and develop a Grid Service.
CO4	Demonstrate Applications using Java Or C/C++ Grid APIs
CO5	Develop Secured Applications using Basic Security Mechanisms available In Globus Toolkit.
CO6	Implement a Grid Portal, where user can submit a job and get the result. Implement it with and without GRAM Concept.

	SOFT SKILL	**L**	**T**	**P**	**C**
U18EEIT6L3	Total Contact Periods:30	0	0	2	1
	Prerequisite – English				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To develop inter personal skills and be an effective goal oriented team player.
- To develop professionals with idealistic, practical and moral values.
- To develop communication and problem solving skills.
- To re-engineer attitude and understand its influence on behavior.

UNIT I SELF ANALYSIS **4**

SWOT Analysis, Who am I, Attributes, Importance of Self Confidence, Self Esteem.

UNIT II CREATIVITY **8**

Out of box thinking, Lateral Thinking

UNIT III ATTITUDE **6**

Factors influencing Attitude, Challenges and lessons from Attitude, Etiquette

UNIT IV MOTIVATION **4**

Factors of motivation, self talk, Intrinsic & Extrinsic Motivators.

UNIT V GOAL SETTING **8**

Wish List, SMART Goals, Blue print for success, Short Term, Long Term, Life Time Goals, Time Management Value of time, Diagnosing Time Management, Weekly Planner to do list, Prioritizing work. Extempore

TEXT BOOK:

1. SOFT SKILLS, 2015, Career Development Centre, Green Pearl Publications.

COURSE OUTCOMES (COs)	
CO1	Develop inter personal skills and be an effective goal oriented team player.
CO2	Communicate effectively through verbal/oral communication, creative thinking and improve the listening skills.
CO3	Write precise briefs or reports and technical documents.

CO4	Participate in group discussion / meetings / interviews and prepare & deliver presentations
CO5	Set goals to become an effective individual, self-motivation.
CO6	Gain the knowledge of team work; develop Inter-personal relationships, conflict management and leadership quality.

U18PCIT701	**WIRELESS NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Data Communication and Computer Networks				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To Study about Wireless Networks, Protocol Stack and Standards.
- To Study about Fundamentals of 3G Services, Its Protocols and Applications.
- To Study about Evolution of 4G Networks, Its Architecture and Applications.

UNIT-I WIRELESS LAN 9

Introduction-WLAN Technologies: Infrared, UHF Narrowband, Spread Spectrum - IEEE802.11: System Architecture, Protocol Architecture, Physical Layer, MAC Layer, 802.11b, 802.11a – Hiper LAN: WATM, BRAN, HiperLAN2 – Bluetooth: Architecture, Radio Layer, Baseband Layer, Link Manager Protocol, Security – IEEE802.16-WIMAX: Physical Layer, MAC, Spectrum Allocation For WIMAX

UNIT II MOBILE NETWORK LAYER 9

Introduction – Mobile IP: IP Packet Delivery, Agent Discovery, Tunneling And Encapsulation, IPV6-Network Layer In The Internet- Mobile IP Session Initiation Protocol – Mobile Ad-Hoc Network: Routing, Destination Sequence Distance Vector, Dynamic Source Routing

UNIT III MOBILE TRANSPORT LAYER 9

TCP Enhancements For Wireless Protocols – Traditional TCP: Congestion Control, Fast Retransmit/Fast Recovery, Implications Of Mobility – Classical TCP Improvements: Indirect TCP, Snooping TCP, Mobile TCP, Time Out Freezing, Selective Retransmission, Transaction Oriented TCP – TCP Over 3G Wireless Networks.

UNIT IV WIRELESS WIDE AREA NETWORK 9

Overview Of UTMS Terrestrial Radio Access Network-UMTS Core Network Architecture: 3G-MSC, 3G-SGSN, 3G-GGSN, SMS-GMSC/SMS-IWMSC, Firewall, DNS/DHCP-High Speed Downlink Packet Access (HSDPA)- LTE Network Architecture And Protocol.

UNIT V 4G NETWORKS **9**

Introduction – 4G Vision – 4G Features And Challenges – Applications Of 4G – 4G Technologies: Multicarrier Modulation, Smart Antenna Techniques, OFDM-MIMO Systems, Adaptive Modulation And Coding With Time Slot Scheduler, Cognitive Radio.

TEXT BOOKS:

3. Simon Haykin , Michael Moher, David Koilpillai, –Modern Wireless Communications‖, First Edition, Pearson Education 2013.

COURSE OUTCOMES (COs)	
CO1	Understand the various protocols and standards of wireless communications.
CO2	Describe about the different wireless WAN architectures.
CO3	Describe the protocols for mobile network layer and routing in mobile ad-hoc network.
CO4	Illustrate the TCP enhancements in mobile transport layer for wireless protocols.
CO5	Demonstrate the latest 3G/4G And Wi-MAX networks and its architecture.
CO6	Explain the 4G technologies and its applications.

U18PEIT011	**COMPUTER VISION**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Mathematics and Computer Fundamentals				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To review image processing techniques for computer vision.
- To understand shape and region analysis.
- To understand Hough Transform and its applications to detect lines, circles, ellipses
- To understand three-dimensional image analysis techniques and motion analysis
- To study some applications of computer vision algorithms

UNIT I IMAGE PROCESSING FOUNDATIONS

Review of image processing techniques – classical filtering operations – thresholding techniques – edge detection techniques – corner and interest point detection – mathematical morphology – texture.

UNIT II SHAPES AND REGIONS

Binary shape analysis – connectedness – object labeling and counting – size filtering – distance functions – skeletons and thinning – deformable shape analysis – boundary tracking procedures – active contours – shape models and shape recognition – centroidal profiles – handling occlusion – boundary length measures – boundary descriptors – chain codes – Fourier descriptors – region descriptors – moments.

UNIT III HOUGH TRANSFORM

Line detection – Hough Transform (HT) for line detection – foot-of-normal method – line localization – line fitting – RANSAC for straight line detection – HT based circular object detection – accurate center location – speed problem – ellipse detection – Case study: Human Iris location – hole detection – generalized Hough Transform (GHT) – spatial matched filtering – GHT for ellipse detection – object location – GHT for feature collation.

UNIT IV 3D VISION AND MOTION

Methods for 3D vision – projection schemes – shape from shading – photometric stereo – shape from texture – shape from focus – active range finding – surface representations – point-based representation – volumetric representations – 3D object recognition – 3D reconstruction – introduction to motion – triangulation – bundle adjustment – translational alignment – parametric motion – spline-based motion – optical flow – layered motion.

UNIT V APPLICATIONS

Application: Photo album – Face detection – Face recognition – Eigen faces – Active appearance and 3D shape models of faces Application: Surveillance – foreground-background separation – particle filters – Chamfer matching, tracking, and occlusion – combining views from multiple cameras – human gait analysis Application: In-vehicle vision system: locating roadway – road markings – identifying road signs – locating pedestrians.

COURSE OUTCOMES (COs)	
CO1	Implement fundamental image processing techniques required for computer vision
CO2	Perform shape analysis, Implement boundary tracking techniques, Apply chain codes and other region descriptors
CO3	Apply Hough Transform for line, circle, and ellipse detections
CO4	Apply 3D vision techniques

CO5	Implement motion related techniques
CO6	Develop applications using computer vision techniques

U18PEIT012	**ADHOC AND SENSOR NETWORK**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Data Communication and Computer Networks				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

The student should be made to:

- Understand the design issues in ad hoc and sensor networks.
- Learn the different types of MAC protocols.
- Be familiar with different types of adhoc routing protocols.
- Be exposed to the TCP issues in adhoc networks.
- Learn the architecture and protocols of wireless sensor networks.

UNIT I INTRODUCTION 9

Fundamentals of Wireless Communication Technology – The Electromagnetic Spectrum – Radio propagation Mechanisms – Characteristics of the Wireless Channel -mobile ad hoc networks (MANETs) and wireless sensor networks (WSNs) :concepts and architectures. Applications of Ad Hoc and Sensor networks. Design Challenges in Ad hoc and Sensor Networks.

UNIT II MAC PROTOCOLS FOR AD HOC WIRELESS NETWORKS 9

Issues in designing a MAC Protocol- Classification of MAC Protocols- Contention based protocols- Contention based protocols with Reservation Mechanisms- Contention based protocols with Scheduling Mechanisms – Multi channel MAC-IEEE 802.11

UNIT III ROUTING PROTOCOLS AND TRANSPORT LAYER IN AD HOC WIRELESS NETWORKS 9

Issues in designing a routing and Transport Layer protocol for Ad hoc networks- proactive routing, reactive routing (on-demand), hybrid routing- Classification of Transport Layer solutions-TCP over Ad hoc wireless Networks.

UNIT IV WIRELESS SENSOR NETWORKS (WSNS) AND MAC PROTOCOLS 9

Single node architecture: hardware and software components of a sensor node - WSN Network architecture: typical network architectures-data relaying and aggregation strategies -MAC layer protocols: self-organizing, Hybrid TDMA/FDMA and CSMA based MAC- IEEE 802.15.4.

UNIT V WSN ROUTING, LOCALIZATION & QOS 9

Issues in WSN routing – OLSR- Localization – Indoor and Sensor Network Localization-absolute and relative localization, triangulation-QOS in WSN-Energy Efficient Design-Synchronization-Transport Layer issues.

TEXT BOOK: 1. C. Siva Ram Murthy, and B. S. Manoj, "Ad Hoc Wireless Networks: Architectures and Protocols ", Prentice Hall Professional Technical Reference, 2008.

COURSE OUTCOMES (COs)	
CO1	Describe the concept of network architectures and applications of adhoc and wireless sensor networks.
CO2	Learn the different types of MAC protocols for adhoc wireless networks.
CO3	Design routing protocols for adhoc wireless networks considering protocol design issues.
CO4	Explain the architecture and routing concepts in Wireless Sensor Networks.
CO5	Understand about MAC protocols for Wireless Sensor Networks.
CO6	Illustrate the issues of routing in Wireless Sensor Networks and evaluate the QoS related performance measurements.

Mapping of Course Outcomes with Program outcomes (POs)

U18PEIT013	**OPTIMIZATION TECHNIQUES**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Mathematics				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES
To Understand Ethical Issues, Environmental Impact And Acquire Management Skills

UNIT I LINEAR PROGRAMMING 9

Introduction – Formulation of Linear Programming Model-Graphical Solution–Solving LPP Using Simplex Algorithm – Revised Simplex Method.

UNIT II ADVANCES IN LPP 9

Duality Theory - Dual Simplex Method – Sensitivity Analysis–-Transportation Problems–Assignment Problems-Traveling Sales Man Problem -Data Envelopment Analysis

UNIT III NON LINEAR PROGRAMMING 9

Classification of Non Linear Programming – Lagrange Multiplier Method – Karush – Kuhn Tucker Conditions–Reduced Gradient Algorithms–Quadratic Programming Method – Penalty and Barrier Method

UNIT IV INTERIOR POINT METHODS 9

Karmarkar's Algorithm–Projection Scaling Method–Dual Affine Algorithm–Primal Affine Algorithm Barrier Algorithm.

UNIT V DYNAMIC PROGRAMMING 9

Formulation of Multi Stage Decision Problem–Characteristics–Concept Of Sub-Optimization And The Principle Of Optimality–Formulation Of Dynamic Programming–Backward And Forward Recursion– Computational Procedure–Conversion of final Value Problem In To Initial Value Problem.

COURSE OUTCOMES (COs)	
CO1	Understand the basic concepts of linear programming
CO2	Learn the advancements in linear programming techniques
CO3	Describe the different non-linear programming techniques
CO4	Apply interior point methods to solve linear and non-linear convex optimization problems
CO5	Formulate multistage decision problem and dynamic programming.
CO6	Apply optimization techniques for real time problems..

U18PEIT014	**VISUAL ANALYTICS**	**L**	**T**	**P**	**C**

	Total Contact Periods:45	3	0	0	3
	Prerequisite – Data Analytics				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

1. To understand how accurately represent voluminous complex data set in web and from other data sources
2. To design and use various methodologies present in data visualization methodologies used for visualizing large data sets
3. To understand the process involved in data visualization and security aspects involved in data visualization
4. Implement the process involved and security issues present in data visualization

UNIT I INTRODUCTION 9

Context of data visualization – Definition, Methodology, Visualization design objectives. Key Factors – Purpose- visualization function and tone- visualization design options – Data representation- Data Presentation- Seven stages of data visualization- widgets- data visualization tools.

UNIT II VISUALIZING DATA METHODS 9

Mapping - Time series - Connections and correlations – Scatter plot maps - Trees, Hierarchies and Recursion - Networks and Graphs- Info graphics

UNIT III VISUALIZING DATA PROCESS 9

Acquiring data - Where to Find Data - Tools for Acquiring Data from the Internet- Locating Files for Use with Processing- Loading Text Data- Dealing with Files and Folders- Listing Files in a Folder - Asynchronous Image Downloads- Advanced Web Techniques- Using a Database-Dealing with a Large Number of Files. Parsing data - Levels of Effort, Tools for Gathering Clues- Text Is Best- Text Markup Languages- Regular Expressions (regexps)- Grammars and BNF Notation-Compressed Data- Vectors and Geometry- Binary Data Formats- Advanced Detective Work.

UNIT IV INTERACTIVE DATA VISUALIZATION 9

Drawing with data – Scales – Axes – Updates- Transition and Motion – Interactivity - Layouts – Geo mapping – Exporting, Framework – T3- js- tablo.

UNIT V SECURITY DATA VISUALIZATION 9

Port scan visualization - Vulnerability assessment and exploitation - Firewall log visualization - Intrusion detection log visualization -Attacking and defending visualization systems - Creating security visualization system.

TEXT BOOK:

2. Ben Fry, –Visualizing Data‖, O"Reilly Media, Inc., 2007.

REFERENCES:

1. Greg Conti, –Security Data Visualization: Graphical Techniques for Network Analysis‖, No Starch Press Inc, 2007.

COURSE OUTCOMES (COs)	
CO1	Understand the purpose of visualization in general and visual analytics in particular

CO2	Describe the collection of visualization and analysis techniques
CO3	Explain the concepts and techniques for visualizing data process
CO4	Develop applications using interactive data visualization tools
CO5	The Students will be able to understand the techniques for Attacking and defending visualization systems
CO6	Identifying the vulnerabilities and attacks and thus create security visualization system.

U18PEIT015	**HEALTH INFORMATICS**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Mastery of a high-level programming language such as C++ or Java				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES
To learn about the historical information of hospitality and recent trends in the Hospital information system.

UNIT-I BIOMEDICAL INFORMATION SYSTEM 9
Historical Highlights of health care information system-Biomedical information system-problems and pitfalls-History and evolution of Electronic resources, Multimedia components

UNIT-II OVERVIEW OF COMPUTER HARDWARE 9
Motherboard and its logic-Memory and I/O interfacing/memory and input output mapping-I/O peripherals and Add-on cards.

UNIT-III HOSPITAL INFORMATION SYSTEM 9
Concept of HIS its position in hospital-introduction of a computerized HIS Automation of medical record-cost and Benefits of HIS-Modems and Networking in Hospitals.

UNIT-IV VISUAL PROGRAMMING AND MULTIMEDIA INFORMATION 9
Visual Basic Principles and Programming-Design, Production and Testing of Multimedia based HIS.

UNIT-IV INTEGRATED MEDICAL INFORMATION SYSTEM 9

Integration of inter and intra hospital information system. Role of expert systems-web based Multimedia information system-Video-conferencing-PowerPoint Presentation.

TEXT BOOK:

COURSE OUTCOMES (COs)	
CO1	Gain Knowledge about the historical highlights of health care and biomedical information system.
CO2	Describe the overview of computer hardware used in the health care Information system
CO3	Learn about the concept of hospital Information system and automating the medical records.
CO4	Develop skills in the concepts of visual programming.
CO5	Design and test the web based multimedia based health care information system
CO6	Acquire the skills for integrating inter and intra hospital information system.

U18PEIT016	**SOFTWARE TESTING**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Software Engineering				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

To Learn the design of test cases and to be familiar with test management and test automation techniques.

UNIT I INTRODUCTION 9

Testing as an Engineering Activity – Testing as a Process – Testing axioms – Basic definitions – Software Testing Principles – The Tester‟s Role in a Software Development Organization – Origins of Defects – Cost of defects – Defect Classes – The Defect Repository and Test Design – Defect Examples – Developer/Tester Support of Developing a Defect Repository – Defect Prevention strategies.

UNIT II TEST CASE DESIGN 9

Test case Design Strategies – Using Black Bod Approach to Test Case Design – Random Testing – Requirements based testing – Boundary Value Analysis – Equivalence Class Partitioning – State-based testing – Cause-effect graphing – Compatibility testing – user documentation testing – domain testing – Using White Box Approach to Test design – Test Adequacy Criteria – static testing vs. structural testing – code functional testing – Coverage and Control Flow Graphs – Covering Code Logic – Paths – code complexity testing – Evaluating Test Adequacy Criteria.

UNIT III LEVELS OF TESTING 9

The need for Levers of Testing – Unit Test – Unit Test Planning – Designing the Unit Tests – The Test Harness – Running the Unit tests and Recording results – Integration tests – Designing Integration Tests – Integration Test Planning – Scenario testing – Defect bash elimination System Testing – Acceptance testing – Performance testing – Regression Testing – Internationalization testing – Ad-hoc testing – Alpha, Beta Tests – Testing OO systems – Usability and Accessibility testing – Configuration testing – Compatibility testing – Testing the documentation – Website testing.

UNIT IV TEST MANAGEMENT 9

People and organizational issues in testing – Organization structures for testing teams – testing services – Test Planning – Test Plan Components – Test Plan Attachments – Locating Test Items – test management – test process – Reporting Test Results – The role of three groups in Test Planning and Policy Development – Introducing the test specialist – Skills needed by a test specialist – Building a Testing Group.

UNIT V TEST AUTOMATION 9

Software test automation – skill needed for automation – scope of automation – design and architecture for automation – requirements for a test tool – challenges in automation – Test metrics and measurements – project, progress and productivity metrics.

TEXT BOOKS:

4. Aditya P. Mathur, ―Foundations Of Software Testing _ Fundamental Algorithms And Techniques‖, Dorling Kindersley (India) Pvt. Ltd., Pearson Education, 2008.

COURSE OUTCOMES (Cos)	
CO1	Design test cases suitable for a software development for different domains.
CO2	Apply different test case design strategies.
CO3	Execute various levels of testing.
CO4	Document the test design, test plan, test reports and project management.

CO5	Acquire the skills required for a test specialist.
CO6	Describe the concepts of software test automation, test metrics and measurements.

U18PEIT021	**HIGH SPEED NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Data Communication and Computer Networks				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- Students will be provided with an up-to-date survey of developments in High Speed Networks.
- Enable the students to know techniques involved to support real-time traffic and congestion control.
- Students will be provided with different levels of quality of service (Q.S) to different applications.

UNIT 1 HIGH SPEED NETWORKS 9

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell - ATM Service Categories - AAL. High Speed LAN‘s: Fast Ethernet, Gigabit Ethernet, Fibre Channel - Wireless LAN‘s: applications, requirements - Architecture of 802.11

UNIT 2 CONGESTION AND TRAFFIC MANAGEMENT 9

Queuing Analysis - Queuing Models - Single Server Queues - Effects of Congestion - Congestion Control - Traffic Management - Congestion Control in Packet Switching Networks - Frame Relay Congestion Control.

UNIT 3 TCP AND ATM CONGESTION CONTROL 9

TCP Flow control - TCP Congestion Control - Retransmission - Timer Management - Exponential RTO backoff - KARN‘s Algorithm - Window management - Performance of TCP over ATM.Traffic and Congestion control in ATM - Requirements - Attributes - Traffic Management Frame work, Traffic Control - ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.

UNIT 4 INTEGRATED AND DIFFERENTIATED SERVICES 9

Integrated Services Architecture - Approach, Components, Services - Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ - Random Early Detection, Differentiated Services.

UNIT 5 PROTOCOLS FOR QOS SUPPORT RSVP 9

Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching - Operations, Label Stacking, Protocol details - RTP - Protocol Architecture, Data Transfer Protocol, RTCP.

TEXTBOOK

1. William Stallings, ―High Speed Networks And Internet‖, Pearson Education, Second Edition, 2002. [Chapter - 4-6, 8, 10, 12, 13, 17,18]
2. Warland & Pravin Varaiya, –High Performance Communication Networks‖, Jean Harcourt Asia Pvt. Ltd., II Edition, 2001.

REFERENCE BOOKS

1. Irvan Pepelnjk, Jim Guichard and Jeff Apcar, –MPLS and VPN architecture‖, Cisco Press, Volume 1 and 2, 2003

COURSE OUTCOMES (COs)	
CO1	Understand the basic concepts of asynchronous transfer mode and wireless LAN
CO2	Analyze the concept of congestion control and traffic management.
CO3	Study about TCP and ATM congestion control
CO4	Understand techniques involved to support real-time traffic and congestion control.
CO5	Understand different levels of Quality of Service (QoS) to different applications.
CO6	Implement protocols for QoS Support RSVP

U18PEIT022	**NATURAL LANGUAGE PROCESSING**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

This course is designed to introduce some of the problems and solutions of NLP, and their relation to linguistics and statistics.

UNIT-I INTRODUCTION 9

Introduction - The issues arid difficulties in natural language processing -Linguistics and computational linguistics - Language under- standing and generation - Understanding of

spoken, written and textual information.

UNIT-II PARSING AND GRAMMAR 9

Syntactic Parsing - English grammar - Structure of the sentence - words and organization of the lexicon - Context free and context sensitive grammar -Transformational grammar-The role of syntax analysis in semantics ATN's - Definite clause grammar and WASP parsers.

UNIT-III INTERPRETATION 9

Semantic interpretation - The conceptual dependency model for semantic representation - Semantic network - Frames and scripts - Semantics in the lexicon.

UNIT-IV SEMANTIC NETWORK 9

Discourses interpretation - The interconnections between pragmatics -Pragmatics in discourse analysis-Speech acts plan-based Theory of speech acts - Semantic network - Frame and scripts - Semantics in the lexicon.

UNIT-V CASE STUDY 9

Generation - Strategies for generation - Planning English referring expressions -KING, a Natural language generation systems.Typical systems - ELIZA - Baseball - GLJS - PARRY - LADDER - SOPGIE & POET current trends in NLP.

TEXTBOOK

1. James Alien Benjamin Cummings, ―Natural language understanding‖, 2nd Edition 1995. Benjamin/Cummins Publishing Company.
2. Natural Language Processing by Ela kumar,2011

REFERENCE BOOK

1 Windgrad, –Language as a Cognitive Process; Syntax‖, Addison Wesley Publication.
2 F Popov, –Talking with Computer in Natural Language‖, Springer-Verlag, 1986.

COURSE OUTCOMES (COs)	
CO1	Outline Natural Language Processing tasks in syntax, semantics, and pragmatics.
CO2	Explain Morphology and Part of Speech Tagging.
CO3	Describe how syntax parsing techniques can be used.
CO4	Explain the use of semantic analysis methods.
CO5	Relate a few applications of Natural Language Processing.
CO6	Simulate elementary case studies of NLP in Syntactical and Semantical Aspects

Mapping of Course Outcomes with Program outcomes (POs)

U18PEIT023	**SOCIAL NETWORK ANALYSIS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Computer networks and data mining				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand the concept of semantic web and related applications.
- To learn knowledge representation using ontology.
- To understand human behaviour in social web and related communities.
- To learn visualization of social networks

UNIT I INTRODUCTION 9

Introduction to Semantic Web: Limitations of current Web - Development of Semantic Web - Emergence of the Social Web - Social Network analysis: Development of Social Network Analysis - Key concepts and measures in network analysis - Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities - Web-based networks - Applications of Social Network Analysis.

UNIT II MODELLING, AGGREGATING AND KNOWLEDGE REPRESENTATION 9

Ontology and their role in the Semantic Web: Ontology-based knowledge Representation - Ontology languages for the Semantic Web: Resource Description Framework - Web Ontology Language - Modelling and aggregating social network data: State-of-the-art in network data representation - Ontological representation of social individuals - Ontological representation of social relationships - Aggregating and reasoning with social network data - Advanced representations.

UNIT III EXTRACTION AND MINING COMMUNITIES IN WEB SOCIAL NETWORKS 9

Extracting evolution of Web Community from a Series of Web Archive - Detecting communities in social networks - Definition of community - Evaluating communities - Methods for community detection and mining - Applications of community mining algorithms - Tools for detecting communities social network infrastructures and communities - Decentralized online social networks - Multi-Relational characterization of dynamic social network communities.

UNIT IV PREDICTING HUMAN BEHAVIOUR AND PRIVACY ISSUES 9

Understanding and predicting human behaviour for social communities - User data management - Inference and Distribution - Enabling new human experiences - Reality mining - Context - Awareness - Privacy in online social networks - Trust in online environment - Trust models based on subjective logic - Trust network analysis - Trust transitivity analysis - Combining trust and reputation - Trust derivation based on trust comparisons - Attack spectrum and countermeasures.

UNIT V VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS 9

Graph theory - Centrality - Clustering - Node-Edge Diagrams - Matrix representation - Visualizing online social networks, Visualizing social networks with matrix-based

representations - Matrix and Node-Link Diagrams - Hybrid representations - Applications - Cover networks - Community welfare - Collaboration networks - Co-Citation networks.

COURSE OUTCOMES (COs)	
CO1	Develop semantic web related applications.
CO2	Represent knowledge using ontology.
CO3	Extract and mine communities in web social networks
CO4	Predict human behavior in social web and related communities
CO5	Analyze the security issues and privacy policies in Social networks
CO6	Visualize social networks in real time applications

Mapping of Course Outcomes with Program outcomes (POs)

U18PEIT024	**BUSINESS ANALYTICS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data mining techniques				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

1. To understand the role of business analytics within an organization.
2. To analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization.
3. Use advanced analytical tools to analyze complex problems under uncertainty.
4. Manage business processes using analytical and management tools.

UNIT - I INTRODUCTION 9

Introduction to Business Analytics - Business View of Information TechnologyApplications - Key purpose of using IT in Business - Characteristics of Internet Ready IT Applications - Information Users and their Requirements- Types of digital data - Introduction to OLTP and OLAP.

UNIT - II BUSINESS INTELLIGENCE 9

Using Analytical Information for Decision Support - Definition and examples in business intelligence - Evolution of BI and Role of DSS- EIS- MIS and Digital Dashboards - BI Definition and Concepts - BI Component Framework - Purpose of BI - Business Intelligence Applications - BI Roles and Applications.

UNIT - III DATA MODELING 9

Basic Data Integration - Data Warehouse -p Data Integration Technologies - Data Quality - Data Profiling - Multidimensional Data Modelling - Inrtoduction - Data Modelling Techniques - Fact table - Dimension table - typical dimensional Models - Dimensional Modelling Life Cycle – Measure- Metrics and Performance Management.

UNIT - IV STATISTICS AND ALGORITHMS 9

Basic of Enterprise Reporting - Understanding Statistics - Role of Statistics in Analytics - Data, Data Description and Summarization - Statistical Tests - Understanding Hypothesis and t-test- Correlation Analysis - Regression - The F-Test - Time Series analysis - Application of Analytics - Data mining Algorithms - Association Rule Mining - k-Mean Clustering - Decision Tree.

UNIT -V CASE STUDIES 9

Segmenting bank customer transaction histories - Association analysis of Web services data - Creating a simple credit risk model from consumer loan data - Predicting university enrolment management

TEXT BOOKS:

1. Fundamentals of Business Analytics, R.N. Prasad, Seema Acharys, 2nd Edition, Wiley India Pvt Ltd., 2016.
2. Business Analytics, James R. Evans, 2nd Edition, Pearson Education Limited- 12-Jan-2016

REFERENCES:

1. Business Analytics an Application focus, Purba Halady Rao PHI Learning Pvt. Ltd - 2013
2. Business Analytics: Data Analysis & Decision Making - Standalone , S. Christian Albright , Wayne L. Winston- Cengage Learning, Business & Economics-31-Mar-2016
3. Competing on Analytics: Updated, with a New Introduction: The New Science of Winning, Thomas H. Davenport, Jeanne G. Harris - Harvard Business Review Press, 2017.

COURSE OUTCOMES (COs)

CO1	Understand the concept and role of analytics in business.
CO2	Use business intelligence to formulate and solve business problems and to support managerial decision making.
CO3	Describe the data integration and data modeling techniques.
CO4	Learn the concept of enterprise reporting, statistical techniques and data mining algorithms in analytics,
CO5	Implement analytics in real time applications-bank management, general management, marketing, finance, operations and supply chain management.
CO6	Apply analytic principles and techniques to a business problem

Mapping of Course Outcomes with Program outcomes (POs)

18PEIT025	**MOBILE APPLICATION DEVELOPMENT**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Mobile communication				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To learn the characteristics of mobile applications.
- To learn about the intricacies of UI required by mobile applications.
- To study about the design aspects of mobile application.

UNIT I INTRODUCTION 9

Mobile Applications – Characteristics and Benefits – Application Model – Infrastructure and Managing Resources – Mobile Software Engineering – Frameworks and Tools – Mobile devices Profiles.

UNIT II USER INTERFACE 9

Generic UI Development – VUIs and Mobile Applications – Text to Speech techniques – Designing the right UI – Multimodal and Multichannel UI – Gesture based UIs – Screen Elements and Layouts – Voice XML – Java API.

UNIT III APPLICATION DESIGN 9

Memory Management – Design patterns for limited memory – Work flow for Application Development – Techniques for composing Applications – Dynamic Linking – Plug ins and rules of thumb for using DLLs – Concurrency and Resource Management – Look and feel.

UNIT IV APPLICATION DEVELOPMENT 9

Intents and Services – Storing and Retrieving data – Communication via the Web – Notification and Alarms – Graphics and Multimedia – Telephony – Location based services – Packaging

and Deployment – Security and Hacking.

UNIT V TOOLS 9

Google Android Platform – Eclipse Simulator – Android Application Architecture – Event based programming – Apple iPhone Platform – UI tool kit interfaces – Event handling and Graphics services – Layer Animation.

TEXT BOOKS:

1. Share Conder, Lauren Darcey, "Android Wireless Application Development" Pearson 3rd Edition.
2. Zigurd Mednieks, Laird Dornin, G, Blake Meike and Masumi Nakamura,―Programming Android‖, O"Reilly, 2011.

3. Alasdair Allan, ―iPhone Programming‖, O"Reilly, 2010.

COURSE OUTCOMES (COs)	
CO1	Explain the features and challenges of mobile devices, native app development frameworks, hybrid app development frameworks
CO2	Learn the intricacies of user interfaces and implement the user interfaces for mobile applications.
CO3	Design the mobile applications considering the resource constraints in mobile devices.
CO4	Design a secure mobile application based on user requirements
CO5	Select appropriate framework and tool for developing mobile applications based on the problem requirements
CO6	Design and develop mobile applications for societal and environmental problems

	WAVELET TRANSFORMS AND ITS APPLICATION	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3

U18PEIT026	Prerequisite – Mobile communication
	Course Designed by:- Dept of Information Technology

OBJECTIVES

To in

troduce the fundamentals concepts of wavelet transforms.

- To study system design using Wavelets
- To learn the different wavelet families & their applications.

UNIT I INTRODUCTION TO WAVELETS 9

Introduction to Multirate signal processing- Decimation and Interpolation, Quadrature Mirror Filters, Subband coding, Limitations of Fourier transform, Short time Fourier transform and its drawbacks, Continuous Wavelet transform, Time frequency representation, Wavelet System and its characteristics, Orthogonal and Orthonormal functions and function space

UNIT II MULTIRESOLUTION CONCEPT AND DISCRETE WAVELET TRANSFORM 9

Multiresolution formulation of wavelet systems- signal spaces, scaling function, wavelet function and its properties, Multiresolution analysis, Haar scaling and wavelet function, Filter banks Analysis and Synthesis, 1D and 2D Discrete wavelet transform, Wavelet Packets, Tree structured filter bank, Multichannel filter bank, Undecimated wavelet transform.

UNIT III WAVELET SYSTEM DESIGN 9

Refinement relation for orthogonal wavelet systems, Restrictions on filter coefficients, Design of Daubechies orthogonal wavelet system coefficients, Design of Coiflet and Symlet wavelets.

UNIT IV WAVELET FAMILIES 9

Continuous Wavelets- Properties of Mexican hat wavelet, Morlet, Gaussian and Meyer wavelets. Orthogonal wavelets- Properties of Haar wavelets, Daubechies wavelets, Symlets, Coiflets and Discrete Meyer wavelets. Properties of Biorthogonal wavelets, Applications of wavelet families.

UNIT V WAVELET APPLICATIONS 9

Denoising of Signals and Images, Image enhancement, Edge detection, Image Fusion, Image compression, Wavelet based feature extraction, Analysis of phonocardiogram signals, Analysis of EEG signals, Speech enhancement for hearing aids

COURSE OUTCOMES (COs)	
CO1	Understand the basic concepts of wavelet and its types

CO2	Analyze multi resolution concepts and discrete wavelet transform.
CO3	Design the different wavelet system.
CO4	Describe the properties and applications of wavelet families.
CO5	Analysis of phonocardiogram signals, EEG signals, Speech enhancement for hearing aids and de-noising technique.
CO6	Implement wavelet applications in real time.

18PEIT031	**CYBERFORENSICS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite –Data Communication and Computer Networks				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To learn computer forensics
- To become familiar with forensics tools
- To learn to analyze and validate forensics data

UNIT I INTRODUCTION TO COMPUTER FORENSICS 9

Introduction to Traditional Computer Crime, Traditional problems associated with Computer Crime. Introduction to Identity Theft & Identity Fraud. Types of CF techniques - Incident and incident response methodology - Forensic duplication and investigation. Preparation for IR: Creating response tool kit and IR team. - Forensics Technology and Systems - Understanding Computer Investigation – Data Acquisition.

UNIT II EVIDENCE COLLECTION AND FORENSICS TOOLS 9

Processing Crime and Incident Scenes – Working with Windows and DOS Systems. Current Computer Forensics Tools: Software/ Hardware Tools.

UNIT III ANALYSIS AND VALIDATION 9

Validating Forensics Data – Data Hiding Techniques – Performing Remote Acquisition – Network Forensics – Email Investigations – Cell Phone and Mobile Devices Forensics

UNIT IV ETHICAL HACKING 9

Introduction to Ethical Hacking - Footprinting and Reconnaissance - Scanning Networks - Enumeration - System Hacking - Malware Threats - Sniffing

UNIT V ETHICAL HACKING IN WEB 9

Social Engineering - Denial of Service - Session Hijacking - Hacking Web servers - Hacking Web Applications – SQL Injection - Hacking Wireless Networks - Hacking Mobile Platforms.

TEXT BOOKS:

1. Bill Nelson, Amelia Phillips, Frank Enfinger, Christopher Steuart, ―Computer Forensics and Investigations‖, Cengage Learning, India Edition, 2016.

3. AnkitFadia ― Ethical Hacking Second Edition, Macmillan India Ltd, 2006

COURSE OUTCOMES (COs)	
CO1	Explain computer forensics and its techniques
CO2	Learn about evidence collection and applying forensic tools for crime investigations.
CO3	Analyze and validate forensics data.
CO4	Explore the fundamentals of ethical hacking
CO5	Execute penetration technique using standard hacking tools in an ethical manner
CO6	Learn about reconnaissance, protocols, windows hacking, hacking web technologies, wireless networks and mobile platforms

Mapping of Course Outcomes with Program outcomes (POs)

U18PEIT033	**APPLICATIONS OF DATAMINING**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data Warehousing and Data mining Techniques				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To learn how to prepare, process, understand, analyze and present the data.
- To analyze the problem and Implement different techniques.
- To Evaluate and Refine them for analyze the problem.
- To implement data mining tools such as R/ Weka

UNIT - I INTRODUCTION 9

Introduction to Data and Big Data -Data Types and Data Qualities - Sampling, Sample Sets

and Data Population - Statistical Inference and Introduction to Supervised and Unsupervised Learning method - Data Mining Goals - Stages of the Data Mining Process - Data Mining Techniques - Introduction to Data Mining Tools - R and WEKA

UNIT - II DATA MINING KNOWLEDGE REPRESENTATION 9

Task relevant data- Background knowledge -Interestingness measure-Representing input data and output knowledge - Data Visualization- Basic concepts - Visualization techniques - Experiments with Weka/R using visualization- Attribute-oriented analysis -Attribute generalization- Attribute relevance -Class comparison -Statistical measures- Experiments with Weka / R using filters and statistics

UNIT- III CLASSIFICATION 9

Basic learning/mining tasks - Inferring rudimentary rules: 1R algorithm - Covering rules - Introduction to Decision Trees -Rule Based Classifier - Experiments with Weka/R using decision trees, rules -The prediction task - Statistical (Bayesian) classification - Bayesian networks -Instance-based methods (nearest neighbor)-Linear models -Experiments with Weka/R using Prediction

UNIT - IV CLUSTERING ANALYSIS 9

Clustering Analysis - Basic issues in clustering - conceptual clustering system: Cluster/2 - Partitioning methods: k-means, expectation maximization (EM) - Hierarchical methods: distance-based agglomerative and divisible clustering - Conceptual clustering: Cobweb - Experiments with Weka/R using k-means, EM, Cobweb -Association rules - Generating item sets and rules efficiently-Correlation analysis -Experiments with Weka/R - mining association rules

UNIT - V CASE STUDY 9

Training and testing - Estimating classifier accuracy (holdout, cross-validation, leave-one-out) - Combining multiple models (bagging, boosting, stacking) - Experiments with Weka/R for training and testing- Mining Real data - Preprocessing data -Applying various data mining techniques to create a comprehensive and accurate model of the data -Text mining: extracting attributes (keywords), structural approaches (parsing, soft parsing).

U18PEIT032	**VIRTUAL AND AUGMENTED REALITY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –C/C++, Data Structures,Computer Graphics				
	Course Designed by:- Dept of Information Technology				

OOBJECTIVES

- To learn Virtual reality; multiple modal interaction, visual-auditory-haptic, interaction inmersion
- To learn imagination, visual computation and environmental modeling; geometric behavior and physically based simulation
- To understand the management of large scale environment, VR development tools, augmented reality, mixed reality, digital entertainment.

UNIT- 1 Introduction of Virtual Reality **9**

Fundamental Concept and Components of Virtual Reality Primary Features and Present Development on Virtual Reality

UNIT- II Multiple Modals of Input and Output Interface in Virtual Reality **9**

Input -- Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3DScanner etc. Output -- Visual / Auditory / Haptic Devices

UNIT- III Visual Computation in Virtual Reality **9**

Fundamentals of Computer Graphics Software and Hardware Technology on Stereoscopic Display Advanced Techniques in CG: Management of Large Scale Environments & Real Time Rendering

UNIT- IV Environment Modeling in Virtual Reality **9**

Geometric Modeling, Behavior Simulation, Physically Based Simulation Interactive Techniques in Virtual Reality: Body Track, Hand Gesture, 3D Manus, Object

UNIT- V Grasp Introduction of Augmented Reality (AR) **9**

System Structure of Augmented Reality Key Technology in AR Development Tools and Frameworks in Virtual Reality: Frameworks of Software Development Tools in VR. X3D Standard; Vega, MultiGen, Virtools etc

TEXT BOOK

1. Bush, V. (1945) As We May Think, The Atlantic.
2. Feiner, S.K. (2002) Augmented Reality: A New Way of Seeing, Scientific American, 286(4), pp. 34-41.
3. Billinghurst, M., Poupyrev, I., Kato, H., May, R. (2000) Mixing Realities in Shared Space: An Augmented Reality Interface for Collaborative Computing, Proc. of the IEEE Int'l Conf. on Multimedia and Expo (ICME), pp. 1641-1644.
4. Uchiyama H., Saito H. (2011) Random Dot Markers, Proc. of IEEE VR 2011, pp. 35-38.

COURSE OUTCOMES (COs)	
CO1	Understand the basic concept and framework of virtual reality.
CO2	Describe the multiple modals of input and output interface in virtual reality.
CO3	Explain the fundamentals of computer graphics.
CO4	Apply display advanced techniques in computer graphics.
CO5	Explore about the environment modeling in virtual reality.
CO6	Learn about the fundamentals of Augmented Reality and implement software development tools in Virtual Reality

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT034	**MACHINE LEARNING TECHNIQUES**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Principles of Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand the concepts of machine learning
- To appreciate supervised and unsupervised learning and their applications
- To understand the theoretical and practical aspects of Probabilistic Graphical Models.
- To understand probabilistic graphical models.
- To understand sample complexity analysis.

UNIT I INTRODUCTION **9**

Machine Learning - Machine Learning Foundations –Overview – Design of a Learning system - Types of machine learning –Applications Mathematical foundations of machine learning - random variables and probabilities - Probability Theory – Probability distributions -Decision Theory- Bayes Decision Theory - Information Theory.

UNIT II SUPERVISED LEARNING 9

Linear Models for Regression - Linear Models for Classification – Naïve Bayes - Discriminant Functions -Probabilistic Generative Models -Probabilistic Discriminative Models - Bayesian Logistic Regression. Decision Trees - Classification Trees- egression Trees - Pruning. Neural Networks -Feed-forward Network Functions - Back- propagation. Support vector machines - Ensemble methods- Bagging- Boosting.

UNIT III UNSUPERVISED LEARNING 9

Clustering- K-means - EM Algorithm- Mixtures of Gaussians. The Curse of Dimensionality - Dimensionality Reduction - Factor analysis - Principal Component Analysis - Probabilistic PCA- Independent components analysis.

UNIT IV PROBABILISTIC GRAPHICAL MODELS 9

Graphical Models - Undirected graphical models - Markov Random Fields - Directed Graphical Models -Bayesian Networks - Conditional independence properties - Inference – Learning- Generalization - Hidden Markov Models - Conditional random fields(CRFs)

UNIT V ADVANCED LEARNING 9

Sampling – Basic sampling methods – Monte Carlo - Reinforcement Learning – K - Armed Bandit - Elements - Model-Based Learning- Value Iteration- Policy Iteration. Temporal Difference Learning- Exploration Strategies- Deterministic and Non-deterministic Rewards and Actions Computational Learning Theory - Mistake bound analysis, sample complexity analysis- VC dimension. Occam learning- accuracy and confidence boosting

COURSE OUTCOMES (COs)	
CO1	Understand the fundamentals and concept of Machine learning.
CO2	Apply probabilistic techniques for real time application in uncertain environment.
CO3	Explain the concepts of supervised and unsupervised learning techniques.
CO4	Design and implement probabilistic graphical models in real time applications.
CO5	Use machine learning tools to implement typical clustering algorithms for different types of applications.
CO6	Explore the different advanced learning techniques.
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT035	**BIO-INSPIRED COMPUTING**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Principles of Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- Learn evolutionary theory and algorithms
- Understand Cellular Automata and artificial life
- Learn artificial neural systems and related learning algorithms

UNIT I EVOLUTIONARY AND CELLULAR SYSTEMS 9

Foundations of evolutionary theory – Genotype – artificial evolution – genetic representations – initial population – fitness functions – selection and reproduction – genetic operators – evolutionary measures – evolutionary algorithms – evolutionary electronics – evolutionary algorithm case study Cellular systems – cellular automata – modeling with cellular systems – other cellular systems – computation with cellular systems – artificial life – analysis and synthesis of cellular systems

UNIT II NEURAL SYSTEMS 9

Biological nervous systems – artificial neural networks – neuron models – architecture – signal encoding – synaptic plasticity – unsupervised learning – supervised learning – reinforcement learning – evolution of neural networks – hybrid neural systems – case study

UNIT III DEVELOPMENTAL AND IMMUNE SYSTEMS 9

Rewriting systems – synthesis of developmental systems – evolutionary rewriting systems – evolutionary developmental programs Biological immune systems – lessons for artificial immune systems – algorithms and applications – shape space – negative selection algorithm – clonal selection algorithm - examples

UNIT IV BEHAVIORAL SYSTEMS 9

Behavior is cognitive science – behavior in AI – behavior based robotics – biological inspiration for robots – robots as biological models – robot learning – evolution of behavioral systems – learning in behavioral systems – co-evolution of body and control – towards self reproduction – simulation and reality

UNIT V COLLECTIVE SYSTEMS 9

Biological self-organization – Particle Swarm Optimization (PSO) – ant colony optimization (ACO) – swarm robotics – co-evolutionary dynamics – artificial evolution of competing systems – artificial evolution of cooperation – case study

COURSE OUTCOMES (COs)	
CO1	Implement and apply evolutionary algorithms.
CO2	Explain cellular automata and artificial life.
CO3	Implement and apply neural systems.
CO4	Explain developmental and artificial immune systems.
CO5	Describe behavioral systems and to implement in collective intelligence systems.
CO6	Design bio inspired solutions for real world problems.

U18PEIT036	**SOFTWARE CONFIGURATION MANAGEMENT**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Software Engineering Methodologies				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To Introduce the basic concepts of software configuration management
- To learn the importance of SCM in software development
- To understand the different SCM phases and activities, branching, release management, configuration management roles.

UNIT 1 INTRODUCTION 9

Introduction to software configuration Management, SCM and Process Improvement, Measurements and Metrics – Benefits of SCM – Configuration Identification – Configuration Change control – Implementing SCM in the Organization – Project Management in CM Environment- Software Scope- Project Estimation – Risk Management Strategies.

UNIT II THE DoD CM PROCESS MODEL 9

CM Benefits, Risks, CM Life-Cycle Management and Planning- Relation to system engineering process – Implementing the CM process – measuring and Evaluating the CM process.

UNIT III CONFIGURATION IDENTIFICATION 9

Product structure – configuration items – configuration documentation – specification types – software requirement analysis and design – software architecture and design – software integration and qualification – configuration base line concept.

UNIT IV CONFIGURATION CONTROL 9

The process of configuration control – Configuration status accounting – Typical CSA information over the acquisition program – Life cycle - Configuration status accounting process Evaluation.

UNIT V CONFIGURATION VERIFICATION AND AUDITING 9

Configuration identification – the effective documentation of the system – Methods and standards – Generating documentation – configuration verification and Audit – Concepts and principles – configuration verification – configuration audit – application of audits.

TEXT BOOK:

REFERENCES:

1. Enterprise Software Configuration Management Solutions for Distributed and System z, Paolo Cravino, David Lawrence, Antonio Alonso, López Brandt Onorato Zhenhua (Eric) Shen, January 2009

COURSE OUTCOMES (COs)	
CO1	Understand the concepts and principles of software configuration management.
CO2	Explain about configuration Management and planning.
CO3	Define the relation between software configuration management and the software development.
CO4	Select configuration items at appropriate levels of the product structure
CO5	Describe the configuration management activities like control, status accounting, auditing and verification.
CO6	Implement technical Software Configuration Management System in real time.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT041	**CLOUD COMPUTING AND SECURITY**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data Communication and Computer Networks				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand the concept of cloud computing.
- To appreciate the evolution of cloud from the existing technologies.
- To have knowledge on the various issues in cloud computing.
- To be familiar with the lead players in cloud.
- To appreciate the emergence of cloud as the next generation computing paradigm.

UNIT I INTRODUCTION 9

Introduction to Cloud Computing – Definition of Cloud – Evolution of Cloud Computing – Underlying Principles of Parallel and Distributed Computing – Cloud Characteristics – Elasticity in Cloud – On-demand Provisioning.

UNIT II CLOUD ENABLING TECHNOLOGIES 10

Service Oriented Architecture – REST and Systems of Systems – Web Services – Publish-Subscribe Model – Basics of Virtualization – Types of Virtualization – Implementation Levels of Virtualization – Virtualization Structures – Tools and Mechanisms – Virtualization of CPU – Memory – I/O Devices –Virtualization Support and Disaster Recovery.

UNIT III CLOUD ARCHITECTURE, SERVICES AND STORAGE 8

Layered Cloud Architecture Design – NIST Cloud Computing Reference Architecture – Public, Private and Hybrid Clouds – laaS – PaaS – SaaS – Architectural Design Challenges – Cloud Storage – Storage-as-a-Service – Advantages of Cloud Storage – Cloud Storage Providers – S3.

UNIT IV RESOURCE MANAGEMENT AND SECURITY IN CLOUD 10

Inter Cloud Resource Management – Resource Provisioning and Resource Provisioning Methods – Global Exchange of Cloud Resources – Security Overview – Cloud Security Challenges – Software-as-a-Service Security – Security Governance – Virtual Machine Security – IAM – Security Standards.

UNIT V CLOUD TECHNOLOGIES AND ADVANCEMENTS 8

Hadoop – MapReduce – Virtual Box — Google App Engine – Programming Environment for Google App Engine — Open Stack – Federation in the Cloud – Four Levels of Federation – Federated Services and Applications – Future of Federation.

COURSE OUTCOMES (COs)	
CO1	Articulate the main concepts, key technologies, strengths and limitations of cloud computing.
CO2	Learn the key and enabling technologies that help in the development of cloud.
CO3	Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.
CO4	Explain the core issues of cloud computing such as resource management and security.
CO5	Be able to install and use current cloud technologies.
CO6	Evaluate and choose the appropriate technologies, algorithms and approaches for implementation and use of cloud.

U18PEIT042	**MULTI AGENT SYSTEMS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Principles of Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- Taxonomy of agent architectures, formal languages for multi-agent systems specification, languages and schemes for knowledge representation, formal languages

and models for modeling of agent and environment behavior, agent communication languages and associated semantic models.

- Basic inter-agent interaction patterns and coordination of cooperative and antagonistic agents. Coordination techniques: organizational structure, contracting, multi-agent planning and negotiation.
- Application of multi-agent systems in computer and robot vision, decision support systems, electronic commerce, robotics, and simulation of societies.

UNIT-I INTRODUCTION 9

Intelligent Agents-Deductive reasoning Agents – Agents as theorem provers- Agent Oriented Programming - Concurrent Metate M- Practical Reasoning Agents

UNIT-II TYPES OF AGENTS 9

Reactive and Hybrid Agents - Brook_s and Subsumption Architecture –The Limitations of Reactive Agents - Hybrid Agents. Communication - Speech Acts - Agent Communication Languages, Working Together - Cooperative Distributed Problem Solving - Task Sharing and Result Sharing Coordination – Multi agent Planning and Synchronization

UNIT-III MULTI-AGENT INTERACTIONS 9

Making group decisions- Co-operative games - Allocating scarce resources

UNIT-IV BARGAINING 9

Bargaining for resource division, task allocation and resource allocation - Arguing – Abstract, deductive, dialogue and implemented argumentation systems –Applications – Agents for different domains

UNIT-V JADE 9

Agent Oriented Language - The JADE Platform – Programming with JADE – Basic Features

REFERENCES:

3. Gerhard Weiss, ―Multi Agent Systems: A Modern Approach to Distributed Artificial Intelligence‖, The MIT press, 2000.

COURSE OUTCOMES (COs)	
CO1	Understand the notions of the intelligent agent and multi
CO2	Describe Reactive and Hybrid Agents
CO3	Identify the basic application areas of intelligent agents
CO4	Apply bargaining and augmentative techniques.
CO5	Explore the basics of the agent oriented languages.
CO6	Design multi agent systems for real time problems.

U18PEIT043	**MINING SOCIAL MEDIA**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data Mining				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To use different tools for collecting, analyzing, and exploring social media data for research and development purposes.
- To process the collected data, primarily structured using methods involving correlation, regression, and classification to derive insights about the sources and people who generated that data.
- To apply best practices in Search Engine

UNIT - I INTRODUCTION 9

What is Social Media Mining - New Challenges fir Mining - Essentials - Graph Essentials- Graph Basics -Graph Representation p- Types of Graph - Connctivity in Graphs - Special Graphs - Graph Algorithms.

UNIT - II NETWORK MEASURES 9

Network Measures - Entity - Transitivity and Reciprocity - Balance and Status - Network Models - Properties of Real-World Networks - Random Graphs - Small-World Models - Preferential Attached Models - Data Mining Essentials - Data Pre-processing - Data mining Algorithms - Supervised Learning - Unsupervised Learning.

UNIT - III COMMUNITY AND INTERACTIONS 9

Community Analysis - Community Detection - Community Evolution - Community Evaluation - Information Diffusion in Social Media - Herd Behavior - Information Cascades - Diffusion of innovations - Epidemics.

UNIT - IV APPLICATIONS 9

Inference and Homophily - Measuring Assortativity - Influence - Homophily- Distinguishing Influence and Homophily - Recommendation in Social Media -Challenges - Classical Recommendation Algorithms - Recommendation Using Social Context - Evaluating Recommendation- Behavior Analytics Individual Behavior - collective Behavior.

UNIT -V CASE STUDY 9

Gathering social media data - Building social media networks - Analyzing network effects- Simulating network dispersion

TEXT BOOK

1. Social Media Mining: An Introduction, Reza Zafarinin, Mohammad Ali Abbasi, Huan Lui - April 2014.

REFERENCES:

1. Mining Text Data , Charu C. Aggarwal, ChengXiang Zhai, Springer 2012.
2. Mastering Social Media Mining with Python, Macro Bonzanini, Packt publications July 2016.

COURSE OUTCOMES (COs)	
CO1	Utilize various Application Programming Interface (API) services to collect data from different social media sources such as YouTube, Twitter, and Flickr.
CO2	Process the collected data, primarily structured using methods involving correlation, regression, and classification to derive insights about the sources and people who generated that data.
CO3	Perform social network analysis to identify important social actors, subgroups (i.e., clusters), and network properties in social media sites such as Twitter, Facebook, and YouTube.
CO4	Apply best practices in Search Engine.
CO5	Design ethical principles to the use of web and social media data.
CO6	Build social networks

U18PEIT044	**DIGITAL AND MEDICAL IMAGE PROCESSING**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Image processing				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- The aim of the course is to show how to extract, model, and analyze information from medical data and application in order to help diagnosis , treatment and monitoring of diseases through computer science.

UNIT-I DIGITAL IMAGE FUNDAMENTAL 9

Elements of digital image processing systems, Elements of Visual perception, Image formation model, Image sampling and quantization, aliasing, zooming and shrinking of digital images. Monochrome Vision Model, Colour Vision Model. Image transforms –Discrete Fourier transform, Properties of Fourier transform, Fast Fourier transform and inverse fast Fourier transform.

UNIT-II IMAGE FUNDAMENTALS 9

Image sampling and quantization, Matrix and Singular Value representation of discrete images. Image pre-processing, point operation, Histogram 119odeling, spatial operations, transform operations.

UNIT-III IMAGE ENHANCEMENT 9

Enhancement by point processing –Simple intensity transformation –Histogram processing – Image subtraction –Image averaging. Spatial filtering –Smoothing filters, sharpening filters. Enhancements in frequency domain-Low pass filtering –High pass filtering.

UNIT-IV IMAGE ANALYSIS, CLASSIFICATION AND RECONSTRUCTION OF ACT AND MRI IMAGES 9

Image analysis, Spatial feature extraction, edge detection, Image segmentation. Image reconstruction from projections, Random transform, filter back projection algorithm, reconstruction of CT images, Imaging methods in MF images, fourier reconstruction of MRI.

UNIT-V TRANSMISSION OF MEDICAL IMAGES 9

Medical Image, data compression of transmission, transform coding, pixelCoding, predictive coding, Interference coding.

TEXT BOOKS:

1. Kavyan Najarian and Robert Splerstor ‖Biomedical Signals and Image Processing‖, CRC – Taylor and Francisn, New York, 1991.
2. John L. Semmlow, ‒Biosignal and Biomedical Image Processing Matlab Based applications‖ Marcel Dekker Inc., New York, 2004.

COURSE OUTCOMES (Cos)	
CO1	Acquire a fundamental knowledge of digital image processing with Fourier transforms.
CO2	Learn about the image sampling, Modeling and quantization techniques.
CO3	Explain the image enhancement, its process and types of filters used in image processing.
CO4	Apply image analysis, classification and reconstruction techniques in images.
CO5	Acquire the skills in the transmission of medical images.
CO6	Design real time applications for processing medical images.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT045	**MULTIMEDIA COMPRESSION TECHNIQUES**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

The student should be made to:

- Understand error–control coding.
- Understand encoding and decoding of digital data streams.
- Be familiar with the methods for the generation of these codes and their decoding techniques.
- Be aware of compression and decompression techniques.
- Learn the concepts of multimedia communication.

UNIT I MULTIMEDIA COMPONENTS

Introduction - Multimedia skills - Multimedia components and their characteristics - Text, sound, images, graphics, animation, video, hardware.

UNIT II AUDIO AND VIDEO COMPRESSION

Audio compression–DPCM-Adaptive PCM –adaptive predictive coding-linear Predictive coding-code excited LPC-perpetual coding Video compression –principles-H.261-H.263-MPEG 1, 2, and 4.

UNIT III TEXT AND IMAGE COMPRESSION

Compression principles-source encoders and destination encoders-lossless and lossy compression- entropy encoding –source encoding -text compression – static Huffman coding dynamic coding – arithmetic coding –Lempel Ziv-Welsh Compression-image compression.

UNIT IV VOIP TECHNOLOGY

Basics of IP transport, VoIP challenges, H.323/ SIP –Network Architecture, Protocols, Call establishment and release, VoIP and SS7, Quality of Service- CODEC Methods- VOIP applicability.

UNIT V MULTIMEDIA NETWORKING

Multimedia networking -Applications-streamed stored and audio-making the best Effort service- protocols for real time interactive Applications-distributing multimedia-beyond best effort service- secluding and policing Mechanisms-integrated services-differentiated Services-RSVP.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	Explore the basic components of multimedia.
CO2	Analyze audio and video compression techniques.
CO3	Apply text and image compression techniques.
CO4	Evaluate the basic concepts of Voice Over Internet Protocol.
CO5	Understand the concepts of multimedia networking and its applications.
CO6	Design interactive real time multimedia applications.

U18PEIT046	**AGILE METHODOLIGY**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To provide students with a theoretical as well as practical understanding of agile software
- To develop practices and how small teams can apply them to create high-quality software.

UNIT I AGILE METHODOLOGY 9

Theories for Agile Management – Agile Software Development – Traditional Model vs. Agile Model – Classification of Agile Methods – Agile Manifesto and Principles – Agile Project Management – Agile Team Interactions – Ethics in Agile Teams – Agility in Design- Testing – Agile Documentations – Agile Drivers- Capabilities and Values

UNIT II AGILE PROCESSES 9

Lean Production – SCRUM, Crystal, Feature Driven Development- Adaptive Software Development – Extreme Programming: Method Overview – Lifecycle – Work Products- Roles and Practices.

UNIT III AGILITY AND KNOWLEDGE MANAGEMENT 9

Agile Information Systems – Agile Decision Making – Earl_S Schools of KM – Institutional Knowledge Evolution Cycle – Development, Acquisition, Refinement, Distribution, Deployment , Leveraging – KM in Software Engineering – Managing Software Knowledge – Challenges of Migrating to Agile Methodologies – Agile Knowledge Sharing – Role of Story-Cards – Story-Card Maturity Model (SMM).

UNIT IV AGILITY AND REQUIREMENTS ENGINEERING 9

Impact of Agile Processes in RE–Current Agile Practices – Variance – Overview of REUsing Agile – Managing Unstable Requirements – Requirements Elicitation – Agile Requirements Abstraction Model – Requirements Management in Agile Environment- Agile Requirements Prioritization – Agile Requirements Modeling and Generation – Concurrency in Agile Requirements Generation.

UNIT V AGILITY AND QUALITY ASSURANCE 9

Agile Product Development – Agile Metrics – Feature Driven Development (FDD) – Financial and Production Metrics in FDD – Agile Approach to Quality Assurance – Test Driven Development – Agile Approach in Global Software Development.

TEXT BOOKS:

2. Kevin C. Desouza, ―Agile Information Systems: Conceptualization, Construction, and Management, Butterworth-Heinemann, 2007.

COURSE OUTCOMES (COs)	
CO1	Understand the fundamentals of agile methodology.
CO2	Explore the various agile processes for software development.
CO3	Demonstrate knowledge management in Agile methodology.
CO4	Describe the benefits and pitfalls of working in an Agile team and to understand Agile development, deployment and testing.
CO5	Apply agile approach to quality assurance.
CO6	Design applications using Agile approach in Global Software Development

U18PEIT051	**INTERNET OF THINGS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Computer Architecture				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand Smart Objects and IoT Architectures
- To learn about various IOT-related protocols
- To build simple IoT Systems using Arduino and Raspberry Pi.
- To understand data analytics and cloud in the context of IoT

UNIT I FUNDAMENTALS OF IoT 9

Evolution of Internet of Things - Enabling Technologies – IoT Architectures: oneM2M, IoT World Forum (IoTWF) and Alternative IoT models – Simplified IoT Architecture and Core IoT Functional Stack -– Fog, Edge and Cloud in IoT – Functional blocks of an IoT ecosystem – Sensors, Actuators, Smart Objects and Connecting Smart Objects

UNIT II IoT PROTOCOLS 9

IoT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and LoRaWAN – Network Layer: IP versions, Constrained Nodes and Constrained Networks – Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks – Application Transport Methods: Supervisory Control and Data Acquisition – Application Layer Protocols: CoAP and MQTT

UNIT III DESIGN AND DEVELOPMENT 9

Design Methodology - Embedded computing logic - Microcontroller, System on Chips - IoT system building blocks - Arduino - Board details, IDE programming - Raspberry Pi - Interfaces and Raspberry Pi with Python Programming.

UNIT IV DATA ANALYTICS AND SUPPORTING SERVICES 9

Structured Vs Unstructured Data and Data in Motion Vs Data in Rest – Role of Machine Learning – No SQL Databases – Hadoop Ecosystem – Apache Kafka, Apache Spark – Edge Streaming Analytics and Network Analytics – Xively Cloud for IoT, Python Web Application Framework – Django – AWS for IoT – System Management with NETCONF-YANG

UNIT V CASE STUDIES/INDUSTRIAL APPLICATIONS 9

Cisco IoT system - IBM Watson IoT platform – Manufacturing - Converged Plantwide Ethernet Model (CPwE) – Power Utility Industry – GridBlocks Reference Model - Smart and Connected Cities: Layered architecture, Smart Lighting, Smart Parking Architecture and Smart Traffic Control

COURSE OUTCOMES (COs)	
CO1	Explain the concept of IoT.
CO2	Analyze various protocols for IoT.
CO3	Design a PoC of an IoT system using Rasperry Pi/Arduino
CO4	Apply data analytics and use cloud offerings related to IoT.
CO5	Analyze applications of IoT in real time scenario
CO6	Implement Industrial IoT applications

	ARTIFICIAL INTELLIGENT GAME	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3

U18PEIT052	Prerequisite – Principles of Artificial Intelligence
	Course Designed by:- Dept of Information Technology

OBJECTIVES

- Study The Concepts Of Artificial Intelligence.
- Learn The Methods Of Solving Problems Using Artificial Intelligence.
- Introduce The Concepts Of Expert Systems And Machine Learning.

UNIT I INTRODUCTION 9

Introduction–Definition – Future of Artificial Intelligence – Characteristics of Intelligent Agents– Typical Intelligent Agents – Problem Solving Approach to Typical AI problems.

UNIT II PROBLEM SOLVING METHODS 9

Problem solving Methods – Search Strategies- Uninformed – Informed – Heuristics – Local Search Algorithms and Optimization Problems – Searching with Partial Observations – Constraint Satisfaction Problems – Constraint Propagation – Backtracking Search – Game Playing – Optimal Decisions in Games – Alpha – Beta Pruning – Stochastic Games

UNIT III KNOWLEDGE REPRESENTATION 9

First Order Predicate Logic – Prolog Programming – Unification – Forward Chaining-Backward Chaining – Resolution – Knowledge Representation – Ontological Engineering-Categories and Objects – Events – Mental Events and Mental Objects – Reasoning Systems for Categories – Reasoning with Default Information

UNIT IV SOFTWARE AGENTS 9

Architecture for Intelligent Agents – Agent communication – Negotiation and Bargaining – Argumentation among Agents – Trust and Reputation in Multi-agent systems

UNIT V APPLICATIONS 9

AI applications – Language Models – Information Retrieval- Information Extraction – Natural Language Processing – Machine Translation – Speech Recognition – Robot – Hardware – Perception – Planning – Moving

COURSE OUTCOMES (COs)	
CO1	Identify problems that are amenable to solution by Artificial Intelligence methods.

CO2	Select appropriate Artificial Intelligence methods to solve a given problem.
CO3	Formalize a given problem in the language/framework of different Artificial Intelligence methods.
CO4	Represent knowledge, design intelligent agents and apply the suitable Artificial Intelligence algorithms for problem solving and reasoning.
CO5	Design and carry out an empirical evaluation of different Artificial Intelligence algorithms
CO6	Learn the concepts of problem solving, reasoning, planning, natural language understanding, computer vision and machine learning and design real time Artificial Intelligence applications

U18PEIT053	**INFERENTIAL STATISTICS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data mining				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES
To enable students to analyze and interpret data, collected data from a variety of types of research designs, within a linear model framework.

UNIT 1 INTERVAL ESTIMATION 10

Concepts of confidence interval and confidence coefficient - confidence interval for mean - difference between means - variance and ratio of variances under normality. Large sample confidence interval for proportions and correlation coefficients

UNIT II TESTING OF HYPOTHESIS 9

Definition of Most Powerful (MP) - Uniformly Most Powerful(UMP) - Neyman Pearson Lemma - Monotone Likelihood Ratio Property - Statement of the theorem -UMP tests for testing one sided hypothesis for distribution with MLR property.

UNIT III LIKELIHOOD RATIO TEST 9

Likelihood Ratio test- LRT for single mean for normal case (large and small samples)- for equality of two means for unknown but equal variances. LRT for single variance and equality

of two variances

UNIT IV NON PARAMETRIC TESTS 9

Need for non parametric tests- Sign test for one sample and two samples- Wilcoxon signed rank test- Median test- Wald Wolfowitz run test- Mann Whitney U test- Run test for randomness- test for independence based on Spearman's rank correlation coefficient(small and large samples)- Chi square test- goodness of fit- independence of attributes in contingency table - and equality of many proportions. Kruskal Wallis Test for equality of several means.

UNIT V SEQUENTIAL PROBABILITY RATIO TEST 8

Need for sequential test- Wald's SPRT- Sequential test for the mean of Normal population when variance is known and for the proportion- Derivation of expressions for OC and ASN functions in Bernoulli and Normal distributions.

COURSE OUTCOMES (COs)	
CO1	Understand the analysis of Variance (ANOVA) or Analysis of Covariance (ANCOVA)
CO2	Analyze and interpret data collected from factorial designs.
CO3	Use the multiple linear regression (MLR) procedures to compute partial and semi-partial correlation analyses and interpret the results
CO4	Infer data from a prediction study using one criterion variable and multiple predictor variables.
CO5	Interpret ANOVA, ANCOVA, and MLR results reported in published reports of research.
CO6	Evaluate the reliability and validity of a measuring (or survey) instrument.

U18PEIT054	DEEP LEARNING	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Principles of Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

This course covers the basics of machine learning, neural networks and deep learning. Model for deep learning technique and the various optimization and generalization mechanisms are included. Major topics in deep learning and dimensionality reduction techniques are covered.

UNIT I INTRODUCTION **9**

Introduction to machine learning- Linear models (SVMs and Perceptrons, logistic regression)- Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates

UNIT II DEEP NETWORKS **9**

History of Deep Learning- A Probabilistic Theory of Deep Learning- Backpropagation and regularization, batch normalization- VC Dimension and Neural Nets-Deep Vs Shallow Networks Convolutional Networks- Generative Adversarial Networks (GAN), Semi-supervised Learning

UNIT III DIMENTIONALITY REDUCTION **9**

Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures – AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyperparameter optimization

UNIT IV OPTIMIZATION AND GENERALIZATION **9**

Optimization in deep learning– Non-convex optimization for deep networks- Stochastic Optimization Generalization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM - Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience

UNIT V CASE STUDY AND APPLICATIONS 9

Imagenet- Detection-Audio WaveNet-Natural Language Processing Word2Vec - Joint Detection BioInformatics- Face Recognition- Scene Understanding- Gathering Image Captions

4. Michael Nielsen, Neural Networks and Deep Learning, Determination Press, 2015.

COURSE OUTCOMES (COs)

CO1	Explain the mathematical, statistical and computational challenges of building neural networks
CO2	Understand the concepts of Machine Learning
CO3	Explore the concepts of deep learning
CO4	Apply dimensionality reduction techniques in deep learning applications
CO5	Describe the optimization and generalization for deep networks
CO6	Design real time applications using deep learning techniques

U18PEIT055	**SOFTWARE QUALITY**	**L**	**T**	**P**	**C**
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Software Engineering Methodologies				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To develop a broad understanding of SQA processes from planning until execution
- To have detailed knowledge of techniques in an appropriate engineering and management context.

UNIT I **9**

Introduction to software quality – Software modeling – Scope of the software quality program – Establishing quality goals – Purpose, quality of goals – SQA planning software – Productivity and documentation.

UNIT II **9**

Software quality assurance plan – Purpose and Scope, Software quality assurance Management – Organization – Quality tasks – Responsibilities – Documentation.

UNIT III **9**

Standards, Practices, Conventions and Metrics, Reviews and Audits – Management - Technical review – Software inspection process – Walk through process – Audit process – Test processes – ISO, cmm compatibility – Problem reporting and corrective action.

UNIT IV **9**

Tools, Techniques and methodologies, Code control, Media control - Supplier control -

Records collection - Maintenance and retention - Training and risk management.

UNIT V **9**

ISO 9000 model - CMM model- Comparisons- ISO 9000 weaknesses- CMM weaknesses- SPICE – Software process improvement and capability determination.

2. Philip.B.Crosby, ―Quality is Free: The Art of making quality certain‖, Mass Market, 1992.

COURSE OUTCOMES (COs)	
CO1	Understand the quality management processes
CO2	Describe the various activities of quality assurance, quality planning and quality control
CO3	Define the importance of standards in the quality
CO4	Discuss the needs for software process assessment and improvement
CO5	Explore the different software quality factors models
CO6	Apply tools, techniques and methodologies to ensure software quality

	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To develop Computer Science, Software Engineering or Computer Engineering student
- To understand the emerging field of software architecture means to the field of software development.

UNIT I **9**

Introduction – Software Architecture – Engineering Discipline for Software – Status of Software Architecture Architectural Styles – Pipes and Filters – Data Abstraction and Object Oriented Organization – Event Based Implicit Invocation – Layered Systems – Repositories – Interpreters – Process Control – Other Architectures – Hetero Generous Architecture – Case Studies.

UNIT II **9**

Shared Information Systems – Database Integration – Integration in Software Development Environments – Integration in the Design of Build – Architectural Structures for Shared Information Systems – Conclusions.

UNIT III **9**

Architectural Design Guidance – Guidance for User-Interface Architectures – The Quantified Design Phase.

UNIT IV **9**

Formal Model and Specification – The Value of Architectural Formalism – Formalizing the Architecture of a Specific System – Formalizing an Architectural Style – Formalizing and Architectural Design Space – Theory of Software Architecture – Notation Linguistic Issues – Requirement for Architecture – Description Languages – First Class Connectors – Adding Implicit Invocation to Traditional Programming Languages.

UNIT V **9**

Tools for Architectural Design – Unicon – Exploiting Style in Architectural Design Environments – Beyond Definition / Use.

COURSE OUTCOMES (Cos)	
CO1	Understand the Software Architectural perspective and how it differs from lower-level design.
CO2	Describe the integration in Software Development process.
CO3	Apply the architectural structures for shared information systems.
CO4	Develop architectural approaches from basic requirements.
CO5	Define the architectural frameworks within product line development.
CO6	Apply tools for software architectural designs.

Mapping of Course Outcomes with Program outcomes (Pos) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT061	**QUANTUM COMPUTING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES	Students will be well versed in Quantum computation and algorithms, Basic quantum mechanics, quantum cryptographic protocols, quantum teleportation, polynomial-time factoring, quantum error correction, and a new graphical calculus for reasoning about quantum systems				

UNIT I FOUNDATION 9

Overview of traditional computing – Church-Turing thesis – circuit model of computation – reversible computation – quantum physics – quantum physics and computation – Dirac notation and Hilbert Spaces – dual vectors – operators – the spectral theorem – functions of operators – tensor products – Schmidt decomposition theorem.

UNIT II QUBITS AND QUANTUM MODEL OF COMPUTATION 9

State of a quantum system – time evolution of a closed system – composite systems – measurement – mixed states and general quantum operations – quantum circuit model – quantum gates – universal sets of quantum gates – unitary transformations – quantum circuits.

UNIT III QUANTUM ALGORITHMS – I 9

Superdense coding – quantum teleportation – applications of teleportation – probabilistic versus quantum algorithms – phase kick-back – the Deutsch algorithm – the Deutsch-Jozsa algorithm – Simon's algorithm – Quantum phase estimation and quantum Fourier Transform.

UNIT IV QUANTUM ALGORITHMS – II 9

Order-finding problem – eigen value estimation approach to order finding – Shor's algorithm for order finding – finding discrete logarithms – hidden subgroups – Grover's quantum search algorithm – amplitude amplification – quantum amplitude estimation – quantum counting – searching without knowing the success probability.

UNIT V QUANTUM COMPUTATIONAL COMPLEXITY AND ERROR CORRECTION 9

Computational complexity – black-box model – lower bounds for searching – general black-

box lower bounds – polynomial method – block sensitivity – adversary methods – classical error correction – classical three-bit code – fault tolerance – quantum error correction – three- and nine-qubit quantum codes – fault-tolerant quantum computation.

COURSE OUTCOMES (COs)	
CO1	Translate fluently between the major mathematical representations.
CO2	Implement basic quantum algorithms.
CO3	Understand quantum decoherence in systems for computation.
CO4	Apply eigenvalue estimation approach to order finding.
CO5	Describe the quantum error correction techniques.
CO6	Designing fault tolerant quantum computing systems

	Prerequisite – Database Management System				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES	The main objective of this course is to cover the principles and design methods of real-time computer systems. It covers the interfacing techniques and microprocessor system realization. The principles of real-time operating systems and real-time software system				

UNIT I INTRODUCTION 9

Issues in Real Time Computing, Structure of a Real Time System. Task Classes, Performance Measures for Real Time Systems, Estimating Program Run times. Task Assignment and Scheduling –Classical Uniprocessor scheduling algorithms, UniProcessor. Scheduling of IRIS Tasks, Task Assignment,Mode Changes, and Fault Tolerant Scheduling.

UNIT II PROGRAMMING LANGUAGES AND TOOLS 9

Programming Language and Tools – Desired Language characteristics, Data Typing, Control structures, Facilitating Hierarchical Decomposition, Packages, Runtime (Exception) Error handling, Overloading andGenerics, Multitasking, Low Level programming, Task scheduling, Timing Specifications, Programming Environments, Run-time Support.

UNIT III REAL TIME DATABASES 9

Basic Definition, Real time Vs General Purpose Databases, Main Memory Databases,134ransact ion priorities, Transaction Aborts, Concurrency Control Issues, Disk Scheduling Algorithms,

Twophase Approach to improve Predictability, Maintaining Serialization Consistency, Data bases for Hard Real Time systems.

UNIT IV COMMUNICATION 9

Real-Time Communication – Communications Media, Network Topologies Protocols, Fault Tolerant Routing. Fault Tolerance Techniques – Fault Types, Fault Detection. Fault Error containment Redundancy, Data Diversity, Reversal Checks, Integrated Failure handling.

UNIT V EVALUATION TECHNIQUES 9

Reliability Evaluation Techniques – Obtaining Parameter Values, Reliability Models for Hardware Redundancy, Software Error models. Clock Synchronization – Clock, A Nonfault-Tolerant Synchronization Algorithm, Impact of Faults, Fault Tolerant Synchronization in Hardware, Fault Tolerant Synchronization in Software

TEXT BOOK:

5. Philip.A.Laplante –Real Time System Design and Analysis‖ PHI , III Edition, April 2004.

COURSE OUTCOMES (Cos)	
CO1	Understand the basics concepts of real-time systems.
CO2	Generate a high-level analysis document based on requirements specifications.
CO3	Describe the basic multi-task scheduling algorithms for periodic, aperiodic.
CO4	Apply fault tolerant routing for the real time communication and communications media.
CO5	Implement reliability evaluation techniques to identify software error models.
CO6	Design real time systems by interacting with the environment.
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT063	COMPUTER GRAPHICS	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Computer Architecture				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- Be familiar with both the theoretical and practical aspects of computing with images.
- Have described the foundation of image formation, measurement, and analysis.
- Understand the geometric relationships between 2D images and the 3D world.

UNIT I INTRODUCTION 9

Survey of computer graphics, Overview of graphics systems – Video display devices, Raster scan systems, Random scan systems, Graphics monitors and Workstations, Input devices, Hard copy Devices, Graphics Software; Output primitives – points and lines, line drawing algorithms, loading the frame buffer, line function; circle and ellipse generating algorithms; Pixel addressing and object geometry, filled area primitives.

UNITII TWO DIMENSIONAL GRAPHICS 9

Two dimensional geometric transformations – Matrix representations and homogeneous coordinates, composite transformations; Two dimensional viewing – viewing pipeline, viewing coordinate reference frame; widow-to-viewport coordinate transformation, Two dimensional viewing functions; clipping operations – point, line, and polygon clipping algorithms.

UNIT III THREE DIMENSIONAL GRAPHICS 9

Three dimensional concepts; Three dimensional object representations – Polygon surfaces- Polygon tables- Plane equations – Polygon meshes; Curved Lines and surfaces, Quadratic surfaces; Blobby objects; Spline representations – Bezier curves and surfaces –B-Spline curves and surfaces.

TRANSFORMATION AND VIEWING: Three dimensional geometric and modeling transformations – Translation, Rotation, Scaling, composite transformations; Three dimensional viewing – viewing pipeline, viewing coordinates, Projections, Clipping; Visible surface detection methods.

UNIT IV ILLUMINATION AND COLOUR MODELS 9

Light sources – basic illumination models – halftone patterns and dithering techniques; Properties of light – Standard primaries and chromaticity diagram; Intuitive colour concepts –

RGB colour model – YIQ colour model – CMY colour model – HSV colour model – HLS colour model; Colour selection.

UNIT V ANIMATIONS & REALISM ANIMATION GRAPHICS 9

Design of Animation sequences – animation function – raster animation – key frame systems – motion specification –morphing – tweening. COMPUTER GRAPHICS REALISM: Tiling the plane – Recursively defined curves – Koch curves – C curves – Dragons – space filling curves – fractals – Grammar based models – fractals – turtle graphics – ray tracing.

TEXT BOOKS:

1. John F. Hughes, Andries Van Dam, Morgan Mc Guire ,David F. Sklar , James D. Foley, Steven K. Feiner and Kurt Akeley ,‖Computer Graphics: Principles and Practice‖, , 3rd Edition, Addison- Wesley Professional,2013. (UNIT I, II, III, IV).
2. Donald Hearn and Pauline Baker M, ―Computer Graphics‖, Prentice Hall, New Delhi, 2007 (UNIT V).

REFERENCES:

5. William M. Newman and Robert F.Sproull, ―Principles of Interactive Computer Graphics‖, Mc GrawHill 1978.

COURSE OUTCOMES (Cos)	
CO1	Equip with the practical skills necessary to build computer vision applications.
CO2	Describe the object, scene recognition and categorization from images.
CO3	Describe basic methods of computer vision related to multi-scale representation, edge detection and detection of other primitives, stereo, motion and object recognition.
CO4	Explore the different illumination and color models.
CO5	Implement motion related techniques.
CO6	Develop applications using computer vision techniques.

U18PEIT064	**BUSINESS INTELLIGENCE**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Database Management System				
	Course Designed by:- Dept of Information Technology				

OBJECTIVE

The objective of this course is to explore business intelligence and data mining, using powerful yet user friendly tools, with exposure to real world business applications.

UNIT I BUSINESS INTELLIGENCE 9

Effective And Timely Decisions – Data, Information And Knowledge – Role Of Mathematical Models – Business Intelligence Architectures: Cycle of A Business Intelligence Analysis – Enabling Factors In Business Intelligence Projects – Development of a Business Intelligence System – Ethics And Business Intelligence.

UNIT II KNOWLEDGE DELIVERY 9

The Business Intelligence User Types, Standard Reports, Interactive Analysis and Ad Hoc Querying, Parameterized Reports And Self-Service Reporting, Dimensional Analysis, Alerts/Notifications, Visualization: Charts, Graphs, Widgets, Scorecards And Dashboards, Geographic Visualization, Integrated Analytics, Considerations: Optimizing The Presentation For The Right Message.

UNIT III EFFICIENCY 9

Efficiency Measures – The CCR Model: Definition Of Target Objectives- Peer Groups – Identification Of Good Operating Practices; Cross Efficiency Analysis – Virtual Inputs And Outputs – Other Models. Pattern Matching – Cluster Analysis, Outlier Analysis.

UNIT IV BUSINESS INTELLIGENCE APPLICATIONS 9

Marketing Models – Logistic And Production Models – Case Studies.

UNIT V FUTURE OF BUSINESS INTELLIGENCE 9

Future of Business Intelligence – Emerging Technologies, Machine Learning, Predicting The Future, BI Search & Text Analytics – Advanced Visualization – Rich Report, Future Beyond Technology.

TEXT BOOK:

1. Efraim Turban, Ramesh Sharda, Dursun Delen, –Decision Support And Business Intelligence Systems‖, 9th Edition, Pearson 2013.

REFERENCES:

1. Larissa T. Moss, S. Atre, –Business Intelligence Roadmap: The Complete Project Lifecycle Of Decision Making‖, Addison Wesley, 2003.
2. Carlo Vercellis, ―Business Intelligence: Data Mining And Optimization For Decision Making‖, Wiley Publications, 2009.
3. David Loshin Morgan, Kaufman, –Business Intelligence: The Savvy Manager‟S Guide‖,

Second Edition, 2012.

5. Ralph Kimball , Margy Ross , Warren Thornthwaite, Joy Mundy, Bob Becker, –The Data Warehouse Lifecycle Toolkit‖, Wiley Publication Inc.,2007.

COURSE OUTCOMES (COs)	
CO1	Understand the basics Business Intelligence.
CO2	Learn Standard Reports, Interactive Analysis and Ad Hoc Querying.
CO3	Understand Efficiency Measures and CCR Model.
CO4	Understand business Intelligence applications.
CO5	Design Business Intelligence Applications for real time cases.
CO6	Predict the future of Business Intelligence and explore the emerging technologies

U18PEIT065	**INFORMATION THEORY AND CODING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Multimedia Systems				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES	• Understand Error–Control Coding.				
	• Understand encoding and decoding of digital data streams. • Be Familiar with the methods for the generation of these codes and their decoding techniques. • Be aware of compression and decompression techniques. • Learn the Concepts of Multimedia Communication.				

UNIT I INFORMATION ENTROPY FUNDAMENTALS 9

Uncertainty, Information And Entropy – Source Coding Theorem – Huffman Coding – Shannon Fano Coding – Discrete Memory Less Channels – Channel Capacity – Channel Coding Theorem – Channel Capacity Theorem.

UNIT II DATA AND VOICE CODING 9

Differential Pulse Code Modulation – Adaptive Differential Pulse Code Modulation – Adaptive

Subband Coding – Delta Modulation – Adaptive Delta Modulation – Coding Of Speech Signal At Low Bit Rates (Vocoders, LPC).

UNIT III ERROR CONTROL CODING 9

Linear Block Codes – Syndrome Decoding – Minimum Distance Consideration – Cyclic Codes – Generator Polynomial – Parity Check Polynomial – Encoder For Cyclic Codes – Calculation Of Syndrome – Convolutional Codes.

UNIT IV COMPRESSION TECHNIQUES 9

Principles – Text Compression – Static Huffman Coding – Dynamic Huffman Coding – Arithmetic Coding – Image Compression – Graphics Interchange Format – Tagged Image File Format – Digitized Documents – Introduction to JPEG Standards.

UNIT V AUDIO AND VIDEO CODING 9

Linear Predictive Coding – Code Excited LPC – Perceptual Coding, MPEG Audio Coders – Dolby Audio Coders – Video Compression – Principles – Introduction To H.261 & MPEG Video Standards.

TEXT BOOKS:

1. Simon Haykin, ―Communication Systems‖, 4th Edition, John Wiley And Sons, 2001.
2. Fred Halsall, ―Multimedia Communications, Applications Networks Protocols And Standards‖, Pearson Education, Asia 2002; Chapters: 3,4,5.

REFERENCES:

1. Mark Nelson, ―Data Compression Book‖, BPB Publication 1992.
2. Watkinson J, ―Compression In Video And Audio‖, Focal Press, London, 1995.

COURSE OUTCOMES (COs)	
CO1	Understand the fundamentals of Information Entropy and channel capacity for various channels
CO2	Compare various data and voice source coding techniques
CO3	Inspect error detection and describe the different error control coding techniques
CO4	Apply the different compression techniques for real time applications.
CO5	Describe the concepts of Audio and video coding techniques.
CO6	Implement the different coding techniques to design applications in multimedia communication systems.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

COs\ POs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PS 01**	**PS 02**	**PS 03**

U18PEIT066	**MULTI AGENT INTELLIGENT SYSTEMS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES	The purpose of this course is to impart concepts of Artificial Intelligence and different agents.				

UNIT I INTRODUCTION 9

Definitions - Foundations - History - Intelligent Agents-Problem Solving-Searching - Heuristics -Constraint Satisfaction Problems - Game playing.

UNIT II KNOWLEDGE REPRESENTATION AND REASONING 9

Logical Agents-First order logic-First Order Inference-Unification-Chaining- Resolution Strategies Knowledge Representation-Objects-Actions-Events.

UNIT III PLANNING AGENTS 9

Planning Problem-State Space Search-Partial Order Planning-Graphs-Nondeterministic Domains Conditional Planning-Continuous Planning-Multi Agent Planning.

UNIT IV AGENTS AND UNCERTAINITY 9

Acting under uncertainty – Probability Notation-Bayes Rule and use - Bayesian Networks-Other Approaches-Time and Uncertainty-Temporal Models- Utility Theory - Decision Network – Complex Decisions.

UNIT V HIGHER LEVEL AGENTS 9

Knowledge in Learning-Relevance Information-Statistical Learning Methods-Reinforcement Learning Communication-Formal Grammar-Augmented Grammars- Future of AI.

TEXTBOOKS:

1. Stuart Russell and Peter Norvig, –Artificial Intelligence - A Modern Approach‖, 2nd Edition, Prentice Hall, 2002.
2. Michael Wooldridge, –An Introduction to Multi Agent System‖, John Wiley, 2002.

REFERENCE BOOKS:

1. Patrick Henry Winston, Artificial Intelligence, 3rd Edition, AW, 1999.
2. Nils.J.Nilsson, Principles of Artificial Intelligence, Narosa Publishing House, 1992.

COURSE OUTCOMES (COs)	
CO1	Describe the modern view of AI as the study of agents that receive percepts from the Environment and perform actions.
CO2	Demonstrate awareness of informed search and exploration Methods.
CO3	Explain about AI techniques for knowledge representation and planning.
CO4	Apply probabilistic/statistical approaches to act in uncertain environment.
CO5	Understand the different learning approaches and make the machine to perform human-like tasks.
CO6	Prepare for future by integrating Artificial Intelligence in real time.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMES
ALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18OEBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations
20. U18OECE003-Road Safety
21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics
38. U18OEAE003- Unmanned Aerial Vehicle
39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion
41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance
43. U18OEEE003-Energy Conservation Techniques
44. U18OEEE004-PLC and SCADA for Industrial
45. U18OEEC-001-Communication Systems
46. U18OEEC-002-VLSI circuits
47. U18OEEC-003-Image Processing Techniques
48. U18OEEC-004-Communication Networks
49. U18OEEC-005-An Introduction to DSP
50. U18OEEC-006-Basics of IoT
51. U18OEBM001-Medical Radiation Safety Engineering
52. U18OEBM002-Medical Waste Management
53. U18OEBM003-Quality Control in Healthcare
54. U18OEBM004-Wearable Technology

55. U18OEEI001-Analytical Methods and Instrumentation
56. U18OEEI002-Introduction to process Data Analytics
57. U18OEEI003-Reliability and Safety in Process industries
58. U18OEEI004-Multi sensor data fusion
59. U18OEBT001- Bioprocess Economics & Plant Design
60. U18OEBT002-Brewing technology
61. U18OEBT003-Biomining
62. U18OEBT004-Industrial Safety Engineering
63. U18OEAC001-Geo- informatics for Precision Farming
64. U18OEAC002-Livestock and poultry management
65. U18OEAC003-Extension methodologies and transfer of Agricultural Technologies
66. U18OEAC004-Soil and Water Conservation Engineering
67. U18OEIT001-Block Chain Technology
68. U18OEIT002-Semantic Web
69. U18OEIT003-Entrepreneurship Development
70. U18OEIT004-Ethical Hacking Techniques
71. U18OECS001-Mobile Application Development
72. U18OECS002-System Modelling and Simulation
73. U18OECS003-Web Programming
74. U18OECS004-Virtual Reality
    U18OECS005- E Commerce
75. U18OEGE001-Metagenomics and Epigenomics
76. U18OEGE002-Molecular Genetics and Genomics
77. U18OEGE003-Principles of Molecular cell biology

HUMANITIES AND SOCIAL STUDIES INCLUDING MANAGEMENT COURSES (HS)

U18HSEN101	COMMUNICATIVE ENGLISH	L	T	P	C
	Total Contact Periods – 45	2	0	2	3
	Prerequisite – School English				
	Course Designed by Department of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations - introducing oneself – exchanging personal information- narrating events, - incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -
The concept of Word Formation

UNIT III LISTENING 6

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely

SOFTSKILL LABORATORY

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews & conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)

6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds - intonation.
12. Creative and critical thinking.

TEXT BOOKS:

1. English A Course book for Under Graduate Engineers and Technologists. Orient Black Swan Limited,Hyderabad:2015
2. Richards, C. Jack. Interchange Students' Book-2 New Delhi: CUP, 2015.

REFERENCES:

6. Remedial English Grammar. F.T. Wood. Macmillan.2007
7. On Writing Well. William Zinsser. Harper Resource Book. 2001

COURSE OUTCOMES	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable
CO6	To create formal letters, presentations and reports for conducting meeting, Interviews and competitive examinations.

Approval	47th Meeting of Academic Council held in Aug, 2018

U18BSMA101	**Engineering Mathematics – I**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and				

	applications that they would find useful in their disciplines.

UNIT I THEORY OF EQUATIONS (9+3)

Fundamental theory of algebra – number of roots of polynomial equations – conjugate pairs theorem (without proof) – Descartes rules of signs- symmetric functions of the roots – formation of equations – diminish the roots of an equations- Multiple roots – reciprocal equation.

UNIT II DIFFERENTIAL CALCULUS – One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian–Maxima and minima of two variables.

UNIT IV INTEGRAL CALCULUS - One Variables (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions-Beta, Gamma functions and their properties.

UNIT V MATRICES (9+3)

Characteristic Equations –Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

EXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth EditionAddison-Wesley, Pearson.
5. Narayanan S., Manickavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers, 1992.

COURSE OUTCOMES (COs)

On completion of the course, the students will be able to	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle's Theorem that is
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.

CO5	Identify Eigen value problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.
CO6	To choose and solve the problems in double and triple integrals.

Category	Basic Science (BS)
Approval	47th Meeting of Academic Council held in Aug, 2018

U18BSPH101	**WAVES AND OPTICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course Designed by – Department of Physics				

OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them.

UNIT 4 WAVE OPTICS 9

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power.

UNIT 5 LASERS 9

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

Course Outcomes (COs)	
CO1	Understand the basic concept of waves and lights.
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing.
CO3	Understand the propagation of light and geometrical optics.
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves.
CO5	Understand the concept of laser and its applications.
CO6	To evaluate the Laser advantages over other materials.

	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY **9**

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming

and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nano chemistry, Types of nano materials: Nano particles, Nano chemistry in biology and medicines.
CO6	To design and develop the Conventional and non-conventional energy sources and energy storage device.

U18ESEE101	BASIC ELECTRICAL & ELECTRONICS ENGINEERING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

UNIT 1 DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamentals Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems,Maximum Power Transformations Theorem.

UNIT 2 AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

UNIT 3 ELECTRICAL MACHINES & TRANSFORMERS **9**

Principles of operation and characteristics of; DC machines, Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer.

UNIT 4 SEMICONDUCTOR DEVICES AND APPLICATIONS **9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half

wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

UNIT 5 DIGITAL ELECTRONICS 6

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

COURSE OUTCOMES (COs)	
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.
CO2	To gain knowledge regarding fundamentals of AC circuits.
CO3	To gain knowledge regarding electrical machines and transformers.
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.
CO5	To gain knowledge on principles of digital electronics systems.
CO6	To design different kinds of circuits and Switches.

U18BSBT101	BIOLOGY FOR ENGINEERS	L	T	P	C
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector.

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins.

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System - types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity-antigens-antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis.

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines-cloning-bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips.

TEXT BOOKS:

1. A Text book of Biotechnology, R.C.Dubey, S. Chand Higher Academic Publications, 2013
2. Diseases of the Human Body, Carol D. Tamparo and Marcia A. Lewis, F.A. Davis Company, 2011.

3. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)	
CO1	To understand the basic concepts of the cell and its structure.
CO2	To understand about biodiversity and its conservation.
CO3	To know the fundamentals of genetics and the immune system.
CO4	To create an awareness about human diseases.
CO5	To give a basic knowledge of the applications of transgenics.
CO6	To know the applications of bio systems in environment, medical and agricultural

	sectors.

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Semiconductor Physics – Circuit branches

1) Determination of Band Gap
2) Zener diode characteristics
3) p-n junction diode Characteristics

3) Transistor Characteristics
5) V-I characteristics using LDR circuit
6) Carey Foster's Bridge

U18BSCH2L4	CHEMISTRY LABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				

OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments.

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization an well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Student will be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method
CO6	To create molecular weight and degree of polymerization using Viscometer.

U18ESME1L2	**Workshop/Manufacturing Practices Lab (Theory & Lab.)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

SYLLABUS

Lectures & videos: (15 hours)

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations &power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice
2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fitting models.
3. Carpentry **(9 hours)**
   a) Preparation Lap joints.
   b) Mortise and Tenonjoints.
   c) Cross Half.
   d) Dove Tail.
4. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
   Preparation of butt joints, lap joints and tee joints
5. Sheet Metal working **(9 hours)**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints
6. Demonstration **(6 Hours)**
   Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

4. Roy A. Lindberg, "Processes and Materials of Manufacture", 4th edition, Prentice Hall India, 1998.
5. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGrawHill House, 2017.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.
CO5	To compare the Laws of Coloumb friction, refrigeration systems, Velocity and acceleration.
CO6	To develop manufacturing methods encountered in engineering practice.

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONIC ENGINEERING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronic Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter

6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipment and verify current and voltage law.
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits .
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator.
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor.
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flops.

U18HSEN201	**TECHNICAL ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	0	0	2
	Prerequisite – I Semester English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of English language and its usage in day to day life.				

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)

On completion of the course, the students will be able to	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.
CO6	To develop a reasonably good level of competency in public speaking

Approval	47th Meeting of Academic Council held in Aug, 2018

	ENGINEERING MATHEMATICS -II	L	T	P	C
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVE	The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables and Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.

3. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.
CO6	To formulate mathematical models for solving real world problems.

CO/PO Mapping:S – Strong, M – Medium, W – Weak

U18BSPH202	SEMICONDUCTOR PHYSICS	L	T	P	C
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES

- To develop physics and engineering strategies of semiconductor materials and to discuss their functionalities in modern electronic and optoelectronic devices

UNIT1 INTRODUCTION AND ELECTRONIC STATES OF SEMICONDUCTORS 9

Introduction to solid state materials - crystal structure - Reciprocal lattice - Brillouin zone and rules for band (k - space) representation. Dynamics of electrons in periodic potential:Kronig - penny and nearly free electron models - Real methods for band structure calculations; Band gaps in semiconductors - Holes and effective mass concept - Properties of conduction and valance bands.

UNIT2 CARRIERS AND DOPING 9

Fermi distribution and energy - Density of states - Valance and conduction band density of states - intrinsic carrier concentration – intrinsic Fermi level. Extrinsic semiconductors: n and p type doping - Densities of carriers in extrinsic semiconductors and their temperature dependence - extrinsic semiconductor Fermi energy level - Degenerate and non - degenerate semiconductors - Band gap engineering

UNIT 3 ELECTRICAL TRANSSORT 9

Scattering Mechanism: electron - electron and electron – phonon scattering. Macroscopic transport: Carrier transport by Diffusion - Carrier transport by Drift: Low field, High field and very high field.

UNIT 4 OPTICAL TRANSSORT 9

Electron - hole pair generation and recombination: band to band (direct and indirect band gap transitions) and intra band (impurity related) transitions, free - carrier & phonon transitions. Excitons: Origin, electronic levels and properties. Carrier transport - continuity equations. Optical constants: Kramers - Kronig relations.

UNIT 5 SEMICONDUCTOR AS DEVICES AND RECENT ADVANCES 9

Processing of Semiconductor devices (Brief), p - n Semiconductor as device and Semiconductor junctions - Homo and hetero Junctions. Active and passive optoelectronic devices: performance and response enhancement (photo processes)**.**

TEXT BOOK:

1) M.N. Avadhanulu and P.G. Kshirsagar, "A Textbook of Engineering Physics" S.Chand Publishers, 2014**(for units 1 and 2)**
2) G.Senthil Kumar, "Engineering Physics", VRB publishers, Chennai, 2015 (for Unit 5)

Course Outcome (COs)													
CO1	Understand the difference between metals, semiconductors and insulators												
CO2	Understand the importance of doping to charge carrier density												
CO3	Understand the electrical transport in semiconductors												
CO4	Understand the difference between direct and indirect semiconductors												
CO5	Understand the concept of semiconductor optoelectronic devices.												
CO6	To design novel engineering materials and its characteristics.												
Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs)													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18BSCH201	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	1	0	0
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I -NATURAL RESOURCES 9

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS 9

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL SOLLUTION 9

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel – oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder- Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.

Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes
CO6	Understand Human population: population growth, variation among nations.

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

UNIT 1 ALGORITHIMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

UNIT 2 DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

UNIT 3 CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return

values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNIT 4 LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, listparameters;Tuples: tuple assignment, tuple as return value; Dictionaries: operations andmethods;advanced list,Processing list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

UNIT 5 FILES, PACKAGES 9

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems
CO6	To Understand Matplotlib,Scipy and Numpy.

U18ESME101	ENGINEERING GRAPHICS & DESIGN	L	T	P	C
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice.				

SYLLABUS

Detailed contents

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM)

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle;

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to oneplane – Parallel to one plane and inclined to other plane – Inclined to both the planes;Projections of planes inclined to either HP or VP;

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

MODULE4:SECTIONSOF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone;

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale –Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS:

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students will get Exposure to basics of building construction
CO4	Students will get Exposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.
CO6	To apply Computer Graphics and techniques like Drawing sectional views of prism, pyramid, cylinder and cone.

	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)

3. ExSOnentiation (SOwer of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib
CO6	To Understand about Simulate bouncing ball using Pygame.

U18BSMA303	**PROBABILITY AND STATISTICS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – Basic knowledge in probability and statistics				
	Course Designed by : Department of Mathematics				
OBJECTIVE	This course aims at providing the required skill to apply the statistical tools in engineering problems.				

UNIT I PROBABILITY AND RANDOM VARIABLES (9+3)

Probability concepts, Random Variables, discrete and continuous functions of random variables. Moment generating function of Binomial, Poisson, Geometric, Uniform, Exponential and Normal distribution (Problems)

UNIT II TWO DIMENSIONAL RANDOM VARIABLES (9+3)

Joint distributions - Marginal and Conditional distributions – Expectation and conditional expectations. Transformation of Random Variable, Central limit theorem (for independent and identically distributed random variables)

UNIT IIIBASIC STATISTICS (9+3)

Measures of central tendency – Measures of dispersion – Moments, Skewness & Kurtosis – Correlation, and Regression and Rank Correlation.

UNIT IVTESTING OF HYPOTHESIS (9+3)

Introduction – Large sample tests based on normal distribution - Test for single mean, difference between means, proportion, difference between proportions, standard deviation, difference between standard deviation. Chi-square test for goodness of fit, independence of attributes.

UNIT V ANALYSIS OF VARIANCE (9+3)

Small sample tests based on T and F distribution - Test for, single mean, difference between means, Paired t-test, test for equality of variances, ANOVA– one –way classification, Two-way classification.

4. Tirupathi R.Chandrauptta. "Quality and Reliability in Engineering". Book Vistas, New Delhi.

COURSE OUTCOMES (COs)	
CO1	To Understand the importance and the application of Probability in Engineering.
CO2	To make students understand Discrete and Continuous Random variables, Random Processes and their Applications.
CO3	To Understand Various tools for testing the parameters based on samples
CO4	The techniques of sampling, and estimating and testing the parameters.
CO5	To Design of Experiments are to be analysed.
CO6	To Evaluate Small sample tests based on T and F distribution.

U18PCCS301	**DATA STRUCTURES& ALGORITHM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisites –Problem Solving & Python Programming				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

This course demonstrates familiarity with major algorithms and data structures and analyzes performance of algorithms. It is used to choose the appropriate data structure and algorithm design method for a specified application and determine which algorithm or data structure to use in different scenarios.

UNIT- I INTRODUCTION **9**

Data objects and structures – Performance analysis- Space complexity – Time complexity- Classification of data structures -The linear list data structure -Implementation of List data Structures- Singly linked list– Circular lists- Doubly liked list.

UNIT- II STACKS AND QUEUES **9**

Stacks – Abstract Data Type - Array Representation – Linked representation - Stack operations: Algorithms and their complexity analysis, Applications of Stacks: Expression Conversion and evaluation– Queue - Queue ADT, Types of Queue: Simple Queue, Circular Queue, Priority Queue - Queue Representation - Operations on each types of Queues: Algorithms.

UNIT- III TREES **9**

Trees - Tree Terminologies, Different types of Trees – Binary trees – Properties of binary trees – Representation of binary trees – Binary tree traversal –Heap – Binary search tree- Binary search tree implementations –AVL trees-Threaded Binary Tree-B Tree, B+ Tree – Splay tree – Applications.

UNIT- IV GRAPH **9**

Graph- Basic Terminologies – Representations- Graph types - Graph search methods - Graph traversal algorithms - complexity analysis– Applications of Graph.

UNIT- VSORTING AND HASHING **9**

Objective and properties of different sorting algorithms: Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort; Performance and Comparison among all the methods, Hashing.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	Explain the basic data structures and its operations.
CO2	Explain the concept of time complexity and space complexity.
CO3	Identify an appropriate data structure for a problem.
CO4	Make use of basic data structures to solve problems.
CO5	Summarize various searching and sorting algorithms.
CO6	To Understand the concept of various data representation.

U18PCCS302	OBJECT ORIENTED PROGRAMMING	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisites –Problem Solving and Python Programming				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

- The course will introduce standard tools and techniques for software development, using object oriented approach, use of a version control system, an automated build process, and an appropriate framework for automated unit and integration tests.
- To develop programming skill and to solve engineering related problems using Object Oriented Programming Concepts.

UNIT 1 INTRODUCTION TO OOP CONCEPTS 9

Procedure Oriented Programming - Object-Oriented Paradigm – Benefits - Applications - Features of OOP – C++ Fundamentals - Data Types – Operators and Expressions – Control Structures – Arrays and Strings – Modular Programming with Functions – Storage Classes – Structures and Unions – Pointers and Runtime Binding.

UNIT 2 PROGRAMMING IN C++ 9

Classes and Objects – Constructors and Destructors – Operator Overloading – Inheritance – Virtual Functions and Polymorphism – Data Abstraction – Encapsulation - Templates – Exception Handling - C++ Stream Classes – I/O Operations – File Classes and Operations

UNIT 3 C++ ADVANCED FEATURES 9

Dynamic Memory –Memory Management-New and Delete Operator-Pointer to Objects-Debugging Pointer- C++ Web Programming – Object Modeling and Object Oriented Software Development.

UNIT 4 INTRODUCTION TO JAVA 9

Overview of Java – Features - JDK, JRE, JVM – Data Types – Variables – Arrays – String – Wrapper Classes – Operators – Control Statements – Java Objects and Classes – Inheritance and Aggregation – Polymorphism: Method Overloading, Method Overriding – Constructors: Default, Parameterized, Static and This Keyword – Garbage Collector – Java Regex.

UNIT 5 PROGRAMMING IN JAVA 9

Packages – Abstract Classes – Interfaces and Inner classes – Exception Handling – Memory Management – Multithreading – File Handling – Streams and I/O – Applets – Design Patterns – Iterator Pattern – Model View Controller Pattern – Generic Programming – Java Collections – Java GUI: Abstract Window Toolkit, Swing, Scala.

COURSE OUTCOMES (COs)	
CO1	Specify simple abstract data types and design implementations, using abstraction functions to document them
CO2	Recognize features of object-oriented design such as encapsulation, polymorphism, inheritance, and composition of systems based on object identity
CO3	Name and apply some common object-oriented design patterns and give examples of their use
CO4	Design applications with an event-driven graphical user interface
CO5	Understand basic knowledge about Java Programming
CO6	Learn various packages in Java.

U**18PCCS303**	**COMPUTER ORGANIZATION AND ARCHITECTURE**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Computer Fundamentals				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

To expose the students to the following :

- How Computer Systems work & the basic principles
- Instruction Level Architecture and Instruction Execution
- The current state of art in memory system design
- How I/O devices are accessed and its principles.
- To provide the knowledge on Instruction Level Parallelism
- To impart the knowledge on micro programming
- To study the basics of hardwired and micro programmed design.

UNIT-I ARCHITECTURE FUNDAMENTALS 9

Functional units – CPU Registers–CPU Organization- Memory operations –Instruction Format – Addressing modes – Basic I/O operations-Evaluating CPU Performance-Data representation-signed number representation, fixed and floating point representations, character representation.

UNIT-II CPU ARCHITECTURE 9

Instruction sets of different machines –Parallel Processing- Flynn's Classification- Pipelining-

Arithmetic Pipeline-Instruction Pipeline- -Pipelining Hazards- CISC Vs RISC - Super Scalar Architecture -overview of hardwired and micro programmed design.

UNIT-III MEMORY SYSTEM 9

Basic concepts – Different Types of Memory-Memory Hierarchy- Semiconductor RAMs – ROMs – Speed, Size and cost –Cache Memory-Mapping Techniques-Virtual memory-Evaluating Memory Performance-Secondary Storage.

UNIT-IV I/O ORGANIZATION 9

Input-Output Interface-I/O Performance Measures-I/O Modes of Transfer-Direct Memory Access-Input Output Processor-Interfacing to different types of I/O devices-I/O device interfaces – SCSI& USB.

UNIT-V PARALLEL ARCHITECTURE 9

Introduction to parallel processors - Multiprocessor- Data flow –Static Dataflow-Dynamic Dataflow-Dataflow Graph-Vector Processors – CRAY-1 Vector Processor-EPIC.

COURSE OUTCOMES (COs)	
CO1	Explain the organization and working principle of computer hardware components.
CO2	Explain the hierarchical memory system and data transfer with in a digital computer.
CO3	Outline the operation of arithmetic unit.
CO4	Summarize the execution sequence of an instruction through the processor
CO5	Explain the ways of communication between a processor and I/O devices.
CO6	Explain the concept of Parallel Architecture.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18ESEC303	**DIGITAL ELECTRONICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Basic Computer and Electronics Knowledge				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

- To get a basic understanding of how circuits and systems are designed with digital electronic circuit elements.
- To be able to analyze and design circuits and systems made from digital electronic circuit elements such as gates and flip-flops.
- To master basic design and programming of simple computers.

UNIT-I NUMBER SYSTEMS AND CODES 9

Review of binary, octal and Hexa decimal representations of numbers and their conversion, Binary arithmetic; conversion algorithms. Weighted binary codes. Non weighted binary codes error-detecting and error-correcting codes-Alphanumeric codes.

UNIT-II BOOLEAN ALGEBRA 9

Introduction to Boolean algebra- The AND, OR and not operations. Laws of Boolean algebra of Boolean expressions. Boolean expressions and logic diagrams. Universal building blocks. Negative logic.

UNIT-III COMBINATIONAL LOGIC9

Truth tables and maps. Sum of products and product of sums; Map reduction hybrid functions. Incompletely specified functions. Multiple- Output minimization. Variable- Entered maps. Tabular minimization. analysis of logic schematics. Synthesis of combinational functions.

UNIT-III LOGIC FUNCTION RELIZATION WITH MSI CIRCUITS 9

Multiplexers, De-multiplexers, Decoders and code converters. Arithmetic circuits, Adder, Number complements. Subtracting positive binary numbers with adders. Signed number addition and subtraction.

UNIT-IV SYNCHORONOUS SEQUENTIAL CIRCUITS 9

Basic latch circuits, De-bouncing switch. Flip-flops, truth table and excitation table. Shift registers. Asynchronous and synchronous counters. Shift counters.

UNIT-V ASYNCHRONOUS SEQUENTIAL CIRCUITS 9

Analysis and Design of Asynchronous Sequential Circuits , Reduction of State and Flow Tables ,Race-free State Assignment, Hazards.

COURSE OUTCOMES (COs)	
CO1	Perform arithmetic operations in any number system.
CO2	Understand the hierarchical memory system and data transfer with in a digital computer.
CO3	Use Boolean simplification techniques to design a combinational hardware circuit.
CO4	Understand the concept of number system.
CO5	Learn the various gates like AND, OR, NOT, XOR.
CO6	Learn the concept of synchronous and asynchronous sequential circuits.

	Total Contact Hours - 45	0	0	3	1.5
	Prerequisite – Data Structures & Algorithm				
	Lab Manual Prepared by – Dept. of Computer Science & Engineering				

OBJECTIVES

This course demonstrates familiarity with major algorithms and data structures and analyzes performance of algorithms. It is used to choose the appropriate data structure and algorithm design method for a specified application and determine which algorithm or data structure to use in different scenarios.

LIST OF EXPERIMENTS:

1. Control Structures (Biggest Among three Numbers, Sum of Digits, Fibonacci Series, Arithmetic Calculator)

2. Functions(Factorial of a Number, sorting)

3.Aggregate Data Type(Manipulation of Unions, Manipulation of Structures)

4.File Handling(Creating File, Reading file and Merging File)

5. Implementation of Linked List(Singly Linked List)

6. Implementation of Linked List(Doubly Linked List)

7. Implementation of Stack(Using Array, Linked List)

8. Implementation of Queue(Using Array, Linked List)

9.Implementation of Trees

10.Implementation of Searching Algorithms(Binary Search, Linear Search)

11.Implementation of Sorting Algorithms(Quick sort)

12.Implementation of sorting algorithms(Insertion sort, Selection sort)

13.Control Structures (Biggest Among Three Numbers, Sum of Digits, Fibonacci Series, Arithmetic Calculator)

14.Functions (Factorial of a Number, sorting)

15.Aggregate Data Type (Manipulation of Unions, Manipulation of Structures)

16. File Handling (Creating File, Reading file and Merging File)

17.Implementation of Linked List(Singly Linked List)

18.Implementation of Linked List(Doubly Linked List)

19.Implementation of Stack(Using Array, Linked List)

20.Implementation of Queue(Using Array, Linked List)

21.Implementation of Trees

22.Implementation of Searching algorithms(Binary Search, Linear Search)

23. Implementation of Sorting algorithms (Quick sort)

24. Implementation of Sorting algorithms (Insertion sort, Selection sort)

COURSE OUTCOMES (COs)	
CO1	Implement various basic data structures and its operations.
CO2	Implement various sorting and searching algorithms.
CO3	Implement various tree operations.

CO4	Implement various graphs algorithms.
CO5	Develop simple applications using various data structures.
CO6	Develop algorithms using various searching and sorting techniques.

U18PCCS3L2	OBJECT ORIENTED PROGRAMMING LAB	L	T	P	C
	Total Contact Hours - 45	0	0	3	1.5
	Prerequisites –Object Oriented Programming				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

- The course will introduce standard tools and techniques for software development, using object oriented approach, use of a version control system, an automated build process, and an appropriate framework for automated unit and integration tests.
- To develop programming skill and to solve engineering related problems using Object Oriented Programming Concepts.

LIST OF EXPERIMENTS

PROGRAMMING IN C++

1. Program using Functions
   - Functions with Default arguments, Friend Function, Inline Function
   - Implementation of Call by Value, Address, Reference
2. Simple classes for understanding objects, member functions, constructors, destructor, copy constructor.
   - Classes with Primitive Data Members
   - Classes with Arrays as Data Members
   - Classes with Pointers as Data Members
   - Classes with Constant Data Members
   - Classes with Static Member Functions
3. Compile Time Polymorphism
   - Operator Overloading
   - Function Overloading
4. Run Time Polymorphism

- Various Forms of Inheritance
- Virtual Functions
- Virtual Base Classes
- Templates

5. File Handling
   - Sequential Access
   - Random Access
   - Dynamic Memory Allocation

PROGRAMMING IN JAVA

Programs Illustrating

1. Various Data Types
2. Manipulating Strings
3. Various forms of Inheritance
4. Polymorphism: Method Overloading, Method Overriding
5. Exception Handling
6. Interfaces
7. Packages
8. Multithreading
9. Draw Various Shapes And Mouse Events Using Java Applets.
10. Window Based Application using Java Swing

COURSE OUTCOMES (COs)	
CO1	Specify simple abstract data types and design implementations, using abstraction functions to document them
CO2	Recognize features of object-oriented design such as encapsulation, polymorphism, inheritance, and composition of systems based on object identity
CO3	Name and apply some common object-oriented design patterns and give examples of their use
CO4	Design applications with an event-driven graphical user interface
CO5	To Understand basic knowledge about Java Programming
CO6	To Learn various packages in Java.

U18ESEC3L3	**DIGITAL ELECTRONICS LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	0	0	3	1.5

	Prerequisite – Basic Electrical and Electronics Engineering Lab
	Lab Manual Designed by – Department of Electronics& Communication Engineering

OBJECTIVES:

- To get a basic understanding of how circuits and systems are designed with digital electronic circuit elements.
- To be able to analyze and design circuits and systems made from digital electronic circuit elements such as gates and flip-flops.
  To master basic design and programming of simple computers.

LIST OF EXPERIMENTS:

1.Study of logic gates.

2. Design and implementation of adders and Subtractors using logic gates.

3. Design and implementation of encoder and decoder using logic gates.

4. Design and implementation of multiplexer and Dusing logic gates .

5. Design and implementation of 2-bit magnitude comparator using logic gates,

6. Design and implementation of 16-bit odd/even parity checker.

7. Design and implementation of Flip-flops using logic gates.

8. Design and implementation of code converters using logic gates.

9. Design and implementation of counters.

10. Design and Implementation of shift registers.

COURSE OUTCOMES (COs)	
CO1	To Learn the basics of gates.
CO2	Construct basic combinational circuits and verify their functionalities.
CO3	To Apply the design procedures to design basic sequential circuits.
CO4	Learn about counters.
CO5	Learn about Shift registers.
CO6	To understand the basic digital circuits and to verify their operation.

U18BSMA401	**DISCRETE MATHEMATICS**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				

OBJECTIVES	Throughout the course, students will be expected to demonstrate their understanding of Discrete Mathematics by being able to do use mathematically correct terminology and notation, construct correct direct and indirect proofs, apply logical reasoning to solve a variety of problems and introduce simple concepts in graph theory.

UNIT I MATHEMATICAL LOGIC (9+3)

Propositions and logic operators –Truth table – Equivalence – Implications – Tautologies – Laws of logic – Proofs in Propositional calculus – Inference theory – Predicate calculus.

UNIT II RELATION AND FUNCTIONS (9+3)

Different types of relations: Binary Relation – Partial Ordering Relation – Equivalence Relation – Sum and Product of Functions – bijective functions – Inverse and Composite Function.

UNIT III RECURRENCE RELATIONS (9+3)

Recurrence relations – solving recurrence relation – Homogeneous and non–homogeneous recurrence relation – Generating Functions – Groups – Properties – cyclic groups and subgroups cosets – Lagrange's theorem.

UNIT IV GRAPH THEORY (9+3)

Introduction of Graphs – Graph terminology – Representation of Graphs – Connectivity – Euler and Hamilton path – Euler and Hamilton cycles – the Travelling sales man problem – Graph Isomorphism.

UNIT V BOOLEAN ALGEBRA (9+3)

Boolean algebra – Partial order Relations on Boolean algebra – Boolean homomorphism – Disjunctive and conjunctive normal forms – Boolean functions.

TEXT BOOKS

1. Tremblay J.P and Manohar. R, "Discrete Mathematical Structures with Application to Computer Science", McGraw Hill Book Company, International Edition, 1987

3. T. Veerarajan, "Discrete Mathematics", Mc Graw Hill Publications, 2006.

COURSE OUTCOMES (COs)	
CO1	Understand Proposition and Logic operators, Inference theory and Predicate Calculus
CO2	Use logical notation to define and reason about fundamental Mathematical Concepts such as sets relations, and functions.
CO3	Use logical notations to define and reason about steps in proportional and Predicate logic.

CO4	Expose to the concept of recurrence relations, generating functions, group, and cyclic groups, subgroups.
CO5	Understand the terminologies of graph and develop the given problems as graph networks and solve with techniques of graph theory.
CO6	To understand given graphs are isomorphic and Lattices.

U18PCCS401	**CLOUD COMPUTING**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Computer Organization & Architecture				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

- Identify the technical foundations of cloud systems architectures.
- Analyze the problems and solutions to cloud application problems.
- Apply principles of best practice in cloud application design and management.
- Identify and define technical challenges for cloud applications and assess their importance.

UNIT I UNDERSTANDING CLOUD COMPUTING 9

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Advantages of Cloud Computing – Disadvantages of Cloud Computing – Companies in the Cloud Today – Cloud Services-Web-Based Application.

UNIT-II CLOUD ARCHITECTURE AND MODEL 9

Technologies for Network Based system-System Models for Distributed and Cloud Computing-NIST Cloud Computing Reference Architecture Cloud models: Characteristics-Cloud Models (IaaS, PaaS, SaaS)-Public vs. Private Cloud-Cloud Solutions-Cloud ecosystem-Service Management-Computing on demand.

UNIT-III CLOUD INFRASTRUCTURE 9

Architectural Design of compute and Storage Clouds-Layered Cloud Architecture Development-Design Challenges-Inter Cloud Resource Management-Resource Provisioning and Platform Deployment-Global Exchange of Cloud Resources.

UNIT-IV PROGRAMMING MODEL 9

Parallel and Distributed Programming Paradigms-Map Reduce-Twister and Iterative Map Reduce-Hadoop Library from Apache-Mapping Applications-Programming Support-Google

App Engine, Amazon AWS-Cloud Software Environments-Eucalyptus, Open Nebula, Open Stack, Aneka, CloudSim.

UNIT-V CLOUD SECURITY 9

Security Overview-Cloud Security Challenges and Risks-Software-as-a-Service-Security Security Governance-Risk Management-Security Monitoring-Security Architecture Design-Data Security-Application Security-Virtual Machine Security-Identity Management and Access Control-Autonomic Security.

TEXTBOOK:

COURSE OUTCOMES (COs)	
CO1	To Understand the fundamental principles of distributed computing.
CO2	To Understand how the distributed computing environments known as Grids can be built from lower level services.
CO3	To Understand the importance of virtualization in distributed computing and how this has enabled the development of Cloud Computing.
CO4	To Analyze the performance of Cloud Computing.
CO5	Learn various Cloud Programming models.
CO6	To Understand the concept of Cloud Security.

U18PCCS402	DESIGN AND ANALYSIS OF ALGORITHMS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Data Structures & Algorithm				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

The Course should enable the students to

- Analyze various computing problems and design algorithms.
- Analyze the time and space complexity of algorithms and compute efficiency.
- Knowledge about different algorithm design techniques for a given problem.
- Demonstrate a familiarity with major algorithms and data structures.
- Improve efficiency of existing algorithms using advanced techniques.

UNIT I FOUNDATIONS 9

Introduction: Characteristics of algorithm. Analysis of algorithm: Asymptotic analysis of complexity bounds – best, average and worst-case behavior; Performance measurements of Algorithm, Time and space trade-offs, Types of problems, Basics of Data Structures, Analysis of non-recursive algorithms, Analysis of recursive algorithms through recurrence relations: Substitution method, Recursion tree method and Masters' theorem.

UNIT II GREEDY METHOD AND DYNAMIC PROGRAMMING 9

Brute Force Approach – Greedy Algorithms: An Activity Selection Problem – Elements of Greedy Strategy – Huffman Codes – Theoretical Foundations of Greedy Method – A task scheduling problem - Knapsack Problem – Dynamic Programming: Assembly line Scheduling – Matrix Chain Multiplication – Elements of Dynamic Programming – Longest Common Subsequence – Optimal Binary Search Tree – Knapsack problem – Travelling Salesman Problem.

UNIT III GRAPH AND TREE ALGORITHMS 9

Graph and Tree Algorithms: Traversal algorithms – Representation of graphs – Breadth First Search – Depth First Search – Transitive Closure – Topological Sort – Strongly Connected Components – Minimum Spanning Trees – Algorithms – Single Source Shortest Path Algorithms – All Pair Shortest Path Algorithms – Network Flow Algorithms.

UNIT IV BACKTRACKING AND BRANCH &BOUND TECHNIQUES 9

Backtracking : n Queens Problem – sum of subsets – graph coloring – Hamiltonian cycle – knapsack problem, Branch and Bound Technique: Knapsack Problem – Travelling Salesman Problem – Heuristics – Characteristics and their applications domains.

UNIT V ADVANCED TOPICS 9

Tractable and Intractable Problems: Computability of Algorithms, Computability classes – P, NP, NP-complete and NP-hard. Cook's theorem, Standard NP-complete problems and Reduction techniques. Approximation algorithms; Randomized algorithms; Class of problems beyond NP – P SPACE.

TEXT BOOKS

1. Introduction to Algorithms, 4TH Edition, Thomas H Cormen, Charles E Lieserson, Ronald L Rivest and Clifford Stein, MIT Press/McGraw-Hill.
2. Fundamentals of Algorithms – E. Horowitz et al.

REFERENCE BOOKS

1. Algorithm Design, 1ST Edition, Jon Kleinberg and ÉvaTardos, Pearson.
2. Algorithm Design: Foundations, Analysis, and Internet Examples, Second Edition, Michael T Goodrich and Roberto Tamassia, Wiley.

4. https://mitpress.mit.edu/books/introduction-algorithms.
5. https://comsciers.files.wordpress.com/.../horowitz-and-sahani-fundamentals-of-computer.

COURSE OUTCOMES (COs)	
CO1	Analyze worst-case running times of algorithms based on asymptotic analysis and justify the correctness of algorithms.
CO2	Analyze the algorithm and solve it by recurrence relations.
CO3	Describe the greedy paradigm and explain when an algorithmic design situation calls for it.
CO4	Describe when an algorithmic design situation calls for it. Derive and solve recurrence relation.
CO5	Describe the dynamic-programming paradigm and explain when an algorithmic design situation calls for it. For a given problems of dynamic-programming and develop the dynamic programming algorithms, and analyze it to determine its computational complexity.
CO6	Apply graph and write the corresponding algorithm to solve the problems.

U18PCCS403	**DATABASE MANAGEMENT SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Data Structures and Algorithm				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

- To understand the different issues involved in the design and implementation of a database system.
- To study the physical and logical database designs, database modeling, relational, hierarchical, and network models
- To understand and use data manipulation language to query, update, and manage a database
- To develop an understanding of essential DBMS concepts such as: database security, integrity, concurrency, distributed database, and intelligent database, Client/Server (Database Server), Data Warehousing.

UNIT -I INTRODUCTION 9

Introduction - Database System Applications-Purpose of Database Systems- View of Data- Data Abstraction- Instances and Schemas- Relational Databases - Database Design- Data

model- Integrity constraints -The Entity - Relationship Model - Transaction Management - Database Architecture - Data Storage and Querying - Database Users and Administrators.

UNIT-II RELATIONAL DATABASES 9

Introduction to Relational model - Structure of Relational Databases - Relational database design - keys - Database Schema and Schema Diagrams - Relational Query Languages - Relational algebra and Relational Operations - Relational calculus -Introduction to SQL - Overview of the SQL Query Language - Basic Structure of SQL Queries - Functional dependency -Normal Forms.

UNIT-III DATA STORAGE AND QUERYING 9

Storage and File Structure - File Organization - Indexing and Hashing- Ordered Indices- Static Hashing- Dynamic Hashing- Query Processing- Overview- Measures of Query Cost-Selection-Sorting- Join Operation- Evaluation of Expressions- Query Optimization- Overview-Transformation of Relational Expressions- Estimating Statistics of Expression Results.

UNIT-IV TRANSACTIONS 9

Transaction Concept-A Simple Transaction Model-Storage Structure-Transaction Atomicity and Durability-Transaction Isolation- Transaction Isolation Levels- Serializability-Transactions as SQL Statements-Concurrency Control- Lock-Based Protocols- Time Stamp-Based Protocols-Validation Based Protocols- Database recovery - Deadlock Handling.

UNIT-VDATABASE SECURITY AND OBJECT-BASED DATABASES 9

Database Security-Authentication, Authorization and access control - DAC, MAC and RBAC models –SQL Injection-Object based databases- Object oriented and object relational databases- Persistent Programming Languages-Object-Relational Mapping-Object-Oriented versus Object-Relational Databases – Logical and web databases-Overview of Data warehousing - Data mining techniques.

TEXT BOOKS:

1. "Database System Concepts", 6th Edition by Abraham Silberschatz, Henry F. Korth, S. Sudarshan, McGraw-Hill.
2. "Fundamentals of Database Systems", 5th Edition by R. Elmasri and S. Navathe, Pearson Education
3. "Principles of Database and Knowledge – Base Systems", Vol 1 by J. D. Ullman, Computer Science Press.

REFERENCE BOOKS:

2. ArunK.Pujari.,"Data Mining Techniques", Universities Press,2013.

COURSE OUTCOMES (COs)	
CO1	For a given query write relational algebra expressions for that query and optimize the developed expressions
CO2	For a given specification of the requirement design the databases using E R method and normalization.
CO3	For a given specification construct the SQL queries for Open source and Commercial DBMS -MYSQL, ORACLE, and DB2.
CO4	For a given query optimize its execution using Query optimization algorithms, For a given transaction-processing system, determine the transaction atomicity, consistency, isolation, and durability.
CO5	Implement the isolation property, including locking, time stamping based on concurrency control and Serializability of scheduling.
CO6	Understand about Database security and Object Oriented Databases.

OBJECTIVES

Every computer professional should have a basic understanding of how an operating system controls the computing resources and provide services to the users. This course provides an introduction to the operating system functions, design and implementation.

UNIT – I INTRODUCTION **9**

Introduction: Concept of Operating Systems, Generations of Operating systems, Types of Operating Systems, OS Services, System Calls, Structure of an OS - Layered, Monolithic, Microkernel Operating Systems, Concept of Virtual Machine. Case study on UNIX and WINDOWS Operating System.

UNIT – II PROCESSES **9**

Processes: Definition, Process Relationship, Different states of a Process, Process State transitions, Process Control Block (PCB), Context switching

Thread: Definition, Various states, Benefits of threads, Types of threads, Concept of multithreads,

Process Scheduling: Foundation and Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time; Scheduling algorithms: Pre-emptive and Non pre-emptive, FCFS, SJF, RR; Multiprocessor scheduling: Real Time scheduling: RM and EDF.

UNIT – III IPC AND DEADLOCK **9**

Inter-process Communication: Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Strict Alternation, Peterson's Solution, The Producer Consumer Problem, Semaphores, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dinning Philosopher Problem etc.

Deadlocks: Definition, Necessary and sufficient conditions for Deadlock, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock detection and Recovery.

UNIT – IV MEMORY MANAGEMENT **9**

Memory Management: Basic concept, Logical and Physical address map, Memory allocation – Contiguous Memory allocation – Fixed and variable partition – Internal and External

fragmentation and Compaction, Paging – Principle of operation – Page allocation – Hardware support for paging, Protection and Sharing, Disadvantages of Paging.

Virtual Memory: Basics of Virtual Memory – Hardware and control structures – Locality of reference, Page fault , Working Set , Dirty page/Dirty bit – Demand paging, Page Replacement algorithms: Optimal, First in First Out (FIFO), Second Chance (SC), Not recently used (NRU) and Least Recently used (LRU).

UNIT – V FILE MANAGEMENT **9**

I/O Hardware: I/O devices, Device controllers, Direct memory access Principles of I/O Software: Goals of Interrupt handlers, Device drivers, Device independent I/O software, Secondary-Storage Structure: Disk structure, Disk scheduling algorithms

File Management: Concept of File, Access methods, File types, File operation, Directory structure, File System structure, Allocation methods (contiguous, linked, indexed), Free-space management (bit vector, linked list, grouping), directory implementation (linear list, hash table), efficiency and performance.

Disk Management: Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C-SCAN, Disk reliability, Disk formatting, Boot-block, Bad blocks.

TEXT BOOKS:

1. Operating System Concepts Essentials, 9th Edition by Silberschatz, Peter Galvin, Greg Gagne, Wiley Asia Student Edition.
2. Operating Systems: Internals and Design Principles, 5th Edition, William Stallings, Prentice Hall of India.

REFERENCS BOOKS:

1. Operating System: A Design-oriented Approach, 1st Edition by Charles Crowley, Irwin Publishing
2. Operating Systems: A Modern Perspective, 2nd Edition by Gary J. Nutt, Addison-Wesley
3. Design of the Unix Operating Systems, 8th Edition by Maurice Bach, Prentice-Hall of India
4. Understanding the Linux Kernel, 3rd Edition, Daniel P. Bovet, Marco Cesati, O'Reilly and Associates.

COURSE OUTCOMES (COs)	
CO1	Illustrate the operating system concepts and its functionalities.
CO2	To Create processes and threads.
CO3	To Develop algorithms for process scheduling.
CO4	To Design and implement file management system.
CO5	Illustrate various file and disk management strategies.
CO6	To Understand the concept about Virtual memory.

U18PCCS405	**FORMAL LANGUAGES & AUTOMATA THEORY**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Programming for problem solving				
	Course Designed by : Dept. of Mathematics				

OBJECTIVES

- To understand various Computing models like Finite State Machine, Pushdown Automata, and Turing Machine.
- To be aware of Decidability and Un-decidability of various problems. Learn types of grammars.

UNIT I FUNDAMENTALS 9

Strings, Alphabet, Language, Operations, Finite state machine, definitions, finite automaton model, acceptance of strings, and languages, deterministic finite automaton and non-deterministic finite automaton, transition diagrams and Language recognizers.

UNIT II FINITE AUTOMATA 9

NFA with ε-transitions - Significance, acceptance of languages. Conversions and Equivalence : Equivalence between NFA with and without ε transitions, NFA to DFA conversion, minimization of FSM, equivalence between two FSM's, Finite Automata with output-Moore and Melay machines.

UNIT III REGULAR LANGUAGES AND GRAMMAR 9

Regular sets, regular expressions, identity rules, Constructing finite Automata for a given regular expressions, Conversion of Finite Automata to Regular expressions. Pumping lemma of regular sets, closure properties of regular sets. Regular grammars-right linear and leftlinear grammars, equivalence between regular linear grammar and FA, inter conversion,Context free grammar, derivation trees, sentential forms. Right most and leftmost derivation of strings.

UNIT IV CONTEXT FREE GRAMMARS AND PUSH DOWN AUTOMATA 9

Ambiguity in context free grammars. Minimization of Context Free Grammars. Chomsky normal form, Greiback normal form, Pumping Lemma for Context Free Languages. Enumeration of properties of CFL. Push down automata, definition, model, acceptance of CFL, Acceptance by final state and acceptance by empty state and its equivalence. Equivalence of CFL and PDA,

UNIT V TURING MACHINE 9

Turing Machine, definition, model, design of TM, Computable functions, recursively enumerable languages. Church's hypothesis, counter machine, types of Turing machines. Universal Turing Machine, un-decidability of posts. Correspondence problem, Turing reducibility, Definition of P and NP problems, NP complete and NP hard problems.

TEXTBOOKS:

1. "Introduction to Automata Theory Languages and Computation". Hopcroft H.E. and Ullman J. D. Pearson Education
2. Introduction to Theory of Computation –Sipser 2nd edition Thomson

1. Introduction to Computer Theory, Daniel I.A. Cohen, John Wiley.
2. Introduction to languages and the Theory of Computation ,John C Martin, TMH

3. "Elements of Theory of Computation", Lewis H.P. & Papadimition C.H. Pearson /PHI.
4 Theory of Computer Science – Automata languages and computation -Mishra and Chandrashekaran, 2nd edition, PHI.

COURSE OUTCOMES (COs)	
CO1	Identify the type of random variable and distribution for a given operational conditions.
CO2	Study and design appropriate queuing model for a given problem or system situation.
CO3	To understand and simulate appropriate application and distribution problems.
CO4	Differentiate and infer the merit of sampling tests.
CO5	Formulate and find optimal solution in the real life optimizing, allocation assignment problems involving conditions and resource constraints.
CO6	Understand about Turing machine and NP hard and Complete problems.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs)

U18PCCS4L1	**OPERATING SYSTEM LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	3	1.5
	Prerequisite –Operating Systems				
	Lab Manual Designed by – Dept. of Computer Science and Engineering				
OBJECTIVES The main objective is students gain knowledge about various Operating System Memory management and Commands using in Operating system.					

LIST OF EXPERIMENTS

1. Working with basic Unix/ Linux commands.
2. Shell Programming.
3. Programs using the following system calls of Unix / Linux operating system: fork, exec, getpid, exit, wait, close, stat, opendir, readdir
4. Programs using the I/O system calls of UNIX operating system (open, read, write)
5. Simulations of Unix / Linux commands like ls, grep, etc.
6. Simulation of scheduling algorithms (CPU and Disk).
7. Implementation of synchronization problems using Semaphore.
8. Simulation of basic memory management schemes.

9. Simulation of virtual memory management schemes.

10. Simulation of file systems.

COURSE OUTCOMES (COs)	
CO1	Demonstrate Unix / Linux commands.
CO2	Implement various commands using shell programming.
CO3	Implement various CPU scheduling algorithms.
CO4	Implement various disk scheduling algorithms.
CO5	Implement memory management techniques.
CO6	To Apply concept about File System.

U18PCCS4L2	**DESIGN AND ANALYSIS OF ALGORITHMS LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	0	0	3	1.5
	Prerequisite: Design and Analysis of Algorithms				
	Course Designed by : Dept. of Computer Science And Engineering				

OBJECTIVE
The Objective is students should analyze various computing problems and design algorithms henceforth find its complexity and efficiency.

LIST OF EXPERIMENTS

1. Implement recursive algorithms using Divide-and-Conquer algorithmic techniques to analyze

i) Quick Sort ii) Merge Sort iii) Binary Search.

2. Implement and analyze Greedy method for

i) Minimum Spanning Tree problem.

ii) Shortest path problem using Dijkstra's algorithm.

3. Implement and analyze Dynamic programming method for Knapsack problem.

4. Implement the graph traversal techniques for Depth First Search and Breadth First Search.

5. Implement and analyze backtracking method for

i) Sum of Subsets problem and

ii) Graph Coloring problem.

6. Implement the branch and bound technique for Travelling Salesman problem and compare with Dynamic Programming.

7. Implement and analyze randomized algorithm for Hiring problem.

COURSE OUTCOMES (COs)	
CO1	For a given algorithms analyze worst-case running times of algorithms based on asymptotic analysis and justify the correctness of algorithms
CO2	For a given problem analyze the algorithm and solve it by recurrence relations.
CO3	Describe the greedy paradigm and explain when an algorithmic design situation calls for it.
CO4	Describe the dynamic-programming paradigm and explain when an algorithmic design situation calls for it. For a given problems of dynamic-programming and develop the dynamic programming algorithms, and analyze it to determine its computational complexity.
CO5	Describe the backtracking, branch and bound techniques and analyse complexity and efficiency.
CO6	To Apply concepts like backtracking and Dynamic programming.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCCS4L3	**DBMS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	3	1.5
	Prerequisite –Database Management System				
	Lab Manual Designed by – Dept. of Computer Science and Engineering				
OBJECTIVES: The main objective is to make the students to gain knowledge about databases for storing the data and to share the data among different kinds of users for their business operations.					

LIST OF EXPERIMENTS

1. Data Definition, Manipulation of base tables and views
2. High level programming language extensions.
3. Front end tools.

4. Forms-Triggers-Menu Design.
5. Reports.
6. Database Design and implementation
7. An exercise using Open Source Software like MySQL.

COURSE OUTCOMES (COs)	
CO1	Develop database modeling for a problem.
CO2	Design a database using normalization.
CO3	Implement a data base query language.
CO4	Develop GUI using front end tool.
CO5	Develop a connection between frontend and database.
CO6	To understand Forms ,Triggers and Reports.

U18PCCS501	**ARTIFICIAL INTELLIGENCE**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Analysis of Algorithms, Discrete Mathematics				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

The objective of this to learn the concepts of Artificial Intelligence such as enable the computers to perform intellectual tasks, problem solving, perception, understanding human communication.

UNIT I PROBLEMS AND SEARCH 9

What is artificial intelligence? - Problems, problem spaces and search – Searching strategies- Uninformed Search- breadth first search, depth first search, uniform cost seart, depth limited search, iterative deepening search, bidirectional search - Informed Search- Best first search, Greedy Best first search , A* search – Constraint satisfaction problem , Local searching strategies.

UNIT II REASONING 9

Symbolic Reasoning Under Uncertainty- Statistical Reasoning - Weak Slot-And-Filler-Structure - Semantic nets – Frames- Strong Slot-And-Filler Structure-Conceptual Dependency-Scripts- CYC.

UNIT III KNOWLEDGE REPRESENTATION 9

Knowledge Representation - Knowledge representation issues - Using predicate logic - Representing Knowledge Using Rules. Syntactic- Semantic of Representation – Logic & slot

and filler - Game Playing – Minimal search- Alpha beta cutoffs –Iteratic deepening planning – component of planning system – Goal stack planning.

UNIT IVNATURAL LANGUAGE PROCESSING 9

Natural Language Processing –Syntactic processing, semantic analysis-Parallel and Distributed AI-Psychological modeling- parallelism and distributed in reasoning systems – Learning - Connectionist Models – Hopfield networks, neural networks.

UNIT V EXPERT SYSTEMS 9

Common Sense –qualitative physics, commonsense Ontologies- memory organization -Expert systems –Expert system shells- explanation – Knowledge acquisition -Perception and Action – Real time search- robot architecture.

TEXT BOOKS

1. E laine Rich, Kevin Knight, "Artificial Intelligence", 3/e, Tata McGraw Hill, 2009.
2. R ussell , " Artificial intelligence :A modern Approach , Pearson Education ,3rd edition,2013

REFERENCE BOOKS

1.Artificial Intelligence and Expert system by V.Daniel hunt, Springer press,2011.
2.Nilsson N.J., "Principles of Artificial Intelligence", Morgan Kaufmann.1998.

COURSE OUTCOMES (COs)	
CO1	Describe the modern view of AI as the study of agents that receive percepts from the Environment and perform actions.
CO2	Demonstrate awareness of informed search and exploration methods.
CO3	Explain about AI techniques for knowledge representation, planning and uncertainty Management.
CO4	Develop knowledge of decision making and learning methods.
CO5	Describe the use of AI to solve English Communication problems
CO6	To Understand Knowledge acquisition ,Perception and Action

U18PCCS502	**SOFTWARE ENGINEERING**	**L**	**T**	**P**	**C**

	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Fundamentals of Computing and Programming				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

This course is intended to provide the students with an overall view over Software Engineering and with insight into the processes of software development.

UNIT I INTRODUCTION 9

Introduction- Notion of Software as a Product – characteristics of a good Software Product. Engineering aspects of Software production – necessity of automation. Job responsibilities of Programmers and Software Engineers as Software developers.

UNIT II PROCESS MODELS AND PROGRAM DESIGN TECHNIQUES 9

Process Models and Program Design Techniques- Software Development Process Models – Code & Fix model, Waterfall model, Incremental model, Rapid Prototyping model, Spiral (Evolutionary) model. Good Program Design Techniques – Structured Programming, Coupling and Cohesion, Abstraction and Information Hiding, Automated Programming, Defensive Programming, Redundant Programming, Aesthetics. Software Modeling Tools – Data flow Diagrams, UML and XML. Jackson System Development.

UNIT III VERIFICATION AND VALIDATION 9

Verification and Validation: Testing of Software Products – Black-Box Testing and White-Box Testing, Static Analysis, Symbolic Execution and Control Flow Graphs – Cyclomatic Complexity. Introduction to testing of Real-time Software Systems.

UNIT IV SOFTWARE PROJECT MANAGEMENT 9

Software Project Management: Management Functions and Processes, Project Planning and Control, Organization and Intra-team Communication, Risk Management. Software Cost Estimation – underlying factors of critical concern. Metrics for estimating costs of software products – Function Points. Techniques for software cost estimation – Expert judgement, Delphi cost estimation, Work break-down structure and Process break-down structure, COCOMO and COCOMO-II.

UNIT V ADVANCED TOPICS 9

Advanced Topics: Formal Methods in Software Engineering – Z notation, Hoare‟s notation. Formalization of Functional Specifications – SPEC. Support environment for Development of Software Products. Representative Tools for Editors, Linkers, Interpreters, Code Generators, Debuggers. Tools for Decision Support and Synthesis, Configuration control and Engineering Databases, Project Management. Petrinets: Introduction to Design Patterns, Aspect-oriented Programming.

TEXT BOOKS:

1. Carlo Ghezzi, Mehdi Jazayari, Dino Mandrioli, “Fundamentals of Software Engineering”, Pearson Education, 2003.
2.Roger Pressman S., “Software Engineering: A Practitioner's Approach”, 7thEdition, McGraw Hill, 2010.

REFERENCE BOOKS:

1. I. Sommerville, “Software Engineering”, Eighth Edition, Pearson Education, 2007
2. Pfleeger, “Software Engineering-Theory & Practice”, 3rd Edition, Pearson Education, 2009
3.http://www.vumultan.com/Books/CS605-SoftwareEngineeringPractitionerEApproachbyRogerPressman.pdf

COURSE OUTCOMES (COs)	
CO1	Explain the engineering aspects of software production
CO2	Explain the principles involved in various process models
CO3	Make use of suitable models through analysis of requirements and arrive at an appropriate software design.
CO4	Ensure the quality of software through testing
CO5	Explain software project management and software maintenance practices.
CO6	To understand various testing concepts.

U18PCCS503	FUNCTIONAL PROGRAMMING	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Object Oriented Programming				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES
The Main objective of this course is to learn the basic concepts of functional programming languages like Haskell, Python and Jscript

UNIT I INTRODUCTION 9
The standard prelude and the Haskell libraries, Hugs commands , Modules, Hugs Session, Basic types and definitions, Designing and writing programs in Haskell , Recursion , Primitive recursion in practice General forms of recursion , Program testing.

UNIT II DATATYPES & GENERIC FUNCTIONS 9

Data types: Introducing tuples, lists and strings,Tuple type, Lists in Haskell , List comprehensions , A library database , Generic functions: polymorphism, Lists and list patterns ,Primitive recursion over lists, Finding primitive recursive definitions , General recursions over lists, Example: text processing.

UNIT III FUNCTIONS 9

Functions as values: Function-level definitions , Function composition , Functions as values and results , Partial application, The Program development, Algebraic types : Introducing algebraic types , Recursive algebraic types.

UNIT IV FUNCTIONAL JAVASCRIPT 9
Introducing Functional JavaScript, Why Functional Programming Matters, Functions as Units

of Abstraction, Encapsulation and Hiding, Functions as Units of Behavior, Data as Abstraction, First Class Functions, JavaScript's Multiple Paradigms.

UNIT V FUNCTIONAL PYTHON 9

Introducing Functional Python, Flow Controls: Encapsulation , Comprehensions , Recursion , Eliminating Loops, Callables: Named Functions and Lambdas , Closures and Callable Instances, Lazy Evaluation : The Iterator Protocol Module: Itertools, Higher-Order Functions: Utility Higher-Order Functions , The operator Module :The functools Module , Decorators.

TEXT BOOKS:

1. Simon Thompson, Haskell: The Craft of Functional Programming, Addison-Wesley, 2011
2. Michael Fogus, Functional JavaScript, O'Reilly Media, May 2013
3. David Mertz, Functional Programming in Python, O'Reilly Media, May 2015

REFERENCE BOOKS:

1. Richard Bird, Thinking Functionally With Haskell, Cambridge University Press, October 2014.
2. Anto Aravinth, Beginning Functional JavaScript, Apress, March 2017
3. Fabrizio Romano, Learning Python, Packt Publishing Limited, Dec 2015
4. https://www.cs.uky.edu/~keen/115/Haltermanpythonbook.pdf

COURSE OUTCOMES (COs)	
CO1	Understand the fundamental concepts of Haskell programs
CO2	Use Haskell to solve simple practical problems
CO3	Develop programs using mathematical functions, Strings, Dictionary, Sets
CO4	Develop programs to handle files, identify objects & develop classes
CO5	Understand the basic concepts of JScript.
CO6	To Understand Functional Python, Flow Controls: Encapsulation

18PCCS504	**COMPUTER NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Internet Concepts				

	Course Designed by – Dept. of Computer Science and Engineering.

OBJECTIVES

Computer Networking is the vital part of any organization these days. This course provides a foundation to understand various principles, protocols and design aspects of Computer Networks and also helps to achieve the fundamental purpose of computer networks in the form of providing access to shared resources.

UNIT I FUNDAMENTALS AND PHYSICAL LAYER 9

Computer Network Developments- Network Terms and Components-Network Topology-Standards-ISO/OSI layers-TCP/IP layers-, Transmission Media, LAN: Wired LAN, Wireless LANs, Connecting LAN and Virtual LAN, Techniques for Bandwidth utilization: Multiplexing - Frequency division, Time division and Wave division, Concepts on spread spectrum.

UNIT II DATA LINK LAYER (LLC & MAC) 9

Logical Link Control : Error Detection and Error Correction - Fundamentals, Block coding, Hamming Distance, CRC; Flow Control and Error control protocols - Stop and Wait, Go back – N ARQ, Selective Repeat ARQ, Sliding Window, Piggybacking, Multiple access protocols : Random Access Protocol, Controlled Access Protocol, Channelization Protocol.

UNIT III NETWORK LAYER 9

Logical addressing – IPV4, IPV6; Address mapping – ARP, RARP, ICMP, BOOTP and DHCP; Routing algorithm-Link state algorithm, Distance vector routing algorithm, Hierarchical routing algorithm; Routing in the Internet-RIP, OSPF,BGP; Broadcast & Multicast routing- DVMRP, PIM.

UNIT IV TRANSPORT LAYER 9

Process to Process Communication, User Datagram Protocol (UDP), Transmission Control Protocol (TCP), SCTP Congestion Control; QoS Improving Techniques (Traffic Shaping, Admission Control And Resource Reservation).

UNIT V APPLICATION LAYER 9

Domain Name Space (DNS), DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), WWW, HTTP, SNMP, Bluetooth, Firewalls, Basic concepts of Cryptography.

TEXT BOOKS

1. Data Communication and Networking, 5th Edition, Behrouz A. Forouzan, McGraw-Hill,2013.
2. Data and Computer Communication, 10th Edition, William Stallings, Pearson Prentice Hall India,2013.

REFERENCE BOOKS

1. Computer Networks, 5th Edition, Andrew S. Tanenbaum, Pearson New International Edition,2010.
2. Internetworking with TCP/IP, Volume 1, 6th Edition Douglas Comer, Prentice Hall of India, 2013.
3. TCP/IP Illustrated, Volume 1, W. Richard Stevens, Addison-Wesley, United States of America,2010

COURSE OUTCOMES (COs)	
CO1	Explain data communication system, components and the purpose of layered architecture.

CO2	Illustrate the functionality of each layer of OSI and TCP/IP reference model.
CO3	Explain the data link layer and network layer protocols.
CO4	Outline the functions of transport layer protocols.
CO5	To Summarize application layer protocols.
CO6	To Understand various application Protocols.

U18HSBA501	**ORGANIZATIONAL BEHAVIOR**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Universal Human Values				
	Course Designed by – Dept of Management Studies				

OBJECTIVES

1.Understanding the basic approaches in organization
2. Knowledge on theories of Personality
3. Clear sight on the Decision Making in Groups
4. Analyse the behaviour of individuals and groups in organizations in terms of the key factors that influence organizational behaviour. Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behavior.

UNIT- I **9**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

UNIT- II **9**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behaviour.

UNIT- III **9**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

UNIT- IV **9**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

UNIT- V **9**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

4. Stephen Robbins, Organizatonal Behavior, Pearson Education
5. RS Diwedi, Human Relations and Organizational Behavior, Mac Millan

COURSE OUTCOMES (COs)	
CO1	Familiarity with the knowledge of Frame work of Organizational Behaviour.
CO2	Knowledge of the Interpersonal perception.
CO3	Awareness of the Merits and Demerits of Group decision making.
CO4	Understanding of the Sources of power
CO5	Familiarity with the knowledge of types of Conflicts.
CO6	To Understand various application Organizational Behaviour.

	Total Contact Hours - 45	0	0	3	1.5
	Prerequisite –Software Engineering ,Database Management System				
	Lab Manual Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

The objective of this Software Engineering Lab is to understand the software engineering methodologies for project development, to gain knowledge on various CASE tools for applying it in the software modeling and implementation, to prepare students for performing requirement analysis and design of variety of applications.

Prepare the following documents for each experiment and develop the software using software engineering methodology.

- **Problem Analysis and Project Planning** -Thorough study of the problem – Identify Project scope, Objectives and Infrastructure.
- **Software Requirement Analysis** - Describe the individual Phases/modules of the project and Identify deliverables.
- **Data Modeling** - Use work products – data dictionary, use case diagrams and activity diagrams, build and test class diagrams, sequence diagrams and add interface to class diagrams.
- **Software Development and Debugging** – implement the design by coding
- **Software Testing** - Prepare test plan, perform validation testing, coverage analysis, memory leaks, develop test case hierarchy, Site check and site monitor.

LIST OF EXPERIMENTS:

Academic Domain

1. Course Registration System
2. Student Marks Analyzing System

Railway Domain

3. Online Ticket Reservation System
4. Platform Assignment System for the Trains in a Railway Station

Medicine Domain

5. Expert System to prescribe the Medicines for the given Symptoms
6. Remote Computer Monitoring

Finance Domain

7. ATM System
8. Stock Maintenance

Human Resource management

9. Quiz System
10. E-mail Client system

COURSE OUTCOMES (COs)	
CO1	Perform requirement analysis and design requirements for solving / developing engineering problems.
CO2	Identify project scope, objectives, and perform data modeling.
CO3	Identify the deliverables in various phases of SDLC.
CO4	Implement solutions using modern tools.
CO5	Explain test plan, perform validation testing, coverage analysis.
CO6	To Understand various Design Concepts in Software Engineering.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

COs	**Programme Outcomes(POs)**											
	a	b	c	d	e	f	g	h	i	j	k	l

CO2	M	H	H	H	M	M					M	M
CO3	M	H	H	H	M	M					M	M
CO4	M	H	H	H	M	M					M	M
CO5	M	H	H	H	M	M					M	M
CO6	M	H	H	H	M	M					M	M

Category	Professional Course (PC)
Approval	47th Academic Council Meeting held in Aug, 2018

U18PCCS5L2	**NETWORK PROGRAMMING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	3	1.5
	Prerequisite –Computer Networks				
	Lab Manual Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES: This laboratory course is intended to make the students know about Networking Concepts and Protocols.

LIST OF EXPERIMENTS:

1. Create a socket (TCP) between two computers and enable file transfer between them.
2. Write a program to develop a simple Chat TCP application.
3. Write a program to develop a simple Chat UDP application.
4. Write a socket Program for Echo/Ping/Talk commands.
5. Implementation of Stop and Wait Protocol and Sliding Window Protocol.
6. Implementation of DNS, SNMP and File Transfer application using TCP and UDP Sockets.
7. Create a socket for HTTP for web page upload and download.
8. Write a program to display the client's address at the server end.
9. Study of Network simulator (NS).and Simulation of Congestion Control Algorithms using NS
10. Perform a case study about the different routing algorithms to select the network path with its optimum and economical during data transfer.
    i. Link State routing
    ii. Flooding
    iii. Distance vector

COURSE OUTCOMES (COs)	
CO1	Understand fundamental underlying of Socket Programming
CO2	Practice packet/file transmission between nodes.
CO3	Implementation of client-server applications
CO4	Analyze the performance of network protocols.
CO5	To Understand various Network Simulator
CO6	To apply various routing algorithms.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs)

U18PCCS601	**COMPILER DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Data Structures, Discrete Mathematics				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

The objective of this to learn the design of compiler Design, the various parsing techniques, how to optimize and effectively generate machine codes

UNIT I OVERVIEW OF COMPILATION AND SYNTAX ANALYSIS 9

The structure of a compiler and applications of compiler technology; Lexical analysis - The role of a lexical analyzer, specification of tokens, recognition of tokens, hand-written lexical analyzers, LEX, examples of LEX programs. Introduction to syntax analysis -Role of a parser, use of context-free grammars (CFG) in the specification of the syntax of programming languages, techniques for writing grammars for programming languages (removal left recursion, etc.), non- context-free constructs in programming languages, parse trees and ambiguity, examples of programming language grammars.

UNIT II PARSING 9

Top-down parsing- FIRST & FOLLOW sets, LL(1) conditions, predictive parsing, recursive descent parsing, error recovery. LR-parsing - Handle pruning, shift-reduce parsing, viable prefixes, valid items, LR(0) automaton, LR-parsing algorithm, SLR(1), LR(1), and LALR(1) parsing. YACC, error recovery with YACC and examples of YACC specifications. Syntax-directed definitions (attribute grammars)-Synthesized and inherited attributes, examples of SDDs, evaluation orders for attributes of an SDD, dependency graphs. S-attributed and L-attributed SDDs and their implementation using LR-parsers and recursive- descent parsers respectively.

UNIT III SEMANTIC ANALYSIS 9

Semantic analysis- Symbol tables and their data structures. Representation of“scope”. Semantic analysis of expressions, assignment, and control-flow statements, declarations of variables and functions, function calls, etc., using S- and L-attributed SDDs (treatment of arrays and structures included). Semantic error recovery.

UNIT IV INTERMEDIATE CODE GENERATION 9

Intermediate code generation - Different intermediate representations –quadruples, triples, trees, flow graphs, SSA forms, and their uses. Translation of expressions (including array references with subscripts) and assignment statements. Translation of control-flow statements – it- then-else, while-do, and switch. Short-circuit code and control-flow translation of Boolean expressions. Back patching. Examples to illustrate intermediate code generation for all constructs.

UNIT V RUN-TIME ENVIRONMENTS 9

Run-time environments:- Stack allocation of space and activation records. Access to non-local data on the stack in the case of procedures with and without nesting of procedures. Introduction to machine code generation and optimization- Simple machine code generation, examples of machine-independent code optimizations.

TEXT BOOKS:

1. Compilers: Principles, Techniques, and Tools , by A.V. Aho, Monica Lam, Ravi Sethi, and J.D. Ullman,(2nd ed.), Addison-Wesley, 2007 (main text book, referred to as ALSU in lab assignments).
2. K.D. Cooper, and Linda Torczon, Engineering a Compiler, Morgan Kaufmann, 2011

REFERENCE BOOKS:

1. K.C. louden, compiler construction: principles and practice, cengage learning,1997
2.D. Brown, J. Levine, and T. Mason, LEX and YACC, O"Reilly Media,1992
3.http://hjemmesider.diku.dk/~torbenm/Basics/basics_lulu2.pdf
4.http://ecomputernotes.com/compiler-design.

COURSE OUTCOMES (COs)	
CO1	Explain the phases of a Compiler
CO2	Illustrate the translation of regular expression into parse tree using syntax analyzer.
CO3	Construct the intermediate representation considering the type systems
CO4	Apply the optimization techniques for the generated code
CO5	Use the different compiler construction tools to develop a simple compiler
CO6	To create Compiler using Lex and YACC tools.

U18PCCS602	**OBJECT ORIENTED SOFTWARE ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Analysis of Algorithms, Discrete Mathematics				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES
The objective of this course is to learn the basic of object oriented analysis and design skills, UML design diagrams and various testing techniques.

UNIT I OBJECT ORIENTED METHODOLOGIES 9
Introduction to System Concepts - Managing Complex Software — Properties – Object Oriented Systems Development – Object Basics – Systems Development Life Cycle - Rumbaugh Methodology - Booch Methodology - Jacobson Methodology – Unified Process.

UNIT II UML 9
Unified Approach – Unified Modeling Language – Static behavior diagrams – Dynamic behavior diagrams – Object Constraint Language.

UNIT III DESIGN CONCEPTS 9
Inception – Evolutionary Requirements – Domain Models – Operation Contracts - Requirements to Design – Design Axioms – Logical Architecture - Designing Objects with

Responsibilities – Object Design – Designing for Visibility.

UNIT IV DESIGN PATTERNS 9

Patterns – Analysis and Design patterns – GoF Patterns - Mapping designs to code – Test Driven development and refactoring – UML Tools and UML as blueprint.

UNIT V ARCHITECTURE ANALYSIS 9

More Patterns – Applying design patterns – Architectural Analysis – Logical Architecture Refinement – Package Design – Persistence framework with patterns.

TEXT BOOKS

1. Booch, Grady. Object Oriented Analysis and Design. 2nd edition, Pearson Education. 2006.
2. Ali Bahrami, " Object Oriented Systems Development", Tata McGraw Hill, 2008.

COURSE OUTCOMES (COs)	
CO1	Design and implement projects using OO concepts
CO2	Use the UML analysis and design diagrams
CO3	Apply appropriate design patterns.
CO4	Create code from design.
CO5	Compare and contrast various testing techniques.
CO6	To Applying design patterns.

U18PCCS6L1	**COMPILER DESIGN LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	3	1.5
	Prerequisite – Compiler Design, C Programming				

OBJECTIVES

This laboratory course is intended to make the students experiment on the basic techniques of compiler construction and tools that can used to perform syntax-directed translation of a high-level programming language into an executable code. Students will design and implement language processors in C by using tools to automate parts of the implementation process. This will provide deeper insights into the more advanced semantics aspects of programming languages, code generation, machine independent optimizations, dynamic memory allocation, and object orientation.

List of Experiments:

1. Design a lexical analyzer for given language and the lexical analyzer should ignore redundant spaces, tabs and new lines. It should also ignore comments. Although the syntax specification states that identifiers can be arbitrarily long, you may restrict the length to some reasonable value. Simulate the same in C language.
2. Write a C program to identify whether a given line is a comment or not.
3. Write a C program to recognize strings under 'a', 'a*b+', 'abb'.
4. Write a C program to test whether a given identifier is valid or not.
5. Write a C program to simulate lexical analyzer for validating operators.
6. Implement the lexical analyzer using JLex, flex or other lexical analyzer generating tools
7. Write a C program for implementing the functionalities of predictive parser for the mini language specified in Note 1.
8. a) Write a C program for constructing of LL (1) parsing.
   b) Write a C program for constructing recursive descent parsing
9. Write a C program to implement LALR parsing
10. a) Write a C program to implement operator precedence parsing.

b)Write a C program to implement Program semantic rules to calculate the expression that takes an expression with digits, + and * and computes the value

11.Convert the BNF rules into Yacc form and write code to generate abstract syntax tree for the mini language specified in Note 1.

12. Write a C program to generate machine code from abstract syntax tree generated by the parser. The instruction set specified in Note 2 may be considered as the target code.

COURSE OUTCOMES (COs)	
CO1	To Understand the working of lex and yacc compiler for debugging of programs.
CO2	To Understand and define the role of lexical analyzer, use of regular expression and transition diagrams.
CO3	To Understand and use Context free grammar, and parse tree construction.
CO4	To Learn & use the new tools and technologies used for designing a compiler.
CO5	To Develop program for solving parser problems.
CO6	To generate machine code from abstract syntax tree generated by the parser.

	Total Contact Hours - 45	0	0	3	1.5
	Prerequisite – Software Engineering				
	Lab Manual Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

This laboratory course is intended to make the students know about basic concepts of Object Oriented Analysis and Design.

LIST OF EXPERIMENTS:

1. Passport automation system.
2. Book bank
3. Exam Registration
4. Stock maintenance system.
5. Online course reservation system
6. E-ticketing
7. Software personnel management system
8. Credit card processing
9. E-book management system
10. Recruitment system
11. Foreign trading system
12. Conferencemanagement System
13. BPO management System
14. Library management system
15. Student information system

COURSE OUTCOMES (COs)	
CO1	To capture the requirements specification for an intended software system
CO2	To draw the UML diagrams for the given specification
CO3	To Apply the design pattern properly in .
CO4	To test the software system thoroughly for all scenarios.
CO5	To improve the design by applying appropriate design patterns.
CO6	To analyze the concept of patterns for constructing software architectures.

U18PCCS701	BIG DATA ANALYTICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Data Structures, Data Ware Housing and Data Mining				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

The basics of Analytics – Concepts, Data preparation – merging, managing missing numbers sampling, Data visualization, Basic statistics.

UNIT- IINTRODUCTION TO BIG DATA 9

Analytics – Nuances of big data – Value – Issues – Case for Big data – Big data options Team challenge – Big data sources – Acquisition – Nuts and Bolts of Big data. Features of Big Data - Security, Compliance, auditing and protection - Evolution of Big data – Best Practices for Big Data Analytics - Big data characteristics - Volume, Veracity, Velocity, Variety – Data Appliance and Integration tools – Greenplum – Informatica.

UNIT- II DATA ANALYSIS 9

Evolution of analytic scalability – Convergence – parallel processing systems – Cloud computing –grid computing – map reduce – enterprise analytic sand box – analytic data sets – Analytic Methods –analytic tools – Cognos – Micro strategy - Pentaho. Analysis approaches – Statistical significance –business approaches – Analytic innovation – Traditional approaches – Iterative.

UNIT- III STREAM COMPUTING 9

Introduction to Streams Concepts – Stream data model and architecture - Stream Computing, Sampling data in a stream – Filtering streams – Counting distinct elements in a stream – Estimating moments – Counting oneness in a window – Decaying window – Real time Analytics Platform(RTAP)applications IBM Infosphere – Big data at rest – Infosphere streams – Data stage – Statistical analysis– Intelligent scheduler – Infosphere Streams.

UNIT- IV PREDICTIVE ANALYTICS AND VISUALIZATION 9

Predictive Analytics – Supervised – Unsupervised learning – Neural networks – Kohonen models –Normal – Deviations from normal patterns – Normal behaviours – Expert options – Variable entry -Mining Frequent itemsets - Market based model – Apriori Algorithm – Handling large data sets in Main memory – Limited Pass algorithm – Counting frequent itemsets in a stream – Clustering Techniques –Hierarchical – K- Means – Clustering high dimensional data Visualizations - Visual data analysistechniques, interaction techniques; Systems and applications.

UNIT- V FRAMEWORKS AND APPLICATIONS 9

IBM for Big Data – Map Reduce Framework - Hadoop – Hive - – Sharding – NoSQL Databases - S3 -Hadoop Distributed file systems – Hbase – Impala – Analyzing big data with twitter – Big data for Ecommerce– Big data for blogs.

COURSE OUTCOMES (COs)	
CO1	Be able to understand Data Appliance and Integration tools like Greenplum and Informatica.
CO2	Have an awareness of the computational theory underlying NN.
CO3	Have a working knowledge of a typical neural network simulation
CO4	Experience in programming Predictive analysis and Visualization.
CO5	Have knowledge of sufficient in Hadoop and Map reduce concepts.
CO6	To understand Map Reduce Framework and Hadoop.

	Total Contact Hours - 45	0	0	3	1.5
	Prerequisite – Data Structures &Data Mining				
	Lab Manual Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES
This laboratory course is intended to make the students know about Big Data Concepts.

LIST OF EXPERIMENTS

1. Summary statistics some sense of the data using R tool.
2. Calculate Hypothesis testing for sample dataset using R tool.
3. Visualization of Health care data using Greenplum.
4. Find the K-means clustering for given dataset.
5. Find the missing dataset using hadoop and map reduce.
6. Calculate mean, median, mode for the given dataset using R tool.
7. Classification using Naïve bayes approach.
8. The k-Nearest Neighbor Algorithm Using MapReduce Paradigm.

COURSE OUTCOMES (COs)	
CO1	Identify the need for big data analytics for a domain.
CO2	To Use Hadoop, Map Reduce Framework.
CO3	To Apply big data analytics for a give problem.

CO4	Suggest areas to apply big data to increase business outcome.
CO5	Contextually integrate and correlate large amounts of information automatically to gain faster insights
CO6	To apply K-Nearest Alogrithm for Big data application

PROGRAMME ELECTIVE-I

U18PECS011	**NATURAL LANGUAGE PROCESSING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Principles of Compiler Design				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	This course is designed to introduce some of the problems and solutions of NLP, and their relation to linguistics and statistics.				

UNIT I INTRODUCTION 9

Natural Language Processing tasks in syntax, semantics, and pragmatics – Issues - Applications- The role of machine learning - Probability Basics –Information theory – Collocations -N-gram Language Models - Estimating parameters and smoothing - Evaluating language models.

UNIT IIMORPHOLOGY AND PART OF SPEECH TAGGING 9

Linguistic essentials - Lexical syntax- Morphology and Finite State Transducers - Part of speech Tagging - Rule-Based Part of Speech Tagging - Markov Models - Hidden Markov Models – Transformation based Models - Maximum Entropy Models. Conditional Random Fields.

UNIT III SYNTAX PARSING 9

Syntax Parsing - Grammar formalisms and tree banks - Parsing with Context Free Grammars- Features and Unification -Statistical parsing and probabilistic CFGs (PCFGs)-Lexicalized PCFGs.

UNIT IV SEMANTIC ANALYSIS 9

Representing Meaning – Semantic Analysis - Lexical semantics –Word-sense disambiguation - Supervised – Dictionary based and Unsupervised Approaches - Compositional semantics- Semantic Role Labeling and Semantic Parsing – Discourse Analysis.

UNIT V APPLICATIONS 9

Named entity recognition and relation extraction- IE using sequence labeling-Machine Translation (MT) - Basic issues in MT-Statistical translation-word alignment- phrase-based

translation – Question Answering.

UNIT I INTRODUCTION **9**

History, What is Information Security?, Critical Characteristics of Information, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT II SECURITY INVESTIGATION **9**

Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues - An Overview of Computer Security - Access Control Matrix, Policy-Security policies, Confidentiality policies, Integrity policies and Hybrid policies

UNIT III SECURITY ANALYSIS **9**

Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk - Systems: Access Control Mechanisms, Information Flow and Confinement Problem

UNIT IV LOGICAL DESIGN **9**

Blueprint for Security, Information Security Policy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT V PHYSICAL DESIGN 9

Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control

Devices, Physical Security, Security and Personnel

TOTAL 45 PERIODS

COURSE OUTCOMES (COs)	
CO1	To Demonstrate knowledge of statistical data analysis techniques utilized in business decision making.
CO2	To Apply principles of Data Science to the analysis of business problems
CO3	To Use data mining software to solve real-world problems.
CO4	To Employ cutting edge tools and technologies to analyze Big Data.
CO5	To Demonstrate use of team work, leadership skills, decision making and organization theory.
CO6	To Understand Learning Sets of Rules and Sequential Covering Algorithm

U18PECS013	**DATA WAREHOUSING AND DATA MINING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Data Base Management System				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

- Dramatic advances in data capture, processing power, data transmission, and storage capabilities are enabling organizations to integrate their various databases into data warehouses.
- Data mining is primarily used by the companies with a strong consumer focus. It enables these companies to determine the factors such as price, product positioning, or staff skills, and economic indicators, competition, and customer demographics.

UNIT- I DATAWAREHOUSE 9

Data Warehouse Roles and Structures – What is a Data Warehouse? – Multi Dimensional Data Model- Data Stores, Warehouses and Marts - The Data Warehouse Environment – Data Warehouse Characteristics - The Data Warehouse Architecture – Meta Data, Metadata Extraction - Implementing the Data Warehouse - OLAP Engine - Data Warehouse Backend Process – Data Warehouse Project Success Factors.

UNIT- II INTRODUCTION TO DATA MINING 9

Basic Data Mining Tasks, Data Mining versus Knowledge Discovery in Data Bases, Data Mining Issues, Data Mining Metrics. Social Implications of Data Mining.Data Mining from a Database Perspective. Data Mining Techniques - Introduction – A Statistical Perspective on Data Mining – Similarity Measures – Decision Trees – Neural Networks – Genetic Algorithms.

UNIT-III CLASSIFICATION 9

Introduction - Statistical Based Algorithms- Distance Based Algorithms – Decision Tree Based Algorithms - Neural Networks Based Algorithms – Rule Based Algorithms – Combining Techniques.

UNIT IV ASSOCIATION RULES 9

Introduction-Large Itemsets- - Methods to Discover Association Rules - Apriori Algorithm - Partition Algorithm. **Clustering Techniques**Introduction – Outliers – Clustering Paradigms – Hierarchical Algorithms, Partitional Algorithms - Clustering Large Databases.

UNIT-V WEB MINING 9

Introduction-Web Mining – Web Content Mining –Crawlers,Harvest System,Virtual Web View -Web Structure Mining –Page Rank, Web Usage Mining-Preprocessing, Data structures, Pattern Discovery and Pattern Analysis.

TEXT BOOKS

1. ArunK.Pujari.,"Data Mining Techniques", Universities Press,2013.
2. Margaret H. Dunham ,S.Sridhar, "Data Mining Introductory and Advanced Topics", Pearson Education,2006.
3. K.P.Soman,ShyamDiwakar,V.Ajay,"*Data Mining*: *Theory And Practice"* , PHI Learning Pvt. Ltd., 2006.

REFERENCE BOOKS

1. "Express Learning - Data Warehousing and Data Mining", ITL ESL,Pearson Education, 2012.
2. N.Venkatesan,S.Prabhu,"Data Mining and WareHousing", New Age International (P) Limited, 2010.

4.http://www.essi.upc.edu/~aabello/publications/11.IGIBook1.pdf

COURSE OUTCOMES (COs)	
CO1	Provide efficient distribution of information and easy access to data.
CO2	Create user friendly reporting environment.

CO3	Find the unseen pattern in large volume of historical data that helps to manage an organization efficiently.
CO4	Understand the concepts of various data mining Techniques.

U18PECS014	DIGITAL IMAGE PROCESSING	L	T	P	C
	• Total Contact Hours - 45	3	0	0	3
	• Prerequisite – Probability Statistics, Computer Graphics				
	• Course Designed by – Dept. of Computer Science & Engineering				

Mapping of COs with POs *(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low*

	Programme Outcomes(POs)											
COs	a	b	c	d	e	f	g	h	i	j	k	l
CO1	M	M	H		H							H
CO2	M		H			M						H
CO3			H	M	H				H		H	H
CO4	M	M	H		H	M						H
CO5					H							M
CO6					M				M		H	H

OBJECTIVES

- To become familiar with digital image fundamentals
- To get exposed to simple image enhancement techniques in Spatial and Frequency domain.
- To learn concepts of degradation function and restoration techniques.
- To study the image segmentation and representation techniques.
- To become familiar with image compression and recognition methods

Category	Programme Elective(PE)
Approval	47th Academic Council Meeting held in Aug, 2018

CO5	Explain the Architecture of Data warehousing.
CO6	Understand the concept of Web Mining.

UNIT I DIGITAL IMAGE FUNDAMENTALS 9

Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization – Relationships between pixels – Color image fundamentals – RGB, HSI models, Two-dimensional mathematical preliminaries, 2D transforms – DFT, DCT.

UNIT II IMAGE ENHANCEMENT 9

Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering–Smoothing and Sharpening Spatial Filtering, Frequency Domain: Introduction to Fourier Transform– Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters, Homomorphic filtering, Color image enhancement.

UNIT III IMAGE RESTORATION 9

Image Restoration – degradation model, Properties, Noise models – Mean Filters – Order Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering

UNIT IV IMAGE SEGMENTATION 9

Edge detection, Edge linking via Hough transform – Thresholding – Region based segmentation – Region growing – Region splitting and merging – Morphological processing-erosion and dilation, Segmentation by morphological watersheds – basic concepts – Dam construction – Watershed segmentation algorithm.

UNIT V IMAGE COMPRESSION AND RECOGNITION 9

Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, JPEG standard, MPEG. Boundary representation, Boundary description, Fourier Descriptor, Regional Descriptors – Topological feature, Texture – Patterns and Pattern classes – Recognition based on matching.

TOTAL: 45 PERIODS

TEXTBOOK:

1. Rafael C. Gonzalez, Richard E. Woods, Digital Image Processing Pearson, Third Edition, 2010.
2.Anil K. Jain, Fundamentals of Digital Image Processing Pearson, 2002.

REFERENCES:

1. Kenneth R. Castleman, Digital Image Processing Pearson, 2006.
2. Rafael C. Gonzalez, Richard E. Woods, Steven Eddins, Digital Image Processing using MATLAB Pearson Education, Inc., 2011.
3. William K. Pratt, Digital Image Processing John Wiley, New York, 2002.

COURSE OUTCOMES (COs)	
CO1	Demonstrate the basics and fundamentals of digital image processing, such as digitization, sampling, quantization, and 2D-transforms.
CO2	Operate on images using the techniques of smoothing, sharpening and enhancement.
CO3	Implement the restoration concepts and filtering techniques.
CO4	Compare the basics of various segmentation and features extraction methods.
CO5	Design different coding and compression techniques
CO6	Design various edge and boundary detection for recognition and pattern matching.

U18PECS015	**MULTICORE ARCHITECTURE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Computer Architecture and Organization, Artificial Intelligence				
	Course Designed by – Department of Computer Science & Engineering				

OBJECTIVES	To understand the need for multi-core processors, and their architecture. To understand the challenges in parallel and multi-threaded programming. To learn about the various parallel programming paradigms.

UNIT I MULTI-CORE PROCESSORS **9**

Single core to Multi-core architectures – SIMD and MIMD systems – Interconnection networks - Symmetric and Distributed Shared Memory Architectures – Cache coherence - Performance Issues – Parallel program design.

UNIT II PARALLEL PROGRAM CHALLENGES **9**

Performance – Scalability – Synchronization and data sharing – Data races – Synchronization primitives (mutexes, locks, semaphores, barriers) – deadlocks and livelocks – communication between threads (condition variables, signals, message queues and pipes).

UNIT III SHARED MEMORY PROGRAMMING WITH OpenMP **9**

OpenMP Execution Model – Memory Model – OpenMP Directives – Work-sharing Constructs - Library functions – Handling Data and Functional Parallelism – Handling Loops - Performance Considerations.

UNIT IV DISTRIBUTED MEMORY PROGRAMMING WITH MPI **9**

MPI program execution – MPI constructs – libraries – MPI send and receive – Point-to-point and Collective communication – MPI derived datatypes – Performance evaluation

UNIT V PARALLEL PROGRAM DEVELOPMENT **9**

Case studies - n-Body solvers – Tree Search – OpenMP and MPI implementations and comparison.

TOTAL HOURS **45**

TEXT BOOKS:

1. Peter S. Pacheco, ―An Introduction to Parallel Programming‖, Morgan-Kauffman/Elsevier, 2011.

2. Darryl Gove, ―Multicore Application Programming for Windows, Linux, and Oracle Solaris‖, Pearson, 2011 (unit 2)

REFERENCES

1. Michael J Quinn, ―Parallel programming in C with MPI and OpenMP‖, Tata McGraw Hill,2003.

2. Victor Alessandrini, Shared Memory Application Programming, 1st Edition, Concepts and Strategies in Multicore Application Programming, Morgan Kaufmann, 2015.

3. Yan Solihin, Fundamentals of Parallel Multicore Architecture, CRC Press, 2015.

COURSE OUTCOMES (COs)

CO1	Describe multicore architectures and identify their characteristics and challenges.
CO2	Identify the issues in programming Parallel Processors.
CO3	Write programs using OpenMP and MPI.
CO4	Design parallel programming solutions to common problems.
CO5	Compare and contrast programming for serial processors and programming for parallel processors.
CO6	Develop multicore programs and design parallel solutions.

U18PECS016	**SERVICE ORIENTED ARCHITECTURE**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Big Data, Data Mining. Data Analytics				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

- To learn the concepts of distributed application development
- To differentiate XML based web services from other standard models
- To study the importance of service composition

UNIT I SOA FUNDAMENTALS **9**

SOA – Services – Loose Coupling – The Enterprise service bus – Service Classification – Business process management – SOA and the organization – SOA and the organization - SOA in context – Message exchange patterns – SOA life cycle – Versioning – Web services

UNIT II SERVICE-ORIENTED ANALYSIS AND DESIGN **9**

SOA Terminology and Concepts - REST Design Constraints and Goals - RESTful Service Orientation - Service Contracts with REST - Service-Orientation and REST Service-Oriented Analysis and Design with REST - Mainstream SOA Methodology - Analysis and Service Modeling with REST - Service-Oriented Design with REST HTML - Cookies - Simple PHP scripts

UNIT III SERVICE COMPOSITION **9**

Service Composition with REST - Fundamental Service Composition with REST – Advanced

Service Composition with REST - Service Composition with REST Case Study - Design Patterns for SOA with REST - Service Versioning with REST - Uniform Contract Profiles.

UNIT IV RESTFUL SERVICES AND THE RESOURCE-ORIENTEDARCHITECTURE 9

Introducing the Simple Storage Service - Object-Oriented Design of S3 - URIs - Addressability -Statelessness - Representations - Links and Connectedness - The Uniform Interface – Resource Design - Turning Requirements into Read-Only Resources - Service Implementation - Web service case studies - Connect Resources to Each Other - Controller Code - Model Code

UNIT V SOA TRANSACTION AND SECURITY 9

SOA and performance - SOA and security – Service Management - Model driven service deployment – Establishing SOA and SOA governance

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Nicolai M.Josuttis, SOA in design - The art of distributed system design, O'REILLY publication, 2007.
2. Raj Balasubramanian, Benjamin Carlyle, Thomas Erl, Cesare Pautasso, "SOA with REST - Principles, Patterns & Constraints for building Enterprise solutions with REST", Prentice Hall/PearsonPTR , 2012.
3. Leonard Richardson and Sam Ruby, RESTful Web Services, O'REILLY publication, 2007.

REFERENCE:

1. Thomas Erl, ―Service Oriented Architecture: Concepts, Technology, and Design‖, Pearson education,2005.

COURSE OUTCOMES

CO1	Explain the fundamental principles of SOA.
CO2	Organise the services to perform the service composition.
CO3	Model and design a service-oriented system using architectural principles, development methods with SOA and related technologies to solve the real life problem
CO4	Outline the technologies used for SOA implementation.
CO5	Demonstrate software development using SOA as a team.
CO6	Understand the fundamentals of service oriented architecture design

PROGRAMME ELECTIVE-II

U18PECS021	**NEURAL NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3

	Prerequisite – Artificial Intelligence, Data mining
	Course Designed by – Department of Computer Science & Engineering
OBJECTIVES	Understand the role of neural networks in engineering, artificial intelligence, and cognitive modeling.

UNIT – I INTRODUCTION TO NEURAL NETWORKS
Introduction, Humans and Computers, Organization of the Brain, Biological Neuron, Biological and Artificial Neuron Models, Characteristics of ANN, McCulloch-Pitts Model, Historical Developments, Potential Applications of ANN.

UNIT – II ESSENTIALS OF ARTIFICIAL NEURAL NETWORKS
Artificial Neuron Model, Operations of Artificial Neuron, Types of Neuron Activation Function, ANN Architectures, Classification Taxonomy of ANN –Connectivity, Learning Strategy (Supervised, Unsupervised, Reinforcement),Learning Rules.

UNIT – III SINGLE LAYER FEED FORWARD NETWORKS
Introduction, Perceptron Models: Discrete, Continuous and Multi-Category, Training Algorithms: Discrete and Continuous Perceptron Networks, Limitations of the Perceptron Model.

UNIT – IV MULTI- LAYER FEED FORWARD NETWORKS
Credit Assignment Problem, Generalized Delta Rule, Derivation of Backpropagation (BP) Training, Summary of Back propagation Algorithm, Learning Difficulties and Improvements.

UNIT - V ASSOCIATIVE MEMORIES
Paradigms of Associative Memory, Pattern Mathematics, Hebbian Learning, General Concepts of Associative Memory, Bidirectional Associative Memory(BAM) Architecture, BAM Training Algorithms: Storage and Recall Algorithm, BAM Energy Function.

5. Timothy J. Ross, " Fuzzy Logic With Engineering Applications", Tata McGraw-Hill Inc. 2000

COURSE OUTCOMES (COs)	
CO1	To understand the role of neural networks in engineering, artificial intelligence, and cognitive modeling.
CO2	To describe the concepts of feed forward neural networks
CO3	To apply Artificial Neural Network to handle uncertainty and solve engineering problems.
CO4	To analyze the limitation of Single layer Perceptron
CO5	To build a knowledge of sufficient theoretical background to be able to reason about the behavior of neural networks.
CO6	To develop Delta learning rule of the output layer

U18PECS022	SOFTWARE AND APPLICATION SECURITY	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Computer Networks				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	• Describe today's increasing network security threats and explain the need to implement a comprehensive security policy to mitigate the threats. • Explain general methods to mitigate common security threats to network devices, hosts, and applications.				

UNIT-I INTRODUCTION **9**

Basic concepts-threats to software security, software vulnerabilities, controls; risk; confidentiality, integrity-availability; security policies, security mechanisms; assurance; prevention-detection, benefits of detecting software security, deterrence.

UNIT-II CRYPTOGRAPHY AND PROGRAM SECURITY **9**

Basic cryptography - Basic cryptographic terms- Historical background- Symmetric crypto primitives- Modes of operation- Cryptographic hash functions- Asymmetric crypto primitives- Program security.

UNIT-III MALICIOUS ATTACKS **9**

Malicious code: viruses, Trojan horses, worms- Program flaws: buffer overflows, time-of-check to time-of-use flaws-incomplete mediation- Defenses- Software development controls- Testing techniques.

UNIT-IV

SECURITY IN CONVENTIONAL OPERATING SYSTEMS **9**

Memory, time, file, object protection requirements and techniques- Protection in contemporary operating systems- Identification and authentication- Identification goals- Authentication requirements-Human authentication- Machine authentication.

TRUSTED OPERATING SYSTEMS

Assurance; trust- Design principles- Evaluation criteria- Evaluation process- Database management-Systems security - Database integrity- Database secrecy- Inference control- Multilevel databases.

UNIT-V APPLICATION SECURITY

Host-Based Intrusion Detection Systems (HIDS), Advantages and Disadvantages of HIDS. Host-Based Firewalls, Application Whitelisting, Endpoint Encryption,

TEXT BOOKS:

1.The Art of Software Security Assessment: Identifying and Preventing Software Vulnerabilities, John McDonald , Mark Down , Justin Schuh,2006.
2. William Stallings, "Cryptography And Network Security Principles and Practices", Prentice Hall of India, 3rd Edition, 2003.

COURSE OUTCOMES (COs)	
CO1	To identify software security threats and determines efforts to counter them.
CO2	To Execute code for relevant cryptographic algorithms.
CO3	To analyzea secure access client for access to a server.
CO4	Understand Security in Conventional and Trusted Operating System.
CO5	To validate the intrusion Detection systems and Firewall
CO6	To classify and evaluate the Malicious attacks

MACHINE LEARNING

U18PECS023	**L**	**T**	**P**	**C**
Total Contact Periods – 45	3	0	0	3

Prerequisite – Data structures and Algorithms

Course Designed by – Department of Computer Science & Engineering

OBJECTIVES

- To study the various supervised, semi-supervised and unsupervised learning algorithms in machine learning
- To learn the new approaches in machine learning
- To design appropriate machine learning algorithms for problem solving

UNIT I INTRODUCTION 9

Learning Problems – Perspectives and Issues – Concept Learning – Version Spaces and Candidate Eliminations – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search.

UNIT II NEURAL NETWORKS AND GENETIC ALGORITHMS 9

Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evaluation and Learning.

UNIT III BAYESIAN AND COMPUTATIONAL LEARNING 9

Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier – Bayesian Belief Network – EM Algorithm – Probability Learning – Sample Complexity – Finite and Infinite Hypothesis Spaces – Mistake Bound Model.

UNIT IV INSTANT BASED LEARNING 9

K- Nearest Neighbor Learning – Locally weighted Regression – Radial Bases Functions –

Case Based Learning.

UNIT V ADVANCED LEARNING 9

Learning Sets of Rules – Sequential Covering Algorithm – Learning Rule Set – First Order Rules – Sets of First Order Rules – Induction on Inverted Deduction – Inverting Resolution – Analytical Learning – Perfect Domain Theories – Explanation Base Learning – FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning.

2. Stephen Marsland, ―Machine Learning: An Algorithmic Perspective‖, CRC Press, 2009.

COURSE OUTCOMES (COs)	
CO1	To Demonstrate knowledge of statistical data analysis techniques utilized in business decision making.
CO2	To Apply principles of Data Science to the analysis of business problems
CO3	To Use data mining software to solve real-world problems.
CO4	To Employ cutting edge tools and technologies to analyze Big Data.
CO5	To Demonstrate use of team work, leadership skills, decision making and organization theory.
CO6	To Understand Learning Sets of Rules and Sequential Covering Algorithm

U18PECS024	**Pattern Recognition and Soft Computing**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	3	0	0	3
	Prerequisite –Digital signal or image Processing				
	Course Designed by – Computer Science and Engineering				
OBJECTIVES: To Provide a sound knowledge in recognition of patterns using pattern models and soft computing					

UNIT I 9

INTRODUCTION Introduction: Basics of pattern recognition – Design principles of pattern recognition system – Learning and adaptation – Pattern recognition approaches. Mathematical foundations: Linear algebra – Probability theory – Expectation – Mean and Covariance – Normal distribution – Multivariate normal densities – Chi square test of hypothesis.

UNIT II **9**

STATISTICAL PATTERN RECOGNITION

Statistical Patten Recognition: Bayesian Decision Theory – Classifiers – Normal density and discriminant functions.**MODELS** Parameter estimation methods: Maximum-Likelihood estimation – Bayesian Parameter estimation – Dimension reduction methods – Principal Component Analysis (PCA) – Fisher Linear discriminant analysis – Expectation – maximization (EM) – Hidden Markov Models (HMM) – Gaussian mixture models. **NON PARAMETRIC TECHNIQUES** Nonparametric Techniques: Density Estimation – Parzen Windows – K-Nearest Neighbor Estimation – Nearest Neighbor Rule – Fuzzy classification.

UNIT III **9**

CLUSTERING TECHNIQUES Unsupervised Learning and Clustering: Criterion functions for clustering – Clustering Techniques: Iterative square – Error partitional clustering – K-Means – agglomerative hierarchical clustering – Cluster validation.

UNIT IV **9**

FUZZY SYSTEMS Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations – Membership Functions- Fuzzy Rules and Fuzzy Reasoning – Fuzzy Inference Systems –Fuzzy Decision Making - Fuzzy Tool box in Matlab. **GENETIC ALGORITHMS** Evolutionary Computation – Genetic Algorithms – Terminologies and Operators of GA –Ant Colony Optimization – Particle Swarm Optimization – GA Tool using MATLAB.

UNIT V **9**

Fuzzy Classification – Fuzzy Pattern Recognition – Applications of Neural Networks: Bio informatics, Knowledge Extraction, Security Systems, Natural Landmark Recognition Task - Applications of Genetic Algorithm: Machine Learning, Image Processing, Data Mining and Wireless Networks.

4. S. N. Sivanandam, S. Sumathi and S. N. Deepa, "Introduction to Fuzzy Logic using MATLAB", First Edition, Springer, 2007.

Course Outcome

	CO
CO 1	To apply the mathematical foundations for recognition of patterns.
CO 2	To Identify the pattern Recognition models.
CO 3	To apply the non-parametric techniques and clustering techniques in pattern Recognition in real time applications.
CO 4	To Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems

CO 5	To Apply genetic algorithms to combinatorial optimization problems.

U18PECS025	**HIGH PERFORMANCE COMPUTER ARCHITECTURES**	**L**	**T**	**P**	**C**

UNIT I FUNDAMENTALS OF COMPUTER DESIGN AND ILP 9

Fundamentals of Computer Design – Measuring and Reporting Performance – Instruction Level Parallelism and its Exploitation – Concepts and Challenges –Exposing ILP - Advanced Branch Prediction - Dynamic Scheduling - Hardware-Based Speculation - Exploiting ILP - Instruction Delivery and Speculation - Limitations of ILP - Multithreading

UNIT II MEMORY HIERARCHY DESIGN 9

Introduction – Optimizations of Cache Performance – Memory Technology and Optimizations – Protection: Virtual Memory and Virtual Machines – Design of Memory Hierarchies – Case Studies.

UNIT III MULTIPROCESSOR ISSUES 9

Introduction- Centralized, Symmetric and Distributed Shared Memory Architectures –Cache Coherence Issues – Performance Issues – Synchronization – Models of Memory Consistency – Case Study-Interconnection Networks – Buses, Crossbar and Multi-stage Interconnection Networks

UNIT IV MULTICORE ARCHITECTURES 9

Homogeneous and Heterogeneous Multi-core Architectures – Intel Multicore Architectures – SUN CMP architecture – IBM Cell Architecture. Introduction to Warehouse-scale computersArchitectures- Physical Infrastructure and Costs- Cloud Computing –Case Study-Google Warehouse-Scale Computer.

UNIT V VECTOR, SIMD AND GPU ARCHITECTURES 9

Introduction-Vector Architecture – SIMD Extensions for Multimedia – Graphics Processing

Units – Case Studies – GPGPU Computing – Detecting and Enhancing Loop Level Parallelism-Case Studies.

COURSE OUTCOMES (COs)	
CO1	Identify the limitations of ILP.
CO2	Discuss the issues related to multiprocessing and suggest solutions
CO3	Point out the salient features of different multicore architectures and how they exploit parallelism.
CO4	Discuss the various techniques used for optimising the cache performance
CO5	Design hierarchal memory system
CO6	Point out how data level parallelism is exploited in architectures

UNIT I PROJECTEVALUATION AND PROJECT PLANNING
Importance of Software Project Management – Activities Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation – Strategic program Management – Stepwise Project Planning.

UNIT II PROJECT LIFE CYCLE AND EFFORT ESTIMATION
Software process and Process Models – Choice of Process models - mental delivery – Rapid Application development – Agile methods – Extreme Programming – SCRUM – Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points - COCOMO II A Parametric Productivity Model - Staffing Pattern.

UNIT III ACTIVITY PLANNING AND RISK MANAGEMENT
Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Monitoring – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of critical patterns – Cost schedules.

UNIT IV PROJECT MANAGEMENT AND CONTROL
Framework for Management and control – Collection of data Project termination – Visualizing progress – Cost monitoring – Earned Value Analysis- Project tracking – Change control- Software Configuration Management – Managing contracts – Contract Management.

UNIT V STAFFING IN SOFTWARE PROJECTS
Managing people – Organizational behaviour – Best methods of staff selection – Motivation – The Oldham-Hackman job characteristic model – Ethical and Programmed concerns – Working in teams – Decision making – Team structures – Virtual teams – Communications

U18PECS026	**SOFTWARE PROCESS AND PROJECT MANAGEMENT**	**L**	**T**	**P**	**C**
	• Total Contact Hours - 45	3	0	0	3
	• Prerequisite –Organizational Behaviour, Software Engineering				
	• Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

At the end of the course, the student shall be able to:

- To describe and determine the purpose and importance of project management from the perspectives of planning, tracking and completion of project.
- To compare and differentiate organization structures and project structures.
- To implement a project to manage project schedule, expenses and resources with the application of suitable project management tools.

genres – Communication plans.

COURSE OUTCOMES (COs)	
CO1	Explain software development life cycle
CO2	Analyse, prioritize, and manage requirements
CO3	Estimate the efforts required for software development
CO4	Define new processes based on the needs
CO5	Perform various tests to ensure quality
CO6	Identify and prioritize risks and create mitigation plans

	Prerequisite – Artificial Intelligence ,Expert Systems				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To learn and understand the basic elements of case based reasoning. To understand the case retrieval. To learncomplex knowledge sources and knowledge management.				

UNIT I BASIC CASE BASED REASONING ELEMENTS 8

Case-Based Reasoning- Experiences and Cases -Parts of a Case -Problems - Solution Types - Case Representations - Case Bases - Similarity and Retrieval -Reuse and Adaptation - Models of CBR.

UNIT II CASE REPRESENTATION AND SIMILARITY MEASURES 9

Representation Layers - Completeness and Efficiency -Flat Attribute-Value Representation- Complex Representations in General. Similarity and Case Representations -Types of Similarity Measures -The Local-Global Principle for Similarity Measures - Virtual Attributes- Similarity Measure to Use. Complex Similarities: Graph Representations and Graph Similarities- Largest Common Subgraphs- Taxonomic Similarities- Similarities for Object-Oriented Representations- Many-Valued Attributes- Similarity for Processes and Workflows.

UNIT III CASE RETRIEVAL AND INDEXING 10

The Retrieval Task - Retrieval Errors-Basic Retrieval Methods: Query Generation-Filtering-Sequential Retrieval -Two-Level Retrieval -Geometric Methods - Voronoi Diagrams and k-Nearest Neighbours -Geometric Approximation - Geometric Filtering-Index-Based Retrieval - kd-Trees- Integration with Decision Trees. Case Indexing- Traditional Indexing Method-Case Indexing Using a Bayesian Model, Prototype-Based Neural Network and Three-Layered Back Propagation Neural Network.

UNIT IV CASE ADAPTATION AND CASE-BASE DEVELOPMENT 10

Rules - Adaptation Types -The Adaptation Process - Adaptation Using Several Cases - Adaptations Using the Solution Process - Quality Issues - Knowledge in the Adaptation Container. Case Based Development-Problem Formulation -Finding and Getting Data, Preprocessing - Case Acquisition- Prototypes and Evaluation The Knowledge Containers - Systematic Development of CBR Systems- Implementation Aspects -Combining CBR with Other Techniques-Maintenance.

UNIT V
COMPLEX KNOWLEDGE SOURCES AND KNOWLEDGE MANAGEMENT 8

Textual CBR- Images- Sensor Data and Speech - Conversational CBR.Knowledge Management- Case-Based Reasoning and Knowledge Management- CBR Implementing KM Cycles.

TEXT BOOKS:

1. Michael M. Richter and Rosina O. Weber, Case-based reasoning: a textbook, springer,2013.

2. S. Simon, P. Sankar, ―Foundations of Soft Case-Based Reasoning, 1st ed. Wiley-Interscience, 2004.

REFERENCES

1.J. Kolodner, ―Case-Based Reasoning, San Mateo, CA: Morgan Kaufmann Publishers;1993

2. I.Watson, Applying Case-Based Reasoning: Techniques for Enterprise Systems. San Francisco, CA: Morgan Kaufmann Inc.1997

COURSE OUTCOMES (COs)	
CO1	To illustrate Knowledge the basic elements of case based reasoning, case representation and similarity measures, the Case adapation with systematic development of CBR Systems
CO2	To Understand the Case Indexing and adaptation process for developing case based reasoning systems.
CO3	To Discover the Systematic development Systems, case based reasoning for managing complex knowledge sources.
CO4	To Illustrate and maintain the CBR with other technique and to find the similarities of Object Oriented Representations.
CO5	To Evaluate the Geometric Approximation, Graph Representation and Similarities.
CO6	To Create prototype-Based Neural Network and Three-Layered Back Propagation Neural Network, Textual CBR and Implementing KM Cycles.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PECS032	**CYBER FORENSICS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite –				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To learn computer forensics To become familiar with forensics tools				

UNIT I INTRODUCTION TO COMPUTER FORENSICS 9

Introduction to Traditional Computer Crime, Traditional problems associated with Computer Crime. Introduction to Identity Theft & Identity Fraud. Types of CF techniques - Incident and incident response methodology - Forensic duplication and investigation. Preparation for IR: Creating response tool kit and IR team. - Forensics Technology and Systems - Understanding Computer Investigation – Data Acquisition.

UNIT II EVIDENCE COLLECTION AND FORENSICS TOOLS 9

Processing Crime and Incident Scenes – Working with Windows and DOS Systems. Current Computer Forensics Tools: Software/ Hardware Tools.

UNIT III ANALYSIS AND VALIDATION 9

Validating Forensics Data – Data Hiding Techniques – Performing Remote Acquisition – Network Forensics – Email Investigations – Cell Phone and Mobile Devices Forensics

UNIT IV ETHICAL HACKING **9**

Introduction to Ethical Hacking - Footprinting and Reconnaissance - Scanning Networks - Enumeration - System Hacking - Malware Threats - Sniffing

UNIT V ETHICAL HACKING IN WEB **9**

Social Engineering - Denial of Service - Session Hijacking - Hacking Web servers - Hacking Web Applications – SQL Injection - Hacking Wireless Networks - Hacking Mobile Platforms.

TOTAL HOURS **45**

TEXT BOOKS:

1. Bill Nelson, Amelia Phillips, Frank Enfinger, Christopher Steuart, ―Computer Forensics and Investigations‖, Cengage Learning, India Edition, 2016.
2. CEH official Certfied Ethical Hacking Review Guide, Wiley India Edition, 2015.

3. AnkitFadia ― Ethical Hacking‖ Second Edition, Macmillan India Ltd, 2006
4. Kenneth C.Brancik ―Insider Computer Fraud‖ Auerbach Publications Taylor & Francis Group–2008.

COURSE OUTCOMES (COs)	
CO1	Understand the basics of computer forensics
CO2	Apply a number of different computer forensic tools to a given scenario
CO3	Analyze and validate forensics data
CO4	Identify the vulnerabilities in a given network infrastructure
CO5	Implement real-world hacking techniques to test system security
CO6	analyze the forensics data

U18PECS033	**DATA ANALYTICS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	3	0	0	3
	Prerequisite – Data Mining and Warehousing, Big Data,				
	Course Designed by Department of Computer Science and Engineering				
OBJECTIVES	The Student should be exposed to learn the different ways of Data Analysis and data streams to evaluate the mining, clustering and visualization concepts.				

UNIT I : INTRODUCTION TO BIG DATA 9

Introduction to Big Data Platform – Challenges of conventional systems – Web data – Evolution of Analytic scalability, analytic processes and tools, Analysis vs reporting – Modern data analytic tools, Stastical concepts: Sampling distributions, resampling, statistical inference, prediction error.

UNIT II : DATA ANALYSIS 9

Regression modeling, Multivariate analysis, Bayesian modeling, inference and Bayesian networks, Support vector and kernel methods, Analysis of time series: linear systems analysis, nonlinear dynamics – Rule induction – Neural networks: learning and generalization, competitive learning, principal component analysis and neural networks; Fuzzy logic: extracting fuzzy models from data, fuzzy decision trees, Stochastic search methods.

UNIT III : MINING DATA STREAMS 9

Introduction to Streams Concepts – Stream data model and architecture – Stream Computing, Sampling data in a stream – Filtering streams – Counting distinct elements in a stream – Estimating moments – Counting oneness in a window – Decaying window – Realtime Analytics Platform(RTAP) applications – case studies – real time sentiment analysis, stock market predictions.

UNIT IV : FREQUENT ITEMSETS AND CLUSTERING 9

Mining Frequent itemsets - Market based model – Apriori Algorithm – Handling large data sets in Main memory – Limited Pass algorithm – Counting frequent itemsets in a stream – Clustering Techniques – Hierarchical – K- Means – Clustering high dimensional data – CLIQUE and PROCLUS – Frequent pattern based clustering methods – Clustering in non-euclidean space – Clustering for streams and Parallelism.

UNIT V : FRAMEWORKS AND VISUALIZATION 9

MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - S3 - Hadoop Distributed

file systems – Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Michael Berthold, David J. Hand, Intelligent Data Analysis, Springer, 2007.

2. Anand Rajaraman and Jeffrey David Ullman, Mining of Massive Datasets, Cambridge University Press, 2012.

REFERENCES:

3. Jiawei Han, MichelineKamber "Data Mining Concepts and Techniques", Second Edition, Elsevier, Reprinted 2008.

Course Outcomes (COs)	
CO1	To remember the statistical analysis methods and modern analytic tools.
CO2	To understand the ability to solve neural networks and fuzzy logic concepts.
CO3	Apply Data stream mining to design real time analytic applications
CO4	Analyze the Clustering Concepts for various streaming algorithms.
CO5	Evaluate the Visualisation techniques and Hadoop file systems.
CO6	To create frameworks for itemsets and data streams to examine the Hadoop and clustering data.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs)

U18PECS034	**AUGMENTED REALITY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Data Structure				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	This course provides students with an opportunity to explore the research issues in Augmented Reality (AR). It also makes the students know the basic concept and framework of augmented reality.				

UNIT 1: Introduction of Augmented Reality and Virtual Reality: 9

Fundamental Concept and Components of Augmented Reality. Primary Features and Present Development on Augmented Reality.

UNIT 2: Multiple Models of Input and Output Interface in Virtual Reality: **9**

Input -- Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3DScanner etc. Output -- Visual /Auditory / Haptic Devices.

UNIT 3: Augmented and Mixed Reality: 9

Taxonomy, technology and features of augmented reality, difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, visualization techniques for augmented reality, wireless displays in educational augmented reality applications, mobile projection interfaces, marker-less tracking for augmented reality, enhancing interactivity in AR environments, evaluating AR systems.

UNIT 4: Visual Computation in Augmented Reality: 9

Fundamentals of Computer Graphics. Software and Hardware Technology on Stereoscopic Display. Advanced Techniques in CG: Management of Large Scale Environments & Real Time Rendering.

UNIT 5: Application of AR in Digital Entertainment: **9**

AR Technology in Film & TV Production. AR Technology in Physical Exercises and Games. Demonstration of Digital Entertainment by AR.

TEXTBOOK

1) Burdea, G. C. and P. Coffet. Virtual Reality Technology, Second Edition. Wiley-IEEE Press, 2003/2006.
2) Alan B. Craig, Understanding Augmented Reality, Concepts and Applications, Morgan Kaufmann, 2013.

REFERENCE BOOK

1) Alan Craig, William Sherman and Jeffrey Will, Developing Virtual Reality Applications, Foundations of Effective Design, Morgan Kaufmann, 2009.

COURSE OUTCOMES (COs)	
CO1	To understand Augmented reality and Virtual Reality
CO2	To gain knowledge about the different models in Virtual Reality
CO3	Understand the Mixed reality and compare with AR and VR
CO4	Apply the knowledge of AR in Computer Graphics and Real time environments
CO5	Apply the concepts of AR and VR in the real world applications
CO6	Master the core concepts of Augmented and Virtual reality

U18PECS035	PARALLEL AND DISTRIBUTED COMPUTING	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: – Computer Science Fundamentals				
	Course Designed by :Dept of computer science and Engineering				

OBJECTIVES

- Principles of distributed simulation and applications using multiprocessor systems.
- Synchronization and time management for distributed environments.
- High-level architecture for distributed simulation.

UNIT I INTRODUCTION TO DISCRETE EVENT STIMULATION 9

Introduction - Why simulation -Why parallel and distributed simulation -Analytic simulation vs virtual environment - Typical applications - Basic concepts: system attribute, state variables, event list, simulation time - Basic mechanisms: time advance, event scheduling, inherent parallelism - Modeling issues and logical processes - Data model, probability distributions, statistics collection

UNIT II PARALLEL PROCESSING OVERVIEW 9

Brief introduction to parallel processing – Overview of cluster computing with MPI– Underlying technologies - Concurrent simulation processes

UNI III CONSERVATIVE SYNCHRONIZATION ALGORITHM9

Synchronization problem - Deadlock avoidance using null messages - Lookahead and the simulation model - Deadlock detection and recovery - Synchronous execution - Barriers Synchronization, Transient Messages, Time Distance between Logical Processes - Performance Issues - Pros and cons of conservative mechanism

UNIT IV DISTRIBUTED TRANSACTION PROCESSING 9

Transactions – Nested Transactions – Locks – Optimistic Concurrency Control – Timestamp Ordering – Comparison – Flat and Nested Distributed Transactions – Atomic Commit Protocols – Concurrency Control in Distributed Transactions – Distributed Deadlocks – Transaction Recovery – Overview of Replication And Distributed Multimedia Systems.

UNIT V HYBRID PROTOCOLS, DISTRIBUTED COMPUTING STANDARDS 9

Moving time windows – Space time simulation - Breathing time buckets - Local time warp - Distributed virtual environment – High level architecture, HLA - Overview, Rules, Object Model, Run-Time Infrastructure, Communication Issues

.

TEXT BOOKS:

1. Ruchard, M.Fujitmoto,"Parallel and Distributed Simulation Systems 1st Edition", Wiley-Interscience (2000).
2. Brendan Burns," Designing Distributed Systems",'Reilly Media; 1st Edition (March 5, 2018)

REFERENCES:

1. Martin Kleppmann,"Designing Data-Intensive Applications", 'Reilly Media; 1st Edition (April 11, 2017).

3. Andrew S. Tanenbaum, Maartenvan Steen, Distributed Systems, "Principles and Pardigms", Pearson Education, 2002.

COURSE OUTCOMES (COs)	
CO1	Explain why distributed simulation is needed.
CO2	Understand the main differences between two synchronization methods
CO3	Describe how the conservative method works
CO4	Describe how the optimistic method works
CO5	Understand hybrid approaches for distributed simulation..
CO6	Describe the HLA standard overview for simulation.

U18PECS036	**SOFTWARE ARCHITECTURE DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Software Engineering				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

1. To introduce to the students the basic knowledge of software, software Development process and the concepts of software design principles.
2. To impart knowledge on the different architectural styles and architectural patterns for the software.

UNIT- I INTRODUCTION AND ARCHITECTURAL DRIVERS

SYLLABUS: Introduction – What is software architecture? – Standard Definitions – Architectural structures – Influence of software architecture on organization-both business

andtechnical – Architecture Business Cycle- Introduction – Functional requirements – Technical constraints – Quality Attributes.

UNIT II QUALITY ATTRIBUTE WORKSHOP

Quality Attribute Workshop – Documenting Quality Attributes – Six part scenarios – Case studies.

UNIT III ARCHITECTURAL VIEWS

Introduction – Standard Definitions for views – Structures and views - Representing views-available notations – Standard views – 4+1 view of RUP, Siemens 4 views, SEI's perspectives and views – Case studies.

UNIT IV ARCHITECTURAL STYLES

Introduction – Data flow styles – Call-return styles – Shared Information styles - Event styles – Case studies for each style.

UNIT V DOCUMENTING THE ARCHITECTURE

SYLLABUS: Good practices – Documenting the Views using UML – Merits and Demerits of using visual languages– Need for formal languages - Architectural Description Languages – ACME – Case studies. Special topics: SOA and Web services – Cloud Computing – Adaptive structures

TEXT BOOKS:

1. Len Bass, Paul Clements, and Rick Kazman, "Software Architectures Principles and Practices", 2nd Edition, Addison-Wesley, 2003.
2. Anthony J Lattanze, "Architecting Software Intensive System. A Practitioner's Guide", Auerbach Publications, 2010.

COURSE OUTCOMES

COURSE OUTCOMES (COs)	
CO1	Ability to understand the software architectural requirements, drivers and to explain About the influence of software architecture on business and technical activities.
CO2	Able to analyze the quality attribute workshop and to apply the concept to prepare the documentation on quality attribute.
CO3	Ability to understand, identify the key architectural structures and to use the views to Specify architecture.
CO4	Ability to use & evaluate the styles to specify architecture.
CO5	Ability to design document for a given architecture.
CO6	To understand various software architectural design and testing concepts.

PROGRAMME ELECTIVE-IV

U18PECS041	ADVANCED DEEP LEARNING AND COMPUTER VISION	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Machine learning				
	Course Designed by :Dept of computer science and Engineering				

OBJECTIVES

- To understand the need for machine learning for various problem solving
- To study the various supervised, semi-supervised and unsupervised learning algorithms inmachine learning
- To understand Hough Transform and its applications to detect lines, circles, ellipses.
- To understand three-dimensional image analysis techniques.
- To study some applications of computer vision algorithms.

UNIT I INTRODUCTION 9

Introduction to machine learning- Linear models (SVMs and Perceptrons, logistic regression)- Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates

UNIT II DIMENTIONALITY REDUCTION 9

Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures – AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyperparameter optimization

UNIT –IIIIMAGE PROCESSING FOUNDATIONS 9

Review of image processing techniques – classical filtering operations – thresholding techniques – edge detection techniques – corner and interest point detection – mathematical

morphology – texture.

UNIT- IV SHAPES AND REGIONS **9**

Binary shape analysis – connectedness – object labeling and counting – size filtering – distance functions – skeletons and thinning – deformable shape analysis – boundary tracking procedures – active contours – shape models and shape recognition – centroidal profiles – handling occlusion – boundary length measures – boundary descriptors – chain codes – Fourier descriptors – region descriptors – moments.

UNIT –VAPPLICATIONS **9**

Application: Photo album – Face detection – Face recognition – Eigen faces – Active appearance and 3D shape models of faces Application: Surveillance – foreground-background separation – particle filters – Chamfer matching, tracking, and occlusion – combining views from multiple cameras – human gait analysis Application: In-vehicle vision system: locating roadway – road markings – identifying road signs – locating pedestrians.

4. Michael Nielsen, Neural Networks and Deep Learning, Determination Press, 2015.

COURSE OUTCOMES (COs)	
CO1	To understand the need for machine learning for various problem solvin
CO2	Implement various deep learning models
CO3	To put back to a new high dimensional data using reduction techniques
CO4	Analyze optimization and Generalization in deep learning
CO5	To develop various neural networks & deep learning
CO6	Implement various deep learning models

U18PECS042	ETHICAL HACKING	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Nil				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

This course gives to explore the concepts of security testing and the knowledge required to protect against the hacker and attackers.

UNIT I INTRODUCTION TO HACKING

Introduction to Hacking – Importance of Security – Elements of Security – Phases of an Attack – Types of Hacker Attacks– Vulnerability Research – Introduction to Footprinting – Information Gathering Methodology – Footprinting Tools – DNS Information Tools – Locating the Network Range

UNIT II SCANNING AND ENUMERATION

Introduction to Scanning – Objectives – Scanning Methodology – Tools – Introduction to Enumeration – Enumeration Techniques – Enumeration Procedure – Tools

UNIT III ARCHITECTURE

Architecture strategies for computer fraud prevention – Protection of Web sites – Intrusion detection system – NIDS, HIDS –Web Services– Reducing transaction risks

UNIT IV SYSTEM HACKING

Introduction – Cracking Passwords – Password Cracking Websites – Password Guessing – Password Cracking Tools – Password Cracking Countermeasures– Keyloggers and Spyware

UNIT V PENETRATION TESTING

Introduction – Security Assessments – Types of Penetration Testing- Phases of Penetration Testing – Penetration Testing Tools

REFERENCES

COURSE OUTCOMES (COs)	
CO1	To understand various hacking techniques and attacks.
CO2	To evaluate where information networks are most vulnerable.

CO3	To identify methods to gain access to systems
CO4	To assess and measure threats to information assets.
CO5	To remember the importance of information security
CO6	To illustrate the different phases in penetration testing.

U18PECS043	**WEB MINING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – DATA MINING				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To focus on a detailed overview of the data mining process and techniques, specifically those that are relevant to Web mining To Understand the basics of Information retrieval and Web search with special emphasis on web Crawling				

UNIT I INTRODUCTION

Introduction – Web Mining – Theoretical background –Algorithms and techniques – Association rule mining – Sequential Pattern Mining -Information retrieval and Web search – Information retrieval Models-Relevance Feedback- Text and Web page Pre-processing – Inverted Index – Latent Semantic Indexing – Web Search – Meta-Search – Web Spamming

UNIT II WEB CONTENT MINING

Web Content Mining – Supervised Learning – Decision tree - Naïve Bayesian Text Classification - Support Vector Machines - Ensemble of Classifiers. Unsupervised Learning - K-means Clustering - Hierarchical Clustering –Partially Supervised Learning – Markov Models - Probability-Based Clustering - Evaluating Classification and Clustering – Vector Space Model – Latent semantic Indexing – Automatic Topic Extraction - Opinion Mining and Sentiment Analysis - Document Sentiment Classification

UNIT III WEB LINK MINING

Web Link Mining – Hyperlink based Ranking – Introduction -Social Networks Analysis- Co-Citation and Bibliographic Coupling - Page Rank -Authorities and Hubs -Link-Based Similarity Search - Enhanced Techniques for Page Ranking - Community Discovery – Web Crawling -A Basic Crawler Algorithm- Implementation Issues- Universal Crawlers- Focused Crawlers- Topical CrawlersEvaluation - Crawler Ethics and Conflicts - New Developments

UNIT IV STRUCTURED DATA EXTRACTION

Structured Data Extraction: Wrapper Generation – Preliminaries- Wrapper Induction- Instance-Based Wrapper Learning ·- Automatic Wrapper Generation: Problems - String Matching and Tree Matching -. Multiple Alignment - Building DOM Trees - Extraction Based on a Single List Page and Multiple pages- Introduction to Schema Matching - Schema-Level Match - Domain and Instance-Level Matching – Extracting and Analyzing Web Social Networks.

UNIT V WEB USAGE MINING

Web Usage Mining - Click stream Analysis -Web Server Log Files - Data Collection and PreProcessing - Cleaning and Filtering- Data Modeling for Web Usage Mining - The BIRCH Clustering Algorithm -Affinity Analysis and the A Priori Algorithm – Binning. Discovery and Analysis of Web Usage Patterns – Modeling user interests –Probabilistic Latent Semantic Analysis – Latent Dirichlet Allocation Model– Applications- Collaborative Filtering-Recommender Systems – Web Recommender systems based on User and Item – PLSA and LDA Models

4. Min Song, Yi Fang and Brook Wu, Handbook of research on Text and Web mining technologies, IGI global, information Science Reference – imprint of :IGI publishing, 2008.

COURSE OUTCOMES:

CO1	Build a sample search engine using available open source tools
CO2	Identify the different components of a web page that can be used for mining
CO3	Apply machine learning concepts to web content mining
CO4	Implement Page Ranking algorithm and modify the algorithm for mining information
CO5	Design a system to harvest information available on the web to build recommender systems
CO6	Analyze social media data using appropriate data/web mining techniques

U18PECS044	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Nil				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	This course provides students with an opportunity to core skills for visual analysis. It also makes the students to know the basic core skills for visual analysis.				

UNIT I CORE SKILLS FOR VISUAL ANALYSIS 9

Information visualization – effective data analysis – traits of meaningful data – visual perception –making abstract data visible – building blocks of information visualization – analytical interaction – analytical navigation – optimal quantitative scales – reference lines and regions – trellises and crosstabs – multiple concurrent views – focus and context – details on demand – over-plotting reduction – analytical patterns – pattern examples.

UNIT II TIME-SERIES, RANKING, AND DEVIATION ANALYSIS 9

Time-series analysis – time-series patterns – time-series displays – time-series best practices – part-to-whole and ranking patterns – part-to-whole and ranking displays – best practices – deviation analysis – deviation analysis displays – deviation analysis best practices.

UNIT III DISTRIBUTION, CORRELATION, AND MULTIVARIATE ANALYSIS 9

Distribution analysis – describing distributions – distribution patterns – distribution displays – distribution analysis best practices – correlation analysis – describing correlations – correlation patterns – correlation displays – correlation analysis techniques and best practices – multivariate analysis – multivariate patterns – multivariate displays – multivariate analysis techniques and best practices.

UNIT IV INFORMATION DASHBOARD 9

Information dashboard – Introduction– dashboard design issues and assessment of needs – Considerations for designing dashboard-visual perception – Achieving eloquence.

UNIT V INFORMATION DASHBOARD DESIGN 9

Advantages of Graphics _Library of Graphs – Designing Bullet Graphs – Designing Sparklines – Dashboard Display Media –Critical Design Practices – Putting it all together- Unveiling the dashboard.

COURSE OUTCOMES (COs)	
CO1	To gain the knowledge about information visualization
CO2	Apply core skills for visual analysis
CO3	Apply visualization techniques for various data analysis tasks
CO4	Analysis the distribution, correlation and multivariate pattern and techniques
CO5	Understand the information regarding dashboard
CO6	Implement the Dashboard design concept in real world environment

U18PECS045	NETWORKED APPLICATIONS AND SERVICES	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Computer Networks				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	This course provides students to understand the concept of network management standards and to analyze the concept of examples of network management.				

UNIT 1: FOUNDATIONS: 9

Network management standards–network management model– organization model– information model abstract syntax notation 1 (ASN.1) – encoding structure– macros–functional model. Network management application functional requirements:Configuration management– fault management–performance management–Error correlation technology– security management– accounting management– common management–report management– polity based management–service level management–management service–community definitions– capturing the requirements– simple and formal approaches–semi formal and formal notations.

UNIT 2: COMMON MANAGEMENT INFORMATION SERVICE ELEMENT 9

CMISE model–service definitions–errors–scooping and filtering features– synchronization– functional units– association services– common management information protocol specification.

UNIT 3: INFORMATION MODELING FOR TMN 9

Rationale for information modeling–management information model–object oriented modeling paradigm– structure of management information–managed object class definition–management 24 information base.

UNIT 4: SIMPLE NETWORK MANAGEMENT PROTOCOL 9

SNMPv1: managed networks–SNMP models– organization model–information model– SNMPv2 communication model–functional model–major changes in SNMPv2–structure of

management information, MIB–SNMPv2 protocol– compatibility with SNMPv1– SNMPv3– architecture– applications–MIB security, remote monitoring–SMI and MIB– RMQN1 and RMON2.

UNIT 5: NETWORK MANAGEMENT EXAMPLES 9

ATM integrated local management interface–ATM MIB–M1– M2–M3– M4– interfaces–ATM digital exchange interface management–digita1 subscriber loop and asymmetric DSL technologies– ADSL configuration management–performance management Network management tools: Network statistics management–network management system–management platform case studies: OPENVIEW–ALMAP

2. Salah Aidarous& Thomas Plevyak, "Telecommunication Network Management: Technologies and Implementations" , Wiley,1997.

COURSE OUTCOMES (COs)	
CO1	Design and analyze of fault management.
CO2	Analyze the common management information protocol specifications
CO3	Design and analyze of management information model.
CO4	Design the simple network management protocol.
CO5	Design the various types of network management tools
CO6	Apply the network management concept in the real world environment.

U18PECS046	**SOFTWARE ANALYSIS AND TESTING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Software Engineering				
	Course Designed by – Department of Computer Science & Engineering				

OBJECTIVES	• Analyzing, Designing, Implementing and Testing programs using Object Oriented Technologies, in order to produce maintainable, high-quality, software applications. • Software quality attributes reliability, correctness, testability, maintainability, flexibility, portability, efficiency, integrity, usability, reusability, and interoperability.

UNIT I INTRODUCTION 9

Definition of Software- Types of software- Characteristics of Software- Attributes of good software- Software Engineering- Software engineering costs- Systems engineering & software Engineering- challenges facing software engineering, Rapid software development- Computer Aided Software Engineering- Agile methods.

UNIT II SYSTEM REQUIREMENTS 9

Requirements elicitation for medium-size applications-Requirements representation and analysis using flow-oriented and scenario-oriented notations-Architectural high-level design of software applications-Structural and behavioural design of software applications, using the Object Oriented paradigm.

UNIT III SOFTWARE DESIGN 9

Design concepts– Abstraction– Architecture– Patterns– Modularity– Cohesion– Coupling – Information hiding– Functional independence Refinement– Design of input and Control– Design of User Interface design – Design issues– Features of modern GUI - Menus, Scroll bars, windows ,Buttons, icons, panels, error Messages etc.

UNIT IV SOFTWARE TESTING 9

Introduction to testing design strategies – The smarter tester – Test case design strategies – Using black box approach to test case design – Random testing – Equivalence class partitioning – Boundary value analysis – Other black box test design approaches – Black box testing and COTS – Using white box approach to test design – Test adequacy criteria – Coverage and control flow graphs – Covering code logic – Paths – Their role in white box based test design – Additional white box test design approaches – Evaluating test adequacy criteria.

UNIT V LEVELS OF TESTING 9

The need for levels of testing – Unit test – Unit test planning – Designing the unit tests – The class as a testable unit – The test harness – Running the unit tests and recording results – Integration tests – Designing integration tests – Integration test planning – System test – The different types – Regression testing – Alpha, beta and acceptance tests.

TEXT BOOKS:

1. Software engineering a practitioner's approach, 7ªed. Roger Pressman. McGraw Hill Higher Education, 2010.

2. Paul C. Jorgensen, “Software Testing: A Craftsman's Approach”, Fourth Edition, 2013.

COURSE OUTCOMES (COs)	
CO1	To understand lifecycle models and Software Architecture.
CO2	To understand the principles involved in gathering and validating software requirements.
CO3	To analyze various software design architecture and Design pattterns .

CO4	To apply the Concepts and techniques for black-box and white-box testing.
CO5	To relationship between testing, software quality and other verification techniques.
CO6	To Understand different levels of testing.

PROGRAMME ELECTIVE-V

U18PECS051	**COGNITIVE MODELING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	PRE-REQUISITES: Artificial Intelligence, Expert System				
	Course Designed by – Dept. of Computer Science & Engineering				
OBJECTIVES	• To become familiar fundamentals of Cognitive science. • To get exposed to simple Inference rules and decision support system. • To design the applications				

UNIT – I INTRODUCTION TO COGNITIVE SCIENCE AND COGNITIVE COMPUTING WITH AI: 9

Cognitive Computing - Cognitive Psychology - The Architecture of the Mind - The Nature of Cognitive Psychology – Cognitive architecture – Cognitive processes – The Cognitive Modeling Paradigms - Declarative / Logic based Computational cognitive modeling – connectionist models – Bayesian models.

UNIT – II INTRODUCTION TO KNOWLEDGE-BASED AI AND FUZZY LOGIC 9

Introduction to Knowledge-Based AI – Human Cognition on AI – Cognitive Architectures, Fuzzy Grey cognitive maps – Dynamic Random fuzzy cognitive Maps

UNIT – III COGNITIVE COMPUTING WITH INFERENCE AND DECISION SUPPORT SYSTEMS 9

Intelligent Decision making - Fuzzy Cognitive Maps – Learning algorithms: Non-linear Hebbian Learning – Data driven NHL - Hybrid learning

UNIT – IV COGNITIVE COMPUTING WITH MACHINE LEARNING 9

Machine learning Techniques for cognitive decision making – Hypothesis Generation and Scoring - Natural Language Processing - Representing Knowledge - Taxonomies and

Ontologies - Deep Learning (11)

UNIT – V CASE STUDIES **9**

Cognitive Systems in health care – Cognitive Assistant for visually impaired – AI for cancer detection, Predictive Analytics - Text Analytics - Image Analytics -Speech Analytics – IBM Watson - Introduction to IBM's PowerAI Platform - Introduction to Google's TensorFlow Development Environment

TOTAL: 45 PERIODS

TEXTBOOK:

1. Hurwitz, Kaufman, and Bowles, "Cognitive Computing and Big Data Analytics", Wiley, Indianapolis, 2005.

2. Jerome R. Busemeyer, Peter D. Bruza, "Quantum Models of Cognition and Decision", Cambridge University Press, 2014.

3. Neil Stillings, Steven E. Weisler, Christopher H. Chase and Mark H. Feinstein, "Cognitive Science: An Introduction", MIT Press, 1995.

COURSE OUTCOMES (COs)	
CO1	Demonstrate the basics and fundamentals of cognitive science and cognitive computing
CO2	Apply knowledge based artificial methods and fuzzy models.
CO3	Implement the cognitive computing in machine learning algorithms.
CO4	Compare the basics of various decision support systems.
CO5	Develop various applications using IBM's PowerAI and Google's TensorFlow Development Environment
CO6	Develop Predictive Analytics in Text, Image and Speech.

U18PECS052	WEB SECURITY	L	T	P	C
	Total Contact Periods – 45	3	0	3	3
	Prerequisite – Computer Network				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	• To understand basics of Network Security and web security. • To be able to secure a message over insecure web channel by various means. • To learn about how to maintain the Confidentiality, Integrity and Availability of a web data. • To understand various protocols for web security to protect against the threats in the networks.				

UNIT I CRYPTOGRAPHY BASICS 9

Basic of Cryptography, secret key cryptography, Types of attack, Substitution ciphers, Transposition ciphers, block ciphers and steam ciphers, Confusion and Diffusion, Data encryption standard, round function, modes of operation, cryptanalysis, brute force attack, Security Goals (Confidentiality, Integrity, Availability).

UNIT I ALGORITHMSIN CRYPTOGRAPHY 9

Public key Cryptography, Modulo arithmetic, Greatest common divisor, Euclidean algorithm, RSA algorithm, hash function, attack on collision resistance, Diffie-Hellman key exchange, Digital signature standard, elliptic curve cryptography

.UNIT III AUTHENTICATION TECHNIQUES 9

One way Authentication, password based, certificate based, Mutual Authentication ,shared secret based, Asymmetric based, Authentication and key agreement, centralized Authentication, eavesdropping, Kerberos, IP security overview:- security association & Encapsulating security payload ,tunnel and transfer modes, internet key exchange protocol, Secure Socket Layer(SSL), Transport Layer Security (TLS).

UNIT IV SOFTWARE VULNERABILITIES 9

Phishing Attacks, buffer overflow vulnerability, Format String attack, Cross Site Scripting, SQL injection Attacks,IoTRansomewares, Email security:- Security services of E-mail ,Establishing keys, Privacy Authentication of the source, Message integrity ,Non-Repudiation, Viruses, Worms, Malware.

UNIT V WEB ISSUES 9

Introduction, Uniform Resource Locator/uniform resource identify, HTTP, Cookies, Web security problem, Penetration Testing, Firewalls:- functionality, Polices and Access Control, Packet filters, Application level gateway, Encrypted tunnel, Security architecture, Introduction to intrusion detection system.

TEXT BOOKS:

1. Bernard Menezes, " Network Security and Cryptography", CENGAGE Learning.

1. Randy Weaver, " Network Infrastructure Security", Cengage Learning.
2. AtualKahate, " Cryptography and Network Security", TMH.

3. William Stalling, " Cryptography and Network security", Pearson.

COURSE OUTCOMES (COs)	
CO1	Should be able to identify network security threats and determine efforts to counter them.
CO2	Should be able to write code for relevant cryptographic algorithms.
CO3	Should be able to write a secure access client for access to a server.
CO4	Should be able to send and receive secure mails.
CO5	Should be able to determine firewall requirements, and configure a firewall.
CO6	To understand Penetration Testing, Firewalls andits functionality.

	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Database Management System, Big data analytics				
	Course Designed by – Dept. of Computer Science and Engineering.				

OBJECTIVES

Develop in depth understanding of the key technologies in data analytics & Visualization: data mining, machine learning, visualization techniques, predictive modeling, and statistics.The basics of Analytics – Concepts, Data preparation, managing and analysis.

COURSE OUTCOMES (COs)	
CO1	Demonstrate knowledge of statistical data analysis techniques utilized in business decision making.
CO2	Apply principles of Data Science to the analysis of business problems
CO3	Use data mining software to solve real-world problems.
CO4	Employ cutting edge tools and technologies to analyze Big Data.
CO5	Demonstrate use of team work, leadership skills, decision making and organization theory.
CO6	Understand the need of data analytics and visualization techniques

UNIT- I INTRODUCTION TO DATA RETRIEVAL 9

Data Models-Data Storage and Querying-Big data analytics building blocks- -Data collection –- Simple storage- Database SQL, data cleaning, normalization, feature selection- Best Practices for Data Analytics - Decompositions and dimensionality reductionSVD and CUR

UNITIIDATAPREPROCESSING&MINING 9

Data cleaning – Data scraping - Data preprocessing-cleaning and summarization-Predictive analysis-supervised learning-Classification –Classification key concepts, KNN- Cross Validation-Decision tree- Regression - unsupervised-Clustering- K-mean, hierarchical clustering Association – apiriori Algorithm

UNIT-III STATISTICAL DATA ANALYSIS 9

Exploratory Data Analysis-Statistics-Correlation- Introduction to the R data analysis environment-analytic data sets – Analytic Methods –analytic tools – Cognos – Micro strategy - Pentaho. Analysis approaches – Statistical significance –business approaches – Analytic innovation – Traditional approaches – Iterative-Real time Analytics Platform(RTAP)applications.

UNIT IV – GRAPHAND TEXT NALYTICS 9

Graph Analytics- Centrality – Page rank Algorithm - Random Walks with Restarts - graph clustering methods(MinFcut, Spectral, Clustering)-Memory-mapping/virtual memory to scale up algorithm – Interactive Applications- Evaluating Apps– Text analytics concepts and applications.

UNIT- V VISUALIZATION 9

Visualization I:Visualizing to explore-Exploration in scale: Introduction to map reduce.Clustering high dimensional data Visualizations - Visual data analysistechniques, interaction techniques; Systems and applications - visualizing inferences and uncertainty

U18PECS054	DEEP LEARNING IN COMPUTER VISION	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Computer Vision				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

This course covers the basics of machine learning, neural networks and deep learning. Model for deep learning technique and the various optimization and generalization mechanisms are included. Major topics in deep learning and dimensionality reduction techniques are covered.

- To present mathematical, statistical and computational challenges of building neural networks
- To study the concepts of deep learning
- To introduce dimensionality reduction techniques
- To enable the students to know deep learning techniques to support real-time applications
- To examine the case studies of deep learning techniques

UNIT I INTRODUCTION **9**

Introduction to machine learning- Linear models (SVMs and Perceptrons, logistic regression)- Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates

UNIT II DEEP NETWORKS **9**

History of Deep Learning- A Probabilistic Theory of Deep Learning- Backpropagation and regularization, batch normalization- VC Dimension and Neural Nets-Deep Vs Shallow NetworksConvolutional Networks- Generative Adversarial Networks (GAN), Semi-supervised Learning

UNIT III DIMENTIONALITY REDUCTION **9**

Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures – AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyperparameter optimization

UNIT IV OPTIMIZATION AND GENERALIZATION **9**

Optimization in deep learning– Non-convex optimization for deep networks- Stochastic OptimizationGeneralization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM - Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience

UNIT V CASE STUDY AND APPLICATIONS 9

Imagenet- Detection-Audio WaveNet-Natural Language Processing Word2Vec - Joint DetectionBioInformatics- Face Recognition- Scene Understanding- Gathering Image Captions

COURSE OUTCOMES (COs)	
CO1	Understand the basics of deep learning concepts
CO2	Implement various deep learning models
CO3	To put back to a new high dimensional data using reduction techniques
CO4	Analyze optimization and Generalization in deep learning
CO5	To develop various neural networks & deep learning
CO6	To develop deep learning applications

U18PECS055	**HIGH PERFORMANCE COMPUTING ARCHITECTURES**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Cloud Computing, Grid Computing, Advanced Computer Architectu				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

The objective of this course is to introduce the design and fundamental computer architectures in high performance computing massively parallel processing (MPP) systems.

UNIT – 1 PARALLEL PROCESSING AND PIPELINING PROCESSING 9

Overview of parallel processing and pipelining processing, study and comparison of uni-processors and parallel processors, conventional and Explicitly Parallel Instruction Computing (EPIC) Architecture; Evolution of parallel processors, future trends and their architecture. Necessity of high performance, Constraints of conventional architecture, Parallelism in uni-processor system, Evolution of parallel processors, Architectural Classification, Applications of parallel processing, Instruction level Parallelism and Thread Level Parallelism.

UNIT – II SIMD and ARRAY PROCESSORS 9

Parallel computers-Taxonomy of parallel computing paradigms SIMD Computer Organization Masking and Data network mechanism, Interconnection networks of SIMD, Static Vs Dynamic network, cube hyper cube and Mesh Interconnection network.

Parallel Algorithms for Array Processors: Models of computation, Analysis of parallel Algorithms, Matrix Multiplication. Sorting, SIMD computer organization; Implementation issues of Matrix multiplication and sorting on array processor and their analysis, Distributed memory programming with MPI, Shared memory programming with open MP

UNIT – III HIGH PERFORMANCE COMPUTING (HPC) PARADIGMS 9

Introduction, Mainframe solution using HPC, Cluster computing architecture, Advanced cluster computing systems, Difference between Grid and Cluster; Grid Computing, Evolution of Grid Computing, Intelligent mainframe grid architecture, Design principle and goals of a grid system, Grid system architecture, Grid systems and applications; OSGI framework. Symmetric Multiprocessing (SMP), SMP and Cluster methods, Thread model, NUMA machines.

UNIT – IV CLOUD COMPUTING AND VIRTUALIZATION TECHNOLOGY

Introduction to cloud computing, definition, architecture-characteristics, cloud computing platforms, SaaS, PaaS, IaaS., Google app engine, Amazon EC2, Sharing-scaling-and-elasticity patterns, Reliability-resiliency-and-recovery patterns, Cloud service and storage security patterns. Virtualization technology-virtual machine technology, virtual machines and elastic computing, Desktop virtualization and application. Virtual server and Hypervisor connectivity and management patterns, Parallel computing, Parallel efficiency of Map-Reduce.

UNIT – V

ADVANCED COMPUTING

Introduction to Petascale computing, Introduction to supercomputers, ARM processor, Superscalar pipelining, Quantum computing, HPC in remote sensing, Load balancing over networks, VLSI models.

TOTAL NO OF PERIODS: 45

TEXT BOOKS:

3. Thomas Erl, Robert Cope and Amin Naserpour, Cloud Computing Design Patterns, Pearson Education, 2017.

4.

COURSE OUTCOMES (COs)

On completion of the course, the students will be able to	
CO1	Understand high performance computing
CO2	Understand models in parallel and distributed computing
CO3	Evaluate design and concepts in advanced computer architecture
CO4	Analyze parallel processing systems – optimization and operation
CO5	Understand advanced computing technologies
CO6	Design advanced computing technologies

U18PECS056	**BUSINESS INTELLIGENCE**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Software Engineering, Service Oriented Architectures				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

The student should be made to:

- Be exposed with the basic rudiments of business intelligence system
- understand the modeling aspects behind Business Intelligence
- understand of the business intelligence life cycle and the techniques used in it
- Be exposed with different data analysis tools and techniques

UNIT I BUSINESS INTELLIGENCE **9**

Effective and timely decisions – Data, information and knowledge – Role of mathematical models – Business intelligence architectures: Cycle of a business intelligence analysis – Enabling factors in business intelligence projects – Development of a business intelligence system – Ethics and business intelligence.

UNIT II KNOWLEDGE DELIVERY **9**

The business intelligence user types, Standard reports, Interactive Analysis and Ad Hoc Querying, Parameterized Reports and Self-Service Reporting, dimensional analysis, Alerts/ Notifications, Visualization: Charts, Graphs, Widgets, Scorecards and Dashboards, Geographic Visualization, Integrated Analytics, Considerations: Optimizing the Presentation for the Right Message.

UNIT III EFFICIENCY **9**

Efficiency measures – The CCR model: Definition of target objectives- Peer groups – Identification of good operating practices; cross efficiency analysis – virtual inputs and outputs – Other models. Pattern matching – cluster analysis, outlier analysis

UNIT IV BUSINESS INTELLIGENCE APPLICATIONS **9**

Marketing models – Logistic and Production models – Case studies.

UNIT V FUTURE OF BUSINESS INTELLIGENCE **9**

Future of business intelligence – Emerging Technologies, Machine Learning, Predicting the Future, BISearch & Text Analytics – Advanced Visualization – Rich Report, Future beyond Technology.

COURSE OUTCOMES:

At the end of the course the students will be able to

CO1	Explain the fundamentals of business intelligence.
CO2	Link data mining with business intelligence.
CO3	Apply various modeling techniques.
CO4	Explain the data analysis and knowledge delivery stages.
CO5	Apply business intelligence methods to various situations.
CO6	Decide on appropriate technique.

PROGRAMME ELECTIVE-VI

U18PECS061	AUGMENTED REALITY	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Artificial Intelligence, Expert Systems				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	This course is designed to introduce some of the problems and solutions of Virtual Reality and Augmented Reality, and their applications.				

UNIT I INTRODUCTION 9

The three I's of virtual reality-commercial VR technology and the five classic components of a VR system - Input Devices: (Trackers, Navigation, and Gesture Interfaces): Three-dimensional position trackers, navigation and manipulation-interfaces and gesture interfaces-Output Devices: Graphics displays-sound displays & hapticfeedback.

UNIT II CONTENT CREATION CONSIDERATIONS FOR AR 9

Augmented and Mixed Reality, Taxonomy, technology and features of augmented reality, difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, visualization techniques for augmented reality.

UNIT III DEVELOPMENT PROCESS 9

Geometric modeling - kinematics modeling- physical modeling - behaviour modeling - model Management.

UNIT IV AR ON THE WEB &AR ONTHE MOBILE 9

JS-pros and cons-building blocks (WebVR, WebGL, Three.js, device orientation events)-frameworks, mobile device configuration, building to android-cameras and interaction-teleporting-spatial audio-Assessing human parameters-device development and drivers-Design Haptics.

UNIT V APPLICATIONS 9

Medical applications-military applications-robotics applications- Advanced Real time Tracking- other applications- games, movies, simulations, therapy.

TEXT BOOKS:

1. Augmented Reality: Principles and Practice (Usability) by Dieter Schmalstieg& Tobias Hollerer, Pearson Education (US), Addison-Wesley Educational Publishers Inc, New Jersey, United States, 2016. ISBN:9780321883575
2. C.Burdea&PhilippeCoiffet,―VirtualRealityTechnology‖,SecondEdition,Gregory,John Wiley & Sons,Inc.,2008
3. Jason Jerald. 2015. The VR Book: Human-Centred Design for Virtual Reality. Association for Computing Machinery and Morgan & Claypool, New York, NY,USA.

2. The Fourth Transformation: How Augmented Reality & Artificial Intelligence Will Change Everything, Robert Scoble&Shel Israel, Patrick Brewster Press; 1 edition,2016.
3. Learning Virtual Reality: Developing Immersive Experiences and Applications for Desktop, Web, and Mobile, Tony Parisi, O'Reilly Media; 1 edition,2015.
4. Programming 3D Applications with HTML5 and WebGL: 3D Animation and Visualization for Web Pages, Tony Parisi, O'Reilly Media; 1 edition,2014.
5. Learning Three.js: The JavaScript 3D Library for WebGL - Second Edition, Jos Dirksen, Packt Publishing - ebooks Account; 2nd Revised ed. Edition2015.

COURSE OUTCOMES (COs)	
CO1	To understand virtual reality, augmented reality and using them to build engineering applications
CO2	To develop software that reflects fundamental techniques for the design and deployment of AR experiences.
CO3	To Analyse& Design a system or process to meet given specifications with realistic engineering constraints.
CO4	Identify and examine state-of-the-art AR design problems and solutions from the industry and academia.
CO5	To develop AR applications with betteroptimality
CO6	To evaluate the benefits and drawbacks of specific VR techniques on the human body.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

COs	**Programme Outcomes(POs)**											
	a	b	c	d	e	f	g	h	i	j	k	l

CO4	H	H	H	H	H				H			M
CO5	H	H	H	H	H				H			M
CO6	H	H	H	H	H				H			M

UNIT I INTRODUCTION TO BLOCKCHAIN AND HOW TO STORE AND USE 9

Block chain Achieves and How to Store and Use Decentralization-Centralization vs. Decentralization-Distributed consensus, Consensus with- out identity using a blockchain, Incentives and proof of work. Simple Local Storage, Hot and Cold Storage, Splitting and Sharing Keys, Online Wallets and Exchanges, Payment Services, Transaction Fees, Currency Exchange Markets.

UNIT II INTRODUCTION TO CRYPTOGRAPHY AND MECHANICS OF BITCOIN 9

Cryptographic Hash Functions, Hash Pointers and Data Structures, Digital Signatures, Public Keys as Identities, A Simple Cryptocurrency. Bitcoin transactions, Bitcoin Scripts, Applications of Bitcoin scripts, Bitcoin blocks, The Bit- coin network, Limitations and improvements.

.UNIT III BITCOIN MINING AND BITCOIN AND ANONYMITY 9

The task of Bitcoin miners, Mining Hardware, Energy consumption and ecology, Mining pools, Mining incentives and strategies.Anonymity Basics, How to De-anonymizeBitcoin, Mixing, Decentralized Mixing, Zerocoin and Zerocash.

UNIT IV COMMUNITY, POLITICS, AND REGULATION 9

Consensus in Bitcoin, Bitcoin Core Software, Stakeholders: Who‟s in Charge, Roots of Bitcoin, Governments Notice on Bitcoin, Anti Money Laundering Regulation, New York‟s Bit License Proposal. Bitcoin as a Platform: Bitcoin as an Append only Log, Bitcoins as Smart Property, Secure Multi Party Lotteries in Bitcoin, Bitcoin as Public Randomness, Source-Prediction Markets, and Real World Data Feeds.

UNIT V ALTCOINS AND THE CRYPTOCURRENCY ECOSYSTEM 9

Altcoins: History and Motivation, A Few Altcoins in Detail, Relationship Between Bitcoin and Altcoins, Merge Mining-Atomic Crosschain Swaps-6 BitcoinBackedAltcoins, Side Chains, Ethereum and Smart Contracts.

Text Book(s)

1. Narayanan, A., Bonneau, J., Felten, E., Miller, A., and Goldfeder, S. (2016). Bitcoin and cryptocurrency technologies: a comprehensive introduction. Princeton University Press.

2. Franco, P. (2014). Understanding Bitcoin: Cryptography, engineering and economics. John Wiley and Sons.William Stalling, “ Cryptography and Network security”, Pearson.

COURSE OUTCOMES (COs)	
CO1	Should be able to understand the mechanism of Blockchain and Cryptocurrency
CO2	To understand the functionality of current implementation of blockchain technology.
CO3	To understand the required cryptographic background.
CO4	To explore the applications of Blockchain to cryptocurrencies and understanding limitations of current Blockchain
CO5	To gain knowledge about various operations associated with the life cycle of Blockchain and Cryptocurrency
CO6	To demonstrate the general ecosystem of several Cryptocurrency

U18PECS063	**BIG DATA FOR HEALTHCARE**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Data Structures and algorithms				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

- To understand the basics of data analytics in Healthcare system
- To learn how to utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces.
- To design, implement and deploy mobile applications using an appropriate software development environment.

UNIT IINTRODUCTIONTO BIG DATA IN HEALTHCARE SYSTEM 9

Basics of data analysis for the healthcare system – Health data standards - Healthcare Data Acquisition and Management - Applied Statistics for Healthcare Analytics - Quantitative Methods in Healthcare Management - Data Mining for Healthcare Analytics - Systems Medicine for Predictive Analytics

UNIT-II HDFS, HADOOP AND HADOOP INFRASTRUCTURE 9

Hadoop and Databases - Typical Datacenter Architecture - Adding Hadoop to the Mix - Key Benefit -· Flexibility: Complex Data Processing - HDFS - Hadoop Infrastructure -Architecture – Different in Data Model and Computing Model – HDFS Files and Blocks , Components of HDFS - Hadoop framework - HDFS-Map Reduce Framework-Data Loading techniques-Hadoop Cluster Architecture-Hadoop Configuration files-Hadoop Cluster modes-Single Node-Multi Node-Fully distributed node.

UNIT-III HADOOP MAP REDUCE FRAMEWORK 9

Relationship between MapReduce and HDFS- Relationship between MapReduce and HDFS-Clients, Data Nodes, and HDFS Storage - MapReduce workloads. Hadoop framework- Hadoop data types-Hadoop map reduce Paradigm-Map and Reduce Tasks-Map reduce Execution framework-Partitioners and Combiners-Input formats (Input Splits and Records, Text Input, Binary Input, Multiple Inputs)- Output Formats (TextOutput, BinaryOutPut, Multiple Output)-Hadoop Mapreduce programming-Advanced Map reduce concepts- Counters, Custom Writables-Unit testing framework-Error Handling-Tuning-Advanced Map reduce.

UNIT-IVHADOOP IMPLEMENTATION AND HADOOP ECO SYSTEM TOOLS9

Hadoop Implementation - · Job Execution - · Hadoop Data Types - · Job Configurations - · Input and Output Formats ECO system tools- Pig's Data Model, Pig Latin, Developing & Testing Pig Latin Scripts- Writing Evaluation, Filter, Load & Store Functions-Hive- Hive Architecture- Comparison with Traditional Database- HiveQL: Data Types, Operators and Functions- Hive Tables- Querying Data-Advance Hive, NoSQL Databases -HBase-Loading Data in Hbase-Querying Data in Hbase

UNIT-V HADOOP PROJECT ENVIRONMENT 9

HBase: Introduction to HBase, Client API's and their features, Available Client, HBase

Architecture, MapReduce Integration. HBase: Advanced Usage, Schema Design, Advance Indexing, Coprocessors, Hadoop 2.0- MRv2 –YARNNameNode High Availability, HDFS Federation, MRv2, YARN, Running MRv1 in YARN, Upgrade your existing MRv1 code to MRv2, Programming in YARN framework-cover Apache Oozie Workflow Scheduler for Hadoop

2.**http://www.mosaic.geo-strategies.com/wp-content/uploads/2013/10/Big-Data-for-Dummies.pdf**

COURSE OUTCOMES (COs)	
CO1	Understand the key issues in big data management in healthcare applications
CO2	Design, implement and deploy mobile applications using an appropriate software development environment.
CO3	Understand rapid prototyping techniques.
CO4	Develop sophisticated mobile interfaces.
CO5	Acquire fundamental enabling techniques and scalable algorithms like Hadoop
CO6	Develop applications for current and emerging mobile computing devices, performing tasks at all stages of the software development life-cycle.

U18PECS064	**MEDICAL IMAGING AND INVERSE PROBLEM**	**L**	**T**	**P**	**C**

	Total Contact Hours: 45	3	0	0	3
	Prerequisite: IMAGE PROCESSING,DIGITAL SIGNAL PROCESSING				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

To provide an in-depth knowledge about Medical image processing that requires a comprehensive environment for data access, analysis, processing, visualization, and algorithm development.

UNIT I INTRODUCTION 9

Introduction to Medical Imaging Technology, Systems, and Modalities- Brief history importance, applications, trends, challenges- Medical Image Formation Principles: X-Ray physics, Basic principles of CT, artifacts, CT hardware, Magnetic Resonance Imaging (MRI), Mathematics of MRI, NMR Spectroscopy Imaging Principles and Hardware, Image artifacts

UNIT II IMAGE ENHANCEMENT AND IMAGE RESTORATION9

Basic gray level transformation - Histogram equalization and histogram matching - Image smoothening, Image sharpening, both spatial and frequency domain - Color image Processing color models, Pseudo color image processing - Image degradation models, restoration - mean filter, order statistics filter, adaptive filters

UNIT III MEDICAL IMAGE ANALYSIS9

Medical Image Segmentation- Region based Segmentation, Edge based Segmentation, Model based Segmentation, Multi scale segmentation and semi-automated Segmentation, Clustering based methods - Classification based methods- Medical Image Registration- Cost functionalities and Optimization Techniques.

UNIT IV INTRODUCTION TO INVERSE PROBLEMS 9

Examples of direct (forward) problems: deterministic and statistical point of view - The deconvolution problem: An Illustrative example - Truncated Fourier decomposition (TFD); Regularization parameter selection - Bayesian perspective Iterative optimization - Optimization algorithms: smooth convex objective functions, non-smooth convex objective functions

UNIT V REGULARIZATION OF LINEAR OPERATORS IN FUNCTION SPACES 9

Singular value decomposition (SVD) - Least squares solution; Mooren - Penrose pseudo inverse - Geometry of a linear inverse problem - Minimization of quadractic functionals - Regularization theory : Tickhonov regularization - Truncated SVD - Generalized Tikhonov /Bayesian regularization - Examples of inverse problems : Image denoising, X-ray tomography.

COURSE OUTCOMES (COs)	
CO1	To learn medical image fundamentals and processing techniques
CO2	Describe the various image enhancement and image restoration techniques
CO3	To learn various segmentation, classification and clustering methods in Medical Image processing.
CO4	To learn the fundamentals of inverse problems in medical imaging
CO5	To apply Optimization algorithmsin medical imaging techniques
CO6	To evaluate linear operators in function spaces for inverse problems

	HIGH PERFORMANCE COMPUTING TOOLS AND APPLICATIONS	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – High Performance Computing				
	Course Designed by – Dept. of Computer Science & Engineering				

OBJECTIVES

This course helps students to study parallel models of computation such as dataflow, and demand-driven computation.

- Introduce the fundamentals of high performance computing with the graphics processing units and many integrated cores using their architectures and corresponding programming environments.
- Introduce the learner to fundamental and advanced parallel algorithms through basic techniques.
- Provide systematic and comprehensive treatment of the components in the pipeline that extract

instruction level parallelism.

UNIT -1 Introduction: Computational Science and Engineering 9

Computational Science and Engineering: Computational Science and Engineering Applications; characteristics and requirements, Review of Computational Complexity, Performance: metrics and measurements, Granularity and Partitioning, Locality: temporal/spatial/stream/kernel, Basic methods for parallel programming, Real-world case studies (drawn from multiscale, multi-discipline applications)

Unit-2 High-End Computer Systems 9

Memory Hierarchies, Multi-core Processors: Homogeneous and Heterogeneous, Shared-memory Symmetric Multiprocessors, Vector Computers, Distributed Memory Computers, Supercomputers and Petascale Systems, Application Accelerators / Reconfigurable Computing, Novel computers: Stream, multithreaded, and purpose-built

Unit-3 Parallel Algorithms 9

Parallel models: ideal and real frameworks, Basic Techniques: Balanced Trees, Pointer Jumping, Divide and Conquer, Partitioning, Regular Algorithms: Matrix operations and Linear Algebra, Irregular Algorithms: Lists, Trees, Graphs, Randomization: Parallel Pseudo-Random Number Generators, Sorting, Monte Carlo techniques

Unit-IV Parallel Programming 9

Revealing concurrency in applications, Task and Functional Parallelism, Task Scheduling, Synchronization Methods, Parallel Primitives (collective operations), SPMD Programming (threads, OpenMP, MPI), I/O and File Systems, Parallel Matlabs (Parallel Matlab, Star-P, Matlab MPI), Partitioning Global Address Space (PGAS) languages (UPC, Titanium, Global Arrays)

Unit-5 Achieving Performance 9

Measuring performance, Identifying performance bottlenecks, Restructuring applications for deep memory hierarchies, Partitioning applications for heterogeneous resources, using existing libraries, tools, and frameworks

4. Petascale Computing: Algorithms and Applications, David A. Bader (Ed.), Chapman & Hall/CRC Computational Science Series, © 2007.

COURSE OUTCOMES (COs)	
CO1	To understand the basics on parallel processing concepts.
CO2	Implement high performance versions of standard single threaded

	algorithms
CO3	Extract maximum performance in a multicore, shared memory execution environment processor.
CO4	Design and deploy large scale parallel programs on tightly coupled parallel systems using the message passing paradigm
CO5	Gain experience with leading-edge performance analysis tools.
CO6	Learn the consistency problems in multiprocessors, and their existing solutions

U18PECS066	**ENTERPRISE APPLICATION INTEGRATION**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Software Architecture Design				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

- Describe approaches to enterprise application integration
- Understand the integration middleware
- Evaluate the integration approaches suitable for a given problem

UNIT I INTRODUCTION **9**

Requirements for EAI - Challenges in EAI – Integration with legacy systems – Integration with partners - Heterogeneous environment – Implementation approaches – Web services, messaging, ETL, direct data integration – Middleware requirements – Approaches to integration – services oriented and messaging.

UNIT II INTEGRATION PATTERNS **9**

Introduction to integration patterns – Architecture for application integration – Integration patterns – Point to point, broker, message bus, publish/subscribe, Challenges in performance, security, reliability - Case studies

UNIT III SERVICE ORIENTED INTEGRATION **9**

Business process integration - Composite applications-services – Web services – Service choreography and orchestration - Business process modeling - BPMN, Business process execution - BPEL – Middleware infrastructure - Case studies

UNIT IV MESSAGING BASED INTEGRATION **9**

Messaging – Synchronous and asynchronous – Message structure – Message oriented middleware – Reliability mechanisms – Challenges – Messaging infrastructure – Java Messaging Services – Case studies

UNIT V ENTERPRISE SERVICE BUS **9**

Enterprise Service Bus – routing, scalable connectivity, protocol and message transformations, data enrichment, distribution, correlation, monitoring – Deployment configurations – Global ESB, Directly connected, Federated, brokered ESBs – Application server based – Messaging system based – Hardware based ESBs – Support to SOA, message based and event based integrations - Case studies.

TOTAL: 45 PERIODS

COURSE OUTCOMES:

CO1	Describe different approaches to integration enterprise applications
CO2	Analyze specifications and identify appropriate integration approaches
CO3	Upon Completion of the course, the students will be able to
CO4	Develop a suitable integration design for a given problem
CO5	Identify appropriate integration middleware for a given problem
CO6	Evaluate the integration approaches against specified requirements

OPEN ELECTIVE

U18OECS001	**MOBILE APPLICATION DEVELOPMENT**	**L**	**T**	**P**	**C**
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Nil				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

This course is concerned with the development of applications on mobile and wireless compu platforms. Android will be used as a basis for teaching programming techniques and design patt related to the development of standalone applications and mobile portals to enterprise and commerce systems. Emphasis is placed on the processes, tools and frameworks required to deve applications for current and emerging mobile computing devices.

UNIT- I INTRODUCTION 9

Introduction to Android: The Android Platform, Android SDK, Eclipse Installation, Android Installation, Building you First Android application, Understanding Anatomy of Android Application, Android Manifest file.

UNIT –II ANDROID APPLICATIONS 9

Android Application Design Essentials: Anatomy of an Android applications, Android terminologies, Application Context, Activities, Services, Intents, Receiving and Broadcasting Intents, Android Manifest File and its common settings, Using Intent Filter, Permissions.

UNIT-III USER INTERFACE 9

Android User Interface Design Essentials: User Interface Screen elements, Designing User Interfaces with Layouts, Drawing and Working with Animation.

UNIT- IV TESTING AND DEPLOYMENT 9

Testing Android applications, Publishing Android application, Using Android preferences, Managing Application resources in a hierarchy, working with different types of resources.

UNIT- V ANDROID API 9

Using Common Android APIs: Using Android Data and Storage APIs, Managing data using Sqlite, Sharing Data between Applications with Content Providers, Using Android Networking APIs, Using Android Web APIs, Using Android Telephony APIs, Deploying Android Application to the World.

COURSE OUTCOMES (COs)	
CO1	Identify various concepts of mobile programming that make it unique from programming for other platforms.
CO2	Critique mobile applications on their design pros and cons.
CO3	Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces.
CO4	Program mobile applications for the Android operating system that use basic and advanced phone features.
CO5	Deploy applications to the Android marketplace for distribution.

CO6	To apply Managing data using Sqlite and Sharing Data between Applications with Content Providers.

	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Nil				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

The overall aim of the course is to provide an understanding of Methods, techniques and tools modeling, simulation and performance analysis of complex systems such as communication computer networks.

UNIT-I OVERVIEW OF PERFORMANCE EVALUATION 9

Need for Performance Evaluation in Computer Systems – Overview of Performance Evaluation Methods – Introduction to Queuing – Probability Review – Generating Random Variables for Simulation – Sample Paths, Convergence and Averages – Little's Law and other Operational Laws – Modification for Closed Systems.

UNIT-II MARKOV CHAINS AND SIMPLE QUEUES 9

Discrete-Time Markov Chains – Ergodicity Theory – Real World Examples – Google, Aloha – Transition to Continuous-Time Markov Chain – M/M/1 and PASTA.

UNIT-III MULTI-SERVER AND MULTI-QUEUE SYSTEMS 9

Server Farms: M/M/k and M/M/k/k – Capacity Provisioning for Server Farms – Time Reversibility and Burke's Theorem – Networks of Queues and Jackson Product Form – Classed and Closed Networks of Queues.

UNIT-IV REAL-WORLD WORKLOADS 9

Case Study of Real-world Workloads – Phase-Type Distributions and Matrix-Analytic Methods – Networks with Time-Sharing Servers – M/G/1 Queue and the Inspection Paradox – Task Assignment Policies for Server Farms.

UNIT-V SMART SCHEDULING IN THE M/G/1 9

Performance Metrics – Scheduling Non-Preemptive and Preemptive Non-Size-Based Policies - Scheduling Non-Preemptive and Preemptive Size-Based Policies – Scheduling - SRPT and Fairness.

COURSE OUTCOMES (COs)	
CO1	Define basic concepts in modeling and simulation (M&S)
CO2	Classify various simulation models and give practical examples for each category
CO3	Construct a model for a given set of data and motivate its validity
CO4	Generate and test random number varieties and apply them to develop simulation models.
CO5	Analyze output data produced by a model and test validity of the model.
CO6	To apply Performance Metrics and Non-Preemptive and Preemptive Scheduling

	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Nil				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

The objective of Web Services is Build web based application using sockets.

UNIT I SCRIPTING

Web page Designing using HTML, Scripting basics- Client side and server side scripting. Java Script-Object, names, literals, operators and expressions- statements and features- events - windows - documents - frames - data types - built-in functions- Browser object model - Verifying forms.-HTML5- CSS3- HTML 5 canvas - Web site creation using tools.

UNIT II JAVA

Introduction to object oriented programming-Features of Java – Data types, variables and arrays – Operators – Control statements – Classes and Methods – Inheritance. Packages and Interfaces –Exception Handling – Multithreaded Programming – Input/Output – Files – Utility Classes – String Handling.

UNIT III JDBC

JDBC Overview – JDBC implementation – Connection class – Statements - Catching Database Results, handling database Queries. Networking– InetAddress class – URL class- TCP sockets

- UDP sockets, Java Beans –RMI.

UNIT IV APPLETS

Java applets- Life cycle of an applet – Adding images to an applet – Adding sound to an applet. Passing parameters to an applet. Event Handling. Introducing AWT: Working with Windows Graphics and Text. Using AWT Controls, Layout Managers and Menus. Servlet – life cycle of a servlet. The Servlet API, Handling HTTP Request and Response, using Cookies, Session Tracking. Introduction to JSP.

UNIT V XML AND WEB SERVICES

Xml – Introduction-Form Navigation-XML Documents- XSL – XSLT- Web services-UDDI-WSDL-Java web services – Web resources.

COURSE OUTCOMES (COs)	
CO1	To understand the concept of Web Application Development and its Architecture.
CO2	To understand the Essentials of Web Application Development.
CO3	To understand and practice web page designing techniques.
CO4	To understand and practice embedded dynamic scripting on client side Internet Programming.
CO5	To understand the differences between client side & server side technologies to develop Web Application
CO6	To apply XML and Web Services concepts.

	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Nil				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

This course gives to explore the concepts of the concepts of virtual Reality systems and its Applications. Basic virtual Reality systems functions(operations) virtual Reality design considerations

UNIT I INTRODUCTION **9**

Virtual Reality & Virtual Environment : Introduction – Computer graphics – Real time computer graphics – Flight Simulation – Virtual environments –requirement – benefits of virtual reality- 3D Computer Graphics : Introduction – The Virtual world space – positioning the virtual observer – the perspective projection – Human vision – stereo perspective projection – 3D clipping – Colour theory – Simple 3D modeling – Illumination models – Reflection models – Shading algorithms.

UNIT II GEOMETRIC MODELING GEOMETRICAL TRANSFORMATIONS GEOMETRIC MODELING: **9**

Introduction – From 2D to 3D – 3D space curves – 3D boundary representation - Geometrical Transformations: Introduction – Frames of reference – Modeling transformations – Instances – Picking – Flying – Scaling the VE – Collision detection - A Generic VR system: Introduction – The virtual

UNIT III ANIMATING THE VIRTUAL ENVIRONMENT: **9**

Introduction – The dynamics of numbers – Linear and Non-linear interpolation - The animation of objects – linear and non-linear translation - shape & object inbetweening – freeform deformation – particle system- Physical Simulation : Introduction – Objects falling in a graphical field –Rotating wheels – Elastic collisions – projectiles – simple pendulum – springs – Flight dynamics of an aircraft

UNIT IV VR HARDWARES & SOFTWARES **9**

Human factors : Introduction – the age- the ear- the somatic senses - VR Hardware : Introduction – sensor hardware – Head-coupled displays –Aquatic hardware – Integrated VR systems-VR Software: Introduction – Modeling virtual world –Physical simulation- VR toolkits – Introduction to VRML.

UNIT V VR APPLICATION **9**

Introduction – Engineering – Entertainment – Science – Training – The Future: Introduction – Virtual environments – modes of interaction

COURSE OUTCOMES (COs)	
CO1	To learn The basic of virtual Reality systems.
CO2	The concepts of virtual Reality systems and its applications.
CO3	Basic virtual Reality systemsfunctions(operations) virtual Reality design considerations.
CO4	Integration of Hardware and software in virtual Reality applications.
CO5	Virtual Reality design considerations.
CO6	Integration of Hardware and software in virtual Reality applications.

Mapping of Course Outcomes with PROGRAMME OUTCOMES(POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low												
COs	**Programme Outcomes(POs)**

	Prerequisite: Nil				
	Course Designed by : Dept. of Computer Science and Engineering				

OBJECTIVES

This course Discuss the current drivers and inhibitors facing the business world in adopting using Ecommerce.

UNIT-I ELECTRONIC COMMERCE 9

Electronic Commerce, Electronic Data Interchange (EDI), E-Commerce Types – PC and networking: Networking, Communication media – Computer Communication Systems: ISO model, Electronic mail, X.400 Message Handling System, E-mail security, Lightweight directory access protocol – Internet: Introduction, Communication protocols, Issues of concern.

UNIT-II ELECTRONIC DATA INTERCHANGE 9

EDI: Introduction, Cost and Benefits, Components of EDI System, Implementation Issues – UN/EDIFACT Standard: Introduction, An EDIFACT Message, Interchange Structure,

Message Directories - EDI Over Internet, Commerce Over Extranets, Identification and Tracking Tools.

UNIT-III BUSINESS PROCESS REENGINEERING 9

Business process reengineering – Approach to BPR, BPR methodology – Change management: Change management in the Government, Implementation plan.

CONCERNS FOR E-COMMERCE GROWTH

Legal issues, Risks: Paper document versus electronic document, Technology for authenticating an electronic document, Laws for e-commerce, EDI interchange agreement.

UNIT-IV CYBER SECURITY 9

Cyber Attacks, Hacking, Firewalls, IDS, Secure Sockets Layer, Symmetric and asymmetric crypto systems, Guidelines for Cryptography Policy, Developing a Security Policy.

CYBER CRIMES: Cybercrimes and the Information Technology Act, 2000, Cyber forensics

UNIT-V CASE STUDIES 9

E-Commerce: Case Studies: ITC's e-Choupal - E-Governance: Case Studies: Indian customs EDI System, Indian Railways, Government of Andhra Pradesh – eSeva.

COMPUTER EMERGENCY RESPONSE TEAM (CERT): Introduction, CERT-In, CERT-In Activities.

2. David Whitley, "E-Commerce: Strategy, Technologies and applications", McGraw Hill, 2000.

COURSE OUTCOMES (COs)	
CO1	Create and refine website and application designs based on industry's usability.
CO2	Assess the suitability of various design principles for websites and applications.
CO3	Apply the skills necessary for large-scale project development on the Web.
CO4	Apply the technologies required to design and prototype Web-based information system
CO5	Recognize the business impact and potential of E-Commerce.
CO6	To analyze various case studies in electronic commerce.

LIST OF PROFESSIONAL ELECTIVES

Professional Elective –I

S. NO	Course Code	Specialization	Course Title		L	T	P	C
1	U18PEEC011	Communication Engineering	Information Theory and Coding		3	0	0	3
2	U18PEEC012	Signal processing	Speech and Audio Processing		3	0	0	3
3	U18PEEC013	Networking	Cellular Mobile Communication		3	0	0	3
4	U18PEEC014	VLSI design	FPGA and System on Chip Design		3	0	0	3
5	U18PEEC015	Embedded system	Design of Semiconductor Memories		3	0	0	3
6	U18PEEC016	Signal processing	Mixed Signal Design		3	0	0	3

Professional Elective –II

S. NO	Course Code	Specialization	Course Title	L	T	P	C
1	U18PEEC021	Communication Engineering	Error Correcting Codes	3	0	0	3
2	U18PEEC022	Networking	Wireless Communication Networks	3	0	0	3
3	U18PEEC023	Networking	Wireless Sensor Networks	3	0	0	3
4	U18PEEC024	Embedded system	ASIC Design	3	0	0	3
5	U18PEEC025	VLSI design	Testing and Verification of Electronic Circuits	3	0	0	3
6	U18PEEC026	Signal processing	Statistical Signal Processing	3	0	0	3

Professional Elective –III

S. NO	Course Code	Specialization	Course Title	L	T	P	C
1	U18PEEC031	Communication Engineering	Cognitive radio	3	0	0	3
2	U18PEEC032	Communication Engineering	Ultra-wideband Communication	3	0	0	3
3	U18PEEC033	Networking	Broadband Network	3	0	0	3
4	U18PEEC034	Networking	Network Services	3	0	0	3
5	U18PEEC035	Embedded Systems	Internet of Things and Machine learning	3	0	0	3
6	U18PEEC036	VLSI design	System Modeling and Design	3	0	0	3
7	U18PEEC037	Signal Processing	Adaptive Signal Processing	3	0	0	3

Professional Elective -IV

S. NO	Course Code	Specialization	Course Title	L	T	P	C
1	U18PEEC041	Communication Engineering	Cryptography and Network Security	3	0	0	3
2	U18PEEC042	Networking	Routing Protocols	3	0	0	3
3	U18PEEC043	Embedded Systems	Robotics and Automation	3	0	0	3
4	U18PEEC044	VLSI Design	Nano Electronics	3	0	0	3
5	U18PEEC045	Signal Processing	Wavelets	3	0	0	3
6	U18PEEC046	Signal Processing	Pattern Recognition and Neural Networks	3	0	0	3

Professional Elective -V

S. NO	Course Code	Specialization	Course Title	L	T	P	C
1	U18PEEC051	Communication Engineering	Satellite Communication	3	0	0	3
2	U18PEEC052	Networking	High Performance Communication and Networks	3	0	0	3
3	U18PEEC053	Embedded System	Real Time Systems	3	0	0	3
4	U18PEEC054	VLSI design	Digital Hardware Design	3	0	0	3
5	U18PEEC055	Signal Processing	Medical Image Processing	3	0	0	3
6	U18PEEC056	Signal processing	Digital Image & Video Processing	3	0	0	3

Professional Elective -VI

S. NO	Course Code	Specialization	Course Title	L	T	P	C
1	U18PEEC061	Communication Engineering	RF Communication Circuits	3	0	0	3
2	U18PEEC062	Communication Engineering	Telecom Networks	3	0	0	3
3	U18PEEC063	Networking	Wireless Adhoc Networks	3	0	0	3
4	U18PEEC064	Embedded system	Embedded C and LINUX	3	0	0	3
5	U18PEEC065	VLSI design	High Speed Electronics	3	0	0	3
6	U18PEEC066	Signal processing	Multimedia Compression and Communication	3	0	0	3

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMES
ALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18oeBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations
20 U18OECE003-Road Safety
21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics
38. U18OEAE003- Unmanned Aerial Vehicle

39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion
41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance
43. U18OEEE003-Energy Conservation Techniques
44. U18OEEE004-PLC and SCADA for Industrial
45. U18OEEC-001-Communication Systems
46. U18OEEC-002-VLSI circuits
47. U18OEEC-003-Image Processing Techniques
48. U18OEEC-004-Communication Networks
49. U18OEEC-005-An Introduction to DSP
50. U18OEEC-006-Basics of IoT
51. U18OEBM001-Medical Radiation Safety Engineering
52. U18OEBM002-Medical Waste Management
53. U18OEBM003-Quality Control in Healthcare
54. U18OEBM004-Wearable Technology
55. U18OEEI001-Analytical Methods and Instrumentation
56. U18OEEI002-Introduction to process Data Analytics
57. U18OEEI003-Reliability and Safety in Process industries
58. U18OEEI004-Multi sensor data fusion
59. U18OEBT001- Bioprocess Economics & Plant Design
60. U18OEBT002-Brewing technology
61. U18OEBT003-Biomining
62. U18OEBT004-Industrial Safety Engineering
63. U18OEAC001-Geo- informatics for Precision Farming
64. U18OEAC002-Livestock and poultry management
65. U18OEAC003-Extension methodologies and transfer of Agricultural Technologies
66. U18OEAC004-Soil and Water Conservation Engineering
67. U18OEIT001-Block Chain Technology
68. U18OEIT002-Semantic Web
69. U18OEIT003-Entrepreneurship Development
70. U18OEIT004-Ethical Hacking Techniques
71. U18OECS004-Mobile Application Development
72. U18OECS005-System Modelling and Simulation
73. U18OECS006-Web Programming
74. U18OECS007-Virtual Reality
75. U18OECS008- E Commerce
76. U18OEGE001-Metagenomics and Epigenomics
77. U18OEGE002-Molecular Genetics and Genomics
78. U18OEGE003-Principles of Molecular cell biology

U18HSEN101	COMMUNICATIVE ENGLISH	L	T	P	C
	Total Contact Periods – 60	2	0	2	3
	Prerequisite – School English				
	Department:- Department of English				

COURSE OBJECTIVES:-
To gain fundamental knowledge of language and the uses in daily life.

UNIT I SPEAKING 6 hours

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing one self – exchanging personal information- narrating events, -incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6 hours

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -
The concept of Word Formation

UNIT III LISTENING 6 hours

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6 hours

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past-present continuous and past continuous- Vocabulary development- synonyms-antonyms-phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6 hours

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely.

SOFTSKILL LABORATORY 30

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews &conversations

4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds- intonation.
12. Creative and critical thinking.

TEXT BOOKS:

7. On Writing Well. William Zinsser. Harper Resource Book. 2001

COURSE OUTCOMES (COs)	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSMA101	ENGINEERING MATHEMATICS – I	L	T	P	C
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Department:- Department of Mathematics				

COURSE OBJECTIVES:-

The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra.

It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3)

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOK:

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCES:

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. Narayanan S., Manicavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers,
5. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth Edition Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.

U18BSPH101	WAVES AND OPTICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Higher Secondary School Physics				
	Department:-Department of Physics				

COURSE OBJECTIVES:-
To gain fundamental knowledge of language and the uses in daily life.

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations,

reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVE OPTICS 9

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS 9

Einstein's theory of matter radiation interaction and A & B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

COURSE OUTCOMES (COs)	
CO1	Understand the basic concept of waves and lights
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing
CO3	Understand the propagation of light and geometrical optics
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves
CO5	Understand the concept of laser and its applications

U18BSPH101	ENGINEERING CHEMISTRY	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Department:-Department of Chemistry				

COURSE OBJECTIVES:-

To gain fundamental knowledge of Engineering Chemistry and its applications

UNIT I WATER TECHNOLOGY 9

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by

Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. Nanocomposites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESEE101	**BASIC ELECTRICAL & ELECTRONICS ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Physics				
	Department:-Department of Electrical & Electronics Engineering				

COURSE OBJECTIVES:-

To gain fundamental knowledge of Electrical and Electronics Engineering and its applications

MODULE 1 : DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamental Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transfer Theorem.

MODULE 2: AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS **9**

Principles of operation and characteristics of; DC machines, Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS **9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS **6**

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

4	Approval	47th Meeting of Academic Council														

U18BSBT101	**BIOLOGY FOR ENGINEERS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Department:-Dept of Industrial Biotechnology				

COURSE OBJECTIVES: -

To provide a basic understanding of the biological systems and its applications in the industrial sector

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System -types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity- antigens - antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines -cloning- bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

TEXT BOOK:

1. A Text book of Biotechnology, R. C. Dubey, S. Chand Higher Academic Publications, 2013
2. Diseases of the Human Body, Carol D. Tamparo and Marcia A. Lewis, F.A. Davis Company, 2011.
3. Biomedical instrumentation, Technology and applications, R. Khandpur, McGraw Hill Professional, 2004

REFERENCES:

3. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)	
CO1	To understand the basic concepts of the cell and its structure
CO2	To understand about biodiversity and its conservation
CO3	To know the fundamentals of genetics and the immune system
CO4	To create an awareness about human diseases
CO5	To give a basic knowledge of the applications of transgenics
CO6	To know the applications of bio systems in environment, medical and agricultural sectors

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

U18BSPH2L2	**Wave Optics and Semi Conductor Physics Laboratory**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Wave Optics and Semi Conductor Physics				
	Department:-Department of Physics				

COURSE OBJECTIVES:

To impart knowledge of practical Physics to the students

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Semiconductor Physics – Circuit branches

1) Determination of Band Gap
2) Zener diode characteristics
3) p-n junction diode Characteristics
3) Transistor Characteristics
5) V-I characteristics using LDR circuit
6) Carey Foster's Bridge

COURSE OUTCOMES (COs)	
CO1	Understand the fundamental concept of optics
CO2	Understand the concept of production of ultrasonic waves
CO3	Understand the functions of semiconductor
CO4	
CO5	
CO6	

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSCH2L4	**CHEMISTRY LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Department:- Department of Chemistry				

COURSE OBJECTIVES:

To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method

2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES:

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.
2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen,Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Student will be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method
CO6	

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PSO 2	PS O3

3	Category	Basic Science (BS)														
4	Approval	47th Meeting of Academic Council														

U18ESME1L2	**WORKSHOP/MANUFACTURING PRACTICES LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Department:-Department of Mechanical Engineering				

COURSE OBJECTIVES:

To educate the students on common manufacturing processes employed in Industries.

Lectures & videos: **(15 hours)**

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice

2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fitting models.

3. Carpentry **(9 hours)**
   a) Preparation of Lap joints.
   b) Mortise and Tenon joints.
   c) Cross Half joints.
   d) Dove Tail joints.

4. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
   Preparation of butt joints, lap joints and Tee joints

5. Sheet Metal working **(9 hours)**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints

6. Demonstration **(6 Hours)**
   Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.

CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.
CO5	
CO6

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronics Engineering				
	Department:-Department of Electrical & Electronics Engineering				

COURSE OBJECTIVES:-

To enhance the practical knowledge on basics of electrical and electronics components and circuits.

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipment and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits .
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flaps

Mapping of Course Outcomes with Program outcomes (POs)

U18HSEN201	**TECHNICAL ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	1	0	3
	Prerequisite – I semester English				
	Department:-Department of English				

COURSE OBJECTIVES:-

To gain fundamental knowledge of English language and its usage in day to day life.

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary

Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech**.**

4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.
CO6	

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSMA201	**ENGINEERING MATHEMATICS II**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Department:-Department of Mathematics				

COURSE OBJECTIVES:-

The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables.

Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.
CO6	

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

3	Category	Basic Science (BS)														
4	Approval	47th Meeting of Academic Council														

U18BSPH202	SEMICONDUCTOR PHYSICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Higher Secondary School Physics				
	Department:-Department of Physics				

COURSE OBJECTIVES:-

To develop physics and engineering strategies of semiconductor materials and to discuss their functionalities in modern electronic and optoelectronic devices

UNIT 1 INTRODUCTION AND ELECTRONIC STATES OF SEMICONDUCTORS 9

Introduction to solid state materials - crystal structure - Reciprocal lattice - Brillouin zone and rules for band (k - space) representation. Dynamics of electrons in periodic potential: Kronig - penny and nearly free electron models - Real methods for band structure calculations; Band gaps in semiconductors - Holes and effective mass concept - Properties of conduction and valance bands

UNIT 2 CARRIERS AND DOPING 9

Fermi distribution and energy - Density of states - Valance and conduction band density of states - intrinsic carrier concentration – intrinsic Fermi level. Extrinsic semiconductors: n and p type doping - Densities of carriers in extrinsic semiconductors and their temperature dependence - extrinsic semiconductor Fermi energy level - Degenerate and non - degenerate semiconductors - Band gap engineering

UNIT 3 ELECTRICAL TRANSSORT 9

Scattering Mechanism: electron - electron and electron – phonon scattering. Macroscopic transport: Carrier transport by Diffusion - Carrier transport by Drift: Low field, High field and very high field.

UNIT 4 OPTICAL TRANSSORT 9

Electron - hole pair generation and recombination: band to band (direct and indirect band gap transitions) and intra band (impurity related) transitions, free - carrier & phonon transitions. Excitons: Origin, electronic levels and properties. Carrier transport - continuity equations. Optical constants: Kramers - Kronig relations.

UNIT 5 SEMICONDUCTOR AS DEVICES AND RECENT ADVANCES 9

Processing of Semiconductor devices (Brief), p - n Semiconductor as device and Semiconductor junctions - Homo and hetero Junctions. Active and passive optoelectronic devices: performance and response enhancement (photo processes)**.**

Course Outcome (COs)	
CO1	Understand the difference between metals, semiconductors and insulators
CO2	Understand the importance of doping to charge carrier density
CO3	Understand the electrical transport in semiconductors
CO4	Understand the difference between direct and indirect semiconductors
CO5	Understand the concept of semiconductor optoelectronic devices.
CO6	

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

	CO5	1	2	3	2	2	2		2	1	1	2				
	CO6															
3	Category	Basic Science (BS)														
4	Approval	47th Meeting of Academic Council														

U18BSCH20	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Higher Secondary School Physical Science				
	Department:-Department of Chemistry				

COURSE OBJECTIVES:-

- To study the interrelationship between living organism and environment.
- To study of the nature and concepts of ecosystem.
- To learn about the integrated themes and biodiversity of an environment.
- To study of pollution control and waste management.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.

UNIT I -NATURAL RESOURCES 9

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS 9

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION 9

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION **9**

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder-Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes. Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

Course Outcome (COs)	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes
CO6

U18ESCS101	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Higher Secondary School Maths				
	Department:-Department of Computer Science & Engineering				

COURSE OBJECTIVES

To gain fundamental knowledge of algorithmic problem solving and python programming

MODULE 1 : ALGORITHMIC PROBLEM SOLVING **9**

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS **9**

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

MODULE 3: CONTROL FLOW, FUNCTIONS **9**

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES **9**

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods;advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES **9**

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

TEXT BOOK:

Course Outcome (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

U18ESME101	**ENGINEERING GRAPHICS & DESIGN (THEORY & LAB.)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Department:-Department of Mechanical Engineering				

COURSE OBJECTIVES

To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice

SYLLABUS

Detailed contents

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing;

Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:
Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM).

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)
Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle.

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)
Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP.

MODULE3:PROJECTIONS OF REGULAR SOLIDS&ISOMETRIC PROJECTIONS (10+3)
Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

MODULE4: SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)
Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

MODULE 5: BUILDING DRAWING (9+2)
Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)
Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication

drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

Course Outcome (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students will get Exposure to basics of building construction
CO4	Students will get Exposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.

U18ESCS1L1	**PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – **Problem Solving And Python Programmingg**				
	Department:-Department of Computer Science & Engineering				

COURSE OBJECTIVES:
To enhance the practical knowledge on writing programs using Python

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. Exponentiation (Power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search

6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

Course Outcome (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib

U18BSMA301	**TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS**	**L**	**T**	**P**	**C**
	Total Contact periods : 60	**3**	**1**	**0**	**4**
	Prerequisite – Engineering Mathematics I & II				
	Department:-Department of Mathematics				

COURSE OBJECTIVES:

- Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms.

- Learn techniques of solving the standard types of first order and second order partial differential equations.
- Learn solving wave and heat equation using Fourier series.
  Understand the problems using Fourier transform and their properties. Understand the problems using Z - transform and their properties.

UNIT I FOURIER SERIES (9+3)

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS (9+3)

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS (9+3)

Classifications second order linear partial differential equations – Solution of one dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation – Fourier Series solutions in Cartesian coordinates.

UNIT IV FOURIER TRANSFORMS (9+3)

Fourier integral theorem (without proof) – Fourier transform pairs – Fourier sine and cosine transform – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT V Z – TRANSFORMS AND DIFFERENCE EQUATIONS (9+3)

Z – Transform – Elementary properties – Inverse Z – Transform – Convolution theorem – Formation of difference equations – Solution of difference equations using Z – Transform.

Course Outcome (COs)	
CO1	Expand given function using the knowledge of Fourier Series and frequently needed practical harmonic analysis that an engineer may have to make from discrete data.
CO2	Solve PDE and higher order with constant coefficients and physically interpret the results.

CO3	Boundary Value Problems and Differential Equations will be knowledgeable about and will be able to analyze solutions to two-point boundary value problems, boundary value problems for partial differential equations.
CO4	Solve many problems in automobile, medicine, electronic engineering by applying Fourier transform with the possible special cases with attention to their applications.
CO5	Apply the basics of Z – Transform in its applicability to discretely varying functions, gained the skill of formulate certain problems in terms of difference equations and solve them using the Z – Transform techniques.
CO6

U18PCEC301	**SIGNALS AND SYSTEMS**	**L**	**T**	**P**	**C**
	Total Contact Hours –60	3	1	0	4
	Prerequisite – Engineering Mathematics-II				
	Department:-Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:

This course trains students for an intermediate level of fluency with signals and systems in both continuous time and discrete time, in preparation for more advanced subjects in digital signal processing (including audio, image and video processing), communication theory, and system theory, control and robotics.

UNIT I CLASSIFICATION OF SIGNALS AND SYSTEMS 9+3

Continuous time signals (CT signals), discrete time signals (DT signals) - Step, Ramp, Pulse, Impulse, Exponential, Classification of CT and DT signals - periodic and aperiodic, random singals, CT systems and DT systems, Classification of systems - Linear Time invariant Systems.

UNIT II ANALYSIS OF C.T. SINGALS 9+3

Fourier series analysis, Spectrum of C.T. signals, Fourier Transform and Laplace Transform in Signal Analysis.

UNIT III LTI-CT SYSTEMS 9+3

Differential equation, Block diagram representation, Impulse response, Convolution integral, Frequency response, Fourier Methods and Laplace transforms in analysis, State equations and Matrix.

UNIT IV ANALYSIS OF D.T. SIGNALS 9+3

Spectrum of D.T. signals, Discrete Time Fourier Transform (DTFT), Discrete Fourier Transform (DFT), Properties of Z-transform in signal analysis.

UNIT V LTI-DT SYSTEMS 9+3

Difference equations, Block diagram representation, Impulse response, Convolution SUM, Frequency response, FFT and Z-transform analysis, State variable equation and Matrix.

3. John Alan Stuller, "An Introduction to Signals and Systems", Thomson, 20076.
4. www.nptel.ac.in

Course Outcome (COs)	
CO1	To Understand different types of signals-continuous and discrete, odd and even, periodic and aperiodic etc. Be able to classify systems based on their properties
CO2	To familiarize the concepts of transform based continuous time signals
CO3	Analyze continuous time systems by using appropriate mathematical tools
CO4	Analyze sampling process and sampling of discrete time signals.
CO5	Analyze discrete time signals by using appropriate mathematical tools
CO6	Determine Fourier transforms for discrete-time system, and understand how to interpret and plot Fourier transform magnitude and phase functions

U18PCEC302	**DIGITAL SYSTEM DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Basic Electronics Engineering				
	Department:-Department of Electronics And Communication Engineering.				

COURSE OBJECTIVES:

To manipulate across various number system and to compute binary arithmetic operations.
To understand the design of combinational and sequential circuits using gates.
To know the concept of memories and programmable logic devices
To learn the design of asynchronous and synchronous sequential circuits

UNIT I BASIC CONCEPTS, BOOLEAN ALGEBRA AND LOGIC GATES 9

Number systems - Binary, Octal, Decimal, Hexadecimal, conversion from one to another, complement arithmetic, Review of Boolean Algebra and De Morgan's Theorem, SOP & POS forms, Canonical forms, Karnaugh maps up to 6 variables. Quine-McCluskey method of minimization

UNIT II COMBINATIONAL CIRCUITS 9

Problem formulation and design of combinational circuits, Half Adder, Full adder, Half Subtractor, Full Subtractor, Carry Look Ahead adder, BCD adder, Fast adder, Serial adder/subtractor, Binary Multiplier, Binary Divider, Encoder ,Decoder, Mux / Demux, Code-converters, Parity Generators, Comparators.

UNIT III SEQUENTIAL CIRCUIT 9

Building blocks like S-R, JK and Master-Slave JK FF, Edge triggered FF, Ripple and Synchronous counters, Shift registers, Finite state machines, Design of synchronous FSM, Algorithmic State Machines charts. Designing synchronous circuits like Pulse train generator, Pseudo Random Binary Sequence generator, Clock generation

UNIT IV LOGIC FAMILIES AND SEMICONDUCTOR MEMORIES 9

TTL NAND gate, Specifications, Noise margin, Propagation delay, fan-in, fan-out, Tristate TTL, ECL, CMOS families and their interfacing, Memory elements, Concept of Programmable logic devices like FPGA. Logic implementation using Programmable Devices.

UNIT V VLSI DESIGN FLOW 9

Design entry: Schematic, FSM & HDL, different modeling styles in VHDL, Data types and objects, Dataflow, Behavioral and Structural Modeling, Synthesis and Simulation VHDL constructs and codes for combinational and sequential circuits.

Course Outcome (COs)	
CO1	Recall the different number systems and demonstrate the simplification of Boolean expressions using Boolean algebra & K-Map method.
CO2	Analyze the Combinational building blocks.
CO3	Analyze the sequential building blocks.
CO4	To Learn about Logic families.
CO5	To gain knowledge about semiconductor memories

CO6	To learn about VLSI design flow and the importance of VHDL

U18PCEC303	**ELECTRONIC DEVICES**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Basic Electrical and Electronics Engineering				
	Department:-Department of Electronics & Communication Engineering				

COURSE OBJECTIVES:

To acquaint the students with the construction, theory and operation of the basic semiconductor devices such as PN junction diode, Bipolar and Field effect Transistors.
To know the applications of the basic semiconductor devices

UNIT I SEMICONDUCTOR DEVICES 9

PN junction diode, Current equations, Energy Band diagram, Diffusion and drift current densities, forward and reverse bias characteristics, Transition and Diffusion Capacitances, Switching Characteristics, Breakdown in PN Junction Diodes, Zener Diode and its characteristics ,Voltage Regulation using Zener Diode

UNIT II RECTIFIERS AND FILTERS 9

The P-N junction as a Rectifier, Half wave Rectifier, Full wave Rectifier, Bridge Rectifier, Harmonic components in a Rectifier Circuit, Inductor Filters, Capacitor Filters, L- Section Filters, π- Section Filters, Comparison of Filters

UNIT III TRANSISTOR BIASING AND STABILIZATION 9

Operating Point, The DC and AC Load lines, Need for Biasing, Fixed Bias, Collector Feedback Bias, Emitter Feedback Bias, Collector - Emitter Feedback Bias, Voltage Divider Bias, Bias Stability, Stabilization Factors, Bias Compensation using Diodes and Transistors, Thermal Runaway, Thermal Stability

UNIT IV BIPOLAR JUNCTION TRANSISTOR AND UJT 9

BJT Construction, Operation, Common Base, Common Emitter and Common Collector Configurations, BJT as an Amplifier ,BJT Hybrid Model, Determination of h-parameters from Transistor Characteristics, Comparison of CB, CE, and CC Amplifier Configurations, UJT and Characteristics.

UNIT V FIELD EFFECT TRANSISTOR AND FET AMPLIFIERS 9

Field Effect Transistor: The Junction Field Effect Transistor (Construction, principle of operation, symbol) – Pinch-off Voltage - Volt-Ampere characteristics, The JFET Small Signal

Model, **MOSFET** (Construction, principle of operation, symbol), MOSFET Characteristics in Enhancement and Depletion modes.

Course Outcome (COs)	
CO1	To understand and analyze the different types of diodes, operation and its characteristics
CO2	To analyze the rectifier circuits and various filters
CO3	To study and understand the BJT and FET.
CO4	To study and understand the various biasing methods of BJT.
CO5	To understand various stabilization techniques of BJT.
CO6	To understand operation and characteristics of FET amplifiers

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCEC304	**NETWORK THEORY**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite – Engineering Mathematics-II & Basic Electrical and Electronics Engineering				
	Department:-Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:

- To analyze concepts of symmetrical and asymmetrical networks.
- To realize the basic Networks and Design the various filters.
- To design Attenuators and Equalizers which are employed in the communications system

- To study the response of the RLC circuits and construct the network.
- To realize the RL and RC networks by synthesis

UNIT I BASIC CIRCUITS ANALYSIS AND NETWORK THEOREMS 9

Node and Mesh Analysis, matrix approach of network containing voltage and current sources, and reactance's, source transformation and duality. Network theorems: Superposition, reciprocity, Thevenin's, Norton's, Maximum power Transfer, compensation and Thallogen's theorem as applied to AC circuits.

UNIT II FOURIER TRANSFORMATIONS 9

Trigonometric and exponential Fourier series: Discrete spectra and symmetry of waveform, steady state response of a network to non-sinusoidal periodic inputs, power factor, effective values, Fourier transform and continuous spectra, three phase unbalanced circuit and power calculation.

UNIT III LAPLACE TRANSFORM TECHNIQUES 9

Laplace transforms and properties: Partial fractions, singularity functions, waveform synthesis, analysis of RC, RL, and RLC networks with and without initial conditions with Laplace transforms evaluation of initial conditions.

UNIT IV TRANSIENT ANALYSIS 9

Transient behavior, concept of complex frequency, Driving points and transfer functions poles and zeros of admittance function, their properties, sinusoidal response from pole-zero locations,

UNIT V FILTER DESIGN TECHNIQUES 9

convolution theorem and Two four port network and interconnections, Behaviors of series and parallel resonant circuits, Introduction to band pass, low pass, high pass and band reject filters

TEXT BOOK:

Course Outcome (COs)	
CO1	Develop the capacity to analyze electrical circuits, apply the circuit theorems in real time.
CO2	Obtain the various network parameters for the given two port networks.
CO3	Design asymmetric, symmetric, attenuator and equalizer networks.
CO4	Determine the parameters for the design of various filters
CO5	Estimate Step and Impulse response of RL and RC networks.
CO6	Synthesize RL and RC networks.

U18HSEC301	PROFESSIONAL ETHICS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – NIL				
	Department:-Dept of Management Studies				

COURSE OBJECTIVES:

To teach the philosophy of Life, personal value, social value, mind cultural value and personal health

To teach professional ethical values, codes of ethics, responsibilities, safety, rights and related global issues

UNIT I PROFESSIONAL ETHICS 9

Ethics in workplace- Formulation of Ethics- Managerial Ethics- Managing Ethical Behavior- codes of Ethics – Encouraging Ethical Behavior- Social Responsibility-Spirituality.

UNIT II SOCIAL VALUES 9

Family - Peace in Family, Society, The Law of Life Brotherhood - The Pride of Womanhood – Five responsibilities/duties of Man : - a) to himself, b) to his family, c) to his environment, d) to his society, e) to the Universe in his lives, Thriftiness (Thrift)/Economics. Health - Education - Governance - People's Responsibility / duties of the community, World peace.

UNIT III LIFE BODY RELATION & CULTURE 9

Mind Culture - Life and Mind - Bio - magnetism, Universal Magnetism (God –Realization and Self Realization) - Genetic Centre – Thought Action – Short term Memory – Expansiveness – Thought – Waves, Channelizing the Mind, Stages - Meditation, Spiritual Value. Structure of the body - the three forces of the body- life body relation, natural causes and unnatural causes for diseases, Methods in Curing diseases

UNIT IV SOCIAL RESPONSIBILITIES FOR SAFETY FOR ENGINEERS'S 9

Engineering as Experimentation – Engineer as Responsible Experimenters – Codes of Ethics – The Challenger, case study. Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk – The Three Mile Island and Chernobyl case studies.

UNIT V RIGHTS AND GLOBAL ISSUES FOR ENGINEERS'S 9

Collegiality and Loyalty – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Whistle Blowing – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination. Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development –Engineers as Managers – Consulting Engineers – Engineers as Expert Eye Witnesses and Advisors – Moral Leadership.

Course Outcome (COs)	
CO1	To learn about philosophy of Life and Individual qualities
CO2	To learn and practice social values and responsibilities
CO3	To learn and practice mind culture, forces acting on the body and causes of diseases and their curing
CO4	To learn more of Engineer as Responsible Experimenter.
CO5	To learn more of Risk and Safety assessment with case studies.
CO6	To learn more of responsibilities and rights as Professional and facing Global Challenges

Mapping of Course Outcomes with Program outcomes (POs)

U18PCEC3L1	**ELECTRONIC DEVICES LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	0	0	2	1
	Prerequisite – Basic Electrical and Electronics Engineering Practices Lab				
	Department:-Department of Electronics & Communication Engineering				

COURSE OBJECTIVES:

To enhance the practical knowledge on Electronic Devices through Experiments.

LIST OF EXPERIMENTS FOR ELECTRONIC DEVICES LAB

1. Study of CRO
2. V-I characteristics of PN junction diode

3. V-I characteristics of Zener diode and Zener regulator Characteristics
4. Half-wave rectifier with and without filter
5. Full-wave rectifier with and without filter
6. BJT input/output characteristics (CE configuration)
7. UJT input/output characteristics
8. Comparison of performance of self bias and fixed bias circuits
9. Transfer characteristics of JFET
10. Transfer characteristics of MOSFET
11. Simulation experiments using Pspice or Multisim.

Experiments beyond the syllabus should be conducted

Course Outcome (COs)	
CO1	To analyze the characteristics of PN junction and Zener Diode
CO2	To analyze Rectifier with and without filter
CO3	To analyze the characteristics of BJT and UJT
CO4	To compare the performance of self bias and fixed bias circuits
CO5	To analyze the characteristics of JFET and MOSFET
CO6	To provide the capability to use simulation tools for performing various analysis of semiconductor devices

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCEC3L2	**DIGITAL SYSTEM DESIGN LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	0	0	2	1
	Prerequisite –Basic Electronics Engineering Lab				
	Department:-Department of Electronics & Communication Engineering				

COURSE OBJECTIVES:

To know the concepts of Combinational circuits.
To understand the concepts of flip-flops, registers and counters

List of Experiments

1. Study of logic gates.
2. Design and implementation of adders and subtractors using logic gates.
3. Design and implementation of encoder and decoder using logic gates.
4. Design and implementation of multiplexer and demultiplexer using logic gates .
5. Design and implementation of 2-bit magnitude comparator using logic gates,
6. Design and implementation of 16-bit odd/even parity checker.
7. Design and implementation of Flipflops using logic gates.

8. Design and implementation of code converters using logic gates.
9. Design and implementation of counters.
10. Design and Implementation of shift registers.

Experiments beyond the syllabus should be conducted.

Course Outcome (COs)	
CO1	Learn the basics of gates.
CO2	Construct basic combinational circuits and verify their functionalities
CO3	Apply the design procedures to design basic sequential circuits
CO4	Learn about counters
CO5	Learn about Shift registers
CO6	To understand the basic digital circuits and to verify their operation

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

U18MCAB305 LEARNING AN ART FORM

Cultivation of arts is an integral part of the development of human beings since the arts are what make us most human, most complete as people. They offer us the experience of wholeness because they touch us at the deepest levels of mind and personality. They come into being not when we move beyond necessity but when we move to a deeper necessity, to the deeper human need to create order, beauty and meaning out of chaos. They are the expressions of deepest human urges, imperatives and aspirations.

While enriching the process of learning through enhanced perceptual and cognitive skills, learning of arts promotes self-esteem, motivation, aesthetic awareness, cultural exposure, creativity, improved emotional expression, as well as social harmony and appreciation of diversity. They promote an understanding and sharing of culture, and equip the learners with social skills that enhance the awareness and respect of others. Each institution will offer a range of introductory courses in different art forms: music, dance, theatre, painting, and other art forms. Care should be taken to give adequate representation to local and regional art forms in which our culture abounds. For example, Banaras has local traditions in vocal music like Chaiti, Hori, Kajri and Birha.

An institution in Banaras area can offer courses on these art forms apart from regular classical and semi-classical vocal music forms. Similar local art tradition can be utilized in different cities and regions. This will, in turn, also ensure wider community involvement/interaction with the institution. Students will be given an option to choose a particular art form, and learn

and practice it under an artist -instructor. At the end of the course, a student should be able to demonstrate basic proficiency in that particular art form. Contact hours per week should be 3-4 hours.

Towards the end of the course, the institution can organize a function/program in which all the students publicly demonstrate their skills.

U18MCAB306 INTANGIBLE CULTURAL HERITAGE (FESTIVALS, FOOD WAYS, LOCAL GAMES)

As part of our rich intangible cultural heritage, foodways, fares and festivals, local games and sports are important sources for discovering the social and cultural values of our people and understanding the inner dynamics of our society, as these are sites where we witness the most significant and intimate representations of our society's self-perception—how our society perceives itself. These traditions have shaped and strengthened our social and cultural identities, and also the notion of community at the local, regional, and national levels. They have played a significant role in the making of our social life, and through them we have constructed for ourselves, individually and collectively, a sense of shared lived past and group identity. They facilitate the transmission of a culture's most deeply held values, from one generation to another and their continuity or discontinuity helps us to understand the changing social structure and culture of a society. For example, each community has its own foodways, and their overall health, well-being and cultural continuity are directly related to their ability to eat traditional foods and continue their traditional food practices. These traditional foods and food practices are deeply intertwined with their cultures and value systems, and play an important role in religious ceremonies and spirituality. Similar is the case with fares and festivals, and local games and sports. These traditions are bound up with rituals, customs, beliefs, and often also with trade, craft and professions. They are not mere superstitious rituals often condemned and denounced as being regressive, stagnant and backward, but repositories of our indigenous knowledge and wisdom which have evolved over centuries, and they still continue to serve social and cultural functions. This knowledge has been the basis for agriculture, food preparation, health care, education, conservation and the wide range of other activities that sustain societies in many parts of the world.

Most of these traditions are either on the verge of extinction or undergoing drastic changes due to globalization, acculturation, migration, questions of identity related to social mobility to confirm to a higher social order or simply because the context in which these traditions originated or were conceived no longer exist and their effectiveness or need seems no longer relevant. For example, while the agro-ecological and food systems offer some signs of resilience and adaptation, a range of factors are increasingly threatening these systems and peoples' well-being. The knowledge and skills of elders concerning traditional food preparation, and the use of traditional herbs and plants for healing purposes have not been passed on to the next generation and is at risk of being lost and disappearing altogether from reservation life and culture.

The course aims at exposing students to these traditions, and making them aware of the veritable treasure house of indigenous knowledge which can be utilized as resource for realizing a vision of sustainable future.

Each locality/region our Indian sub-continent abounds in a rich variety of food-ways, fares and festivals, games and sports. Students should be asked to identify one of these traditions and study them in detail. For example, the following guidelines can be adopted in the study of food-ways:

- To study and document the indigenous knowledge and wisdom of everyday food habits and food items consumed;
- To study and document the prevalent social practices and beliefs regarding traditional foods;
- To study and document the feasts on religious and social occasions of different communities;
- To identify and document the food items consumed by different communities and determine their nutritional values;
- To conduct chemical analysis of food ingredients;
- To identify and document the kitchen generated health ingredients used by different communities;
- To find out the uses of leftover food stuff of different communities;
- To develop hygienic food chart for people ailing and suffering from different metabolic disorders;
- To develop suitable communication strategies to effectively disseminate traditional knowledge regarding food habits.

Similarly, in the case of fares and festivals, and games and sports one could study how these traditions create a sense of community bonding and lead to the rules of commensality and social interaction and behavior. Suitable guidelines along the lines of foodways can be developed and adopted for such a study.

At the end of the course, students will be required to submit a detailed project report. Options should be given to the students to make short documentaries and films on these traditions.

U18BSMA404	**PROBABILITY AND STOCHASTIC PROCESSES**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – Basic knowledge of probability				
	Department:- Department of Mathematics				

COURSE OBJECTIVES

- The objective of this course is to introduce the students to the idea of random variables, distribution and random process, and an important mathematical tool in signal processing.
- An ability to design and analyze an Electronic circuits in Engineering as well as to formulate coding to interpret data.
- An ability to use the techniques, skills, and modern tools in science and engineering environment

UNIT I PROBABILITY THEORY (9+3) Hrs

Sets and set operations; Probability space; Conditional probability and Bayes theorem; Combinatorial probability and Sampling models.

UNIT II RANDOM VARIABLES (9+3) Hrs

Discrete random variables, probability mass function, probability distribution function, and standard distributions; Continuous random variables, probability density function, probability distribution function, and standard distributions.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES (9+3) Hrs

Joint distributions, Marginal and conditional distributions-covariance- correlation and regression: properties and problems- rank correlation; Transformation of a random variable.

UNIT IV APPLICATION OF TWO DIMENSIONAL RANDOM VARIABLES (9+3)Hrs

Random sequences and modes of convergence (everywhere, almost everywhere probability, distribution and mean square); Limit theorems; Strong and weak laws of large numbers, central limit theorem.

UNIT V RANDOM PROCESS AND SPECTRAL DENSITY (9+3)Hrs

Random process, Stationary processes. Mean and covariance functions, Markov, Ergodicity, Power spectral density, Transmission of random process through LTI.

TEXT BOOK:

Course Outcome (COs)	
CO1	Apply concepts of Probability to solve problems in Electronic Engineering.
CO2	Make students understand Discrete and Continuous Random variables, Random Processes and their applications in Electronic Transmissions
CO3	Find the trend information from discrete data set through numerical differentiation and summary information through random process
CO4	Understand propagation of random signals in LTI systems
CO5	Find functional relationship between random inputs and outputs with the use of Random Process Techniques

Mapping of Course Outcomes with Program outcomes (POs)

U18PCEC401	ANALOG AND DIGITAL COMMUNICATION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Digital Electronics				
	Department:-Dept. of Electronics and Communication Engineering				

COURSE OBJECTIVES

The student should be made to:

- Understand analog and digital communication techniques.
- Learn data and pulse communication techniques.
- Be familiarized with source and Error control coding.
- Gain knowledge on multi-user radio communication.

UNIT I ANALOG COMMUNICATION 9

Noise: Source of Noise - External Noise- Internal Noise - Noise Calculation. Introduction to Communication Systems: Modulation – Types - Need for Modulation. Theory of Amplitude Modulation - Evolution and Description of SSB Techniques - Theory of Frequency and Phase Modulation – Comparison of various Analog Communication System (AM –FM – PM).

UNIT II DIGITAL COMMUNICATION 9

Amplitude Shift Keying (ASK) – Frequency Shift Keying (FSK) Minimum Shift Keying (MSK) –Phase Shift Keying (PSK) – BPSK – QPSK – 8 PSK – 16 PSK - Quadrature Amplitude Modulation (QAM) – 8 QAM – 16 QAM – Bandwidth Efficiency– Comparison of various Digital Communication System (ASK– FSK – PSK – QAM).

UNIT III DATA AND PULSE COMMUNICATION 9

Data Communication: History of Data Communication - Standards Organizations for Data Communication- Data Communication Circuits - Data Communication Codes - Error Detection and Correction Techniques - Data communication Hardware - serial and parallel interfaces. Pulse Communication: Pulse Amplitude Modulation (PAM) – Pulse Time Modulation (PTM) – Pulse code Modulation (PCM) - Comparison of various Pulse Communication System.

UNIT IV SOURCE AND ERROR CONTROL CODING 9

Entropy, Source encoding theorem, Shannon Fano coding, Huffman coding, mutual information, channel capacity, channel coding theorem, Error Control Coding, linear block codes, cyclic codes, convolution codes, viterbi decoding algorithm.

UNIT V MULTI-USER RADIO COMMUNICATION 9

Advanced Mobile Phone System (AMPS) - Global System for Mobile Communications (GSM) - Code division multiple access (CDMA) – Cellular Concept and Frequency Reuse - Channel Assignment and Hand - Overview of Multiple Access Schemes - Satellite Communication - Bluetooth.

	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basic electrical and electronics, Electronic Devices				
	Department:-Dept. of Electronics and Communication Engineering				

COURSE OBJECTIVES
Learn about biasing of BJTs and various transistor models
To teach the fundamentals of amplifiers, types of amplifiers, gain margin
Study Oscillators and characteristics.
Study OP AMP and its applications
To introduce the fundamentals of DAC and ADC

UNIT I INTRODUCTION 9

Diode Circuits, Amplifier models: Voltage amplifier, current amplifier, trans-conductance amplifier and trans-resistance amplifier. Biasing schemes for BJT and FET amplifiers, bias stability, various configurations (such as CE/CS, CB/CG, CC/CD) and their features, small

signal analysis, low frequency transistor models, estimation of voltage gain, input resistance, output resistance etc., design procedure for particular specifications, low frequency analysis of multistage amplifiers.

UNIT II HIGH FREQUENCY TRANSISTOR MODELS AND POWER AMPLIFIERS 9

High frequency transistor models, frequency response of single stage and multistage amplifiers, cascode amplifier. Various classes of operation (Class A, B, AB, C etc.), their power efficiency and linearity issues. Feedback topologies: Voltage series, current series, voltage shunt, current shunt, effect of feedback on gain, bandwidth etc., calculation with practical circuits, concept of stability, gain margin and phase margin.

UNIT III OSCILLATORS 9

Review of the basic concept, Barkhuizen criterion, RC oscillators (phase shift, Wien bridge etc.), LC oscillators (Hartley, Colpitts, Clapp etc.), non-sinusoidal oscillators. Current mirror: Basic topology and its variants, V-I characteristics, output resistance and minimum sustainable voltage (VON), maximum usable load.

UNIT IV OPEARTIONAL AMPLIFIER AND ITS APPLICATIONS 9

OP-AMP design: design of differential amplifier for a given specification, design of gain stages and output stages, compensation. Differential amplifier: Basic structure and principle of operation, calculation of differential gain, common mode gain, CMRR and ICMR.

OP-AMP applications: review of inverting and non-inverting amplifiers, integrator and differentiator, summing amplifier, precision rectifier, Schmitt trigger and its applications. Active filters: Low pass, high pass, band pass and band stop, design guidelines.

UNIT V DIGITAL TO ANALOG CONVERTERS (DAC) AND ANALOG TO DIGITAL CONVERTERS 9

Digital -to-analog converters Weighted resistor, R-2R ladder, resistor string etc. Analog-to-digital converters (ADC): Single slope, dual slope, successive approximation, flash etc. Switched capacitor circuits: Basic concept, practical configurations, application in amplifier, integrator, ADC etc.

Course Outcome (COs)	
CO1	Understand the characteristics of diodes and transistors.
CO2	Design and analyze various rectifier and amplifier circuits
CO3	Design sinusoidal and non-sinusoidal oscillators.

CO4	Understand the functioning of OP-AMP and design OP-AMP based circuits
CO5	Design ADC and DAC.
CO6	Understand the applications of OP – AMP and special function IC's

U18PCEC403	MICROCONTROLLERS	L	T	P	C
	Total Contact Hours – 60	3	0	0	3
	Prerequisite – Digital System Design				
	Department:-Dept. of Electronics and Communication Engineering				

COURSE OBJECTIVES

The student should be made to:

The objective of this course is to become familiar with the architecture and the instruction set of an Intel microcontroller

Assembly language programming will be studied as well as the design of various types of digital and analog interfaces

Understand the architecture of 8051

UNIT 1 MICROPROCESSORS AND MICROCONTROLLER INTRODUCTION 9

Microprocessors and microcontroller. Introduction, Microprocessors and Microcontrollers, RISC & CISC CPU Architectures, Harvard & Von-Neumann CPU architecture, Computer software. The 8051 Architecture: Introduction, Architecture of 8051, Pin diagram of 8051, Memory organization, External Memory interfacing, Stacks.

UNIT II ADDRESSING MODES INSTRUCTION SET 9

Addressing Modes: Introduction, Instruction syntax, Data types, Subroutines, Addressing modes: Immediate addressing, Register addressing, Direct addressing, Indirect addressing, relative addressing, Absolute addressing, Long addressing, Indexed addressing, Bit inherent addressing, bit direct addressing. Instruction set: Instruction timings, 8051 instructions: Data transfer instructions, Arithmetic instructions, Logical instructions, Branch instructions, Subroutine instructions, Bit manipulation instruction.

UNIT III 8051 PROGRAMMING 9

Assembler directives, Assembly language programs and Time delay calculations.

UNIT IV 8051 INTERFACING AND APPLICATIONS 9

Basics of I/O concepts, I/O Port Operation, Interfacing 8051 to LCD, Keyboard, parallel and serial ADC, DAC, Stepper motor interfacing and DC motor interfacing and programming.

UNIT V 8051 INTERRUPTS AND TIMERS/COUNTERS 9

Basics of interrupts, 8051 interrupt structure, Timers and Counters, 8051 timers/counters, programming 8051 timers in assembly and C .

TEXT BOOK:

1. The 8051 Microcontroller and Embedded Systems : Using Assembly and C" by Muhammad Ali Mazidi

3. www.nptel.ac.in

Course Outcome (COs)	
CO1	Independently design and implement an embedded system based on an eight-bit microcontroller, taking into account energy conservation and possible software errors,
CO2	Program a microcontroller using C, including hardware configuration and interrupt service routines,
CO3	Manage parallel processes with different priority and real time constraints without the aid of an operating system,
CO4	Select data types and algorithms suitable for the architecture and instruction set of a given microcontroller
CO5	Give a detailed description of limitations of the chosen system design
CO6	Debug a microcontroller application using different tools.

Mapping of Course Outcomes with Program outcomes (POs)

U18PCEC404	**ELECTROMAGNETIC WAVES**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Transforms and Partial Differential equation				
	Department:- Department of Electronics & Communication Engineering				

COURSE OBJECTIVES

- To impart knowledge on the basics of static electric and magnetic field and the associated laws.
- To give insight into the propagation of EM waves and also to introduce the methods in computational electro magnetics.
- To make students have depth understanding of antennas, electronic devices, waveguides is possible

UNIT I STATIC ELECTRIC FIELD 9

Vector Algebra, Coordinate Systems, Vector differential operator, Gradient, Divergence, Curl, Divergence theorem, Stokes theorem, Coulombs law, Electric field intensity, Point, Line, Surface and Volume charge distributions, Electric flux density, Gauss law and its applications, Gauss divergence theorem, Absolute Electric potential, Potential difference, Calculation of potential differences for different configurations. Electric dipole, Electrostatic Energy and Energy density.

UNIT II CONDUCTORS AND DI ELECTRICS 9

Conductors and dielectrics in Static Electric Field, Current and current density, Continuity equation, Polarization, Boundary conditions, Method of images, Resistance of a conductor, Capacitance, Parallel plate, Coaxial and Spherical capacitors, Boundary conditions for perfect dielectric materials, Poisson's equation, Laplace's equation, Solution of Laplace equation, Application of Poisson's and Laplace's equations.

UNIT III STATIC MAGNETIC FIELDS 9

Biot-Savart Law, Magnetic field Intensity, Estimation of Magnetic field Intensity for straight and circular conductors, Ampere's Circuital Law, Point form of Ampere's Circuital Law, Stokes theorem, Magnetic flux and magnetic flux density, The Scalar and Vector Magnetic potentials, Derivation of Steady magnetic field Laws.

UNIT IV MAGNETIC FORCES AND MATERIALS 9

Force on a moving charge, Force on a differential current element, Force between current elements, Force and torque on a closed circuit, The nature of magnetic materials, Magnetization and permeability, Magnetic boundary conditions involving magnetic fields, The magnetic circuit, Potential energy and forces on magnetic materials, Inductance, Basic expressions for self and mutual inductances, Inductance evaluation for solenoid, toroid, coaxial cables and transmission lines, Energy stored in Magnetic fields.

UNIT V TIME VARYING FIELDS AND MAXWELL'S EQUATIONS 9

Fundamental relations for Electrostatic and Magnetostatics fields, Faraday's law for Electromagnetic induction, Transformers, Motional Electromotive forces, Differential form of Maxwell's equations, Integral form of Maxwell's equations, Potential functions, Electromagnetic boundary conditions, Wave equations and their solutions, Poynting's theorem, Time harmonic fields, Electromagnetic Spectrum.

4. www.Wiley.com

Course Outcome (COs)	
CO1	Analyze field potentials due to static changes and static electric fields
CO2	Explain how materials affect electric fields
CO3	To analyze about static magnetic field.
CO4	Explain how materials affect magnetic fields
CO5	Analyze the relation between the fields under time varying situations
CO6	Discuss the principles of propagation of uniform plane waves

U18ESCS401	OBJECT ORIENTED PROGRAMMING AND DATA STRUCTURES	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Fundamentals of Computing and Programming				
	Department:- Dept of Information Technology				

COURSE OBJECTIVES

- To provide a brief, hands-on overview of object-oriented analysis in software process
- To discuss Case studies-based project specifications to develop object-oriented models and identify implementation strategies.
- To demonstrate and apply basic object-oriented techniques to create and modify object-oriented analysis and design models.
- To understand and apply testing techniques for object-oriented software.

UNIT I DATA ABSTRACTION & OVERLOADING 9

Overview of C++–Structures–Class Scope and Accessing Class Members –Reference Variables–Initialization–Constructors–Destructors–MemberFunctionsandClasses– Friend Function – Dynamic Memory Allocation – Static Class Members –Overloading: Function overloading and Operator Overloading.

UNIT II INHERITANCE&POLYMORPHISM 9

Base Classes and Derived Classes–Protected Members–Overriding –Public, Protected and Private Inheritance –Constructors and Destructors in derived Classes–Implicit Derived– Class

Object to Base–Class Object Conversion–Virtual functions–This Pointer–Abstract Base Classes and Concrete Classes– Virtual Destructors– Dynamic Binding.

UNIT III LINEAR DATA STRUCTURES 9

Abstract Data Types (ADTs)–List ADT–array-based implementation– linked list implementation– singly linked lists–Polynomial Manipulation-Stack ADT – Queue ADT

UNIT IV NON-LINEAR DATA STRUCTURES 9

Trees–Binary Trees –Binary tree representation and traversals–The Search Tree ADT– Graph and its representations–Graph Traversals–Breadth-first search–Depth-first search– Bi-connectivity**.**

UNIT V SORTING AND SEARCHING 9

Sorting algorithms: Insertion Sort-Quick sort –Mergesor-Searching: Linear search –Binary S

Course Outcome (COs)	
CO1	Develop solutions to a given problems using class object concepts.
CO2	Illustrate overloading, inheritance and polymorphism concepts with example
CO3	Explain the basic data structures and its operations
CO4	Make use of basic data structures to solve problems
CO5	To develop programs using C++ which forms the basic for advanced programming
CO6	Outline various searching and sorting algorithms

U18MCTH502	UNIVERSAL HUMAN VALUES	L	T	P	C
	Total Contact Periods – 30	2	0	0	0
	Prerequisite –nil				
	Department:-AICTE				

Course Objective

The objective of the course is four-fold:

1. Sensitization of student towards self, family (relationship), society and nature.
2. Understanding (or developing clarity) of nature, society and larger systems, on the basis of human relationships and resolved individuals.
3. Strengthening of self-reflection.
4. Development of commitment and courage to act.

Course Outcome

At the end of the course, students are expected to become more aware of their surroundings, society, social problems and their sustainable solutions, while keeping human relationships and human nature in mind. They would have better critical ability. They would also become sensitive to their commitment towards what they believe in (humane values. humane relationships and humane society). It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be mad

U18HSBA401	ORGANIZATIONAL BEHAVIOR	L	T	P	C
	Total No. of contact hours: 45	3	0	0	3
	Pre-requisite: NIL				
	Department:-Dept of Management Studies				

COURSE OBJECTIVES

Understanding the basic approaches in organization
Knowledge on theories of Personality
Clear sight on the Decision Making in Groups
Analyze the behavior of individuals and groups in organizations in terms of the key factors that influence organizational behavior. Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behavior.

UNIT I **9**

Organizational Behavior – Definition, need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

UNIT II **9**

Individual behavior – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behavior.

UNIT III **9**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behavior and Group Decision – Motivation – Need and Importance – Theories of Motivation

UNIT IV **9**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

UNIT V **9**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

3. Chandhan JS, Organizational Behavior, Vikas Publishers
4. Stephen Robbins, Organizational Behavior, Pearson Education
5. RS Diwedi, Human Relations and Organizational Behavior, Mac Millan

Course Outcome (COs)	
CO1	Familiarity with the knowledge of Frame work of Organizational Behavior
CO2	Knowledge of the Interpersonal perception
CO3	Awareness of the Merits and Demerits of Group decision making.
CO4	Understanding of the Sources of power
CO5	Fmiliarity with the knowledge of types of Conflicts

U18PCEC4L1	**ANALOG AND DIGITAL COMMUNICATION LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	0	0	2	1
	Prerequisite – Digital Electronics				
	Department:-Dept. of Electronics and Communication Engineering				

COURSE OBJECTIVES

- Understand analog and digital communication techniques.
- Learn data and pulse communication techniques.
- Be familiarized with source and Error control coding.
- Gain knowledge on multi-user radio communication.

List of Experiments:

1. Generation of noise and observations of its effect on a sinusoidal signal
2. Generation of AM signals
3. Demodulation of AM signals
4. Frequency modulation
5. Introduction to phase locked loop
6. FM Demodulators
7. Digital Modulation: FSK
8. Pre-emphasis & De-emphasis
9. Pulse code modulation
10. MATLAB basic for communication system design

11. Introduction to amplitude modulation (SIMULINK implementation)
12. Introduction to amplitude modulation (MATLAB implementation)

Course Outcome (COs)	
CO1	Apply analog and digital communication techniques.
CO2	Use data and pulse communication techniques.
CO3	Analyze Source and Error control coding.
CO4	Gain knowledge on multi-user radio communication.
CO5	To understand the various applications of coding
CO6	Discuss the various types of systems

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

U18PCEC4L2	**MICROCONTROLLER LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	**0**	**0**	**2**	**1**
	Prerequisite – Digital System Design				
	Department:-Dept. of Electronics And Communication Engineering				

COURSE OBJECTIVES

The student should be made to:

- To introduce the basics of microcontroller and its applications.
- To provide in depth knowledge of 8051 ,PIC Microcontroller and Embedded-C programming
- To expertise working with Keil compiler and embedded C programming.
- To impart the I/O interfacing concepts for developing real time embedded systems.
- To encourage the students in building real time applications.

EMBEDDED C PROGRAMMING

LED Blinking using 8051 Microcontroller
Displaying Numbers on 7-Segment Display using 8051 Microcontroller
Timer/Counter Calculations and Program using 8051 Microcontroller
Serial Communication Calculations and Program using 8051 Microcontroller
Keypad Programming using 8051 Microcontroller
LCD Programming with 8051 Microcontroller
LED Blinking using PIC Microcontroller
Displaying Numbers on 7-Segment Display using PIC Microcontroller
Timer/Counter Calculations and Program using PIC Microcontroller
Serial Communication Calculations and Program using PIC Microcontroller

Keypad Programming using PIC Microcontroller
LCD Programming with PIC Microcontroller

MINI PROJECTS (any one)
Interfacing GPS with 8051 Microcontroller
Bidirectional Visitor Counter using 8051 Microcontroller
Water Level Controller using 8051 Microcontroller
Stepper Motor Control using 8051 Microcontroller
Password Based Door Locking System using 8051
Noncontact Digital Tachometer using 8051
Digital humidity sensor using PIC microcontroller

Course Outcome (COs)	
CO1	Familiarize with the embedded C programming using 8051.
CO2	Familiarize with 8051
CO3	Familiarize with the Keil µVision-3/4 and IAR Embedded Workbench tools.
CO4	Design circuits for various applications using microcontrollers.
CO5	Apply the concepts on real- time applications
CO6	To study about interfacing techniques

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PSO 2	PS O3

	CO4	2	3	3	2	2			1	1		2				
	CO5	2	3	3	1	2				1		2				
	CO6	2	3	3	1	2				1		2				
3	Category	Professional Core (PC)														
4	Approval	48th Meeting of Academic Council														

U18PCEC4L3	**ANALOG CIRCUIT LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	**0**	**0**	**2**	**1**
	Prerequisite –Basic Electronics Lab				
	Department:-Dept of Electronics and communication engineering				

COURSE OBJECTIVES
The student should be made to:
Study the characteristic of CE, CB and CC Amplifier
Learn the frequency response of CS Amplifiers
Study the Transfer characteristic of differential amplifier
Perform experiment to obtain the bandwidth of single stage and multistage amplifiers
Perform SPICE simulation of Electronic Circuits

List of Experiments

1. Half Wave and Full Wave Rectifiers, Filters, Power supplies
2. Frequency Response of CE, CB, CC and CS amplifiers
3. Darlington Amplifier
4. Differential Amplifiers- Transfer characteristic, CMRR Measurement
5. Cascode / Cascade amplifier
6. Class A and Class B Power Amplifiers
7. Determination of bandwidth of single stage and multistage amplifiers
8. Astable and Monostable multivibrators using transistors.
9. Single Tuned Amplifier
10. Double Tuned amplifiers.
11. Pspice Simulation of Common Emitter and Common Source amplifiers
12. Pspice Simulation of Clippers and Clampers

Course Outcome (COs)	
CO1	Differentiate cascade and cascade amplifier
CO2	Analyze the limitation in bandwidth of single stage and multi stage amplifier
CO3	Simulate amplifiers using Spice
CO4	Measure CMRR in differential amplifier
CO5	Analyze the characteristics of single tuned and double tuned amplifiers
CO6	Understand the characteristics of Multivibrators

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

	CO6	2	3	3	1	2				1		2				
3	Category	Professional Core (PC)														
4	Approval	48th Meeting of Academic Council														

U18MCAB407 LITERATURE, CINEMA AND MEDIA (WORKSHOP, READING MULTIPLE NEWS SOURCES, ANALYZE ADS)

The objective is to inculcate the habit of active (or interactive) consumption of the best content available in literature, films and media, rather than passive consumption.

Description.

Literature is perhaps as old as history or Aug be older and it is difficult to think of a fully educated person without any exposure to the best of the world literature (not just the literature of their own country or in their own language). Cinema is more recent and mass media is even more recent, but all these have a vital role in today's society. The problem is that the content available easily to most people (partly due to extensive promotion) caters to the lowest common denominator. Engineering students should be encouraged to read the best of the world literature and watch the best of the world cinema (regardless of their viewpoints). They should also be

made aware that news is best collected from different sources, which don't necessarily agree, so that they can understand the true meaning of democracy and also learn to form educated opinions about various topics based on the information from diverse sources. They should learn that being opinionated without being properly informed (say, by relying only on one source of news on TV based on TRPs) is not the right way to be a good citizen. They should get the experience of their opinion being contradicted by the most reliable evidence, so that they realize that there is no shame in changing a wrong opinion in the light of overwhelming evidence. For that, they will also have to learn how to find out the degree of reliability of different sources. One way to achieve this is to conduct workshops where students, aided by invited experts, read news from different sources, watch the best cinema and read or watch different media sources. They can then discuss these with their peers and with the invited experts and learn to talk peacefully with people of different viewpoints, as well as learn to form their own opinions. They should then be encouraged to write about their takeaways from these discussions or their opinions and their reasons for forming those opinions. Such activities can counter the current culture of being 'trolls' on the social media, for example. Instead, we should have citizens who give due respect to their fellow citizens and learn to analyze, discuss and reach conclusions in an agreeable manner, without unnecessary feelings of bitterness and enmity.

Another related exercise could be to read or watch advertisements and then analyze them in terms of the biases they promote (such as the desirability of fair skin) or the deception they indulge in to psychologically compel consumers to buy things they don't really need. Some advertisements even promote the habit of treating fellow human beings with contempt for being different from them (even in terms of possessing the products they are promoting). A well-educated citizen should be less susceptible to such practices in advertisements. Advertisements are just one example. Something similar could be done with all kinds of propaganda material

U18MCAB408 LITERATURE & MEDIA GROUP READING (SAAMUHIKVAACHAN) OF CLASSICS

This will make group to read one or two books during a semester.

Process: An hour Aug be fixed for a small group for a classic. Group sits, and each person reads aloud (if possible, with proper modulation) taking turns. This if done properly for an hour one Aug complete 30-40 pages in an hour. A normal classic can be finished in 15 to 20 days. If serious books on philosophy etc. are taken up a discussion can be held after every idea is complete.

U18PCEC501	**DIGITAL SIGNAL PROCESSING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	**3**	**1**	**0**	**4**
	Prerequisite – Signals & Systems				
	Department:-Department of Electronics & Communication Engineering				

COURSE OBJECTIVES

To study about discrete time systems and to learn about FFT algorithms.

- -To study the design techniques for FIR and IIR digital filters.
- -To study the finite word length effects in signal processing.
- -To study the properties of random signal, Multirate digital signal processing and about QMF filters.

UNIT I DISCRETE – TIME SIGNALS AND SYSTEMS 9+3

Sampling of Analogue signals – aliasing – standard discrete time signals – classification – discrete time systems – Linear time invariant stable casual discrete time systems – classification methods – linear and circular convolution – Overlap add and Save Methods-Difference

equation representation – DFS, DTFT, DFT – FFT computations using DIT and DIF algorithms.

UNIT II INFINITE IMPULSE RESPONSE DIGITAL FILTERS 9+3

Review of design of analogue Butterworth and Chebyshev Filters, Frequency transformation in analogue domain – Design of IIR digital filters using impulse invariance technique – Design of digital filters using bilinear transform – pre-warping – Frequency transformation in digital domain – Realization using direct, cascade and parallel forms.

UNIT III FINITE IMPULSE RESPONSE DIGITAL FILTERS 9+3

Symmetric and Antisymmetric FIR filters – Linear phase FIR filters – Design using Frequency sampling technique – Window design using Hamming, Hanning and Blackman Windows – Concept of optimum equiripple approximation – Realisation of FIR filters – Transversal, Linear phase and Polyphase realization structures.

UNIT IV FINITE WORD LENGTH EFFECTS 9+3

Quantization noise – derivation for quantization noise power – Fixed point and binary floating point number representations – Comparison – Overflow error – truncation error – coefficient quantization error – limit cycle oscillations- signal scaling – analytical model of sample and hold operations.

UNIT V SPECIAL TOPICS IN DSP 9+3

Discrete Random Signals- Mean, Variance, Co-variance and PSD – Periodiogram Computation – Principle of Multi rate DSP – decimation and Interpolation by integer factors – Time and frequency domain descriptions – Single, Multi stage, polyphase structures – QMF filters –Sub band Coding-Digital Signal Processor based applications

Course Outcome (COs)	
CO1	To apply DFT for the analysis of digital signals & systems.
CO2	To design FIR filters.
CO3	To design IIR filters.
CO4	To characterize finite Word length effect on filters.
CO5	To have a deep understanding on basics of digital signal processing which can be applied to communication systems.
CO6	To design the Multirate Filters.

U18PCEC502	TRANSMISSION LINES AND WAVEGUIDES	L	T	P	C
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Semiconductor Physics				
	Department:-Dept. of Electronics and Communication Engineering				

COURSE OBJECTIVES

To introduce the various types of transmission lines and to discuss the losses associated.
To give thorough understanding about impedance transformation and matching.
To impart knowledge on filter theories and waveguide theories

UNIT I TIME VARRYING FIELDS AND MAXWELL'S EQUTIONS 12

Motional Electromotive Force, General Expression for motional EMF, Faraday's Law of Induction, Displacement current, Maxwell's equation in the point or differential form, Maxwell's equations in Integral form, Maxwell's equations from Gauss's Law, Maxwell's equations and Boundary conditions, Poynting's theorem, Time harmonic (sinusoidal) fields, Maxwell's equations in phasor form.

UNIT II TRANSMISSION LINES 12

Need for Transmission Lines, Types of Transmission lines, Characterization in terms of primary and secondary constants, Characteristic impedance, General wave equation, Loss less propagation, Propagation constant, Wave reflection at discontinuities, Voltage standing wave ratio, Transmission line of finite length, The Smith Chart, Smith Chart calculations for lossy lines, Impedance matching by Quarter wave transformer, Single and double stub matching.

UNIT III THE UNIFORM PLANE WAVE 12

Wave propagation in free space, Wave propagation in dielectrics, Forward and Backward Travelling Wave, Poynting Theorem and Wave Power, Energy of the Radiated wave, Propagation in good conductors and good dielectrics, Skin effect, Wave polarization, Linearly, Elliptically and Circularly polarized waves

UNIT IV TRANSMISSION AND REFLECTION OF PLANE WAVES AT BOUNDARIES 12

Normal incidence of Uniform Plane waves: Conductor-Conductor interface, Dielectric-Dielectric interface, Dielectric-perfect Conductor interface, Dielectric-Conductor interface. Oblique incidence on a plane boundary for perpendicular polarization, Dielectric-Dielectric interface, Dielectric-Conductor interface.

UNIT V WAVE GUIDES AND CAVITY RESONATORS 12

General Wave behaviors along uniform Guiding structures, Transverse Electromagnetic waves, Transverse Magnetic waves, Transverse Electric waves, TM and TE waves between parallel plates, TM and TE waves in Rectangular wave guides, Bessel's differential equation and Bessel function, TM and TE waves in Circular wave guides, Rectangular and circular cavity Resonators.

Course Outcome (COs)	
CO1	Discuss the fundamental concepts of wave propagation in Transmission Lines and Wave Guides.
CO2	Analyze the line parameters and various losses in transmission lines.
CO3	Apply smith chart for line parameter and impedance calculations
CO4	Evaluate the characteristics of parallel plane and rectangular wave guides.
CO5	Evaluate the characteristics of Circular waveguides.
CO6	Evaluate the characteristics of resonators.

U18PCEC503	**ANTENNAS AND PROPAGATION**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	**3**	**1**	**0**	**4**
	Prerequisite – Transforms and Partial Differential equation				
	Department:- Department of Electronics & Communication Engineering				

COURSE OBJECTIVES

Students will be introduced to antennas, their principle of operation
Antenna analysis and their applications.
Introduce the student to wave propagation over ground, through troposphere and ionosphere; diversity principles

UNIT I BASIC ANTENNA CONCEPTS 9+3

Radiation Patterns Beam solid angle, radiation intensity, Directivity, effective aperture, Antenna field zones, Polarization, impedance, cross field, Poynting vector. Friis Transmission

formula, Duality of Antennas, Antenna and Transmission line, Radiation from a dipole antenna, Antenna temperature System temperature**.**

UNIT II POINT SOURCES 9+3

Definition, Power patterns, Array of two-point sources – Pattern multiplication, Broad side array, End fire array, n-isotropic array, Evaluation of null directions and maxima, Amplitude distributions. Concept of Phased arrays, Adaptive array, Basic principle of antenna Synthesis-Binomial array.

UNIT III SMALL ANTENNAS 9+3

Halfwave dipole antenna radiated fields of short dipole, small loop and helical Antenna, monofilar- multifilar helix. Radiation resistance, Directivity and Design Feature. Half wave dipole: radiated fields and other feature. Numerical tool for antenna analysis.

UNIT IV SPECIAL ANTENNAS: 9+3

Yagi uda Antenna, Tunstile antenna, Principle of frequency independent antennas –Spiral antenna, Helical antenna, Log periodic. Modern antennas- Reconfigurable antenna, Active antenna, Dielectric antennas, rhombic antenna, Horn antenna, Reflector antennas and their feed systems, Micro strip antenna, Impedance and antenna measurements.

UNIT V WAVE PROPOGATION 9+3

Ground wave propagation, Troposphere wave, wave- tilt of the surface wave, Ionosphere propagation – effective permittivity and Conductivity of ionized gas, Reflection – Refraction of waves from ionosphere, regular – irregular variation of Ionosphere, earth magnetic field, Faraday rotation, wave propagation in the Ionosphere. Duct propagation, Critical frequency and Space propagation,

Course Outcome (COs)	
CO1	Define various antenna parameters
CO2	Analyze radiation patterns of antennas
CO3	Evaluate antennas for given specifications
CO4	Illustrate techniques for antenna parameter measurements
CO5	To understand the various applications of antennas.
CO6	Discuss radio wave propagation and Propagation effects in microwave systems, satellite, space, and radar links

U18PCEC504	**MICROWAVE THEORY AND TECHNIQUES**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite –Electromagnetic Waves				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES

Learn the concepts related to microwave transmission

Understand the principle and working of microwave devices

UNIT I INTRODUCTION TO MICROWAVES AND MATHEMATICAL MODEL OF MICROWAVE TRANSMISSION 9+3

History of Microwaves, Microwave Frequency bands; Applications of Microwaves: Civil and Military, Medical, EMI/ EMC.-Concept of Mode, Features of TEM, TE and TM Modes, Losses associated with microwave transmission, Concept of Impedance in Microwave transmission.

UNIT II ANALYSIS OF RF AND MICROWAVE TRANSMISSION LINES 9+3

Coaxial line, Rectangular waveguide, Circular waveguide, Strip line, Micro strip line. Microwave Network Analysis- Equivalent voltages and currents for non-TEM lines, Network parameters for microwave circuits, Scattering Parameters.

UNIT III PASSIVE AND ACTIVE MICROWAVE DEVICES 9+3

Microwave passive components: Directional Coupler, Power Divider, Magic Tee, Attenuator, Resonator. Microwave active components: Diodes, Transistors, Oscillators, Mixers. Microwave Semiconductor Devices: Gunn Diodes, IMPATT diodes, Schottky Barrier diodes, PIN diodes. Microwave Tubes: Klystron, TWT, Magnetron.

UNIT IV MICROWAVE DESIGN PRINCIPLES 9+3

Impedance transformation, Impedance Matching, Microwave Filter Design, RF and Microwave Amplifier Design, Microwave Power Amplifier Design, Low Noise Amplifier Design, Microwave Mixer Design, Microwave Oscillator Design. Microwave Antennas-Antenna parameters, Antenna for ground based systems, Antennas for airborne and satellite borne systems, Planar Antennas.

UNIT V MICROWAVE MEASUREMENTS AND SYSTEMS 9+3

Power, Frequency and impedance measurement at microwave frequency, Network Analyzer and measurement of scattering parameters, Spectrum Analyzer and measurement of spectrum of a microwave signal,. Measurement of Microwave antenna parameters.

Microwave Systems- Radar, Terrestrial and Satellite Communication, Radio Aids to Navigation, RFID, GPS. Modern Trends in Microwaves Engineering- Effect of Microwaves on human body, Medical and Civil applications of microwaves, Electromagnetic interference and Electromagnetic Compatibility (EMI & EMC), Monolithic Microwave ICs, RF MEMS for microwave components, Microwave Imaging.

TEXT BOOK:

Course Outcome (COs)	
CO1	To understand the concepts involved in microwave transmission and its applications
CO2	To analyse the microwave transmission lines
CO3	To learn the various active microwave devices.
CO4	To learn the various passive microwave devices.
CO5	To understand the various microwave design principles and the antenna parameters
CO6	To have a better understanding about microwave systems and its measurements

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18MCTH401	**CONSTITUTION OF INDIA**	**L**	**T**	**P**	**C**
	Total Contact Hours – 24	2	0	0	0
	Prerequisite – NIL				
	Department:-AICTE				

COURSE OBJECTIVES:-

- Understand the premises informing the twin themes of liberty and freedom from a civil right perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in
- the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution

UNIT I **4**

History of Making of the Indian Constitution**:** History Drafting Committee, (Composition & Working)

UNIT II **4**

Philosophy of the Indian Constitution: Preamble, Salient Features

UNIT III **4**

Contours of Constitutional Rights &Duties: Fundamental Rights**,** Right to Equality**,** Right to Freedom**,** Right against Exploitation**,** Right to Freedom of Religion**,** Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

UNIT IV **4**

Organs of Governance: Parliament, Composition**,** Qualifications and Disqualifications**,** Powers and Functions**,** Executive**,** President**,** Governor**,** Council of Ministers Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions

UNIT V **4**

Local Administration: District's Administration head: Role and Importance, Municipalities: Introduction, Augor and role of Elected Representative CEO of Municipal Corporation. Panchayati raj: Introduction, PRI: Zila Panchayat. Elected officials and their roles, CEO Zila Panchayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy

UNIT VI **4**

Election Commission**:** Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners. State Election Commission: Role and Functioning.

Institute and Bodies for the welfare of SC/ST/OBC and women.

SUGGESTED READING

1. The Constitution of India, 1950 (Bare Act), Government Publication.
2. Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, 2015.
3. M. P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
4. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

Course Outcome (COs)	
CO1	Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
CO2	Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
CO3	Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution
CO4	Discuss the passage of the Hindu Code Bill of 1956.
CO5	Understand the concept of Administration
CO6	Understand the concept of Election commission
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCEC5L1	**DIGITAL SIGNAL PROCESSING LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods – 30	**0**	**0**	**2**	**1**
	Prerequisite – Signals & Systems				
	Department:-Department of Electronics & Communication Engineering				

COURSE OBJECTIVES

- To implement Linear and Circular Convolution.
- To implement FIR and IIR filters.
- To study the architecture of DSP processor

LIST OF EXPERIMENTS FOR DIGITAL SIGNAL PROCESSING LABORATORY

1. Waveform generation
2. Sampling and its effect on aliasing
3. Linear and circular convolution
4. DFT computation
5. Fast Fourier transforms
6. FIR Filters Implementation
7. IIR Filters Implementation
8. Quantization Noise.
9. Multirate Signal Processing

10 DSP processor implementation.

Course Outcome (COs)	
CO1	Experiment concepts of DSP and its applications using MATLAB Software
CO2	To understand about the basic signal generation.
CO3	To learn Fourier Transform Concepts.
CO4	To design FIR filters.
CO5	To design IIR filters.
CO6	Demonstrate their abilities towards DSP processor-based implementation of DSP systems.

Mapping of Course Outcomes with Program outcomes (POs)

	Total Contact Hours – 30	0	0	2	1
	Prerequisite –Transmission Lines and Networks				
	Department:-Dept. of Electronics and Communication Engineering				

COURSE OBJECTIVES

Know about the behavior of microwave components.
Understand the radiation pattern of horn antenna.

LIST OF EXPERIMENTS

1. Study of microwave components
2. Characteristics of reflex klystron oscillator
3. Characteristics of gunn diode oscillator
4. Radiation pattern of horn antenna
5. Measurement of Antenna gain
6. Frequency and wavelength measurement
7. Impedance measurement by slotted line method
8. VSWR and Reflection Co-efficient measurement
9. Characteristics of E Plane/ H Plane Tee.
10. Characteristics of Magic Tee.
11. Characteristics of Directional coupler.

Experiments beyond the syllabus should be conducted.

Course Outcome (COs)	
CO1	Demonstrate the characteristics of Microwave sources
CO2	Demonstrate the characteristics of directional Couplers
CO3	To test the characteristics of microwave components
CO4	To analyze the radiation pattern of antenna.
CO5	To measure antenna gain
CO6	Practice microwave measurement procedures

U18MCAB509- SOCIAL AWARENESS (ARTISANS-RELATES TO ENGG., VISIT TO HOSPITALS, ORPHANAGES, POLICESTATION, COURTS, TRAUMA CENTERS, CONSUMER FORUMS)

Human beings live in relationship with their family members and with others in the society. As a society, mankind strives to achieve ordered and organized life through which an environment of cooperation and coexistence is expected. A healthy society creating an environment of fearlessness is a key for the mankind to achieve higher goals because it is society which makes us most human, most complete as people.

Although as a society, our expectation is fearlessness, but due to lack of understanding of our role in a society, we fail to fulfill the expectation. The social awareness activity shall promote an understanding and sharing of issues of societal problem through exposure to variety of artisans and different kind of organizations. It is expected that this exposure will enable the learners to appreciate social issues, problems and challenges.

Each institution will offer a range of introductory activity-based courses focusing on local artisans related to engineering so that students are sensitized to appreciate their problems and can take up some of the problems to solve while they do their regular studies. This course shall also include visits to visit to hospitals, orphanages, police station, courts, trauma centers, consumer forums so that they get exposed to different facets of societal problems. Care should be taken to give adequate representation to local and regional organizations and artisans. For example, Banaras has local traditions in Banarasi Saari, Toy making, etc. and has almost all types of organizations. An institution in Banaras area can offer courses on these artisans. This will, in turn, also ensure wider community involvement/interaction with the institution. At the end of the course/semester, a student should be able to identify a social issue, prepare project report and give presentation on the selected issues. Contact hours per week should be 3 -4 hours. Towards the end of the course, the institution can organize an exhibition in which all the students publicly demonstrate findings of their reports and their future plan of actions.

U18MCAB510 SOCIAL SERVICE

(teach in neighborhood, adopt an underprivileged school, village stay / visit (NSS), cleanliness drive, and skill transfer)

U18PCEC601	**CONTROL SYSTEMS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Transforms and Partial Differential equation				
	Department:-Department of Electronics & Communication Engineering				

COURSE OBJECTIVES:

- To understand the use of transfer function models for analysis physical systems and introduce the control system components.
- To provide adequate knowledge in the time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed–loop frequency responses of systems.
- To introduce stability analysis and design of compensators
- To introduce state variable representation of physical systems and study the effect of state feedback

UNIT I CONTROL SYSTEM MODELING 9

Introduction to control problem- Industrial Control examples. Transfer function. System with dead-time. System response. Translational and rotational mechanical systems, simple Electro - mechanical systems. Block diagram representation of systems. Block Diagram reduction methods. Closed loop transfer function, determination of Signal flow graphs. Mason's gain formula. Examples.

UNIT II TIME RESPONSE ANALYSIS 9

Time response of second-order systems, steady-state errors and error constants. Performance specifications in time-domain. proportional, integral and derivative systems. Feed forward and multi-loop control configurations,..

UNIT III FREQUENCY RESPONSE ANALYSIS 9

Frequency-response analysis- Polar plots, Bode plot, Nyquist plots, M and N Circle, Performance specifications in frequency-domain. Frequency domain methods of design, Compensators-Lead, Lag and Lead-Lag compensation.

UNIT IV STABILITY ANALYSIS 9

Feedback control systems- stability concept, relative stability, Routh stability criterion, Nyquist stability criterion, Root locus method of design.

UNIT V STATE VARIABLE ANALYSIS 9

State variable Analysis- Concepts of state, state variable, state model, state models for linear continuous time functions, diagonalization of transfer function, solution of state equations, concept of controllability & observability.

TEXT BOOK:

REFERENCES:

1. Kuo, B.C., "Automatic Control System", Prentice Hall, sixth edition, 1993.
2. Ogata, K., "Modern Control Engineering", Prentice Hall, second edition, 1991.

Course Outcome (COs)	
CO1	Students will be able to determine and use models of physical systems in forms suitable for use in the analysis and design of control systems.
CO2	Students will be able to determine the time and frequency-domain responses of first and second-order systems to step and sinusoidal (and to some extent, ramp) inputs
CO3	Students are able to determine the (absolute) stability of a closed-loop control system
CO4	Students are able to apply root-locus technique to analyze and design control systems.
CO5	Students are able to express and solve system equations in state-variable form (state variable models).
CO6	Students will be able to design the compensation technique that can be used to stabilize control

U18PCEC602	**COMPUTER NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Analog and digital communication				
	Department:-Department of Electronics & Communication Engineering				

COURSE OBJECTIVES

- To make the students to understand the different layers of ISO /OSI model and TCP/IP Network IEEE standards.
- To understand IP addressing methods and QOS parameters.
- To know the functions and congestion control mechanism of TCP.
- To know about application layer and network security

UNIT I INTRODUCTION 9

Introduction to computer networks and the Internet: Application layer: Principles of network applications, The Web and Hyper Text Transfer Protocol, File transfer, Electronic Mail, Domain name system, Peer-to-Peer file sharing, Socket programming, Layering concepts.

UNIT II SWITCHING NETWORKS 9

Switching in networks: Classification and requirements of switches, a generic switch, Circuit Switching, Time-division switching, Space-division switching, Crossbar switch and evaluation of blocking probability, 2-stage, 3-stage and n-stage networks, Packet switching, Blocking in packet switches, Three generations of packet switches, switch fabric, Buffering, Multicasting, Statistical multiplexing.

UNIT III TRANSPORT LAYER 9

Transport layer: Connectionless transport - User Datagram Protocol, Connection-oriented transport – Transmission Control Protocol, Remote Procedure Call.

UNIT IV NETWORK LAYER 9

Congestion Control and Resource Allocation: Issues in Resource Allocation, Queuing Disciplines congestion Control, Congestion Avoidance Mechanisms and Quality of Service. Virtual circuit and Datagram networks, Router, Internet Protocol, Routing algorithms, Broadcast and Multicast routing

UNIT V DATALINK LAYER 9

ALOHA, Multiple access protocols, IEEE 802 standards, Local Area Networks, addressing, Ethernet, Hubs, Switches.

Course Outcome (COs)	
CO1	Explain the networks, topologies and layers of OSI model, compare with TCP/IP model.
CO2	Classify error control and flow control techniques and types of LAN technologies.
CO3	Analyze different routing algorithms and methods to improve QOS.
CO4	Explain the role of protocols in networking.
CO5	Summarize the transport layer protocols and congestion controls methods.
CO6	Describe various application layer services and cryptographic techniques.

U18PCEC603	**BIOMEDICAL INSTRUMENTATION**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Nil				
	Department:- Department of Electronics & Communication Engineering				

COURSE OBJECTIVES: The objective of the course is to make the student acquire an adequate knowledge of the physiological systems of the human body and relate them to the parameters that have clinical importance.

UNIT I BIO-CHEMICAL AND NON ELECTRICAL PARAMETER MEASUREMENT 9

PH, PO2, PCO2, PHCO3, Electrophoresis, colorimeter, photometer, Auto analyzer, Blood flow meter, cardiac output, respiratory measurement, Blood pressure, temperature, pulse, Blood cell counters.

UNIT II ELECTRO-PHYSIOLOGY AND BIO-POTENTIAL RECORDING 9

The origin of Bio-potentials; biopotential electrodes, biological amplifiers, ECG, EEG, EMG, PCG, EOG, lead systems and recording methods, typical waveforms and signal characteristics

UNIT III ASSIST DEVICES AND BIO-TELEMETRY 9

Cardiac pacemakers, DC Defibrillator, Telemetry principles, frequency selection, Biotelemetry, radio-pill and tele-stimulation.

UNIT IV RADIOLOGICAL EQUIPMENTS 9

Ionizing radiation, Diagnostic x-ray equipment's, use of Radio Isotope in diagnosis, Radiation Therapy.

UNIT V RECENT TRENDS IN MEDICAL INSTRUMENTATION 9

Thermograph, endoscopy unit, Laser in medicine, Diathermy units, Electrical safety in medical equipment.

Course Outcome (COs)	
CO1	To introduce the student to the various sensing and measurement devices of electrical origin
CO2	To Know about the origin of Bio-potentials; bio potential electrodes, biological amplifiers
CO3	To know about the ECG, EEG, EMG, PCG, EOG
CO4	To know about cardiac pacemakers, DC Defibrillator, Bio-telemetry
CO5	To know about Diagnostic x-ray equipments, Radiation Therapy,
CO6	To know about Endoscopy unit, Laser in medicine, Electrical safety in medical equipment

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCEC6L1	COMPUTER NETWORKS LAB	L	T	P	C
	Total Contact Periods – 30	0	0	2	1
	Prerequisite – **Computer Networks**				
	Department:- Department of Electronics & Communication Engineering				

COURSE OBJECTIVES

To understand the working principle of various communication protocols.
To analyze the various routing algorithms.
To know the concept of data transfer between nodes.

List of Experiments

1. Creation and transmission of data between two nodes with duplex link
2. Data transmission between multiple sender and one receiver via router
3. TCP Scenario with droptail queue mechanism
4. Simulate a complex topology with a link failure
5. Creation and transmission of data between two nodes via wireless link
6. Simulation of Different network topology
7. Implementation and study of stop and wait protocol
8. Implementation and study of Goback-N and selective repeat protocols
9. Implementation of distance vector routing algorithm
10. Implementation of Link state routing algorithm
11. Implementation of Data encryption and decryption

Course Outcome (COs)	
CO1	Understand fundamental underlying principles of computer networking
CO2	Understand details and functionality of layered network architecture.
CO3	Apply mathematical foundations to solve computational problems in computer networking
CO4	Analyze performance of various communication protocols.
CO5	Compare routing algorithms
CO6	Practice packet /file transmission between nodes.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation)
3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

4	Approval	48th Meeting of Academic Council														

U18PCEC6L2	ELECTRONICS MEASUREMENT LAB	L	T	P	C
	Total Contact Periods – 45	0	0	2	1
	Prerequisite – Basic Electrical and Electronics Engineering				
	Department:- Department of Electronics & Communication Engineering				

COURSE OBJECTIVES

To introduce students to the use of various electrical/electronic instruments, their construction, applications, principles of operation, standards and units of measurements
To provide students with opportunities to develop basic skills in the design of electronic equipment's.
To experimentally verify the principle and characteristics of various transducers.
To introduce students a knowledge to use modern tools necessary for electrical projects.
To provide a student a knowledge to design and create novel products and solutions for real life problems.
To impart the students with an adequate knowledge and work experience of the different types of bridges

List of Experiments

1. Designing DC bridge for Resistance Measurement (Quarter, Half and Full bridge)
2. Designing AC bridge Circuit for capacitance measurement
3. Designing signal Conditioning circuit for Pressure Measurement
4. Designing signal Conditioning circuit for Temperature Measurement
5. Designing signal Conditioning circuit for Torque Measurement
6. Designing signal Conditioning circuit for Strain Measurement
7. Experimental study for the characteristics of ADC and DAC
8. Error compensation study using Numerical analysis using MATLAB (regression)

Course Outcome (COs)	
CO1	Students will be able to design and validate DC and AC bridges
CO2	Students will be able to analyze the dynamic response and the calibration of few instruments
CO3	Students are able to learn about various measurement devices, their characteristics, their operation and their limitations
CO4	Students are able to understand statistical data analysis
CO5	Students are able to understand computerized data acquisition.
CO6	Students will be able to learn about the various types of electrical transducers

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

U18MCAB611 SPIRITUAL, MINDFULNESS AND MEDITATION

The human mind especially among the youth needs to transcend its preoccupation with negative experiences such as fear, anxiety, anger and obsession and to become more comfortable with the experience of compassion, acceptance and forgiveness. The student's

attitude of acceptance towards negativity, aggression and turbulent emotions should be diffused with the practice of mindfulness. Rather than suppressing emotions or by indulging in them, the student be taught to handle such vibes with acceptance and generosity and with the observation of the self.

A mindful state has to be achieved when negative thoughts and experiences are becoming more personalized and do not serve as dictators of subsequent feelings and activities (e.g. suicide attempts, violence etc.). Both concentrative and insight meditation techniques Aug be practiced for 10-day sessions during every two months. Behavioral techniques of self monitoring should also be practiced to observe the stream of consciousness from the perspective of a vigilant but detached observer.
The students should be trained to practice different models of mindfulness and meditation so as to elicit a state of deep physical and behavioral relaxation. They Aug work on selectively influencing or changing the symmetry in hemispheric brain activity. Positive addiction, meta -cognitive practices etc. are exercised to make the students experience the universal human capacity through spiritual experiences.

The students Aug learn to turn-off or bypass the cognitive processing of usual daily pre-occupations and concerns, allowing access to mindful, spiritual and meditative state of self realization.

Activities

Reading (10 books/ narrations)
Exercises (Mindfulness based Stress Reduction (MBSR) and 10 more) Sessions: multiple 10-day sessions Aug be organized over a semester.

U18MCAB612 RELIGION AND INTER-FAITH

The objective is to gain knowledge about the beliefs and philosophies of different religions on issues like environment, gender equality, unity, financial equality etc.

The scholars of different religious and philosophical sects should be invited to talk about the issues mentioned above. Efforts should be made to ensure that such talks and discourses should stay clear-off making a critical study on these areas.

Following activities must be included.

Reading of books on religious texts of different faiths by famous authors. (Reading methods Aug be as suggested under 'book reading'.)
Organizing lecture on interfaith issues covering philosophies and chronology and contemporary situations world over at a given time.

U18PCEC701	**EMBEDDED SYSTEMS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Microcontroller				
	Department:-Dept of Electronics & Instrumentation Engineering				
COURSE OBJECTIVES To introduce the Building Blocks of Embedded System To Educate in Various Embedded Development Strategies					

To Introduce Bus Communication in processors, Input/output interfacing.
To impart knowledge in various processor scheduling algorithms.
To introduce Basics of Real time operating system and example tutorials to discuss on one real time operating system tool

UNIT I EMBEDDED DESIGN WITH MICROCONTROLLERS 9

Product specification – Hardware / Software partitioning – Detailed hardware and software design – Integration – Product testing – Microprocessor Vs Micro Controller – Embedded Systems on a Chip (SoC) and the use of VLSI designed circuits – RTOS Micro Controller - issues in selection of processors.

UNIT II PARTITIONING DECISION 9

Hardware / Software duality – Hardware-Software portioning- coding for Hardware- software development – ASIC revolution – Managing the Risk – Co-verification – execution environment – memory organization –memory enhancement – Firmware-speed and code density -System startup.

UNIT III FUNCTIONALITIES FOR SYSTEM DESIGN 9

Timers, Watch dog timers – RAM, Flash Memory basic toolset – Integration of Hardware & Firmware- in System Programming, in Application Programming, IDE-Target Configuration-Host based debugging – Remote debugging – ROM emulators – Logic analyzer.

UNIT IV REAL TIME OPERATING SYSTEMS 9

Definitions of process, tasks and threads - Clear cut distinction between functions - ISRs and tasks by their characteristics - Operating System Services- Goals - Structures- Kernel - Process Management - Memory Management - Device Management - File System Organisation and Implementation - I/O Subsystems - Interrupt Routines Handling in RTOS, REAL TIME OPERATING SYSTEMS : RTOS Task scheduling models - Handling of task scheduling and latency and deadlines as performance metrics - Co-operative Round Robin Scheduling - Cyclic Scheduling with Time Slicing (Rate Monotonics Co-operative Scheduling) - Preemptive Scheduling Model strategy by a Scheduler - Critical Section Service by a Preemptive Scheduler - Fixed (Static) Real time scheduling of tasks - Inter Process Communication and Synchronisation - Shared data problem - Use of Semaphore(s) - Priority Inversion Problem and Deadlock Situations - Inter Process Communications using Signals - Semaphore Flag or mutex as Resource key - Message Queues - Mailboxes - Pipes - Virtual (Logical) Sockets - Remote Procedure Calls (RPCs).

UNIT V EMBEDDED DESIGN LIFE CYCLE & TESTING 9

Objective, Need, different Phases & Modeling of the EDLC, choice of Target Architectures for Embedded Application Development-for Control Dominated-Data Dominated Systems-Software &Hardware Design, PCB Design, Manufacturing & PCB Assembly-Bug tracking – reduction of risks & costs – Performance – Unit testing – Regression testing – Choosing test cases – Functional tests – Coverage tests – Testing embedded software – Performance testing – Maintenance.

TEXT BOOK:

Course Outcome (COs)	
CO1	Acquire a basic knowledge about fundamentals of microcontrollers
CO2	Acquire a basic knowledge about programming and system control to perform a specific task.
CO3	Acquire knowledge about devices and buses used in embedded networking
CO4	Develop programming skills in embedded systems for various applications.
CO5	Acquire knowledge about basic concepts of REAL Time Operating Systems
CO6	Build complex embedded system with the use of RTOS.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18MCTH603	**Essence of Indian Knowledge Tradition**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	2	0	0	0
	Prerequisite – NIL				
	Course Designed by – Department of Electronics & Communication Engineering				

OBJECTIVE

- It will also focus on Indian philosophical, linguistic and artistic traditions, along with yoga and Indian perspective of modern scientific worldview.

The course aims at imparting basic principles of thought process, reasoning and inferencing

U18MCAB713 BEHAVIORAL AND INTERPERSONAL SKILLS (NON-VERBAL SKILLS / BEHAVIOURS, NON-AGGRESSION)

Each individual has behavior patterns that are shaped by the context of his or her past. Most often, adapting the behaviour to the changing context of the reality a person lives in becomes difficult which Aug lead to the reduction in personal effectiveness and natural self-expression. The main focus of this course is to equip the students with useful approaches to help in the deeper understanding of self and help individuals empower themselves to be the source of their own growth and development. The course will help students to learn effective communication skills, Group and team building skills and will help them learn the goal setting process and thus become more effective in achieving their goals.

The broader objective of this course is to make the students aware about the different facets of self and to help them learn skills to strengthen their inner capacities. So that they are able to understand themselves, think and act effectively, to be able to communicate in an effective manner and to learn to lead and to form an effective team. The specific objectives, however, are as following.

- To help the students to understand their real self by recognizing different aspects of their self-concept that will lead to an increased self-confidence.
- To train the students for communicating effectively in both formal as well as in informal settings.
- To help the students to understand the importance of non-verbal aspects of effective communication.
- To help the students to understand Emotion and emotional intelligence, Managing ones' own emotional reservoirs, effective dealing with emotions at work
- To facilitate the students in understanding the formation and function of group and team and to help them to learn the skills of a successful leader.
- To help the students in understanding and practicing the goal setting process by recognizing the importance of each step involved in goal setting. The activities involved are designed to facilitate their career goal decision making.

The activities to achieve the above objectives can be suggested as follows.

- Motivational lectures
- Group Discussions/activities
- Case Study
- Games/Stimulation Exercises
- Role-Playing
- Mindfulness training.

U18MCAB714- NATURE

Nature club (bird watching, recognizing plants at institute/at home, recognizing local animals, appreciating biodiversity

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.
Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place.

Making high resolution big photographs of small creatures (bees, spiders, ants. mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants).

Videography/ photography/ information collections on specialties/unique features of different types of common creatures.

Search and explore patents and rights related to animals, trees etc. Studying miracles of mechanisms of different body systems.

U18MCAB815 INNOVATION PROJECT BASED – SC., TECH, SOCIAL, DESIGN & INNOVATION

Many students, when they enter engineering, are full of enthusiasm to understand new areas, to build systems and to experiment and play with them. This enthusiasm is to be tapped and to direct it to exploration and sustained pursuit by the student which Aug result in development

of a working system, a prototype, or a device or material, etc. They are not required or even expected to produce research or an innovation.

Students Aug be encouraged to take up projects which are aimed at providing solutions to societal problems, reduce drudgery and improving efficiency in rural work, green technologies, utilization of rural and urban waste, sanitation and public health, utilizing non -conventional energy sources, technologies for the benefit of the differently abled people and technologies ready to be implemented in the Institute.

Two types of activities Aug be undertaken under this

Exposure to social problems (which are amenable to technological solutions)
Design & Innovation (to address above problems)

After this student, be encouraged to undertake technology projects of social relevance.

PROFESSIONAL ELECTIVES

U18PEEC011	INFORMATION THEORY AND CODING	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Probability and Stochastic Processes, Analog and Digital Communication				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

The student should be made to:

- Understand error–control coding.
- Understand encoding and decoding of digital data streams.
- Be familiar with the methods for the generation of these codes and their decoding techniques.
- Be aware of compression and decompression techniques.
- Learn the concepts of multimedia

UNIT I INFORMATION ENTROPY FUNDAMENTALS 9

Uncertainty, Information and Entropy – Source coding Theorem – Huffman coding –Shannon Fano coding – Discrete Memory less channels – channel capacity – channel coding Theorem – Channel capacity Theorem.

UNIT II DATA AND VOICE CODING 9

Differential Pulse code Modulation – Adaptive Differential Pulse Code Modulation – Adaptive subband coding – Delta Modulation – Adaptive Delta Modulation – Coding of speech signal at low bit rates (Vocoders, LPC).

UNIT III ERROR CONTROL CODING 9

Linear Block codes – Syndrome Decoding – Minimum distance consideration – cyclic codes – Generator Polynomial – Parity check polynomial – Encoder for cyclic codes – calculation of syndrome – Convolutional codes.

UNIT IV COMPRESSION TECHNIQUES 9

Principles – Text compression – Static Huffman Coding – Dynamic Huffman coding – Arithmetic coding – Image Compression – Graphics Interchange format – Tagged Image File Format – Digitized documents – Introduction to JPEG standards.

UNIT V AUDIO AND VIDEO CODING 9

Linear Predictive coding – code excited LPC – Perceptual coding, MPEG audio coders – Dolby audio coders – Video compression – Principles – Introduction to H.261 & MPEG Video standards.

TEXT BOOK:

1. Simon Haykin, "Communication Systems", 4th Edition, John Wiley and Sons, 2001.
2. Fred Halsall, "Multimedia Communications, Applications Networks Protocols and Standards", Pearson Education, Asia 2002; Chapters: 3,4,5.

2. Watkinson J, "Compression in Video and Audio", Focal Press, London, 1995.
3. https://lecturenotes.in/subject/540/information-theory-coding-itc

COURSE OUTCOMES (COs)	
CO1	Design an application with error–control
CO2	Use compression and decompression techniques
CO3	Apply the concepts of multimedia communication
CO4	Discuss about various error control coding
CO5	To study about audio coding techniques
CO6	To study about video coding techniques

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

	CO6	3	2	2	2	2			2	1	1	2				
3	Category	Professional Elective (PE)														
4	Approval	49th Meeting of the Academic Council,														

U18PEEC012	**SPEECH & AUDIO PROCESSING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Digital Signal Processing				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To introduce speech production and related parameters of speech.

To show the computation and use of techniques such as short time Fourier transform, linear predictive coefficients and other coefficients in the analysis of speech.

To understand different speech modeling procedures such as Markov and their implementation issues

UNIT I BASIC CONCEPTS 9

Signal Processing concepts; Short-Time Fourier Transform, Filter-Bank and LPC Methods. Speech Fundamentals: Articulatory Phonetics – Production and Classification of Speech Sounds; Acoustic Phonetics – Acoustics of speech production; Review of Digital

UNIT II SPEECH ANALYSIS 9

Features, Feature Extraction and Pattern Comparison Techniques: Speech distortion measures– mathematical and perceptual – Log–Spectral Distance, Cepstral Distances, Weighted Cepstral Distances and Filtering, Likelihood Distortions, Spectral Distortion using a Warped Frequency Scale, LPC, PLP and MFCC Coefficients, Time Alignment and Normalization – Dynamic Time Warping, Multiple Time – Alignment Paths.

UNIT III SPEECH MODELING 9

Hidden Markov Models: Markov Processes, HMMs – Evaluation, Optimal State Sequence – Viterbi Search, Baum-Welch Parameter Re-estimation, Implementation issues.

UNIT IV SPEECH RECOGNITION 9

Large Vocabulary Continuous Speech Recognition: Architecture of a large vocabulary continuous speech recognition system – acoustics and language models – n-grams, context dependent sub-word units; Applications and present status.

UNIT V SPEECH SYNTHESIS 9

Text-to-Speech Synthesis: Concatenative and waveform synthesis methods, sub-word units for TTS, intelligibility and naturalness – role of prosody, Applications and present status.

TEXT BOOK:

5. https://nptel.ac.in/courses/117105145/

COURSE OUTCOMES (COs)	
CO1	Model speech production system and describe the fundamentals of speech.
CO2	Extract and compare different speech parameters.
CO3	Choose an appropriate statistical speech model for a given application.
CO4	Design a speech recognition system.
CO5	Use different speech synthesis techniques.
CO6	To study about speech analysis and modeling

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEEC013	CELLULAR MOBILE COMMUNICATION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Analog and Digital Communication				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To understand the basic cellular system concepts.

To have an insight into the various propagation models and the speech coders used in mobile communication.

To understand the multiple access techniques and interference education techniques in mobile communication

UNIT I INTRODUCTION TO WIRELESS MOBILE COMMUNICATION 9

History and evolution of mobile radio systems, Types of mobile wireless services/systems – Cellular, WLL, Paging, Satellite systems, Standard, Future trends in personal wireless systems.

UNIT II CELLULAR CONCEPT AND SYSTEM DESIGN FUNDAMENTALS 9

Cellular concept and frequency reuse, Multiple Access Schemes, Channel assignment and handoff, Interface and system capacity, Trucking and Erlang capacity calculations.

UNIT III MOBILE RADIO PROPAGATION 9

Radio wave propagation issues in personal wireless systems, Propagation models, Multipath fading and based and impulse models, Parameters of mobile multipath channels, Antenna systems in mobile radio.

UNIT IV MODULATION AND SIGNAL PROCESSING 9

Analog and digital modulation techniques, Performance of various modulation techniques – Spectral efficiency, Error rate, Power Amplification, Equalization/Rake receiver concepts, Diversity and Space-time processing, Speech coding and channel coding.

UNIT V SYSTEM EXAMPLES AND DESIGN ISSUES 9

Multiple Access Techniques – FDMA, TDMA and CDMA Systems, Operational Systems, Wireless networking, design issues in personal wireless systems.

3. https://en.wikipedia.org/wiki/Cellular_network

COURSE OUTCOMES (COs)	
CO1	Discuss cellular radio concepts
CO2	Identify various propagation effects
CO3	To have knowledge of the mobile system specifications.
CO4	Classify multiple access techniques in mobile communication.
CO5	Outline cellular mobile communication standards.
CO6	Analyze various methodologies to improve the cellular capacity

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

4	Approval	49th Meetings of Academic Council														

U18PEEC014	FPGA AND SYSTEM ON CHIP	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Digital System Design				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To make the students to learn the role of FPGA's and ASIC are perceived to be enormous in embedded systems.

To make the student learn, FPGA fundamentals, design and implementation of circuits in them.

To make the student learn System-on-chip fundamentals, their applications and On-chip networking methods**.**

To give the student an understanding of basics of System on Chip and Platform based design

UNIT I INTRODUCTION TO ASICS, CMOS LOGIC AND ASIC LIBRARY DESIGN 9

Types of ASICs – Design Flow – CMOS transistors, CMOS design rules – Combinational Logic Cell – Sequential logic cell – Data path logic cell – Transistors as Resistors – Transistor Parasitic Capacitance – Logical effort –Library cell design –Library architecture.

UNIT II PROGRAMMABLE LOGIC CELLS AND I/O CELLS 9

Anti fuse – static RAM – EPROM and EEPROM technology – PREP bench marks – Actel ACT – Xilinx LCA –Altera FLEX – Altera MAX DC & AC inputs and outputs – Clock and power inputs – Xilinx I/O block

UNIT III ASIC DESIGN SOFTWARE, FLOOR PLANNING, PLACEMENT AND ROUTING 9

Actel ACT – Xilinx LCA – Xilinx EPLD – Altera MAX 5000 and 7000 – Altera MAX 9000 Altera FLEX – System partition – FPGA partitioning – partitioning methods – floor planning – placement – physical design flow –global routing – detailed routing – special routing – circuit extraction – DRC.

UNIT IV SOC FUNDAMENTALS, SOFTWARE AND ENERGY MANAGEMENT 9

Essential issues of SoC design – A SoC for Digital still camera – multimedia IP development: Image and video codecs. SoC embedded software – energy management techniques for SoC design.

UNIT V SYSTEM DESIGN AND METHODOLOGY, SOFTWARE AND APPLICATION INTERFACES 9

Design methodology for NOC based systems – Mapping concurrent application onto architectural platforms.MP-SoC from software to hardware – NoC APIs – multilevel software validation for NoC – Software for network on chip.

6. https://www.mepits.com/tutorial/421/vlsi/system-on-chip

COURSE OUTCOMES (COs)	
CO1	Demonstrate VLSI tool-flow and appreciate FPGA architecture
CO2	understand the issues involved in ASIC design, including technology choice, design management, tool-flow, verification, debug and test, as well as the impact of technology scaling on ASIC design
CO3	To study the programmable logic cells and i/o cells and understand the algorithms used for ASIC construction
CO4	understand the basics of System on Chip, On chip communication architectures like AMBA,AXI and utilizing Platform based design
CO5	To study the design principles of FPGA and PLA.
CO6	To learn various floor planning methods for system design.

Mapping of Course Outcomes with Program outcomes (POs)

U18PEEC015	DESIGN OF SEMICONDUCTOR MEMORIES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Semiconductor Physics				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To study the architectures for SRAM and DRAM
To know about various non-volatile memories.
To study the fault modeling and testing of memories for fault detection.
To learn the radiation hardening process and issues for memory.
To know about Ferroelectric Random Access Memories (FRAMs).

UNIT I RANDOM ACESS MEMORY TECHNOLOGY 9

Static Random Access Memories(SRAM) SRAM Cell Structure-MOS SRAM Architecture-MOS SRAM Cell and Peripherals Circuit Operation – Bipolar SRAM Technologies –Silicon On Insulator (Sol) Technology – Advanced SRAM Architecture and Technologies – Application Specific SRAMs Dynamic Random Access Memoirs(DRAMs) DRAM Technology Development – CMOS DRAMs-DRAMs Cell Theory and Advanced Cell Structures-BICMOS DRAMs – Soft Error Failure in DRAMs – Advanced DRAM Designs and Architecture – Application Specific DRAMs.

UNIT II NON-VOLATILE MEMORIES 9

Mask Read Only Memories (ROMs)-High Density ROMs-Programmable Read Only Memories(PROMs)-Bipolar PROMs CMOS PROMs-Erasable (UV) – Programmable Read Only Memories(EPROMs) - Floating – Gate EPROM Cell-One Time Programmable (OTP) EPROMs -Electrically Erasable PROMs(EEPROMs) – EEPROM Technology and Architecture – Non Volatile SRAM – Flash Memories (EPROM or EEPROM)

UNIT III MEMORY FAULTS MODELLING, TESTING AND MEMORY DESIGN FOR TESTABILITY AND FAULT TOLERANCE 9

RAM Fault, Electrical Testing, Pseudo Random Testing-Megabit DRAM Testing-Nonvolatile Memory Modeling and Testing-IDDQ Fault modeling and Testing-Application Specific Memory Testing

UNIT IV SEMICONDUCTOR MEMORY RELIABILITY AND RANDOM EFFECTS 9

General Reliability Issues-RAM Failure Modes and Mechanism - Nonvolatile Memory Reliability – Reliability Modeling and Failure Rate Prediction – Design for Reliability – Reliability Test Structures – Reliability Screening and Qualification. Radiation Effects-Single Event Phenomenon (SEP) – Radiation Hardened Memory Characteristics – Radiation Hardness Assurance and Testing – Radiation Dosimettry - Water Level Radiation Testing and Test Structures.

UNIT V ADVANCED MEMORY TECHNOLOGIES AND HIGH-DENSITY MEMORY PACKAGING TECHNOLOGICS 9

Ferroelectric Random-Access Memories (FRAMs) – Gallium Arsenide (GaAs) FRAM – Analog Memories Magneto Resistive Ferroelectric Random-Access Memories (MRAMS) – Experimental Memory Devices Memory Hybrids and MCMs (2D – Memory Stacks and MCMs 3D) – Memory MCM Testing and Reliability Issues – Memory Cards – High Density Memory Packing Feature Directions.

COURSE OUTCOMES (COs)	
CO1	Design Memory Structures.
CO2	Decide the type of memory for a specific application.
CO3	Describe the smartness in the circuits used for memories.
CO4	Design the architectures of Static and Random Access, Nonvolatile memories
CO5	Evaluate the fault modeling and testing procedures for memory circuit
CO6	Identification of new developments in semiconductor memory design.

Mapping of Course Outcomes with Program outcomes (POs)

U18PEEC016	**MIXED SIGNAL DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Analog Circuits & Signals and Systems				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To know the fundamentals of Signals, Filters and Sampling process
To understand the design techniques of analog and digital filters Structures
To know the fundamentals of analog and digital conversion techniques in logical design

UNIT I SIGNALS, FILTERS AND SAMPLING 9

Sinusoidal Signals, Comb Filters, Representing Signals, Impulse Sampling, Decimation, The Sample-and-Hold, Interpolation, K-Path Sampling, The Track-and-Hold Implementing the S/H, The S/H with Gain, The Discrete Analog Integrator.

UNIT II ANALOG FILTERS 9

Integrator Building Blocks- Lowpass Filters, Active-RC Integrators, MOSFET-C Integrators, gm-C (Transconductor-C) Integrators, Discrete-Time Integrator, Filtering Topologies- The Bilinear Transfer Function, The Biquadratic Transfer Function.

UNIT III DIGITAL FILTERS 9

SPICE Models for DACs and ADCs- The Ideal DAC, The Ideal ADC, Number Representation, Sinc-Shaped Digital Filters- The Counter, Lowpass Sinc Filters, Bandpass and Highpass Sinc Filters, Interpolation using Sinc Filters, Decimation using Sinc Filters, Filtering Topologies- FIR Filters, Stability and Overflow, The Bilinear Transfer Function, The Biquadratic Transfer Function

UNIT IV DATA CONVERTER FUNDAMENTALS 9

Analog Versus Discrete Time Signals, Converting Analog Signals to Digital Signals, Sample-and-Hold (S/H) Characteristics, Digital-to-Analog Converter (DAC) Specifications, Analog-to-Digital Converter (ADC) Specifications, Mixed-Signal Layout Issues.

UNIT V DATA CONVERTER ARCHITECTURES 9

DAC Architectures- Digital Input Code, Resistor String, R-2R Ladder Networks, Current Steering, Charge-Scaling DACs, ADC Architectures- Flash, The Two-Step Flash ADC, The Pipeline ADC, Integrating ADCs, The Successive Approximation ADC, The Oversampling ADC.

COURSE OUTCOMES (COs)	
CO1	Understand the practical situations where mixed signal analysis is required.
CO2	Analyze and handle the inter-conversions between signals. Design systems involving mixed signals
CO3	To understand the various conversion architectures for analog and digital signal processing.
CO4	To be able to design analog and digital filters Structures.
CO5	To be able to carry out the filters design in data conversions.

CO6	To be able to design conversion architectures for DSP algorithms.

U18PEEC021	ERROR CORRECTING CODES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Digital System Design				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

Theory and application of error detecting and correcting codes.
Encoding, decoding and error correcting techniques.
System control with emphasis on hardware implementation

UNIT 1 INTRODUCTION TO CODING 9

Basic Definitions, Block Codes and Maximum Likelihood Decoding, Decoding Tables, Hamming Weight and Distance, Error Correction Vs Detection

UNIT II LINEAR BLOCK CODES 9

Definitions, Generator Matrix, Parity-Check Matrix, Error-Correcting Capability of a Linear Code, The Standard Array

UNIT III BINARY CYCLIC CODES 9

Description of Cyclic Codes, encoding with (n-k)-Stage Shift Register, Syndrome Calculations and Error Detection, A General Decoder for Cyclic Codes, Shortened Cyclic Codes

UNIT IV ERROR TRAPPING DECODING FOR CYCLIC CODE 9

Error Trapping Decoding, Hamming Codes, Double-Error-Detecting and Single-Error Correcting Hamming Codes, A Modified Error-Trapping Decoding, Oley Code

UNIT V BCH CODES 9

Description of Codes, Decoding of the BCH Codes, Implementation of Error Correction, Non binary BCH Codes and Reed-Solomon Codes, Single-Burst-Error-Correcting Codes, Burst-and-Random-Error-Correcting Codes, Error Detecting and Correcting Systems Design and Hardware Implementation

TEXT BOOK:

5.http://www.cs.cmu.edu/~odonnell/toolkit13/lecture10.pdf

COURSE OUTCOMES (COs)	
CO1	Understand Block Codes and Maximum Likelihood Decoding.
CO2	Understand Decoding Tables, Hamming Weight and Distance and Error Correction Vs Detection.
CO3	Understand Generator Matrix, Parity-Check Matrix and Error-Correcting Capability of a Linear Code.
CO4	Design an error detecting and correcting system for semiconductor memory system to meet given system specification.
CO5	Understand Binary Cyclic Codes, encoding with (n-k)-Stage Shift Register and Syndrome Calculations and Error Detection
CO6	Design an error detecting and correcting system for magnetic storage device to meet given system specification.

U18PEEC022	**WIRELESS COMMUNICATION NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Computer Network and Analog & Digital Communication				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To provide the students with the fundamental treatment about many practical and theoretical concepts that forms basic of wireless communications.

To equip the students with various kinds of wireless networks and its operations.

To prepare students to understand the concept of frequency reuse and be able to apply it in the design of mobile cellular system.

UNIT I THE CELLULAR CONCEPT-SYSTEM DESIGN FUNDAMENTALS 9

Introduction, Frequency Reuse, Channel Assignment Strategies, Handoff Strategies-Prioritizing Handoffs, Practical Handoff Considerations, Interference and system capacity — Co channel Interference and system capacity, Channel planning for Wireless Systems,

Adjacent Channel interference ,Trunking and Grade of Service, Improving Coverage & Capacity in Cellular Systems.

UNIT II MOBILE RADIO PROPAGATION 9

Large-Scale Path Loss: Introduction to Radio Wave Propagation, Free Space Propagation Model, Relating Power to Electric Field, The Three Basic Propagation Mechanisms, Outdoor Propagation Models,lndoor Propagation Models, Signal penetration into buildings, Ray Tracing and Site Specific Modeling.

UNIT III MOBILE RADIO PROPAGATION 9

Small Scale Fading and Multipath: Small Scale Multipath Propagation-Factors influencing small scale fading, Doppler shift, Impulse Response Model of a multipath channel-Relationship between Bandwidth and Received power, Small-Scale Multipath Measurements-Direct RF Pulse System, Spread Spectrum Sliding Correlator Channel Sounding, Frequency Domain Channels Sounding, Parameters of Mobile Multipath Channels.

UNIT IV EQUALIZATION AND DIVERSITY 9

Introduction, Fundamentals of Equalization, Training A Generic Adaptive Equalizer, Equalizers in a communication Receiver, Linear Equalizers, Non-linear Equalization-Decision Feedback Equalization (DFE), Maximum Likelihood Sequence Estimation (MLSE) Equalizer.

UNIT V WIRELESS NETWORKS 9

Introduction to wireless Networks, Advantages and disadvantages of Wireless Local Area Networks, WLAN Topologies, WLAN Standard IEEE 802.11, IEEE 802.11 Medium Access Control, Comparison of IEEE 802.11 a,b,g and n standards, IEEE 802.16 and its enhancements, Wireless PANs, Hiper Lan, WLL.

U18PEEC023	**WIRELESS SENSOR NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Computer Networks				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To Obtain a broad understanding about the network architecture of wireless sensor network.
To Understand all basic characteristics of wireless sensor networks and sensor nodes.

COURSE OUTCOMES (COs)	
CO1	Understand the principles of wireless communications.
CO2	Understand fundamentals of wireless networking
CO3	Understand cellular system design concepts.
CO4	Analyze various multiple access schemes used in wireless communication.
CO5	Understand wireless wide area networks and their performance analysis.
CO6	Demonstrate wireless local area networks and their specifications.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3
2	CO1	3			2	2			1	3		3		3	3	3
	CO2	2	1		2	2			2	1						
	CO3	3	2	2	1	2			2			2				
	CO4	3	1		1	2			1			2	2			
	CO5	2	1		2	2			3	2		2				
	CO6	2	2		1	2			2	1		1				
3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

To learn the principles of data transmission, clustering algorithm and routing protocols.
To Understand different constraint of wireless sensor network, e.g., coverage, power management, security and data collisions.
To Design and development of new network architecture and MAC protocols

UNIT I BASIC WIRELESS SENSOR TECHNOLOGY AND APPLICATIONS 6

Introduction, Sensor Node Technology, Sensor Taxonomy, Examples of Category 1 WSN Applications, Examples of Category 2 WSN Applications, WN Trends.

UNIT II MEDIUM ACCESS CONTROL PROTOCOLS FOR WIRELESS SENSOR NETWORKS 9

Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSN, Sensor-MAC Case Study, IEEE 802.15.4 LR-WPANs Standard Case Study

UNIT III ROUTING PROTOCOLS FOR WIRELESS SENSOR NETWORK 12

Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in Wireless Sensor Network, Routing Strategies in Wireless Sensor Networks, Traditional Transport Control Protocols, Examples of Existing Transport Control Protocols

UNIT IV MIDDLEWARE FOR WIRELESS SENSOR NETWORKS 6

Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware

UNIT V OPERATING SYSTEM & NETWORK MANAGEMENT FOR WIRELESS SENSOR NETWORKS 12

Introduction, Network Management Requirements, Traditional Network Management Models Network Management Design Issues, Example of Management Architecture: MANNA, Other Issues Related to Network Management, Operating System Design Issues, TinyOS, Mate, Magnet OS, MANTIS.

COURSE OUTCOMES (COs)	
CO1	Design wireless sensor networks for a given application
CO2	Understand emerging research areas in the field of sensor networks
CO3	Understand MAC protocols used for different communication standards used in WSN
CO4	Explore new protocols for WSN
CO5	Understand Middleware of wireless sensor networks
CO6	Understand the operating system and network management of WSN

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

U18PEEC024	**ASIC DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Digital System design				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To acquire knowledge about different types of ASICs design.
To study about various types of Programmable ASICs architectures and interconnects

UNIT I INTRODUCTION TO ASICS, CMOS LOGIC, ASIC LIBRARY DESIGN 9

Types of ASICs - Design flow – CMOS transistors- CMOS Design rules –Combinational logic Cell Sequential logic cell - Transistor as Resistors - Transistor parasitic capacitance – Logical effort - Library cell design – Library architecture.

UNIT II PROGRAMMABLE ASICS, PROGRAMMABLE ASIC LOGIC CELLS 9

Anti fuse - Static RAM - EPROM and EEPROM technology - PREP benchmarks - Actel ACT - Xilinx LCA –Altera FLEX - Altera MAX DC & AC inputs and outputs - Xilinx I/O blocks.

UNIT III PROGRAMMABLE ASIC INTERCONNECT, PROGRAMMABLE ASIC DESIGN SOFTWARE AND LOW LEVEL DESIGN 9

Entry: Actel ACT -Xilinx LCA - Xilinx EPLD - Altera MAX 5000 and 7000 - Altera MAX 9000 - Altera FLEX –Design systems - Logic Synthesis - Half gate ASIC -Low level design language - PLA tools EDIF- CFI design representation.

UNIT IV SYSTEM ON-CHIP DESIGN 9

Voice over IP SOC - Intellectual Property – SOC Design challenges- Methodology and design-FPGA to ASIC conversion – Design for integration-SOC verification-Set top box SOC.

UNIT V PHYSICAL AND LOW POWER DESING 9

Over view of physical design flow- tips and guideline for physical design- modern physical design techniques- power dissipation-low power design techniques and methodologies-low power design tools- tips and guideline for low power design.

3. www.vhdl.org/rassp/vhdl/guidelines/DesignReq.pdf

COURSE OUTCOMES (COs)	
CO1	Recognize need for programmable devices.
CO2	Describe architecture of programmable devices.
CO3	Explain programmable methodologies.
CO4	Recall IC fabrication techniques vis-à-vis CMOS switch.
CO5	Relate design and implementation flow for PLDs.
CO6	Low power design techniques and methodologies.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEEC025	**TESTING AND VERIFICATION OF ELECTRONIC CIRCUITS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basic electrical and electronics, Electronic circuits				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVE:-

Gain knowledge on the basics of testing and the testing equipment's
Emphasize the needs of fault modeling and simulation
Interpret different testing methods of combinational and sequential Circuits.

UNIT I INTRODUCTION 9

Introduction to Testing: Testing philosophy, Role of testing, Digital and analog circuit testing, Technology trends affecting testing, Test Equipment's, Economics and Quality: Test economics, Defining cost, Benefit-cost analysis, The rule of ten, Yield.
Verification: Importance of verification, Verification plan, Verification flow, Levels of verification, Verification methods and languages. Functional Verification: Introduction to test bench, Test bench architecture, Types of test benches.

UNIT II FAULT SIMULATION AND TESTABILITY MEASURES 9

Simulation for Design Verification, Simulation for Test Evaluation, Modeling Circuits for Simulation, Algorithms for True-Value Simulation, Algorithms for Fault Simulation, SCOAP Controllability and Observability.

UNIT III TESTING AND TESTABILITY OF COMBINATIONAL CIRCUITS 9

Test Generation Techniques: One dimensional path sensitization, Boolean Difference, D-Algorithm, PODEM, FAN, Delay Fault Detection. Detection of multiple faults, The Reed-Muller Expansion Technique, Three level OR-AND-OR Design, Automatic Synthesis of Testable Logic, Testable PLA Design

UNIT IV TESTING AND TESTABILITY OF SEQUENTIAL CIRCUITS 9

Testing of sequential circuits as iterative combinational circuits, State Table Verification, Test Generation based on Circuit Structure, Ad Hoc Design Rules, Scan Path Technique, Partial Scan and Boundary Scan

UNIT V DELAY TEST AND IDDQ TEST 9

Delay Test Problem, Path-Delay Test, Faults Detected by IDDQ Tests, IDDQ Testing Methods, Limitations of IDDQ Testing, IDDQ Built-In Current Testing, IDDQ Design for Testability

COURSE OUTCOMES (COs)	
CO1	Understand the need of testing also able to identify the different characteristics of verification, validation, testing and diagnosis in context of electronic circuits.

CO2	Effectively use the different verification tools and methods
CO3	Effectively use the automatic test equipment and automatic test pattern generator
CO4	Add DFT and BIST techniques in given electronic design
CO5	Analyze the various fault models
CO6	Analyze IDDQ testing Methods

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEEC026	**STATISTICAL SIGNAL PROCESSING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Digital signal processing				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To Introduce the basics of random signal processing and Concept wise Introduction to Estimation and prediction theory

UNIT I INTRODUCTION TO RANDOM SIGNAL PROCESSING 9

Discrete Random Processes- Ensemble Averages, Stationary processes, Bias and Estimation, Auto covariance, Autocorrelation, Parseval's theorem, Wiener-Khintchine relation, White noise, Power Spectral Density, Spectral factorization, Filtering Random Processes, Special types of Random Processes – ARMA, AR, MA – Yule-Walker equations.

UNIT II SPECTRAL ESTIMATION 9

Estimation of spectra from finite duration signals, Nonparametric methods - Periodogram, Modified periodogram, Bartlett, Welch and Blackman-Tukey methods, Parametric method, AR (p) spectral estimation and detection of Harmonic signals, MUSIC algorithm.

UNIT III LINEAR ESTIMATION AND PREDICTION 9

Linear Prediction of Signals-Forward and Backward Predictions, Solution to Prony's normal equation, Levinson Durbin Algorithm, Lattice filter realization of prediction error filters. Linear Minimum Mean-Square Error (LMMSE)

UNIT IV ADAPTIVE FILTERS 9

FIR adaptive filters – adaptive filter based on steepest descent method- Widrow-Hopf LMS algorithm, Normalized LMS algorithm, Adaptive channel equalization, Adaptive echo cancellation, Adaptive noise cancellation, RLS adaptive algorithm.

UNIT V APPLICATION OVERVIEW-SPEECH PROCESSING 9

Speech Fundamentals: Articulatory Phonetics – Production and Classification of Speech Sounds; Acoustic Phonetics – acoustics of speech production; Short-term Fourier transform (STFT): overview of Fourier representation, non-stationary signals, development of STFT, transform and filter-bank views of STFT; Short time Homomorphic Filtering of Speech; Linear Prediction (LP) analysis: Basis and development, Levinson-Durbin's method, normalized error, LPC spectrum.

COURSE OUTCOMES (COs)	
CO1	Students will analyze the random signal processing
CO2	Students will learn to understand the spectral Estimation
CO3	Students will develop knowledge in Estimation and Prediction theory.
CO4	To know about adaptive filtering and its Applications.
CO5	Understand the fundamentals of Speech
CO6	Understand about speech processing.

U18PEEC031	**COGNITIVE RADIO**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Analog and Digital Communication				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

Learn the design of the wireless networks based on the cognitive radios
Understand the concepts of wireless networks and next generation networks.

UNIT I INTRODUCTION TO SOFTWARE DEFINED RADIO 9

Definitions and potential benefits, software radio architecture evolution, technology tradeoffs and architecture implications.

UNIT II SDR ARCHITECTURE 9

Essential functions of the software radio, basic SDR, hardware architecture, Computational processing resources, software architecture, top-level component interfaces, interface topologies among plug and play modules,.

UNIT III INTRODUCTION TO COGNITIVE RADIOS 9

Marking radio self-aware, cognitive techniques–position awareness, environment awareness in cognitive radios, optimization of radio resources, Artificial Intelligence Techniques.

UNIT IV COGNITIVE RADIO ARCHITECTURE 9

Cognitive Radio- functions, components and design rules, Cognition cycle-orient, plan, decide and act phases, Inference Hierarchy, Architecture maps, Building the Cognitive Radio Architecture on Software defined Radio Architecture.

UNIT V NEXT GENERATION WIRELESS NETWORKS 9

The XG Network architecture, spectrum sensing, spectrum management, spectrum mobility, spectrum sharing , upper layer is sues,cross –layer design.

COURSE OUTCOMES (COs)	
CO1	Describe the basics of the software defined radios.
CO2	To learn the hardware and software architecture of software defined radio
CO3	Design the wireless network based on the cognitive radios.
CO4	Gives an understanding of cognitive radio architecture
CO5	Explain the concepts behind the wireless networks and next generation networks
CO6	To have a better understanding of cognitive techniques

U18PEEC032	**ULTRA WIDEBAND COMMUNICATION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Analog and Digital Communication				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

This course focuses on the basic signal processing techniques that concerns present and future dynamic UWB communication systems.

This course encompasses all areas of design and implementation of UWB systems.

At the end of the semester, the student should be able to develop a comprehensive overview of UWB system design that spans propagation, transmit and receive antenna implementations, standards and advanced topics, modulation and multiple access, network issues, and applications

UNIT I UWB SIGNALS AND SYSTEMS WITH UWB WAVEFORMS 9

Introduction – Power spectral density – Pulse shape – Pulse trains – Spectral masks – Multipath – Penetration characteristics – Spatial and spectral capacities – Speed of data transmission – Gaussian waveforms – Designing waveforms for specific spectral masks – Practical constraints and effects of imperfections.

UNIT II SIGNAL PROCESSING TECHNIQUES FOR UWB SYSTEMS AND UWB CHANNEL MODELING 9

Effects of a lossy medium on a UWB transmitted signal – Time domain analysis – Frequency domain techniques – A simplified UWB multipath channel model – Path loss model – Two-ray UWB propagation model – Frequency domain autoregressive model

UNIT III UWB COMMUNICATIONS AND ADVANCED UWB PULSE GENERATION UWB 9

Modulation methods – Pulse trains – UWB transmitter/receiver – Multiple access techniques in UWB – Capacity of UWB systems – Comparison of UWB with other wideband communication systems – Interference and coexistence of UWB with other systems – Hermite pulses – Orthogonal prolate spheroidal wave functions – Wavelet packets in UWB PSM – Applications of UWB communication systems.

UNIT IV UWB COMMUNICATION STANDARDS AND ADVANCED TOPICS IN UWB COMMUNICATION SYSTEMS UWB 9

Standardization in wireless personal area networks – DS-UWB proposal – MB-OFDM UWB proposal – IEEE proposals for UWB channel models – UWB ad-hoc and sensor networks – MIMO and Space-time coding for UWB systems – Self interference in high data-rate UWB communications – Coexistence of DS-UWB with WIMAX

COURSE OUTCOMES (COs)	
CO1	To understand the operational characteristics of UWB
CO2	To study the working principle UWB technologies
CO3	To understand the working concept of all the Blocks Standards of UWB..
CO4	The ability to identify, formulate the radio channel,
CO5	To demonstrate the Wireless OFDM and RFID
CO6	To study the UWB signal characteristics , mask features, fundamentals and standards

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEEC033	**BROADBAND NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Computer Networks				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To understand the basics of networks and to study packet switched networks and circuit switched networks and to study ATM ad optical networks

UNIT I BASIC OF NETWORKS 9

Telephone, computer, cable Television and Wireless network, Networking principles, Digitalization , service integration, network services, and layered Architecture, traffic characterization and QOS, networks services, network elements and network mechanisms

UNIT II PACKET SWITCHED NETWORK 9

CSI and IP models: Ethernet (IEEE 802.3), tokentring(IEEE 802.5) FDDI, QDB, frame relay, SMDS, internet working with SMDS

UNIT III INTERNET AND TCP/IP NETWORKS 9

Interview , internet protocol , TCP and VDP, performance of TCP/IP networks circuit switched networks, SONET , DWDM, Fibre to home ,DSL, Intelligent networks, CATV.

UNIT IV BROAD BAND NETWORK TECHNOLOGY 9

Broadband services, ATM and IP , IPV6, High speed switching, resource reservation, Buffer management, traffic shaping, caching, scheduling and policing, throughput, delay and jitter performance.

UNIT V APPLICATIONS 9

MIME, Peer-to-peer computing, shared application, video conferencing, centralized and distributed conference control, distributed virtual reality, light weight session philosophy.

COURSE OUTCOMES (COs)	
CO1	To develop skills in networking.
CO2	To gain knowledge in TCP/IP and ISDN concepts.
CO3	To study Internet And Tcp/Ip Networks
CO4	To study packet switched networks and circuit switched networks.
CO5	To study ATM ad optical networks
CO6	To learn about real time applications in broad band networks

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

U18PEEC034	NETWORK SERVICES	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Computer Network				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

The course gives an introduction to network processors including architecture and how such devices can be used in a system. Additionally, the course looks at how to program Intel IXP network processors and how to use these in a distributed multimedia system

UNIT I INTRODUCTION 9

Traditional protocol processing Systems – Network processing Hardware – Basic Packet Processing Algorithms and data Structures - Packet processing functions – Protocol Software –Hardware Architectures for Protocol processing – Classification and Forwarding– Switching Fabrics.

UNIT II NETWORK PROCESSOR TECHNOLOGY 9

Network Processors: Motivation and purpose - Complexity of Network Processor Design – Network Processor Architectures architectural variety, architectural characteristics Peripheral Chips supporting Network Processors: Storage processors, Classification Processors, Search Engines, Switch Fabrics, Traffic Managers.

UNIT III COMMERCIAL NETWORK PROCESSORS 9

Multi-Chip Pipeline, Augmented RISC processor, Embedded Processor plus Coprocessors Pipelilne of Flomogeneous processors. Configurable Instruction set processors – Pipeline of Electrogeneous processors – Extensive and Diverse processors – Flexible RISC plus Coprocessors – Scalability issues – Design Tradeuffs and consequences.

UNIT IV NETWORK PROCESSOR: ARCHITECTURE ANDPROGRAMMING 9

Architecture: Intel Network Processor: Multiheaded Architecture Overview – Features-Embedded EISC processor - Packet Processor Hardware – Memory interfaces – System and Control Interface Components – Bus Interface. Programming Software Development Kit-IXP Instruction set –register formats – Micro Engine Programming – Intra thread and Inter-thread communication –thread synchronization – developing sample applications – control plane – ARM programming.

UNIT V IOS TECHNOLOGIES 9

CISCO COS – Connectivity and scalability – high availability – IP routing – IP services – IPV6 –Mobile IP – MPLS – IP Multicast 0 Manageability – QoS – Security – Switching – Layer VPN2.

COURSE OUTCOMES (COs)	
CO1	Understand network processing hardware.
CO2	Understand network processors and classification of processors.
CO3	Understand Embedded processors and coprocessors and pipelining.
CO4	Explore network processor architecture and programming.
CO5	Understand IP routing and IP services.
CO6	Understand the Quality of service and security.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEEC035	**IOT AND MACHINE LEARNING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Embedded System				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To Understand the Architectural Overview of IoT
To Understand the IoT Reference Architecture and real World Design Constraints.
To Understand about cloud systems and sensors in IoT
To Understand the various learning algorithms and the applications of IoT

UNIT I OVERVIEW 9

IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations. M2M Value Chains, IoT Value Chains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies.

UNIT II IOT SMART SENSORS 9

Introduction of Different Types of Sensors such as Capacitive, Resistive, Surface Acoustic Wave for Temperature, Pressure, Humidity, Toxic Gas, etc., Important Characteristics of Sensors Importance and Adoption of Smart Sensors Architecture of Smart Sensors Fabrication of Sensor and Smart Sensor: Electrode fabrication: Screen printing, Photolithography, Electroplating Sensing film deposition: Physical and chemical Vapor, Anodization, Sol-gel

UNIT III IOT CLOUD SYSTEMS 9

The Cloud -Hype cycle-metaphorical interpretation-cloud architecture standards and interoperability- Cloud types; IaaS, PaaS, SaaS. Benefits and challenges of cloud computing, public, private clouds community cloud, role of virtualization in enabling the cloud.

UNIT IV LEARNING ALGORITHMS IN IOT 9

Regression Algorithms-Linear Regression- Polynomial Regression-Recurrent Neural Networks-Long Short term Memory Networks-Logistic Regression-Support Vector machines-Anomaly Detection-Python Programming

UNIT V CASE STUDIES 9

Design and Implementation of IoT for Environmental Condition Monitoring Case study: Development of WSN Based Smart Bed for Health Care Application Case study: Study of Smart City and its Design Case study: Study of Smart Airport and its Design Relevance of IoT to Developing World and Research Scope for the Internet of things

U18PEEC036	SYSTEM MODELING & DESIGN	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Analog & Digital Communication and Computer Networks				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To enable the student to understand the various aspects of simulation methodology and performance, appreciate the significance of selecting sampling frequency and modeling different types of signals and processing them

UNIT I SIMULATION METHODOLOGY 9

Introduction, Aspects of methodology, Performance Estimation, Simulation sampling frequency, Low pass equivalent simulation models for band pass signals, Multicarrier signals, Non-linear and time varying systems, Post processing – Basic graphical techniques and estimations.

UNIT II RANDOM SIGNAL GENERATION & PROCESSING 9

Uniform random number generation, Mapping uniform random variables to an arbitrary pdf, Correlated and Uncorrelated Gaussian random number generation, PN sequence generation, Random signal processing, Testing of random number generators.

UNIT III MONTE CARLO SIMULATION 9

Fundamental concepts, Application to communication systems, Monte Carlo integration, Semianalytic techniques, Case study: Performance estimation of a wireless system.

UNIT IV ADVANCED MODELS & SIMULATION TECHNIQUES 9

Modeling and simulation of non-linearities : Types, Memoryless non-linearities, Non-linearities with memory, Modeling and simulation of Time varying systems : Random process models, Tapped delay line model, Modelling and simulation of waveform channels, Discrete memoryless channel models, Markov model for discrete channels with memory.

UNIT V EFFICIENT SIMULATION TECHNIQUES 9

Tail extrapolation, pdf estimators, Importance Sampling methods, Case study: Simulation of a Cellular Radio System.

COURSE OUTCOMES (COs)	
CO1	The student would be able to mathematically model a physical phenomena
CO2	To simulate the phenomena to depict the characteristics that Aug be observed in a real experiment
CO3	The student would be able to apply his knowledge of the different simulation techniques for designing a communication system or channel
CO4	To show the performance so as to match a realistic scenario.
CO5	To expose the student to the different simulation techniques, their pros and cons
CO6	To enable him to understand and interpret results using case studies

U18PEEC037	**ADAPTIVE SIGNAL PROCESSING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Digital signal processing				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

Introduction to the various techniques used to predict the outcomes of a random Process.
Ability to appreciate the various filters, their inherent assumptions and the statistics they require.
Top-level understanding of the convergence issues, computational complexities and optimality of different filters.
Ability to develop adaptive systems for various applications.

UNIT I ADAPTIVE SYSTEMS 9

Definitions and characteristics - applications – properties-examples - adaptive linear combiner input signal and weight vectors - performance function-gradient and minimum mean square error - introduction to filtering-smoothing and prediction - linear optimum filtering-orthogonality - Wiener – Hop equation-performance surface.

UNIT II STABILITY AND RATE OF CONVERGENCE 9

Learning curve-gradient search - Newton's method - method of steepest descent - comparison - Gradient estimation - performance penalty - variance - excess MSE and time constants – mis-adjustments.

UNIT III LMS ALGORITHM CONVERGENCE OF WEIGHT VECTOR 9

LMS/Newton algorithm - properties - sequential regression algorithm - adaptive recursive filters - random-search algorithms - lattice structure - adaptive filters with orthogonal signals.

UNIT IV INVERSE ADAPTIVE MODELING 9

Equalization, and de-convolution adaptive equalization of telephone channels-adapting poles and zeros for IIR digital filter synthesis.

UNIT V APPLICATIONS 9

Adaptive Modeling and System Identification, Multipath communication channel, geophysical exploration, FIR digital filter synthesis.

U18PEEC041	CRYTOGRAPHY AND NETWORK SECURITY	L	T	P	C
	Total Contact Hours-45	3	0	0	3
	Prerequisite: Computer Networks				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

The student should be made to:

Understand OSI security architecture and classical encryption techniques.

Acquire fundamental knowledge on the concepts of finite fields and number theory.

Understand various block cipher and stream cipher models.

Describe the principles of public key cryptosystems, hash functions and digital signature.

UNIT I INTRODUCTION & NUMBER THEORY 10

Services, Mechanisms and attacks-the OSI security architecture-Network security model-Classical Encryption techniques (Symmetric cipher model, substitution techniques, transposition techniques, steganography).FINITE FIELDS AND NUMBER THEORY: Groups, Rings, Fields-Modular arithmetic-Euclid‟s algorithm-Finite fields- Polynomial Arithmetic –Prime numbers-Fermat‟s and Euler‟s theorem-Testing for primality -The Chinese remainder theorem- Discrete logarithms.

UNIT II BLOCK CIPHERS & PUBLIC KEY CRYPTOGRAPHY 10

Data Encryption Standard-Block cipher principles-block cipher modes of operation-Advanced Encryption Standard (AES)-Triple DES-Blowfish-RC5 algorithm. **Public key cryptography:** Principles of public key cryptosystems-The RSA algorithm-Key management - Diffie Hellman Key exchange-Elliptic curve arithmetic-Elliptic curve cryptography.

UNIT III HASH FUNCTIONS AND DIGITAL SIGNATURES 8

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC –MD5 - SHA - HMAC – CMAC - Digital signature and authentication protocols – DSS – EI Gamal – Schnorr.

UNIT IV SECURITY PRACTICE & SYSTEM SECURITY 8

Authentication applications – Kerberos – X.509 Authentication services - Internet Firewalls for Trusted System: Roles of Firewalls – Firewall related terminology- Types of Firewalls - Firewall designs - SET for E-Commerce Transactions. Intruder – Intrusion detection system – Virus and related threats – Countermeasures – Firewalls design principles – Trusted systems – Practical implementation of cryptography and security.

UNIT V E-MAIL, IP & WEB SECURITY 9

E-mail Security: Security Services for E-mail-attacks possible through E-mail - establishing keys privacy-authentication of the source-Message Integrity-Non-Repudiation-Pretty Good Privacy-S/MIME. **IP Security:** Overview of IPSec - IP and IPv6-Authentication Header-Encapsulation Security Payload (ESP)-Internet Key Exchange (Phases of IKE, ISAKMP/IKE Encoding). **Web Security:** SSL/TLS Basic Protocol-computing the keys- client authentication-PKI as deployed by SSLAttacks fixed in v3- Exportability-Encoding-Secure Electronic Transaction (SET).

TEXT BOOK:

1. William Stallings, Cryptography and Network Security, 6th Edition, Pearson Education, March 2013. (UNIT I,II,III,IV).

2. Charlie Kaufman, Radia Perlman and Mike Speciner, "Network Security", Prentice Hall of India, 2002.(UNIT V).

REFERENCES:

1. Behrouz A. Ferouzan, "Cryptography & Network Security", Tata McGraw Hill, 2007.
2. Man Young Rhee, "Internet Security: Cryptographic Principles", "Algorithms and Protocols", Wiley Publications, 2003.
3. Charles Pfleeger, "Security in Computing", 4th Edition, Prentice Hall of India, 2006.

COURSE OUTCOMES (COs)	
CO1	Able to Compare various Cryptographic Technique.
CO2	Design Secure applications
CO3	Understand Inject secure coding in the developed applications
CO4	Explore Security of Hash function and MAC.
CO5	Understand Firewall related terminology and Types of Firewall.
CO6	Understand the concepts of web security and IP security.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

U18PEEC042	**ROUTING PROTOCOLS**	**L**	**T**	**P**	**C**
	Total Contact Hours-45	3	0	0	3
	Prerequisite: Computer Networks				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

Obtain a broad understanding about the routing protocol; it specifies how routers communicate with each other, distributing information that enables them to select routes between any two nodes on a computer network. Routing algorithms determine the specific choice of route. Each router has a prior knowledge only of networks attached to it directly. A routing protocol shares this information first among immediate neighbors, and then throughout the network

UNIT I INTRODUCTION TO ROUTING AND PACKET FORWARDING 9

Inside the Router, CLI Configuration and Addressing, Building the Routing Table, Path Determination and Switching Functions.

UNIT II ROUTING TABLE 9

The Routing Table Structure, Routing Table Lookup Process, Routing Behavior

UNIT III STATIC ROUTING PROTOCOLS 9

Routers and the Network, Router Configuration Review, Exploring Directly Connected Networks, Static Routes with "Next-Hop" Addresses, Static Routes with Exit Interfaces, Managing and Troubleshooting Static Routes

UNIT IV DYNAMIC ROUTING PROTOCOLS 9

Introduction to Dynamic Routing Protocols , Classifying Dynamic Routing Protocols, Distance Vector Routing Protocols, Link-State Routing Protocols.

UNIT V ROUTING INFORMATION PROTOCOL 9

Basic RIPv1 Configuration, Basic RIPv2 Configuration, Verification and Troubleshooting, Automatic Summarization.

TEXT BOOK

1. Routing Protocols and Concepts CCNA Exploration Companion Guide, Rick Graziani, Allan Johnson, Copyright© 2008 Cisco Systems, Inc. Published by: Cisco Press 800 East 96th Street Indianapolis, IN 46240 USA.

U18PEEC043	ROBOTICS AND AUTOMATION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Microcontroller				
	Department:- Dept. of Electronics and Communication Engineering.				

To study the various parts of robots and fields of robotics
To study the various kinematics and inverse kinematics of robots
To study the Euler, Lagrangian formulation of Robot dynamics
To study the trajectory planning for robot.
To study the control of robots for some specific applications

UNIT I BASIC CONCEPTS 9

Definition and origin of robotics – various generations of robots - Asimov's laws of robotics - robot anatomy – robot configuration, robot motions and degrees of freedom –control system of a robot - types of robot control – performance measures – stability, resolution, accuracy, repeatability and compliance of robot

UNIT II SENSORS AND MACHINE VISION 9

Requirements of a sensor, Principles and Applications of the tactile sensors – touch sensors, force and torque sensors – non tactile sensors – light/ fiber optic sensor, laser sensor, acoustic, magnetic sensor – machine vision: model, sensing and digitizing, image processing and analysis, applications of machine vision in robotics.

UNIT III DRIVES, MANIPULATORS AND GRIPPERS 9

Hydraulic, pneumatic and electric drive systems – gears – Construction of manipulators – manipulator dynamics and force control – grippers – mechanical, vacuum and magnetic grippers design considerations.

UNIT IV KINEMATICS AND PROGRAMMING 9

Robot kinematics and Solution of inverse kinematics problem - Robot programming methods – lead through programming method: program as path in space, commands, program for pick and place operation – textual programming method: language structure, elements and functions languages

UNIT V CASE STUDIES 9

Multiple robots and machine interface – robot cell layout/ work cell, work cell design consideration, work cell controller – Robots in manufacturing applications, robots in nonmanufacturing applications - selection of robot.

U18PEEC044	NANO ELECTRONICS	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Semiconductor Physics				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To learn and understand basic concepts of Nano electronics.
To know the techniques of fabrication and measurement.
To gain knowledge about Nanostructure devices and logic devices

UNIT I INTRODUCTION TO NANOTECHNOLOGY 9

Background to nanotechnology: Types of nanotechnology and nanomachines – periodic table – atomic structure – molecules and phases – energy – molecular and atomic size – surface and dimensional space – top down and bottom up; Molecular Nanotechnology: Electron microscope – scanning electron microscope – atomic force microscope – scanning tunnelling microscope – nano manipulator – nano tweezers – atom manipulation– nanodots – self assembly – dip pen nanolithography. Nano materials: preparation –plasma arcing – chemical vapor deposition – sol-gels – electro deposition – ball milling –applications of nanomaterials.

UNIT II FUNDAMENTALS OF NANOELECTRONICS 9

Fundamentals of logic devices:- Requirements – dynamic properties – threshold gates; physical limits to computations; concepts of logic devices:- classifications – two terminal devices – field effect devices – coulomb blockade devices – spintronics – quantum cellular automata – quantum computing – DNA computer; performance of information processing systems;- basic binary operations, measure of performance processing capability of biological neurons – performance estimation for the human brain. Ultimate computation: - power dissipation limit – dissipation in reversible computation – the ultimate computer.

UNIT III SILICON MOSFETs & QUANTUM TRANSPORT DEVICES 9

Silicon MOSFETS - Novel materials and alternate concepts: - fundamentals of MOSFET Devices- scaling rules – silicon-dioxide based gate dielectrics – metal gates – junctions & contacts – advanced MOSFET concepts. Quantum transport devices based on resonant tunneling: - Electron tunneling – resonant tunneling diodes – resonant tunneling devices; Single electron devices for logic applications: - Single electron devices – applications of single electron devices to logic circuits.

UNIT IV CARBON NANOTUBES 9

Carbon Nanotube: Fullerenes - types of nanotubes – formation of nanotubes – assemblies – purification of carbon nanotubes – electronic properties – synthesis of carbon nanotubes – carbon nanotube interconnects – carbon nanotube FETs –Nanotube for memory applications – prospects of an all carbon nanotube nanoelectronics.

UNIT V MOLECULAR ELECTRONICS 9

Electrodes & contacts – functions – molecular electronic devices – first test systems – simulation and circuit design – fabrication; Future applications: MEMS – robots – random access memory – mass storage devices.

COURSE OUTCOMES (COs)	
CO1	Students will understand about nano technology and nano machines.
CO2	Students will have in-depth technical knowledge about logic devices,their properties and their performance

CO3	Students will learn about silicon MOSFET and advanced MOSFET Concepts
CO4	Students will develop deep knowledge about quantum transport devices
CO5	Students will learn about carbon nano tubes.
CO6	Students will learn about the concepts related to molecular electronics.

U18PEEC045	**WAVELETS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Digital signal processing				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To study the basics of signal representation and Fourier theory.
To understand Multi Resolution Analysis and Wavelet concepts
To study the wavelet transform in both continuous and discrete domain
To understand the design of wavelets using Lifting scheme
To understand the applications of Wavelet transform

UNIT I FUNDAMENTALS 9

Vector Spaces – Properties– Dot Product – Basis – Dimension, Orthogonality and Orthonormality – Relationship Between Vectors and Signals – Signal Spaces – Concept of Convergence – Hilbert Spaces for Energy Signals- Fourier Theory: Fourier series expansion, Fourier transform, Short time Fourier transform, Time-frequency analysis.

UNIT II MULTI RESOLUTION ANALYSIS 9

Definition of Multi Resolution Analysis (MRA) –Haar Basis – Construction of General Orthonormal MRA – Wavelet Basis for MRA – Continuous Time MRA Interpretation for the DTWT – Discrete Time MRA – Basis Functions for the DTWT – PRQMF Filter Banks.

UNIT III CONTINUOUS WAVELET TRANSFORMS 9

Wavelet Transform – Definition and Properties – Concept of Scale and its Relation with Frequency – Continuous Wavelet Transform (CWT) – Scaling Function and Wavelet Functions (Daubechies , Coiflet, Mexican Hat, Sinc, Gaussian, Bi Orthogonal)– Tiling of Time – Scale Plane for CWT.

UNIT IV DISCRETE WAVELET TRANSFORM 9

Filter Bank and Sub Band Coding Principles – Wavelet Filters – Inverse DWT Computation by Filter Banks – Basic Properties of Filter Coefficients – Choice of Wavelet Function Coefficients – Derivations of Daubechies Wavelets – Mallat's Algorithm for DWT –Multi Band Wavelet Transforms Lifting Scheme- Wavelet Transform Using Polyphase Matrix Factorization – Geometrical Foundations of Lifting Scheme – Lifting Scheme in Z –Domain.

UNIT V APPLICATIONS 9

Wavelet methods for signal processing- Image Compression Techniques: EZW–SPHIT Coding– Image Denoising Techniques: Noise Estimation – Shrinkage Rules – Shrinkage Functions –Edge Detection and Object Isolation, Image Fusion, and Object Detection.

COURSE OUTCOMES (COs)	
CO1	Understand time-frequency nature of the signals.
CO2	Apply the concept of wavelets to practical problems.
CO3	Mathematically analyze the systems or process the signals using appropriate wavelet functions.
CO4	Gain knowledge about MRA and representation using wavelet bases.
CO5	Acquire knowledge about various wavelet transforms and design wavelet transform
CO6	Apply wavelet transform for various signal & image processing applications.

U18PEEC046	PATTERN RECOGNITION AND NEURAL NETWORKS	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Digital Signal Processing				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

The course provides a comprehensive foundation to Artificial Neural Networks with applications to Pattern Recognition and Data Mining. Learning processes: supervised and unsupervised, deterministic and statistical.

UNIT I INTRODUCTION AND SIMPLE NEURAL NET WORK 9

Elementary neurophysiology and biological neural network-Artificial neural network – Architecture, biases and thresholds, Hebb net, Perceptron, Adaline and Madaline.

UNIT II BACK PROPOGATION AND ASSOCIATIVE MEMORY 9

Back propogation network, generalized delta rule, Bidirectional Associative memory, Hopefield network.

UNIT III NEURAL NETWORKS BASED ON COMPETITION 9

Korhonen Self organizing map, Learning Vector Quantization, counter propagation network.

UNIT IV UNSUPERVISED LEARNING AND CLUSTERING ANALYSIS 9

Patterns and features, training and learning in pattern recognition, discriminant functions, different types of pattern recognition. Unsupervised learning- hierarchical clustering, partitional clustering. Neural pattern recognition approach – perceptron model.

UNIT V SUPERVISED LEARNING USING PARAMETRIC AND NON-PARAMETRIC APPROACH 9

Bayesian classifier, non-parametric density estimation, histograms, kernels, window estimators, k-nearest neighbor classifier, estimation of error rates.

COURSE OUTCOMES (COs)	
CO1	To understand the basics of Neural Network and Architecture

CO2	To gain knowledge about back propagation and associative memory
CO3	To provide knowledge of self self-organizing
CO4	To understand different types of pattern recognition
CO5	To understand and apply both supervised classification methods to detect and characterize patterns in real-world data
CO6	To provide knowledge of learning and adaptation in supervised modes of learning

U18PEEC051	**SATELLITE COMMUNICATION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Electromagnetic Waves & Analog& Digital Communication				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To enable the student to become familiar with satellites and satellite services.
Study of satellite orbits and launching.
Study of earth segment and space segment components
Study of satellite access by various users

UNIT I INTRODUCTION 9

Introduction, Types – Active and Passive Satellite, Frequency allocation, Satellite orbits, Kepler's laws, Definitions of terms for earth-orbiting Satellites, Apogee and Perigee heights, Orbit Perturbations, Geo stationary orbit, Antenna look angles, Limits of visibility, Earth Eclipse of Satellite, Sun transit outage, launching orbits.

UNIT II THE SPACE SEGMENT 9

Introduction, The Power supply, Attitude control, spinning satellite, stabilization, Momentum Wheel Stabilization, Station keeping, Thermal control, TT&C subsystem, Transponders, The Wide Band receiver, The Input Demultiplexer, The Power Amplifier, The Antenna subsystem.

UNIT III THE EARTH SEGMENT AND ANTENNAS 9

Transmit receive earth station subsystems, up-converters-High Power Amplifier-Receive chain-LNA&LNB.TVRO earth station, The isotropic radiator and antenna gain, Horn antenna, The Parabolic reflector, Double reflector antenna-Cassie grain antenna-Gregorian antenna.

UNIT IV THE SPACE LINK & SATELLITE ACCESS 9

EIRP, Transmission losses The Link budget equation, System noise, Effects of rain, up link and down link C/N ratio. Multiple access techniques-Concepts and types of TDMA, FDMA and CDMA-Comparison and contrast of TDMA, FDMA and CDMA.

UNIT V SATELLITE APPPLICATIONS **9**

Satellite Mobile services, DBS, VSAT, Remote sensing, GPS, INTELSAT, INMARSAT, SARSAT, Video Conferencing and Internet connectivity

COURSE OUTCOMES (COs)	
CO1	Define orbital mechanics and launch methodologies
CO2	Describe satellite subsystems
CO3	Design link power budget for satellites
CO4	Compare competitive satellite services
CO5	Explain satellite access techniques
CO6	DTH and compression standards

U18PEEC052	**HIGH PERFORMANCE COMMUNICATION NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Hours-45	3	0	0	3
	Prerequisite: Computer Networks				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To Provide the various high speed digital access and broadband technologies, Switching techniques used for communication, Congestion control Performance issues and quality of service required for better performance of high speed networks and focuses how networking research is done.

UNIT I BASIC OF NETWORKS 9

Telephone, computer, cable Television and Wireless network, Networking principles, Digitalization , service integration, network services, and layered Architecture, traffic characterization and QOS, networks services, network elements and network mechanisms.

UNIT II PACKET SWITCHED NETWORK 9

CSI and IP models: Ethernet (IEEE 802.3), tokentring(IEEE 802.5) FDDI, QDB, frame relay, SMDS, internet working with SMDS.

UNIT III INTERNET AND TCP/IP NETWORKS 9

Interview , internet protocol , TCP and VDP, performance of TCP/IP networks circuit switched networks, SONET , DWDM, Fiber to home ,DSL, Intelligent networks, CATV.

UNIT IV ATM AND WIRELESS NETWORKS 9

Main features- addressing, signaling and routing , ATM header structure- adaptation layer, management and control, BISDN, Interworking with ATM, Wireless channel, link level design, channel access, Network design and wireless networks.

UNIT V OPTICAL NETWORKS AND SWITCHING 9

Optical links- WDM systems, cross –connects, optical LAN'S, optical paths and networks, TDS and SDS, modular switch designs- packet switching, distributed, shared, input and output buffers.

COURSE OUTCOMES (COs)	
CO1	Understand about basics of network.
CO2	Gain knowledge in TCP/IP and ISDN concepts.
CO3	Understand about Internet and Tcp/Ip Networks
CO4	Understand about packet switched networks and circuit switched networks
CO5	Understand about ATM and optical networks
CO6	Understand different networking and switching design
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low	

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3
2	CO1	2	3	3	2	2			2	3	3	3		3	3	3
	CO2	2	3	3	2	2			2	3	3	3				
	CO3	2	3	3	2	2			2	3	3	3				
	CO4	2	3	3	2	2			2	3	3	3				
	CO5	2	3	3	2	2			2	3	3	3				
	CO6	2	3	3	2	2			2	3	3	3				
3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

U18PEEC053	REAL TIME SYSTEMS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Embedded systems				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To expose the students to the fundamentals of Real Time systems
To teach the fundamentals of Scheduling and features of programming languages
To study the data management system for real time
To introduce the fundamentals of real time communication
To teach the different algorithms and techniques used for real time systems

UNIT I INTRODUCTION 9

Introduction – issues in real time computing – structure of a real time system – task glasses – performances measures for real time systems – estimating program run time – task assignment and scheduling – classical uniprocessor scheduling algorithms – uniprocessor scheduling of IRIS tasks – tasks assignment – mode changes – fault tolerant scheduling.

UNIT II PROGRAMMING LANGUAGES AND TOOLS 9

Language features – desired language characteristics – data typing – control structure – facilitating hierarchical decomposition – package – run – lime error handling – overloading and generics – multi tasking – low-level programming – task scheduling – lining specifications – programming environment – run-time support – code generation.

UNIT III REAL TIME DATA BASES 9

Real time data base- basic definition – real lime vs general – purpose database – main memory data bases – transaction priorities – transaction aborts – concurrent control issues –disk scheduling algorithms – two-phase approach to improve predictability – maintaining serialization consistency- databases for hard real time systems.

UNIT IV COMMUNICATION 9

Real time communication – communications media – network topologies – protocols – buffering data – synchronization – deadlock – mailboxes and semaphores – fault tolerance techniques – fault types – fault detection – fault error containment – redundancy – data diversity – reversal checks – integrated handling.

UNIT V EVALUATIION TECHNIQUES 9

Reliability evaluation techniques – reliability models for hardware redundancy – software error models – response time calculations – interrupt latency – time loading and its measurement –

reducing response times – latency – time loading and its measurement – reducing response times – analysis of memory requirements – reducing memory loading.

TEXT BOOK

4. www.rts.org/rassp/vhdl/guidelines/**Design**Req.pdf

COURSE OUTCOMES (COs)	
CO1	Explain and apply the fundamental concepts and terminology of real-time systems.
CO2	Explain and address the fundamental problems of real-time systems
CO3	Analyze real-time systems designs
CO4	Design a real-time system (at least partially)
CO5	Identify and assess the relevant literature and research trends of real-time systems.
CO6	Analyze the programming languages of real time systems

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3
2	CO1			3	2					2		3	3	3	3	3
	CO2	3	2	2		3	3				3	1	3			
	CO3				3	1			3	1		2	3			
	CO4		3	1		2	1	3		2		3	3			
	CO5	2											3			
	CO6		3			2				2			3			
3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

U18PEEC054	**DIGITAL HARDWARE DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – Digital System Design				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To study the applications of logic gates.
To use K-maps for digital circuit design.
To study and understand basics of microprocessors
To understand fundamentals of multicore technology

UNIT I DIGITAL CIRCUIT DESIGN 9

Introduction to digital circuit design, Circuit design using logic gates: Binary to gray converter, Gray to Binary converter, Decimal to BCD encoder, Circuit designusing state table/K-map: Design of Full adder, full subtractor, BCD to seven segment decoder, Concept of excitation table, Design of 3 bit synchronous up counter , 3 bit random sequence generator .

UNIT II MEMORY 9

Memory Architecture, Memory Hierarchy, Introduction to USB storage device, Memory parameters (Access time, speed, capacity, cost), Vertical & horizontal Memory expansion (increasing the capacity, increasing word size), Associative Memory, Cache memory, cache mapping techniques, virtual memory, virtual memory mapping (paging and segmentation).

UNIT III COMPUTER ORGANIZATION 9

Concept of Address Bus, Data Bus, Control Bus. Register based CPU organization, stack organization, I/O organization: need of interface, block diagram of general I/O interface. Working concepts like polling, interrupt initiated data transfer. Concept of DMA , DMA transfer, DMA Controller Serial communication: Synchronous, asynchronous and their data transmission formats, RS–232, General block diagram of UART.

UNIT IV MICROPROCESSOR 9

Evolution of Microprocessor (8086 to Pentium 4), Features like address, data, bus size, speed, cache capacity, number of parallel instructions executed. Concept of RISC & CISC, Von-Neumann & Harvard Architecture, Concept of pipeline.

UNIT V ARCHITECTURE OF BASIC MICROPROCESSOR 9

Architecture of basic microprocessor: 8086 & Pentium (Basic Version), Introduction to multicore processors, its development and impact on Hardware, Software.

TEXT BOOK:

1. Fundamental of Digital electronics : R.P. Jain ,
2. Digital design : M. Morris Mano, Prentice-Hall of India
3. Computer System Architecture : Morris Mano, Prentice-Hall of India

COURSE OUTCOMES (COs)	
CO1	To lay a strong foundation to understand the concepts in Digital circuit design.
CO2	To learn about Memories
CO3	To gain knowledge about computer organization
CO4	To understand about serial communication
CO5	To understand the basics of microprocessor
CO6	To understand about multi core processor.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

2	CO1	3	3	3	2	2			2	2		2		3	3	3
	CO2	3		3	2				2	3	2					
	CO3	2		2		2					2					
	CO4	2	3	2	2	2			2			2				
	CO5	2	3	3	3					2						
	CO6	2	3	3	3				2	2	2	2				
3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

U18PEEC055	MEDICAL IMAGE PROCESSING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Digital Signal Processing				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

This course provides in depth knowledge about the various digital image processing techniques applied in processing of the medical images

UNIT I IMAGE FUNDAMENTALS 9

Image perception, MTF of the visual system, Image fidelity criteria, Image model, Image sampling and quantization – two dimensional sampling theory, Image quantization, Optimum mean square quantizer, Image transforms – 2D-DFT and other transforms.

UNIT II IMAGE PREPROCESSING 9

Image enhancement – point operation, Histogram modeling, spatial operations, Transform operations, Image restoration – Image degradation model, Inverse and Weiner filtering. Image Compression – Spatial and Transform methods .

UNIT III MEDICAL IMAGE RECONSTRUCTION 9

Mathematical preliminaries and basic reconstruction methods, Image reconstruction in CT scanners, MRI, FMRI, Ultra sound imaging., 3D Ultra sound imaging Nuclear Medicine Imaging Modalities SPECT,PET, Molecular Imaging.

UNIT IV IMAGE ANALYSIS AND CLASSIFICATION 9

Image segmentation- pixel based, edge based, region based segmentation. Image representation and analysis, Feature extraction and representation, Statistical, Shape, Texture, feature and image classification – Statistical, Rule based, Neural Network approaches.

UNIT V IMAGE REGISTRATION AND VISUALIZATION 9

Rigid body visualization, Principal axis registration, Interactive principal axis registration, Feature based registration, Elastic deformation based registration, Medical image fusion, Image visualization – 2D display methods, 3D display methods, virtual reality based interactive visualization.

COURSE OUTCOMES (COs)	
CO1	To study the image fundamentals and image transforms
CO2	To study the image enhancement techniques
CO3	To understand about reconstruction methods related to medical images
CO4	To study the image segmentation and image analysis
CO5	To study the image registration procedures
CO6	To learn about image visualization techniques

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

U18PEEC056	DIGITAL IMAGE & VIDEO PROCESSING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Digital signal processing				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

This course will cover the fundamentals of image and video processing.
Students will gain knowledge to understand about algorithm design, mathematical tools, and practical implementations of various digital image & video applications

UNIT I FUNDAMENTALS OF IMAGE PROCESSING AND IMAGE TRANSFORMS 9

Basic steps of Image processing system sampling and quantization of an Image – Basic relationship between pixels Image Transforms: 2 – D Discrete Fourier Transform, Discrete Cosine Transform (DCT), Discrete Wavelet transforms

UNIT II IMAGE PROCESSING TECHNIQUES 9

Image Enhancement: Spatial Domain methods: Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial filters, Sharpening Spatial filters Frequency Domain methods: Basics of filtering in frequency domain, image smoothing, image sharpening, selective filtering Image Segmentation: Segmentation concepts, point, line and Edge detection, Thresholding, region based segmentation.

UNIT III IMAGE COMPRESSION 9

Image compression fundamentals – coding Redundancy, spatial and temporal redundancy. Compression models : Lossy and Lossless, Huffmann coding, Arithmetic coding, LZW coding,

run length coding, Bit Plane coding, transform coding, predictive coding , wavelet coding, JPEG standards.

UNIT IV BASIC STEPS OF VIDEO PROCESSING 9

Analog video, Digital Video, Time varying Image Formation models : 3D motion models, Geometric Image formation , Photometric Image formation, sampling of video signals, filtering operations.

UNIT V 2-D MOTION ESTIMATION 9

Optical flow, general methodologies, pixel based motion estimation, Block matching algorithm, Mesh based motion Estimation, global Motion Estimation, Region based motion estimation, multi resolution motion estimation. Waveform based coding, Block based transform coding, predictive coding, Application of motion estimation in video coding.

TEXT BOOK:

4. https://nptel.ac.in/courses/117105079/

COURSE OUTCOMES (COs)	
CO1	Learn the signal processing algorithms and techniques in image enhancement and image restoration.
CO2	Mathematically represent the various types of images and analyze them.
CO3	Process these images for the enhancement of certain properties or for optimized use of the resources.
CO4	Develop algorithms for image compression and coding.
CO5	Get broad exposure to and understanding of various applications of image processing in industry, medicine, and defense.
CO6	Acquire an appreciation for the image processing issues and techniques and be able to apply these techniques to real world problems.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

	CO3	3	3	3	2								3			
	CO4	3	2	2	3	2			2	3	2	3	2			
	CO5	3		3		2				3	2	2	2			
	CO6	3	3	3	3	2			2	3						
3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

U18PEEC061	RF COMMUNICATION CIRCUITS	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Analog & Digital Communication				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To learn about the CMOS RF Front End (RFE) building block and in all of wireless and many high frequencies wire-line systems

To learn about the important building blocks within including the Low Noise Amplifiers, Phase Locked Loop Synthesizers, Mixers, Power Amplifiers, and impedance matching circuits.

UNIT I CMOS PHYSICS, TRANSCEIVER SPECIFICATIONS AND ARCHITECTURES 9

Introduction to MOSFET Physics, Noise: Thermal, shot, flicker, popcorn noise, Two port Noise theory, Noise Figure, THD, IP2, IP3, Sensitivity, SFDR, Phase noise - Specification distribution over a communication link, Homodyne Receiver, Heterodyne Receiver, Image reject, Low IF Receiver Architectures Direct up conversion Transmitter, Two step up conversion Transmitter.

UNIT II IMPEDANCE MATCHING AND AMPLIFIER 9

S-parameters with Smith chart, Passive IC components, Impedance matching networks, Common Gate, Common Source Amplifiers, OC Time constants in bandwidth estimation and enhancement, High frequency amplifier design, Power match and Noise match, Single ended and Differential LNAs, Terminated with Resistors and Source Degeneration LNAs.

UNIT III FEEDBACK SYSTEMS AND POWER AMPLIFIERS 9

Stability of feedback systems: Gain and phase margin, Root-locus techniques, Time and Frequency domain considerations , Compensation, General model – Class A, AB, B, C, D, and F amplifiers, Power amplifier Linearisation Techniques, Efficiency boosting techniques, ACPR metric, Design considerations

UNIT IV MIXERS AND OSCILLATORS 9

Mixer characteristics, Non-linear based mixers, Quadratic mixers, Multiplier based mixers, Single balanced and double balanced mixers, subsampling mixers, Oscillators describing Functions, Colpitts oscillators Resonators, Tuned Oscillators, Negative resistance oscillators, Phase noise.

UNIT V PLL AND FREQUENCY SYNTHESIZERS 9

Linearised Model, Noise properties, Phase detectors, Loop filters and Charge pumps, Integer-N frequency synthesizers, Direct Digital Frequency synthesizers.

TEXT BOOK:

3. https://onlinelibrary.wiley.com/doi/10.1002/9781119259411.ch4

COURSE OUTCOMES (COs)	
CO1	The student after completing this course must be able to translate the top level Wireless architectures
CO2	Communications system specifications into block level specifications of the RFE.
CO3	The student should also able to learn about the feedback concepts
CO4	The students will gain knowledge about the amplifiers
CO5	The present course will introduce the principles of operation and design principles of mixers and oscillators
CO6	The course will also provide and highlight the importance of phased locked system and about frequency synthesizers.

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

	CO6				1											
3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

U18PEEC062	TELECOM NETWORKS	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Computer Network				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

Understand the concept of a network.

Identify several major developments and trends in the industries, technologies, and business applications of telecommunications and Internet technologies

UNIT I INTRODUCTION TO SWITCHING AND TELECOM NETWORKS 9

Introduction to crossbar & electronics exchange, Types of networks, Network design issues, Design tools, switching technologies (circuit switching and packet switching)

UNIT II BROADBAND TELECOM NETWORKS 9

ISDN, Basic structure, ISDN Interfacing & functions, transmission structure Protocol architecture, Narrow band & Broadband ISDN

UNIT III FRAME RELAY & ATM 9

Frame Relay introduction, Protocol, architecture frame, mode call control, LAPF core Protocol, frame Relay congestion control. ATM, ATM Protocols, Public ATM networks, ATM cells their details and transmission, AAL, Traffic congestion and control.

UNIT IV BROADBAND ACCESS AND ROUTING TECHNOLOGIES 9

DSL, ADSL, Cable modems, WLL, Optical wireless, Leased lines. Routing Algorithms for shortest path centralized routing, Distributed, Static and dynamic routing.

UNIT V TELECOM NETWORK MANAGEMENT 9

Telecom network operation and maintenance, Traffic management, Management of Transport Networks, Configuration management, Fault management, Security, Network planning support, Network management using SNMP: Object management, management Information base, traps.

COURSE OUTCOMES (COs)	
CO1	To understand various types of networks and switching technologies
CO2	To gain knowledge about broadband telecom networks
CO3	To understand architecture and protocols of Frame Relay and ATM
CO4	To learn about DSL,ADSL and cable modems
CO5	To gain knowledge about various routing technologies
CO6	To understand Telecom Network Management

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

	CO5	3	1	2	2	1			2	1	1	2				
	CO6	3	1	2	2	3			2	1	1	2				
3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

U18PEEC063	**WIRELESS ADHOC NETWORKS**	**L**	**T**	**P**	**C**
	Total Contact Hours-45	3	0	0	3
	Prerequisite: Computer Networks				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-
To provide more advanced in-depth networking concepts to graduate students. Upon completion of this course, students will be able to apply the knowledge in their networking research

UNIT I AD HOC NETWORKS 6
Introduction, Issues in Ad hoc wireless networks, Ad hoc wireless internet.

UNIT II MAC PROTOCOLS FOR AD HOC WIRELESS NETWORKS 12
Introduction, Issues in designing a MAC protocol for Ad hoc wireless Networks, Design goals of a MAC protocol for Ad hoc wireless Networks, Classification of MAC protocols, Contention - based MAC protocols with scheduling mechanism, MAC protocols that use directional antennas, Other MAC protocols.

UNIT III ROUTING PROTOCOLS FOR AD HOC WIRELESS NETWORKS 8
Introduction, Issues in designing a routing protocol for Ad hoc wireless Networks, Classification of routing protocols, Table drive routing protocol, On-demand routing protocol.

UNIT IV TRANSPORT LAYER PROTOCOLS FOR AD HOC WIRELESS NETWORK 7
Introduction, Issues in designing a transport layer protocol for Ad hoc wireless Networks, Design goals of a transport layer protocol for Ad hoc wireless Networks.

UNIT V SECURITY & QUALITY OF SERVICE IN ADHOC WIRELES NETWORKS 12
Security in wireless Ad hoc wireless Networks, Network security requirements, Issues & challenges in security provisioning, Introduction, Issues and challenges in providing QoS in Ad hoc wireless Networks, Classification of QoS solutions.

COURSE OUTCOMES (COs)	
CO1	Understand about basics of network.
CO2	Gain knowledge in TCP/IP and ISDN concepts.
CO3	Understand about Internet and Tcp/Ip Networks
CO4	Understand about packet switched networks and circuit switched networks
CO5	Understand about ATM and optical networks
CO6	Understand different networking and switching design

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low																
1	COs/POs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

3	Category	Professional Elective (PE)														
4	Approval	49th Meetings of Academic Council														

U18PEEC064	EMBEDDED C AND LINUX	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Embedded System				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To expose the students to the fundamentals of embedded Programming.
To Introduce the GNU C Programming Tool Chain in Linux.
To study basic concepts of embedded C, Embedded OS & Python Programming
To introduce time driven architecture, Serial Interface with a case study.
To involve Discussions/ Practice/Exercise onto revising & familiarizing the concepts acquired over the 5 Units of the subject for improved employability skills.
To learn to implement embedded linux applications

UNIT I EMBEDDED PROGRAMMING 9

C and Assembly - Programming Style - Declarations and Expressions - Arrays, Qualifiers and Reading Numbers - Decision and Control Statements - Programming Process - More Control Statements - Variable Scope and Functions - C Preprocessor - Advanced Types - Simple Pointers - Debugging and Optimization – In-line Assembly.

UNIT II C PROGRAMMING TOOL CHAIN IN LINUX 9

C preprocessor - Stages of Compilation - Introduction to GCC - Debugging with GDB - The Make utility - GNU Configure and Build System - GNU Binary utilities

UNIT III EMBEDDED C 9

Adding Structure to 'C' Code: Object oriented programming with C, Header files for Project and Port, Examples. Meeting Real-time constraints: Creating hardware delays - Need for timeout mechanism - Creating loop timeouts - Creating hardware timeouts.

UNIT IV EMBEDDED OS 9

Creating embedded operating system: Basis of a simple embedded OS, Introduction to sEOS, Using Timer 0 and Timer 1, Portability issue, Alternative system architecture, Important design considerations when using sEOS- Memory requirements - embedding serial communication &scheduling data transmission - Case study: Intruder alarm system.

UNIT V PYTHON PROGRAMMING 9

Basics of PYTHON Programming Syntax and Style – Python Objects– Dictionaries – comparison with C programming on Conditionals and Loops – Files – Input and Output – Errors and Exceptions – Functions – Modules – Classes and OOP – Execution Environment.

TEXT BOOK:

1. Karim Yaghmour, Jon Masters, Gillad Ben Yossef, Philippe Gerum, "Building embedded linux systems", O'Reilly, 2008.
2. Christopher Hallinan, "Embedded Linux Primer: A practical real world approach", Prentice Hall, 2007.

4. https://www.sciencedirect.com/topics/engineering/high-speed-circuit

COURSE OUTCOMES (COs)	
CO1	Ability to use GNU C to develop embedded software.
CO2	Knowledge and understanding of fundamental embedded systems design paradigms, architectures, possibilities and challenges, both with respect to software and hardware
CO3	To explain programming concepts and embedded programming in C and assembly language
CO4	Understanding and knowledge of python programming, Errors and Exceptions
CO5	Identification of new developments in embedded linux programming
CO6	Analyze the programming languages of real time systems

Mapping of Course Outcomes with Program outcomes (POs)

U18PEEC065	**HIGH SPEED ELECTRONICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Electronic Devices				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

To learn about the issues involved in high speed electronics
To learn about the materials involved in high speed devices
To understand the working of various high-speed devices

UNIT I INTRODUCTION 9

Transmission line theory (basics) crosstalk and nonideal effects; signal integrity: impact of packages, vias, traces, connectors; non-ideal return current paths, high frequency power delivery, methodologies for design of high-speed buses; Noise Analysis: radiated emissions and minimizing system noise; Noise Sources, Noise Figure, Gain compression, Harmonic distortion, Intermodulation, Cross-modulation, Dynamic range

UNIT II MATERIALS FOR HIGH SPEED DEVICES AND CIRCUITS 9

Merits of III –V binary and ternary compound semiconductors (GaAs, InP, InGaAs, AlGaAs ETC.), silicon-germanium alloys and silicon carbide for high speed devices, as compared to silicon-based devices. Brief outline of the crystal structure, dopants and electrical properties such as carrier mobility, velocity versus electric field characteristics of these materials. Material and device process technique with these III-V and IV – IV semiconductors.

UNIT III AMPLIFIER DESIGN 9

Stability, Low Noise Amplifiers, Broadband Amplifiers (and Distributed) Power Amplifiers, Class A, B, AB and C, D E Integrated circuit realizations, Cross-over distortion Efficiency RF power output stages Mixers –Up conversion Down conversion, Conversion gain and spurious response. Oscillators Principles. PLL Transceiver architectures

UNIT IV HIGH SPEED CIRCUITS 9

GaAs Digital Integrated Circuits for high speed operation- Direct Coupled Field Effect Transistor Logic (DCFL), Schottky Diode FET Logic (SDFL), Buffered FET Logic(BFL). GaAs FET Amplifiers. Monolithic Microwave Integrated Circuits (MMICs) High Frequency resonant – tunneling devices. Resonant-tunneling hot electron transistors and circuits.

UNIT V PRINTED CIRCUIT BOARD 9

Anatomy, CAD tools for PCB design, Standard fabrication, Microvia Boards. Board Assembly: Surface Mount Technology, Through Hole Technology, Process Control and Design challenges.

TEXT BOOK:

1. Stephen H. Hall, Garrett W. Hall, James A. McCall “High-Speed Digital System Design: A Handbook of Interconnect Theory and Design Practices”, August 2000, Wiley-IEEE Press

3. Guillermo Gonzalez, “Microwave Transistor Amplifiers”, 2nd Edition, Prentice Hall.

COURSE OUTCOMES (COs)	
CO1	To learn about high frequency power delivery and to analyze the noise involved
CO2	To learn in detail about the various materials involved in High speed devices and circuits
CO3	To understand about the design principles involved in amplifier design
CO4	To understand the working of different high speed devices
CO5	Understand the fabrication procedure for Printed circuit board
CO6	To learn about the various design challenges involved in PCB design

U18PEEC066	MULTIMEDIA COMPRESSION & COMMUNICATION	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Computer Networks, Analog and Digital Communication				
	Department:- Dept. of Electronics and Communication Engineering.				

COURSE OBJECTIVES:-

The comprehensive objective of this course is to make students familiar with the different types of compression techniques used for textual, audio, image and video compression

UNIT I MULTIMEDIA COMPONENTS 9

Introduction - Multimedia skills - Multimedia components and their characteristics - Text, sound, images, graphics, animation, video, hardware.

UNIT II AUDIO AND VIDEO COMPRESSION 9

Audio compression–DPCM-Adaptive PCM –adaptive predictive coding-linear Predictive coding-code excited LPC-perpetual coding Video compression –principles-H.261-H.263-MPEG 1, 2, and 4.

UNIT III TEXT AND IMAGE COMPRESSION 9

Compression principles-source encoders and destination encoders-lossless and lossy compression- entropy encoding –source encoding -text compression –static Huffman coding dynamic coding – arithmetic coding –Lempel ziv-welsh Compression-image compression

UNIT IV VOIP TECHNOLOGY 9

Basics of IP transport, VoIP challenges, H.323/ SIP –Network Architecture, Protocols, Call establishment and release, VoIP and SS7, Quality of Service- CODEC Methods- VOIP applicability.

UNIT V MULTIMEDIA NETWORKING 9

Multimedia networking -Applications-streamed stored and audio-making the best Effort service- protocols for real time interactive Applications-distributing multimedia-beyond best effort service- secluding and policing Mechanisms-integrated services-differentiated Services-RSVP.

TEXT BOOK:

6. https://www.vidyarthiplus.com/vp/Thread-EC6018-Multimedia-Compression-and-Communication-Question-Bank-2017-VEC-Edition#.Xagli5IzbIU

COURSE OUTCOMES (COs)	
CO1	To Apply the compression concepts in multimedia communication.
CO2	To have a complete understanding of error–control coding
CO3	To understand encoding and decoding of digital data streams.
CO4	To introduce methods for the generation of these codes and their decoding techniques
CO5	To have a detailed knowledge of compression and decompression techniques.
CO6	To introduce the concepts of multimedia communication

Mapping of Course Outcomes with Program outcomes (POs)

SEMESTER – 1

U18HSEN101	Communicative English	L	T	P	C
	Total Contact Hours – 45	2	0	2	3
	Prerequisite course –NIL				
	Course Coordinator: Ms.A.S.Ragvi. Department:-English				

COURSE OBJECTIVES:- To emphasis and develop language skills to satisfy the needs of work environment. To inculcate reading and listening habits and thereby improvising speaking and writing skills.

COURSE OUTCOMES (COs)

CO1	R	Recall and list language skills for business related situations.
CO2	U	Understand and intensely focus on improving and increasing LSRW Skills
CO3	A	Apply a good command over basic writing technical report and reading skills.
CO4	An	Infer and use vocabulary in corporate work environment.
CO5	E	Examine Task- Based activity to enhance an effective communication
CO6	C	Actualize communication skills for employability

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/Pos	PO 1	2	3	4	5	6	7	8	9	10	11	12	PS O1
2	CO1	3			2			3		2				
	CO2	1			1			3		2				--
	CO3	1			2			3		2				
	CO4	1			1			3		3				
	CO5	1			2			3		2				
	CO6	1			1			3		3				

3	Category	Humanities & Social Studies (HS)	Basic Sciences (BS)	Engg Sciences (ES)	Professional Core (PC)	Core Elective (CE)	Non-Major Elective (NE)	Open Elective (OE)	Any other	Project/Term Paper/ Seminar/
			BS							
4	Approval									

UNIT I SPEAKING **6 hours**

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations:Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing one self – exchanging personal information- narrating events, -incidents , speakingabout one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts ofspeech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6 hours

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short readingtexts-- and longer passages - understanding text structure- use of reference words and discoursemarkers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -The concept of Word Formation.

UNIT III LISTENING 6hours

Listening – listening to longer texts and filling in the table- product description- asking aboutroutine actions and expressing opinions. –Listening to telephonic conversations -degrees ofcomparison- pronouns- direct vs indirect questions- Vocabulary development – single wordsubstitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement.

UNIT IV WRITING 6 hours

Writing- letter writing, formal and personal letters- after listening to dialogues or conversationsand completing exercises based on them. Understanding text structure- use of reference words anddiscourse markers-coherence-jumbled sentences -Tenses- simple present- simple past- presentcontinuous and past continuous- Vocabulary development- synonyms- antonyms- phrasal verbs-Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6hours

Writing short essays – developing an outline- identifying main and subordinate ideas- dialoguewriting- listening to talks, conversations to complete the remaining, participating inconversations- short group conversations-Language development-modal verbs- present/ pastperfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions .Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Useof phrases and clauses in sentences - Importance of proper punctuation - Creating coherence-Organizing principles of paragraphs in documents- Techniques for writing precisely.

CourseCoordinator HOD

SOFTSKILL LABORATORY

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews &conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds- intonation.
12. Creative and critical thinking.

U18BSMA101	**Engineering Mathematics – I**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite course –Nil				
	Course Coordinator: Mr. VivekKumaran. Department:-Mathematics				

COURSE OBJECTIVES:-The aim is to develop mathematical curiosity and use inductive and deductive reasoning when solving problems, and to develop the knowledge,skills and attitudes necessary to pursue further studies in Mathematics and tobecome confident in using Mathematics to analyze and solve problems in real – life situations.

COURSE OUTCOMES (COs)

CO1	R	To remember both the limit definition and rules of differentiatefunctions.
CO2	U	Understand the Theorem ant its application of analysis to Engineering problems. Also they will have a basic understanding of Beta and Gamafunctions.
CO3	A	To apply differential and integral calculus to notions of curvature. Also applydifferentiation to find maxima and minima of functions. To apply definite integrals of algebraic and trigonometric functions using formulas and substitution.
CO4	An	To analyze multiple integrals to compute area and volume over curves, surface anddomain in two dimensional and three dimensional spaces.
CO5	E	To examine Eigenvalue problems from practical areas using transformations;Diagonalising the matrix that would render the Eigen values.
CO6	C	To design differentiation and integration techniques to solve engineering problems

Mapping of Course Outcomes with Program outcomes (POs)
(1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/Pos	PO 1	2	3	4	5	6	7	8	9	10	11	12	PS O1

			BS							
4	Approval									

UNIT I THEORY OF EQUATIONS (9+3) hours

Fundamental theory of algebra – number of roots of polynomial equations – conjugate pairs
theorem (without proof) – Descartes rules of signs- symmetric functions of the roots – formation
of equations – diminish the roots of an equations- Multiple roots – reciprocal equation.

UNIT II DIFFERENTIAL CALCULUS – One Variabl (9+3) hours

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule
– Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem –
Taylor's and Maclaurin's Theorem with remainders

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3) hours

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total
derivative – Jacobian–Maxima and minima of two variables.

UNIT IV INTEGRAL CALCULUS - One Variables (9+3)hours

Definite integrals – Substitution rule – Techniques of integration – Integration by parts –
Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by
partial fractions – Integrations of irrational functions-Beta, Gamma functions and their properties.

UNIT V MATRICES (9+3)hours

Characteristic Equations –Eigenvalue and Eigenvectors of the real matrix– Properties–-Cayley-
Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical
form by orthogonal transformation – Nature of Quadratic form.

CourseCoordinator HOD

U18BSPH101	Waves and Optics	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course -Nil				
	Course Coordinator: Ms.Radhika. Department:-Physics				

COURSE OBJECTIVES:-To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.

COURSE OUTCOMES (COs)

CO1	R	Recall the basic concept of waves and lights
CO2	U	Understand the importance of Ultrasonic waves and Non-Destructive Testing
CO3	A	Apply the propagation of light and geometrical optics
CO4	An	Analyze the optical phenomenon like interference, diffraction and superposition of waves
CO5	E	Evaluate the operation of laser and its applications
CO6	C	Design applications of lasers in science, engineering and medicine.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE

DIMENSION **9 hours**

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves,reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the

wave equation for them, acoustics waves and speed of sound. Waves with dispersion,superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES **9 hours**

Production of ultrasonics by magnetostriction and piezoelectric methods - acoustic grating–Detection - Non Destructive Testing – pulse echo system through transmission and reflection

modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9 hours

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of

reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and

transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses

and optical instruments based on them.

UNIT 4 WAVES OPTICS **9 hours**

Huygens' principle, superposition of waves and interference of light by wavefront splitting and

amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer.

Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their

resolving power.

UNIT 5 LASERS **9 hours**

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light

by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-statelasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and

brightness, applications of lasers in science, engineering and medicine.

	Total Contact Hours – 45	3	0	0		3
	Prerequisite course –Nil					
	Course Coordinator: Dr.P.Mahesn. Department:-Chemistry					

COURSE OBJECTIVES:-To gain fundamental knowledge of Engineering Chemistry and its applications

COURSE OUTCOMES (COs)

CO1	R	To remember the principles of Conventional and non-conventional energy sources and energy storage devices
CO2	U	To understandthe principles, water characterization,conversant with boiler feed water requirements and water treatment techniques.
CO3	A	. To apply industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO4	An	To analyze the Chemistry of Fuels and calorificvalue, manufacture of solid, liquid and gaseous fuels.
CO5	E	To evaluate the Nanochemistry, Types of nanomaterials:Nanoparticles,Nanochemistry in biology and medicines.
CO6	C	To design industrial application using conventional and non-conventional energy sources and energy storage devices

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I WATER TECHNOLOGY 9hours

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness -Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and MethylOrange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods(Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantagesof using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) –Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatmentmethod) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9 hours

Introduction: Statement of Phase Rule and Explanation of terms involved – One componentsystem – Water system – Construction of phase diagram by thermal analysis - Condensed phaserule - Two Component System : Simple eutectic systems (lead-silver system) – eutectictemperature – eutectic composition – Pattinson's Process of desilverisation of Lead.Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel – heattreatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding.Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9hours

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass – super critical mass - sub - critical mass Light water nuclear reactor for Power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9hours

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas,CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9hours

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes – Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis.Nano composites – sensors and electronic devices.

UNIT 1 DC CIRCUITS 9 hours

Electrical circuit elements, voltage and current sources, Fundamentals Relationship of VI forRLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis ofsimple circuits with dc excitation. Basics of Superposition, Thevenin and NortonTheorems,Maximum Power Transfer Theorem.

UNIT 2 AC CIRCUITS 9 hours

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power,reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting ofR, L, C, RL, RC, RLC combinations (series and parallel), resonance.Time-domain analysis offirst-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations instar and delta connections.

UNIT 3 ELECTRICAL MACHINES & TRANSFORMERS 9 hours

Principles of operation and characteristics of; DC machines,Synchronous machines, three phaseand single phase induction motors. Transformers (single and three phase) regulation andefficiency,all day efficiency and auto-transformer .

UNIT 4 SEMICONDUCTOR DEVICES AND APPLICATIONS 9 hours

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Halfwave and Full wave Rectifiers – Voltage Regulation.Bipolar Junction Transistor – CB, CE, CCConfigurations and Characteristics – Elementary Treatment of Small Signal Amplifier and itsapplications, Introduction to OP-AMP.

UNIT 5 DIGITAL ELECTRONICS 6hours

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops –Registers and Counters – Fundamentals of A/D and D/A Conversion.

UNIT I INTRODUCTION TO LIFE 6hours

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic andeukaryotic cell- Introduction to biomolecules - general classification and important functions ofcarbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6hours

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System:elementary study of digestive-respiratory-circulatory-excretory systems and their functions.Microbial System -types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6hours

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity-antigens-antibody-immuneresponse.

UNIT IV HUMAN DISEASES 6hours

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer,hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6hours

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines-cloning-bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-iochips.

SYLLABUS

Lectures & videos **(15 hours)**

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods (3 lecture)
- CNC machining, Additive manufacturing (2 lecture)
- Fitting operations &power tools (2 lecture)
- Carpentry (2 lecture)
- Plastic moulding, glass cutting (2 lecture)
- Metal casting (2 lecture)
- Welding (arc welding & gas welding), brazing (2 lecture)

WORKSHOP PRACTICE

1. Machine shop (6 hours)
   a) Facing
   b) Turning
   c) Drilling Practice
2. Fitting shop (6 hours)
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.
3. Carpentry (9 hours)
   a) Preparation Lap joints.
   b) Mortise and Tenonjoints.
   c) Cross Half.
   d) Dove Tail.
4. Welding shop (Arc welding 6 hrs + gas welding 3 hrs) (9 hours)
   Preparation of butt joints, lap joints and tee joints
5. Sheet Metal working (9 hours)
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints
6. Demonstration (6 Hours)
   Smithy operations, upsetting, swaging, setting down and bending.
   Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or moreof the techniques covered above.

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchhoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to
step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary
and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement),
induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring
arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier.

UNIT I LISTENIN 6 hours

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions – listening todaily issue- -Vocabulary Development- technical vocabulary - Language Development –subjectverb agreement – compound words.

UNIT II READING 6 hours

Reading – reading longer technical texts- identifying the various transitions in a text- interpretingcharts, graphs after reading the, practice in speed reading- vocabulary Development-vocabularyused in formal letters/emails and reports -Language Development personal passive voice,numerical adjectives.

UNIT III TECHNICAL WRITING 6 hours

Writing after listening to classroom lectures- talk should be on engineering /technology–introduction to technical presentations- longer texts both general and technical, Describing aprocess, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 6 hours

Writing- email etiquette- job application – cover letter –Resume preparation (via email

and hardcopy)- analytical essays and issue based essays–Vocabulary Development- finding suitablesynonyms-paraphrasing-. Language Development- clauses- dependent, independent, ifconditionals.

UNIT V LANGUAGE DEVELOPMENT 6 hours

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of ameeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, LanguageDevelopment- reported speech.

	Total Contact Hours – 60	3	1	0	4
	Prerequisite course –Engineering Mathematics 1				
	Course Coordinator:Ms.Pavi. Department:-Mathematics				

COURSE OBJECTIVES:-The objective of this course is to equip the students of Engineering andTechnology with techniques in ordinary equations, vector calculus, complexvariables and Laplace transform with advanced level of mathematics andapplications that would be essential to formulate problems in engineeringenvironment..

COURSE OUTCOMES (COs) On completion of the course, the students will be able to

CO1	R	.To remember the concept of differential equation, vector calculus and analytical functions
CO2	U	To understand the analytic functions, conformal mapping and complex integration andtheir applications.
CO3	A	To relatemathematical tools for solution of differential equation that model physicalprocess
CO4	An	To study the line, surface and volume integrals using Green's, Stoke's and GaussTheorems and their verification.
CO5	E	. To evaluate real and complex integrals using the Cauchy's integral formula and Residuetheorem.
CO6	C	To design an application of Laplace Transformation in analysis and solve differentialequations

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3) hours

Higher order linear differential equations with constant coefficients – linear differential equationswith variable coefficients– Euler's and Legendre's linear equations – Simultaneous first orderlinear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3) hours

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Anglebetween two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem– Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes andrectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)hours

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (withoutproof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomsonmethod –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3) hours

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3) hours

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms ofderivatives and integrals – Initial and final value theorem – Laplace transform of PeriodicFunctions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to secondorder with constant coefficient.

UNIT1 INTRODUCTION AND ELECTRONIC STATES OF SEMICONDUCTORS
9 hours

Introduction to solid state materials - crystal structure - Reciprocal lattice - Brillouin zone andrules for band (k - space) representation. Dynamics of electrons in periodic potential:Kronig - penny and nearly free electron models - Real methods for band structure calculations; Band gapsin semiconductors - Holes and effective mass concept - Properties of conduction and valancebands.

UNIT2 CARRIERS AND DOPING 9 hours

Fermi distribution and energy - Density of states - Valance and conduction band density of states- intrinsic carrier concentration – intrinsic Fermi level. Extrinsic semiconductors: n and p typedoping - Densities of carriers in extrinsic semiconductors and their temperature dependence -

extrinsic semiconductor Fermi energy level - Degenerate and non - degenerate semiconductors - Band gap engineering

UNIT 3 ELECTRICAL TRANSPORT 9 hours

Scattering Mechanism: electron - electron and electron – phonon scattering. Macroscopictransport: Carrier transport by Diffusion - Carrier transport by Drift: Low field, High field andvery high field.

UNIT 4 OPTICAL TRANSPORT 9 hours

Electron - hole pair generation and recombination: band to band (direct and indirect band gaptransitions) and intra band (impurity related) transitions, free - carrier & phonon transitions.Excitons: Origin, electronic levels and properties. Carrier transport - continuity equations.Optical constants: Kramers - Kronig relations.

UNIT 5 SEMICONDUCTOR AS DEVICES AND RECENT ADVANCES 9 hours

Processing of Semiconductor devices (Brief), p - n Semiconductor as device and Semiconductorjunctions - processes).

TEXT BOOK

1) M.N. Avadhanulu and P.G. Kshirsagar, "A Textbook of Engineering Physics" S.ChandPublishers, 2014(for units 1 and 2)
2) G.Senthil Kumar, "Engineering Physics", VRB publishers, Chennai, 2015 (for Unit 5)

REFERENCES BOOKS

1) Kevin F Brennan, "The Physics of Semiconductors", Cambridge Univ.Press 1999.
2) Peter Y Yu and Manuel Cardona, "Fundamentals of Semiconductors",Spriger, 1996.

CourseCoordinator HOD

U18BSCH201	**Environmental Science**	**L**	**T**	**P**		**C**
	Total Contact Hours – 45	3	0	0		3
	Prerequisite course –NIL					
	Course Coordinator:Dr.Chandrabose. Department:-Chemistry					

COURSE OBJECTIVES:-

- To study the interrelationship between living organism and environment.
- To study of the nature and concepts of ecosystem.
- To learn about the integrated themes and biodiversity of an environment.
- To study of pollution control and waste management.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functionsand its value.

COURSE OUTCOMES (COs)

CO1	R	To recognize core concepts and methods from ecological and physical sciences. and theirapplication inenvironmental problem solving
CO2	U	Understand the transnational character of environmental problems and ways ofaddressing them, including interactions across local to global scales
CO3	A	To form methods from ecological and physical sciences and theirapplication in environmental problem solving.

CO4	An	Analyze the impact of engineering solutions in a global and societal context.
CO5	E	Evaluate and understand interactionsbetween social and environmental processes
CO6	C	Plan the gained knowledge to overcome pollution problems

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I NATURAL RESOURCES 9hours

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soilerosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II ECOSYSTEMS 9hours

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers,consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains,food webs and ecological pyramids - Introduction, types, characteristic features, structure andfunction of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem,Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rainwater harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues andPossible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III BIODIVERSITY AND ITS CONSERVATION 9hours

Introduction and Definition - genetic, species and ecosystems diversity, biogeographicallyclassification of India - Value biodiversity: consumptive use, productive use, social, ethical,aesthetic and option values - Biodiversity at global, national and local levels. India as a megadiversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife,man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL SOLLUTION 9hours

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution,Marine pollution, Noise pollution, Thermal pollution, nuclear hazards. Solid waste Management:Causes, effects and control measures of urban and industrial wastes - Role of an individual inprevention of pollution - pollution case studies - Disaster Management: floods earthquake,cyclone and landslides.

UNIT V SOCIAL ISSUES AND HUMAN SOPULATION 9hours

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water(Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act,Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks– (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder-Regulator) –Harmful nature of ingredients – chemical effects on health due to inhaling fumes.Human population: population growth, variation among nations, Population explosion-FamilyWelfare programs, Environment and human health, Human Rights, Value Education, HIV andAIDS, Women and Child Welfare, Role of Information Technology in Environment and Humanhealth - Case Studies.

UNIT I ALGORITHIMIC PROBLEM SOLVING 9 hours

Introduction to components of a computer system - disks, memory, processor, operating system,compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Buildingblocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flowchart,programming language), algorithmic problem solving, simple strategies for developingalgorithms (iteration, recursion). Problem Illustrations

UNIT II DATA, EXPRESSIONS, STATEMENTS 9 hours

Python interpreter and interactive mode; values and types: int, float, boolean, string, andlist;variables, expressions, statements, tuple assignment, precedence of operators, comments;modulesand functions, function definition and use, flow of execution, parameters and arguments;Illustrativeprograms: exchange the values of two variables, circulate the values of n variables,distance betweentwo Points.

UNIT III CONTROL FLOW, FUNCTIONS 9 hours

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chainedconditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions:return values, parameters, local and global scope, function composition, recursion; Strings:stringslices, immutability, string functions and methods, string module; Lists as arrays. Illustrativeprograms: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNITIV LISTS, TUPLES, DICTIONARIES 9 hours

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists,listparameters;Tuples: tuple assignment, tuple as return value; Dictionaries: operationsandmethods;advancedlist,Processing list comprehension; Illustrative programs: selection sort,insertion sort, mergesort, histogram.

UNIT V FILES, PACKAGES **9hours**

Files and exception: text files, reading and writing files, errors and exceptions, handlingexceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

UNIT I TRADITIONAL ENGINEERING GRAPHICS

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; DrawingPrinciples; Isometric Projection; Surface Development; Perspective; Reading a Drawing;Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, ShortestDistance.

UNIT II COMPUTER GRAPHICS

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; ModelViewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing;Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to BuildingInformation Modelling (BIM)(Except the basic essential concepts, most of the teaching part can happen concurrently inthe laboratory)

UNITIII INTRODUCTION TO ENGINEERING DRAWING (9+2Hrs)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle;

UNIT IV ORTHOGRAPHIC PROJECTIONS (10+2 Hrs)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographicprojection of lines in first quadrant - Parallel to both the planes – Perpendicular to oneplane –Parallel to one plane and inclined to other plane – Inclined to both the planes;Projections ofplanes inclined to either HP or VP;

UNIT V PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS(10+3Hrs)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane;Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions – Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

UNIT VI SECTIONSOF SOLIDS AND DEVELOPMENT OF SURFAC(10+3Hrs)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone;

UNIT VII BUILDING DRAWING (9+2Hrs)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales forvarious types of Drawings,Symbols, Conventions and Abbreviations.Drawing of residential singleand two storied buildingswith detail of Line plan, Foundation Plan, Ground floor Plan, First floorplan, Elevation and Sections.

UNIT VIII OVERVIEW OF COMPUTER GRAPHICS (12+3 Hrs)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawinglimits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographicconstraints, Snap to objects manually and automatically; Setup a drawing with proper scale–Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings byusing various coordinate input entry methods to draw straight lines, Applying various ways ofdrawing circles;Create basic drawing of objects such as polygon and general multi-line figures;Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawingsectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing(Development of surfaces); Drawing front view, top viewand side view of objects from the givenpictorial view; Creation of 3-D models of simple objects.

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING

LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. ExSOnentiation (SOwer of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

SEMESTER – III

U18BSMA301	**Partial Differential Equations and Transformation**	**L**	**T**	**P**		**C**
	Total Contact Hours – 60	3	1	0		4
	Prerequisite course –Engineering Mathematics I& II					
	Course Coordinator: Dr.Ramya Department:-Mathematics					
COURSE OBJECTIVES:- The course should enable the student to						

- Grasp the Fourier series expansion for given periodic function in specific intervals andtheir different forms.
- Learn techniques of solving the standard types of first order and second order partialdifferential equations.
- Learn solving wave and heat equation using Fourier series.
- Understand the problems using Fourier transform and their properties.
- Understand the problems using Z - transform and their properties.

COURSE OUTCOMES (COs)

CO1	R	To remember the formulas and equations to solve the problems..
CO2	U	Understand to solve PDE and transformation techniques.
CO3	A	Apply the basics of Z – Transform in its applicability to discretely varyingfunctions, gained the skill of formulate certain problems in terms of differenceequations and solve them using the Z – Transform techniques.
CO4	An	To analysis the boundary value problems and differential equations oftwo-pointboundary value problems, boundary value problems for partial differentialequations, etc...
CO5	Ev	To evaluate the standard types of first order and second order partial differentialequations.
CO6	C	Finding Solution of difference equations using Z – Transform.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/Pos	PO 1	2	3	4	5	6	7	8	9	10	11	12	PSO	PSO

4	Approval		

UNIT I Fourier series 12 hours

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval'sIdentity – Harmonic Analysis.

UNIT II Partial Differential Equations 12 hours

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT IIIBoundary Value Problems for Partial Differential Equations 12 hours

Classifications second order linear partial differential equations – Solution of one

dimensionalwave equation – One dimensional heat equation – Steady state solution of two dimensional heatequation – Fourier series solutions in Cartesian coordinates.

UNIT IV Fourier Transform 12hours

Fourier integral theorem (without proof) – Fourier transform pairs – Fourier sine and cosinetransform – Properties – Transforms of simple functions – Convolution theorem – Parseval'sidentity.

UNIT V Z – Transform and Difference Equations 12 hours

Z – Transform – Elementary properties – Inverse Z – Transform – Convolution theorem – Formation of difference equations – Solution of difference equations using Z – Transform.

	Total Contact Hours – 60	3	1	0		4
	Prerequisite course –Basic Electrical & Electronics Engineering					
	Course Coordinator: Mrs.R.Rathika. Department:-EEE					

COURSE OBJECTIVES:-

To develop problem solving skills and understanding of circuit theory through the application of techniques and principles of electrical circuit analysis to common circuit problems.

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to

CO1	R	Remember network theorems for the analysis of electrical circuits.
CO2	U	Understand the First and Second order electrical networks
CO3	A	Apply the theorems to solve the electrical network problems
CO4	An	Infer circuit response using Laplace transform and frequencyresponse methods.
CO5	Ev	Predict the two port network parameters.
CO6	C	To create the two port networks.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I Network Theorems 12 hours

Superposition theorem, Thevenin theorem, Norton theorem, Maximum power transfertheorem, Reciprocity theorem, Compensation theorem.Analysis with dependent current andvoltage sources.Node and Mesh Analysis.Concept of duality and dual networks.

UNIT II Solution of First and Second order networks 12 hours

Solution of first and second order differential equations for Series and parallel R-L, R-C, R- L-C circuits, initial and final conditions in network elements, forced and free response, time constants, steady state and transient state response.

UNIT III Sinusoidal steady state analysis 12 hours

Representation of sine function as rotating phasor, phasor diagrams, impedances andadmittances, AC circuit analysis, effective or RMS values, average power and complex power.Three-phase circuits. Mutual coupled circuits, Dot Convention in coupled circuits, IdealTransformer.

UNIT IV Electrical Circuit Analysis Using Laplace Transforms 12 hours

Review of Laplace Transform, Analysis of electrical circuits using Laplace Transform forstandard inputs, convolution integral, inverse Laplace transform, transformed network withinitial conditions. Transfer function representation. Poles and Zeros.Frequency response(magnitude and phase plots), series and parallel resonances.

UNIT V Two Port Network and Network Functions 12 hours

Two Port Networks, terminal pairs, relationship of two port variables, impedance parameters,admittance parameters, transmission parameters and hybrid parameters, interconnections of twoport networks.

	Total Contact Hours – 45	3	0	0	3
	Prerequisite course – Basic Electrical & Electronic Engineering				
	Course Coordinator: Dr.T.R.Rangaswamy. Department:-EEE				

COURSE OBJECTIVES:- To understand the fundamental concepts, operation and applications of Analog Electronic Circuits

COURSE OUTCOMES (COs)

CO1	R	Recall the operation of P-N junction Diode&Zener Diode, Bjt, MOSFET, Opp-Amplifier,
CO2	U	Understand the characteristics and working of P-N junction Diode, Zener Diode, Bjt, MOSFET, Opp-Amplifiers and power amplifiers, Clipper & Clamper circuits
CO3	Ex	Solve different configurations of BJT & MOSFET and power & Operation amplifiers applications
CO4	A	Analyze the Diode circuits, Multistage & Direct Coupled amplifiers, Differential & Power amplifiers.
CO5	Ev	Criticize linear applications of Opp-Amplifiers and power amplifiers
CO6	D	Design application of Diode ,Transistor and non- linear Opp-amplifiers

UNIT I Diode circuits 5 hours

junction diode, I-V characteristics of a diode; review of half-wave and full-wave rectifiers, Zener diodes, clamping and clipping circuits.

UNIT II BJT circuits 8 hours

Structure and I-V characteristics of a BJT; BJT as a switch. BJT as an amplifier: small-signal model, biasing circuits, current mirror; common-emitter, common-base and common-collector amplifiers; Small signal equivalent circuits, high-frequency equivalent circuits

UNIT III MOSFET circuits 8 hour

MOSFET structure and I-V characteristics.MOSFET as a switch. MOSFET as an amplifier:

small-signal model and biasing circuits, common-source, common-gate and common-drain amplifiers; small signal equivalent circuits - gain, input and output impedances, trans-conductance, high frequency equivalent circuit.

UNIT IV Differential, multi-stage and operational amplifier 8 hours

Differential amplifier; power amplifier; direct coupled multi-stage amplifier; internal structure of an operational amplifier, ideal op-amp, non-idealities in an op-amp (Output offset voltage, input bias current, input offset current, slew rate, gain bandwidth product)

UNIT V Linear applications of op-amp 8 hours

Idealized analysis of op-amp circuits. Inverting and non-inverting amplifier, differential amplifier, instrumentation amplifier, integrator, active filter, P, PI and PID controllers and lead/lag compensator using an op-amp, voltage regulator, oscillators (Wein bridge and phase shift).Analog to Digital Conversion.

UNIT VI Nonlinear applications of op-amp 8 hours

Hysteretic Comparator, Zero Crossing Detector, Square-wave and triangular-wave generators. Precision rectifier, peak detector.Monoshot.

UNIT I Magnetic fields and magnetic circuits 7 hours

Review of magnetic circuits - MMF, flux, reluctance, inductance; review of Ampere Law andBiotSavart Law; Visualization of magnetic fields produced by a bar magnet and a currentcarrying coil - through air and through a combination of iron and air; influence of highlypermeable materials on the magnetic flux lines.

UNIT II Electromagnetic force and torque 9 hours

B-H curve of magnetic materials; flux-linkage vs current characteristic of magnetic circuits;linear and nonlinear magnetic circuits; energy stored in the magnetic circuit; force as a partialderivative of stored energy with respect to position of a moving element; torque as a partialderivative of stored energy with respect to angular position of a rotating element. Examples -galvanometer coil, relay contact, lifting magnet, rotating element with eccentricity or saliency.

UNIT III DC machines 8 hours

Basic construction of a DC machine, magnetic structure - stator yoke, stator poles, pole-faces orshoes, air gap and armature core, visualization of magnetic field produced by the field windingexcitation with armature winding open, air gap flux density distribution, flux per pole, inducedEMF in an armature coil. Armature winding and commutation - Elementary armature coil andcommutator, lap and wave windings, construction of commutator, linear commutationDerivation of back EMF equation, armature MMF wave, derivation of torque equation,armature reaction, air gap flux density distribution with armature reaction.

UNIT IV DC machine - motoring and generation 9 hours

Armature circuit equation for motoring and generation, Types of field excitations – separatelyexcited, shunt and series. Open circuit characteristic of separately excited DC generator, backEMF with armature reaction, voltage build-up in a shunt generator, critical field resistance andcritical speed. V-I characteristics and torque-speed characteristics of separately excited, shuntand series motors. Speed control through armature voltage. Losses, load testing and back-to-back testing of DC machines.

UNIT V Transformers 12 hours

Principle, construction and operation of single-phase transformers, equivalent circuit, phasordiagram, voltage regulation, losses and efficiency Testing - open circuit and short circuit tests,polarity test, back-to-back test, separation of hysteresis and eddy current losses Three-phasetransformer - construction, types of connection and their comparative features, Paralleloperation of single-phase and three-phase transformers, Autotransformers - construction,principle, applications and comparison with two winding transformer, Magnetizing current,effect of nonlinear B-H curve of magnetic core material, harmonics in magnetization current,Phase conversion - Scott connection, three-phase to six-phase conversion, Tap-changingtransformers - No-load and on-load tap-changing of transformers, Three-winding transformers.Cooling of transformers.

UNIT I Review of Vector Calculus 6 hours

Vector algebra, addition, subtraction, components of vectors, scalar and vector multiplications, tripleproducts, three orthogonal coordinate systems (rectangular, cylindrical and spherical). Vector calculus-differentiation, partial differentiation, integration, vector operatordel, gradient, divergence and Curlintegral theorems of vectors. Conversion of a vector from one coordinate system to another.

UNIT II Static Electric Field 9 hours

Coulomb's law, Electric field intensity, Electrical field due to point charges. Line, Surface andVolume charge distributions. Gauss law and its applications.Absolute Electric potential, potentialdifference, Calculation of potential differences for different configurations.Electric dipole,Electrostatic Energy and Energy density.

UNIT III Conductors, Dielectrics and Capacitance 6 hours

Current and current density, Ohms Law in Point form, Continuity of current, Boundary conditionsof perfect dielectric materials. Permittivity of dielectric materials, Capacitance, Capacitance of atwo wire line, Poisson's equation, Laplace's equation, Solution of Laplace and Poisson'sequation, Application of Laplace's and Poisson's equations.

UNIT IV Static Magnetic Fields 6 hours

Biot-Savart Law, Ampere Law, Magnetic flux and magnetic flux density, Scalar and Vector Magnetic potentials. Steady magnetic fields produced by current carrying conductors.

UNIT V Magnetic Forces, Materials and Time Varying Fields 9 hours

Force on a moving charge, Force on a differential current element, Force between differential current elements, Nature of magnetic materials, Magnetization and permeability, Magnetic boundary conditions, Magnetic circuits, inductances and mutual inductances.
Faraday's law for Electromagnetic induction, Displacement current, Point form of Maxwell's equation, Integral form of Maxwell's equations, Motional Electromotive forces. Boundary Conditions.

Module VI Electromagnetic Waves 9 hours

Derivation of Wave Equation, Uniform Plane Waves, Maxwell's equation in Phasor form, Waveequation in Phasor form, Plane waves in free space and in a homogenous material. Wave equationfor a conducting medium, Plane waves in lossy dielectrics, Propagation in good conductors, Skineffect. Poynting theorem.

	Total Contact Hours – 45	3	0	0		3
	Prerequisite course –Basic Electrical &Electronics Engineering					
	Course Coordinator : Dr.V.Jayalakshmi Department:-EEE					

COURSE OBJECTIVES:-

Students will be able understand working of logic gates. Design and implementCombinational and Sequential logic circuits. Design of Analog to Digital Conversion technique.

COURSE OUTCOMES (COs) At the end of this course, Students Will demonstrate the ability to

CO1	R	State the Fundamentals of Digital Systems and logicfamilies

CO2	U	Classify on Combinational Digital Circuits
CO3	An	Relate the Sequential circuits and systems
CO4	A	Implement the A/D and D/A Converters
CO5	Ev	Argue the Semiconductor memories and Programmable logicdevices
CO6	D	Design and implement the logic circuits & ADC technique.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I Fundamentals of Digital Systems and logic families 9 hours

Digital signals, digital circuits, AND, OR, NOT, NAND, NOR and Exclusive-OR operations,Boolean algebra, examples of IC gates, number systems-binary, signed binary, octalhexadecimal number, binary arithmetic, one's and two's complements arithmetic, codes,error detecting and correcting codes,characteristics of digital lCs, digital logic families, TTL,Schottky TTL and CMOS logic, interfacing CMOS and TTL, Tri-state logic.

UNIT II Combinational Digital Circuits 9 hours

Standard representation for logic functions, K-map representation, simplification of logicfunctions using K-map, minimization of logical functions. Don't care conditions,Multiplexer,De-Multiplexer/Decoders, Adders, Subtractors, BCD arithmetic, carry lookahead adder,serial adder, ALU, elementary ALU design, popular MSI chips, digitalcomparator, parity checker/generator, code converters, priority encoders, decoders/drivers fordisplay devices,Q-M method of function realization.

UNIT III Sequential circuits and systems 9 hours

A 1-bit memory, the circuit properties of Bitable latch, the clocked SR flip flop, J- K-TAndtypes flipflops,applications of flip flops, shift registers, applications of shift registers, serial toparallelconverter, parallel to serial converter, ring counter, sequence generator,ripple(Asynchronous) counters, synchronous counters, counters design using flip flops, specialcounter IC's, asynchronous sequential counters, applications of counters.

UNIT IV A/D and D/A Converters 9 hours

Digital to analog converters: weighted resistor/converter, R-2R Ladder D/A converter,specifications for D/A converters, examples of D/A converter lCs, sample and hold circuit,analog to digital converters: quantization and encoding, parallel comparator A/D

converter,successive approximation A/D converter, counting A/D converter, dual slopeA/D converter,A/D converter using Voltage to frequency and voltage to time conversion, specificationsof A/D converters, example of A/D converter ICs

UNIT V Semiconductor memories and Programmable logic devices. 9 hours

Memory organization and operation, expanding memory size, classification andcharacteristics of memories, sequential memory, read only memory (ROM), read and writememory(RAM), content addressable memory (CAM), charge de coupled device memory(CCD), commonly used memory chips, ROM as a PLD, Programmable logic array,Programmable array logic, complex Programmable logic devices (CPLDS), FieldProgrammable Gate Array (FPGA).

UNIT I Fundamentals of AC machine windings 9 hours

Physical arrangement of windings in stator and cylindrical rotor; slots for windings; single-turnoil - active portion and overhang; full-pitch coils, concentrated winding, distributed winding,winding axis, 3D visualization of the above winding types, Air-gap MMF distribution withfixed current through winding - concentrated and distributed, Sinusoidally distributed winding,winding distribution factor.

UNIT II Pulsating and revolving magnetic fields 9 hours

Constant magnetic field, pulsating magnetic field - alternating current in windings with spatial displacement, Magnetic field produced by a single winding - fixed current and alternatingcurrent, Pulsating fields produced by spatially displaced windings, Windings spatially shiftedby 90 degrees, Addition of pulsating magnetic fields, Three windings spatially shifted by 120degrees (carrying three-phase balanced currents), revolving magnetic field.

UNIT III Induction Machines 12 hours

Construction, Types (squirrel cage and slip-ring), Torque Slip Characteristics, Starting andMaximum Torque.Equivalent circuit.Phasor Diagram, Losses and Efficiency.Effectofparameter variation on torque speed characteristics (variation of rotor and stator resistances,stator voltage, frequency). Methods of starting, braking and speed control for induction motors.Generator operation.Self-excitation.Doubly-Fed Induction Machines.

UNIT IV Single-phase induction motors 5 hours

Constructional features, double revolving field theory, equivalent circuit, determination ofparameters. Split-phase starting methods and applications.

UNIT V Synchronous machines 10 hours

Constructional features, cylindrical rotor synchronous machine - generated EMF, equivalentcircuit and phasor diagram, armature reaction, synchronous impedance, voltage regulation.Operating characteristics of synchronous machines, V-curves.Salient pole machine – tworeaction theory, analysis of phasor diagram, power angle characteristics.Parallel operation ofalternators - synchronization and load division.

UNIT I Power switching devices 10hours

Diode, Thyristor, MOSFET, IGBT: I-V Characteristics; Firing circuit for thyristor; Voltage andcurrent commutation of a thyristor; Gate drive circuits for MOSFET and IGBT.

UNIT II Thyristor rectifiers 7 hours

Single-phase half-wave and full-wave rectifiers, Single-phase full-bridge thyristor rectifier withR-load and highly inductive load; Three-phase full-bridge thyristor rectifier with R-load andhighly inductive load; Input current wave shape and power factor.

UNIT III DC-DC converters 10hours

Elementary chopper with an active switch and diode, concepts of duty ratio and average

voltage,power circuit of a buck converter, analysis and waveforms at steady state, duty ratio control ofoutput voltage, Power circuit of a boost converter, analysis and waveforms at steady state,relation between duty ratio and average output voltage.

UNIT IV Single-phase voltage source inverter 10hours

Power circuit of single-phase voltage source inverter, switch states and instantaneous outputvoltage, square wave operation of the inverter, concept of average voltage over a switching cycle,bipolar sinusoidal modulation and unipolar sinusoidal modulation, modulation index and outputvoltage.

UNIT V Three-phase voltage source inverter 8 hours

Power circuit of a three-phase voltage source inverter, switch states, instantaneous outputvoltages, average output voltages over a sub-cycle, three-phase sinusoidal modulation.

UNIT I Discrete-time signals and systems 8hours

Discrete time signals and systems: Sequences; representation of signals on orthogonal basis;Representation of discrete systems using difference equations, Sampling and reconstruction ofsignals - aliasing; Sampling theorem and Nyquist rate.

UNIT II Z-transform 8 hours

Z-Transform, Region of Convergence, Analysis of Linear Shift Invariant systems using z-transform, Properties of z-transform for causal signals, Interpretation of stability in z-domain,Inverse z-transforms.

UNIT III Discrete Fourier Transform 10hours

Frequency Domain Analysis, Discrete Fourier Transform (DFT), Properties of DFT,Convolution of signals, Fast Fourier Transform Algorithm, Parseval's Identity, Implementationof Discrete Time Systems.

UNIT IV Design of Digital filters 12 hours

Designof FIR Digital filters: Window method, Park-McClellan's method. Design of IIRDigitalFilters: Butterworth, Chebyshev and Elliptic Approximations; Low-pass, Band-pass,and-stop and High-pass filters.Effect of finite register length in FIR filter design. Parametricand non-parametric spectral estimation. Introduction to multi-rate signal processing.

UNIT V Applications of Digital Signal Processing 7 hours

Correlation Functions and Power Spectra, Stationary Processes, Optimal filtering using ARMAModel, Linear Mean-Square Estimation, Wiener Filter.

CourseCoordinator HOD

U18BSMA402	Probability, Statistics and Numerical Methods	L	T	P	C
	Total Contact Hours – 60	3	1	0	4
	Prerequisite course –Engineering Mathematics 1&II				
	Course Coordinator :Dr.Manimegalai. Department:-Mathematics				

COURSE OBJECTIVES:-

The course should enable the student to

1. Learn basics of probability, Baye's Theorem. Understand the concept of random variable,moment generating functions and their properties; learn standard distributions in discreteand continuous cases.
2. Learn measures of central tendency and correlation and regressions, rank correlation,statistical intervals for single sample and test of hypothesis for a small and large sample.
3. Ability to apply knowledge of mathematics, science and engineering.
4. Ability to analyze and interpret data
5. Identify , formulate and solve equations by various methods

COURSE OUTCOMES (COs) At the end of this course, Students Will demonstrate the ability to

CO1	R	Memorize the concept of numerical differentiation and integration usingTrapezoidal and Simpson's rules..
CO2	U	Discuss to Learn the basic idea of statistics including measures of central tendency.Identify the appropriate hypothesis testing procedure based on type of outcomevariable and number of samples.
CO3	A	Solveequations by Newton-Raphson and Regula-Falsi methods and system of linearequations by various methods
CO4	An	Compare the value of a dependent variable in the given data by Newton's forwardand backward difference formulae and also unequal intervals.
CO5	E	Argue the probability using addition and multiplication theorem and the moments ofdistributions using moment generating functions
CO6	C	Design and solution for engineering applications

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

4	Approval		

UNIT I Probability Distribution 12 hours

Probability – Axioms of probability – Conditional probability – Baye's theorem –Random variables – Binomial – Poisson – Geometric – Uniform – Exponential and normaldistribution and their properties.

UNIT II Statistics and Testing of Hypothesis 12 hours

Measures of central tendency – Moments – Skewness and kurtosis – Correlation and Regression –Rank correlation – Test of significance: Large sample test for single proportion, difference ofproportions – Chi Square test for goodness fit and independence of attributes.

UNIT III Solution of Polynomial and Transcendental Equations 12 hours

Bisection method, Newton-Raphson method and Regula-Falsi method for single variable-solutions of linear system of equations by Gaussian, Gauss-Jordan, Jacobian and Gauss-Siedalmethods.

UNIT IV Finite Difference and Interpolation 12 hours

Finite differences -Relation between finite difference operators- Interpolation using Newton'sforward and backward difference formulae, Interpolation with unequal intervals-Newton'sDivided difference formula, Lagrange's Interpolation formula.

UNIT V Numerical Differentiation and Integration 12 hours

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidaland Simpson's both 1/3 rd and 3/8 th rules. Double integration using Trapezoidal rule and Simpsonrule.

	Total Contact Hours – 45	3	0	0		3
	Prerequisite course –NIL					
	Course Coordinator :Dr Praveen. Department:-Management Studies					

COURSE OBJECTIVES:-

1. Understanding the basic approaches in organization
2. Knowledge on theories of Personality
3. Clear sight on the Decision Making in Groups
4. Analyse the behaviour of individuals and groups in organizations interms of the key factors that influence organizational behaviour. Assessthe potential effects of organizational - level factors (such as structure,culture and change) on organizational behaviour.

COURSE OUTCOMES (COs) At the end of this course, Students Will demonstrate the ability to

CO1	R	List the Frame work of Organizational Behaviour

CO2	U	Describe the Sources of power
CO3	A	Execute the Awareness of the Merits and Demerits of Group decision making.
CO4	An	Examine the Knowledge of the Interpersonal perception
CO5	Ev	Appraise the knowledge of types of Conflicts
CO6	C	Development of leadership including training, Power and Authority

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

UNIT I **9 hours**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplinesinvolved in the study of Organizational Behavior, -Contributing disciplines and area – Applicationof Organizational Behavior in Business.

UNIT II **9 hours**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Groupand inter-group behaviour.

UNIT III **9 hours**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

UNIT IV **9 hours**

Leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

UNIT V **9 hours**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

U18MCTH401	Universal Human Values	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite course –NIL				
	Course Coordinator :Ms.Aarthisuriya. Department:- EEE				

COURSE OBJECTIVES:-

The objective of the course is four fold:

1. Sensitization of student towards self, family (relationship), society and nature.
2. Understanding (or developing clarity) of nature, society and larger systems, on the basis of Human relationships and resolved individuals.
3. Strengthening of self-reflection.
4. Development of commitment and courage to act.

COURSE OUTCOMES (COs)

At the end of the course, students are expected to become more aware of their surroundings, society, social problems and their sustainable solutions, while keeping human relationships and human nature in mind. They would have better critical ability.

They would also become sensitive to their commitment towards what they believe in (humane values. humane relationships and humane society). It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction

LIST OF EXPERIMENTS

1. Introduction to Digital Electronics lab-Nomenclature of digital ICS, 1 specifications, study ofthe data sheet, concept of vcc and ground, verification of the truth tables of logic gates usingTTL ICS.
2. Implementation of the given Boolean function using logic gates in 2 both sop and pos forms.
3. Verification of state tables of RS, JK, T and D flip-flops using 3 NAND & nor gates.
4. Implementation and verification of decoder/de-multiplexer and 4 encoder using logic gates.
5. Implementation of 4x1 multiplexer using logic gates.
6. Implementation of 4-bit parallel adder using 7483 IC.
7. Design and verify the 4-bit synchronous counter.
8. Design and verify the 4-bit asynchronous counter.
9. To design and verify operation of adder and subtractor.
10. To design and verify operation of AD/DA Converter
11. To design & verify the operation of magnitude comparator

SYLLABUS

UNIT I BASIC CONCEPTS 9 Hours

Evolution of Power Systems and Present-Day Scenario. Structure of a power system: Bulk Power Grids and Micro-grids. Generation: Conventional and Renewable Energy Sources. Distributed Energy Resources.Energy Storage. Transmission and Distribution Systems: Line diagrams, transmission and distribution voltage levels and topologies (meshed and radial systems). Synchronous Grids and Asynchronous (DC) interconnections. Review of Three-phase systems. Analysis of simple three-phase circuits. Power Transfer in AC circuits and Reactive Power.

UNIT II POWER SYSTEM COMPONENTS 12 Hours

Overhead Transmission Lines and Cables: Electrical and Magnetic Fields around conductors, Corona. Parameters of lines and cables.Capacitance and Inductance calculations for simple configurations.Travelling-wave Equations. Sinusoidal Steady state representation of Lines: Short, medium and long lines. Power Transfer, Voltage profile and Reactive Power.

Characteristics of transmission lines. Surge Impedance Loading. Series and Shunt Compensation of transmission lines.

Transformers: Three-phase connections and Phase-shifts. Three-winding transformers, auto-transformers, Neutral Grounding transformers. Tap-Changing in transformers.Transformer Parameters.Single phase equivalent of three-phase transformers.

Synchronous Machines: Steady-state performance characteristics. Operation when connected to infinite bus. Real and Reactive Power Capability Curve of generators. Typical waveform under balanced terminal short circuit conditions – steady state, transient and sub-transient equivalent circuits. Loads: Types, Voltage and Frequency Dependence of Loads. Per-**UNIT** System and per-UNIT calculations.

UNIT III OVER-VOLTAGES AND INSULATION REQUIREMENTS 6 Hours

Generation of Over-voltages: Lightning and Switching Surges. Protection against Over-voltages, Insulation Coordination.Propagation of Surges. Voltages produced by traveling surges. Bewley Diagrams.

UNITIV FAULT ANALYSIS 9 Hours

Method of Symmetrical Components (positive, negative and zero sequences). Balanced and Unbalanced Faults.Representation of generators, lines and transformers in sequence networks.Computation of Fault Currents.Neutral Grounding.

UNIT V INTRODUCTION TO DC TRANSMISSION & RENEWABLE ENERGY SYSTEMS 9 Hours

DC Transmission Systems: Line-Commutated Converters (LCC) and Voltage Source Converters (VSC). LCC and VSC based dc link, Real Power Flow control in a dc link. Comparison of ac and dc transmission. Solar PV systems: I-V and P-V characteristics of PV panels, power electronic interface of PV to the grid. Wind Energy Systems: Power curve of wind turbine. Fixed and variable speed turbines. Permanent Magnetic Synchronous Generators and Induction Generators. Power Electronics interfaces of wind generators to the grid.

SYLLABUS

UNIT I INTRODUCTION TO CONTROL PROBLEM 6 Hours

Industrial Control examples. Mathematical models of physical systems. Control hardware and their models. Transfer function models of linear time-invariant systems.

Feedback Control: Open-Loop and Closed-loop systems. Benefits of Feedback. Block diagram algebra.

UNITII TIME RESPONSE ANALYSIS 10 Hours

Standard test signals. Time response of first and second order systems for standard test inputs.Application of initial and final value theorem. Design specifications for second-order systems based on the time-response.

Concept of Stability.Routh-Hurwitz Criteria.Relative Stability analysis.Root-Locus technique.Construction of Root-loci.

UNIT III FREQUENCY-RESPONSE ANALYSIS 6 Hours

Relationship between time and frequency response, Polar plots, Bode plots. Nyquist stability criterion. Relative stability using Nyquist criterion – gain and phase margin. Closed-loop frequency response.

UNIT IV INTRODUCTION TO CONTROLLER DESIGN 10 Hours

Stability, steady-state accuracy, transient accuracy, disturbance rejection, insensitivity and robustness of control systems.Root-loci method of feedback controller design.Design specifications in frequency-domain.Frequency-domain methods of design.Application of Proportional, Integral and Derivative Controllers, Lead and Lag compensation in designs.Analog and Digital implementation of controllers.

UNIT V STATE VARIABLE ANALYSIS 7 Hours

Concepts of state variables.State space model.Diagonalization of State Matrix.Solution of state equations.Eigenvalues and Stability Analysis.Concept of controllability and observability.Pole-placement by state feedback.

Discrete-time systems.Difference Equations. State-space models of linear discrete-time systems. Stability of linear discrete-time systems.

UNIT VI INTRODUCTION TO OPTIMAL CONTROL AND NONLINEARCONTROL 6 Hours

Performance Indices.Regulator problem, Tracking Problem.Nonlinear system–Basic concepts and analysis.

OBJECTIVES To provide sound knowledge about constructional details and design of various electrical machines.

SYLLABUS

UNIT I INTRODUCTION 12 Hours

Major considerations in electrical machine design, electrical engineering materials, space factor, choice of specific electrical and magnetic loadings, thermal considerations, heat flow, temperature rise, rating of machines.

UNIT II TRANSFORMERS 12 Hours

Sizing of a transformer, main dimensions, kVA output for single- and three-phase transformers, window space factor, overall dimensions, operating characteristics, regulation, no load current, temperature rise in transformers, design of cooling tank, methods for cooling of transformers.

UNIT III INDUCTION MOTORS 12 Hours

Sizing of an induction motor, main dimensions, length of air gap, rules for selecting rotor slots of squirrel cage machines, design of rotor bars & slots, design of end rings, design

of wound rotor, magnetic leakage calculations, leakage reactance of polyphase machines, magnetizing current, short circuit current, circle diagram, operating characteristics.

UNIT IV SYNCHRONOUS MACHINES 12 Hours

Sizing of a synchronous machine, main dimensions, design of salient pole machines, short circuit ratio, shape of pole face, armature design, armature parameters, estimation of air gap length, design of rotor, design of damper winding, determination of full load field mmf, design of field winding, design of turbo alternators, rotor design.

UNITV COMPUTER AIDED DESIGN (CAD) 12 Hours

Limitations (assumptions) of traditional designs, need for CAD analysis, synthesis and hybrid methods, design optimization methods, variables, constraints and objective function, problem formulation. Introduction to FEM based machine design. Introduction to **c**omplex structures of modern machines-PMSMs, BLDCs, SRM and claw-pole machines.

TEXT BOOKS

SYLLABUS

UNITIINTRODUCTION **9 Hours**

Functional elements of measurement system – static characteristics – static calibration – accuracy, precision, resolution, linearity, dynamic, characteristics – performance characteristics of zero first, second order system – error in measurement.

UNIT II SENSORS AND TRANSDUCER **9 Hours**

Basic requirement of sensors – classification of sensors – resistive, inductive and capacitive transducers –LVDT, piezoelectric, thermoelectric, optical and digital transducer – transducers application in force, torque, level, flow, pressure, speed, and temperature measurement – PH electrode – photoelectric transducer.

UNIT III SIGNAL CONDITIONING SYSTEM **9 Hours**

Bridges – instrumentation amplifier – operational amplifier – buffer amplifier – differential amplifier – active filter, V/F and F/V converters, PLL, sample and hold circuit, A/D and D/A converters, function generators, multiplexing and de-multiplexing system, data acquisition system.

UNIT IV ELECTRICAL AND ELECTRONICS MEASUREMENT AND TELEMETRY 9 Hours

Principle of ammeter and voltmeter – digital voltmeter – energy meter – wattmeter – current – voltage and position telemetry system – AC telemetry – wattmeter – current, voltage and position telemetry system – AC system

UNIT V INPUT – OUTPUT DEVICES AND DISPLAYS 9 Hours

Seven segment display – LED, LCD, mixie tube, alphanumeric display – CRT, CRO – Magnetic tape recorder – digital printer – X-Y recorder .

U18MCTH502	**CONSTITUTION OF INDIA**		**L**	**T**	**P**	**C**
	Total Contact Hours – 24		2	0	0	0
	Prerequisite – NIL					
	Course Coordinator : Department:- AICTE					
	COURSE OBJECTIVES Students will be able to: • Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective. • To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism. • To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.					
	COURSE OUTCOMES (COs)					
CO1	R	Remember the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.				
CO2	U	Understand the intellectual origins of the framework of argument that informed the				

		conceptualization of social reforms leading to revolution in India.
CO3	A	Relatephilosophy of the Indian Constitution
CO4	An	To discuss about the passage of the Hindu Code Bill of 1956.
CO5	Ev	Evaluate the concept of administration and election commission.
CO6	C	Action plan for Organsation of Governance

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

SYLLABUS

UNIT I **4 Hours**

History of Making of the Indian Constitution**:** History Drafting Committee, (Composition& Working)

UNIT II **4 Hours**

Philosophy of the Indian Constitution: Preamble, Salient Features

UNIT III **4Hours**

Contours of Constitutional Rights &Duties: Fundamental Rights**,** Right to Equality**,** Right to Freedom**,** Right against Exploitation**,** Right to Freedom of Religion**,** Cultural and Educational

Rights,Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

UNIT IV **4 Hours**

Organsation of Governance: Parliament, Composition**,** Qualifications and Disqualifications**,** Powers and FPhilosophy of the Indian Constitution: Preamble, Salient Features unctions**,** Executive**,** President**,** Governor**,** Council of Ministers Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.

UNIT V **4 Hours**

Local Administration: District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of ElectedRepresentativeCEO of Municipal Corporation.Pachayati raj: Introduction, PRI: ZilaPachayat. Elected officials and their roles, CEO ZilaPachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.

UNIT VI **4 Hours**

Election Commission**:** Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners. State Election Commission: Role and Functioning.Institute and Bodies for the welfare of SC/ST/OBC and women.

COURSE OBJECTIVES

- To address the underlying concepts & approaches behind analysis of power system network using software tools.
- To identify & formulate solutions to problems relevant to power system using Software tools.

COURSE OUTCOMES (COs)

CO1	R	Recall the principles and approaches behind the power system
CO2	U	To understand the Modeling of a Wind Turbine System and HVDC Transmission Line Analyzer
CO3	A	To Apply the I-V and P-V characteristics of series and parallel combination of PV
		modules.

CO4	An	To analyze the Equivalent circuit of a 3-winding transformer, Per-unit calculations, Three phase short circuit analysis in a Synchronous Machine
CO5	Ev	To Evaluate Symmetrical components of a set of Unbalanced currents and original unbalanced phase voltages from Symmetrical Components
CO6	C	Design a model for the application of renewable energy resources.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

SYLLABUS

List of Experiments

1. Voltage Regulation of a Medium Line Model
2. Calculation of ABCD Parameters for Short, Medium and Long Transmission Lines.
3. Determination of Equivalent circuit of a 3-winding transformer.
4. Per-UNIT calculations
5. Three phase short circuit analysis in a Synchronous Machine
6. Unsymmetrical Fault Analysis

7.a) Obtain Symmetrical components of a set of Unbalanced currents

b) Obtain the original unbalanced phase voltages from Symmetrical Components

8. To demonstrate the I-V and P-V characteristics of series and parallel combination of PV modules
9. To demonstrate HVDC Transmission Line Analyzer
10. Modeling of a Wind Turbine System

	Total Contact Hours – 30	0	0	3	1.5
	Prerequisite – Engineering Mathematics, Electrical Circuit Analysis				
	Course Coordinator : Ms.G.Hemavathy Department:- EEE				

COURSE OBJECTIVES

To introduce control system lab experiments using hardware and software tools which provide path towards the engineering applications.

COURSE OUTCOMES (COs)

CO1	R	To Remember the basic concepts of control system concept of AC/DC servo motor to compute the transfer function.
CO2	U	To understand the impact of P. PI &PID controllers on linear system.
CO3	A	To Apply the design concept in lead & Lag compensators and closed loop control system
CO4	An	To analyze the Synchro Transmitter and Receiver characteristics.
CO5	Ev	compare the different controller and compensator techniques and find best application
CO6	C	To Create Bode, Root Locus, Nyquistplots , using Mat lab software for control system application.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

SYLLABUS

LIST OF EXPERIMENTS

1. Determination of transfer function parameters of a DC servo motor.
2. Determination of transfer function parameters of AC servo motor.
3. Effect of P, PI and PID controllers on second order system.
4. Digital simulation of linear systems
5. Design of lag and lead compensators.
6. Closed loop control system
7. Stability analysis of linear systems.
8. Synchro Transmitter and Receiver characteristics.
9. MATLAB programming
   a. Determination of Transfer function from poles and zeros.
   b. Determination of Poles and zeros from transfer function.
   c. Step and ramp response of first order system.
10. Simulation of second order system using MATLAB
11. Bode, Root Locus, Nyquist plots of Linear Time Invariant system using MATLAB.

SYLLABUS

LIST OF EXPERIMENT

1. Measurement of a batch of resistors and estimating statistical parameters.
2. Measurement of L using a bridge technique as well as LCR meter.
3. Measurement of C using a bridge technique as well as LCR meter
4. Measurement of L using a bridge technique as well as LCR meter.
5. Measurement of C using a bridge technique as well as LCR meter.
6. Measurement of Low Resistance using Kelvin's double bridge.
7. Measurement of High resistance and Insulation resistance using Megger.
8. Measurement of temperature using thermocouple and RTD.
9. Measurement of displacement using LVDT
10. Design of Instrumentation amplifiers.

11. Measurement of Torque and angle.
12. Calibration of single phase energy meter
13. Usage of DSO for steady state periodic waveforms produced by a function generator. Selection of trigger source and trigger level, selection of time-scale and voltage scale. Bandwidth of measurement and sampling rate.
14. Download of one-cycle data of a periodic waveform from a DSO and use values to compute the RMS values using a C program.
15. Usage of DSO to capture transients like a step change in R-L-C circuit.
16. Current Measurement using Shunt, CT, and Hall Sensor.

SYLLABUS

UNIT I POWER FLOW ANALYSIS 9 Hours

Review of the structure of a Power System and its components. Analysis of Power Flows: Formation of Bus Admittance Matrix. Real and reactive power balance equations at a node. Load and Generator Specifications. Application of numerical methods for solution of non-linear algebraic equations – Gauss Seidel and Newton-Raphson methods for the solution of the power flow equations. Computational Issues in Large-scale Power Systems.

UNIT II STABILITY CONSTRAINTS IN SYNCHRONOUS GRIDS 9 Hours

Swing Equations of a synchronous machine connected to an infinite bus. Power angle curve. Description of the phenomena of loss of synchronism in a single-machine infinite bus system following a disturbance like a three--phase fault. Analysis using numerical integration of swing equations (using methods like Forward Euler, Runge-Kutta 4^{th} order methods), as well as the Equal Area Criterion. Impact of stability constraints on Power System Operation. Effect of generation rescheduling and series compensation of transmission lines on stability.

UNIT III CONTROL OF FREQUENCY AND VOLTAGE 9 Hours

Turbines and Speed-Governors, Frequency dependence of loads, Droop Control and Power Sharing.Automatic Generation Control.Generation and absorption of reactive power by various components of a Power System. Excitation System Control in synchronous generators, Automatic Voltage Regulators. Shunt Compensators, Static VAR compensators and STATCOMs. Tap Changing Transformers.Power flow control using embedded dc links, phase shifters and

UNIT IV MONITORING AND CONTROL 9 Hours

Overview of Energy Control Centre Functions: SCADA systems. Phasor Measurement UNITs and Wide-Area Measurement Systems.State-estimation.System Security Assessment. Normal, Alert, Emergency, Extremis states of a Power System. Contingency Analysis.Preventive Control and Emergency Control.

UNIT V POWER SYSTEM ECONOMICS AND MANAGEMENT 9 hours

Basic Pricing Principles: Generator Cost Curves, Utility Functions, Power Exchanges, Spot Pricing. Electricity Market Models (Vertically Integrated, Purchasing Agency, Whole-sale competition, Retail Competition), Demand Side-management, Transmission and Distributions charges, Ancillary Services.Regulatory framework.

SYLLABUS

UNIT I FUNDAMENTALS OF MICROPROCESSORS 7 Hours

Fundamentals of Microprocessor Architecture.8-bitMicroprocessor and Microcontrollerarchitecture, Comparison of 8-bit microcontrollers, 16-bit and 32-bit microcontrollers.Definition of embedded system and its characteristics, Role of microcontrollers in embedded Systems.Overview of the 8051 family.

UNIT II THE 8051 ARCHITECTURE 8 Hours

Internal Block Diagram, CPU, ALU, address, data and control bus, Working registers, SFRs, Clock and RESET circuits, Stack and Stack Pointer, Program Counter, I/O ports, Memory Structures, Data and Program Memory, Timing diagrams and Execution Cycles.

UNIT III INSTRUCTION SET AND PROGRAMMING 8 Hours

Addressing modes: Introduction, Instruction syntax, Data types, Subroutines Immediate addressing, Register addressing, Direct addressing, Indirect addressing, Relative addressing, Indexed addressing, Bit inherent addressing, bit direct addressing. 8051 Instruction set, Instruction timings. Data transfer instructions, Arithmetic instructions, Logical instructions, Branch instructions, Subroutine instructions, Bit manipulation instruction. Assembly language programs, C language programs. Assemblers and compilers.Programming and debugging tools.

UNIT IV MEMORY AND I/O INTERFACING 8 Hours

Memory and I/O expansion buses, control signals, memory wait states. Interfacing of peripheral devices such as General Purpose I/O, ADC, DAC, timers, counters, and memory devices.

UNIT V EXTERNAL COMMUNICATION INTERFACE 6 Hours

Synchronous and Asynchronous Communication. RS232, SPI, I2C. Introduction and interfacing to protocols like Blue-tooth and Zig-bee.

UNIT VI APPLICATIONS 8 Hours

LED, LCD and keyboard interfacing.Stepper motor interfacing, DC Motor interfacing, and sensor interfacing, waveform generation.

	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Engineering Mathematics II				
	Course Coordinator : Dr.T.R.Rangaswamy Department:-EEE				

COURSE OBJECTIVES To master the various fundamental concepts of fuzzy logic and artificial neural networks. This will help you to get sufficient knowledge to analyze and design the various intelligent control systems.

COURSE OUTCOMES (COs)

CO1	R	Comprehend the fuzzy logic and the concept of fuzzinessinvolved in various systems and fuzzy set theory
CO2	U	Understand appropriate learning rules for each of the architectures.
CO3	A	Applying several neural network paradigms.Apply the conceptual things to the real world Electrical and electronics problems and applications.
CO4	An	Analysis of Competitive and Special Neural Networks

CO5	Ev	Describe the artificial intelligent techniques and interprets its data	
CO6	C	Develop some familiarity with current research problems and research methods in fuzzy and neural Techniques.

SYLLABUS

UNITI FUNDAMENTALS OF FUZZY LOGIC 9 Hours

Basic concepts: fuzzy set theory- basic concept of crisp sets and fuzzy sets- complements-union- intersection- combination of operation- general aggregation operations- fuzzy relations-compatibility relations-orderings- morphisms- fuzzy relational equations-fuzzy set and systems

UNITII ARCHITECTURE OF NEURAL NETWORKS 9 Hours

Architectures: motivation for the development of natural networks-artificial neural networks-biological neural networks-area of applications-typical Architecture-setting weights-common activations functions- Basic learning rules- McGulloch-Pitts neuron- Architecture, algorithm, applications-single layer net for pattern classification- Biases and thresholds, linear separability - Hebb'srule- algorithm -perceptron - Convergence theorem-Delta rule

UNIT III BASIC NEURAL NETWORK TECHNIQUES 9 Hours

Back propagation neural net:standard back propagation-architecture algorithm- derivation of learning rules-number of hidden layers--associative and other neural networks- hetro associative memory neural net, auto associative net- Bidirectional associative memory-applications-Hopfield nets-Boltzman machine

UNIT IV COMPETITIVE NEURAL NETWORKS 9 Hours

Neural network based on competition: fixed weight competitive nets- Kohonenself organizing maps and applications-learning vector quantization-counter propagation nets and applications adaptive resonance theory: basic architecture and operation-architecture, algorithm, application and analysis of ART1 & ART2

UNIT V SPECIAL NEURAL NETWORKS 9 Hours

Cognitron and Neocognitron- Architecture, training algorithm and application-fuzzy associate memories, fuzzy system architecture- comparison of fuzzy and neural systems

TEXT BOOKS:

1. Kliryvan- Fuzzy System & Fuzzy logic Prentice Hall of India, First Edition.
2. Lawrence Fussett- fundamental of Neural network Prentice Hall , First Edition.

U18PCEE6L1	**POWER SYSTEMS-II LABORATORY**		**L**	**T**	**P**	**C**
	Total Contact Hours – 30		0	0	3	1.5
	Prerequisite – Power system-I Laboratory					
	Course Coordinator : Dr.V.Jayalakshmi Department:- EEE					
COURSE OBJECTIVES ➢ To enhance the practical knowledge on power systems through simulation of load flow, economic load dispatch etc. using various soft ware's like ETAP, MATLAB etc.						
COURSE OUTCOMES (COs)						
CO1	R	Understand and remember the parameters of the Power System Network				
CO2	U	Experiment with the basic load flow analysis methods				
CO3	A	Apply the load flow technique with different methods(Newton Raphson, Gauss – seidel, Fast decoupled).				
CO4	An	Analyze the load frequency control of various network systems				
CO5	Ev	Evaluate the load flow, optimal dispatchusing MATLAB software.				
CO6	C	Formulate the bus impedance &admittance matrix by different transformation method.				

	Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low														
1	COs/Pos	PO1	2	3	4	5	6	7	8	9	10	11	12	PSO	PSO

LIST OF EXPERIMENTS FOR POWER SYSTEMS-II LAB

1. Formulation of the bus admittance matrix by direct inspection and SingularTransformation method.
2. Formation of bus impedance matrix by direct inspection and SingularTransformation method.
3. Load Flow studies by Gauss – seidelmethods
4. Load Flow studies by Newton Raphson methods.
5. Load Flow studies by Fast decoupled methods.
6. Numerical Integration of Swing equation.
7. The Equal-Area Criterion.
8. Economic/Optimal Load Dispatch.
9. Load Frequency Control

U18PCEE6L2	MICROPROCESSORS&MICROCONTROLLERS LABORATORY	L	T	P	C
	Total Contact Hours – 30	0	0	3	1.5
	Prerequisite – Digital Electronics				
	Course Coordinator : Dr.S.P.Vijayaragavan Department:- EEE				

COURSE OBJECTIVES

- To gain knowledge in programming microprocessor and microcontroller and to learn about various Interfacing concepts.

COURSE OUTCOMES (COs)

CO1	R	Remember the instruction set, addressing modes of microprocessor and microcontroller
CO2	U	Understand the basic concepts of ALP.
CO3	A	Apply the assembly level programming for real time projects.
CO4	An	Analyzing ability to compare Processor & Controller.
CO5	Ev	Designing Mini projects with processors & controllers.
CO6	C	To Develop an ability in interfacing a microprocessor and microcontroller with electrical and electronic systems

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/Pos	PO1	2	3	4	5	6	7	8	9	10	11	12	PSO	PSO

LIST OF EXPERIMENTS:

8085 Programming

1	(a)	8 bit Addition.	(b)	8 bit Subtraction.
2	(a)	Multiplication.	(b)	Division.
3	(a)	16 bit Addition	(b)	16 bit Subtraction.
4	(a)	Largest Element in an array.	(b)	Smallest Element in an array.
5	(a)	Ascending order.	(b)	Descending order.

8085 Interfacing

6. Traffic Light control
7. Keyboard Interface.
8. 8251 USART interface

8051 Programming

1. Demonstration of basic instructions with 8051 micro controller execution including Conditional jumps, looping and calling subroutines.

8051 Interfacing

10. Stepper motor control.
11. A/D & D/A Interface.
12. Waveform Generation

SEMESTER VII

U18PCEE701	**SMART GRID**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Power Systems-I				
	Course Coordinator : Dr.S.Prakash Department:-EEE				

COURSE OBJECTIVES To enable the students acquire knowledge on smart grid, different options of architectural design and communication technology for various aspects of smart grid , System analysis and stability analysis in smart grid, renewable energy sources and storage integration with smart grid.

COURSE OUTCOMES (COs)

CO1	R	Remember the concepts and design of Smart grid
CO2	U	Understand the various communication and measurement technologies in smart grid.
CO3	A	Apply the smart grid integration technologies in real time
CO4	An	Analyzethe stability of smart grid.
CO5	Ev	Evaluate the high performance computing techniques for Smart Grid applications
CO6	C	Compiles different smart grid technologies and Summaries it

	Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

SYLLABUS

UNIT I INTRODUCTION TO SMART GRID 9 Hours

Evolution of Electric Grid, Concept, Definitions and Need for Smart Grid, Smart grid drivers, functions, opportunities, challenges and benefits, Difference between conventional & Smart Grid, Concept of Resilient &Self-Healing Grid, Present development & International policies in Smart Grid, Diverse perspectives from experts and global Smart Grid initiatives.

UNIT II SMART GRID TECHNOLOGIES 9 Hours

Technology Drivers, Smart energy resources, Smart substations, Substation Automation, Feeder Automation ,Transmission systems: EMS, FACTS and HVDC, Wide area monitoring, Protection and control, Distribution systems: DMS, Volt/VAr control, Fault Detection, Isolation and service restoration, Outage management, High-Efficiency Distribution Transformers, Phase Shifting Transformers, Plug in Hybrid Electric Vehicles (PHEV).

UNITIII SMART METERS 9 Hours

Introduction to Smart Meters, Advanced Metering infrastructure (AMI) drivers and benefits, AMI protocols, standards and initiatives, AMI needs in the smart grid, Phasor Measurement UNIT(PMU), Intelligent Electronic Devices(IED) & their application for monitoring & protection.

UNIT IV POWER QUALITY MANAGEMENT IN SMART GRID 9 Hours

Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit.

UNIT V HIGH PERFORMANCE COMPUTING 9 Hours

Local Area Network (LAN), House Area Network (HAN), Wide Area Network (WAN),Broadband over Power line (BPL), IP based Protocols, Basics of Web Service and CLOUD Computing to make Smart Grids smarter, Cyber Security for Smart Grid.

TEXT BOOK:

CourseCoordinator HOD

U18MCTH701	**ESSENCE OF INDIA KNOWLEDGE TRADITION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	2	2	0	0
	Prerequisite – NIL				
	Course Coordinator : Department:-EEE				

Objective:

- It will also focus on Indian philosophical, linguistic and artistic traditions, along with yoga and Indian perspective of modern scientific worldview.
- The course aims at imparting basic principles of thought process, reasoning and inferencing.

CourseCoordinator HOD

U18PCEE7L1	Electronics Design Lab	L	T	P	C
	Total Contact Hours – 30	0	0	4	2

Prerequisite – Analog Electronics Circuits, Digital Electronics, Power Electronics

Course Coordinator : Dr.S.Prakash & Dr. T.R.Rangaswamy
Department:- EEE

COURSE OBJECTIVES

To enhance the practical knowledge on Electronic Design for Industrial Applications through experiments and simulations

-

COURSE OUTCOMES (COs)

CO1	R	To recall the concept of Digital & Analog Electronics
CO2	U	To interpret and understand the Power Electronics Components
CO3	A	To classify analog and digital electronics components
CO4	An	To differentiate real time and simulation of Electronic Design applications
CO5	Ev	Choose appropriate components, software and hardware platforms
CO6	C	To Develop an electronic systems and interface with microprocessor / microcontroller

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

1	COs/Pos	PO1	2	3	4	5	6	7	8	9	10	11	12	PSO	PSO

LIST OF EXPERIMENTS:(Selection Based)

1

a. Design of IGBT based single phase PWM inverter.
b. Design IGBT based three phase PWM inverter.
c. Design if Single Phase AC Voltage controller with R & RL Load.
d. Design and Simulation of dc-dc converters.
e. Design of Switched Mode Power Supply.
f. Design DSP based Stepper Motor Controller using 8051 Micro-controller.

2. Programmable logic Controller (PLC) design
3. Analog and digital system design and analysis
4. Computer aided design and simulation
5. Electrical substation design
6. Design of Automation and control of Industrial process
7. Design of signal conditioning circuits;
8. Group projects involving electronic hardware (Analog, Digital, mixed signal) leading to implementation of an application

UNIT I Introduction and Components of a Protection System 9 Hours

Principles of Power System Protection, Relays, Instrument transformers, Circuit Breakers

UNIT II Faults and Over-Current Protection 9 Hours

Review of Fault Analysis, Sequence Networks. Introduction to Over current Protection and over current relay co-ordination.

UNIT III Equipment Protection Schemes 9 Hours

Directional, Distance, Differential protection.Transformer and Generator protection. Bus bar Protection, Bus Bar arrangement schemes.

UNIT IV Digital Protection 9 Hours

Computer-aided protection, Fourier analysis and estimation of Phasors from DFT. Sampling, aliasing issues.

UNIT V Modeling and Simulation of Protection Schemes 9 Hours

CT/PT modeling and standards, Simulation of transients using Electro-Magnetic Transients (EMT) programs. Relay Testing.

UNIT VI System Protection 9 Hours

Effect of Power Swings on Distance Relaying.System Protection Schemes. Under-frequency, under-voltage and df/dt relays, Out-of-step protection, Synchro-phasors, Phasor Measurement Units and Wide-Area Measurement Systems (WAMS). Application of WAMS for improving protection systems.

U18PEEE12	**Line-Commutated and Active PWM Rectifiers**	**L**	**T**	**P**	**C**
	Total Contact Hours – 40	3	0	0	3
	Prerequisite – Power Electronics				
	Course Coordinator – Ms.S.Sherine ,Department: EEE				

OBJECTIVES

- At the end of this course, students will demonstrate the ability to Analyse controlled rectifier circuits.
- Understand the operation of line-commutated rectifiers – 6 pulse and multi-pulse configurations regeneration modes and lagging, leading and unity power factor.
- Understand the operation of PWM rectifiers – operation in rectification and mode.

COURSE OUTCOMES (COs)

CO1	R	To remember thediode, thyristor and converters.
CO2	U	To understand the operation of rectifier circuits.
CO3	A	To apply the power devices in drives.
CO4	An	To analyze about the converter operations.
CO5	E	To evaluate the rectification and regeneration modes in PWM rectifiers
CO6	C	To create the phasordiagramsand closed-loop control structure.

SYLLABUS

UNIT 1 Diode rectifiers with passive filtering 6 Hours

Half-wave diode rectifier with RL and RC loads; 1-phase full-wave diode rectifier with L, C and LC filter; 3-phase diode rectifier with L, C and LC filter; continuous and discontinuous conduction, input current waveshape, effect of source inductance; commutation overlap.

UNIT II Thyristor rectifiers with passive filtering 6 Hours

Half-wave thyristor rectifier with RL and RC loads; 1-phase thyristor rectifier with L and LC filter; 3-phase thyristor rectifier with L and LC filter; continuous and discontinuous conduction, input current wave shape

.

UNIT III Multi-Pulse converter 6 Hours

Review of transformer phase shifting, generation of 6-phase ac voltage from 3-phase ac, 6-pulse converter and 12-pulse converters with inductive loads, steady state analysis, commutation overlap, notches during commutation.

UNIT IV Single-phase ac-dc single-switch boost converter 6 Hours

Review of dc-dc boost converter, power circuit of single-switch ac-dc converter, steady state analysis, unity power factor operation, closed-loop control structure.

UNIT V Ac-dc bidirectional boost converter 6 Hours

Review of 1-phase inverter and 3-phase inverter, power circuits of 1-phase and 3-phase ac-dc boost converter, steady state analysis, operation at leading, lagging and unity power factors. Rectification and regenerating modes. Phasor diagrams, closed-loop control structure.

UNIT VI Isolated single-phase ac-dc fly back converter 10 Hours

Dc-dc flyback converter, output voltage as a function of duty ratio and transformer turns ratio. Power circuit of ac-dc flyback converter, steady state analysis, unity power factor operation, closed loop control structure

SYLLABUS

UNIT I Electric Drives 12 Hours

Type of electric drives, choice of motor, starting and running characteristics, speed control, temperature rise, Particular applications of electric drives, Types of industrial loads, continuous, Intermittent and variable loads, load Equalization.

UNIT II Electric Heating 12 Hours

Advantages and methods of electric heating, resistance heating, induction heating and dielectric heating.

UNIT III Electric Welding 12 Hours

Electric welding, resistance and arc welding, electric welding equipment, comparison between A.C. and D.C. Welding.

UNIT IV Illumination Fundamentals & Various Illumination Methods 12 Hours

Introduction, terms used in illumination, laws of illumination, polar curves, photometry, integrating sphere, sources of light. Discharge lamps, MV and SV lamps – comparison between tungsten filament lamps and fluorescent tubes, Basic principles of light control, Types and design of lighting and flood lighting.

UNIT V Electric Traction 12 Hours

System of electric traction and track electrification. Review of existing electric traction systems in India. Special features of traction motor, methods of electric braking-plugging rheostatic braking and regenerative braking, Mechanics of train movement. Speed-time curves for different services – trapezoidal and quadrilateral speed time curves. Calculations of tractive effort, power, specific energy consumption forgiven run, effect of varying acceleration and braking retardation, adhesive weight and braking retardation adhesive weight and coefficient of adhesion.

SYLLABUS

UNITI Synchronous Reluctance Motors 9 Hours

Constructional features – Types – Axial and Radial flux motors – Operating principles – Variable Reluctance and Hybrid Motors – Voltage and Torque Equations - Phasor diagram - Characteristics.

UNIT II Stepping Motors 9 Hours

Constructional features – Principle of operation – Variable reluctance motor – Hybrid motor – Single and multi-stack configurations – Torque equations – Modes of excitations – Characteristics – Drive circuits – Microprocessor control of stepping motors – Closed loop control.

UNIT III Switched Reluctance Motors 9 Hours

Constructional features – Rotary and Linear SRMs - Principle of operation – Torque production – Steady state performance prediction- Analytical method -Power Converters and their controllers – Methods of Rotor position sensing – Senseless operation –Closed loop control of SRM - Characteristics.

UNIT IV Permanent Magnet Brushless D.C. Motors 9 Hours

Constructional features of PMBLDC Motor - Permanent Magnet materials – Magnetic Characteristics –Principle of operation – Types – Magnetic circuit analysis – EMF and torque equations –Commutation - Power converters – Motor characteristics and control.

UNIT V Permanent Magnet Synchronous Motors 9 Hours

Principle of operation – Ideal PMSM – EMF and Torque equations – Armature reaction MMF – Synchronous Reactance – Sine wave motor with practical windings – Phasor diagram – Torque/speed characteristics - Power controllers - Converter Volt-ampere requirements.

U18PEEE21	**HVDC Transmission Systems**	**L**	**T**	**P**	**C**
	Total Contact Hours – 40	3	0	0	3
	Prerequisite – Power Systems – I & II				
	Course Coordinator: Dr.S. Prakash Department:EEE				

OBJECTIVES

At the end of this course, students will demonstrate the ability to understand the advantages of DC transmission over AC transmission.

COURSE OUTCOMES (COs)		
CO1	R	To remember the basics of DC power transmission.
CO2	U	To Understand the operation of Line Commutated Converters and Voltage Source Converters.
CO3	A	To demonstrate converters for HVDC system
CO4	An	To analyze the control strategies used in HVDC transmission system.
CO5	E	To evaluate the modern trends in HVDC technology.
CO6	C	To create and analyze the multi terminal DC Systems.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

SYLLABUS

UNIT I DC Transmission Technology 4 Hours

Comparison of AC and dc Transmission (Economics, Technical Performance and Reliability).Application of DC Transmission.Types of HVdc Systems.Components of aHVdc system. Line Commutated Converter and Voltage Source Converter based systems.

UNIT II Analysis of Line Commutated and Voltage Source Converters 10 Hours

Line Commutated Converters (LCCs): Six pulse converter, Analysis neglecting commutation overlap, harmonics, Twelve Pulse Converters.Inverter Operation.Effect of Commutation Overlap.Expressions for average dc voltage, AC current and reactive power absorbed by the converters.Effect of Commutation Failure, Misfire and Current Extinction in LCC links.

Voltage Source Converters (VSCs): Two and Three-level VSCs. PWM schemes: Selective Harmonic Elimination, Sinusoidal Pulse Width Modulation. Analysis of a six pulse converter. Equations in the rotating frame. Real and Reactive power control using a VSC.

UNIT III Control of HVDC Converters 10 Hours

Principles of Link Control in aLCCHVdc system. Control Hierarchy, Firing Angle Controls– Phase-Locked Loop, Current and Extinction Angle Control, Starting and Stopping of a Link. Higher level Controllers Power control, Frequency Control, Stability Controllers.Reactive Power Control. Principles of Link Control in a VSC HVDC system: Power flow and dc Voltage Control. Reactive Power Control/AC voltage regulation.

UNIT IV Components of HVDC systems 8 Hours

Smoothing Reactors, Reactive Power Sources and Filters in LCC HVdc systems DC line: Corona Effects.Insulators, Transient Over-voltages.dc line faults in LCC systems. dc line faults in VSC systems. DC breakers.Monopolar Operation.Ground Electrodes.

UNIT V Stability Enhancement using HVDC Control 4 Hours

Basic Concepts: Power System Angular, Voltage and Frequency Stability. Powe Modulation: basic principles – synchronous and asynchronous links. Voltage Stability Problem in AC/DC systems.

UNIT V MTDC Links 4 Hours

Multi-Terminal and Multi-Infeed Systems.Series and Parallel MTDC systems using LCCs. MTDC systems using VSCs. Modern Trends in HVDC Technology.Introduction to Modular Multi-level Converters.

	Prerequisite – Electrical Machines I, Power Electronics				
	Course Coordinator: Ms.Sherine Department:EEE				

OBJECTIVES

- To study and understand the operation of DC drives and intelligentcontroller for drives.

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	Remember the characteristics of dc motors.
CO2	U	Understand the concept of converter and chopper fed drives
CO3	A	To apply the characteristics of dc motors using digital control
CO4	An	To analyze the DC Drives in closed loop control
CO5	E	To Evaluate four quadrant operations of Class A, B, C, D, E chopper
CO6	C	To design closed loop control systems

SYLLABUS

UNIT I DC MOTORS FUNDAMENTALS AND MECHANICAL SYSTEMS 9

DC motor- Types, induced emf, speed-torque relations; Speed control – Armature and field speed control; Ward Leonard co+ntrol – Constant torque and constant horse power operation – Introduction to high speed drives and modern drives. Characteristics of mechanical system – dynamic equations, components of torque, types of load; Requirements of drives characteristics – stability of drives – multi-quadrant operation; Drive elements, types of motor duty and selection of motor rating.

UNIT II CONVERTER CONTROL 9

Principle of phase control – Fundamental relations; Analysis of series and separately excited DC motor with single-phase and three-phase converters – waveforms, performance parameters, performance characteristics. Continuous and discontinuous armature current operations; Current ripple and its effect on performance; Operation with freewheeling diode; Implementation of braking schemes; Drive employing dual converter.

UNIT III CHOPPER CONTROL 9

Introduction to time ratio control and frequency modulation; Class A, B, C, D and E chopper controlled DC motor – performance analysis, multi-quadrant control – Chopper based implementation of braking schemes; Multi-phase chopper; Related problems.

UNIT IV CLOSED LOOP CONTROL 9

Modeling of drive elements – Equivalent circuit, transfer function of self, separately excited DC motors; Linear Transfer function model of power converters; Sensing and feeds back elements – Closed loop speed control – current and speed loops, P, PI and PID controllers – response comparison. Simulation of converter and chopper fed d.c drive.

UNIT V DIGITAL CONTROL OF D.C DRIVE 9

Phase Locked Loop and micro-computer control of DC drives – Program flow chart for constant horse power and load disturbed operations; Speed detection and current sensing circuits.

TOTAL: 45 PERIODS

SYLLABUS

UNIT I INTRODUCTION 9

Conventional power generation: advantages and disadvantages, Energy crises, Non - conventional energy (NCE) resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.

UNIT II DISTRIBUTED GENERATIONS (DG) 9

Concept of distributed generations, topologies, selection of sources, regulatory standards/ framework, Standards for interconnecting Distributed resources to electric power systems: IEEE 1547. DG installation classes, security issues in DG implementations. Energy storage elements: Batteries, ultra-capacitors, flywheels. Captive power plants.

UNIT III IMPACT OF GRID INTEGRATION 9

Requirements for grid interconnection, limits on operational parameters,: voltage, frequency, THD, response to grid abnormal operating conditions, islanding issues. Impact of grid integration with NCE sources on existing power system: reliability, stability and power quality issues.

UNIT IV BASICS OF A MICROGRID 9

Concept and definition of micro grid, micro grid drivers and benefits, review of sources of micro grids, typical structure and configuration of a micro grid, AC and DC micro grids, Power Electronics interfaces in DC and AC micro grids.

UNIT V CONTROL AND OPERATION OF MICROGRID 9

Modes of operation and control of micro grid: grid connected and islanded mode, Active and reactive power control, protection issues, anti-islanding schemes: passive, active and communication based techniques, micro grid communication infrastructure, Power quality issues in micro grids, regulatory standards, Micro grid economics, Introduction to smartmicro grids.

SYLLABUS

UNIT I EMBEDDED SYSTEMS 9

Introduction to embedded systems – hardware and software components –types- examples-characteristics –system on chip-challenges in embedded computing system design – embedded system design process.

UNIT II EMBEDDED SYSTEM INTERFACING 9

Serial and parallel communication devices-wireless devices – timer & counting devices-Watch dog timer – Serial communication using I2C- CAN USB buses –Parallel Communication using ISA- PCI- PCI/X buses-wireless and mobile system protocol.

UNIT III ARM PROCESSOR-7 **9**

MSP430 architecture-addressing modes-constant generator and emulsion instructions-instruction set, functions- interrupts low power modes.

UNIT IV PIC CONTROLLER **9**

PIC microcontrollers: History and features –Architecture – memory organization – addressing modes – instruction set – PIC progrmming –I/O port, Data Conversion, RAM & ROM Allocation.

UNIT V INTERFACING – CASE STUDY **9**

Interfacing PIC to LCD – Keyboard– parallel and serial ADC, DAC– Stepper motor interfacing.

SYLLABUS

UNIT I Breakdown in Gases, liquid and solid Insulating materials 15 Hours

Ionization processes and de-ionization processes, Types of Discharge, Gases as insulating materials, Breakdown in Uniform gap, non-uniform gaps, Townsend's theory, Streamer mechanism, Corona discharge, Breakdown in pure and commercial liquids, Solid dielectrics and composite dielectrics, intrinsic breakdown, electromechanical breakdown and thermal breakdown, Partial discharge, applications of insulating materials.

UNIT II Generation of High Voltages 7 Hours

Generation of high voltages, generation of high D. C. and A.C. voltages, generation of impulse voltages, generation of impulse currents, tripping and control of impulse generators.

UNIT III Measurements of High Voltages and Currents 7 Hours

Peak voltage, impulse voltage and high direct current measurement method, cathode ray oscillographs for impulse voltage and current measurement, measurement of dielectric constant and loss factor, partial discharge measurements.

UNIT IV Lightning and Switching Over-voltages 8 Hours

Charge formation in clouds, Stepped leader, Dart leader, Lightning Surges. Switching over-voltages, Protection against over-voltages, Surge diverters, Surge modifiers.

UNIT V High Voltage Testing of Electrical Apparatus and High Voltage Laboratories 8 Hours

Various standards for HV Testing of electrical apparatus, IS, IEC standards, Testing of insulators and bushings, testing of isolators and circuit breakers, testing of cables, power transformers and some high voltage equipment, High voltage laboratory layout, indoor and outdoor laboratories, testing facility requirements, safety precautions in H. V. Labs.

SYLLABUS

UNIT I STATOR VOLTAGE CONTROL OF INDUCTION MOTOR 9

Torque, slip characteristics, operation with different types of loads, performance comparison of different AC power controllers speed reversal, closed loop control.

UNIT II STATOR FREQUENCY CONTROL 9

Operation of induction motor Non-Sinusoidal supply waveforms, Variable frequency, operation of 3 phase induction motor, constant flux operation, current fed operation dynamic and regenerative braking of CSI and VSI fed drives.

UNIT III ROTOR RESISTANCE CONTROL 9

Torque, slip characteristics, types of rotor choppers, torque equation, constant torque operation, TRC strategy, combined stator voltage control and rotor resistance control.

UNIT IV SLIP POWER RECOVERY SCHEME 9

Torque equation, torque – slip characteristics-power factor consideration, Sub-Synchronous operation closed loop control.

UNIT V SYNCHRONOUS MOTOR DRIVES 9

Need for leading pf operation –open loop VSI fed and its characteristics –self-control torque angle control –power factor control- Brushless excitation systems staring, principles of vector control

Total Periods: 45

SYLLABUS

UNIT I EMS 9 Hours

Introduction to EMS, Objectives, Evolution of EMS, Evolution of SCADA, Function and Benefits of EMS, EMS Architecture, Practical EMS, Working of EMS, Power System Security: Introduction, Static Security Assessment, Operating states of Power System. Real Time or Online Application: Control Function, Protection Function, Operating States of Power System.

UNIT II Network Analysis Function of EMS 9 Hours

Real Time Function, Extended Real Time Function, State Estimation: Introduction, Conventional State Estimation, Linear state estimation. Economic Dispatch and Optimal Power Flow: Introduction, Economic Dispatch, Generation Model, Economic Dispatch Problem, Optimal Power Flow problem Formulation.

UNIT III SCADA 8 Hours

Introduction to SCADA, Evolution of SCADA, Benefits of SCADA, Function of SCADA, SCADA in Process control, SCADA Application, Usage of SCADA, Real-Time Monitoring and Control using SCADA, Data Acquisition, Data Communication, Data Presentation, Control.

UNIT IV SCADA Hardwar 8 Hours

Introduction, SCADA hardware Functions, Remote Terminal Units, SCADA RTU, Basic Functions, RTU Standards, Difference Between RTU and PLC, Features of SCADA. SCADA Software and Protocols: Introduction to ISO Model, DNP3 Model, Important Features of DNP3, IEC60870 PROTOCOL, HDLC, Modbus Protocol.

UNITV Power System Automation 8 Hours

Benefits of Power System Automation, Power System Automation, Architecture For Power System Automation, Classification of Power system Automation, Implementation of Power System Automation and Protection Using SCADA, SCADA Based Model for Automation and Digital Protection.

SYLLABUS

UNIT I PHYSIOLOGY AND TRANSDUCERS 9

Electrophysiology: cell and its functions- Neuron-Axon-Synapse-Action Potential - Propagation of electrical impulses along the axon-Sodium sump-Salutatory condition-Electrophysiology and Cardiopulmonary systems- Respiration and nervous system and peripheral nervous system

UNIT II ELECTRO – PHYSIOLOGICAL MEASUREMENTS 9

Sensors and recorders: psychological transducer-general consideration for electronic recording systems- basic recording systems-pre amplifiers-direct writing recorders- UV recorders-electrostatic recorders-instrumentation tape recorders

UNIT III NON-ELECTRICAL PARAMETER MEASUREMENTS 9

Modem imaging systems: X- ray machines and computed Tomography-magnetic resonance imaging systems--ultrasonic imaging systems-medical thermography-electron microscope

UNIT IV MEDICAL IMAGING AND PMS 9

Diagnostic equipment's: electrocardiograph-electroencephalograph-electromyography-blood flow meters-blood gas analyzers-computer applications in medical field- ultrasonic equipment's-bio telemetry-transmission of physiological data

UNIT V ASSISTING AND THERAPEUTIC EQUIPMENTS 9

Therapeutic equipment's: pace makers- defibrillators-dialyzers-surgical diathermy machines-later applications-physiotherapy and electrotherapy equipment's

OBJECTIVES

To understand the various power Quality Phenomenon, their origin and mitigation methods.
Understand the effects of various power quality phenomenon in various equipment.

SYLLABUS

UNIT I Introduction 9 Hours

Introduction – Characterization of Electric Power Quality: Transients, short duration and long duration voltage variations, Voltage imbalance, waveform distortion, Voltage fluctuations, Power frequency variation, Power acceptability curves – power quality problems: poor load power factor, Nonlinear and unbalanced loads, DC offset in loads, Notching in load voltage, Disturbance in supply voltage – Power quality standards.

UNIT II Analysis of Single Phase And Three Phase System 9 Hours

Single phase linear and nonlinear loads – single phase sinusoidal, non-sinusoidal source – supplying linear and nonlinear load – three phase Balance system – three phase unbalanced system – three phase unbalanced and distorted source supplying nonlinear loads – concept of pf – three phase three wire – three phase four wire system.

UNIT III Conventional Load Compensation Methods 9 Hours

Principle of load compensation and voltage regulation – classical load balancing problem: open loop balancing – closed loop balancing, current balancing – harmonic reduction and voltage sag reduction – analysis of unbalance – instantaneous of real and reactive powers – Extraction of fundamental sequence component from measured.

UNIT IV Load Compensation Using DSTATCOM 9 Hours

Compensating single – phase loads – Ideal three phase shunt compensator structure – generating reference currents using instantaneous PQ theory – Instantaneous symmetrical components theory – Generating reference currents when the source is unbalanced – Realization and control of DSTATCOM – DSTATCOM in Voltage control mode

UNIT V Series Compensation Of Power Distribution System 9 Hours

Rectifier supported DVR – DC Capacitor supported DVR – DVR Structure – voltage Restoration – Series Active Filter – Unified power quality conditioner.

U18PEEE42	SOLID STATE RELAYS	L	T	P	C
	Total Contact Hours – 43	3	0	0	3
	Prerequisite – Power Electronics				
	Course Coordinator: Ms.S.Sherine Department:EEE				

OBJECTIVES

- To educate the basic concepts and new developments in solid state relays and power system protection

COURSE OUTCOMES (COs) Students will be able to		
CO1	R	To remember thedifferentprotective equipment's, power relays, etc.…
CO2	U	To understand the different applications of the relays, circuit breakers, grounding for different elements of power system.
CO3	A	To apply the various types of relay testing in power system protection.
CO4	An	To analyze a microprocessor based relays.
CO5	E	To evaluate the inverse time characteristics.
CO6	C	To design Microprocessor Based Relays

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
1	COs/Pos	a	b	c	d	e	f	G	h	i	j	k	l	PSO 1	PSO 2
2	CO1		1	1					1		3	2		1	2
	CO2		1	1					1		3	2		1	2
	CO3		1	1					1		3	2		1	2
	CO4		1	1					1		3	2		1	2
	CO5		1	1					1		2	2	1	1	2
	CO6		2	2					2		2	2		3	3
3	Category	**PROGRAM ELECTIVE (PE)**													
4	Approval														

SYLLABUS

UNIT I INTRODUCTION OF RELAYS 9

Comparators: phase and amplitude comparators-types-Direct and integrating rectifier bridge, circulating current, opposed voltage coincident type phase comparator-Direct or block spike phase comparator, phase splitting technique, integrating type phase comparator with transistor AND gate, hybrid comparator with transistor AND gate. Hybrid comparator- Hall effect type and magneto resistivity type, vector product type - zener diode phase comparators-Multi input-Three input coincidence comparators

UNIT II RELAY CIRCUIT 9

Static relay circuit (using analog and digital ic's) for over current, inverse time characteristics, differential relay.

UNIT III RELAY CIRCUIT 9

Static relay circuits fort generator loss of field, under frequency, distance relay, impedance, reactance, reverse power relays.

UNIT IV TRANSIENT BEHAVIOR OF RELAYS 9

Static relay circuits for carrier current protection-steady state and transient behavior of static relay-testing and maintenance - tripping circuits using thyristors.

UNIT V MICROPROCESSOR BASED RELAYS 9

Microprocessor based relays: hardware and software for the measurement of voltage, current, frequency, phase angle-microprocessor implementation of over current relays-inverse time characteristics-impedance relay-directional relay-mho relay.

U18PEEE43	**RENEWABLE ENERGY SOURCES**	**L**	**T**	**P**	**C**
	Total Contact Hours – 43	3	0	0	3
	Prerequisite – Basic Electrical & Electronics Engineering				
	Course Coordinator: Dr. S.Prakash Department:EEE				

OBJECTIVES

To create awareness among the students about the different types of non-conventional energy resources and emphasize its importance

COURSE OUTCOMES (COs) After completion of the course the student will be able to		
CO1	R	Remember about renewable energy sources.
CO2	U	Able to understand how renewable energy can be used to help reduce greenhouse gases.
CO3	A	Apply ideas to perform case studies on renewable energy systems.
CO4	An	To analyze about the various energy generation technologies.
CO5	E	Criticize wind and solar systems
CO6	C	To design solar energy applications water heaters, air heaters, solar cooking, solar drying and power generation-tower concept (solar plant)-solar pump

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
1	COs/Pos	a	b	c	d	e	f	G	h	i	j	k	l	PSO 1	PSO 2

	CO6		1	1					1		3	2		1	2
3	Category	**PROGRAM ELECTIVE (PE)**													
4	Approval														

UNIT I INTRODUCTION ABOUT ENERGY RESOURCES 9

General primary and commercial energy resources- study of availability-energy consumption pattern and growth rath in India- non –commercial energy sources –availability, economics and efficiency

UNIT II SOLAR ENERGY AND APPLICATIONS OF SOLAR ENERGY 9

Solar energy and application; solar radiation-principles of solar energy collections- types of collectors-characteristics and principles of different types of collectors- their efficiencies-solar energy applications water heaters, air heaters, solar cooking, solar drying and power generation-tower concept (solar plant)-solar pump

UNIT III WIND ENERGY 9

Wind energy: energy from wind-general theory of wind mills - types of wind mills-performance of wind machines-wind power – efficiency.

UNIT IV TIDAL AND GEOTHERMAL ENERGY 9

Tidal Energy from tides and waves- working principles of tidal plants-tidal power generations –geothermal energy-principle of working of geothermal power plants

UNIT V BIOMASS ENERGY 9

Bio energy: energy from bio mass-biogas plants-various types-industrial wastes-municipal wastes-burning plants-energy from the agricultural wastes- applications

U18PEEE44	**Industrial Electrical Systems & Automation**	**L**	**T**	**P**	**C**
	Total Contact Hours – 42	3	0	0	3
	Prerequisite –Power system II and Measurement& Instrumentation				
	Course Coordinator: Ms Rathika. RDepartment:EEE				

OBJECTIVES At the end of this course, students will demonstrate the ability to

- Understand the electrical wiring systems for residential, commercial and industrial consumers, representing the systems with standard symbols and drawings, SLD.
- Understand various components of industrial electrical systems.
- Analyze and selectthe proper size of various electrical system components.

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	Remember the principles of batteries.
CO2	U	Understand the construction of batteries.
CO3	A	Apply the knowledge of Electrical and Electronics engineering concepts in Automotive controls.
CO4	An	Analyzing Electronic Fuel Injection, starting, Ignition Systems and Sensors.
CO5	E	Identify, demonstrate and compare the various components and systems of Auto electrical stems.
CO6	C	To explore practically about the components present in an Automotive electrical and Electronics system.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

SYLLABUS

UNIT I Electrical System Components 8 Hours

LT system wiring components, selection of cables, wires, switches, distribution box, metering system, Tariff structure, protection components- Fuse, MCB, MCCB, ELCB, inverse current characteristics, symbols, single line diagram (SLD) of a wiring system, Contactor, Isolator, Relays, MPCB, Electric shock and Electrical safety practices

UNIT II Residential and Commercial Electrical Systems 8 Hours

Types of residential and commercial wiring systems, general rules and guidelines for installation, load calculation and sizing of wire, rating of main switch, distribution board and protection devices, earthing system calculations, requirements of commercial installation, deciding lighting scheme and number of lamps, earthing of commercial installation, selection and sizing of components.

UNIT III Illumination Systems 6 Hours

Understanding various terms regarding light, lumen, intensity, candle power, lamp efficiency, specific consumption, glare, space to height ratio, waste light factor, depreciation factor, various illumination schemes, Incandescent lamps and modern luminaries like CFL, LED and their operation, energy saving in illumination systems, design of a lighting scheme for a residential and commercial premises, flood lighting.

UNIT IV Industrial Electrical Systems I 8 Hours

HT connection, industrial substation, Transformer selection, Industrial loads, motors, starting of motors, SLD, Cable and Switchgear selection, Lightning Protection, Earthing

design, Power factor correction – kVAR calculations, type of compensation, Introduction to PCC, MCC panels. Specifications of LT Breakers, MCB and other LT panel components.

UNIT V Industrial Electrical Systems II 6 Hours

DG Systems, UPS System, Electrical Systems for the elevators, Battery banks, Sizing the DG, UPS and Battery Banks, Selection of UPS and Battery Banks.

UNIT VI Industrial Electrical System Automation 6 Hours

Study of basic PLC, Role of in automation, advantages of process automation, PLC based control system design, Panel Metering and Introduction to SCADA system for distribution automation.

U18PEEE51	**Power System Dynamics and Control**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Power System II				
	Course Coordinator: Dr.V.Jayalakshmi Department:EEE				

OBJECTIVES

To gain fundamental knowledge of the power system mathematical modelling and predict power system dynamic behavior during and after disturbances.

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	To explain the methods to enhance the small signal stability of the power system.
CO2	U	Understand the concept of stability problems in power system.
CO3	A	Apply the concepts of modeling and simulating the dynamic phenomena of power systems, Interpret results of system stability studies
CO4	An	Analysis of Linear Dynamical System& issues in modeling
CO5	E	Evaluating the system stability and controllers.
CO6	C	To develop dynamic modeling of a synchronous machine&and Associated Controllers

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

SYLLABUS

UNIT I Introduction to Power System Operations 3 Hours

Introduction to power system stability.Power System Operations and Control.Stability problems in Power System.Impact on Power System Operations and control.

UNIT II Analysis of Linear Dynamical System and Numerical Methods 5 Hours

Analysis of dynamical System, Concept of Equilibrium, Small and Large Disturbance Stability.Modal Analysis of Linear System.Analysis using Numerical Integration Techniques. Issues in Modeling: Slow and Fast Transients, Stiff System.

UNIT III Modeling of Synchronous Machines and Associated Controllers 12 Hours

Modeling of synchronous machine: Physical Characteristics.Rotor position dependent model.D-Q Transformation.Model with Standard Parameters.Steady State Analysis of Synchronous Machine.Short Circuit Transient Analysis of a Synchronous Machine.Synchronization of Synchronous Machine to an Infinite Bus.Modeling of Excitation and Prime Mover Systems.Physical Characteristics and Models.Excitation System Control.Automatic Voltage Regulator.Prime Mover Control Systems. Speed Governors.

UNIT IV Modeling of other Power System Components 10 Hours

Modeling of Transmission Lines and Loads.Transmission Line Physical Characteristics.Transmission Line Modeling. Load Models - induction machine model. Frequency and Voltage Dependence of Loads. Other Subsystems – HVDC and FACTS controllers, Wind Energy Systems.

UNIT V Stability Analysis 11Hours

Angular stability analysis in Single Machine Infinite Bus System.Angular Stability in multi-machine systems – Intra-plant, Local and Inter-area modes. Frequency Stability: Centre of Inertia Motion. Load Sharing: Governor Droop. Single Machine Load Bus System: Voltage Stability. Introduction to Torsional Oscillations and the SSR phenomenon. Stability Analysis Tools: Transient Stability Programs, Small Signal Analysis Programs.

UNIT VI Enhancing System Stability 4 Hours

Planning Measures.Stabilizing Controllers (Power System Stabilizers).Operational Measures-Preventive Control.Emergency Control.

	Total Contact Hours – 40	3	0	0	3
	Prerequisite – Analog Electronics Circuits & Digital Electronics				
	Course Coordinator: Mrs.S.SherineDepartment:EEE				

OBJECTIVES

To gain the knowledge on power converter analysis and design

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	Learning power electronics system simulation and control methods
CO2	U	Understanding operation and analysis of switched mode DCDC converters and their signing.
CO3	A	Apply suitable controllers to converters and inverters
CO4	An	Skill of analyzing power electronic devices
CO5	E	Fitness in mitigating converter harmonics.
CO6	C	Developing Ripple free system for renewable energy sources.

SYLLABUS

UNIT 1 SNUBBER AND DRIVE CIRCUITS

Design considerations: Snubber circuit for power switching devices Thermal design: temperature control, Heat sink Gate Trigger Circuits for Thyristors Base drive circuits for BJT and Gate drive circuit for MOSFET Practical converter design considerations

UNIT II ANALYSIS AND DESIGN OF DC-DC CONVERTERS

Classification of DC-DC converters. Analysis of buck, boost in continuous and discontinuous operations Analysis of buck- boost, Cuk and Sepic converters in continuous and discontinuous operations Analysis of Forward, Fly back ,half bridge and full bridge isolated converters Design of isolated and non-isolated DC-DC converters Estimating the Output Voltage Ripple in Converters Containing Two-Pole Low-Pass Filters, Input and output filter design

UNIT III ANALYSIS AND DESIGN OF MULTILEVEL INVERTERS

Multilevel concept, Classification of multilevel inverters Diode clamped, improved diode Clamped, Flying capacitors multilevel inverter analysis. Design of multilevel inverters Influence of PWM techniques on switching loss, design of PWM for low inverter loss

UNIT 1V DESIGN OF CONVERTER CONTROL

Control and analysis of voltage mode and current modes. Review of different controllers used in power electronic converters Introduction to controller design Sliding Mode Control of Power Converters , Fuzzy Logic Control of Power Converters

UNIT V RESONANT CONVERTERS

Principles of resonant converters, Classical series resonant and parallel resonant converters, Quasi-Resonant Converters, Multi resonant Converters, Zero-VoltageTransition (ZVT) Converters, Zero-voltage and Zero-current switching, Resonant converter design techniques based on frequency response

U18PEEE53	**ELECTRIC POWER DISTRIBUTION SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Power System I				
	Course Coordinator: Dr.S.P.VijayaraghavanDepartment:EEE				

OBJECTIVES

Student will be able to:

1. Learning about power distribution system
2. Learning of SCADA System
3. Understanding Distribution Automation

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	Remember the process power distribution system
CO2	U	Understand the concept of Distribution Management System, Optimum Switching Device Placement , Control & Communication Systems
CO3	A	To apply the concept of Distribution Management System, Control & Communication Systems using SCADA system
CO4	An	Analyze the Distribution automation and its application in practice&Coordination of Protective Devices
CO5	E	Differentiate the types of loads and their characteristics
CO6	C	Design a radial and loop type distribution feeders.

SYLLABUS

UNIT I Load Forecasting&Power Management 8 Hours

Distribution of Power, Management, Power Loads, Load Forecasting Short-term & Long-term, Power System Loading, Technological Forecasting.

UNIT II Distribution Automation 8 Hours

Advantages of Distribution Management System (D.M.S.) Distribution Automation: Definition, Restoration / Reconfiguration of Distribution Network, Different Methods and Constraints Power Factor Correction.

UNIT III Control & Communication system 8 Hours

Interconnection of Distribution, Control& Communication Systems, Remote Metering, Automatic Meter Reading and its implementation.

UNIT IV SCADA 8 Hours

SCADA: Introduction, Block Diagram, SCADA Applied To Distribution Automation. Common Functions of SCADA, Advantages of Distribution Automation through SCADA.

UNIT V Switching operation and Types 7 Hours

Calculation of Optimum Number of Switches, Capacitors, Optimum Switching Device Placement in Radial, Distribution Systems, Sectionalizing Switches – Types, Benefits, Bellman's Optimality Principle, Remote Terminal Units, Energy efficiency in electrical distribution & Monitoring.

UNIT VI Automation Distribution Systems 6 Hours

Maintenance of Automated Distribution Systems Difficulties in Implementing Distribution. Automation in Actual Practice, Urban/Rural Distribution, Energy Management, AI techniques applied to Distribution Automation.

SYLLABUS

UNIT I Overview of Power Generation 9 Hours

Brief survey of methods of power generation-Wind, Solar, Tidal, Geothermal, MHD, Fuel cells, Biomass-Conventional energy resources-Hydro, Nuclear, Gas, Thermal-Comparison of various conventional power plants-Importance of Instrumentation and control in power generation-P&I diagrams-P&I diagram of boiler-co-generation

.

UNIT II Turbine Monitoring and Control 9 Hours

Electrical parameters-Current, Voltage, Power, Energy, Frequency, Power factor etc-Non-electrical parameters-Flow of feed water, fuel, air and steam with correction factor for temperature and pressure-Speed, vibration, shell temperature monitoring and control-Steam pressure control-Lubricant oil temperature control- cooling system.

UNITIII Analytical Measurement 9 Hours

Oxygen measurement in flue gas-CO2 in flue gas-Combustibles analyzers-Infrared flue gas analyzers-Smoke detector-Dust monitor-Closed Circuit Television-Fuel analyzers-Pollution monitoring instruments

UNITIV Control Loops In Boilers 9 Hours

Combustion control-air-fuel ratio control-furnace draft control-drum level control- main steam and reheat steam temperature control-super heater control- attemperator- deaerator control-Distributed Control System in power plant interlocks in boiler operation. 188 IC-2013 SRM(E&T)

UNIT V Nuclear Power Plant Instrumentation 9 Hours

Introduction-Nuclear physics-Classification of nuclear reactors-Basic reactor systems-P&I diagram of Nuclear power plant-Radiation detection instruments- nuclear reactor control systems and allied instrumentation.

PROGRAM ELECTIVE – 6

U18PEEE61	**Flexible AC Transmission Systems**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Power System II				
	Course Coordinator: Dr.V.Jayalakshmi Department:EEE				

OBJECTIVES

This course introduces the application of a variety of high power-electronic controllers for active and reactive power in transmission lines. Students are exposed to the basics, modeling aspects, control and scope for different types of FACTS controllers.

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	Rememberthe basic concepts ofelectrical power transmission lines.
CO2	U	Understand and analyze the concept of FACTS
CO3	A	Apply various FACTS controllers according to compensation schemes.
CO4	An	Analyse the various types of compensation Techniques(VAR,TCSC,SVC , STATCOM,DVR)
CO5	E	Evaluation of Power flow, Stability analysis of various systems
CO6	C	Modelling of FACTS Controllers for Stability analysis.

Syllabus

UNIT I Introduction 9 Hours

Reactive power control in electrical power transmission lines -Uncompensated transmission line - series compensation – Basic concepts of Static Var Compensator (SVC) – Thyristor Controlled Series capacitor (TCSC) – Unified power flow controller (UPFC).

UNIT II Static VAR Compensator (SVC) and Applications 9 Hours

Voltage control by SVC – Advantages of slope in dynamic characteristics – Influence of SVC on system voltage – Design of SVC voltage regulator –Modelling of SVC for power flow and fast transient stability – Applications: Enhancement of transient stability – Steady state power transfer – Enhancement of power system damping.

UNIT III Thyristor Controlled Series Capacitor (TCSC) and Applications 9 Hours

Operation of the TCSC – Different modes of operation – Modelling of TCSC – Variable reactance model – Modelling for Power Flow and stability studies. Applications: Improvement of the system stability limit – Enhancement of system damping.

UNIT IV Voltage Source Converter Based FACTS Controllers 9 Hours

Static Synchronous Compensator (STATCOM) – Principle of operation – V-I Characteristics. Applications: Steady state power transfer-enhancement of transient stability - prevention of voltage instability. SSSC-operation of SSSC and the control of power flow–modelling of SSSC in load flow and transient stability studies.

UNIT V Co-Ordination of FACTS Controllers 9 Hours

Controller interactions – SVC – SVC interaction – Co-ordination of multiple controllers using linear control techniques – Control coordination using genetic algorithms.

	Total Contact Hours – 40	3	0	0	3
	Prerequisite – Power Electronics				
	Course Coordinator: Dr.Prakash.S Department:EEE				

OBJECTIVES To learn about the impacts of renewable energy generation on environment

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	Remember various types of renewable energy sources& drives
CO2	U	Understand the concepts of PV,Wind and Hybrid energy sources
CO3	A	Applying appropriate maximum power point tracking techniques.
CO4	An	To analyze the performance of IG, PMSG, SCIG and DFIG.
CO5	E	Evaluating various operating modes of wind electrical generators and solar energy Systems.
CO6	C	To design different power converters namely AC to DC, DC to DC and Ac to AC Converters for renewable energy sources.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

SYLLABUS

UNIT-I INTRODUCTION 9

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost- GHG Emission) – Qualitative study of different renewable energy resources: Solar, Wind, Ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems.

UNIT-II ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION 9

Review of reference theory fundamentals – Principle of Operation and analysis: IG, PMSG, SCIG and DFIG.

UNIT-III POWER CONVERTERS 9

Solar: Block diagram of solar photo voltaic system – Principle of Operation: Line Commutated Converters (inversion – mode) –Boost and Buck- Boost Converters- Selection of Inverter, battery sizing, array sizing.

Wind: Three phase AC Voltage Controllers- AC-DC-AC Converters: uncontrolled rectifiers, PWM Inverters, Grid Interactive Inverters- Matrix Converters.

UNIT-IV ANALYSIS OF WIND AND PV SYSTEMS **9**

Standalone operation of fixed and variable speed wind energy conversion systems and solar system- Grid Connection Issues- Grid integrated PMSG and SCIG Based WECS- Grid integrated solar System.

UNIT-V HYBRID RENEWABLE ENERGY SYSTEMS **9**

Need for Hybrid Systems- Range and type of Hybrid Systems- Case studies of Wind- PV- Maximum Power point Tracking(MPPT).

Total Periods: 45

	Total Contact Hours - 39	3	0	0	3
	Prerequisite –Electrical Machines-I& II				
	Course Coordinator: Dr.K.Sakthivel Department:EEE				

OBJECTIVES

At the end of this course, students will demonstrate the ability to understand the energy scenario and the consequent growth of the power generation from renewable energy sources.

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	Remember the design specifications wind and solar system.
CO2	U	Understand the basic renewable energy sources & systems.
CO3	A	Apply engineering techniques to build solar, wind energy systems.
CO4	An	Analyze and evaluate the implication of renewable energy.
CO5	E	Evaluating the concepts in solving numerical problems pertaining to solar radiation geometry and wind energy systems.
CO6	C	Demonstrate self -learning capability to design & establish renewable energy systems.

SYLLABUS

UNIT I Physics of Wind Power 5 Hours

History of wind power, Indian and Global statistics, Wind physics, Betz limit, Tip speed ratio, stall and pitch control, Wind speed statistics-probability distributions, Wind speed and power-cumulative distribution function

UNIT II Wind generator topologies 12 Hours

Review of modern wind turbine technologies, Fixed and Variable speed wind turbines, Induction Generators, Doubly-Fed Induction Generators and their characteristics, Permanent-Magnet Synchronous Generators, Power electronics converters. Generator-Converter configurations, Converter Control.

UNIT III the Solar Resource 3 Hours

Introduction, solar radiation spectra, solar geometry, Earth Sun angles, observer Sun angles, solar day length, Estimation of solar energy availability.

UNIT IV Solar photovoltaic 8 Hours

Technologies-Amorphous, monocrystalline, polycrystalline; V-I characteristics of a PV cell, PV UNIT, array, Power Electronic Converters for Solar Systems, Maximum Power Point Tracking (MPPT) algorithms. Converter Control.

UNIT V Network Integration Issues 8 Hours

Overview of grid code technical requirements. Fault ride-through for wind farms - real and reactive power regulation, voltage and frequency operating limits, solar PV and wind farm behavior during grid disturbances. Power quality issues. Power system interconnection experiences in the world. Hybrid and isolated operations of solar PV and wind systems.

UNIT VI Solar thermal power generation 3 Hours

Technologies, Parabolic trough, central receivers, parabolic dish, Fresnel, solar pond, elementary analysis.

	Prerequisite- Measurement & Instrumentation				
	Course Coordinator: Mr.K.DwarakeshDepartment:EEE				

OBJECTIVES

To provide comprehensive knowledge of robotics in the design, analysis and control point of

COURSE OUTCOMES (COs) At the end of this course, students will demonstrate the ability to		
CO1	R	Remembering the perception of actuators,sensors&transducers
CO2	U	Understand the dynamics ,control of electric drives and Robotic programming
CO3	A	Select the appropriate sensor, actuators& grippers with the robotic systems.
CO4	An	Analyse the singularity issues associated with the operation of robotic systems
CO5	E	Evaluation of algebraic tools for the description of motion.
CO6	C	To develop the ability to and design the motion for articulated systems View

Syllabus

UNIT I Basic concepts 9 Hours

Robotics – basic components – classification - performance characteristics- drives and control systems – electric , hydraulic and pneumatic actuators – control loops using current amplifiers and voltage amplifiers**.**

UNITII Sensors and Transducers 9 Hours

Sensors and vision systems; Transducers and sensors – tactile sensors –Proximity and range sensors –Acoustics sensors- visition systems – image Processing and analysis – image data reduction – segmentation feature

UNIT III Robotic Programming and Gripper 9 Hours

End effectors –type –mechanical gripper –vacuum cup- magnetic grippers – robot to end effectors interface –software for industrial robots – positive stop program-Point to point program and continuous path program.

UNIT IV Kinematics and path planning 9 Hours

Robot motion analysis and control manipulation kinematics – homogeneous Transformation

and robot dynamics configuration of a robot controller.

UNIT V Industrial Robot 9 Hours

Industrial robots –Robots for welding ,painting and assembling –remote Controlled robots for nuclear ,thermal and chemical plants –industrial Automation – typical examples of automated industries .

OPEN ELECTIVES

U18OEEE01	**GREEN TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours:45	3	0	0	3
	Course Coordinator: Dr.S.Prakash Department:EEE				
OBJECTIVES Green Technologies is a highly interdisciplinary degree program that emphasizes green systems and environment, energy technology and efficiency, and sustainability and society					

SYLLABUS

UNIT- I INTRODUCTION

Green Technology – definition- Importance – Historical evolution – advantages and disadvantages of green technologies-factors affecting green technologies- Role of Industry, Government and Institutions – Industrial Ecology – role of industrial ecology in green technology.

UNIT- II CLEANER PRODUCTION (CP)

Definition – Importance – Historical evolution – Principles of Cleaner Production–Benefits– Promotion – Barriers – Role of Industry, Government and Institutions – clean development mechanism, reuse, recovery, recycle, raw material substitution-Wealth from waste, case studies.

UNIT- III POLLUTION PREVENTION AND CLEANER PRODUCTION AWARENESS PLAN

Waste audit – Environmental Statement, carbon credit, carbon sequestration, carbon trading, Life Cycle Assessment – Elements of LCA – Life Cycle Costing – Eco Labelling.

UNIT -IV AVAILABILITY AND NEED OF CONVENTIONAL ENERGY RESOURCES

Major environmental problems related to the conventional energy resources, future possibilities of energy need and availability. Non-conventional energy sources: Solar Energy-solar energy conversion technologies and devices, their principles, working and application.

UNIT- V GREEN FUELS

Definition-benefits and challenges – comparison of green fuels with conventional fossil fuels with reference to environmental, economic and social impacts- public policies and market-driven initiatives. Biomass energy: Concept of biomass energy utilization, types of biomass energy, conversion processes, Wind Energy, energy conversion technologies, their principles, equipment and suitability in Indian context; tidal and geothermal energy.

U18OEEE02	**ELECTRICAL SAFETY**	**L**	**T**	**P**	**C**
	Total Contact Hours:45	3	0	0	3
	Course Coordinator: Dr.T.R.Rangaswamy Department:EEE				

OBJECTIVES

The objective of the course is to introduce IE rules and its significance, electrical safety in residen commercial and industrial installations. It also helps the students to know about the electrical safet during installation, testing and commissioning, operation and maintenance. Besides, it enables the stud to know more about the quality management**.**

SYLLABUS

UNIT I REVIEW OF IE RULES AND ACTS AND THEIR SIGNIFICANCE 9

Objective and scope– ground clearances and section clearances– standards on electrical safety safe limits of current, voltage–earthing of system neutral –Rules regarding first aid and firefighting facility.

UNIT II

ELECTRICAL SAFETY IN RESIDENTIAL, COMMERCIAL AND AGRICULTURAL INSTALLATIONS 9

Wiring and fitting–Domestic appliances– water tap giving shock–shock from wet wall–fan Firing shock–multi-storied building–Temporary installations–Agricultural pump installation – Do's and Don'ts for safety in the use of domestic electrical appliances.

UNIT III

SAFETY DURING INSTALLATION, TESTING AND COMMISSIONING, OPERATION AND MAINTENANCE 9

Preliminary preparations–safe sequence–risk of plant and equipment–safety documentation–

field quality and safety - personal protective equipment – safety clearance notice – safety precautions – safe guards for operators– safety.\

UNIT IV
ELECTRICAL SAFETY IN HAZARDOUS AREAS 9
Hazardous zones–class0,1 and 2– spark, flash overs and corona discharge and functional requirements– Specifications of electrical plants, equipments for hazardous locations– Classification of equipment enclosure for various hazardous gases and vapours– classification of equipment/enclosure for hazardous locations.

UNIT V PROTECTION SYSTEMS 9
Fuse – circuit breakers and overload relays – protection against over voltage and under voltage – safe limits of amperage – voltage –safe distance from lines-capacity and protection of conductor-joints-and connections-means of cutting of power-overload and short circuit protection-no load protection-earth fault protection-earthing standards FRLS insulation-insulation and continuity test-system grounding-equipment grounding-earth leakage circuit breaker (ELCB)-cable wires-maintenance of ground-ground fault circuit interrupter-use of low voltage-electrical guards-Personal protective equipment – safety in handling hand held electrical appliances and tools.

	Total Contact Hours:45	3	0	0	3
	Course Coordinator: Dr.S.P.Vijaraghavan Department:EEE				

OBJECTIVES
To analyze the pros and cons of
- Conventional energy conversion techniques
- Direct energy conversion systems
- Need and necessity of energy storage systems and their desirable characteristics
- Detail on thermodynamics and kinetics of fuel cells

SYLLABUS

UNIT I INTRODUCTION 8
Energy conversion – conventional techniques – reversible and irreversible cycles – Carnot, Stirling and Ericsson – Otto, Diesel, Dual, Lenoir, Atkinson, Brayton, rankine.

UNIT IIDIRECT CONVERSION OF THERMAL TO ELECTRICAL ENERGY8
Thermoelectric Converters – thermoelectric refrigerator – thermoelectric generator – Thermionic converters – Ferro electric converter – Nernst effect generator – thermo magnetic converter.

UNIT III CHEMICAL AND ELECTROMAGNETIC ENERGY TO ELECTRICAL ENERGY 9

Batteries – types – working – performance governing parameters – hydrogen energy – solar cells.

UNIT IV ENERGY STORAGE SYSTEMS 9

Introduction – storage of mechanical energy, electrical energy, chemical energy, thermal energy.

UNIT VFUEL CELLS11

Basics – working advantages and drawbacks – types – comparative analysis – thermodynamics and kinetics of fuel cell process – performance of fuel cell – applications.

TOTAL: 45 PERIODS

U18OEEE04	**PLC AND SCADA FOR INDUSTRIAL AUTOMATION**	**L**	**T**	**P**	**C**
	Total Contact Hours:45	3	0	0	3
	Course Coordinator: Dr.V.Jayalakshmi Department:EEE				

OBJECTIVES

This course introduces the student to practical methods of automatic control of machines, processes systems. Also the student will learn the PLC programming fundamentals and some knowledge in SCADA which are used in process automation industries.

SYLLABUS

UNIT I - INTRODUCTION TO AUTOMATION 9 hours

Architecture of industrial automation systems-Manufacturing plants and operations-Industrial control Systems- Process, Discrete manufacturing industries Fluid Power and Electrical Actuators- Piezoelectric Actuator-

UNIT II – PROGRAMMABLE LOGIC CONTROLLER BASICS 9 hours

Overview of PLC systems – parts of PLC –Input/output UNITs – power supplies and isolators – Fundamental PLC wiring diagram – relays – switches –transducers – sensors –seal-in circuits.

UNIT III – PROGRAMMING OF PLC 9 hours

Fundamentals of logic – Program scan – Relay logic – PLC programming languages – timers – counters – math instructions – data manipulation instructions – requirement of communication networks for PLC – connecting PLC to computer.

UNIT IV – SCADA **9 hours**

Definition – elements of SCADA system – history of SCADA – remote terminal unit (RTU) – discrete control – analog control – master terminal unit – (MTU) –operator interface.

UNIT V – DISTRIBUTED CONTROL SYSTEM **9 hours**

Evolution – Different architectures – local control unit – Operator Interface – Displays – Engineering Interface – DCS Applications in power plants – Iron plant –steel plant– Cement plant.

LIST OF ELECTIVES

Code No.	Specialization	Course Title	L	T	P	C
Professional Elective-I (Semester V)						
U18PEAU011	Manufacturing	Manufacturing of Automotive Components	3	0	0	3
U18PEAU012	Engines	Automotive Pollution and Control	3	0	0	3
U18PEAU013	Vehicle Technology	Automotive Control Systems	3	0	0	3
U18PEAU014	Design	Product Design and Development	3	0	0	3
	Professional Elective-II (Semester VI)					
U18PEAU021	Manufacturing	Agile Manufacturing	3	0	0	3
U18PEAU022	Engines	Alternate Fuels and Energy Systems	3	0	0	3
U18PEAU023	Vehicle Technology	Special Type of Vehicles	3	0	0	3
U18PEAU024		Automotive Standards and Regulations	3	0	0	3
	Professional Elective-III (Semester VI)					
U18PEAU031	Manufacturing	Flexible Manufacturing Systems	3	0	0	3
U18PEAU032	Engines	Combustion Engineering	3	0	0	3
U18PEAU033	Vehicle Technology	Heating Ventilation and Air Conditioning	3	0	0	3
U18PEAU034	Design	Automotive Styling	3	0	0	3
	Professional Elective-IV (Semester VII)					
U18PEAU041	Auto Electronics	Artificial Intelligence	3	0	0	3
U18PEAU042	Engines	Fuels and Lubricants	3	0	0	3
U18PEAU043	Vehicle Technology	Two and Three Wheelers	3	0	0	3
U18PEAU044	Design	Automotive Instrumentation and Embedded System	3	0	0	3
Professional Elective-V (Semester VII)						
U18PEAU051	Auto Electronics	Robotics for Automobile Engineers	3	0	0	3
U18PEAU052	Engines	Simulation of IC Engines	3	0	0	3
U18PEAU053	Vehicle Technology	Tyre Technology	3	0	0	3
U18PEAU054	Design	Automotive Safety	3	0	0	3
Professional Elective-VI (Semester VIII)						
U18PEAU061	Management	Transport Management and Motor Industry	3	0	0	3
U18PEAU062	Engines	Noise Vibration and Harshness	3	0	0	3
U18PEAU063	Vehicle Technology	Chassis Control System	3	0	0	3
U18PEAU064	Vehicle Technology	Intelligent Vehicle Technology	3	0	0	3

OPEN ELECTIVES

COURSES OFFERED BY THE DEPT OF AUTO ENGG						
1	U18OEAU001	Electric and Hybrid Vehicles	3	0	0	3
2	U18OEAU002	Intelligent Transportation System	3	0	0	3
3	U18OEAU003	Vibration and Noise Control	3	0	0	3
4	U18OEAU004	Automotive Sensors and Applications	3	0	0	3

U18HSEN101	**COMMUNICATIVE ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	0	2	3
	Prerequisite – School English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing oneself – exchanging personal information- narrating events, - incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -
The concept of Word Formation

UNIT III LISTENING 6

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past-present continuous and past continuous- Vocabulary development- synonyms-antonyms-phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely

SOFTSKILL LABORATORY 15

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews & conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management

9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds - intonation.
12. Creative and critical thinking.

TEXT BOOKS:

1. English A Course book for Under Graduate Engineers and Technologists. Orient Black Swan Limited,Hyderabad:2015
2. Richards, C. Jack. Interchange Students' Book-2 New Delhi: CUP, 2015.

COURSE OUTCOMES	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

Approval	47th Meeting of Academic Council held in Aug, 2018

U18BSMA101	**Engineering Mathematics – I (Common to B.Tech – Civil, Mech, Mechatronics, Automobile, Aero, Aerospace, EEE, ECE, BME, CSE & IT)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3)

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi – 2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P &co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P.Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. Narayanan S., Manicavachagam Pillai T.K., Ramanaiah G., Advanced Mathematics for Engineering students, Volume I (2nd edition), S.Viswanathan Printers and Publishers,
5. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth Edition Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.

			L	T	P	C
U18BSPH101	**Waves and Optics**		**3**	**0**	**0**	**3**
Pre-requisite	Higher Secondary School Physics					
Course designed by	Department of Physics					
OBJECTIVES:	To develop Physics fundamentals of Waves and Optics in order to formulate and discuss their functionalities in modern optoelectronics.					

			L	T	P	C
U18BSMA202	**Mathematics II for Bio Engineering** **(Common to IBT, Genetics and Agricultural Bio Tech)**		**3**	**1**	**0**	**4**
Pre-requisite	Prerequisite – School Level Mathematics					
Course designed by	Department of Mathematics					
OBJECTIVES:	To Enable the students to Learn and Understand the concepts of Mathematics to solve problems effectively in their respective fields of engineering.					

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION **9**

Introduction - Transverse wave on a stretched string - General solution for wave equation - Standing waves - Longitudinal waves and the wave equation - Acoustic waves - Energy and energy density of waves - Intensity - Reflection and transmission of waves at a boundary - Impedance matching - Speed of sound waves - Doppler effect.

UNIT 2 ULTRASONIC WAVES **9**

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS **9**

Fermat's principle of stationary time and its application to the laws of reflection and refraction. Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVE OPTICS **9**

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS **9**

Einstein's theory of matter radiation interaction and A & B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO_2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

TEXT BOOKS

UNIT I ORDINARY DIFFERENTIAL EQUATIONS **9** **(9+3)**

Higher order linear differential equations with constant coefficients – Linear differe equations with variable coefficients – Euler's and Legendre's linear equations – Simultan first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II MULTIPLE INTEGRALS - Several Variables **(9+3)**

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a do integral – Triple integrals in Cartesian co-ordinates – Volume as triple integrals – Do integrals in polar co-ordinates – simple problems.

UNIT III VECTOR CALCULUS **9** **(9+3)**

Scalar and vector point functions – Gradient, Divergence and curl – Directional derivativ Angle between two surfaces – Irrotational and Solenoidal vector fields – Integration of v function – Green's theorem in a plane – Gauss divergence theorem and Stoke's theore Simple applications involving cubes and rectangular parallelepipeds.

UNIT IV ANALYTIC FUNCTIONS **(9+3)**

Functions of complex variable – Analytic functions – Necessary and sufficient condi Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properti analytic functions – Construction of analytic functions using Milne Thomson meth Conformal mapping : and Bilinear Transformation.

UNIT V LAPLACE TRANSFORMS **(9+3)**

Transforms of elem Functions – Inverse Laplace transform – Convolution theorem – Periodic Functio Applications of Laplace transform for solving linear ordinary differential equations up to se order with constant coefficient.

Course Outcomes (COs)	
CO1	Understand the basic concept of waves and lights
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing
CO3	Understand the propagation of light and geometrical optics
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves
CO5	Understand the concept of laser and its applications

Mapping of Course Outcomes with Programme Outcomes (POs)

U18BSCH101	**ENGINEERING CHEMISTRY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY **9**

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications

	to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and

methods; advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES **9**

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

U18ESME101	**Engineering Graphics & Design (Theory & Lab.)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				

OBJECTIVES	To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice

Detailed contents

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM).

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle.

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP.

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

MODULE4: SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by

using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

2. Shah, M.B. &Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)												
CO1	Students will gain Exposure to engineering communication.											
CO2	Students will learn standards of engineering graphics.											
CO3	Students will get Exposure to basics of building construction											
CO4	Students will get Exposure to computer-aided geometric design											
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering											
Mapping of Course Outcomes with Programme Outcomes (POs) (S/M/W indicates strength of correlation) S-Strong, M-Medium, W-Weak

U18BSPH2L1	**WAVE OPTICS AND MECHANICS LABORATORY (Common to B.Tech-Civil, Mech, Mechatronics, Aero, Aerospace & Auto)**	L	T	P	C
		0	0	3	1.5
	Total Contact Hours - 45				
	Prerequisite – **Wave Optics and Mechanics**				
	Course designed by – Department of Physics				
OBJECTIVES: To impart Practical knowledge of Physics to the students					

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle

5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Mechanics
1) Torsional Pendulum – without symmetrical mass
2) Torsional Pendulum – With symmetrical mass
3) Young's Modulus – Non-uniform bending
4) Young's Modulus – Uniform Bending
5) Compound Pendulum
6) Coefficient of viscosity of the given liquid – Poiseuille method

Course Outcome (CO's)												
CO1	Understand the fundamental concept of optics											
CO2	Understand the concept of production of ultrasonic waves											
CO3	Understand the basic concept of Mechanics											
Mapping of Course Outcomes with Programme Outcomes (POs) CO/SO Mapping:S – Strong M – Medium W-Weak												
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k

U18BSCH2L4	**CHEMISTRY LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.

COURSE OUTCOMES (COs)

CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Studentswill be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Students will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. Exponentiation (Power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib

U18HSEN201	**TECHNICAL ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	1	0	3
	Prerequisite – I semester English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of English language and its usage in day to day life.				

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions – listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development – subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and

hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)

On completion of the course, the students will be able to	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

Approval	47th Meeting of Academic Council held in Aug, 2018

U18BSMA201	**Engineering Mathematics II (Common to B.Tech – Civil, Mech, Mechatronics, Automobile, Aero, Aerospace, EEE, ECE, BME, CSE & IT)**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVE	The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex				

	variables and Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.

CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

U18BSPH201	**INTRODUCTION TO MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To impart basic knowledge of mechanics involving 1D, 2D and 3D motions ofa rigid body

UNIT 1 **9**

Forces in Nature; Newton's laws and its completeness in describing particle motion; Solving Newton's equations of motion in polar coordinates; Problems including constraints and friction; Extension to cylindrical and spherical coordinates

UNIT 2 **9**

Potential energy function; F = - Grad V, equipotential surfaces and meaning of gradient; Conservative and non-conservative forces, curl of a force field; Central forces; Conservation of Angular Momentum; Energy equation and energy diagrams; Elliptical and parabolic orbits;

UNIT 3 **9**

Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and lightly-damped oscillators; Forced oscillations and resonance

UNIT 4 **9**

Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion, Kinetic energy of a rotating body

UNIT 5 **9**

Introduction to three-dimensional rigid body motion — only need to highlight the distinction from two-dimensional motion in terms of (a) Angular velocity vector, and its rate of change and (b) Moment of inertia tensor; Three-dimensional motion of a rigid body wherein all points move in a coplanar manner: e.g. Rod executing conical motion with center of mass fixed

Course Outcomes

CO1	Understand and solve the various equation of motions in different coordinates
CO2	Understand the conservation of energy and angular momentum
CO3	Understand the concept of harmonic motion in different damped conditions
CO4	Understand the rigid body motion in different criteria
CO5	Understand the rigid body motion in 3D

Mapping of Course Outcomes with Programme Outcomes (POs)

	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I -NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS **9**

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers,

consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION 9

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder-Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.
Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES	
CO1	Master core concepts and methods from ecological and physical sciences and their

	application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

CO/SO Mapping: S – Strong, M – Medium, W – Weak

COs	**Programme Outcomes (POs)**										
CO1	S			M		S		S		W	
CO2	W	S	S		M		S		M		W
CO3		M				W			S	M	
CO4	S		M	W			M				M
CO5		S		W		M				S	

U18BSBT101	**BIOLOGY FOR ENGINEERS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System -types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation- nucleic acids as a genetic material-central dogma - immunity- antigens - antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines -cloning- bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

TEXT BOOKS:

1. A Text book of Biotechnology, R. C. Dubey, S. Chand Higher Academic Publications, 2013
2. Diseases of the Human Body, Carol D. Tamparo and Marcia A. Lewis, F.A. Davis

Company, 2011.
3. Biomedical instrumentation, Technology and applications, R. Khandpur, McGraw Hill Professional, 2004

REFERENCE BOOKS

1. Biology for Engineers, Arthur T. Johnson, CRC Press, Taylor and Francis, 2011
2. Cell Biology and Genetics (Biology: The unity and diversity of life Volume I), Cecie Starr, Ralph Taggart, Christine Evers and Lisa Starr, Cengage Learning, 2008
3. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)												
CO1	To understand the basic concepts of the cell and its structure											
CO2	To understand about biodiversity and its conservation											
CO3	To know the fundamentals of genetics and the immune system											
CO4	To create an awareness about human diseases											
CO5	To give a basic knowledge of the applications of transgenics											
CO6	To know the applications of bio systems in environment, medical and agricultural sectors

U18ESEE101	**BASIC ELECTRICAL & ELECTRONICS ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

MODULE 1 : DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamental Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transfer Theorem.

MODULE 2: AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS **9**

Principles of operation and characteristics of; DC machines, Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS **9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS **6**

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

TEXT BOOKS:

1. John Bird, Electrical Circuit Theory & Technology, Taylor & Francis Ltd, 6th, edition. 2017.

3. Jacob Millman and Christos C-Halkias,"Electronic Devices and Circuits", Mcgraw Higher Ed, 4th Edition, 2015.

COURSE OUTCOMES (COs)	
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.
CO2	To gain knowledge regarding fundamentals of AC circuits.
CO3	To gain knowledge regarding electrical machines and transformers.
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.
CO5	To gain knowledge on principles of digital electronics systems.
Mapping of Course Outcomes with Programme Outcomes

U18ESME1L2	**Workshop/Manufacturing Practices Laboratory**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

Lectures & videos: (15 hours)

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice

2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.

3. Carpentry **(9 hours)**
   a) Preparation of Lap joints.
   b) Mortise and Tenon joints.
   c) Cross Half joints.
   d) Dove Tail joints.

4. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
   Preparation of butt joints, lap joints and Tee joints

5. Sheet Metal working **(9 hours)**
   a) Forming &Bending:
   b) Model making–Trays, funnels, etc.
   c) Different type of joints

6. Demonstration **(6 Hours)**
   Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

1. Hajra Choudhury S.K., Hajra Choudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and publishers Private Limited, Mumbai.
2. Kalpakjian S. And Steven S. Schmid, "Manufacturing Engineering and Technology",4th edition, Pearson Education India Edition, 2002.
3. Gowri P. Hariharan and A. Suresh Babu,"Manufacturing Technology – I" Pearson Education, 2008.
4. Roy A. Lindberg, "Processes and Materials of Manufacture", 4th edition, Prentice Hall India, 1998.
5. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGraw Hill House, 2017.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronics Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter

6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier

REFERENCE BOOKS:

1. S. K. Bhattacharya, "Basic Electrical and Electronics Engineeing", Pearson Education India,2011

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipment and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flaps

U18HSEN101	**COMMUNICATIVE ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	2	0	2	3
	Prerequisite – School English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing oneself – exchanging personal information- narrating events, - incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -
The concept of Word Formation

UNIT III LISTENING 6

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past-present continuous and past continuous- Vocabulary development- synonyms-antonyms-phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely

SOFTSKILL LABORATORY

LIST OF EXPERIMENTS / EXCERCISES

13. Group discussion
14. Making effective presentations
15. Watching interviews & conversations
16. Reading different genres of texts
17. International English Language Testing System (IELTS)
18. Test of English as a Foreign Language (TOEFL)
19. Mock interviews

20. Time management &stress management
21. Role play
22. Listening to lectures, discussions from TV/ Radio.
23. Articulation of sounds - intonation.
24. Creative and critical thinking.

TEXT BOOKS:

7. On Writing Well. William Zinsser. Harper Resource Book. 2001

COURSE OUTCOMES	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

U18BSMA101	**Engineering Mathematics – I**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation

rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3)

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

10. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth Edition Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.

U18BSMA202	**Total Contact Hours - 45**	**3**	**0**	**0**	**3**				
	Prerequisite – Higher Secondary School Physics				**3**	**1**	**0**	**4**	
	Course designed by – Department of Physics								

OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern communication systems.

Prerequisite	School Level Mathematics
Course Designed by	Department of Mathematics
OBJECTIVES	To make the students learn Mathematics in order to formulate and solve problems effectively in their respective fields of engineering.

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION **9**

Introduction - Transverse waves on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES **9**

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS **9**

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them.

UNIT 4 WAVE OPTICS **9**

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power.

UNIT 5 LASERS **9**

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium). Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

REFERENCE BOOKS

9) BrijLal and Subramanian, "Waves and Oscillation", Vikas Publishsing House, 2011

UNIT I ORDINARY DIFFERENTIAL EQUATIONS **(9+3)**

Higher order linear differential equations with constant coefficients – Linear differe equations with variable coefficients – Euler's and Legendre's linear equations – Simultan first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II MULTIPLE INTEGRALS - Several Variables **(9+3)**

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a do integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Do integrals in polar co-ordinates – simple problems.

UNIT III VECTOR CALCULUS **(9+3)**

Scalar and Vector point functions – Gradient, Divergence and Curl – Directional derivativ Angle between two surfaces – Irrotational and Solenoidal vector fields – Integration of v function – Green's theorem in a plane – Gauss divergence theorem and Stoke's theore Simple applications involving cubes and rectangular parallelepipeds.

UNIT IV ANALYTIC FUNCTIONS **(9+3)**

Functions of complex variable - Analytic functions – Necessary and sufficient condi Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properti analytic functions – Construction of analytic functions using Milne Thomson metho Conformal mapping : and Bilinear Transformation.

UNIT V LAPLACE TRANSFORMS **(9+3)**

Transforms of elementary functions – Basic properties – Shifting theorem- Transform derivatives and integrals – Initial and final value theorem – Laplace transform of Peri Functions – Inverse Laplace transform – Convolution theorem – Periodic Functio Applications of Laplace transform for solving linear ordinary differential equations up to se order with constant coefficient.

Course Outcomes (COs)	
CO1	Understand the basic concept of waves and lights
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing
CO3	Understand the propagation of light and geometrical optics
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves
CO5	Understand the concept of laser and its applications

OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNITI WATER TECHNOLOGY **9**

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS **9**

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat

treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non-ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke – manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-

	conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHIMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods;advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES 9

Files and exception: text files, reading and writing files, errors and exceptions, handling

exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

OBJECTIVES	To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice				

SYLLABUS

Detailed contents

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM)

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle;

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP;

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

MODULE4: SECTIONSOF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone;

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating

orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

8. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
9. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
10. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)												
CO1	Students will gain Exposure to engineering communication.											
CO2	Students will learn standards of engineering graphics.											
CO3	Students will get Exposure to basics of building construction											
CO4	Students will get Exposure to computer-aided geometric design											
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering											
Mapping of Course Outcomes with Programme Outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	Total Contact Hours - 45	**0**	**0**	**3**	**1.5**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To impart knowledge of practical Physics to the students					

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

7) Ultrasonic Interferometer
8) Air-wedge Experiment
9) Particle size determination
10) Determination of acceptance angle
11) Determination of Laser Wavelength
12) Spectrometer – Determination of wavelength using grating

List of Experiments for Mechanics
7) Torsional Pendulum – without symmetrical mass
8) Torsional Pendulum – With symmetrical mass
9) Young's Modulus – Non-uniform bending
10) Young's Modulus – Uniform Bending
11) Compound Pendulum
12) Coefficient of viscosity of the given liquid – Poiseuille method

Course Outcome (CO's)												
CO1	Understand the fundamental concept of optics											
CO2	Understand the concept of production of ultrasonic waves											
CO3	Understand the basic concept of Mechanics											
Mapping of Course Outcomes with Programme Outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18BSCH2L4	**CHEMISTRY LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method

6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization an well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Student will be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				

OBJECTIVES: To enhance the practical knowledge on writing programs using Python

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

15. Compute the GCD of two numbers.
16. Find the square root of a number (Newton‘s method)
17. ExSOnentiation (SOwer of a number)
18. Find the maximum of a list of numbers
19. Linear search and Binary search
20. Selection sort, Insertion sort
21. Merge sort
22. First n prime numbers
23. Multiply matrices
24. Find the most frequent words in a text read from a file
25. Simulate elliptical orbits in Pygame
26. Simulate bouncing ball using Pygame
27. Simulate matrix operations with Scilab
28. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

	TECHNICAL ENGLISH	**L**	**T**	**P**	**C**
U18HSEN201	Total Contact Periods – 45	2	1	0	3
	Prerequisite – I semester English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of English language and its usage in day to day life.				

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology–

introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

COURSE OUTCOMES (COs)

On completion of the course, the students will be able to	
CO1	The student will acquire basic proficiency in English
CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

Category	Humanities and Social Studies (HS)
Approval	47th Meeting of Academic Council held in Aug, 2018

	Engineering Mathematics II	**L**	**T**	**P**	**C**
U18BSMA201	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVE	The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables and Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

8. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

U18BSPH201	**INTRODUCTION TO MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To impart basic knowledge of mechanics involving 1D, 2D and 3D motions of a rigid body

UNIT 1 **9**

Forces in Nature; Newton's laws and its completeness in describing particle motion; Solving Newton's equations of motion in polar coordinates; Problems including constraints and friction; Extension to cylindrical and spherical coordinates

UNIT 2 **9**

Potential energy function; F = - Grad V, equipotential surfaces and meaning of gradient; Conservative and non-conservative forces, curl of a force field; Central forces; Conservation of Angular Momentum; Energy equation and energy diagrams; Elliptical and parabolic orbits;

UNIT 3 **9**

Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and lightly-damped oscillators; Forced oscillations and resonance

UNIT 4 **9**

Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion, Kinetic energy of a rotating body

UNIT 5 **9**

Introduction to three-dimensional rigid body motion — only need to highlight the distinction from two-dimensional motion in terms of (a) Angular velocity vector, and its rate of change and (b) Moment of inertia tensor; Three-dimensional motion of a rigid body wherein all points move in a coplanar manner: e.g. Rod executing conical motion with center of mass fixed

Course Outcomes

CO1	Understand and solve the various equation of motions in different coordinates
CO2	Understand the conservation of energy and angular momentum
CO3	Understand the concept of harmonic motion in different damped conditions
CO4	Understand the rigid body motion in different criteria
CO5	Understand the rigid body motion in 3D

U18BSCH201	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				

OBJECTIVES

- To study the interrelationship between living organism and environment.
- To study of the nature and concepts of ecosystem.
- To learn about the integrated themes and biodiversity of an environment.
- To study of pollution control and waste management.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.

UNIT I -NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS **9**

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION **9**

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL SOLLUTION **9**

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN SOPULATION **9**

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder- Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.

Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

TEXT BOOKS:

COURSE OUTCOMES	
CO1	Master core concepts and methods from ecological and physical sciences and their

	application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

CO/SO Mapping: S – Strong, M – Medium, W – Weak

U18BSBT101	**BIOLOGY FOR ENGINEERS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				

OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System - types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity- antigens - antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines -cloning- bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

TEXT BOOKS:

4. A Text book of Biotechnology, R. C. Dubey, S. Chand Higher Academic Publications, 2013
5. Diseases of the Human Body, Carol D. Tamparo and Marcia A. Lewis, F.A. Davis Company, 2011.
6. Biomedical instrumentation, Technology and applications, R. Khandpur, McGraw Hill Professional, 2004

9. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)												
CO1	To understand the basic concepts of the cell and its structure											
CO2	To understand about biodiversity and its conservation											
CO3	To know the fundamentals of genetics and the immune system											
CO4	To create an awareness about human diseases											
CO5	To give a basic knowledge of the applications of transgenics											
CO6	To know the applications of bio systems in environment, medical and agricultural sectors											
Mapping of Course Outcomes with Students Outcomes (SOs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18ESEE101	**BASIC ELECTRICAL & ELECTRONICS ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

MODULE 1 : DC CIRCUITS 12

Electrical circuit elements, voltage and current sources, Fundamentals Relationship of VI for RLC

circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transformations Theorem.

MODULE 2: AC CIRCUITS 9

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS 9

Principles of operation and characteristics of; DC machines, Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS 6

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.
CO2	To gain knowledge regarding fundamentals of AC circuits.
CO3	To gain knowledge regarding electrical machines and transformers.
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.
CO5	To gain knowledge on principles of digital electronics systems.

	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

SYLLABUS

Lectures & videos: **(15 hours)**

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

3. Machine shop **(6 hours)**
- d) Facing
- e) Turning
- f) Drilling Practice

4. Fitting shop **(6 hours)**
- c) Fitting Exercises–Preparation of square fitting
- d) Vee–fitting models.

3. Carpentry **(9 hours)**
- a) Preparation Lap joints.
- b) Mortise and Tenon joints.
- c) Cross Half.
- d) Dove Tail.

10. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
Preparation of butt joints, lap joints and tee joints

11. Sheet Metal working **(9 hours)**
- d) Forming & Bending:
- e) Model making–Trays, funnels, etc.
- f) Different type of joints

12. Demonstration **(6 Hours)**
Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies

	and dimensional tolerances.											
CO4	Students will be able to produce small devices of their interest.

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONIC ENGINEERING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronic Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration

4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipment and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits .
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flaps

U18BSMA302	**Partial Differential Equations, Probability and Statistics**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – Engineering Mathematics I & II				
	Course Designed by : Department of Mathematics				
OBJECTIVE	Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms. Learn techniques of solving the standard types of first order and second order partial differential equations. Learn solving wave and heat equation using Fourier series. Learn basics of probability, Baye's Theorem. Understand the concept of random variable, moment generating functions and their properties; learn standard distributions in discrete and continuous cases. Learn measures of central tendency and correlation and regressions, rank correlation, statistical intervals for single sample and test of hypothesis for a small and large sample				

UNIT I FOURIER SERIES (9+3) Hrs

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS (9+3) Hrs

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS (9+3) Hrs

Classifications second order linear partial differential equations – Solution of one dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation – Fourier Series solutions in Cartesian coordinates.

UNIT 1V PROBABILITY DISTRIBUTION (9+3)Hrs

Probability – Axioms of probability – Conditional probability – Baye's theorem – Random variables – Binomial – Poisson – Geometric – Uniform – Exponential and normal distribution and their properties.

UNIT V STATISTICS AND TESTING OF HYPOTHESIS (9+3)Hrs

Measures of central tendency – Moments – Skewness and kurtosis – Correlation and Regression – Rank correlation – Test of significance: Large sample test for single proportion, difference of proportions – Chi Square test for goodness fit and independence of attributes.

5. TirupathiR.Chandrauptta. "Quality and Reliability in Engineering". Book Vistas, New Delhi.

COURSE OUTCOMES (COs)	
CO1	Expand given function using the knowledge of Fourier Series and frequently needed practical harmonic analysis that an engineer may have to make from discrete data.
CO2	Solve PDE and higher order with constant coefficients and physically interpret the results.
CO3	Boundary Value Problems and Differential Equations will be knowledgeable about and will be able to analyze solutions to two-point boundary value problems, boundary value problems for partial differential equations.
CO4	Evaluate the probability using addition and multiplication theorem. Apply Baye's Theorem for practical problems to find the probability. Apply the discrete and continuous distribution for solving practical problems. Evaluates the moments of distributions using moment generating functions.
CO5	Learn the basic idea of statistics including measures of central tendency .Identify the appropriate hypothesis testing procedure based on type of outcome variable and number of samples.

U18PCAU301	**SOLID MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Introduction to Mechanics				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE:

The main objective of this course is to impart knowledge in Solid Mechanics. The detailed concept, stresses in beams, Deflection of beams will be taught to the students. Stresses in helical springs and biaxial stresses will also be introduced to the students.

MODULE 1 INTRODUCTION TO SOLID MECHANICS 9

Definition of stress, strain and their relations – Relations between material constants – Axial loading - Statically determinate and indeterminate problems in tension & compression – Plane truss analysis – method of joints – method of sections – 3-D trusses – Thermal stresses –Impact loading.

MODULE 2 STRESS IN BEAMS 9

Shear force & bending moment diagrams: Bending and shear stress variation in beams of Symmetric sections, a typical spar section: Beams of uniform strength - beams of two materials.

MODULE 3 DEFLECTION OF BEAMS 9

Double integration method – Macaulay's method – moment area method – conjugate beam Method – principle of superposition – Maxwell's reciprocal theorem.

MODULE 4 TORSION – SPRINGS- COLUMNS 9

Torsion of solid and hollow circular shafts – shear stress variation – open and closed-coiled helical springs – stresses in helical springs – classification of columns – Euler buckling – columns with different end conditions.

MODULE 5 BIAXIAL STRESSES 9

Stresses in thin-walled pressure vessels – combined loading of circular shaft with bending, torsion and axial loadings – Mohr's circle and its construction – determination of principal stresses.

4. Ray Hulse, Keith Sherwin & Jack Cain, Solid Mechanics, Palgrave ANE Books, 2014.
5. Singh D.K, Mechanics of Solids" Pearson Education 2012.

Course Outcomes															
CO1 - Acquire the knowledge on basics of Solid Mechanics															
CO2 - Attain the knowledge of stress acting on the beams															
CO3 - Gain the knowledge of deflection of beams															
CO4 - Obtain the acquaintance in loading on shaft, springs, columns															
CO5 - Develop the basic understanding of Biaxial Stresses

U18PCAU302	**ENGINEERING FLUID MECHANICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Engineering Mathematics				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE:

The main objective of this course is to impart knowledge in Engineering Fluid Mechanics. The detailed concept, Basic theory of Engineering Fluid Mechanics, Basic Equations of fluid Flow Analysis, Incompressible In viscid flow, Incompressible viscous flow and Fluid machinery will be taught to the students.

MODULE 1 BASIC CONCEPTS 8

Fluid - definition, distinction between solid and fluid - Units and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension - Fluid statics: concept of fluid static pressure, absolute and gauge pressures - pressure measurements by manometers and pressure gauges.

MODULE 2 FLUID KINEMATICS & FLUID DYNAMICS 9

Fluid Kinematics: Fluid Kinematics – Flow visualization – Lines of flow – types of flow – velocity field and acceleration– continuity equation (one and three dimensional forms) Equation of stream line - stream function - velocity potential function – flow net.
Fluid Dynamics: Introduction - Euler's equations of motion – Bernoulli's equation from Euler's equation – Bernoulli's equation for real fluid – Applications of Bernoulli's equation – Venturimeter, orificemeter – pitot tube.

MODULE 3 BOUNDARY LAYER FLOW 9

Introduction – Laminar boundary layer – Turbulent boundary layer – boundary layer thickness – drag force on a flat plate due to boundary layer – velocity profiles – turbulent boundary layer on a flat plate.

MODULE 4 INCOMPRESSIBLE FLUID FLOW 9

Viscous flow - Navier - Stoke's equation (Statement only) - Shear stress, pressure gradient relationship - laminar flow between parallel plates - Laminar flow through circular tubes (Hagen poiseulle's)-Hydraulic and energy gradient - flow through pipes - Darcy - weisback's equation – pipe roughness - friction factor - Moody's diagram - minor losses - flow through pipes in series and in parallel

MODULE 5 FLUID MACHINERY 9

Introduction and classification of fluid machines – Turbo machinery analysis – The angular momentum principle – Euler turbo machine equation– Application to fluid systems – Working principle of turbines, fans, blowers, pumps and compressors.

2. Vasandani, V.P., "Hydraulic Machines - Theory and Design", Khanna Publishers, 2014.
3. Ramamirtham, S., "Fluid Mechanics and Hydraulics and Fluid Machines", Dhanpat Rai and Sons, Delhi, 2012.

REFERENCE BOOKS

1. White, F.M., "Fluid Mechanics", Tata McGraw-Hill, 5th Edition, New Delhi, 2013.
2. Som, S.K., and Biswas, G., "Introduction to fluid mechanics and fluid machines", Tata McGraw-Hill, 2nd edition, 2014.
3. Streeter, V.L., and Wylie, E.B., "Fluid Mechanics", McGraw-Hill, 2013.
4. Kumar, K.L., "Engineering Fluid Mechanics", Eurasia Publishing House (P) Ltd., New Delhi (7^{th} edition), 2014.

Course Outcomes
CO1 - Apply the fundamental concepts in the design of flow measuring devices
CO2 - Apply the basic laws in fluid kinematics
CO3 - Apply the governing equation in fluid dynamics
CO4 - Analyze incompressible fluid flow through pipes
CO5 - Demonstrate and analyze the performance of hydraulic turbines

U18PCAU303	**THERMODYNAMICS AND THERMAL ENGINEERING**	**L**	**T**	**P**	**C**

	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Engineering Physics				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE:

The main objective of this course is to impart knowledge in Engineering Thermodynamics. The detailed concept, Basic Thermodynamics, Air cycle and Compressors, Refrigeration and Air-conditioning, Heat Transfer and Heat exchangers will be taught to the students.

MODULE 1 BASIC THERMODYNAMICS 12

Systems, Zeroth low, First law. Properties of gases and vapours. Steady flow energy equation. Heat and work transfer in flow and non-flow processes. Second law, Kelvin-Planck statement - Clausius statement - Concept of Entropy, Clausius inequality, Entropy change in non-flow processes.

MODULE 2 AIR STANDARD CYCLES AND THEIR ANALYSIS 12

Carnot, Stirling, Ericsion, Otto, Diesel, Dual and Air standard efficiency. Mean effective pressure, comparison of Otto, Diesel, Dual cycles- Problems on Otto and Diesel cycles

Actual Cycles and their analysis-Exhaust blow down – Heat loss factor – Actual volumetric Efficiency.

MODULE 3 REFRIGERATION AND AIR-CONDITIONING 9

Principles of Psychometry and refrigeration - Vapour compression - Vapour absorption types -Co-efficient of performance, Properties of refrigerants – Basic Principle and types Air conditioning.

MODULE 4 HEAT TRANSFER 9

Conduction in parallel, radial and composite wall – Basics of Convective heat transfer - Fundamentals of Radiative heat transfer.

MODULE 5 HEAT EXCHANGERS 9

Types of Heat Exchangers- Radiators-Types- Design of Parallel, Counter and Cross flow Heat Exchangers. **(**Use of standard thermodynamic tables, Mollier diagram and Refrigerant property tables are permitted)

TEXT BOOKS:

1. Nag.P.K., "Engineering Thermodynamics", Tata McGraw-Hill, New Delhi, 2007.
2. Rathakrishnan E., "Fundamentals of Engineering Thermodynamics", Prentice-Hall India, 2005**.**

3. Venwylen and Sontag, "Classical Thermodynamics", Wiley Eastern, 1987
4. Arora C.P, "Thermodynamics", Tata McGraw-Hill, New Delhi, 2003.

Course Outcomes
CO1 –To learn the detailed study of zeroth and first law of thermodynamics
CO2 – To learn detailed study of Air cycle and Compressors
CO3 – To learn detailed study and types of Refrigeration and Air conditioning
CO4 – To learn detailed study of Heat Transfer
CO5 – To learn detailed study of Heat exchangers and its types
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18PCAU304	**MATERIAL TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Engineering Physics				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE:

The main objective of this course is to impart knowledge in Automotive Petrol Engines. The detailed concept, fuel supply system cooling and lubrication system and combustion and combustion chambers and other petrol engines will be taught to the students.

MODUEL 1 CONSTITUTION OF ALLOYS AND PHASE DIAGRAMS 9

Constitution of alloys - Solid solutions, substitutional and interstitial - phase diagrams, Isomorphous, eutectic, peritectic, eutectoid and peritectroid reactions, Iron - Iron carbide equilibrium diagram. Classification of steel and cast Iron micro-structure, properties and application.

MODULE 2 HEAT TREATMENT 9

Definition - Full annealing, stress relief, recrystallisation and spheroidizing - Normalising, hardening and Tempering of steel. Isothermal transformation diagrams - Cooling curves superimposed on I.T. diagram CCR - Hardenability, Jominy end quench test - Austempering, martempering - Case hardening, carburising, nitriding, cyaniding, carbonitriding - Flame and Induction hardening

MODULE 3 SELECTION OF MATERIALS 9

Criteria of selecting materials for automotive components viz cylinder block, Cylinder head, piston, piston ring. Gudgeon pin, connecting rod, crank shaft, crank case, cam, cam shaft, engine valve, gear wheel , clutch plate, axle, bearings, chassis, spring, body panel, radiator, brake lining.

MODULE 4 NON-METALLIC MATERIALS 9

Polymers - types of polymer, commodity and engineering polymers - Properties and applications of PE, PP, PS, PVC, PMMA, PET, PC, PA, ABS, PI, PAI, PPO, PPS, PEEK, PTFE Polymers - Urea and Phenol formaldehydes - Engineering Ceramics - Properties and applications of Al2O3, SiC, Si3N4, PSZ and Sialon - Fiber and particulate reinforced composites.

MODULE 5 MECHANICAL PROPERTIES AND TESTING 9

Mechanism of plastic deformation, slip and twinning - Types of fracture - Testing of materials under tension, compression and shear loads - Hardness tests (Brinell, Vickers and Rockwell) Impact test Izod and charpy, fatigue and creep test.

TEXT BOOKS

1. Kenneth G.Budinski and Michael K.Budinski "Engineering Materials" Prentice-Hall of India Private Limited, 4th Indian Reprint 2012.

2. Raghavan.V.Materials Science and Engineering, Prentice Hall of India Pvt. Ltd., 2010
3. Sydney H.Avner "Introduction to Physical Metallurgy" McGraw-Hill Book Company 2012

Course Outcomes
CO1 - The students should be able to Familiarize on the constitutions of alloys and their phase diagrams
CO2 - The students should be able to understand the various heat treatment process
CO3 - The students should be able to gain knowledge on the selection criteria of materials
CO4 - The students should be able to attain knowledge about the non-metallic materials
CO5 - The students should be able to develop knowledge on the mechanical properties and testing of materials

U18PCAU305	**AUTOMOTIVE PETROL ENGINES**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Thermodynamics and Thermal Engineering				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE:

To impart knowledge on Gasoline fuel injection system, requirement, Components and types of ignition and combustion system and various emissions and alternative fuels for S.I. Engines

MODULE 1 INTRODUCTION TO SI ENGINES 9

Construction and Working principle of SI Engine, Four stroke and Two stroke Engines, Comparison of Four stroke and Two stroke Engines, Classification of SI Engines, applications of SI Engines, Fuels for SI Engines, Conventional and Alternate Fuels for IC Engines.

MODULE 2 COMBUSTION IN S.I. ENGINES 9

Stages of combustion in SI Engines, normal and abnormal combustion, Flame front propagation, Flame speed, Rate of Pressure, The phenomenon of Knock in SI Engines, Combustion chambers for SI Engines, Smooth Engine operation, High power output and Thermal efficiency.

MODULE 3 ENGINE LUBRICATION AND COOLING 9

Introduction- Direct Frictional Loses, Pumping Loses, Power Loss to drive, Mechanical Efficiency, Mechanical Friction, Blowby Loses, Pumping Loses, Factors affecting Mechanical friction, Lubrication, Lubrication of Engine components, Types of Lubrication system, Crankcase Ventilation, Properties of Lubricants, SAE Rating of Lubricants, Additives for Lubricants, Need for Cooling system, Characteristics of an Efficient Cooling System, Types of Cooling Systems, Liquid Cooling Systems, Air Cooled System, Comparison of Liquid and Air Cooling Systems

MODULE 4 EMISSIONS IN SI ENGINE AND CONTROL 9

Introduction, Air Pollution due to IC Engines, Emission norms, Comparison between Bharat Stage and Euro norms, Engine Emissions, Hydrocarbons (HC), Hydrocarbon Emissions, Carbon Monoxide (CO) Emission, Oxides of Nitrogen (NO_x), Other Emissions, Emission Control Methods, Catalytic Converters, Non Exhaust Emissions, Modern Evaporative Emission Control System, Crankcase Blowby.

MODULE 5 SUPERCHARGING AND TURBOCHARGING 9

Introduction-Supercharging, Types of Superchargers, Effects of Supercharging, Limitations of Supercharging, Thermodynamic Analysis of Supercharged Engine Cycle, Gear driven and Exhaust Driven Supercharging Arrangements, Turbo charging.

TEXT BOOKS:

1. Ganesan V, Internal Combustion Engines, McGraw Hill Education (India) Private Limited, 2012.
2. Ramalingam, K.K., Internal Combustion Engines, SciTech Publications (India) Pvt. Ltd., 2004.

4. Obert, E.F., Internal Combustion Engine and Air Pollution, International Text Book Publishers,1983.

Course Outcomes

CO1 - To learn Gasoline Air mixture requirements and supply system

CO2 - To learn Gasoline injection and ignition system

CO3 - To learn combustion in SI engines

CO4 – To learn liquid and gaseous fuels for SI engine

CO5 – To learn emissions from SI engine

Mapping of Course Outcomes with Program outcomes (POs)

U18PCAU3L1	**AUTOMOTIVE PARTS AND ASSEMBLY DRAWING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**0**	**0**	**2**	**1**
	Prerequisite – Engineering Graphics				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVES					
The main objective of this Study is to Design and drawing practice of Automotive Parts.					

MODULE I DRAWING STANDARDS & FITS AND TOLERANCES 12

Code of practice for Engineering Drawing, BIS specifications – Welding symbols, riveted joints, keys, fasteners – Reference to hand book for the selection of standard components like bolts, nuts, screws, keys etc. - Limits, Fits – Tolerancing of individual dimensions – Specification of Fits – Preparation of production drawings and reading of part and assembly drawings, basic principles of geometric dimensioning & tolerancing.

MODULE 2 INTRODUCTION TO 2D DRAFTING 16

Drawing, Editing, Dimensioning, Layering, Hatching, Block, Array, Detailing, Detailed drawing.

- Bearings - Bush bearing, Plummer block
- Valves – Safety and non-return valves.
- Cams and Followers

MODULE 3 3D GEOMETRIC MODELING AND ASSEMBLY 17

Sketcher - Datum planes – Protrusion – Holes - Part modeling – Extrusion – Revolve – Sweep – Loft – Blend – Fillet - Pattern – Chamfer - Round - Mirror – Section - Assembly

- Couplings – Flange, Universal, Oldham's, Muff, Gear couplings
- Joints – Knuckle, Gib & cotter, strap, sleeve & cotter joints
- Engine parts – Piston, connecting rod, cross-head (vertical and horizontal), stuffing box, multi-plate clutch
- Miscellaneous machine components – Screw jack, machine vice, tail stock, chuck, vane and gear pump

Note: 25% of assembly drawings must be done manually and remaining 75% of assembly drawings must be done by using any CAD software. The above tasks can be performed manually and using standard commercial 2D / 3D CAD software

U18LCAU3L2	**FLUID MECHANICS & STRENGTH OF MATERIALS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	**0**	**0**	**2**	**1**
	Prerequisite – Solid Mechanics, Fluid Mechanics & Machinery				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE					
The main objective of this Study is to lab practice of fluid flows, Determination of Flow through notches, weir and orifice. The practical study of strength of materials.					

LIST OF EXPERIMENTS

FLUID MECHANICS LAB

1. Determination of flow through pipes, losses in pipes.
2. Calibration of orificemeter and venture meter.
3. Flow through notches and weir.
4. Flow through open orifice.
5. Buoyancy experiment-Metacentric height.
6. Impact of jet on vanes-inclined and curved vanes.
7. Verification of Bernoulli's equation.

FLUID MACHINERY LAB

1. Performance characteristics of Jet pump
2. Performance characteristics of Vane pump
3. Performance characteristics of Centrifugal pump
4. Performance characteristics of Reciprocating pump
5. Performance characteristics of Gear pump

6. Characteristics of Impulse turbine
7. characteristics of Reaction turbine

STRENGTH OF MATERIALS LAB

1. Tension test of a mild steel rod
2. Double shear test on mild steel and Aluminium rods
3. Torsion test on mild steel rod
4. Hardness test on metals- Brinell and Rockwell hardness
5. Deflection test on helical springs
6. Deflection test on beams
7. Double shear test in U.T.M
8. Impact test on Metals

Course Outcomes															
CO1 - Determination of flow through pipes, losses in pipes.															
CO2 - Calibration of orificemeter and venture meter.															
CO3 - Performance characteristics of pumps and turbines.															
CO4 – Tension and Torsion test of a mild steel rod															
CO5 - Deflection test on helical springs, beams and Impact test on Metal

U18BSMA401	**Numerical Methods**	**L**	**T**	**P**	**C**
	Total Contact Periods: 60	**3**	**1**	**0**	**4**
	Prerequisite – Engineering Mathematics I & II				
	Course Designed by : Department of Mathematics				
OBJECTIVES	The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT 1 SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS **12 Hrs**

Fixed Point Iteration methods - Newton - Raphson method and Regula-Falsi method for single variable - solutions of linear system of equations by Gaussian, Gauss-Jordan, Jacobian and Gauss-Siedel methods.

UNIT 2 INTERPOLATION **12 Hrs**

Finite differences - Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals-

Newton's Divided difference formula, Lagrange's Interpolation formula.

UNIT 3 NUMERICAL DIFFERNTIATION AND INTEGRATION 12 Hrs

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's Both $1/3^{rd}$ and $3/8^{th}$ rules. Double integration using Trapezoidal rule and Simpson rule.

UNIT 4 INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATION 12 Hrs

Single step methods- Taylor series, Euler and modified Euler methods, Runge Kutta method of fourth order for solving first and second order differential equations, Multiple step methods- Milne and Adam's - Bash forth predictor and corrector methods.

UNIT 5 BOUNDARY VALUE PROBLEMS FOR ORDINARY AND PARTIAL DIFFERENTIAL EQUATION 12 Hrs

Finite difference - solution of 2^{nd} order ODE - Finite difference solutions for two dimensional Laplace and Poisson equations, Finite difference solutions for one dimensional heat equation both implicit and explicit (Bender-Schmidt and Crank-Nicholson methods), Finite difference explicit method for one dimensional wave equation.

TEXT BOOKS

1. Sastry.SS "Introductory Numerical Methods" 5^{th} edition, PHI, 2012.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 42^{nd} Edition, 2016.
3. Jain K.K. Iyengar, S.R.K and Jain, R.K. "Numerical Methods for Scientific and Engineering Computation" 4rd edition, 2005.

REFERENCE BOOKS

1. Curtis F. Gerald. "Applied Numerical Analysis" 7th Edn. Pearson Education,
2. Dennis G. Zill and Warren S.Wright. "Advanced Engineering Mathematics", 3rd Edn. Jones & Bartlett Publishers, UK. 1992.
3. P.Kandasamy, K.Thilagavathy, K. Gunavathi - Numerical methods, S.Chand & Company, 2^{nd} Edition 2010.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge for solving equations by Newton-Raphson and Regula-Falsi methods and system of linear equations by various methods.
CO2	Students will be able to interpolate the value of a dependent variable in the given data by Newton's forward and backward difference formulae and also unequal intervals.
CO3	Understanding the concept of numerical differentiation and integration using Trapezoidal and Simpson's rules.
CO4	Be exposed Taylor's series and Runge-Kutta methods to solve initial value problems of ODE
CO5	Student will be able to solve two dimensional Laplace, Poisson equations and one dimensional heat and wave equations of PDE.

	AUTOMOTIVE CHASSIS	**L**	**T**	**P**	**C**
U18PCAU401	Total Contact Hours - 45	3	0	0	3
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE:					

The main objective of this course is to impart knowledge in Automotive Chassis. The detailed concept of Introduction, Frame, Steering system, Propeller shaft and final drive, Axles and Tyres, Suspension system and Braking system will be taught to the students.

MODULE 1 INTRODUCTION 9

Types of chassis layout with reference to power plant locations and drives, vehicle frames, various types of frames, monocoque structure, constructional details, materials, testing of vehicle frames, auto body styles.

MODULE 2 FRONT AXLE AND STEERING SYSTEM 9

Types of front axles, construction details, materials, front wheel geometry: castor, camber, king pin inclination, toe-in. conditions for true rolling motion of wheels during steering, steering geometry, Ackermann steering system, constructional details of steering linkages, different types of steering gear boxes, steering linkages and layouts, turning radius, wheel wobble, power assisted steering, steering of crawler tractors and Electronic Steering System.

MODULE 3 DRIVE LINE 9

Effect of driving thrust and torque reactions, Hotchkiss drive, torque tube drive and radius rods, propeller shaft, universal joints, front wheel drive, different types of final drive, double reduction and twin speed final drives, differential principle, construction details of differential unit, non-slip differential, differential locks, differential housings, construction of rear axles, types of loads acting on rear axles, fully floating, three quarter floating and semi floating rear axles, rear axle housing, construction of different types of axle housings, multi axle vehicles, wheels and tyres.

MODULE 4 SUSPENSION SYSTEM 9

Need of suspension system, types of suspension, suspension springs, constructional details and characteristics of leaf, coil and torsion bar springs, rubber suspension, pneumatic suspension, shock absorbers, independent suspension, semi-active and active suspension system.

MODULE 5 BRAKING SYSTEM 9

Classification of brakes, drum brakes and disc brakes, constructional details, theory of braking, concept of dual brake system, parking brake, material, hydraulic system, vacuum assisted system, air brake system, antilock braking system, retarded engine brakes, eddy retarders and electronic braking system.

TEXT BOOKS

1. James D. Halderman , ‘Automotive Chassis Systems’, Pearson Series, 2017.
2. Kirpal Singh - "Automobile Engineering, Vol.1 "- Standard Publishers Distributors, New Delhi - 2013
3. NK. Giri – Automobile Engineering - Khanna Publishers – 2015

REFERENCE BOOKS

1. Newton, Steeds and Garrotte- “The Motor Vehicles"- Butterworths, London- 2000.
2. Jornsen Reimpell , Helmut Stoll and Jurgen Betzler , “ The Automotive Chassis: Engineering Principles”, 2001.
3. Tim Gilles, “Automotive Chassis”, CENGAGE Delmar Learning, 2004.

Course Outcomes
CO1 - Understand the basic knowledge about various vehicle frames and steering systems.

CO2 - Understand the construction and working principle of final drives.
CO3 - Gain knowledge about rear axle and types of tires
CO4 - To identify the suspension springs for different applications
CO5 - To suggest suitable braking systems for different types of automobiles
CO6 - Able to realize the importance of braking systems in a vehicle and possess knowledge about ABS and EBS

Mapping of Course Outcomes with Program outcomes (POs)

U18PCAU402	AUTOMOTIVE ELECTRICAL SYSTEMS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Electrical and Electronics				
	Course Designed by- Department of Automobile Engineering				

Objective:

- Knowledge in vehicle electrical and electronics components for engine operation.
- Enhancing the knowledge on microprocessor applications in vehicle control systems.
- Gaining information's on modern safety system in vehicle braking.

MODULE 1 BATTERIES **8**

Principle and construction of lead-acid battery. Characteristics of battery, rating, capacity and efficiency of batteries. Various tests on battery condition, charging methods - Modern storage batteries- Nickel-Iron and others-Batteries for electric cars-Limitations

MODULE 2 STARTING SYSTEM **9**

Condition at starting, behaviour of starter during starting, series motor and its characteristics, principle and construction of starter motor, working of different starter drive units, care and maintenances of starter motor, starter switches.

MODULE 3 CHARGING SYSTEM **9**

Function, Components of DC and AC Charging System for Automobile, construction, operating principle, characteristics, charging circuit controls – cut out, relays, voltage and current regulators, troubleshooting, new developments.

MODULE – 4 IGNITION SYSTEM **9**

Types, construction & working of battery coil and magneto ignition systems. Relative merits,

centrifugal and vacuum advance mechanisms. Types and construction of spark plugs, Glow Plug, Electronic Ignition systems. Distributor Less Ignition systems.

MODULE – 5 LIGHTING SYSTEM & ACCESSORIES 9

Insulated & earth return systems. Positive & negative earth systems. Details of head light & side light. LED lighting system, Head light dazzling & preventive methods. Electrical fuel-pump, Speedometer, Fuel, oil & temperature gauges, Horn, Wiper system, Trafficator, wiring system.

REFERENCE BOOKS

1. Kholi.P.L "Automotive Electrical Equipment", Tata McGraw-Hill Co., Ltd., New Delhi, reprint 2011
2. Robert Bosch "Automotive Hand Book", SAE (5th Edition), 2010.

CO1 - Familiarize with lead acid battery and accessories.
CO2 - Acquire the knowledge of starting system.
CO3 - Develop the knowledge on charging system.
CO4 - Gain knowledge on automotive electronics.
CO5 - Gain the information about sensors and activators.

Mapping of Course Outcomes with Program outcomes (POs)

U18PCAU403	**DESIGN OF ENGINE COMPONENTS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	3	1	0	4
	Prerequisite – Solid Mechanics				
	Course Designed by- Department of Automobile Engineering				

Objective: To make the students understand the design concept and principles of various engine components. These concepts and principles are familiarized for design of components.

MODULE 1 INTRODUCTION **12**

Engineering materials and their physical properties applied to design, selection of materials, factor of safety, endurance limit, notch sensitivity, principles of design optimization, future trends, computer aided drafting.

MODULE 2 LIMITS, FITS, TOLERANCES, SURFACE FINISH, SHAFTS AND SPRINGS 12

Definitions, types of tolerances and fits, design considerations for interference fits, surface finish, surface roughness, design of power transmission shafts, and design of helical springs.

MODULE 3 DESIGN OF CYLINDER AND PISTON **12**

Choice of material for cylinder and piston, piston friction, piston slap, design of cylinder, piston, piston pin, piston rings, piston failures, lubrication of piston assembly.

MODULE 4 DESIGN OF CONNECTING ROD, CRANKSHAFT **12**

Material for connecting rod, determining minimum length of connecting rod, small end and big end design, shank design, design of big end cap bolts, connecting rod failures, balancing of I.C. Engines, significance of firing order, material for crankshaft, design of crankshaft under bending and twisting, balancing weight calculations.

MODULE 5 DESIGN OF VALVES AND FLYWHEEL **12**

Design aspects of intake and exhaust manifolds, inlet and Exhaust valves, valve springs, tappets, valve train. Materials and design of flywheel.

Course Outcomes
CO1 - Familiarize on various types of materials and their properties.
CO2 - Acquire knowledge on geometrical dimensioning.
CO3 - Develop the knowledge on design procedure of various engine components
CO4 – Develop the knowledge of designing connecting rod and crankshaft
CO5 - Acquire knowledge of designing valves
CO6 - Acquire knowledge of designing flywheel

U18PCAU404	AUTOMOTIVE DIESEL ENGINES	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Thermodynamics and Thermal Engineering				
	Course Designed by- Department of Automobile Engineering				

Objectives:

To Understand the intake, exhaust, fuel injection system and combustion in diesel engines
To impart knowledge on various alternative fuels for C.I Engines
To identify the nature of pollutant formation and control in C I engines.

MODULE - 1 BASIC THEORY AND INTAKE AND EXHAUST MANIFOLDS 8

Diesel engine construction and operation. Two stroke and four stroke diesel engines. Diesel cycle – Fuel-air and actual cycle analysis. Diesel fuel. Ignition quality. Cetane number. Intake system components, Air filter, Intake manifold, Turbochargers, Exhaust manifold and exhaust pipe, Exhaust mufflers and Resonators.

MODULE – 2 DIESEL INJECTION SYSTEMS 9

Direct and indirect injection systems, Inline injection pump, Rotary Pump and Injector– Construction and principle of operation, Electronic control, Common rail and unit injector systems – Construction and principle of operation.

MODULE – 3 COMBUSTION IN C.I. ENGINES 10

Stages of combustion, vapourisation of fuel droplets and spray formation, air motion, swirl measurement, knock and engine variables, Features and design considerations of combustion chambers, delay period correlations, heat release correlations, Influence of the injection system on combustion.

MODULE – 4 LIQUID AND GASEOUS FUELS FOR C.I. ENGINES 9

Requirements, Utilisation techniques - Blends, Neat fuels, Reformed fuels, Emulsions, Dual fuelling, Ignition accelerators and Additives, Performance and emission characteristics.Utilisation techniques of gaseous fuels-Hydrogen, Biogas, Liquefied Petroleum gas, Compressed Natural gas in CI engines. Dual fuelling.

MODULE – 5 EMISSIONS FORMATION AND CONTROL TECHNIQUES 9

Carbon Monoxide, Unburnt Hydrocarbons, Oxides of Nitrogen, Particulate matter and smoke – sources. Emission control measures for CI engines. Effect of emissions on environment and human beings.

TEXT BOOKS:

1. Ramalingam, K.K., Internal Combustion Engines, SciTech Publications (India) Pvt. Ltd., 2004.
2. Ganesan, V, Internal Combustion Engines, Tata McGraw Hill Book Co., 2003.
3. Rajput R.K. Internal Combustion Engines, Laxmi Publications (P) Ltd, 2006.

4. Willard W. Pulkrabek, Engineering Fundamentals of the Internal Combustion Engines, 2007, Second Edition, Pearson Prentice Hall.

Course Outcomes
CO1 - Understand the various components of the engine and its functions
CO2 - Understand the fuel injection system in CI engines.
CO3 - Optimize the combustion process in CI Engine for better performance with reduced emissions
CO4 - Apply the Supercharging, Turbo charging and Scavenging Concepts in I.C Engines to enhance the combustion process
CO5 - Design Analyze and optimize the complete engine and its subsystems for better efficiency
CO6 - Knowledge about the recent development in the area of engines.

U18PCAU405	**MANUFACTURING TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Mechanical Engineering				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE					

The automobile components such as piston, connecting rod, crankshaft, engine block, front axle, frame, body etc., are manufactured by various types of production processes involving casting, welding, machining, metal forming, power metallurgy etc. Hence B.E. Automobile Engineering students must study this course Production Technology.

MODULE 1 CASTING **8**

Casting types, procedure to make sand mould, types of core making, moulding tools, machine moulding, special moulding processes – CO2 moulding; shell moulding, investment moulding, permanent mould casting, pressure die casting, centrifugal casting, continuous casting, casting defects.

MODULE 2 WELDING **8**

Classification of welding processes. Principles of Oxy-acetylene gas welding. A.C metal arc welding, resistance welding, submerged arc welding, tungsten inert gas welding, metal inert gas welding, plasma arc welding, thermit welding, electron beam welding, laser beam welding, defects in welding, soldering and brazing.

MODULE 3 MACHINING **13**

General principles (with schematic diagrams only) of working and commonly performed operations in the following machines: Lathe, Shaper, Planer, Horizontal milling machine, Universal drilling machine, cylindrical grinding machine, Capstan and Turret lathe. Basics of CNC machines. General principles and applications of the following processes: Abrasive jet machining, Ultrasonic machining, Electric discharge machining, Electro chemical machining, Plasma arc machining, and Electron beam machining and Laser beam machining.

MODULE 4 FORMING AND SHAPING OF PLASTICS **7**

Types of plastics - Characteristics of the forming and shaping processes – Moulding of Thermoplastics – Working principles and typical applications of - Injection moulding – Plunger and screw machines – Blow moulding – Rotational moulding – Film blowing – Extrusion - Typical industrial applications – Thermoforming – Processing of Thermosets – Working principles and typical applications - Compression moulding – Transfer moulding – Bonding of Thermoplastics – Fusion and solvent methods – Induction and Ultrasonic methods

MODULE 5 METAL FORMING AND POWDER METALLURGY **9**

Principles and applications of the following processes: Forging, Rolling, Extrusion, Wire drawing and Spinning, Powder metallurgy – Principal steps involved advantages, disadvantages and limitations of powder metallurgy.

Course Outcomes															
CO1 - Understand various metal casting process, principle and procedure															
CO2 - Understand the process, principle of various types of welding and its applications															
CO3 - Understand the various machining process															
CO4 - Understand the industrial applications of forming and shaping of plastics															
CO5 - Understand the process, principle and procedure of powder metallurgy															
CO6 - Understand the process, principle of metal forming process															
Mapping of Course Outcomes with Program outcomes (POs)

U18LCAU4L1	**AUTOMOTIVE ELECTRICAL AND ELECTRONICS LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Basic Electrical and Electronics				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE					
To introduce the testing procedure for electrical and electronics system in automobile.					

LIST OF EXPERIMENTS

AUTOMOTIVE ELECTRICAL LAB

1. Battery testing
2. Alternator testing.
3. Starter motor testing.
4. Diagnosis of ignition system.
5. Diagnosis of automotive electrical wiring.
6. Fault finding of relay & fuses in car using Off Board Diagnostics Systems (OBDS).
7. Relay & fuse Fault diagnostic of a car using OBDS

AUTOMOTIVE ELECTRONICS LAB

1. Characteristics of rectifiers and filters
2. Study of IC timer
3. Study of Microprocessor 8085
4. Simple ALP program using 8085 MEL Kit
5. Data acquisition from sensors using 8085 MEL Kit

6. Interfacing of stepper motor with 8085 MEL Kit
7. Fault finding location of sensor in car using OBDS

Course Outcomes															
Familiarize with various testing procedures of Battery, Alternator and Starter motor.															
Acquire the Diagnosis of ignition system and automotive electrical wiring.															
Develop the Skills on Off Board Diagnostics Systems (OBDS) procedure.															
Gain the knowledge about the rectifier, IC timer and microprocessor 8085.															
Acquire the skill on ALP program, Interfacing and data acquisition using 8085 MEL Kit															
Mapping of Course Outcomes with Program outcomes (POs)

U18LCAU4L2	**MANUFACTURING TECHNOLOGY LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Workshop Technology				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE					
To make the student understand various process, capabilities of lathe, drilling machine, milling machine and shaper machine					

LIST OF EXPERIMENTS

1. Cylindrical surface process
2. Lathe – Taper turning and external thread cutting
3. Drilling machine – Drilling, Tapping & Reaming
4. Milling process – Surface milling
5. Gear manufacturing process – spur gear, gear hobbing
6. Shaping process – keyway cutting
7. Surface finishing process – surface grinding, cylindrical grinding

Course Outcomes
Ability to use different machines depending on job profile requirement
Ability to use different machine tools depending on job surface requirement
Ability to manufacture single point cutting tool using cutter grinder
Ability to manufacture gear through generation process
Ability to use different grinding machine process
Mapping of Course Outcomes with Program outcomes (POs)

U18LCAU4L3	**AUTOMOTIVE ENGINE AND CHASSIS COMPONENTS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Automotive Chassis and Engines				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE					
To dismantle and assembling of engine and chassis components					

LIST OF EXPERIMENTS

Automotive Engine Components

1. Dismantling, Study and Assembling of Multi Cylinder SI Engine
2. Dismantling, Study and Assembling of Multi Cylinder C I Engine
3. Study of oil filter, fuel filter, fuel injection system and carburetor
4. Study of MPFI and CRDI Systems
5. Study of Ignition Systems – Battery coil, Magneto and Electronic
6. Study of engine cooling system components
7. Study of engine lubrication system components

Automotive Chassis Components

1. Study and measurement of the chassis frames: Heavy duty vehicle & Light duty vehicle
2. Dismantle, study and assemble of Front Axle, Rear Axle and Differential
3. Dismantle study and assemble of various Steering systems.
4. Dismantle, study and assemble of various Braking systems – including ABS
5. Dismantle, study and assembling of dependent and independent suspension systems
6. Dismantle, study and assembling of various clutch assemblies
7. Dismantle, study and assembling of various gear boxes and transfer case

Course Outcomes
Ability to use different machines depending on job profile requirement
Ability to use different machine tools depending on job surface requirement
Ability to manufacture single point cutting tool using cutter grinder
Ability to manufacture gear through generation process

Ability to use different grinding machine process

U18EEAU4S1	**TECHNICAL SEMINAR-I**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	1	1
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE					
The students know about the resent techniques in Automobile Evaluation will be made based on the reports, the presentations and the interactions during the question answer sessions.					

The students are expected to make presentations throughout the semester under the supervision of a team of respective department faculty. The students are to be grouped appropriately so that each student makes a minimum of two different presentations on engineering topics of current interest. Every student has to submit an approved technical report prior to his presentation. Evaluation will be made based on the reports, the presentations and the interactions during the question answer sessions.

Course Outcomes																
CO1 –Ability and Skills to be improved																
CO2 – self confidents to be improved																
CO3 –leadership quality to be improved																
CO4 –innovative ideas will be generated

U18PCAU501	**AUTOMOTIVE TRANSMISSION**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE

The main objective of this course is to impart knowledge in Automotive Transmission. The detailed concept of Clutch and Gear Box, Hydrodynamic Drive, Planetary Gear Boxes, Automatic Transmission Applications, Hydrostatic and Electric Drive will be taught to the students.

MODULE – 1 CLUTCH AND GEAR BOX 10

Requirement of transmission system. Different types of clutches, principle, Construction and torque capacity. Determination of gear ratios for vehicles. Different types of gearboxes such as Sliding mesh gearbox, Constant mesh gearbox and Synchromesh gearbox.

MODULE – 2 HYDRODYNAMIC DRIVE 9

Fluid coupling - Principle of operation, Constructional details, Torque capacity, Performance characteristics and Reduction of drag torque. Hydrodynamic Torque converter - Principle of operation, Constructional details and Performance characteristics. Multistage torque converters. Polyphase torque converters. Converter coupling

MODULE – 3 PLANETARY GEAR BOXES 8

Construction and operation of Ford – T-model gearbox, Wilson Gear box and Cotal electromagnetic transmission.

MODULE 4 AUTOMATIC TRANSMISSION APPLICATIONS 9

Need for automatic transmission, Principle of operation. Hydraulic control system for automatic transmission. Chevrolet "Turboglide" Transmission, Continuously Variable Transmission (CVT) – Types – Electronically operated transmission system. Case study for the transmission of Nissan, Mercedes Benz, Toyota.

MODULE 5 HYDROSTATIC AND ELECTRIC DRIVE 9

Hydrostatic drive - Various types of hydrostatic systems, Principles of Hydrostatic drive system. Advantages and limitations. Comparison of hydrostatic drive with hydrodynamic drive, Construction and Working of typical Janny hydrostatic drive. Electric drive - Principle of operation of Early and Modified Ward Leonard Control system, Advantages & limitations.

TEXT BOOKS:

1. Heldt, P.M., "Torque converters", Chilton Book Co., 1962.
2. Newton and Steeds, "Motor vehicles", Illiffe Publishers, 1985.
3. Devaradjane. G., Kumaresan. M., "Automobile Engineering", AMK Publishers, 2013.

REFERENCES:

3. Crouse,W.H., Anglin,D.L.," Automotive Transmission and Power Trains construction", McGraw Hill, 1976.
4. Heinz Heisler, "Advance vehicle Technology", Butterworth-Heinemann, 2002

Course Outcomes
CO1 - Understand the fundamentals, principle of operation and performance of various clutches and gear boxes.
CO2 - Gain the knowledge about various hydrodynamic drives.
CO3 – Conceive various types of gear boxes used for Automotive transmission
CO4 - Understand the principle of operation and performance of various hydrostatic drives
CO5 - Understand the principle of operation and performance of various electric drives
CO6 - Compare various types of transmission system

U18PCAU502	**AUTOMOTIVE AERODYNAMICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Fluid Dynamics				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE:

At the end of the course, the students will be able to apply basic principles of aerodynamics for the design of vehicle body.

MODULE I INTRODUCTION **9**

Scope, historical developments, fundamental of fluid mechanics, flow phenomenon related to vehicles, external and internal flow problem, resistance to vehicle motion, performance, fuel consumption and performance potential of vehicle aerodynamics.

MODULE II AERODYNAMIC DRAG OF CARS 9

Cars as a bluff body, flow field around car, drag force, types of drag force, analysis of aerodynamic drag, drag coefficient of cars, strategies for aerodynamic development, low drag profiles.

MODULE III SHAPE OPTIMIZATION OF CARS 9

Front end modification, front and rear wind shield angle, boat tailing, hatch back, fast back and square back, dust flow patterns at the rear, effects of gap configuration, effect of fasteners. Case studies on modern vehicles.

MODULE IV VEHICLE HANDLING 9

The origin of forces and moments on a vehicle, lateral stability problems, methods to calculate forces and moments – vehicle dynamics under side winds, the effects of forces and moments, characteristics of forces and moments, dirt accumulation on the vehicle, wind noise, drag reduction in commercial vehicles and racing cars.

MODULE V WIND TUNNELS FOR AUTOMOTIVE AERODYNAMICS 9

Introduction, principle of wind tunnel technology, limitation of simulation, stress with scale models, full scale wind tunnels, measurement techniques, equipment and transducers, road testing methods, numerical methods. CFD analysis.

TEXT BOOKS

1 W.H. Hucho, 'Aerodynamics of Road Vehicles', Butterworth and Co., 2014.
2 A. Pope, "Wind Tunnel Testing", 2nd Edition, John Wiley & Sons New York,

REFERENCE BOOKS

1 E.L.Houghton & P.L.Carpenter, "Aerodynamics for Engineering students", Butterworth Heinman(2013)
2 Milliken and Milliken, "Race Car Vehicle Dynamics".

Course Outcomes
CO1 - Understand the importance aerodynamics for automobiles
CO2 - Able to calculate drag on car
CO3 - Analyze various aerodynamic shapes of car.
CO4 - Understand about the stability of vehicle
CO5 - Apply the concept of wind tunnel for aerodynamic design of automobiles.
CO6 - Able to use wind tunnel for calculating aerodynamic performance of car model

U18PCAU503	ELECTRONIC ENGINE MANAGEMENT SYSTEM	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Electrical & Electronics				
	Course Designed by – Dept of Automobile Engineering				
OBJECTIVES: To explain the principle of engines and vehicle electronic management system and different sensors used in the systems.					

MODULE 1 FUNDAMENTALS OF AUTOMOTIVE ELECTRONICS 6

Components for electronic engine management system, open and closed loop control strategies, PID control, Look up tables, introduction to modern control strategies like Fuzzy logic and adaptive control. Parameters to be controlled in SI and CI engines.

MODULE 2 SENSORS 9

Types – Mass Air flow, Manifold Absolute Pressure, Throttle, Temperature, Speed, EGO, Knock, and Crankshaft Position-Hall Effect-Principle of operation, construction, material and characteristics.

MODULE 3 SI ENGINE MANAGEMENT 9

Mono point, Multi point and direct injection systems - Principles and Features, Bosch injection systems- L-Jetronic and LH –Jetronic- Layout and working, Open loop control and Lambda loop control in injection.

MODULE 4 CI ENGINE MANAGEMENT 9

Fuel injection system parameters affecting combustion, noise and emissions in CI engines. Inline injection pump, Rotary pump and injector - Construction and principle of operation, electronically controlled Unit Injection system. Layout of the common rail fuel injection system.

MODULE 5 IGNITION SYSTEMS AND ENGINE MAPPING 12

Ignition fundamentals, Types of solid state ignition systems, High energy ignition distributors, Electronic spark timing and control. Combined ignition and fuel management systems. Digital control techniques - Dwell angle, Ignition timing and Injection duration calculation.

TEXT BOOKS

1. Bosch Technical Instruction Booklets.
2. Tom Denton, Automotive Electrical and Electronic Systems, Edward Amold.
3. William B Ribbens “Understanding Automotive Electronics”, SAE Publications.
4. Eric Chowanietz “Automobile Electronics” SAE Publications.

REFERENCE BOOKS

2. Robert Bosch, "Gasoline Engine Management" SAE Publications.
3. Robert N.Brady, "Automotive Computers and Digital Instrumentation", Prentice Hall.
4. Duffy Smith, Auto Fuel Systems, The god Heart Willcox Company Inc., Publishers.
5. Heinz Heisler, Advanced Engine Technology. SAE Publications.

Course Outcomes
CO1 - Study of modern control strategies like Fuzzy logic and adaptive control
CO2 - Understand the role of various sensors and actuators
CO3 - Ability to know construction and working principle of sensors and its influence in controlling pollution
CO4 - Describe the ignition and injection methods used in an SI engine
CO5 - Describe the fuel injection systems in a diesel engine and the emission control systems
CO6 - Explain the electronic systems used in the fuel control system and the dash board unit.

U18PCAU504	**DESIGN OF CHASSIS COMPONENTS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	3	1	0	4
	Prerequisite –				
	Course Designed by – Dept of Automobile Engineering				
OBJECTIVES: At the end of the course, the student can able to design the automotive components like frame, suspension systems, axles, clutch, gear box, drive line components etc					

MODULE 1 DESIGN OF CLUTCHES **9+3**

Design of single plate clutch, multi plate clutch, centrifugal clutch and cone clutch; energy dissipated by clutches, torque transmission capacity of clutches, design of clutch components.

MODULE 2 DESIGN OF GEAR BOX **9+3**

Performance of vehicles, total resistances to vehicle motion, traction and tractive effort, geometric progression for calculation of gear ratios, design of three speed and four speed gear ratios.

MODULE 3 DESIGN OF CHASSIS FRAME AND SUSPENSION 9+3

Study of loads, moments and stresses on Chassis frame members, design procedure of ladder type chassis frame, design procedure of leaf springs, coil springs and torsion bar springs.

MODULE 4 DESIGN OF FRONT AXLE AND STEERING SYSTEMS 9+3

Study of loads, moments and stresses on front axle, design procedure of front axle; Condition for true rolling motion, Ackermann steering principles, calculation of turning circle radius.

MODULE 5 DESIGN OF PROPELLER SHAFT AND REAR AXLE 9+3

Design procedure of propeller shaft, design procedure of rear axles.

TEXT BOOKS

1. Giri.N.K- "Automobile Mechanics"- Khanna Publisher, New Delhi- 2012

1. An Introduction to Modern Vehicle Design. Editor, Julian Happian-Smith. Edition, illustrated, reprint. Publisher, SAE International, 2014.
2. Handbook of Vehicle Design Analysis by John Fenton, 9781560919032

Course Outcomes
CO1 - Acquire the knowledge on design of various types of clutches.
CO2 - Familiarize on the performance of vehicles and design of gear ratio calculations.
CO3 - Attain knowledge on design of ladder type chassis frame and suspension components.
CO4 - Obtain the knowledge on design procedure of front axle
CO5 - Gain the knowledge on design of propeller shaft and rear axle.
CO6 - Obtain the knowledge on design procedure of steering systems.

	Total Contact Hours - 45	0	0	2	1
	Prerequisite –				

	Course Designed by- Department of Automobile and Mechatronics Engineering
OBJECTIVE	
Study and performance of pneumatic and hydraulic applications in automobiles	

LIST OF EXPERIMENTS

1. Design and testing of hydraulic circuits such as
   a) Pressure control
   b) Flow control
   c) Direction control
   d) Design of circuit with programmed logic sequence, using an optional PLC in hydraulic Electro hydraulic Trainer.
2. Design and testing of pneumatic circuits such as
   (a) Pressure control (b) Flow control
   (b) Direction control (d) Circuits with logic controls
   (f) Circuits with timers
   g) Circuits with multiple cylinder sequences in Pneumatic Electro pneumatic Trainer.
3. Design of speed control circuits
   a) Meter – In Circuit
   b) Meter – Out Circuit
4. Design of continuous cycle circuit
5. Design of synchronizing circuit
6. Design of sequence circuit

Course Outcomes															
CO1 –Design and testing of hydraulic circuits															
CO2 – Design and testing of pneumatic circuits															
CO3 – Design of speed control circuits and Design of synchronizing circuit															
CO4 – Design of sequence circuit

U18LCAU5L2	**ENGINE PERFORMANCE AND EMISSION TESTING LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Automotive Petrol and Diesel Engines				
	Course Designed by- Dept of Automobile Engineering				

OBJECTIVE: To conduct performance test and emission test on the IC engines.

LIST OF EXPERIMENTS

1. Study of hydraulic, electrical and eddy current dynamometers
2. Valve timing and port timing diagrams
3. Performance and emission test on two wheeler SI engine
4. Performance and emission test on automotive multi-cylinder SI engine
5. Performance and emission test on automotive multi-cylinder CI engine
6. Retardation test on I.C. Engines.
7. Heat balance test on automotive multi-cylinder SI engine
8. Heat balance test on automotive multi-cylinder CI engine
9. Morse test on multi-cylinder SI engine
10. Flash, Fire and Pour Point Measurement of a fuel
11. Motoring test for indicated power

Course Outcomes																
CO1 – Study of Dynamometers																
CO2 – Performance study of Petrol and Diesel engines																
CO3 – Study of balance Test																
CO4 – Study of Emission Test and Exhaust gas Analyzer																
Mapping of Course Outcomes with Program outcomes (POs)

U18BSMA601	**Operations Research For Engineers (common to B.Tech - Mech, Mechatronics & Automobile)**	**L**	**T**	**P**	**C**
	Total Contact periods: 45	**3**	**0**	**0**	**3**
	Prerequisite – Engineering Mathematics I & II and statistics				
	Course Designed by Department of Mathematics				
OBJECTIVES	To provide the student with the concept and an understanding of basic concepts in Linear Programming techniques, Duality Principles, Transportation and Assignment problems, Inventory models, PERT/CPM, Queuing and Replacement Models.				

UNIT I LINEAR PROGRAMMING 9 Hrs

Introduction to phases of an Operations Research study– Linear programming – Formulation of the Programming – Graphical method – Simplex method – Dual simplex method-Two phase method.

UNIT II TRANSPORTATION &ASSIGNMENT PROBLEMS 9 Hrs

Transportation models – Vogel's approximation method MODI method – Unbalanced transportation problem – Degeneracy in transportation models **-** Assignment problems – Hungarian method

UNIT III NETWORKS & REPLACEMENT MODELS 9Hrs

Networks – PERT and CPM – Network diagrams – Shortest route – Minimum spanning tree, Replacement models– Individual and Group replacement policy

UNIT IV INVENTORY MODELS 9 Hrs

Inventory models – Deterministic models – Production models – Economic Ordering Quantity Models – Quantity Discount Model – Multi Product Models – Inventory Control Models in practice.

UNIT V QUEUEING MODELS & RESOURCE SCHEDULING 9Hrs

Queuing theory – Queuing system and structure – Kendal's notation– Poisson arrival and Exponential service time – Characteristic of queuing models – Single channel and multiple models. Resource scheduling – Sequencing of n- jobs through 2 machines and 3 machines.

TEXT BOOKS

1. Gupta and Hira D.S " Operations Research", S. Chand & Co, New Delhi, 2006
2. H. A. Taha, "Operations Research", Prentice Hall of India, 2002, Seventh Edition 2007.

REFERENCE BOOKS

1. Kanti Swarup, Gupta P.K., and Manmohan, "Operations Research", Sultan Chand & Sons 1997. Paneerselvam R., Operations research, Prentice-Hall of India, New Delhi, 2001.
2. T. Veerarajan, "Operations Research", Published by Orient Black Swan, 2010.

COURSE OUTCOMES (COs)	
CO1	To Explain the basic concepts of optimization and to formulate and solve linear programming problems, Apply duality principle in day to day life style.
CO2	Apply the concepts of Transportation Problem and Assignment Problem, Participate in the class room discussion on Transportation algorithm.
CO3	Explain and demonstrate the basic concepts of PERT- CPM and their application, reproduce the network model.
CO4	Explain the basic concepts of optimization and to formulate and solve inventory problems.
CO5	Explain and apply the concepts of Queueing theory, sequencing problem and their application.

U18PCAU601	**ELECTRIC AND HYBRID VEHICLE**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Electrical and Electronics, Computer Control of Vehicle Systems				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To understand the principle, working and design of electric and hybrid vehicles.					

MODULE 1- ELECTRIC VEHICLES **9**

Layout of an electric vehicle, performance of electric vehicles – traction motor characteristics, tractive effort, transmission requirements, vehicle performance, energy consumption, advantage and limitations, specifications, system components, electronic control system.

MODULE 2- ELECTRIC PROPULSION SYSTEMS & GENERATORS **9**

DC motors, AC motors, permanent magnet motors, brushless DC and reluctance motors, characteristics, regenerative braking. DC generators, AC generators, voltage and frequency regulations

MODULE 3- HYBRID VEHICLES **9**

Concepts of hybrid electric drive train, types, architecture of series and parallel hybrid electric drive train, merits and demerits, series and parallel hybrid electric drive train design.

MODULE 4- MOTOR CONTROLLERS AND CONTROL SYSTEMS & ENERGY STORAGES **9**

Control system principles, speed and torque control – DC motors and AC motors. Electromechanical batteries- types of batteries –lead acid batteries, nickel based batteries, lithium based batteries, electrochemical reactions, thermodynamic voltage, specific energy, specific power, energy efficiency, ultra-capacitors.

MODULE 5- FUEL CELLS & SOLAR CARS **9**

Fuel cell, construction, working, equations, possible fuel sources, fuel reformer, design. Solar carsphotovoltaic cells, tracking, efficiency and cost comparison.

TEXT BOOKS

1. Mehrdad Ehsani, Yimin Gao, sebastien E. Gay and Ali Emadi, “Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design”, CRS Press, 2014.
2. James Larminie and John Loury, “Electric Vehicle Technology-Explained”, John Wiley & Sons Ltd., 2013.

REFERENCE BOOKS

1. Sandeep Dhameja, “Electric Vehicle Battery Systems”, Butterworth –Heinemann, 2012.

3 Ronald K Jurgen, “Electric and Hybrid – Electric Vehicles”, SAE, 2012
4 Ron Hodkinson and John Fenton, “Light Weight Electric/Hybrid Vehicle Design”, Butterworth- Heinemann, 2011.

COURSE OUTCOMES (COs)
CO1 - The students should be able to Familiarize on concepts of electric vehicle & performance of electric vehicles
CO2 - The students should be able to Gain knowledge on Electric Propulsion Systems & Generators

CO3 - The students should be able to Acquire the knowledge on hybrid electric drive train systems																
CO4 - The students should be able to Attain the knowledge on Energy Storages																
CO5 - The students should be able to Attain the knowledge on Fuel Cells & Solar Cars																
CO6 - The students should be able to Attain the knowledge on Control Systems

U18PCAU6L1	**TWO AND THREE WHEELERS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	2	1
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE:					
To train the students to conduct performance test on two and three wheelers To train the students to dismantle and assemble the gear box, steering system etc.,					

LIST OF EXPERIMENTS

1. Performance test of a two wheeler using chassis dynamometer.
2. Performance test on shock absorber
3. Performance test on coil spring.
4. Two wheeler chain test
5. Brake and Clutch adjustment as per specification.
6. Dismantling and assembling of two wheeler gear box and finding gear ratios
7. Dismantling and assembling of three wheeler box and finding gear ratios
8. Three wheeler brake and clutch play adjustment
9. Dismantling and assembling of three wheeler steering system.
10. Study of three wheeler chassis frame and power transmission system.

Course Outcomes
CO1 - Graduates will have basic knowledge of testing of two wheeler vehicles
CO2 - Able to dismantle and assemble of clutch and brake system used in two wheeler
CO3 - Able to dismantle and assemble of gear box used in two wheeler and find out gear ratios
CO4 - Able to measuring the dimensions of three wheeler chassis
CO5 - Able to dismantle and assemble of front fork assembly used in two wheeler

U18PCAU6L2	**CAD / CAM LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Technical and Machine Drawing, Engineering Graphics, Computer Integrated Manufacturing, CAD-CAM, AutoCAD and Pro-E Basics				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE:					
Study of Computer aided drafting and manufacturing					

LIST OF EXPERIMENTS

COMPUTER AIDED DRAFTING

CAD introduction to computer aided drawing, 2D drawing Orthographic view, Isometric views, 2D -Sectional views , Part drawing, Assembly drawing, Detailed drawing, Dimensioning, Annotations, Symbols, Welding, Surface finish, Threads, Text, Bill of materials. Exercise - Knuckle Joint, Gib and Cotter Joint, Screw Jack, Foot step Bearing.

3D drawing part modeling - Protrusion, Cut Sweep, Draft and Loft-Modify/ Edit - Pattern-Transformation, Boolean operation. Assembly - creating assembly from parts, Modify / Edit - Pattern conversion of 3D solid model to 2D model. Surface modeling - Tabulated, Revolve, Ruled and edge surfaces, Exercise-Piston, Connecting Rod, Knuckle Joint, Universal Joint and Couplings.

COMPUTER AIDED MANUFACTURING

1. Manual Part programming for CNC machines using a standard G-codes and M-codes. Simulation of tool path, machining practice on trainer type CNC machines - straight cut, Taper turning, Profile, Parting, Thread cutting.
2. CNC milling machines; Production of various contour shapes.
3. Computer assisted part programming-APT PROGRAMMING LANGUAGE - Part programming using APT and other NC programming languages.
4. Introduction to component modeling.
5. NC code generation using CAD/CAM software - Post Processing for standard CNC controls like FANUC, SIMUMERIC etc.,

Course Outcomes
CO1 –CNC milling machines; Production of various contour shapes.
CO2 – Introduction to component modeling.
CO3 – NC code generation using CAD/CAM software
CO4 – Manual Part programming for CNC machines using a standard G-codes and M- codes.

U18PCAU701	VEHICLE DYNAMICS	L	T	P	C
	Total Contact Hours - 60	3	1	0	4
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE:					
To know about the application of basic mechanics principles for dynamic analysis of vehicles.					

MODULE 1 CONCEPT OF VIBRATION 9

Definitions, Modeling and Simulation, Global and Vehicle Coordinate System, Free, Forced, Undamped and Damped Vibration, Response Analysis of Single DOF, Two DOF, Multi DOF, Magnification factor, Transmissibility, Vibration absorber, Vibration measuring instruments, Torsional vibration, Critical speed.

MODULE 2 TIRES 9

Tire forces and moments, Tire structure, Longitudinal and Lateral force at various slip angles, rolling resistance, Tractive and cornering property of tire. Performance of tire on wet surface. Ride property of tires. Magic formulae tire model, Estimation of tire road friction. Test on Various road surfaces. Tire vibration.

MODULE 3 VERTICAL DYNAMICS 9

Human response to vibration, Sources of Vibration. Design and analysis of Passive, Semi-active and Active suspension using Quarter car, half car and full car model. Influence of suspension stiffness, suspension damping, and tire stiffness. Control law for LQR, H-Infinite, Skyhook damping. Air suspension system and their properties.

MODULE 4 LONGITUDINAL DYNAMICS AND CONTROL 9

Aerodynamic forces and moments. Equation of motion. Tire forces, rolling resistance, Load distribution for three wheeler and four wheeler. Calculation of Maximum acceleration, Reaction forces for Different drives. Braking and Driving torque. Prediction of Vehicle performance. ABS, stability control, Traction control.

MODULE 5 LATERAL DYNAMICS 9

Steady state handling characteristics. Steady state response to steering input. Testing of handling characteristics. Transient response characteristics, Direction control of vehicles. Roll center, Roll axis, Vehicle under side forces. Stability of vehicle on banked road, during turn. Effect of suspension on cornering.

TEXT BOOKS:

5. Michael Blundell & Damian Harty, "The Multibody Systems Approach to Vehicle Dynamics", Elsevier Limited, 2004
6. Nakhaie Jazar. G., "Vehicle Dynamics: Theory and Application", 1st edition, Springer, 2008

Course Outcomes
CO1 - Understand the concept of mechanical vibrating system
CO2 - Understand fundamentals of vibration theory and familiar with basics of vibrations and their mathematic models.
CO3 - Gain knowledge about the suspension and tire related vibrations
CO4 - Analyze the performance, ride and handling mode of the vehicle.
CO5 - Understand about the stability of vehicle
CO6 - Equip themselves about the vibration control techniques.

U18PCAU702	**VEHICLE MAINTENANCE**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –				

	Course Designed by- Department of Automobile Engineering

OBJECTIVE:

The main objective of this course is to impart knowledge maintenance records and schedule, maintenance, repair and overhauling of chassis drive line components, maintenance, repair and servicing of electrical systems, maintenance, repair and servicing of cooling, lubrication system, fuel system and body will be taught to the students.

MODULE 1 MAINTENANCE, WORKSHOP PRACTICES, SAFETY AND TOOLS 10

Maintenance – Need, importance, primary and secondary functions, policies - classification of maintenance work - vehicle insurance - basic problem diagnosis. Automotive service procedures – workshop operations – workshop manual - vehicle identification. Safety – Personnel, machines and equipment, vehicles, fire safety - First aid. Basic tools – special service tools – measuring instruments – condition checking of seals, gaskets and sealants. Scheduled maintenance services – service intervals - Towing and recovering.

MODULE 2 ENGINE AND ENGINE SUBSYSTEM MAINTENANCE 8

General Engine service- Dismantling of Engine components- Engine repair- working on the underside, front, top, ancillaries- Service of basic engine parts, cooling and lubricating system, fuel system, Intake and Exhaust system, electrical system - Electronic fuel injection and engine management service - fault diagnosis- servicing emission controls

MODULE 3 TRANSMISSION AND DRIVELINE MAINTENANCE 8

Clutch- general checks, adjustment and service- Dismantling, identifying, checking and reassembling transmission, transaxle- road testing- Removing and replacing propeller shaft, servicing of cross and yoke joint and constant velocity joints- Rear axle service points- removing axle shaft and bearings- servicing differential assemblies- fault diagnosis.

MODULE 4 STEERING, BRAKE, SUSPENSION, WHEEL MAINTENANCE 10

Inspection, Maintenance and Service of Hydraulic brake, Drum brake, Disc brake, parking brake. Bleeding of brakes. Inspection, Maintenance and Service of Mc person strut, coil spring, leaf spring, shock absorbers. Dismantling and assembly procedures. Wheel alignment and balance, removing and fitting of tyres, tyre wear and tyre rotation. Inspection, Maintenance and Service of steering linkage, steering column, Rack and pinion steering, Recirculating ball steering service- Worm type steering, power steering system

MODULE 5 AUTO ELECTRICAL AND AIR CONDITIOING MAINTENANCE 9

Maintenance of batteries, starting system, charging system and body electrical -Fault diagnosis using Scan tools. Maintenance of air conditioning parts like compressor, condenser, expansion valve, and evaporator - Replacement of hoses- Leak detection- AC Charging- Fault diagnosis. Vehicle body repair like panel beating, tinkering, and soldering, polishing, painting.

TEXT BOOKS:

1. Ed May, "Automotive Mechanics Volume One" and Two, Mc Graw Hill Publications, 2003.
2. Vehicle Service Manuals of reputed manufacturers

REFERENCE:

1. Bosch Automotive Handbook, Sixth Edition, 2004

Course Outcomes
CO1 - Gain knowledge about vehicle operation and maintenance, service schedules etc.

CO2 - Gain skills in handling situations where the vehicle is likely to fail.
CO3 - Understand maintenance procedures like repairing, overhauling etc.,
CO4 - Understand the concept of fault diagnosis
CO5 - Understand the various advances in fault diagnosis
CO6 - Understand the auto electrical and air-conditioning maintenance

U18PCAU703	**VEHICLE BODY ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Chassis				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE:					
The main objective of this course is to impart knowledge of car body details, Vehicle aerodynamics, bus body details, commercial vehicle details, body materials, trim and mechanisms will be taught to the students.					

MODULE 1 CAR BODY DETAILS **9**

Types car bodies – Visibility: regulations, driver's visibility, methods of improving visibility – Safety: Safety Design, constructional details of roof, under floor, bonnet, boot, wings etc

MODULE 2 BUS BODY DETAILS **9**

Types of bus bodies. Floor height, engine location – Entrance and exit location, Constructional details, frame construction, Double skin construction, Types of metal sections used, regulations, Conventional and integral type construction.

MODULE 3 VEHICLE AERODYNAMICS **9**

Objects – Vehicle drag and types. Various types of forces and moments. Effects of forces and moments various body optimization techniques for minimum drag. Principle of wind tunnel technology. Flow visualization techniques. Tests with scale models

MODULE 4 COMMERCIAL VEHICLE DETAILS AND BODY MATERIALS **9**

Types of bodies – Flat platform, drop side, fixed side, tipper body, tanker body. Construction

of commercial vehicle bodies. Dimensions of driver's seat in relation to controls. Drivers cab design. Steel sheet, timber, plastics, GRP, properties of materials. Corrosion: Anticorrosion methods, Modern painting process. Body trim items – Body mechanisms.

MODULE 5 BODY LOADS AND STRESS ANALYSIS 9

Scaled structure – Structural surface – Shear panel method – Symmetric and Asymmetrical vertical loads in a car – Longitudinal loads – Different loading situations – Load distribution on vehicle structure – Stress analysis of bus body structure under bending and torsion – Stress analysis in integral bus body. Analysis of shock and impulse.

TEXTBOOK:

2. Dieler Anselm., The passenger car body, SAE International, 2000.
3. John Fenton, "Vehicle Body Layout and Analysis", Mechanical Engineering Publication Ltd., London.

Course Outcomes
CO1 - Understand the fundamentals of various automotive body construction details
CO2 - Understand the concepts of aerodynamics in body engineering for better style and low drag.
CO3 - Familiarize various aerodynamic effects of vehicle body shape
CO4 - Know about different aspects of car body and bus body, types, commercial vehicle.
CO5 - Role of various aerodynamic forces and moments, measuring instruments
CO6 - Know about the material used in body building, tools used, body repairs.

OBJECTIVE					
Study and performance of stability of vehicle under test conditions					

LIST OF EXPERIMENTS

1. Testing of natural frequency
2. Measurement of displacement velocity and acceleration
3. Whirling of Shafts
4. Critical Speed Determination
5. Camber angle measurement
6. Modal Analysis of given structure

Course Outcomes
CO1 - Find the natural frequency of the given model
CO2 - Study vibration characteristics of a vehicle using quarter car / half car model
CO3 – Find the displacement, Velocity and acceleration with the use of Mathematical software using various sensors
CO4 - Familiarize using MATLAB- SIMULINK software to solve simple mechanical systems
CO5 - Familiarize using Multi Body dynamics software to solve simple Car model
CO6 - Analyze the Dynamic modeling and simulations of road vehicles and their subsystems.

	Total Contact Hours - 45	0	0	2	1
	Prerequisite – Vehicle Maintenance				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE

Study of an automobile repair, service and maintenance shop.

LIST OF EXPERIMENTS

1. Study of an automobile repair, service and maintenance shop.
2. Study and preparation of different statements/records required for the repair and maintenance works.
3. Study of different types of tools and instruments required for repair and Maintenance.
4. Engine tune up for Diesel and Petrol Engines.
5. Fault diagnosis in electrical ignition system, gasoline fuel system, diesel fuel system.
6. Study of the faults in the electrical systems such as headlights, side or parking lights, electric horn system, windscreen wiper system, starting and lighting system.
7. Study of fuel filters and air cleaners.
8. Study and adjustment of pedal play in clutch, hand brake and steering wheel play.
9. Practices on air bleeding from hydraulic brakes, air bleeding of diesel fuel system.
10. Removal and fitting of tires and tubes.

Course Outcomes

CO1 - Prepare the Workshop layout and statements

CO2 - Understand about the tools and equipment's used in automotive workshop

CO3 - Able to perform a major and minor tune up of gasoline and diesel engines and will be calibrate the fuel pump

CO4 - Ability to identify the faults and knowledge on maintenance of various sub systems in the vehicle

CO5 - Able to diagnose and service the engine and transmission system using scan tool

CO6 - Removal and fitting of tire and tube.

U18EEAU7P1	Project Work Phase - I	L	T	P	C
	Total Contact Hours –	0	0	3	3
	Prerequisite – Professional Courses				
	Lab Manual Prepared by – Dept of Automobile Engineering				

OBJECTIVES

To teach the student the procedures and methodologies for understanding the literature survey and preparation for research paper.

Students should model, analyze and animate /fabricate a functional model of any component, subsystem or a mechanism used in automobile. They should prepare a design project report and submit.The assessment will be done on a continuous basis as follows:

Review / Exam	Weightage
1st Review	20%
2nd Review	20%
3rd Review	20%
Report	20%
Final Viva	20%
Total	**100%**

COURSE OUTCOMES (COs)

CO1 - To identify the area of research.

CO2 - To prepare list of literatures in the relevant area.

CO3 - Compile the abstract from the literatures.

CO4 - Focus the search to a well-defined theme and title.

CO5 - Make and exhaustive report by compiling all the literatures that students surveyed.

CO6 - To prepare a research paper for publications in journal/conference proceedings.

U18EEAU8P2	Project Work Phase - II	L	T	P	C
	Total Contact Hours – 18 Periods Per Week	0	0	18	9

	Prerequisite – Design and Fabrication with Analysis, Research article writing and Literature Survey
	Course Designed by- Department of Automobile Engineering
OBJECTIVE	
The objective of project work is to enable the students, to work in convenient groups of not more than four members in a group, on a project involving some design and fabrication work or theoretical and experimental studies related to the respective engineering discipline.	

The objective of project work is to enable the students, to work in convenient groups of not more than four members in a group, on a project involving some design and fabrication work or theoretical and experimental studies related to the respective engineering discipline. Every project work shall have a Guide who is a member of the faculty of the University. Twelve periods per week shall be allotted in the Time table for this important activity and this time shall be utilized by the students to receive directions from the Guide, on library reading, laboratory work, computer analysis, or field work as assigned by the Guide and also to present in periodical seminars or viva to review the progress made in the project. Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details, estimation of cost and conclusions. This final report shall be in typewritten form as specified in the guidelines. The continuous assessment and semester evaluation may be carried out as specified in the guidelines to be issued from time to time.

Course Outcomes															
CO1 –comprehensive report															
CO2 – literature survey															
CO3 – problem statement, project work details															
CO4– project work details, estimation of cost and conclusions

PROFESSIONAL ELECTIVE - I

U18PEAU011	**MANUFACTURING OF AUTOMOTIVE COMPONENTS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Manufacturing Technology				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE:					
The main objective of this course is to impart knowledge maintenance records and schedule,					

maintenance, repair and overhauling of chassis drive line components, maintenance, repair and servicing of electrical systems, maintenance, repair and servicing of cooling, lubrication system, fuel system and body will be taught to the students.

MODULE 1 - POWDER METALLURGY **9**

Process flow chart - Production of metal powders and their raw materials - Manufacture of friction lining materials for clutches and brakes - Testing and inspection of PM parts.

MODULE 2 - FORMING PROCESS **9**

Forging - process flow chart, forging of valves, connecting rod, crank shaft, cam shaft, propeller shaft, transmission gear blanks, foot brake linkage, steering knuckles. Extrusions: Basic Process steps, extrusion of transmission shaft, steering worm blanks, brake anchor pins, rear axle drive shaft, axle housing spindles, piston pin and valve tappets. Hydro forming: Process, hydro forming of manifold and comparison with conventional methods - Hydro forming of tail Lamp housing. Stretch forming - Process, stretch forming of auto body panels - Super plastic alloys for auto body panels.

MODULE 3 - CASTING AND MACHINING **9**

Sand casting of cylinder block and liners - Centrifugal casting of flywheel, piston rings, bearing bushes and liners, permanent mould casting of piston, pressure die casting of carburetor and other small auto parts. Machining of connecting rods - crank shafts - cam shafts - pistons - piston pins - piston rings - valves - front and rear axle housings - flywheel - Honing of cylinder bores – copy turning and profile grinding machines.

MODULE 4 - GEAR MANUFACTURING **9**

Gear milling, Hobbing and shaping - Gear finishing and inspection.

MODULE 5 - RECENT TRENDS IN MANUFACTURING OF AUTO COMPONENTS **9**

Powder injection molding - Shot peen hardening of gears - Production of aluminum MMC liners for engine blocks - Plasma spray coated engine blocks and valves - Recent developments in auto body panel forming - Squeeze casting of pistons - aluminum composite brake rotors. Friction welding of dissimilar metal components.

4 Upton, Pressure Die Casting, Pergamon Press, 1985.
5 High Velocity Forming of metals, ASTME, Prentice Hall of India (P) Ltd., NewDelhi, 2010.

COURSE OUTCOMES (COs)	
CO1	The students should be able to familiarize on powder metallurgy technology
CO2	The students should be able to acquire the knowledge on forming process involved in various automotive components

CO3	The students should be able to obtain knowledge on casting & machining process of various automotive components
CO4	The students should be able to gain knowledge on various gears manufacturing process
CO5	The students should be able to expertise in recent trends of Automotive manufacturing

U18PEAU012	**AUTOMOTIVE POLLUTION AND CONTROL**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Engines				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To acquire knowledge about Emission formation and controls in automobiles.					

MODULE 1 – INTRODUCTION **9**

Vehicle population assessment in International, National and Metropolitan cities and contribution to pollution, effects on human health and environment, global warming, types of emission, transient operational effects on pollution. Emission Norms and Regularity Body – Challenges.

MODULE 2 – POLLUTANT FORMATION IN SI ENGINES **9**

Pollutant formation in SI Engines, mechanism of HC and CO formation in four stroke and two stroke SI engines. NOx formation in SI engines. Effects of design and operating variables on emission formation, Flame Quenching- Kinetic Effect- Mixture Strength- crevice effect-oil film HC. Source and Control of evaporative emission. Two stroke engine pollution.

MODULE 3- POLLUTANT FORMATION IN CI ENGINES **9**

Pollutant formation in CI engines. Smoke and particulate Formation in CI engines-Composition of particulates, soot structure- stoichiometric considerations, nucleation, growth and oxidation. Formation of NO and NO2 in CI engines, NO formation in premixed and diffusion combustion periods. Formation of HC in CI engines, undermining and over mixing. Effect of engine variables effects of design and operating variables on CI engine emissions.

MODULE 4- CONTROL OF SI AND CI ENGINES EMISSIONS **9**

Design of engine, optimum selection of operating variables for control of emissions, Crankcase and evaporative emission control, Thermal and catalytic reactors, Elements of catalytic reactors, catalysts and substrates, Cold start HC control. EGR, Lean de-NOx catalysts, water injection, NOx traps and SCR. Diesel particulate filters (DPF), DPF regeneration, and Secondary air injection. Fuel modifications. Two stroke engine pollution control.

MODULE 5–MEASUREMENT TECHNIQUES EMISSION STANDARDS AND TEST 9

Measurement of emissions, instrumentation for CO HC, NOx, PM. NDIR, FID, Chemiluminescent analyzers, Gas Chromatograph and Smoke meters. Noise and Vibration Measurement – Harshness. Emission standards, driving cycles - USA, Japan, Euro and India. Test procedures - ECE, FTP Tests. SHED Test - chassis dynamometers, dilution tunnels - BS VI Norms

3 Marco Nute- “Emissions from two stroke engines, SAE Publication - 2015.

COURSE OUTCOMES (COs)																
CO1	The students should be able familiarize the effect of various automotive emissions.															
CO2	The students should be able to gain Knowledge about the formation of various types of pollutants from SI and CI engines.															
CO3	The students should be able to acquire the significance of emission control techniques.															
CO4	The students should be able to familiarize the construction and working of emission measuring instruments.															
CO5	The students should be able to gain information on various emission standards and test procedures.															
Mapping of Course Outcomes with Program outcomes (POs)

U18PEAU013	**AUTOMOTIVE SENSORS AND ITS APPLICATIONS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Knowledge in electronics and engines				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To understand the importance and use of actuators, sensors and signal conditioning for automotive applications.					

MODULE 1 - INTRODUCTION **9**

Introduction to automotive sensors and instrumentation, Market perspective for sensors and instrumentation techniques. Sensor electronics and techniques. Overview of sensor measurements. Sensor linearization and characterization. Sensor classification. Signals and systems Sensor product selection guide.

MODULE 2 - SENSORS FOR ENGINES **9**

Sensors and interfacing- Pressure, position, flow, temperature, humidity, speed, acceleration, oxygen, torque, light, distance and level.

MODULE 3 – ACTUATORS **9**

Principles of actuation and control. DC motors, stepper motors. Relays and solenoids. Hydraulic and pneumatic actuators.

MODULE 4 - SENSORS FOR CHASSIS **9**

Sensors and interfacing techniques for Engine control, adaptive cruise control, braking control, traction control, steering and stability.

MODULE 5 - INTELLIGENT SENSORS **9**

Sensors for intelligent transport systems. Lighting, wipers, climate control and electronic displays. Sensors for occupant safety .The digital vehicle intelligent vehicle systems

COURSE OUTCOMES (COs)	
CO1	Familiarize on automotive instruments and sensor
CO2	Gain knowledge on the measurement of engine parameter by using sensor.
CO3	Acquire the concept on working of actuators.
CO4	Attain the knowledge on working of sensors.
CO5	Familiarize on application of intelligent sensors.
CO6	Familiarize on application of sensors for chassis

Mapping of Course Outcomes with Program outcomes (POs)

U18PEAU014	**PRODUCT DESIGN AND DEVELOPMENT**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – New Product Development, Process Planning and Control				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: The objective of the course is to impart knowledge on the strategies, processes and methods used for new-product development.					

MODULE 1 - ENGINEERING DESIGN PROCESS **9**

Need for developing products – the importance of engineering design – types of design –the design process – relevance of product lifecycle issues in design –designing to codes and standards- societal considerations in engineering design –generic product development process –various phases of product development-planning for products –establishing markets- market segments- relevance of market research. Introduction to Automotive design, History of Automotive design, Car design brands & brand values and Brand history and Styling DNA and Case studies.

MODULE 2 - BENCH MARKING **9**

Identifying customer needs –voice of customer –customer populations- hierarchy of human needs need gathering methods – affinity diagrams – needs importance- establishing engineering characteristics-competitive benchmarking- quality function deployment- house of quality- product design specification-case studies

MODULE 3 - CREATIVE DESIGN **9**

Creative thinking –creativity and problem solving- creative thinking methods- generating design concepts-systematic methods for designing –functional decomposition – physical decomposition – functional representation –morphological methods

MODULE 4 - PRODUCT DESIGN **9**

Decision making –decision theory –utility theory –decision trees –concept evaluation methods – Pugh concept selection method- weighted decision matrix –analytic hierarchy process –introduction to embodiment design –product architecture – types of modular architecture –steps in developing product architecture

MODULE 5 - PRODUCT DEVELOPMENT **9**

Industrial design –Advance product Quality plan (APQP) - human factors design –user friendly design – design for serviceability – design for environment – prototyping and testing – Production part approval process(PPAP) –Feedback assessment and Corrective action- cost evaluation

PROFESSIONAL ELECTIVE II

U18PEAU021	**AGILE MANUFACTURING (LEAN)**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Process Planning and Control, New Product Development, Lean Manufacturing				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To acquire knowledge in understanding the functional and competition behavior in manufacturing industries, Lean concepts, inventory management systems. And acquiring knowledge in industrial automation technique for shop floor control.					

MODULE 1 AGILE MANUFACTURING 9

Definition, business need, conceptual frame work, characteristics, and generic features. Enterprise, Strategies, integration of organization, workforce and technology, reference models, examples.

MODULE 2 INTEGRATION OF PRODUCT /PROCESS DEVELOPMENT 9

Principles, Robust design approach, Approaches to enhance ability in manufacturing, Role of QFD, Managing people in Agile organization, Approaches.

MODULE 3 APPLICATION OF IT/IS CONCEPTS IN AGILE MANUFACTURING 9

Strategies, Management of complexities and information. Flow, approaches, applications of multimedia to improve agility in manufacturing, system concepts.

MODULE 4 AGILE SUPPLY CHAIN MANAGEMENT 9

Principles, IT/IS concepts in supply chain management, enterprise integration and management in agile manufacturing, concepts, Agility, Adaptability and learners – comparison of concepts.

CAPP for Agile Manufacturing, Aggregate capacity planning and production line design / redesign in Agile manufacturing, Cellular manufacturing, concepts, examples.

MODULE 5 DESIGN OF SKILL & KNOWLEDGE 9

Enhancing technology for Machine tool system, Resumption of design requirement geometry, definition, methods, decision support for selection of cutting parameters, design enhancements, parametric approach only.

TEXTBOOKS

1. Gunasekaran A, "Agile Manufacturing, 21st Strategy Competitiveness Strategy", Elsevier Publications, 2001.
2. Montgomery J C and Levine L O, "The Transition to Agile Manufacturing – Staying Flexible for Competitive Advantage", ASQC Quality Press, Wisconsin, 1995.

REFRENCE BOOKS

2. Brian H Maskell, "Software and the Agile Manufacturer, Computer Systems and World Class Manufacturing, Productivity Press, 1993

COURSE OUTCOMES (COs)																
CO1	The manufacturing system and operation in terms of economic and technology.															
CO2	The manufacturing categories, material handling and manufacturing product															
CO3	The industrial automation levels and its functional requirement															
CO4	The importance of supply chain management and its vital role in making the system Lean															
CO5	The importance of Agility in the manufacturing industry and able to differentiate Lean Versus Mass Versus Agile manufacturing															
CO6	Ability to develop design skills and knowledge															
Mapping of Course Outcomes with Program outcomes (POs)

	ALTERNATE FUELS AND ENERGY SYSTEMS	L	T	P	C
U18PEAU022	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Fuels and Lubricants, Fuels and Combustion, Engineering Chemistry				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To acquire the knowledge of alternate fuels, hybrid and electric vehicles					

MODULE 1 – INTRODUCTION **9**

Need for alternate fuel- Evolution- Availability and properties of alternate fuels, general use of alcohols, LPG, Hydrogen, Ammonia, CNG and LNG, Vegetable oils, water and biogas, Merits and demerits of various alternate fuels. Government norms and Subsidiary. Introduction to alternate energy sources. Like EV, Hybrid, Semi-Hybrid, Fuel cell, Nuclear Cars and Solar car,

MODULE 2 – ALCOHOLS **9**

Availability –Source- Types of Alcohols- Properties as engine fuel – Octane Number- Self Ignition Temperature- Calorific Value. Fuel and Engine Modification. Blending with diesel and gasoline- Dual Fuel Operation- Energy share Calculation. Performance in SI engine- Combustion characteristics in CI engines- Emission characteristics. Problems of using alcohols in diesel engine. DME, DEE properties- storage, Performance in SI & CI Engines.

MODULE – 3 NATURAL GAS, LPG, HYDROGEN AND BIOGAS **9**

Availability of CNG, properties, Difficulties of using gaseous fuel in IC engines – Modification required using in engines, Performance and emission characteristics of CNG using LPG in SI & CI engines, Performance and emission of LPG. Hydrogen; Storage and handling, properties – flame speed- flammability. Performance emission and Combustion behavior of hydrogen in CI engine - safety aspects and design of gaseous fuel induction system.

MODULE – 4 VEGETABLE OILS **9**

Design of engine, optimum selection of operating variables for control of emissions, Crankcase and evaporative emission control, Thermal and catalytic reactors, Elements of catalytic reactors, catalysts and substrates, Cold start HC control. EGR, Lean de-NOx catalysts, water injection, NOx traps and SCR. Diesel particulate filters (DPF), DPF regeneration, and Secondary air injection. Fuel modifications. Two stroke engine pollution control.

MODULE 5 – ELECTRIC, HYBRID, FUEL CELL AND SOLAR CARS **9**

Need of E-Vehicle. Layout of an electric vehicle, Advantage and limitations, Specifications, System components, Electronic control system, High energy and power density batteries,

battery design - Charging Station – Cost analysis. Hybrid vehicle – type- advantages and limitations. Fuel cell vehicles, Solar powered vehicles.

TEXT BOOKS

COURSE OUTCOMES (COs)	
CO1	The students should be able to familiarize on various alternate fuels.
CO2	The students should be able to gain knowledge on the details of methanol and ethanol usage, storage, chemical structure.
CO3	The students should be able to acquire knowledge of natural gas, LPG, hydrogen and biogas.
CO4	The students should be able to attain the performance characteristics of various vegetable oils.
CO5	The students should be able to familiarize with electric and hybrid vehicles.
CO6	The students should be able to familiarize with solar cars

U18PEAU023	**SPECIAL TYPE OF VEHICLES**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE: The main objective of this course is to impart knowledge earth moving and constructional equipments, power train concepts, sub systems of farm equipments, military and combat vehicles, special purpose vehicles for industrial applications will be taught to the students.

MODULE 1 EARTH MOVING AND CONSTRUCTIONAL EQUIPMENTS 11

Construction layout, capacity and applications of earthmovers like dumpers, front-end loaders, bulldozers, excavators, backhoe loaders, scrappers, motor graders, and Water sprinklers etc. criteria for selection of prime mover fro dumpers and front end loaders based on vehicle performance characteristics.

MODULE 2 POWER TRAIN CONCEPTS 7

Engine – converter match curves. Hauling & cyclic type transmissions. Selection criteria for universal joints. Constructional details of steerable and drive axles of dumper.

MODULE 3 SUB SYSTEMS OF STV 11

Brake system and actuation – OCDB and dry disc caliper brakes. Body hoist and bucket operational hydraulics. Hydro-pneumatic suspension cylinders. Power steering system. Kinematics for loader and bulldozer operational linkages. Safety features, safe warning system for dumper. Tractor controls and the starting of the tractor engines – Basic notions and definition – Engine cycles – Operation of multicylinder engines – General engine design – Basic engine performance characteristics.

MODULE 4 SPECIAL PURPOSE VEHICLES FOR INDUSTRIAL APPLICATION 8

Cranes- Types, Constructional features, capacity and stability, Vibratory compactors, Material Handling vehicles- Forklift- Tippers-Others.

MODULE 5 FARM EQUIPMENTS, MILITARY AND COMBAT VEHICLES 8

Ride and stability characteristics, power take off, special implementations. Special features and constructional details of tankers, gun carriers and transport vehicles. Classification of tractors – Main components of tractor – Safety rules.Working attachment of tractors – Farm equipment – Classification – Auxiliary equipment – Trailers and body tipping mechanism.

COURSE OUTCOMES (COs)	
CO1	The students should be able to Familiarize with the construction and working of various Earth moving equipment
CO2	The students should be able to Acquire the knowledge on construction and working of various constructional equipment
CO3	The students should be able to Gain knowledge on the construction and working of Farm equipment
CO4	The students should be able to Familiarize with the working of Industrial equipment
CO5	The students should be able to Develop the knowledge on working of Military equipment
CO6	The students should be able to Develop the knowledge on working of combat vehicles

U18PEAU024	**AUTOMOTIVE STANDARDS AND REGULATIONS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Safety, Transport Management and Road Safety Engineering				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To familiarize the students about various automotive standards and regulations.					

MODULE 1 GENERAL AUTOMOTIVE STANDARDS AND REGULATIONS 9

Procedure For Type Approval And Certification Of Vehicles For Compliance To Central Motor Vehicles Rules - Speed Limitation Devices And Its Specifications - Arrangement Of Foot Controls Of Vehicles - Starting Grade-Ability - Method Of Measurement And Requirements - Protective Helmets For Motor Cycle Riders - Protective Helmets And Visors For Motorcycle Riders – Specification - Two Wheeled Vehicles – Location, Identification And Operation Of Controls, Tell-Tales And Indicators - Procedure For Type Approval And Establishing Conformity Of Production For Safety Critical Components - NCAP And BNVSAP Ratings, Requirements For School Buses.

MODULE 2 COLLISION SAFETY STANDARDS 9

Bumper Fitment On Vehicles – Test Methods - Safety Belt Assemblies, Safety Belt Anchorages – Specifications - Seats, Their Anchorages And Head Restraints Specifications, Survival Space For The Protection Of The Occupants - Requirements For Behavior Of Steering Mechanism Of A Vehicle In A Head-On Collision - Procedure For Determining The "H" Point And The Torso Angle, In Seating Positions Of Motor Vehicles - Requirements For The Protection Of The Occupants In The Event Of An Offset Frontal Collision - Approval Of Vehicles With Regards To The Protection Of The Occupants In The Event Of A Lateral Collision - Requirements For The Protection Of Pedestrian And Other Vulnerable Road Users In The Event Of A Collision With A Motor Vehicle - Requirements For The Protection Of Fuel System In The Event Of Rear Impact Of A Motor Vehicle.

MODULE 3 AUTOMOTIVE ELECTRICAL STANDARDS 9

Testing Procedure And Requirements For Headlamp Beam - Approval Of Front Position Lamps, Rear Position Lamps, Stop Lamps, Direction Indicators, Rear Registration Plate Illuminating Devices And Reversing Lamp - Provisions Concerning The Approval Of Headlamps Equipped With Gas Discharge Light Sources - Provisions Concerning The Approval Of Light Emitting Diode (LED) Light Sources For Use In Approved Lamp Units -

Lighting, Signaling & Indicating Systems On Motor Vehicles - Performance Requirements Of Lighting And Light-Signaling Devices - Testing Standards For Wind Screen Wiping System - Horn Installation Requirement - Electronic Stability Control Systems.

MODULE 4 ELECTRIC AND HYBRID VEHICLE STANDARDS 9

Battery Operated Vehicles – Requirements For Construction And Functional Safety - Measurement Of Electrical Energy Consumption - Method Of Measuring The Range - Measurement Of Net Power And The Maximum 30 Minute Power And Speed - Electric Power Train - Requirements For Construction And Functional Safety - CMVR Type Approval For Hybrid Electric Vehicles, CMVR Type Approval Of Vehicles Retrofitted With Hybrid ElectricSystem.

MODULE 5 CNG, LPG VEHICLES AND ENGINE EMISSION STANDARDS 9

Safety And Procedural Requirements For Type Approval Of CNG Operated Vehicles and LPG Operated Vehicles - Code Of Practice For Use Of LPG Fuel In Internal Combustion Engine To Power 4 Wheeled Vehicles, 2 & 3 Wheeled Vehicles, Bharath And Euro Emission Norms.

COURSE OUTCOMES (COs)															
CO1	Gain knowledge about basic automobile standards and regulations														
CO2	Gain knowledge about standards for safety during collision.														
CO3	Understand the various standards used for automotive electrical systems.														
CO4	Gain knowledge about the regulations used for hybrid and electric vehicles.														
CO5	Gain knowledge about the regulations used for gaseous fuel vehicles.														
CO6	Gain knowledge about the engine emission standards

PROFESSIONAL ELECTIVE III

U18PEAU031	**FLEXIBLE MANUFACTURING SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE: At the end of this course the student should be able to understand

- Modern manufacturing systems
- To understand the concepts and applications of flexible manufacturing systems

MODULE 1 PLANNING, SCHEDULING AND CONTROL OF FLEXIBLE MANUFACTURING SYSTEMS 9

Introduction to FMS– development of manufacturing systems – benefits – major elements – types of flexibility – FMS application and flexibility –single product, single batch, n – batch scheduling problem – knowledge based scheduling system.

MODULE 2 COMPUTER CONTROL AND SOFTWARE FOR FLEXIBLE MANUFACTURING SYSTEMS 9

Introduction – composition of FMS– hierarchy of computer control –computer control of work center and assembly lines – FMS supervisory computer control – types of software specification and selection – trends.

MODULE 3 FMS SIMULATION AND DATA BASE 9

Application of simulation–model of FMS–simulation software – limitation – manufacturing data systems–data flow–FMS database systems–planning for FMS database.

MODULE 4 GROUP TECHNOLOGY AND JUSTIFICATION OF FMS 9

Introduction – matrix formulation – mathematical programming formulation –graph formulation – knowledge based system for group technology – economic justification of FMS- application of possibility distributions in FMS systems justification.

MODULE 5 APPLICATIONS OF FMS AND FACTORY OF THE FUTURE 9

FMS application in machining, sheet metal fabrication, prismatic component production – aerospace application – FMS development towards factories of the future – artificial intelligence and expert systems in FMS – design philosophy and characteristics for future.

TEXTBOOKS

1. Jha, N.K. “Handbook of flexible manufacturing systems”, Academic Press Inc.,1991.

COURSE OUTCOMES (COs)															
CO1	Gain knowledge about Scheduling and Planning in FMS														
CO2	Gain knowledge about Computer Control System with its function in FMS														
CO3	Understand the FMS simulation and Database.														
CO4	Gain knowledge about the Group technology and Justification of FMS														
CO5	Gain knowledge on applications of FMS														
CO6	Gain knowledge on applications of FMS in future

U18PEAU032	COMBUSTION ENGINEERING	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Thermodynamics and Thermal Engineering				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To understand and analyze the combustion with emphasis on engineering applications.					

MODULE 1 CHEMICAL REACTIONS **9**

Fuels and combustion, Theoretical and actual combustion processes, Enthalpy of formation and enthalpy of combustion, First law analysis of Reacting systems, Adiabatic flame temperature, Entropy change of reacting systems, Second law analysis of reacting systems, problems

MODULE 2 COMBUSTION OF GASEOUS AND VAPORIZED FUELS **9**

Review of types of fuels, Types of flames, Energy balance and furnace efficiency, Burner type, Emissions from gas-fired furnaces, Emissions control, Chamber design, Detonation

MODULE 3 COMBUSTION OF LIQUID FUELS **9**

Spray combustion in furnace, spray formation and droplet behaviour, Gas turbine operating parameters, combustor design, ignition delay, and detonation of liquid fuel sprays

MODULE 4 COMBUSTION OF SOLID FUELS **9**

Drying of solid fuels, devolatilization of solid fuels, stoker-fired boilers, Refuse and biomass fired boilers, Pulverized coal-burning systems, Pulverized coal combustion, Emission from pulverized coal, Problems

MODULE 5 FLUIDIZED BED COMBUSTION **9**

Fluidization fundamentals, combustion in bubbling bed, atmospheric fluidized bed combustion systems, circulating fluidized beds, pressurized fluidized bed combustion, problems.

TEXTBOOK

1. Yunus.A.Cengel- A textbook of Thermodynamics

REFERENCE BOOKS

1. Gary.L.Borman, Combustion Engineering-McGraw Hill international Edition,1998
2. Roger.A.Strehlow-Combustion fundamentals- McGraw Hill international Edition,1989.

COURSE OUTCOMES (COs)	
CO1	Understand various types of fuels and its properties

CO2	Understand the concept of gaseous fuels															
CO3	Will able to differentiate gaseous and liquid fuels															
CO4	Will understand the concept of solid fuels															
CO5	Student understands the fundamentals in combustion of fuels.															
CO6	Student understands the fundamentals in FBD.															
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low																
1	COs/POs	**a**	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**	**PSO1**	**PSO2**	**PSO3**

	CO5	M	H	H	L		L									H
	CO6	H				M								H	H	H
3	Category	Professional Electives (PE)														
4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18PEAU033	**AUTOMOTIVE AIR-CONDITIONING SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: At the end of the course, the students will be able to understand the components of the automotive air-conditioning and their functions and the latest developments in this field.					

MODULE 1 AUTOMOTIVE AIRCONDITIONING FUNDAMENTALS 9

Purposes of Heating, Ventilation and Air Conditioning- Environmental Concerns- Ozone layer depletion- Location of air conditioning components in a car – Schematic layout of a vehicle refrigeration system. Psychrometry – Basic terminology and Psychrometric mixtures- Psychrometric Chart- Related problems

MODULE 2 AUTOMOTIVE COOLING AND HEATING SYSTEM 9

Vehicle Refrigeration System and related problems- Fixed thermostatic and Orifice tube system- Variable displacement thermostatic and Orifice tube system- Vehicle air conditioning operation

Types of compressor- Compressor Clutches- Compressor Clutch electrical circuit- Compressor lubrication- Condensers- Evaporators- Expansion devices- Evaporator temperature and pressure controls- receiver-drier- Accumulators- refrigerant hoses, Connections and other assemblies- Heating system

MODULE 3 AIR-CONDITIONING CONTROLS, DELIVERY SYSTEM AND REFRIGERANTS 9

Types of Control devices- Preventing Compressor damage- Preventing damage to other systems- Maintaining driveability- Preventing Overheating

Ram air ventilation- Air delivery Components- Control devices- Vacuum Controls

Containers – Handling refrigerants – Discharging, Charging & Leak detection – Refrigeration system diagnosis – Diagnostic procedure – Ambient conditions affecting system pressures.

MODULE 4 AUTOMATIC TEMPERATURE CONTROL 9

Different types of sensors and actuators used in automatic temperature control- Fixed and variable displacement temperature control- Semi Automatic- Controller design for Fixed and variable displacement type air conditioning system

MODULE 5 SYSTEM SERVICING AND TESTING 9

Special tools for servicing vehicle air conditioning – Diagnosing components and air conditioning systems- Diagnosing cooling system- Air delivery system- Automatic temperature Control system diagnosis and service

TEXT BOOKS:

1. Warren Farnell and James D.Halderman, "Automotive Heating, Ventilation, and Air Conditioning systems", Classroom Manual, Pearson Prentice Hall, 2004
2. William H Crouse and Donald L Anglin, "Automotive Air conditioning", McGraw Hill Inc., 1990.

REFERENCES:

1. Goings,L.F., "Automotive Air Conditioning", American Technical services, 1974.
2. Mitchell Information Services, Inc., "Mitchell Automatic Heating and Air Conditioning Systems", Prentice Hall Inc., 1989.
3. McDonald,K.L., "Automotive Air Conditioning", Theodore Audel series, 1978.
4. Paul Weisler, "Automotive Air Conditioing", Reston Publishing Co. Inc., 1990.

COURSE OUTCOMES (COs)																
CO1	To Understand the basic concepts and fundamentals of Automotive Air-conditioning. .Systems															
CO2	To Know about Automotive Cooling and Heating System.															
CO3	To Understand air-conditioning controls delivery system and refrigerants.															
CO4	To Gain Knowledge about automatic temperature control.															
CO5	To Know and to understand system servicing And testing.															
CO6	To learn about diagonistics of air-conditioning system															
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

3	Category	Professional Electives (PE)														
4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18PEAU034	**AUTOMOTIVE STYLING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Chassis, Vehicle Design, Automotive Body Building Technology and Vehicle Body Engineering				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To learn about how to design and make styling of automotive bodies using					

software.

BODY AND CHASSIS SYSTEMS **9**

Complete Body-In-White, Floor Pans, Underbody Assemblies, Door/Hood/Deck Assemblies, Roof Panels ,Fender/Quarter Panels , Tailgate/Lift gate Assemblies ,A, B, C and D Pillars , Bumper Beams, Door Intrusion Systems, Oil Strainers, Heat Shields, Cross member Assemblies, Radiator Supports Shock Towers, Engine Cradles, Front and Rear Sub-Frame Assemblies, Front and Rear Suspension Modules, Control Arms, Frame Rails, Full Frame Assemblies

EXTERIOR SYSTEMS **9**

Front and Rear Fascias, Energy Management Systems , Greenhouse & Sealing Systems-Backlit Moldings , Belt and Windshield Mouldings,Decklid and Pillar Appliqués, Door Surround Moldings Roof Drip Mouldings,Cowl Screens ,Window Surround Modules, Door Seals ,Inner & Outer Belt Seals Glass Run Channels, Side Door, Pop-Out Window, Lift gate Seals, Complete Convertible Seating System-Backlights and Quarter Windows, Exterior Trim- Body Side Moldings and Claddings , Wheel Opening Moldings, Rocker Panels, Stone Guards/Mud Flaps, Spoilers and Grilles, Vehicle Enhancement Packages-Ground Effects, Roof Racks, Running Boards, Plastic Body Panels-Vertical Body Panels, Front and Truck side Fenders, Door Panels, Quarter Panels

INTERIOR SYSTEMS **9**

Door Modules-Complete Door Modules, Sealed Modules, Hardware Trim Modules, Integrated Trim Modules, Structural Plastic Modules, Lift gate and Tailgate Modules, Mid-Door Modules Window Systems- Single and Dual Rail Systems, Cable and Drum Systems ,Arm and Sector Systems ,Quarter Systems, Rear Window Systems, Integrated Electronics, Power Closer System-Power Sliding Doors ,Power Lift gates, Integrated Electronics, Obstacle Detection, Driver Controls- Adjustable Pedals, Fixed Pedals, Park Brakes

LATCHING SYSTEMS AND HANDLE ASSEMBLIES **9**

Side Door Latches, Sliding Door Latches, Lift gate Latches, Hood Latches, Tailgate, Deck lid Latches, Actuator Assemblies, Inside Handles, Outside Handles

SEATING AND HARDWARE SYSTEMS **9**

In-Vehicle Stowable Seating, Stow-in-Floor, Stow-to-Floor, Other Specialty Options, Modular Seat Assemblies, Integrated Child Safety Seats , Integrated Occupant Safety Restraints, Trim Covers, Specialty Mechanisms for In-Vehicle Seat , Stowage , Stow-in-Floor, Stow-to-Floor, Other Specialty Options , Manual Adjusters, Seat Height Adjusters, EZ Entry Mechanisms, Fold & Tumble TM Mechanisms Manual Recliners, Fold Flat Mechanisms, Specialty Latches, Spring Suspension Systems , Risers , Power Recliners, Power Adjusters

TEXT BOOKS:

1. Herb Adams, "Chassis Engineering", HP Books-Penguin Publishers, 1993.
2. Martin W. Stockel &Martin T. Stockel, “Auto mechanics fundamentals", Good heart-Wilcox Co., 1982.
3. William Crouse and Donald Anglin, “Automotive Mechanics- SIE", Tata McGraw-Hill Education, 1960

COURSE OUTCOMES (COs)																
CO1	To Understand the basic concepts and fundamentals of Automotive Chassis and Body Design															
CO2	To Understand the basic concepts and fundamentals of Exterior Systems in Automobile															
CO3	To Understand the basic concepts and fundamentals of Interior Systems in Automobile															
CO4	To Gain Knowledge about Latching System and Door Handle Assemblies															
CO5	To Know and to understand Seating system and its Hardware technology															
CO6	To Know and to understand latching system and its Hardware technology															
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low																
1	COs/Pos	**a**	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**	**PSO1**	**PSO2**	**PSO3**

PROFESSIONAL ELECTIVE – IV

U18PEAU041	**Artificial Intelligence**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To learn about basic representation knowledge of AI					

MODULE –1: INTRODUCTION TO Al AND PRODUCTION SYSTEMS 9

Introduction to AI-Problem formulation, Problem Definition -Production systems, Control strategies, Search strategies. Problem characteristics, Production system characteristics - Specialized production system- Problem solving methods - Problem graphs, Matching, Indexing and Heuristic functions -Hill Climbing-Depth first and Breath first, Constraints satisfaction – Related algorithms, Measure of performance and analysis of search algorithms

MODULE –2: REPRESENTATION OF KNOWLEDGE 9

Game playing - Knowledge representation, Knowledge representation using Predicate logic, Introduction to predicate calculus, Resolution, Use of predicate calculus, Knowledge representation using other logic-Structured representation of knowledge.

MODULE – 3: KNOWLEDGE INFERENCE **9**

Knowledge representation -Production based system, Frame based system. Inference – Backward chaining, Forward chaining, Rule value approach, Fuzzy reasoning - Certainty factors, Bayesian Theory-Bayesian Network-Dempster - Shafer theory

MODULE – 4: PLANNING AND MACHINE LEARNING **9**

Basic plan generation systems - Strips -Advanced plan generation systems – K strips – Strategic explanations -Why, Why not and how explanations. Learning- Machine learning, adaptive Learning.

MODULE –5: EXPERT SYSTEMS **9**

Expert systems - Architecture of expert systems, Roles of expert systems - Knowledge Acquisition – Meta knowledge, Heuristics. Typical expert systems - MYCIN, DART, XOON, Expert systems shells.

TEXT BOOKS

1. Kevin Night and Elaine Rich, Nair B., "Artificial Intelligence (SIE)", Mc Graw Hill- 2018.
2. Stuart Russel and Peter Norvig "AI – A Modern Approach", 2 nd Edition, Pearson Education 2010.

REFERENCE BOOKS

Deepak Khemani "Artificial Intelligence", Tata Mc Graw Hill Education 2013

COURSE OUTCOMES (COs)																
CO1	Study the concepts of Artificial Intelligence.															
CO2	Learn the methods of solving problems using Artificial Intelligence															
CO3	Introduce the concepts of Expert Systems and machine learning															
CO4	Identify problems that are amenable to solution by AI methods															
CO5	Formalize a given problem in the language/framework of different AI methods.															
CO6	Formalize typical expert systems - MYCIN, DART, XOON, Expert systems shells.															
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18PEAU042	**FUELS AND LUBRICANTS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – IC Engines, Automotive Fuels				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE: To understand the properties of fuels and lubricants for the design and operation of the I.C engines.

MODULE 1 MANUFACTURE OF FUELS AND LUBRICANTS 9

Structure of petroleum, refining process, fuels, thermal cracking, catalytic cracking, polymerization, alkylation, isomerisation, blending, products of refining process. Manufacture of lubricating oil base stocks, manufacture of finished automotive lubricants.

MODULE 2 THEORY OF LUBRICATION 9

Engine friction: introduction, total engine friction, effect of engine variables on friction, hydrodynamic lubrication, elasto hydrodynamic lubrication, boundary lubrication, bearing lubrication, functions of the lubrication system, introduction to design of a lubricating system.

MODULE 3 LUBRICANTS 9

Specific requirements for automotive lubricants, oxidation deterioration and degradation of lubricants, additives and additive mechanism, synthetic lubricants, classification of lubricating oils, properties of lubricating oils, tests on lubricants. Grease, classification, properties, test used in grease.

MODULE 4 PROPERTIES AND TESTING OF FUELS 9

Thermo-chemistry of fuels, properties and testing of fuels, relative density, calorific value, flash point, fire point, distillation, vapour pressure, spontaneous ignition temperature, viscosity, pour point, flammability, ignitability, diesel index, API gravity, aniline point, carbon residue, copper strip corrosion etc.

MODULE 5 COMBUSTION & FUEL RATING 9

SI Engines – flame propagation and mechanism of combustion, normal combustion, knocking, octane rating, fuel requirements. CI Engine, mechanism of combustion, diesel knock, cetane rating, fuel requirements. Additive - mechanism, requirements of an additive, petrol fuel additives and diesel fuel additives – specifications of fuels.

5. Raymond. C. Gunther, "Lubrication", Chilton Book Co., 1971

COURSE OUTCOMES (COs)	
CO1	The Students should know about manufacture of fuels and lubricants
CO2	To Know and Understand about theory of lubrication
CO3	The Students should know about lubricants
CO4	The Students should know about properties and testing of fuels
CO5	The Students should know about combustion & fuel rating
CO6	The Students should know about additive mechanism

Mapping of Course Outcomes with Program outcomes (POs)

	TWO AND THREE WHEELERS	**L**	**T**	**P**	**C**
U18PEAU043	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Engines and Auxiliaries				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: The aim of this course is to make the students to know and understand the constructional details operating characteristics and vehicle design aspects					

MODULE 1 THE POWER UNIT **9**

Two stroke and four stroke SI & CI engine Construction and Working, merits and demerits, Symmetrical and unsymmetrical valve & port timing diagrams. Scavenging process.

MODULE 2 FUEL AND IGNITION SYSTEMS **9**

Fuel system – Different circuits in two wheeler fuel systems, fuel injection system. Lubrication system, Ignition systems - Magneto coil and battery coil spark ignition system, Electronic ignition System, Starting system - Kick starter system – Self-starter system. Recent technologies.

MODULE 3 CHASSIS AND SUB-SYSTEMS **9**

Main frame for two and three wheelers, its types, Chassis and different drive systems for two wheelers, Single, multiple plates and centrifugal clutches, Gear box and its and various gear controls in two wheelers. Front and rear suspension systems. Shock absorbers. Panel meters and controls on handle bar, Freewheeling devices

MODULE 4 BRAKES AND WHEELS **8**

Drum brakes & Disc brakes Construction and Working and its Types, Front and Rear brake links lay-outs. Brake actuation mechanism. Spoked wheel, cast wheel, Disc wheel & its merits and demerits. Tyres and tubes Construction & its Types. Steering geometry.

MODULE 5 TWO & THREE WHEELERS – CASE STUDY **10**

Case study of Sports bike, Motor cycles, Scooters and Mopeds - Auto rickshaws, Pick up van, Delivery van and Trailer. Servicing and maintenance. Recent developments.

5. The Cycle Motor Manual, Temple Press Ltd., London, 1990.

COURSE OUTCOMES (COs)																
CO1	To Know and to Understand the Power unit of Two and Four stroke engines															
CO2	To Know about fuel and ignition systems															
CO3	To Know and understand about chassis and sub-systems															
CO4	To Understand the systems of brakes and wheels															
CO5	To Know and to evolve two & three wheelers with their case study															
CO6	To Know and understand steering geometry															
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low																
1	COs/POs	**a**	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**	**PSO1**	**PSO2**	**PSO3**
2	CO1	H	H				H			M			L	H	H	H
	CO2	M	H				H				M				H	H
	CO3	H	H	H	M					H		M	H	H	H	H
	CO4	H	H	M	M		L	M					M	M		H
	CO5	M	H	H	L		L			L					H	H
	CO6	H		M											H	
3	Category	Professional Electives (PE)														
4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18PEAU044	**AUTOMOTIVE INSTRUMENTATION AND EMBEDDED SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Electrical and Electronics, Electronics and Instrumentation				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To attain the knowledge of instrumentation and embedded system					

MODULE-1 MEASUREMENT CHARACTERSTICS 9

Instrument Classification, Characteristics of Instruments - Static and dynamic, experimental error analysis, Systematic and random errors, Statistical analysis, Uncertainty, Experimental planning and selection of measuring instruments, Reliability of instruments

MODULE -2 AUTOMOTIVE INSTRUMENTATION 9

Modern automotive instrumentation - computerized instrumentation system, multiplexing, sampling and advantages - Measurements - fuel quality, coolant temperature, oil pressure vehicles speed, Display devices - LED, LCD, VFD, CRT and types, CAN network, the glass cockpit and information system. On-board diagnostics - fault code displays. Off board diagnostics - engine data display, expert system occupant protection system - Airbag deployment system security and warning systems.

MODULE – 3 MEASUREMENT ANALYSIS 9

Chemical, thermal, magnetic and optical gas analyzers, measurement of smoke, dust and moisture, gas chromatography, spectrometry, measurement of pH, Review of basic measurement techniques.

MODULE – 4 INTRODUCTION TO EMBEDDED SYSTEM 9

Introduction to functional building blocks of embedded systems - Register, memory devices, ports, timer, interrupt controllers using circuit block diagram representation for each categories –Devices & buses for devices network - serial communication using I2C, CAN, USB buses – parallel communication using ISA, PCI - device drivers in a system - Serial port & parallel port.

MODULE -5 REAL TIME OPERATING SYSTEM (RTOS) 9

Introduction to basic concepts of RTOS, Basics of real time & embedded system operating systems, RTOS - Interrupt handling, task scheduling; embedded system design issues in system development process - Action plan, use of target system, emulator, use of software tools

TEXT BOOKS

1 WilliamB.Riddens - Understanding Automotive Electronics, 5th edition- Butter worth Heinemann, Woburn- 2015

2 Rajkamal, 'Embedded System - Architecture, Programming, Design', Tata McGraw Hill, 2013.

3 Daniel W. Lewis 'Fundamentals of Embedded Software', Prentice Hall of India, 2014.

4 Holman, J.P., Experimental methods for engineers, McGraw-Hill, 2013

5 Raman, C.S., Sharma, G.R., Mani, V.S.V., Instrumentation Devices and Systems, TataMcGraw

COURSE OUTCOMES (COs)																
CO1	Familiarize on measurement characteristics															
CO2	Acquire the knowledge on working of automotive instruments															
CO3	Gain knowledge on measurement analysis															
CO4	Develop the knowledge on embedded systems															
CO5	Attain the knowledge on real time operating system(RTOS)															
CO6	Attain the knowledge on airbag development system															
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

PROFESSIONAL ELECTIVE – V

	ROBOTICS FOR AUTOMOBILE ENGINEERS	L	T	P	C
U18PEAU051	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Mechatronics, Robot Engineering, Applied Hydraulic and Pneumatics				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE: The main objective of this course is to impart knowledge in introduction to robot application, end effectors and sensors, robot cell design, robot programming, industrial applications will be taught to the students.

MODULE 1 INTRODUCTION TO ROBOT APPLICATION 9

Basic concepts - Robot anatomy - Manipulators - kinematics: Forward and inverse kinematics - Precision movement, robot specifications and Work volume, Types of Robot drives - Basic robot motions - Point to point control, continuous path control. Robot control - unit control system concept - servo and non-servo control of robot joints, adaptive and optimal control.

MODULE 2 END EFFECTORS AND SENSORS 9

End effectors - classification - mechanical, magnetic, vacuum and adhesive gripper - gripper force analysis and design. Sensor devices, Types of sensors - contact, position and displacement sensors, Force and torque sensors - Proximity and range sensors - acoustic sensors Robot vision systems - Sensing and digitizing - Image processing and analysis.

MODULE 3 ROBOT CELL DESIGN 9

Robot work cell design and control – Safety in Robotics – Robot cell layouts – Multiple Robots and machine interference – Robot cycle time analysis.

MODULE 4 ROBOT PROGRAMMING 9

Robot language classification - programming methods - off and on line programming - Lead through method - Teach pendent method - VAL systems and language, simple program.

MODULE 5 INDUSTRIAL APPLICATIONS 9

Application of robots - Material handling - Machine loading and unloading, Assembly, Inspection, Welding, Spray painting, Mobile robot, Microbots-Recent developments in robotics-safety considerations.

TEXT BOOKS:

COURSE OUTCOMES (COs)																
CO1	To learn the detailed study of introduction to robot application															
CO2	To learn the detailed study of end effectors and sensors															
CO3	To learn the detailed study of robot cell design															
CO4	To learn the detailed study of robot programming															
CO5	To learn the detailed study of industrial applications (welding techniques)															
CO6	To learn the detailed study of industrial applications (machine loading & unloading)															
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEAU052	SIMULATION OF IC ENGINES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Automotive Engines				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: The main objective of this course is to impart knowledge in introduction, adiabatic flame temperature, spark ignition engines, si engine simulation with adiabatic combustion, si engine simulation with gas exchange process will be taught to the students.					

MODULE 1 INTRODUCTION 8

Simulation, advantages of computer simulation, step – by – step approach, reactive processes, heat reaction, measurement of URP, measurement of HRP.

MODULE 2 ADIABATIC FLAME TEMPERATURE 8

Introduction, complete combustion C/H/N/O/ systems, constant – volume adiabatic combustion, constant – pressure adiabatic combustion, calculation of adiabatic flame temperature, isentropic changes of state.

MODULE 3 SPARK IGNITION ENGINES 9

Introduction, Basic details and nomenclature, cylinder pressure indicator diagram, indicated power, brake power, SI Engine simulation with air as working medium, deviation between actual and ideal cycle.

MODULE 4 SI ENGINE SIMULATION WITH ADIABATIC COMBUSTION 10

Introduction, Engine details, temperature drop due to fuel vaporization, full throttle operation, work output and efficiency calculation, part-throttle operation, engine performance at part throttle, super charged operation, SI Engines simulation with progressive combustion.

MODULE 5 SI ENGINE SIMULATION WITH GAS EXCHANGE PROCESS 10

Introduction, gas exchange process, Heat transfer process, friction calculation, compression of simulated values, validation of the computer code, engine performance simulation, pressure crank angle diagram, brake power, brake thermal efficiency, effect of speed on performance, simulation of two stroke SI Engine.

U18PEAU053	**TYRE TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Materials, Rubber Technology, Modern Manufacturing Process				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: The main objective of this course is to impart knowledge infabric preparation, calendaring, thread extrusion and bead construction, tyre building, green tyre preparation & curing will be taught to the students.					

MODULE 1 FABRIC PREPARATION 9

Fabrics of the Tyre Industry: Cotton, Rayon, Nylon & steel cords – manufacture, construction – styles and presentations. Bonding methods – Fabric bonding necessities of stronger fabrics leading to bonding methods developments. Wet & dry bonding systems – dip and hot stretch process for Nylon. REL-VP latex systems – and parameters for dip & hot stretch process for

Nylon. Modified surface treatment needed for polyesters & glass fabric - Metal coating for steel cord. Recent developments in Radical Tyre fabrics – Aromatic Nylon (Kevlar) and other special fabric reinforcement systems and their use - Testing of dipped fabrics 'U', 'H' and other tests. Dip pick up and the relation to adhesion etc.

MODULE 2 CALENDERING 9

Calendering process: 3 and 4 roll calenders. Skimming & frictioning process preparation of bead wrapper and chaffer-on fabrics on 3 roll calenders. Topping process on calendar - Limitation of 3 roll calenders and advantages of 4 roll calenders-process control aspects – economics - Relation between ends per inch and calendering process. Inner, outer and breaker fabrics. Compound fabric ratios and compound design consideration for different styles of fabrics - Defects of calendered fabrics and their remedies. Parameters for scrap control in fabric processes in the tyre industry requirement of total quality control involving fabric supplier's dipping, calendering and bias cutting operations. Economics of fabric usage.

MODULE 3 THREAD EXTRUSION AND BEAD CONSTRUCTION 9

Basic concepts of Extrusion. Die swell & shrinkage phenomenon – effect of compounding parameters on these phenomenon. Die design and theoretical calculation of tread weight. Effect of viscosity & temperature on extrusion. Dimensions and weight control extusion operation parameters like feeding rate, screw speed, take off conveyor speed on tread extrusion. Extruded tread profile – critical dimensions. Duel extruder – Cap & base concept relation to tyre wear parameters like tread wear heat buildup etc. Cross head extruder wire coating process - Bias cutting and pocket making: Bias angle specification and the significance Horizontal and vertical laying of coated wore. Apex preparation on extruder and profile calender Bead wrapping and flipping operations. Single and double bead concept and preliminary calculation of bead safety factors. Width and angle adjustments splicing and identification. Bias plies pocket 3-3-2 4-4-2 ply constructions Defects of pockets wrong identification over splicing wrinkles, parallel plies etc.

MODULE 4 TYRE BUILDING 9

Tyre building inputs: Inner liners, plies, beads, tread, side wall and gum strips – their inspection Drum inspection for drumset, drum circumference Significance of parameters for tyre building. Size making on finished tyre and the relation to building specifications. Tyre building specifications sequence of building. Intermitant consolidation use of various cements and gum strips. Importance of the state of the Art Technology. Appraisal of Tyre building as most crucial operation correlation of some of the cured tyre & service returned tyres to the lack of building skill. Green tyre inspection procedures weight tolerancetechno-commercial importance of green tyre weight. Green tyre storage considerations.

MODULE 5 GREEN TYRE PREPARATION & CURING 9

Internal and External painting – Awling – Bagging in case of Air bag cure Bag-omatic and Air bag curing – mold lubrication- Bladder assembly bead curing rings – Dimension criticality Services to the Bag-o-matic presses Curing cycle – shaping – HPS, and hot water circulation. Dome steam cold water & vacuum cycles. Determination of optimum cure of tyres by thermocouple built tyres. Economics of curing post cure inflation of Nylon tyres cured tyre inspection. Defects of tyres – Tyre classification for defects – causes and discussions - Examination of: (i) Returned tyres (ii) Tyres for retreading - Norm of tyre adjustments for fastwear, poor retreading Bead/casing failures. Hot and cold process retreading concept of total price/km run increasing competition and future trends in the industry and open house discussion.

U18PEAU054	**AUTOMOTIVE SAFETY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Chassis Design, Automotive Aerodynamics				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: At the end, the students will have good exposure to automotive safety aspects including the understanding of the various safety equipment's.					

MODULE 1 INTRODUCTION **9**

Design of the body for safety, energy equation, engine location, deceleration of vehicle inside passenger compartment, deceleration on impact with stationary and movable obstacle, concept of crumble zone, safety sandwich construction.

MODULE 2 SAFETY CONCEPTS **9**

Active safety: driving safety, conditional safety, perceptibility safety, operating safety, passive safety: exterior safety, interior safety, deformation behaviour of vehicle body, speed and acceleration characteristics of passenger compartment on impact.

MODULE 3 SAFETY EQUIPMENTS **9**

Seat belt, regulations, automatic seat belt tightener system, collapsible steering column, tiltable steering wheel, air bags, electronic system for activating air bags, bumper design for safety.

MODULE 4 COLLISION WARNING AND AVOIDANCE **9**

Collision warning system, causes of rear end collision, frontal object detection, rear vehicle object detection system, object detection system with braking system interactions.

MODULE 5 COMFORT AND CONVENIENCE SYSTEM **9**

Steering and mirror adjustment, central locking system , Garage door opening system, tyre pressure control system, rain sensor system, environment information system

PROFESSIONAL ELECTIVE – VI

U18PEAU061	**TRANSPORT MANAGEMENT AND MOTOR INDUSTRY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Industrial Engineering and Management, Total Quality Management, Road Safety Engineering				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: The students are able to manage a transport fleet and their related activities					

for minimizing operational cost.

MODULE 1 INTRODUCTION **9**

Personnel management; objectives and functions of personnel management, psychology, sociology and their relevance to organization, personality problems. Selection process: job description, employment tests, interviewing, introduction to training objectives, advantages, methods of training, training procedure, psychological tests.

MODULE 2 TRANSPORT SYSTEMS **9**

Introduction to various transport systems. Advantages of motor transport. Principal function of administrative, traffic, secretarial and engineering divisions. chain of responsibility, forms of ownership by state, municipality, public body and private undertakings.

MODULE 3 SCHEDULING AND FARE STRUCTURE **9**

Principal features of operating costs for transport vehicles with examples of estimating the costs. Fare structure and method of drawing up of a fare table. Various types of fare collecting methods. Basic factors of bus scheduling. Problems on bus scheduling.

MODULE 4 MOTOR VEHICLE ACT **9**

Traffic signs, fitness certificate, registration requirements, permit insurance, constructional regulations, description of vehicle-tankers, tippers, delivery vans, recovery vans, Power wagons and fire fighting vehicles. Spread over, running time, test for competence to drive.

MODULE 5 MAINTENANCE **9**

Preventive maintenance system in transport industry, tyre maintenance procedures. Causes for uneven tyre wear; remedies, maintenance procedure for better fuel economy, Design of bus depot layout.

TEXT BOOKS:

U18PEAU062	**NOISE, VIBRATION AND HARSHNESS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Pollution and Its Control, Environmental Science , Mechanical Vibrations & Vehicle Dynamics				
	Course Designed by- Department of Automobile Engineering				

OBJECTIVE:

- knowledge in basic of vibration and noise
- Understanding the effect of noise an human comfort and environment
- Knowing the methods of vibration and noise measurement.

MODULE 1 FUNDAMENTALS OF ACOUSTICS AND NOISE, VIBRATION 8

Theory of Sound—Predictions and Measurement, Sound Sources, Sound Propagation in the Atmosphere, Sound Radiation from Structures and Their Response to Sound, General Introduction to Vibration, Vibration of Simple Discrete and Continuous Systems, Random Vibration, Response of Systems to Shock, Passive Damping

MODULE 2 EFFECTS OF NOISE, BLAST, VIBRATION, AND SHOCK ON PEOPLE 7

General Introduction to Noise and Vibration Effects on People and Hearing Conservation, Sleep Disturbance due to Transportation Noise Exposure, Noise-Induced Annoyance, Effects of Infrasound, Low-Frequency Noise, and Ultrasound on People, Auditory Hazards of Impulse and Impact Noise, Effects of Intense Noise on People and Hearing Loss, Effects of Vibration on People, Effects of Mechanical Shock on People, Rating Measures, Descriptors, Criteria, and Procedures for Determining Human Response to Noise.

MODULE 3 TRANSPORTATION NOISE AND VIBRATION—SOURCES, PREDICTION, AND CONTROL 10

Introduction to Transportation Noise and Vibration Sources, Internal Combustion Engine Noise Prediction and Control—Diesel, Exhaust and Intake Noise and Acoustical Design of Mufflers, Tire/Road Noise—Generation, Measurement, and Abatement, Aerodynamic Sound Sources in Vehicles—Prediction and Control, Transmission and Gearbox Noise and Vibration Prediction and Control, Brake Noise Prediction and Control.

MODULE 4 INTERIOR TRANSPORTATION NOISE AND VIBRATION SOURCES - PREDICTION AND CONTROL 10

Introduction to Interior Transportation Noise and Vibration Sources, Automobile, Bus, and Truck Interior Noise and Vibration Prediction and Control, Noise and Vibration in Off-Road Vehicle Interiors-Prediction and Control

MODULE 5 NOISE AND VIBRATION TRANSDUCERS, ANALYSIS EQUIPMENT, SIGNAL PROCESSING, AND MEASURING TECHNIQUES 10

General Introduction to Noise and Vibration Transducers, Measuring Equipment, Measurements, Signal Acquisition, and Processing, Acoustical Transducer Principles and Types of Microphones, Vibration Transducer Principles and Types of Vibration Transducers, Sound Level Meters, Noise Dosimeters, Analyzers and Signal Generators, Equipment for

Data Acquisition, Noise and Vibration Measurements, Determination of Sound Power Level and Emission Sound Pressure Level, Sound Intensity Measurements, Noise and Vibration Data Analysis, Calibration of Measurement Microphones, Calibration of Shock and Vibration Transducers, Metrology and Traceability of Vibration and Shock Measurements.

TEXT BOOKS:

COURSE OUTCOMES (COs)																
CO1	To learn the detailed study of basics of vibration analysis															
CO2	To learn the detailed study of vibration control techniques															
CO3	To learn the detailed study of noise fundamentals															
CO4	To learn the detailed study of NVH measurements															
CO5	To learn the detailed study of automotive noise sources and control techniques															
CO6	To learn the detailed study of automotive noise measuring techniques															
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low																
1	COs/ Pos	**a**	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**	**PSO 1**	**PSO 2**	**PSO 3**

4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18PEAU063	**ADVANCED THEORY OF IC ENGINES**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Automotive Petrol and Diesel Engines, IC Engine Testing				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To familiarize the knowledge of advanced engines.					

MODULE 1 - COMBUSTION PRINCIPLES **6**

Combustion – Combustion equations, heat of combustion – chemical equilibrium and Dissociation-Theories of Combustion - Flammability Limits - Reaction rates - Laminar and Turbulent Flame Propagation in Engines. Introduction to spray formation and characterization.

Suggested Reading: Fuel properties, Adiabatic Flame temperature

MODULE 2 - COMBUSTION IN SI ENGINES 9

Stages of combustion, normal and abnormal combustion, knocking, variables affecting knock,

Features and design consideration of combustion chambers. Flame structure and speed, cyclic variations, Lean burn combustion, Stratified charge combustion systems. Heat release correlations.

Suggested Reading: Fuel qualities affecting knocking, Types of combustion chambers, p-theta graphs, HRR curves, Cumulative Heat release, ignition delay, combustion duration.

MODULE 3 - COMBUSTION IN CI ENGINES 9

Stages of combustion, vaporisation of fuel droplets and spray formation, air motion, swirl measurement, knock and engine variables, Features and design considerations of combustion chambers, delay period correlations, heat release correlations, Influence of the injection system on combustion, Direct and indirect injection systems.

Suggested Reading: K-Jetronic, KE-Jetronic, Motronic Systems

MODULE 4 - ADVANCES IN IC ENGINES 9

Surface ignition concept and multi fuel engines, Lean Burn Engines, LHR engines, Stratified charge Engines, HCCI engines - Performance and emission characteristics, Merits and demerits. Use of Nano Technology in IC engines.

Suggested Reading: Fuel qualities affecting knocking, Types of combustion chambers, p-theta graphs, HRR curves, Cumulative Heat release, ignition delay, combustion duration.

MODULE 5 - IGNITION SYSTEMS AND ENGINE MAPPING 12

Computer control of SI & CI engines for better performance and low emissions, Closed loop control of engine parameters of fuel injection and ignition.

Suggested Reading: Electronic ignition systems, ECU for controlling emissions, Ignition and Injection timing calculations.

2 Richard Stone - "Introduction to IC Engines" – 4th edition – Macmilan.

3 B.P. Pundir Engine Combustion and Emission, Narosa Publishing House, 2011.,

4 Obert., Internal Combustion Engine and Air Pollution, International Text Book Publishers, 2009.

COURSE OUTCOMES (COs)	
CO1	Understand the concept of combustion in IC engines.
CO2	Gain knowledge about the combustion in SI and CI engines.

CO3		Gain insight on the development on recent technologies in IC engines.														
CO4		Familiarize with the applications of engine management system on the engine performance and emissions.														
CO5		Gain the knowledge in advances in IC engines														
CO6		Understand the concept of engine mapping														
Mapping of Course Outcomes with Program outcomes (POs)																
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO4	H	H	M	M		L	H					M	M	H	H
	CO5	M	H	H	H		L			L					H	H
	CO6	H			H										H	
3	Category	Professional Electives (PE)														
4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18PEAU064	**INTELLIGENT VEHICLE SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Computer Control of Vehicle System, Hybrid Electric and Fuel Cell Vehicles, Automotive Safety				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To understand the advanced vision system in vehicles, Autonomous vehicles and Intelligent Transportation System					

MODULE 1 INTRODUCTION TO INTELLIGENT VISION SYSTEM 9

Vision Based Driver Assistance System –Vehicle optical Sensor, Laser Radar - Non Contact ground velocity detecting Sensor, Road Surface Recognition Sensor - Vehicle Sensors for Electronic Toll Collection System - Components of a Vision Sensor System , Driver Assistance on Highways –Lane Recognition, Traffic Sign Recognition - Driver Assistance in Urban Traffic-Stereo Vision, Shape base analysis and Pedestrian Recognition

MODULE 2 VEHICLE INFORMATION SYSTEM & INTELLIGENT TRANSPORTATION 8

Intelligent Transportation System (ITS) – Vision for ITS Communications - Multimedia communication in a car –Current ITS Communication Systems and Services - Vehicle to Vehicle and Road to Vehicle Communication Systems - Inter and Intra Vehicle Communication - VANETS-Devices-Optical Technologies and Millimeter Wave technologies

MODULE 3 ADAPTIVE CONTROL TECHNIQUES FOR INTELLIGENT VEHICLES 8

Automatic Control Of Highway Traffic And Moving Vehicles - Adaptive Control –Gain Scheduling - Model Reference Adaptive Control - Self Tuning Adaptive Control System Model – System Identification Basics, Recursive Parameter Estimation, Estimator Initialization - Design Of Self-Tuning Controllers –Generalized Minimum Variance (GMV) Control, Pole Placement Control And Model Predictive Control.

MODULE 4 DECISIONAL ARCHITECHTURES FOR AUTONOMOUS VEHICLES 8

Control Architectures And Motion Autonomy –Deliberative Architectures, Reactive Architectures, Hybrid Architectures - Overview Of Sharp Architecture, Models Of Vehicles - Concepts Of Sensor Based Maneuver, Reactive Trajectory Following, Parallel Parking, Platooning - Main Approaches To Trajectory Planning, Non-Holonomic Path Planning.

MODULE 5 AUTONOMOUS VEHICLE AND CASE STUDIES 8

DARPA Challenge Case Study - ARGO Prototype Vehicle - The Gold System-The inverse Perspective Mapping, Lane Detection, Obstacle Detection, Vehicle Detection, Pedestrian Detection - Software systems architecture, Computational Performances - ARGO Prototype vehicle Hardware –Functionalities, Data acquisition System, Processing System and Control System

COURSE OUTCOMES (COs)																
CO1	Understand the intelligent vision system used in automobiles															
CO2	Understand the architecture of intelligent transportation system															
CO3	Understand adaptive control techniques of an autonomous vehicle															
CO4	Understand about the successful autonomous vehicle projects															
CO5	Understand about the successful autonomous vehicle - case studies															
CO6	Understand about the successful prototype vehicle

OPEN ELECTIVES

U18OEAU001	**ELECTRIC AND HYBRID VEHICLES**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3

	Prerequisite – Automotive Electrical and Electronics, Computer Control of Vehicle Systems
	Course Designed by- Department of Automobile Engineering
OBJECTIVE: To understand the principle, working and design of electric and hybrid vehicles.	

MODULE 1- ELECTRIC VEHICLES **9**

Layout of an electric vehicle, performance of electric vehicles – traction motor characteristics, tractive effort, transmission requirements, vehicle performance, energy consumption, advantage and limitations, specifications, system components, electronic control system.

MODULE 2- ELECTRIC PROPULSION SYSTEMS & GENERATORS **9**

DC motors, AC motors, permanent magnet motors, brushless DC and reluctance motors, characteristics, regenerative braking. DC generators, AC generators, voltage and frequency regulations

MODULE 3- HYBRID VEHICLES **9**

Concepts of hybrid electric drive train, types, architecture of series and parallel hybrid electric drive train, merits and demerits, series and parallel hybrid electric drive train design.

MODULE 4- MOTOR CONTROLLERS AND CONTROL SYSTEMS & ENERGY STORAGES **9**

Control system principles, speed and torque control – DC motors and AC motors. Electromechanical batteries- types of batteries –lead acid batteries, nickel based batteries, lithium based batteries, electrochemical reactions, thermodynamic voltage, specific energy, specific power, energy efficiency, ultra-capacitors.

MODULE 5- FUEL CELLS & SOLAR CARS **9**

Fuel cell, construction, working, equations, possible fuel sources, fuel reformer, design. Solar carsphotovoltaic cells, tracking, efficiency and cost comparison.

TEXT BOOKS

1. Mehrdad Ehsani, Yimin Gao, sebastien E. Gay and Ali Emadi, “Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design”, CRS Press, 2014.
2. James Larminie and John Loury, “Electric Vehicle Technology-Explained”, John Wiley & Sons Ltd., 2013.

REFERENCE BOOKS

1. Sandeep Dhameja, “Electric Vehicle Battery Systems”, Butterworth –Heinemann, 2012.

3 Ronald K Jurgen, “Electric and Hybrid – Electric Vehicles”, SAE, 2012
4 Ron Hodkinson and John Fenton, “Light Weight Electric/Hybrid Vehicle Design”, Butterworth- Heinemann, 2011.

COURSE OUTCOMES (COs)	
CO1	To Understand the components of Electric Vehicle with its specification
CO2	To Know about electric propulsion systems and generators
CO3	To Concepts of Hybrid Vehicle with its merits and demerits

CO4		Familiarize with Motor Controllers and Control Systems & Energy Storages													
CO5		To Know and understand about Fuel Cells & Solar Cars													
CO6		Understand the concept of Hybrid Electric Vehicle with their auxiliary systems													
Mapping of Course Outcomes with Program outcomes (POs)															
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low															
1	COs/POs	**a**	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**	**PSO1**	**PSO2**	**PSO3**

	CO2	M	H				H				L				H	
	CO3	H	H	H	M					H		M	H	H	H	H
	CO4	H	H	M	M		L	H					M	M	H	H
	CO5	M	H	H	H		M			H					H	H
	CO6	H			H										H	
3	Category		Open Electives (OE)													
4	Approval		47^{th} Meeting of Academic Council held in Aug, 2018													

U18OEAU002	**INTELLIGENT TRANSPORTATION SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To learn fundamentals of ITS and functional areas of ITS.					

MODULE 1 – INTRODUCTION 9

Introduction to Intelligent Transportation Systems (ITS) – Definition of ITS and Identification of ITS Objectives, Historical Background, Benefits of ITS - ITS Data collection techniques – Detectors, Automatic Vehicle Location (AVL), Automatic Vehicle Identification (AVI), Geographic Information Systems (GIS), video data collection.

MODULE 2 9

Telecommunications in ITS – Importance of telecommunications in the ITS system, Information Management, Traffic Management Centres (TMC). Vehicle – Road side communication – Vehicle Positioning System

MODULE 3 9

ITS functional areas – Advanced Traffic Management Systems (ATMS), Advanced Traveler Information Systems (ATIS), Commercial Vehicle Operations (CVO), Advanced Vehicle Control Systems (AVCS), Advanced Public Transportation Systems (APTS), Advanced Rural Transportation Systems (ARTS).

MODULE 4 9

ITS User Needs and Services – Travel and Traffic management, Public Transportation Management, Electronic Payment, Commercial Vehicle Operations, Emergency Management, Advanced Vehicle safety systems, Information Management.

MODULE 5 9

Automated Highway Systems - Vehicles in Platoons – Integration of Automated Highway Systems. ITS Programs in the World – Overview of ITS implementations in developed countries, ITS in developing countries.

COURSE OUTCOMES (COs)																
CO1		Understand the Introduction to Intelligent Transportation Systems														
CO2		To Understand the Importance of telecommunications														
CO3		Gain insight on ITS functional areas and advanced traffic management systems														
CO4		Familiarize with the types of Advanced Traffic Management Systems (ATMS)														
CO5		Gain the knowledge in Travel and Traffic management														
CO6		Understand the concept of Automated Highway Systems

	CO4	H	H	M	M		L	H					M	M	H	H
	CO5	M	H	H	H		L			L					H	M
	CO6	H			H										H	
3	Category	Open Electives (OE)														
4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18OEAU003	**VIBRATION AND NOISE CONTROL**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To learn about how to control noise and vibration in automobiles					

MODULE 1 – INTRODUCTION 9

Single degree of freedom, two degree of freedom, free, forced and damped vibrations modelling and simulation studies, model of an automobile, magnification factor, transmissibility, vibration absorber. Two degree of freedom system, modal analysis

MODULE 2 - NUMERICAL METHODS 9

Approximate methods for determining fundamental frequency, Dunkerleys lower bound, Rayleighs upper bound, Holzer method for closed coupled system and branched system.

MODULE 3 - CONTROL TECHNIQUES 9

Vibration isolation, tuned absorbers, untuned viscous dampers, damping treatments, application dynamic forces generated by IC engines, engine isolation, crank shaft damping, modal analysis of the mass elastic model shock absorbers.

MODULE 4 - AUTOMOTIVE NOISE SOURCES 9

Noise Characteristics of engines, engine overall noise levels, assessment of combustion noise, assessment of mechanical noise, engine radiated noise, intake and exhaust noise, engine accessory contributed noise, transmission noise, aerodynamic noise, tyre noise, brake noise.

MODULE 5 - SOURCE OF NOISE AND CONTROL 9

Methods for control of engine noise, combustion noise, mechanical noise, predictive analysis, palliative treatments and enclosures, automotive noise control principles, sound in enclosures, sound energy absorption, sound transmission through barriers

TEXT BOOKS

3 Hilton P.D. and Jacobs P.F., "Rapid Tooling: Technologies and Industrial Applications", CRC press, 2012.

COURSE OUTCOMES (COs)															
CO1	Understand about the degrees of freedom														
CO2	Gain knowledge about Numerical Methods														
CO3	The development on control techniques in isolating vibration														
CO4	Familiarize with Automotive Noise Sources.														
CO5	Gain the knowledge in Source of Noise and Control														
CO6	Understand the Methods of Controlling noise														
Mapping of Course Outcomes with Program outcomes (POs)															
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	47th Meeting of Academic Council held in Aug, 2018														

U18OEAU004	**AUTOMOTIVE SENSORS AND APPLICATIONS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Computer control of Vehicle Systems, Automotive Electronics				
	Course Designed by- Department of Automobile Engineering				
OBJECTIVE: To learn about how to control noise and vibration in automobiles					
Category	OE				
Approval	47th Meeting of Academic Council held in Aug, 2018				

MODULE 1 - INTRODUCTION **9**

Introduction to automotive sensors and instrumentation, Market perspective for sensors and instrumentation techniques. Sensor electronics and techniques. Overview of sensor measurements. Sensor linearization and characterization. Sensor classification. Signals and systems

MODULE 2 - SENSORS FOR ENGINES **9**

Sensors and interfacing- Pressure, position, flow, temperature, humidity, speed, acceleration, oxygen, torque, light, distance and level.

MODULE 3 – ACTUATORS **9**

Principles of actuation and control. DC motors, stepper motors. Relays and solenoids. Hydraulic and pneumatic actuators.

MODULE 4 - SENSORS FOR CHASSIS **9**

Sensors and interfacing techniques for Engine control, adaptive cruise control, braking control, traction control, steering and stability.

MODULE 5 - INTELLIGENT SENSORS **9**

Sensors for intelligent transport systems, Lighting, wipers, climate control and electronic displays. Sensors for occupant safety .The digital vehicle intelligent vehicle systems

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMES

ALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18OEBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations
20 U18OECE003-Road Safety
21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics
38. U18OEAE003- Unmanned Aerial Vehicle
39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion
41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance

43.U18OEEE003-Energy Conservation Techniques

44.U18OEEE004-PLC and SCADA for Industrial

45.U18OEEC-001-Communication Systems

46. U18OEEC-002-VLSI circuits

47. U18OEEC-003-Image Processing Techniques

48.U18OEEC-004-Communication Networks

49. U18OEEC-005-An Introduction to DSP

50. U18OEEC-006-Basics of IoT

51. U18OEBM001-Medical Radiation Safety Engineering

52. U18OEBM002-Medical Waste Management

53. U18OEBM003-Quality Control in Healthcare

54. U18OEBM004-Wearable Technology

55.U18OEEI001-Analytical Methods and Instrumentation

56.U18OEEI002-Introduction to process Data Analytics

57.U18OEEI003-Reliability and Safety in Process industries

58.U18OEEI004-Multi sensor data fusion

59. U18OEBT001- Bioprocess Economics & Plant Design

60. U18OEBT002-Brewing technology

61. U18OEBT003-Biomining

62. U18OEBT004-Industrial Safety Engineering

63. U18OEAC001-Geo- informatics for Precision Farming

64. U18OEAC002-Livestock and poultry management

65. U18OEAC003-Extension methodologies and transfer of Agricultural Technologies

66. U18OEAC004-Soil and Water Conservation Engineering

67. U18OEIT001-Block Chain Technology

68. U18OEIT002-Semantic Web

69. U18OEIT003-Entrepreneurship Development

70. U18OEIT004-Ethical Hacking Techniques

71. U18OECS004-Mobile Application Development

72. U18OECS005-System Modelling and Simulation

73.U18OECS006-Web Programming

74.U18OECS007-Virtual Reality

75. U18OECS008- E Commerce

76.U18OEGE001-Metagenomics and Epigenomics

77.U18OEGE002-Molecular Genetics and Genomics

78.U18OEGE003-Principles of Molecular cell biology

U18HSEN101	COMMUNICATIVE ENGLISH	L	T	P	C
	Total Contact Periods – 45	2	0	2	3
	Prerequisite – School English				
	Course Coordinator Name & Department:-				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

COURSE OUTCOMES	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

MAPPING BETWEEN COURSE OUTCOMES& PROGRAMME OUTCOMES

UNIT I SPEAKING 6

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing oneself – exchanging personal information- narrating events, -incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -The concept of Word Formation

UNIT III LISTENING 6

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely

SOFTSKILL LABORATORY 15

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion
2. Making effective presentations
3. Watching interviews & conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds - intonation.
12. Creative and critical thinking.

Course Coordinator HOD

U18BSMA101	Engineering Mathematics – I	L	T	P	C
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Coordinator Name & Department:-				
OBJECTIVES	The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

COURSE OUTCOMES (COs)	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.

CO/PO Mapping
3 – Strong, 2 – Medium, 1 – Weak

Category	Basic Science (BS)
Approval	47th Academic Council Meeting held in Aug, 2018

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3)

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

Course Coordinator **HOD**

U 18BSPH101	Waves and Optics	L	T	P	C
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course Coordinator Name & Department:-				

OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.

Course Outcomes (COs)	
CO1	Understand the basic concept of waves and lights
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing
CO3	Understand the propagation of light and geometrical optics
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves
CO5	Understand the concept of laser and its applications

Mapping of Course Outcomes with Programme Outcomes (POs)

	CO4	3	1			1			2	2		2	
	CO5	3	2	2	2				2		3	1	
3	Category	Basic Sciences (BS)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVE OPTICS 9

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS **9**

Einstein's theory of matter radiation interaction and A & B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

U18BSCH101	ENGINEERING CHEMISTRY	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Coordinator Name & Department:-				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

CO/SO Mapping: 3 – Strong, 2 – Medium, 1 – Weak

Approval	47th Academic Council Meeting held in Aug, 2018

UNIT I WATER TECHNOLOGY **9**

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS **9**

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non- ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke –manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

U18ESCS101	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Coordinator Name & Department:-				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

Mapping of Course Outcomes with Programme Outcomes (POs)

MODULE 1 : ALGORITHMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES **9**

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

U18ESME101	Engineering Graphics & Design (Theory & Lab.)	L	T	P	C
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Coordinator Name & Department:-				
OBJECTIVES	To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice				

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students will get Exposure to basics of building construction
CO4	Students will get Exposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of

Detailed contents

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM).

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning

and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle.

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP.

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

MODULE4: SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

MODULE 5: BUILDING DRAWING (9+2)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Mechanics

1) Torsional Pendulum – without symmetrical mass
2) Torsional Pendulum – With symmetrical mass
3) Young's Modulus – Non-uniform bending
4) Young's Modulus – Uniform Bending
5) Compound Pendulum
6) Coefficient of viscosity of the given liquid – Poiseuille method

Course Coordinator **HOD**

U18BSCH2L4	CHEMISTRY LABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Coordinator Name & Department:-				

OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Studentswill be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Students will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

MAPPING OF COURSE OUTCOMES WITH PROGRAMME OUTCOMES
3 – Strong, 2 – Medium, 1 – Weak

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development – subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

U18BSMA201	Engineering Mathematics II (Common to B.Tech – Civil, Mech, Mechatronics, Automobile, Aero, Aerospace, EEE, ECE, BME, CSE & IT)	L	T	P	C
	Total Contact Periods - 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Coordinator Name & Department:-				
OBJECTIVE	The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables and Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

CO/PO Mapping
3 – Strong, 2 – Medium, 1 – Weak

CO5	3		1	1			2				3	
Cate	Basic Science (BS)											
App	47th Academic Council Meeting held in Aug, 2018											

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS
(9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions

– properties of analytic functions – Construction of analytic functions using Milne Thomson method –Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

	CO5	1	3	3	2				2	1	1	1	
3	Category	Basic Sciences (BS)											
4	Approval	47th Meeting of the Academic Council held in Aug, 2018											

UNIT 1

Forces in Nature; Newton's laws and its completeness in describing particle motion; Solving Newton's equations of motion in polar coordinates; Problems including constraints and friction; Extension to cylindrical and spherical coordinates

UNIT 2

Potential energy function; F = - Grad V, equipotential surfaces and meaning of gradient; Conservative and non-conservative forces, curl of a force field; Central forces; Conservation of Angular Momentum; Energy equation and energy diagrams; Elliptical and parabolic orbits;

UNIT 3

Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and lightly-damped oscillators; Forced oscillations and resonance

UNIT 4

Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion, Kinetic energy of a rotating body

UNIT 5

Introduction to three-dimensional rigid body motion — only need to highlight the distinction from two-dimensional motion in terms of (a) Angular velocity vector, and its rate of change and (b) Moment of inertia tensor; Three-dimensional motion of a rigid body wherein all points move in a coplanar manner: e.g. Rod executing conical motion with center of mass fixed

Course Coordinator **HOD**

U18BSCH201	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Coordinator Name & Department:-				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

COURSE OUTCOMES	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

CO/SO Mapping: 3 – Strong, 2 – Medium, 1 – Weak

COs	**Programme Outcomes (POs)**											
	a	b	c	d	e	f	g	h	i	j	k	**l**
CO1	3			2		3		3		1		3
CO2	1	3	3		2		3		2		1	
CO3		2				1			3	2		
CO4	3		2	1			2				2	3
CO5		3		1		2				3		

UNIT I -NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS **9**

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert

ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION 9

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel –oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder-Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.
Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

Course Coordinator HOD

U18BSBT101	BIOLOGY FOR ENGINEERS	L	T	P	C
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Coordinator Name & Department:-				

OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector

COURSE OUTCOMES (COs)	
CO1	To understand the basic concepts of the cell and its structure
CO2	To understand about biodiversity and its conservation
CO3	To know the fundamentals of genetics and the immune system
CO4	To create an awareness about human diseases
CO5	To give a basic knowledge of the applications of transgenics
CO6	To know the applications of bio systems in environment, medical and agricultural sectors

Mapping of Course Outcomes with Programme Outcomes
(S/M/W indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System -types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity- antigens - antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines -cloning- bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

U18ESEE101	BASIC ELECTRICAL & ELECTRONICS ENGINEERING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Physics				
	Course Coordinator Name & Department:-				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

COURSE OUTCOMES (COs)	
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.
CO2	To gain knowledge regarding fundamentals of AC circuits.
CO3	To gain knowledge regarding electrical machines and transformers.
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.
CO5	To gain knowledge on principles of digital electronics systems.

Mapping of Course Outcomes with Programme Outcomes

MODULE 1 : DC CIRCUITS 12

Electrical circuit elements, voltage and current sources, Fundamental Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transfer Theorem.

MODULE 2: AC CIRCUITS 9

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance.Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS 9

Principles of operation and characteristics of; DC machines, Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS **6**

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

Course Coordinator **HOD**

U18ESME1L2	Workshop/Manufacturing Practices Laboratory	L	T	P	C
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Coordinator Name & Department:-				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge of the different manufacturing processes.
CO2	Students will be able to fabricate components with their own hands.
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO4	Students will be able to produce small devices of their interest.

Mapping of Course Outcomes with Programme Outcomes

(S/M/W indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

4	Approval	47th Meeting of Academic Council held in Aug, 2018											

Lectures & videos: **(15 hours)**

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice

2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.

3. Carpentry **(9 hours)**
   a) Preparation of Lap joints.

b) Mortise and Tenon joints.
c) Cross Half joints.
d) Dove Tail joints.

4. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**

Preparation of butt joints, lap joints and Tee joints

5. Sheet Metal working **(9 hours)**

a) Forming &Bending:
b) Model making–Trays, funnels, etc.
c) Different type of joints

6. Demonstration **(6 Hours)**

Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

U18ESEE1L3	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronics Engineering				
	Course Coordinator Name & Department:-				

OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics Components and circuits.

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipment and verify current and voltage law
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits
CO3	To understand domestic wiring procedures practically.
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flaps

Mapping of Course Outcomes (COs) with Programme Outcomes (POs)
(S/M/W indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

	CO6	3	3			3				3		2	
3	Category	Engg Sciences (ES)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging – slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.

2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops – JK and RS
5. Applications of Operational Amplifier

Course Coordinator **HOD**

U18BSMA302	**Partial Differential Equations , Probability and Statistics**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Engineering Mathematics I & II				
	Course Coordinator Name & Department:-Ms S.Priyanka& Dept.of Mathematics				

OBJECTIVES

- Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms.
- Learn techniques of solving the standard types of first order and second order partial differential equations.
- Learn solving wave and heat equation using Fourier series. Learn basics of probability, Baye's Theorem.
- Understand the concept of random variable, moment generating functions and their properties; learn standard distributions in discrete and continuous cases.
- Learn measures of central tendency and correlation and regressions, rank correlation, statistical intervals for single sample and test of hypothesis for a small and large sample.

COURSE OUTCOMES (Cos)

CO1	Expand given function using the knowledge of Fourier Series and frequently needed practical harmonic analysis that an engineer may have to make from discrete data.
CO2	Solve PDE and higher order with constant coefficients and physically interpret the results.
CO3	Boundary Value Problems and Differential Equations will be knowledgeable about and will be able to analyze solutions to two-point boundary value problems, boundary value problems for partial differential equations.
CO4	Evaluate the probability using addition and multiplication theorem. Apply Baye's Theorem for practical problems to find the probability. Apply the discrete and continuous distribution for solving practical problems. Evaluates the moments of distributions using moment generating functions.
CO5	Learn the basic idea of statistics including measures of central tendency .
CO6	Identify the appropriate hypothesis testing procedure based on type of outcome variable and number of samples.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

	CO6	3	3				2		1			3	
	Category	Basic Sciences											
4	Approval	47th Academic Council, July 2018											

UNIT I FOURIER SERIES 12Hrs

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS 12Hrs

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS 12Hrs

Classifications second order linear partial differential equations – Solution of one dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation – Fourier Series solutions in Cartesian coordinates.

UNIT 1V PROBABILITY DISTRIBUTION 12Hrs

Probability – Axioms of probability – Conditional probability – Baye's theorem –Random variables – Binomial – Poisson – Geometric – Uniform – Exponential and normal distribution and their properties.

UNIT V STATISTICS AND TESTING OF HYPOTHESIS 12Hrs

Measures of central tendency – Moments – Skewness and kurtosis – Correlation and Regression – Rank correlation – Test of significance: Large sample test for single proportion, difference of proportions – Chi Square test for goodness fit and independence of attributes.

U18ESME301	ENGINEERING MECHANICS	L	T	P	C
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Engineering Mathematics I , II, Engg. Physics				
	Course Coordinator Name & Department:-– Mr. V. Jose Ananth Vino ,Department of Mechanical Engineering				

OBJECTIVES: To understand the concept of basic engineering mechanism

COURSE OUTCOMES (COs)

CO1	Students will understand the concepts and behaviour of engineering mechanics
CO2	Students will demonstrate and draw the vectorial representation of forces and moments
CO3	Students will be able to differentiate between machines and mechanisms..
CO4	Students will gain knowledge regard be able to examine various types of forces and reactions and draw the free body diagram for complicated structures..
CO5	Student will gain knowledge in solving problems involving work and energy
CO6	Student will gain knowledge on friction on equilibrium and its application.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

	CO6						3	3	1		2		1
	Category	Engineering Sciences											
4	Approval	47th Academic Council, July 2018											

UNIT I **12**

Introduction - Units and Dimensions - Laws of Mechanics **– Lame's theorem, Parallelogram and triangular Law** of forces – Vectors –Vectorial representation of forces and moments – Vector operations on forces - Coplanar Forces – Resolution and Composition of forces – Resultant of several concurrent forces - Equilibrium of a forces – Forces in space - Equilibrium of particle in space - Equivalent systems of forces – Principle of transmissibility – Single equivalent force.

UNIT II **12**

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis –Vectorial representation of moments and couples– Scalar components of a moment – **Varignon's theorem** - Equilibrium of Rigid bodies in two dimensions -Equilibrium of Rigid bodies in three dimensions.

UNITIII **12**

Determination of areas – First moment of area and the Centroid of standard sections – T section, I section, Composite figures, Hollow section – second moments of plane area – Rectangle, triangle, circle - T section, I section, Hollow section – Parallel axis theorem and

perpendicular axis theorem – Polar moment of inertia – Principal moments of inertia of plane areas – Principal axes of inertia – Basic concept of Mass moment of inertia.

UNITIV **12**

Frictional force – Laws of Coloumb friction – Cone of friction – Angle of repose – Simple contact friction – Sliding of blocks – Wedge friction - Ladder friction – Screw Jack – Belt friction - Rolling resistance.

UNIT V **12**

Displacements, Velocity and acceleration, their relationship – Relative motion – Relative acceleration – Curvilinear motion of particles – **Newton's law** – work energy equation – impulse and Momentum – Impact ofelastic bodies.

U18PCME302	MATERIALS ENGINEERING	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Basic Physics and Chemistry				
	Course Coordinator Name & Department:-Dr. C. M. Meenakshi Department of Mechanical Engineering				

OBJECTIVES

- Understanding of the correlation between the internal structure of materials, their mechanical properties and various methods to quantify their mechanical integrity and failure criteria.
- To provide a detailed interpretation of equilibrium phase diagrams
- Learning about different phases and heat treatment methods to tailor the properties of Fe-C alloys.

COURSE OUTCOMES (COs)

CO1	Student will be able to identify crystal structures for various materials and understand the defects in such structures
CO2	Student gain knowledge in selecting materials
CO3	Student will be able predict the mechanical properties of materials
CO4	Student will be able to derive the material properties of ferrous and non-ferrous alloys
CO5	Student will be able to interpret surface engineering techniques
CO6	Student will be able build mechanical integrity and deduct failure in materials

4	Approval	47th Academic Council, July 2018											

UNIT I **9**

Structure of metals, alloysand ceramics – Molecules and bonding – Crystal structure: Inter atomic distance and Ionic radii, polymorphism, Miller indices of atomic planes, Bragg's law, crystal defects – point, line and plane defects – Effect of crystal imperfection on mechanical properties- strengthening mechanism for improvement of mechanical properties – Allotropy, grain and grain boundaries, Slip system, critically resolved shear stress, Schmid's law.

UNIT II **8**

Mechanical Property measurement: Tensile, compression and torsion tests; Young's modulus, relations between true and engineering stress-strain curves, generalized Hooke's law, yielding and yield strength, ductility, resilience, toughness and elastic recovery; Hardness: Rockwell, Brinell and Vickers and their relation to strength.

UNIT III **9**

Static failure theories: Ductile and brittle failure mechanisms, Tresca, Von-mises, Maximum normal stress, Mohr-Coulomb and Modified Mohr-Coulomb; Fracture mechanics: Introduction to Stress-intensity factor approach and Griffith criterion. Fatigue failure: High cycle fatigue, Stress-life approach, SN curve, endurance and fatigue limits, effects of mean stress using the Modified Goodman diagram; Fracture with fatigue, Creep, Introduction to non-destructive testing (NDT)

UNIT IV **10**

Alloys, substitutional and interstitial solid solutions- Phase diagrams: Interpretation of binary phase diagrams and microstructure development; eutectic, peritectic, peritectoid and monotectic reactions. Iron Iron-carbide phase diagram and microstructural aspects of ledeburite, austenite, ferrite and cementite, cast iron.

Alloying of steel, properties of stainless steel and tool steels, maraging steels- cast irons; grey, white, malleable and spheroidal cast irons- copper and copper alloys; brass, bronze and cupro-nickel; Aluminium and Al-Cu – Mg alloys- Nickel based superalloys and Titanium

UNIT V **9**

Heat treatment of Steel: Annealing, tempering, normalising and spheroidising, isothermal transformation diagrams for Fe-C alloys and microstructure development. Continuous cooling curves and interpretation of final microstructures and properties- austempering, martempering, case hardening, carburizing, nitriding, cyaniding, carbo-nitriding, flame and induction hardening, vacuum and plasma hardening.

U18PCME303	**THERMODYNAMICS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – MATHEMATICS –I &II				
	Course Coordinator Name & Department:-Mr. V. Srinivasan, Department of Mechanical Engineering				

OBJECTIVES

- To learn about work and heat interactions, and balance of energy between system and its surroundings
- To learn about application of I law to various energy conversion devices To evaluate the changes in properties of substances in various processes
- To understand the difference between high grade and low grade energies and II law limitations on energy conversion

COURSE OUTCOMES (COs)

CO1	To calculate energy balance to the systems and control volumes, in situations involving heat and work interactions
CO2	Derive second law of thermodynamics and estimate carnot cycle problems.
CO3	Compare the various types of steam and gas power cycles.
CO4	Evaluate changes in thermodynamic properties of substances
CO5	Estimate the performance of energy conversion devices
CO6	Differentiate between high grade and low grade energies.

Mapping of Course Outcomes with Program outcomes (POs)

UNIT-I **(12)**

Fundamentals - System & Control volume; Property, State & Process; Work - Thermodynamic definition of work; examples; Displacement work; Path dependence of displacement work and illustrations for simple processes; Temperature, Definition of thermal equilibrium and Zeroth law; Definition of heat; First Law for Cyclic & Non-cyclic processes; Concept of Internal energy and Enthalpy. Application to closed and open systems, steady and unsteady flow processes.

UNIT-II **(12)**

Second law - Definitions of direct and reverse heat engines; Definitions of thermal efficiency and COP; Kelvin-Planck and Clausius statements; Definition of reversible process; Internal and external irreversibility; Carnot cycle; Absolute temperature scale. Clausius inequality; Definition of entropy S; Demonstration that entropy S is a property; Evaluation of S for solids, liquids, ideal gases

UNIT-III **(12)**

Definition of Pure substance, Ideal Gases and ideal gas mixtures, Real gases and real gas mixtures, Compressibility charts- Properties of two phase systems - Const. temperature and Const. pressure heating of water; Definitions of saturated states; P-v-T surface; Use of steam tables and R134a tables; Saturation tables; Superheated tables; Identification of states & determination of properties, Mollier's chart.

UNIT-IV **(8)**

Thermodynamic cycles - Basic Rankine, Brayton cycle, effect of reheat, regeneration and intercooling and comparison with Carnot cycle.

UNIT-V (12)

Ideal gas mixtures undergoing various processes; Determination of s from steam tables- Principle of increase of entropy; Illustration of processes in T-s coordinates; Definition of Isentropic efficiency for compressors, turbines and nozzles- Irreversibility and Availability, Availability function for systems and Control volumes undergoing different processes, Lost work. Second law analysis for a control volume.Exergy balance equation and Exergy analysis.

U18PCME304	MANUFACTURING PROCESSES	L	T	P	C
	Total Contact Hours –45	3	0	0	3
	Prerequisite- Manufacturing Practices				
	Course Coordinator Name & Department:-Dr. R. J. Golden Renjith Nimal& Department of Mechanical Engineering				

OBJECTIVES

- To motivate and challenge students to understand and develop an appreciation of the processes in correlation with material properties which change the shape, size and form of the raw materials into the desirable product by conventional or unconventional manufacturing methods

COURSE OUTCOMES (COs)

CO1	Recall the concepts of basic manufacturing process.
CO2	Explore the importance of various manufacturing process.
CO3	Evaluate the cutting forces and prevent the failures of machine tool.
CO4	Analyze the principles of metal cutting in Lathe.
CO5	Discuss the working principle of various Metal cutting machines.
CO6	Improve surface finish in the given components using grinding machines.

	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

UNIT I **9**

Mechanical working of metals-Forming, hot and cold working-rolling, extrusion, spinning, wire- drawing, press working. Welding - different types of gas and arc welding process, soldering and brazing. Foundry: Pattern, pattern materials, types, moulding, Cupola Furnace. Casting: Sand casting using Green sand mould,Die casting, centrifugal casting, casting defects and inspection.

UNIT II **8**

Introduction, mechanics of metal cutting- chip formation, Merchant's circle theory, cutting force calculations, tool materials, Influence of tool angles, tool life, cutting fluids, machining time calculations, Metal cutting economics, problem in merchant circle, machining time and economics.

UNIT III **10**

Lathe- Introduction, types, construction, mechanisms, operations and attachments, nomenclature of single point cutting tool. Capstan and turret lathes: various mechanisms, tool and loading arrangement. Automatic lathes- single spindle and multi spindle mechanisms.

UNIT IV **10**

Shaper, planer and slotter: types, specification, mechanisms, operations, holding devices, difference between shaper and planer. Milling machine - types and specification, mechanisms, holding devices, milling operations.Milling tool nomenclature, indexing types-simple, compound and differential.

UNIT V **8**

Drilling, Boring- Specification.Nomenclature of drilling and reaming tool and its specification.Broaching: Specification, types, mechanisms, nomenclature of broaching tool.
Surface Finishing: Grinding, Honing, Polishing, Buffing, Metal Spraying, Galvanizing, Anodizing, Electroplating and Super finishing.

	Prerequisite – MATHEMATICS I & II				
	Course Coordinator Name & Department:-**Mr. Arun V Rejus Kumar &**Department of Mechanical Engineering				

OBJECTIVES

- To learn about the application of mass and momentum conservation laws for fluid flows To understand the importance of dimensional analysis
- To obtain the velocity and pressure variations in various types of simple flows To analyze the flow in water pumps and turbines.

COURSE OUTCOMES (COs)

CO1	Apply mathematical knowledge to predict the properties and characteristics of a fluid
CO2	Can understand different types of flow.
CO3	Understand dimensional analysis
CO4	Learn Fluid Dynamics and kinematics
CO5	Understand working principle of pumps
CO6	Understand working principle of turbines

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

	CO6	3	3	1					2	2		3	2
	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

Unit-I **9**

Definition of fluid, Newton's law of viscosity, Units and dimensions-Properties of fluids, mass density, specific volume, specific gravity, viscosity, compressibility and surface tension, Control volume- application of continuity equation and momentum equation, Incompressible flow, Bernoulli's equation and its applications.

Unit-II **9**

Exact flow solutions in channels and ducts, Couette and Poisuielle flow, laminar flow through circular conduits and circular annuli- concept of boundary layer – measures of boundary layer thickness – Darcy Weisbach equation, friction factor, Moody's diagram.

Unit-III **9**

Need for dimensional analysis – methods of dimension analysis – Similitude – types of similitude Dimensionless parameters – application of dimensionless parameters – Model analysis. Centrifugal pumps, Pump outlet and efficiencies-Cavitations, pump characteristics, multistage pumps, axial flowpumps-characteristics, construction details,Non-dimesnsionalparameters-Efficiencies-reciprocating pumps, Indicator diagram-Rotary pumps – Classifications, Working.

Unit-IV **8**

Euler's equation – theory of Rotodynamic machines – various efficiencies – velocity components at entry and exit of the rotor, velocity triangles – Centrifugal pumps, working principle, work done by the impeller, performance curves – Cavitation in pumps- Reciprocating pump – working principle**.**

Unit-V **8**

Classification of water turbines, heads and efficiencies, velocity triangles- Axial, radial and mixed flow turbines- Pelton wheel, Francis turbine and Kaplan turbines, working principles – draft tube- Specific speed, unit quantities, performance curves for turbines – governing of turbines.

	Total Contact Hours - 30	0	0	2	1
	Prerequisite – ENGINEERING GRAPHICS				
	Course Coordinator Name & Department: Mr.Hariharan, Department of Mechanical Engineering				

OBJECTIVES

- To make the students understand and interpret drawings of machine Componentsso as to prepare assembly drawings.
- To familiarize the students with Indian Standards on drawing practices and standard components.

COURSE OUTCOMES (COs)	
CO1	To discover good interpretation of machine components
CO2	To demonstrate standardization of drawings.
CO3	Student will demonstrate Indian and International standard components.
CO4	To make use of industrial standard.
CO5	Decide what tolerance and fits and assembly
CO6	Imagine to Learn the difference between free sketching and machine drawing

Indian standard code (BIS) of practice for engineering drawing-General principle of presentation, Conventional representation of threaded parts, Springs, Gear and common features, Abbreviations and symbols use in technical drawings.

Tolerance- Types-Symbols used and representation on the drawing - Fit types, Selection for different application- Allowance, Interchangeability. Surface finish- Relation to the manufacturing processes- Types of representation on the drawing- Welding symbols.

Preparation of working drawing for given machine components:
Bolts, Screws, Studs, Nuts, Keys and Key-ways.

Preparation of simple assembly drawings:
Different types of cotter and knuckle joints.

Preparation of simple assembly drawing for following machine with part drawings given:
Screw jack, Plummer block, Connecting rod, Machine vice, Tail stock of lathe, Tool head of shaper, fuel injection pump for single cylinder engine, Stop valve.

18MCAB305	CULTURAL- LEARNING AN ART FORM	L	T	P	C
	Total Contact Hours – 30	0	0	2	0
	Prerequisite – Nil				
	Course Coordinator Name & Department:-AICTE				

Learning an Art Form

Cultivation of arts is an integral part of the development of human beings since the arts are what make us most human, most complete as people. They offer us the experience of wholeness because they touch us at the deepest levels of mind and personality. They come into being not when we move beyond necessity but when we move to a deeper necessity, to the deeper human need to create order, beauty and meaning out of chaos. They are the expressions of deepest human urges, imperatives and aspirations.

While enriching the process of learning through enhanced perceptual and cognitive skills, learning of arts promotes self-esteem, motivation, aesthetic awareness, cultural exposure, creativity, improved emotional expression, as well as social harmony and appreciation of diversity. They promote an understanding and sharing of culture, and equip the learners with social skills that enhance the awareness and respect of others. Each institution will offer a range of introductory courses in different art forms: music, dance, theatre, painting, and other art forms. Care should be taken to give adequate representation to local and regional art forms in which our culture abounds. For example, Banaras has local traditions in vocal music like *Chaiti*, *Hori*, *Kajri* and *Birha*.

An institution in Banaras area can offer courses on these art forms apart from regular classical and semi-classical vocal music forms. Similar local art tradition can be utilized in different cities and regions. This will, in turn, also ensure wider community involvement/interaction with the institution. Students will be given an option to choose a particular art form, and learn and practice it under an artist -instructor. At the end of the course, a student should be able to demonstrate basic proficiency in that particular art form. Contact hours per week should be 3-4 hours.

Towards the end of the course, the institution can organize a function/program in which all the students publicly demonstrate their skills.

Dr. K. Balasubramanian

18MCAB306	**CULTURAL- INTANGIBLE CULTURAL HERITAGE**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	0	0	2	0
	Prerequisite – NIL				
	Course Coordinator Name & Department:-AICTE				

Intangible Cultural Heritage (Festivals, Food ways, Local Games)

As part of our rich intangible cultural heritage, foodways, fares and festivals, local games and sports are important sources for discovering the social and cultural values of our people and understanding the inner dynamics of our society, as these are sites where we witness the most significant and intimate representations of our society's self-perception—how our society perceives itself. These traditions have shaped and strengthened our social and cultural identities, and also the notion of community at the local, regional, and national levels. They have played a significant role in the making of our social life, and through them we have constructed for ourselves, individually and collectively, a sense of shared lived past and group identity. They facilitate the transmission of a culture's most deeply held values, from one generation to another and their continuity or discontinuity helps us to understand the changing social structure and culture of a society. For example, each community has its own foodways, and their overall health, well-being and cultural continuity are directly related to their ability to eat traditional foods and continue their traditional food practices. These traditional foods and food practices are deeply intertwined with their cultures and value systems, and play an important role in religious ceremonies and spirituality. Similar is the case with fares and festivals, and local games and sports. These traditions are bound up with rituals, customs, beliefs, and often also with trade, craft and professions. They are not mere superstitious rituals often condemned and denounced as being regressive, stagnant and backward, but repositories of our indigenous knowledge and wisdom which have evolved over centuries, and they still continue to serve social and cultural functions. This knowledge has been the basis for agriculture, food preparation, health care, education, conservation and the wide range of other activities that sustain societies in many parts of the world.

Most of these traditions are either on the verge of extinction or undergoing drastic changes due to globalization, acculturation, migration, questions of identity related to social mobility to confirm to a higher social order or simply because the context in which these traditions originated or were conceived no longer exist and their effectiveness or need seems no longer relevant. For example, while the agro-ecological and food systems offer some signs of resilience and adaptation, a range of factors are increasingly threatening these systems and peoples' well-being. The knowledge and skills of elders concerning traditional food preparation, and the use of traditional herbs and plants for healing purposes have not been passed on to the next generation and is at risk of being lost and disappearing altogether from reservation life and culture.

The course aims at exposing students to these traditions, and making them aware of the veritable treasure house of indigenous knowledge which can be utilized as resource for realizing a vision of sustainable future.

Each locality/region our Indian sub-continent abounds in a rich variety of food-ways, fares and festivals, games and sports. Students should be asked to identify one of these traditions and study them in detail. For example, the following guidelines can be adopted in the study of food-ways:

- To study and document the indigenous knowledge and wisdom of everyday food habits and food items consumed;
- To study and document the prevalent social practices and beliefs regarding traditional foods;
- To study and document the feasts on religious and social occasions of different communities;
- To identify and document the food items consumed by different communities and determine their nutritional values;
- To conduct chemical analysis of food ingredients;
- To identify and document the kitchen generated health ingredients used by different communities;
- To find out the uses of leftover food stuff of different communities;
- To develop hygienic food chart for people ailing and suffering from different metabolic disorders; andto develop suitable communication strategies to effectively disseminate traditional knowledge regarding food habits.

Similarly, in the case of fares and festivals, and games and sports one could study how these traditions create a sense of community bonding and lead to the rules of commensality and social interaction and behavior. Suitable guidelines along the lines of foodways can be developed and adopted for such a study.

At the end of the course, students will be required to submit a detailed project report. Options should be given to the students to make short documentaries and films on these traditions.

U18PCME401	APPLIED THERMODYNAMICS	L	T	P	C
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Thermodynamics				
	Course Coordinator Name & Department:-Dr. D. Ravi, Department of Mechanical Engineering				

OBJECTIVES

- To learn about of I law for reacting systems and heating value of fuels
- To learn about gas and vapor cycles and their first law and second law efficiencies
- To understand about the properties of dry and wet air and the principles of psychrometry
- To learn about gas dynamics of air flow and steam through nozzles
- To learn the about reciprocating compressors with and without intercooling
- To analyze the performance of steam turbines

COURSE OUTCOMES (COs)

CO1	To explain the law of reacting systems and heating value of fuels
CO2	To illustrate energy conversion in various thermal devices
CO3	Analyze about reciprocating compressors with and without intercooling
CO4	Elaborate Gas dynamics of air flow and steam through nozzles
CO5	Understand phenomena occurring in high speed compressible flows
CO6	Estimate the performance of steam turbines using principle of psychrometry

Mapping of Course Outcomes with Program outcomes (POs)

Unit-I **12**

Introduction to solid, liquid and gaseous fuels– Stoichiometry, exhaust gas analysis- First law analysis of combustion reactions- Heat calculations using enthalpy tables- Adiabatic flame temperature- Chemical equilibrium and equilibrium composition calculations using free energy.

Unit-II **12**

Vapor power cycles Rankine cycle with superheat, reheat and regeneration, exergy analysis. Super-critical and ultra super-critical Rankine cycle- Gas power cycles, Air standard Otto, Diesel and Dual cycles.

Unit-III **12**

Reciprocating compressors, staging of reciprocating compressors, optimal stage pressure ratio, effect of intercooling, minimum work for multistage reciprocating compressors. Working principles, Simple impulse(De laval) turbine, Reaction turbine, Analysis of steam turbines, velocity and pressure compounding of steam turbines.

Unit-IV **12**

Basics of compressible flow. Stagnation properties, Isentropic flow of a perfect gas through a nozzle, choked flow, subsonic and supersonic flows- normal shocks- use of ideal gas tables, Flow of steam and refrigerant through nozzle,supersaturation- compressible flow in diffusers, efficiency of nozzle and diffuser.

Unit-V **12**

Introduction to Psychrometry-Psychrometric chart- Properties of dry and wet air, use of pschyrometric chart, processes involving heating/cooling and humidification/dehumidification, dew point. Simple calculations used in psychrometry,

	Prerequisite – Engineering Mathematics I & II				
	Course Coordinator Name & Department:-**Mr. P. Bathmanaban, Mrs. K. L. Rajashree&** Dept of Mathematics				

OBJECTIVES

The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.

COURSE OUTCOMES (COs)

CO1	Students will gain knowledge for solving equations by Newton-Raphson and Regula-Falsi methods and system of linear equations by various methods.
CO2	Students will be able to interpolate the value of a dependent variable in the given data by Newton's forward and backward difference formulae and also unequal intervals.
CO3	Understanding the concept of numerical differentiation and integration using Trapezoidal and Simpson's rules.
CO4	Be exposed Taylor's series and Runge-Kutta methods to solve initial value problems of ODE
CO5	Student will be able to solve two dimensional Laplace, Poisson equations.
CO6	Apply one dimensional heat and wave equations of PDE in Engineering problems.

UNIT 1SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS 9+3 Hrs

Fixed Point Iteration methods - Newton-Raphson method and Regula-Falsi method for single variable-solutions of linear system of equations by Gaussian, Gauss-Jordan, Jacobian and Gauss-Siedel methods.

UNIT 2 INTERPOLATION 9+3 Hrs

Finite differences -Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals-Newton's Divided difference formula, Lagrange's Interpolation formula.

UNIT 3NUMERICAL DIFFERNTIATION AND INTEGRATION9+3 Hrs

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's Both $1/3^{rd}$ and $3/8^{th}$ rules. Double integration using Trapezoidal rule and Simpson rule.

UNIT 4 INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATION9+3 Hrs

Single step methods- Taylor series, Euler and modified Euler methods, RungeKutta method of fourth order for solving first and second order differential equations, Multiple step methods- Milne and Adam's -Bash forth predictor and corrector methods.

UNIT 5 BOUNDARY VALUE PROBLEMS FORORDINARY AND PARTIAL DIFFERENTIAL EQUATION 9+3 Hrs

Finite difference - solution of 2^{nd} order ODE - Finite difference solutions for two dimensional Laplace and Poisson equations, Finite difference solutions for one dimensional heat equation both implicit and explicit (Bender-Schmidt and Crank-Nicholson methods),Finite difference explicit method for one dimensional wave equation.

Dr. K. Balasubramanian

U18PCME402	**STRENGTH OF MATERIALS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	3	1	0	4
	Prerequisite – Engineering Mechanics				
	Course Coordinator Name & Department:- Mr. R. Hariharan, Department of Mechanical Engineering				

OBJECTIVES

- To understand the nature of stresses developed in simple geometries such as bars, cantilevers, beams, shafts, cylinders and spheres for various types of simple loads
- To calculate the elastic deformation occurring in various simple geometries for different types of loading

COURSE OUTCOMES (COs)

CO1	To recognize the deformation behavior of simple structures.
CO2	Determine the types of beams and shear force and bending moment diagrams.
CO3	Illustrate about moment of inertia and deflection of beam
CO4	Analyze stress behavior
CO5	To evaluatethe stresses and deformation of the various types of shafts
CO6	Design about thick and thin cylinders

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

1	COs/POs	a	b	c	d	E	f	G	h	i	j	k	l
2	CO1	3	3			3							3
	CO2					2					1		
	CO3			3		2					1		3
	CO4		2			2	2				1		
	CO5					2					1		
	CO6					2					1		1
3	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

UNIT-I **9+3**

Deformation in solids- Hooke's law, stress and strain- tension, compression and shear stresses- elastic constants and their relations- volumetric, linear and shear strains- principal stresses and principal planes- Mohr's circle.

UNIT-II

Beams and type's transverse loading on beams- shear force and bending moment diagrams- Types of beam supports, simply supported and over-hanging beams, cantilevers. Theory of bending of beams, bending stress distribution and neutral axis, shear stress distribution, point and distributed loads.

UNIT - III

Moment of inertia about an axis and polar moment of inertia, deflection of a beam using double integration method, computation of slopes and deflection in beams, Maxwell's reciprocal theorems.

UNIT - IV

Torsion, stresses and deformation in circular and hollow shafts, stepped shafts, deflection of shafts fixed at both ends, stresses and deflection of helical springs.

UNIT - V

Axial and hoop stresses in cylinders subjected to internal pressure, deformation of thick and thin cylinders, deformation in spherical shells subjected to internal pressure, column and struts, Euler's formula, limitations of Euler's formula.

Course Coordinator **HOD**

Mr. R. Hariharan **Dr. K. Balasubramanian**

U18PCME403	**MANUFACTURING TECHNOLOGY**	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite- MANUFACTURING PROCESSES				
	Course Coordinator Name & Department:- Dr. R. J. Golden Renjith Nimal **,** Department of Mechanical Engineering				

OBJECTIVES

- To provide knowledge on machines and related tools for manufacturing various components.
- To understand the relationship between process and system in manufacturing domain.
- To identify the techniques for the quality assurance of the products and the optimality of the process in terms of resources and time management.

COURSE OUTCOMES (COs)

CO1	To get the knowledge of Jigs and Fixtures so as to describe the machine capability for variety of operations.
CO2	Students will be able to discuss and improve the gear manufacturing and finishing processes.
CO3	Classify and explain the working principle of different NTM processes and interpret their suitability for machining different materials.
CO4	Students will be able to memorize the basic concepts of high energy rate forming.
CO5	Students will be able to evaluate different molding and forming operations for plastic materials.
CO6	Students will be able to analyze the different manufacturing processesof metals as well as polymer products.

Mapping of Course Outcomes with Program outcomes (POs)

	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

UNIT I **10**

Tooling for conventional and non-conventional machining processes: Mould and die design,Press tools, Cutting tools; Holding tools: Jigs and fixtures, principles, applications and design; press tools – configuration, design of die and punch; principles of forging die design.

UNIT II **10**

Gear manufacturing process: Gear milling, gear shaping, gear planning, gear hobbing, Gear broaching. stamping process, cold drawing process, rolling process, sintering process, gear finishing process - gear shaving, gear grinding, gear lapping, gear honing**.**

UNIT III **10**

Non-traditional machining techniques, classification. Abrasive jet machining, Electrical Discharge machining, E.D wire cutting, Electro chemical machining, Electron Beam

Machining, Laser Beam Machining, Ultrasonic Machining – process parameters, process capabilities, application.

UNIT IV **6**

High Energy Rate forming - Explosive forming, Electro hydraulic, Electro magnetic forming, Dynapack machine – process parameters, process capabilities, application**.**

UNIT V **9**

Plastics – Introduction, Types, Plastic Moulding - compression Moulding, transfer Moulding, injection Moulding, blow Moulding, film and sheet forming, thermo forming, reinforced plastic, laminated plastics.

U18PCME404	**INSTRUMENTATION AND CONTROL**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Physics				
	Course Coordinator Name & Department:-**Mr. V. P. Durairaj ,** Department of Mechanical Engineering				

OBJECTIVE:

- To provide a basic knowledge about measurement systems and their components
- To learn about various sensors used for measurement of mechanical quantities
- To learn about system stability and control
- To integrate the measurement systems with the process for process monitoring and control

COURSE OUTCOMES (COs)

CO1	Develop the knowledge of basics of Measurements, Metrology and Measuring instruments.
CO2	Improve the competence in sensors, transducers and terminating devices with associated parameters.
CO3	Discuss the various devices for measuring torque, force, strain, stress and temperature.
CO4	Describe the various advanced measuring devices and laser metrology.
CO5	Determine the advancements in the control system.
CO6	Demonstrate the ability to analyze the results of various measuring systems and instruments to give better conclusions.

UNIT – I **10**

Generalized measuring system - Limits, fits and tolerances; Limit Gauges and Slip Gauges, linear and angular measurements; comparators; Interferometry; Metrology in tool wear and part quality including surface integrity, alignment and testing methods; tolerance analysis in manufacturing and assembly, Auto collimator – Angle Dekkor.

UNIT – II **9**

Measurement systems and performance – accuracy, range, resolution, error sources; Instrumentation system elements – sensors and transducers for common engineering measurements; Signal processing and conditioning; correction elements

UNIT – III **9**

Form measurement – Measurement of tooth thickness – gear tooth Vernier – Surface finish measurement – radius measurement – flatness and roundness measurement – Screw thread and gear Measurement.Laser Metrology: Precision instrument based on laser – Principle – Application of laser – Laser interferometer – Applications in linear measurement and angular measurement.

UNIT – IV **8**

Coordinate Measuring Machine – constructional features – types – Applications of CMM – CNC. CMM applications – Inspection by computer aided – machine vision – Applications in Metrology.

Force measurement – Torque measurement – Pressure measurement – Temperature measurement – Vibration Measurement.

UNIT – V **9**

Actuators: pneumatic, hydraulic, electric; Control systems – basic elements, open/closed loop, design of block diagram; control method – P, PI, PID, when to choose what, tuning of controllers; System models, transfer function and system response, frequency response; Nyquist diagrams and their use.

U18PCME405	THEORY OF MACHINES	L	T	P	C
	Total Contact Hours - 60	3	1	0	4
	Prerequisite –Engineering Mechanics				
	Course Coordinator Name & Department:- **Dr. R. J. Golden Renjith Nimal,** Department of Mechanical Engineering				

OBJECTIVES

- To understand the kinematics and rigid- body dynamics of kinematically driven machine components
- To understand the motion of linked mechanisms in terms of the displacement, velocity and acceleration at any point in a rigid link
- To be able to design some linkage mechanisms and cam systems to generate specified output motion
- To understand the kinematics of gear trains

COURSE OUTCOMES (COs)	
CO1	Discuss the basic concepts of various mechanisms.
CO2	Examine the velocity and acceleration diagram for a given mechanism.
CO3	Discover the effects of friction in mechanical element.
CO4	Design cams and followers for specified motion profiles.
CO5	Determine the static and dynamic balancing calculations for rotating and reciprocating masses.
CO6	Evaluate the important types of vibrations and acquire knowledge in the calculation of natural frequency.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

	CO6	3	3	2	1	2			3			1	
	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

UNIT I **12**

Machine Structure – Kinematic link, pair and chain – Grueblers criteria – Constrained motion – Degrees of freedom - Slider crank and crank rocker mechanisms – Inversions – Applications – Kinematic analysis of simple mechanisms – Determination of velocity and acceleration.

UNIT II **12**

Friction in screw and nut – Pivot and collar – Thrust bearing – Plate and disc clutches – Belt (flat and V) and rope drives. Ratio of tensions – Effect of centrifugal and initial tension – Condition for maximum power transmission – Open and crossed belt drive.

UNIT III **12**

Gear profile and geometry – Nomenclature of spur and helical gears – Gear trains: Simple, compound gear trains and epicylic gear trains - Determination of speed and torque - Cams – Types of cams – Design of profiles – Knife edged, flat faced and roller ended followers with and without offsets for various types of follower motions

UNIT IV **12**

Static and dynamic balancing – Single and several masses in different planes –Balancing of reciprocating masses- primary balancing and concepts of secondary balancing – Single and multi cylinder engines (Inline) – Balancing of radial V engine – direct and reverse crank method

UNIT V **12**

Free, forced and damped vibrations of single degree of freedom systems – Force transmitted to supports – Vibration isolation – Vibration absorption – Torsional vibration of shaft – Single and multi rotor systems – Geared shafts – Critical speed of shaft.

UNIT I **9**

Historical Background – Constituent Assembly of India – Philosophical foundations of the Indian Constitution – Preamble – Fundamental Rights – Directive Principles of State Policy – Fundamental Duties – Citizenship – Constitutional Remedies for citizens.

UNIT II 9

Union Government – Structures of the Union Government and Functions – President – Vice President – Prime Minister – Cabinet – Parliament – Supreme Court of India – Judicial Review.

UNIT III 9

State Government – Structure and Functions – Governor – Chief Minister – Cabinet – State Legislature – Judicial System in States – High Courts and other Subordinate Courts.

UNIT IV 9

Indian Federal System – Center – State Relations – President's Rule – Constitutional Amendments – Constitutional Functionaries - Assessment of working of the Parliamentary System in India.

UNIT V 9

Society : Nature, Meaning and definition; Indian Social Structure; Castle, Religion, Language in India; Constitutional Remedies for citizens – Political Parties and Pressure Groups; Right of Women, Children and Scheduled Castes and Scheduled Tribes and other Weaker Sections.

U18PCME4L1	**STRENGTH OF MATERIALS AND FLUID MECHANICS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours –30	**0**	**0**	**2**	**1**
	Prerequisite – Engineering Mechanics				
	Course Coordinator Name & Department:- Mr. Arun V.Rejus Department of Mechanical Engineering				

OBJECTIVES

- To supplement the theoretical knowledge gained in Mechanics of Solids with practical testing for determining the strength of materials under externally applied loads. This would enable the student to have a clear understanding of the design for strength and stiffness

COURSE OUTCOMES (COs)

CO1	Students will understand flow through pipes
CO2	Students will practically understand different flow measuring equipment.
CO3	Student will understand the strength of components and testing methods.
CO4	Student will understand the characteristics of pumps.
CO5	Students study the importance of flow analysis
CO6	Students learn deflection and stresses

4	Approval	47th Academic Council, July 2018											

LIST OF EXPERIMENTS

FLUID MECHANICS LAB

1. Determination of flow through pipes, losses in pipes.
2. Calibration of orificemeter and venture meter
3. Flow through notches and weir
4. Flow through open orifice
5. Buoyancy experiment-Metacentric height.
6. Impact of jet on vanes-inclined and curved vanes
7. Verification of Bernoulli's equation

FLUID MACHINERY LAB

1. Performance characteristics of Jet pump
2. Performance characteristics of Vane pump
3. Performance characteristics of Centrifugal pump
4. Performance characteristics of Reciprocating pump
5. Performance characteristics of Gear pump
6. Characteristics of Impulse turbine

7. Characteristics of Reaction turbine

STRENGTH OF MATERIALS LAB

1. Tension test of a mild steel rod
2. Double shear test on mild steel and Aluminum rods
3. Torsion test on mild steel rod
4. Hardness test on metals- Brinell and Rockwell hardness
5. Deflection test on helical springs
6. Deflection test on beams
7. Compression test – bricks
8. Double shear test in U.T.M

Course Coordinator **HOD**

U18PCME4L2	METROLOGY & METALLURGY LAB	L	T	P	C
	Total Contact Hours –30	0	0	2	1
	Prerequisite – Metrology				
	Course Coordinator Name & Department:- Mrs.G.Sucharitha, Department of Mechanical Engineering				

OBJECTIVES

- To get an idea of the dimensional & form accuracy of products.

COURSE OUTCOMES (COs)	
CO1	Students will understand the difference between accuracy and precision
CO2	Students will be able to identify the different measuring equipments .
CO3	Student will have the knowledge to make a use of metallurgicalmicroscope.
CO4	Student will learn to analyze metallographic structures of different materials.
CO5	Student will be able to explain the crystallographic structures of different materials.
CO6	Students will be able to discuss about the profile of a gear.

	CO4										1		
	CO5				2							1	
	CO6							2					
3	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

LIST OF EXPERIMENTS:

METROLOGY LABORATORY

1. Calibration of dial gauge, micrometer and vernier.
2. Measurement using Precision Measuring Instrument like verniercaliper,Micrometer,dialcauge,Vernier height Gauge
3. Measurement of angles using sine bar, bevel protractors, sine centre
4. Use of Tool Maker's Microscope
5. Volume and Area Measurement for the given block using slip gauge.
6. Bore diameter measurement using micrometer and telescopic gauge

METALLURGY LABORATORY

1. Study of metallurgical microscope
2. Preparation of specimen for metallographic observation of white Cast Iron, Grey Cast Iron, Malleable Iron.
3. Preparation of specimen for metallographic observation of Mild Steel, Low CarbonSteel, Medium Carbon Steel, Tool Steel, High speed Steel, and Stainless steel.
4. Preparation of specimen for metallographic observation of Copper-bronze, Copper brass.
5. Microscopic examination of heat-treated and untreated metallic samples

U18MCAB407	**LITERATURE & MEDIA – LITERATURE ,CINEMA& MEDIA**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Coordinator Name & Department:-AICTE				

The objective is to inculcate the habit of active (or interactive) consumption of the best content available in literature, films and media, rather than passive consumption. DescriptionLiterature is perhaps as old as history or may be older and it is difficult to think of a fully educated person without any exposure to the best of the world literature (not justthe literature of their own country or in their own language). Cinema is more recent and mass media is even more recent, but all these have a vital role in today's society. The problem is that the content available easily to most people (partly due to extensive promotion) caters to the lowest common denominator. Engineering students should be encouraged to read the best of the world literature and watch the best of the world cinema (regardless of their viewpoints). They should also be made aware that news is best collected from different sources, which don't necessarily agree, so that they can understand the true meaning of democracy and also learn to form educated opinions about various topics based on the information from diverse sources. They should learn that being opinionated without being properly informed (say, by relying only on one source of news on TV based on TRPs) is not the right way to be a good citizen. They should get the experience of their opinion being contradicted by the most reliable evidence, so that they realize that there is no shame in changing a wrong opinion in the light of overwhelming evidence. For that, they will also have to learn how to find out the degree of reliability of different sources. One way to achieve this is to conduct workshops where students, aided by invited experts, read news from different sources, watch the best cinema and read or watch different media sources. They can then discuss these with their peers and with the invited experts and learn to talk peacefully with people of different viewpoints, as well as learn to form their own opinions. They should then be encouraged to write about their takeaways from these discussions or their opinions and their reasons for forming those opinions. Such activities can counter the current culture of being 'trolls' on the social media, for example. Instead, we should have citizens who give due respect to their fellow citizens and learn to analyze, discuss and reach conclusions in an agreeable manner, without unnecessary feelings of bitterness and enmity.

Another related exercise could be to read or watch advertisements and then analyze them in terms of the biases they promote (such as the desirability of fair skin) or the deception they indulge in to psychologically compel consumers to buy things they don't really need. Some advertisements even promote the habit of treating fellow human beings with contempt for being different from them (even in terms of possessing the products they are promoting). A well-educated citizen should be less susceptible to such practices in advertisements. Advertisements are just one example. Something similar could be done with all kinds of propaganda material

U18MCAB408	**LITERATURE & MEDIA – GROUP READING OF CLASSICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Coordinator Name & Department:-AICTE				

This will make group to read one or two books during a semester.

Process: An hour may be fixed for a small group for a particular classic. Group sitsand each person reads aloud (if possible with proper modulation) taking turns. This if done properly for an hour one may complete 30-40 pages in an hour. A normal classic can be finished in 15 to 20 days. If serious books on philosophy etc. are taken up a discussion can be held after every idea is complete.

U18PCME501	**HEAT TRANSFER**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Thermal Engineering-II				
	Course coordinator Name & Department – Mr.J. Manikandan, Department of Mechanical Engineering				

OBJECTIVES

- The aim of the course is to build a solid foundation in heat transfer exposing students to the three basic modes namely conduction, convection and radiation.
- Rigorous treatment of governing equations and solution procedures for the three modes will be provided, along with solution of practical problems using empirical correlations.
- The course will also briefly cover boiling and condensation heat transfer, and the analysis and design of heat exchangers.

COURSE OUTCOMES (COs)

CO1	Upon completion of this course, the students can able to understand different heat and mass transfer principles
CO2	Students exhibit memory of the principles of conduction
CO3	Students are able to presentthe principles of convection
CO4	Students solve problems in new situations by applying acquired knowledge for the welfare of the people
CO5	Students will have the knowledge of examining the radiation concepts in heat and mass transfer
CO6	Students are able to present and defend opinions by making judgments about steady state and unsteady state of systems

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

Unit –I **14**

Introduction to three modes of heat transfer, Derivation of heat balance equation- Steady one dimensional solution for conduction heat transfer in Cartesian, cylindrical and spherical geometry, concept of conduction and film resistances, critical insulation thickness, lumped system approximation and Biot number, heat transfer through pin fins- Two dimensional conduction solutions for both steady and unsteady heat transfer-approximate solution to unsteady conduction heat transfer by the use of Heissler charts.

Unit-II **14**

Heat convection, basic equations, boundary layers- Forced convection, external and internal flows- Natural convective heat transfer- Dimensionless parameters for forced and free convection heat transfer-Correlations for forced and free convection- Approximate solutions to

laminar boundary layer equations (momentum and energy) for both internal and external flow. Estimating heat transfer rates in laminar and turbulent flow situations using appropriate correlations for free and forced convection.

Unit-III **10**

Types of heat exchangers, Analysis and design of heat exchangers using both LMTD and ε-NTU methods. Boiling and Condensation heat transfer, Pool boiling curve

Unit-IV **12**

Interaction of radiation with materials, definitions of radiative properties, Stefan Boltzmann's law, black and gray body radiation, Calculation of radiation heat transfer between surfaces using radiative properties, view factors and the radiosity method.

Unit-V **10**

Introduction mass transfer, Fick's law of diffusion, Stefan's law, Mass transfer co-efficient, Non-dimensional number used in mass transfer, evaporation process in the atmosphere. Similarity between heat and mass transfer.

Total number of hours (40 lectures + 12 tutorials)

U18PCME502	**COMPUTER AIDED DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Manufacturing Technology				
	Course coordinator Name & Department – Dr.S.Thirumavalavan Department of Mechanical Engineering				

OBJECTIVES

This course will enable the student To gain knowledge about the basic fundamentals of CAD.

COURSE OUTCOMES (COs)

CO1	To Remember how computers are integrated at various levels of planning, manufacturing and computer aided planning and monitoring.
CO2	Understand the concepts of CAD Algorithm
CO3	To apply the knowledge of various curves in CAD
CO4	To analyze the basics of CAM
CO5	To create Part Programming in CAM
CO6	To understand the 2D , 3D and Part Programming

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

UNIT I **9**

Principles of Computer hardware, Software and Operating System, Data Handling and File Structures, Computer aid in Phases of design- CAD standards- Graphical Kernel System (GKS), standards for exchange images, Open Graphics Library (OpenGL), Data exchange standards- IGES, STEP, CALS etc., Communication standards

Elements of CAD Systems, Introduction to Graphic Hardware, Software, Details of 2D Software Packages-Layering, Drawing Primitives, Display Techniques, Editing, utilities, Scaling, Dimensioning, 3D Visualization, Geometric Modeling-Wireframe and Solid models.

UNIT II **9**

Hidden Line – Surface - Solid removal algorithms – shading – colouring – computer animation.Assembly of parts- assembly modelling, interferences of positions and orientation, tolerance analysis, mass property calculations, mechanism simulation and interefence checking

UNIT III **9**

Representation of curves- Hermite curve- Bezier curve- B-spline curves-rational curves- Techniques for surface modeling – surface patch- Coons and bicubic patches- Bezier and B-spline surfaces. Solid modeling techniques- CSG and B-rep.

UNIT IV **9**

Numerical Control- Modes- NC Elements- NC Machine Tools- CNC Machines- CNC Hardware Basics- CNC Tooling- CNC Machine Tools and Control System- Part Programming- Manual part programming & Types- G-Codes and M-Codes.

UNIT V **9**

Advanced Part Programming- Direct Numerical Control- Adaptive Control Computer Aided Part Programming, APT, Canned Cycle, Offset, Simple CNC programs

	MACHINE DESIGN - I	L	T	P	C
U18PCME503	Total Contact Hours - 60	3	1	0	4
	Prerequisite – ENGINEERING MECHANICS				
	Course coordinator Name & Department – Dr.V.Balambica Department of Mechanical Engineering				

OBJECTIVES

This course seeks to provide an introduction to the design of machine elements commonly encountered in mechanical engineering practice.

COURSE OUTCOMES (COs)

CO1	Students will be able to learn the concepts and behavior of machine components failure criteria based on suitable material selection.
CO2	Student will have an understanding of the origins, nature and applicability of empirical design principles, based on safety considerations
CO3	Students will have an overview of codes, standards and design guidelines for different elements
CO4	Students will have the knowledge of parametric optimization and design iteration
CO5	Students will recognize the relationships between component level design and overall machine -system design performance
CO6	Upon completion of this course, students will be able to improve design methodologies and provide alternative solutions.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

UNIT I FUNDAMENTALS 12

Design process – Engineering Materials and Mechanical properties – Design Considerations: Limits, Fits and Tolerances – Principal stresses — Calculation of permissible stress – Failure theories(Static and Dynamic) including fatigue failure – Stress Concentration .

UNIT II DESIGN OF SHAFTS 12

Design of Shafts under Static and Fatigue loading – Shafts carrying Pulleys, Gears – Simply Supported Shafts - Hollow shafts.

UNIT III DESIGN OF HELICAL & LEAF SPRINGS 12

Design of Tension, Torsional and Compression Helical springs and Leaf springs – Springs for Buffers – Springs for Impact loads.

UNIT IV DESIGN OF BEARINGS 12

Design of sliding contact bearings using Somerfield number - Selection of Rolling contact bearings for Radial and Axial load combination .

UNIT V DESIGN OF JOINTS & COUPLINGS 12

Design of Joints –-Bolted and Welded joints -Screw fasteners –Analysis and Application of Power Screws– Design of Couplings: Muff coupling -Flange Coupling & Clamp coupling.

U18HSBA401	**ORGANIZATIONAL BEHAVIOR**	L	T	P	C
	Total No. of contact hours: 45	3	0	0	3
	Pre-requisite:				
	Course coordinator Name & Department –Dept of Management Studies				

Course Objectives

1. Understanding the basic approaches in organization
2. Knowledge on theories of Personality
3. Clear sight on the Decision Making in Groups
4. Analyse the behaviour of individuals and groups in organizations in terms of the key factors that influence organizational behaviour. Assess the potential effects of organizational - level factors (such as structure, culture and change) on organizational behaviour.

COURSE OUTCOMES (COs)

CO1	Familiarity with the knowledge of Frame work of Organizational Behaviour
CO2	Knowledge of the Interpersonal perception
CO3	Awareness of the Merits and Demerits of Group decision making.
CO4	Understanding of the Sources of power
CO5	Familiarity with the knowledge of types of Conflicts
CO6	

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	L
2	CO1				3								
	CO2				3			3		3			
	CO3				3								
	CO4										3		
	CO5										3		
	CO6												
	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

Unit I **9**

Orgnanizational Behavior – Definition, Need for studying Organizational Behavior, Disciplines involved in the study of Organizational Behavior, -Contributing disciplines and area - Application of Organizational Behavior in Business.

Unit II **9**

Individual behaviour – personality, perception, learning, attitudes inter-personal behavior – Group and inter-group behaviour.

Unit III **9**

Group Dynamics – Formal and Informal Group, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision – Motivation – Need and Importance – Theories of Motivation

Unit IV **9**

leadership-nature, stles and approaches, development of leadership including laboratory training. Power and Authority – Definition of Power – Types of Power.

Unit V **9**

Management of change-conflict Management- Management of culture, Cross Cultural Management.

U18PCME5L1	**THERMAL AND HEAT TRANSFER ENGINEERING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Thermal Engineering, Thermodynamics				
	Course coordinator Name & Department – Mr.J.Manikandan, Department of Mechanical Engineering				

OBJECTIVES

- To practically understand the concepts and working of various thermal application like IC engines, Compressors and Refrigeration and Air conditioning systems
- To practically understand the concepts and working of various Heat transfer application like Conduction, convection and radiation systems

COURSE OUTCOMES (COs)

CO1	Upon completion of this course, the students can able to understand the fundamentals in every area of thermal engineering.
CO2	Will improve the knowledge regarding the concepts in thermal and heat transfer lab
CO3	Students are able to presentthe working principle of Thermal Equipments
CO4	Students can examine the working principle of IC Engines
CO5	Students are able to presentthe concept and working of compressors
CO6	Students are able to compilethe working principle of Heat transfer equipments

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	L
2	CO1	3											
	CO2		3										
	CO3									3			
	CO4										1		
	CO5				2							1	
	CO6							2					
	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

Contents:

Thermal Lab

Determination of viscosity using Saybolt and Redwood viscometer
Valve timing diagram of a four stroke engine, Port timing diagram of a two stroke engine
Determination of mechanical efficiency of four stroke diesel engine
Heat balance test on a four stroke diesel engine
Performance test on a multi cylinder petrol engine- Morse test
Test on Air compressor
Performance test on a Refrigeration plant
Performance test on A/C plant

Heat Transfer Lab

Thermal conductivity of insulating materials
Thermal conductivity of guarded hot plate method
Heat transfer through composite wall
Heat transfer by free and forced convection
Test on heat exchangers- parallel and counter flow
Emissivity measurement apparatus
Stefan-Boltzman apparatus
Test on Pin fin apparatus

Course Coordinator **HOD**

Mr.J.Manikandan **Dr. K. Balasubramanian**

	INSTRUMENTATION AND DYNAMICS LAB	L	T	P	C
U18PCME5L2	Total Contact Hours –30	0	0	2	1
	Prerequisite – Instrumentation and Control				
	Course coordinator Name & Department – Dr. R. J Golden Renjith Nimal Department of Mechanical Engineering				

OBJECTIVES

- To understand the measurement of mechanical properties of materials
- To understand the deformation behaviour of materials
- To understand the kinematic and dynamic characteristics of mechanical devices
- To understand how certain measuring devices are used for dynamic testing.

COURSE OUTCOMES (COs)

CO1	Recall the concepts in kinematics and Dynamics of Machinery
CO2	Describe the various measuring devices are used for dynamic testing.
CO3	Improve knowledge regarding various types of forces and reactions.
CO4	Determine the natural frequency of various types of vibrations.
CO5	Demonstrate the balancing of rotors and develop the knowledge to use tachometer.
CO6	Analyze the forces acting on machines and mechanisms for specific applications such as, cams, gears and balancing.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

1	COs/POs	a	b	c	d	e	F	g	h	i	j	k	L
2	CO1	3								2			
	CO2											3	
	CO3									2			
	CO4								1				
	CO5			2									
	CO6					3				2			
3	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

LIST OF EXPERIMENTS:

INSTRUMENTATION

1. Pressure measuring device calibrations
2. Force measurement load cell, providing ring
3. Temperature measuring devices: Thermocouple, Platinum resistance thermometer.
4. Speed measurement: Tachometer & Stroboscope
5. Torque measurement
6. Flow measurement: Orifice meter, Rotometer.
7. Vibration measurement.

DYNAMICS LAB

1. Kinematics of four bar, slider crank, crank rocker, double crank, double rocker and oscillating cylinder mechanisms
2. Cam & follower and motion studies
3. Kinematics of gear trains – Simple, Compound, Epicyclic
4. Determination of M.O.I by using connecting rod and flywheel
5. Governors – Watt, Porter
6. Motorized gyroscope and verification of losses
7. Single degree of freedom Spring-mass-damper system, determination of natural frequency and damping coefficient
8. Determination of M.O.I using compound pendulum.
9. Determination of stiffness and natural frequency of single rotor and two rotor shafts.
10. Determination of critical speed of shaft with concentrated loads- Whirling of shafts.
11. Balancing of rotors.

Course Coordinator **HOD**

Dr. K. Balasubramanian

	MANUFACTURING TECHNOLOGY LAB	L	T	P	C
U18PCME5L3	Total Contact Hours- 30	0	0	2	1
	Prerequisite – Manufacturing Technology				
	Course coordinator Name & Department – R.Hariharan , Department of Mechanical Engineering				

OBJECTIVES

- To provide an understanding of advanced manufacturing methods.
- To get an idea of the dimensional & form accuracy of products
- To expose students in understanding various metal cutting operations and commonly used machine tools.

COURSE OUTCOMES (COs)

CO1	recognize lathe and its working
CO2	To aware about different tools used in manufacturing.
CO3	Understand the concept of tool wear.
CO4	Distinguish the functions and applications of different metal cutting tools
CO5	To formulate different methods of manufacturing
CO6	To create how to learn force calculations

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	L
2	CO1	3								2		3	
	CO2											3	
	CO3									2			
	CO4												
	CO5											3	
	CO6			2		3				2			
3	Category	Professional core											
4	Approval	47th Academic Council, July 2018											

LIST OF EXPERIMENTS:

1. Exercise on Plain turning and thread cutting
2. Taper turning and knurling using lathe
3. Contour milling using vertical milling machine
4. Spur gear cutting in milling machine
5. Helical Gear cutting using Hobbing machine
6. Determination of cutting forces in Milling and drilling using dynamometers
7. Slotting and key way cutting in vertical slotting machine
8. Shaper Exercise : Making a square from a round rod
9. Exercise on drilling and boring
10. Surface Grinding

Course Coordinator **HOD**

U18MCAB611	**SELF DEVELOPMENT –SPRIRITUAL, MINDFULNESS & MEDITATION**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Designed by – AICTE				

Spiritual, Mindfulness and Meditation

The human mind especially among the youth needs to transcend its preoccupation with negative experiences such as fear, anxiety, anger and obsession and to become more comfortable with the experience of compassion, acceptance and forgiveness.

The student's attitude of acceptance towards negativity, aggression and turbulent emotions should be diffused with the practice of mindfulness. Rather than suppressing emotions or by indulging in them, the student be taught to handle such vibes with acceptance and generosity and with the observation of the self.

A mindful state has to be achieved when negative thoughts and experiences are becoming more personalized and do not serve as dictators of subsequent feelings and activities (e.g. suicide attempts, violence etc.). Both concentrative and insight meditation techniques may be practiced for 10-day sessions during every two months. Behavioral techniques of self monitoring should also be practiced to observe the stream of consciousness from the perspective of a vigilant but detached observer.

The students should be trained to practice different models of mindfulness and meditation so as to elicit a state of deep physical and behavioral relaxation. They may work on selectively influencing or changing the symmetry in hemispheric brain activity. Positive addiction, meta - cognitive practices etc. are exercised to make the students experience the universal human capacity through spiritual experiences.

The students may learn to turn-off or bypass the cognitive processing of usual daily pre-occupations and concerns, allowing access to mindful, spiritual and meditative state of self realization.

Activities:

Reading (10 books/ narrations)

Exercises (Mindfulness based Stress Reduction (MBSR) and 10 more)
Sessions: multiple 10-day sessions may be organized over a semester.

U18MCAB612	**SELF DEVELOPMENT – RELIGION AND INTER -FAITH**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Designed by – AICTE				

The objective is to gain knowledge about the beliefs and philosophies of different religions on issues like environment, gender equality, unity, financial equality etc.

The scholars of different religious and philosophical sects should be invited to talk about the issues mentioned above. Efforts should be made to ensure that such talks and discourses should stay clear-off making a critical study on these areas.

Following activities must be included.

Reading of books on religious texts of different faiths by famous authors. (Reading methods may be as suggested under 'book reading'.)

Organizing lecture on interfaith issues covering philosophies and chronology and contemporary situations world over at a given time.

U18PCME601	**MACHINE DESIGN II**	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Machine design I				
	Course coordinator Name & Department – Mr. V.Jose Ananth Vino Department of Mechanical Engineering				

OBJECTIVES

To learn about the design procedures for mechanical power transmission components.

COURSE OUTCOMES (COs)

CO1	Upon completion of this course, the students will understand the basic design aspects associated with different types of clutches and brakes.
CO2	Students will be able to do analysis of flexible power transmission drives and can design and recommend best flexible power transmission drives for any types of machines
CO3	Students will understand Design principles associated with different types of gears
CO4	Students will apply the design knowledge for recommending the required types, size and shape of gears required in any machines.
CO5	Students can evaluate gear box for automobiles and machine tools.
CO6	Students can create single plate clutch ,multi plate clutch and gears .

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	L
2	CO1	3	3	1						3		3	3
	CO2	3	3	1					2			3	
	CO3	3	3							2		3	
	CO4	3	2	2					2			3	2
	CO5	2	2	2								2	
	CO6	2	3	3					2			3	
3	Category	Professional Core											
4	Approval	47th Academic Council, July 2018											

UNIT I **12**

Design of Plate Clutches, Axial Clutches, Cone Clutches, Internal Expanding Rim Clutches; Electromagnetic Clutches; Band and Block brakes, External Shoe Brakes, Internal Expanding Shoe Brake.

UNIT II **12**

Design of Flexible Transmission drives using manufacturer's data. Design of Flat Belts & Pulleys, Selection of V-belts and pulleys, Selection of Hoisting Wire ropes and pulleys, Design of Chains and Sprockets

UNIT III **12**

Gear Materials- Force Analysis-Design of Spur and Helical gears – Cross Helical Gears, Terminology, Helix angles, Sizing of a pair of Helical gears.

UNIT IV **12**

Straight Bevel gear- Tooth Terminology, Tooth Forces and Stresses, Equivalent Number of teeth. .Estimating the Dimensions of a pair of Straight Bevel gears; Worm gear, Merits &Demerits, Terminology, Materials, Forces & Stresses, Efficiency, Estimating the size of Worm Gear Pair.

UNIT V **12**

Gear box- Geometric progression, Standard step ratio; Ray diagram, Kinematics layout; Design of Sliding Mesh, Constant mesh, Synchromesh Gear Box- Design of Multi-Speed Gear Box for Machine Tool Applications. Calculation of Number of teeth in Gears- Speed Reducer Unit; Variable Speed Gear Box.

	Total Contact Hours – 60	3	0	0	4
	Prerequisite – Numerical Methods				
	Course coordinator Name & Department – Dr.C.M.Meenakshi Department of Mechanical Engineering				

OBJECTIVES

This course will enable the student To gain knowledge about the basic fundamentals of CAD.

COURSE OUTCOMES (COs)

CO1	Upon completion of this course, the students will able to recognize different mathematical Techniques used in FEM analysis
CO2	Understand the concepts of Nodes and elements
CO3	Students will able to apply FEA in Structural and thermal problem
CO4	Students will able analyze heat transfer problem using FEA technique
CO5	Students will able to classify the types of analysis and its application
CO6	Students will able to build a FEA Model

UNIT -1 **9**

Historical Background, Mathematical modeling of field problems in engineering, governing equations, discrete and continuous models, boundary and initial value problems, Weighted Residual Methods, Variational formulation of boundary value problems, Ritz technique, Basic concept of Finite Element Method.

UNIT –II **9 HRS**

One dimensional second order equation, Bar element – Mechanical and Thermal loads discretization, linear and higher order elements, derivation of shape functions, Stiffness matrix and force vectors, assembly of elemental matrices, longitudinal vibration and mode shapes

UNIT -1II **9 HRS**

Two dimensional equations, variational formulation, finite element formulation, triangular elements- shape functions, elemental matrices application to thermal problems, torsion of non-circular shafts. Plane stresses and plane strain problems.Trusses and Frames.

UNIT -1V **9 HRS**

Natural coordinate systems, isoparametric elements and shape functions, numerical integration and application to plane stress problems, Choice of quadrature rule – Gauss Point -matrix solution techniques, solution of dynamic problems

UNIT – V **9 HRS**

Introduction to FE software.Computerized FEA – Preprocessing –Element types - Mesh generation – Solution – Post processing – Procedures of Case studies.

	Course coordinator Name & Department – Department of Mechanical Engineering				

OBJECTIVES

To provide the student with the concept and an understanding of basic concepts in Linear Programming techniques, Duality Principles, Transportation and Assignment problems, Inventory models, PERT/CPM, Queuing and Replacement Models.

COURSE OUTCOMES (COs)

CO1	Explain the basic concepts of optimization and to formulate and solve linear programming problems, Apply duality principle in day to day life style
CO2	Apply the concepts of Transportation Problem and Assignment Problem, Participate in the class room discussion on Transportation algorithm.
CO3	Explain and Demonstrate the basic concepts of PERT- CPM and their application reproduce the network model.
CO4	Explain the basic concepts of optimization and to formulate and solve inventory problems.
CO5	Explain and apply the concepts of Queueing theory and their application
CO6	Explain and apply the concepts of sequencing problem and its applications

4	Approval	47th Academic Council, July 2018											

UNIT I LINEAR PROGRAMMING 12Hrs

Introduction to phases of an Operations Research study– Linear programming – Formulation of the Programming – Graphical method – Simplex method – Dual simplex method-Two phase method.

UNIT IITRANSPORTATION &ASSIGNMENT PROBLEMS12Hrs

Transportation models – Vogel's approximation method Modi method – Unbalanced transportation problem – Degeneracy in transportation models - Assignment problems – Hungarian method

UNIT III NETWORKS & REPLACEMENT MODELS 12Hrs

Networks – PERT and CPM – Network diagrams – Shortest route – Minimum spanning tree,Replacement models– Individual and Group replacement policy

UNIT IV INVENTORY MODELS 12Hrs

Inventory models– Deterministic models– Production models – Economic Ordering Quantity Models – Quantity Discount Model –Multi Product Models – Inventory Control Models in practice.

UNIT VQUEUEING MODELS&RESOURCE SCHEDULING 12Hrs

Queuing theory – Queuing system and structure – Kendal's notation– Poisson arrival and Exponential service time – Characteristic of queuing models – Single channel and Multiple models.Resource scheduling – Sequencing n jobs through 2 machines and 3 machines.

	Course coordinator Name & Department – Mr.Srinivasan Department of Mechanical Engineering				

OBJECTIVES

This course will enable the student To gain knowledge about the basic fundamental of CAD and CAM

COURSE OUTCOMES (COs)

CO1	Understand the benefits of computer aided design
CO2	Students remember and learn the Knowledge of CNC.
CO3	Understand the computer aided manufacturing of machine elements.
CO4	**Students analyze 2D modeling**
CO5	Students apply and solve 3d Drawings
CO6	Remember to learn writing commands

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	3							2			1	3
	CO2	3							2			1

	CO6						2	2	2				
3	Category	Professional core											
4	Approval	47th Academic Council, July 2018											

CAD Introduction to Computer Aided Drawing

2-D DRAWING Orthographic Views, Isometric Views, 2D Sectional Views, Part Drawing, Assembly Drawing, Detailed Drawing. Dimensioning, Annotations, Symbols, Welding, Surface finish, Threads, Text, Bill of Materials. Exercise- Knuckle Joint, Gib and Jotter Joint, Screw Jack, Foot Step Bearing.

3-D DRAWING Part Modeling- Protrusion, Cut, Sweep, Draft and Loft- Modify/Edit- Pattern- Transformation, Boolean operation. Assembly- Creating Assembly from Parts, Modify/Edit- Pattern Conversion of 3D Solid Model to 2D Model. Surface Modeling- Tabulated, Revolve, Ruled and Edge Surfaces. Exercise- Piston, Connecting Rod, Knuckle Joint, Universal Joint, Couplings.

CAM LAB

1. Manual Part programming for CNC machines Using standard G – Codes and M- codes. Simulation of Tool path – Machining Practices on Trainer type CNC Machines – Straight cut, Taper turning, Profile, Parting, Thread cutting.
2. CNC Milling Machine: Production of Various Contour shapes
3. Computer assisted part programming – APT programming Language – Part programming

using APT and other NC programming Languages.

4. Introduction to Component Modeling
5. NC code generation using CAD / CAM software – Post processing for standard CNC controls like FANUC, SINUMERIC etc.,

	SOFT SKILL LAB	L	T	P	C
U18EEEA6L2	Total Contact Hours –30	0	0	2	1
	Prerequisite – CAD /CAM/CIM				
	Course Designed by – Department of English				

OBJECTIVES

Develop their communicative competence in English with specific reference to speaking and listening

COURSE OUTCOMES (COs)

CO1	Develop their communicative competence in English with specific reference to speaking and listening
CO2	Enhance their ability to communicate effectively and efficiently in interviews.
CO3	Strengthen their prospects of success in competitive examinations.
CO4	Work with peer group in a smooth manner.
CO5	Develop inter personal and intra personal skills
CO6	Develop their communicative competence in English with specific reference to speaking and listening

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) **3 – Strong, 2 – Medium, 1 – Weak**

UNIT I LISTENING AND SPEAKING SKILLS 6 hours

Conversational skills (formal and informal)- group discussion- making effective presentations using computers, listening/watching interviews conversations, documentaries. Listening to lectures, discussions from TV/ Radio.

UNIT II READING AND WRITING SKILLS 6 hours

Reading different genres of texts ranging from newspapers to creative writing. Writing job applications- cover letter- resume- emails- letters- memos- reports.Writing abstracts- summaries- interpreting visual texts.

UNIT III ENGLISH FOR NATIONAL AND INTERNATIONAL EXAMINATIONS AND PLACEMENTS 6 hours

International English Language Testing System (IELTS) - Test of English as a Foreign Language (TOEFL) - Civil Service(Language related)- Verbal Ability.

UNIT IV INTERVIEW SKILLS 6 hours

Different types of Interview format- answering questions- offering information- mock interviews-body language(paralinguistic features)- articulation of sounds- intonation.

UNIT V SOFT SKILLS 6 hours

Motivation- emotional intelligence-Multiple intelligences-managing changes-time management-stress management-leadership traits-team work- career planning -intercultural communication- creative and critical thinking

To be totally learner-centric with minimum teacher intervention as the course revolves around practice.

1. Suitable audio/video samples from YouTube to be used for illustrative purposes.
2. GD/Interview/Role Play/Debate could be conducted off the laboratory (in a regular classroom) but learners are to be exposed to telephonic interview and video conferencing.
3. Learners are to be assigned to read/write/listen/view materials outside the classroom as well for graining proficiency and better participation in the class.

OBJECTIVES

Develop their communicative competence in English with specific reference to speaking and listening

COURSE OUTCOMES (COs)

CO1	Recognize the importance and opportunities for the development of skills.
CO2	Select the appropriate training and experiential learning methodologies.
CO3	Strengthen their potential in diversified but essential activities like counselling, assessment, outreach, and provision of supervision and enhance the prospects of success in technological world.
CO4	Outline the importance of work with peer group and to enhance their amicability.
CO5	Recommend an open and supportive environment conducive to the development of multicultural competence.
CO6	Make use of the prescribed regulations to built the continuous assessment report

Industrial / Practical Training / Internship / Mini Project

The Industrial / Practical Training shall carry 100 marks and shall be evaluated through continuous assessment only. At the end of Industrial / Practical training / internship / Summer Project, the student shall submit a brief report on the training undergone and a certificate from the organization concerned. The evaluation will be made based on this report and a Viva-Voce Examination, conducted internally by a three member Departmental Committee constituted by the Head of the Department. Certificates (issued by the Organization) submitted by the student shall be attached to the mark list and sent to the Controller of Examinations by the Head of the Department.

18MCAB509	**SOCIAL SERVICES – SOCIAL AWARENESS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Designed by – AICTE				

Social awareness (Artisans-relates to engg., visit to hospitals, orphanages, policestation, courts, trauma centers, consumer forums)

Human beings live in relationship with their family members and with others in the society. As a society, mankind strives to achieve ordered and organized life through which an environment of cooperation and coexistence is expected. A healthy society creating an environment of fearlessness is a key for the mankind to achieve higher goals because it is society which makes us most human, most complete as people.

Although as a society, our expectation is fearlessness, but due to lack of understanding of our role in a society, we fail to fulfill the expectation. The social awareness activity shall promote an understanding and sharing of issues of societal problem through exposure to variety of artisans and different kind of organizations. It is expected that this exposure will enable the learners to appreciate social issues, problems and challenges.

Each institution will offer a range of introductory activity based courses focusing on local artisans related to engineering so that students are sensitized to appreciate their problems and can take up some of the problems to solve while they do their regular studies. This course shall also include visits to visit to hospitals, orphanages, police station, courts, trauma centers, consumer forums so that they get exposed to different facets of societal problems. Care should be taken to give adequate representation to local and regional organizations and artisans. For example, Banaras has local traditions in *BanarasiSaari*, Toy making, etc and has almost all types of organizations. An institution in Banaras area can offer courses on these artisans. This will, in turn, also ensure wider community involvement/interaction with the institution. At the end of the course/semester, a student should be able to identify a social issue, prepare project report and give presentation on the selected issues. Contact hours per week should be 3 -4 hours. Towards the end of the course, the institution can organize an exhibition in which all the students publicly demonstrate findings of their reports and their future plan of actions.

U18PCME701	**AUTOMATION IN MANUFACTURING**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Manufacturing Technology, CAD/CAM				
	Course coordinator Name & Department – Mr.Lenin Rakesh Department of Mechanical Engineering				

OBJECTIVES

- To understand the importance of automation in the of field machine tool based manufacturing
- To get the knowledge of various elements of manufacturing automation – CAD/CAM, sensors, pneumatics, hydraulics and CNC
- To understand the basics of product design and the role of manufacturing automation

COURSE OUTCOMES (COs)

CO1	Upon completion of this course, the Students can able to remember the computer based automation of manufacturing operations
CO2	Students are able to learn and understand the fundamentals of CAD
CO3	Learn and analyze about the New Product Development and Optimization
CO4	Students remember the fundamentals of CNC and CNC Programming
CO5	Understand the Electronics in Mechanical systems and Flexible automation
CO6	Students are able to create a new level of manufacturing

LIST OF EXPERIMENTS:

A. PROGRAMMING IN MATLAB

1. Simple Applications in Arithmetic, Linear Algebra, Matrix operations.
2. Basic 2-D plots like i) Creating the circle ii) Creating the sine curve

B. MESHING AND ANALYSIS

1. Simple Meshes using a Meshing Software
2. Stress analysis of a plate with circular hole
3. Stress analysis of beams (Cantilever, Simply supported and fixed beams)
4. Thermal analysis of hot fluids in a pipe line
5. Mass flow of flue gases in an exhaust pipe
6. Harmonic analysis of a thin plate under axial loading
7. Mode frequency of a 2D component

The objective of this project is to provide opportunity for the students to implement their skills acquired in the previous semesters to practical problems.

The students in convenient groups of not more than 4 members have to take one small item for design and fabrication. Every project work shall have a guide who is the member of the faculty of the institution.

The item chosen may be small machine elements (Example- screw jack, coupling, machine vice, cam and follower, governor etc) attachment to machine tools, tooling (jigs, fixtures etc), small gear box, automotive appliances, agricultural implements, simple heat exchangers, small pumps, hydraulic/pneumatic devices etc.

The students are required to design and fabricate the chosen item in the college and demonstrate its working apart from submitting the project report. The report should contain assembly drawing, parts drawings, process charts related to fabrication.

U18EEME7P1	**PROJECT -I**	**L**	**T**	**P**	**C**
	Total Contact Hours –16 periods per week	0	0	8	4
	Prerequisite – Professional Courses				
	Course coordinator Name & Department – Dr.K.Balasubramanian Department of Mechanical Engineering				

OBJECTIVES

Every project work shall have a guide who is the member of the faculty of the institution. The aim of the project work is to deepen comprehension of principles by applying them to a new creative problem which may be the design and manufacture of a system, a research investigation, project management or a design problem.

COURSE OUTCOMES (COs)

CO1	Tabulate a comprehensive report covering core related information, literature survey and describe the problem statement, project work details and conclusion.
CO2	Summarize the final report in typewritten form as outlined in the guidelines.
CO3	Make use of the prescribed regulations to built the continuous assessment report
CO4	Motivate the studentto design and analyse the mechanical components
CO5	Understand the different fabrication processes.
CO6	Formulate assertiveness to face industrial environment.

18MCAB713	**BEHAVIORAL AND INTERPERSONAL SKILLS**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	0	0	2	0
	Prerequisite – Nil				
	Course coordinator Name & Department –Department of Mechanical Engineering				

Behavioral and Interpersonal skills (non-verbal skills / behaviours, non-aggression**)**

Each individual has behavior patterns that are shaped by the context of his or her past. Most often, adapting the behaviour to the changing context of the reality a person lives in becomes difficult which may lead to the reduction in personal effectiveness and natural self-expression. The main focus of this course is to equip the students with useful approaches to help in the deeper understanding of self and help individuals empower themselves to be the source of their own growth and development. The course will help students to learn effective communication skills, Group and team building skills and will help them learn the goal setting process and thus become more effective in achieving their goals.

The broader objective of this course is to make the students aware about the different facets of self and to help them learn skills to strengthen their inner capacities. So that they are able to understand themselves, think and act effectively, to be able to communicate in an effective manner and to learn to lead and to form an effective team. The specific objectives, however, are as following.

To help the students to understand their real self by recognizing differentaspects of their self-concept that will lead to an increased self-confidence.

To train the students for communicating effectively in both formal as well as in informal settings.

To help the students to understand the importance of non-verbal aspects of effective communication.

To help the students to understand Emotion and emotional intelligence, Managing ones' own emotional reservoirs, effective dealing with emotions at work

To facilitate the students in understanding the formation and function of group and team and to help them to learn the skills of a successful leader.

To help the students in understanding and practicing the goal setting process by recognizing the importance of each step involved in goal setting. The activities involved are designed to facilitate their career goal decision making.

The activities to achieve the above objectives can be suggested as follows.

- Motivational lectures
- Group Discussions/activities
- Case Study
- Games/Stimulation Exercises
- Role-Playing
- Mindfulness training.

Course Coordinator **HOD**

18MCAB714	**NATURE CLUB**	**L**	**T**	**P**	**C**
	Total Contact Hours – 30	0	0	2	0
	Prerequisite – Nil				
	Course Designed by – AICTE				

Nature club (bird watching, recognizing plants at institute/at home, recognizinglocal animals, appreciating biodiversity

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.

Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place.

Making high resolution big photographs of small creatures (bees, spiders, ants. mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants).

Videography/ photography/ information collections on specialties/unique features of different types of common creatures.Search and explore patents and rights related to animals, trees etc. Studying miracles of mechanisms of different body systems.

18MCAB815	**INNOVATION - PROJECT BASED – SC., TECH, SOCIAL, DESIGN & INNOVATION**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Designed by – AICTE				

Project based – Sc., Tech, Social, Design & Innovation

Many students, when they enter engineering, are full of enthusiasm to understand new areas, to build systems and to experiment and play with them. This enthusiasm is to be tapped and to direct it to exploration and sustained pursuit by the student which may result in development of a working system, a prototype, or a device or material, etc. They are not required or even expected to produce research or an innovation.

Students may be encouraged to take up projects which are aimed at providing solutions to societal problems, reduce drudgery and improving efficiency in rural work, green technologies, utilization of rural and urban waste, sanitation and public health, utilizing non - conventional energy sources, technologies for the benefit of the differently abled people and technologies ready to be implemented in the Institute.

Two types of activities may be undertaken under this

- Exposure to social problems (which are amenable to technological solutions)
- Design & Innovation (to address above problems)

After this students be encouraged to undertake technology projects of social relevance.

PROFESSIONAL ELECTIVE COURSES

U18PEME011	**ADVANCED INTERNAL COMBUSTION ENGINES**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite – Applied Thermodynamics.				
	Course Coordinator Name & Department – Mr.J.Manikandan Department of Mechanical Engineering				

OBJECTIVES

- To familiarize with the terminology associated with IC engines.
- To understand the basics of IC engines.
- To understand combustion, and various parameters and variables affecting it in various types of IC engines.
- To learn about various systems used in IC engines and the type of IC engine required for various applications

COURSE OUTCOMES (COs)

CO1	To explainengine exhaust emission control and basics of fuel injection systems
CO2	To summarize the concept of alternate fuels.
CO3	Illustrate the recent developments in Diesel Fuel Injection Systems.
CO4	Discuss the formation of various pollutants and methods of controlling emissions
CO5	Evaluate the performance of Air assisted Combustion
CO6	Understand the basics of Hybrid Electric Vehicles

	Total Contact Hours – 45	3	0	0	3
	Prerequisite – MACHINE DESIGN, MANUFACTURING TECHNOLOGY				
	Course Coordinator Name & Department – Mr. Jeevabharathi/ Department of Mechanical Engineering				

OBJECTIVES

- At the end of this course the student should be able to understand the design principles of casting, welding, forming, machining and assembly, by considering various manufacturing constraints.

COURSE OUTCOMES (COs)

CO1	Students will learn the principles of manufacturing
CO2	Students will Understand the Design for manufacturing
CO3	Students will able to relate welding and its applications
CO4	Students will able to select fasteners for their design
CO5	Students will able to summarize about design principles of casting and machining
CO6	Students will able to adopt the principles of machining and assembly in design

UNIT I **9**

General design principle for manufacturing - Process capability- Surface finish – tolerances – features of tolerance – cumulative effect of tolerance – Geometric tolerances.

UNIT II **9**

Fits- Selective assembly- Deciding the number of groups, control of axial play- Grouped datum systems- Types- Automated assemblies- laminated shims assemblies.

UNIT III **9**

True position theory- Virtual size concept- True position tolerancing- fixed fasteners- Floating fasteners- zero true position tolerances- Functional gauging- paper layout gauging.

UNIT IV **9**

Form design of castings- Redesigning- Parting line consideration- Minimizing core requirements- economic design of castings- Form design of weldments- Welding symbols- redesigning cast members using weldments- Economic weldments.

UNIT V **9**

Design for assembly- Design for inspection- Design for machining- Redimensioning based on manufacturing datums- Design of reduce value addition – Parts cut to length – Machined round holes- Blind & Through holes – Design consideration for various machining operations.

Mr. Jeevabharathi

U18PEME13	**SPECIAL CASTING PROCESS**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite – Manufacturing Processes ,Manufacturing Technology				
	Course Coordinator Name & Department – Dr.Golden Renjith Nimal, Department of Mechanical Engineering				

OBJECTIVES

Understand the concepts of molding and casting

COURSE OUTCOMES (COs)

CO1	Recall and perform the basic concepts of casting processes.
CO2	Make use of modern casting industry tools (real and virtual).
CO3	Student will able to analyze a casting design in terms of casting parameters and cost estimates using technical methodology.
CO4	Improve the knowledge on designing parameters of casting.
CO5	Discuss the different fabrication processes.
CO6	Determine the advancements in casting processes to face industrial environment.

Mapping of Course Outcomes with Program outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	B	c	d	e	f	g	h	i	j	K	l
2	CO1								2			1	
	CO2			3				2	3	3		1	
	CO3			3	3	2		2			1	1	
	CO4					2		2		2		1	
	CO5					2							
	CO6						2	3	2				
3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

UNIT I **10**

Introduction to Casting: Scope of Foundry, Features of casting, Solidification, Risering, Gating, Patterns, Moulding and core making, Defects, Sand casting -Need for special casting process-Applications.

UNIT II **7**

Shell Moulding: Process-Machines-Pattern-Sand, resin and other materials – Process parameters – Characteristics of shell mould casting-'D' Process – Applications

UNIT III **8**

Investment casting: Process- Pattern and mold materials – Black mold and ceramic shell mold - Mere Cast and Shaw process – Applications.

UNIT IV **8**

Centrifugal casting: Types – True centrifugal casting – semi centrifugal casting - Centrifuging– Equipment - Applications.

Die casting: Equipment – Types – Hot chamber – Cold Chamber – Applications.

UNIT V **12**

Reciprocating continuousmould process – Direct chill process – Use of steel, Aluminum, brass material in continuous casting. CO_2Mould / Core hardening process – Full Mould process: Principle – Applications, Special processes like Squeeze casting and Electroslag casting processes.

	INDUSTRIAL ENGINEERING	L	T	P	C
U18PEME014	Total Contact Hours –45	3	0	0	3
	Prerequisite – Manufacturing Processes ,Manufacturing Technology				
	Course Coordinator Name & Department – Mrs. G. Sucharitha/ Department of Mechanical Engineering				

OBJECTIVES: To impart knowledge in undertaking market research, demand forecasting and costing for designing plant, operation, production, maintaining standards of professional ethics.

COURSE OUTCOMES (COs)

CO1	After completing the course students will be able to understand the industrial engineering concept and apply in the industrial engineering Environment.
CO2	Describe different aspects of production planning and control in manufacturing industries.
CO3	Demonstrate the knowledge of designing plants and controlling Production
CO4	Students will able to analyzeand implement different concepts involved in methods study and understanding of work content in different situations.
CO5	Students will be able to build leadership qualities and develop communication skills.
CO6	Students will be able to create control charts for different attributes and understand the acceptable quality levels in the in the production.

UNIT I **9**

Definitions-Productivity, Effectiveness, and Types-Factors Influencing Productivity-Techniques To Improve Productivity, Technology Based Techniques and material Based Productivity Improvement-Inventory Control-M.R.P-Quality Circles-Brainstorming-Pareto Analysis-Cause And Effect Analysis-TQM-Zero Defects-Flextime-Just In Time-Ergonomics-Reliability Improvement-Modular Design-Maintainability**.**

UNIT II **9**

Types of Layout, Its Advantages and Disadvantages-Preference of Different Types of Layout, Plant Location and Decision-Definitions: Group Technology-Principles of Material Handling. Loading- Master Scheduling- Perpetual Loading-Order Scheduling-Loading By Scheduled Method-Index Method Of Scheduling-Factors Influencing Scheduling-Production Planning And Control-Routing And Dispatching-Job Card-Job Order-Order Control And Machine Load Chart.

UNIT III **9**

Techniques of Work Study-Procedure-Method Study, Types of Process Charts and Diagrams-Multiple Activity Chart-Utility-Time Study-Micro Motion Time Study-PMTS-Work Sampling-Job Analysis-Job Evaluation and Merit Rating-Wage and Wage Incentive.

UNIT IV **9**

Introduction-Nature And Scope-Objectives-Hawthorne Studies And Its Conclusion-Individual Behaviour-Group Behaviour,Types Of Groups-Formal And Informal Organizations-Fatigue – Accident,MajorFactors,Prevention-Importance And Methods Of Training To The Employees, Methods And Aids-Leadership And Leadership Styles-Communication And Its Importance.

UNIT V **9**

Introduction to Quality Control-Statistical Measures-Control Chart-Types –Control Chart for Attributes-Control Chart for Number of Defects per Unit-Acceptance Sampling-Basic Probability-Normal Distribution-Acceptable Quality Level-Lot Tolerance Percent Defective-Average Outgoing Quality

U18PEME21	**POWER PLANT ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Applied Thermodynamics				
	Course Coordinator Name & Department – Dr.S.Thirumavalavan / Department of Mechanical Engineering				

OBJECTIVES

To understand the various components, operations and applications of differenttypes of power plants

To provide an overview of power plants and the associated energy conversion issues

COURSE OUTCOMES (COs)

CO1	Remembers the types of turbines, boilers and condensers.
CO2	Understands the types of boilers and working of generators
CO3	Analyze the different types of reactors and learn the key knowledge.
CO4	Students understands the facts and ideas of hydro power plants
CO5	Students are able to learn and evaluate the tariffs.
CO6	Student understands the installation of nuclear power plants and their adv and disadvantages

Mapping of Course Outcomes with Program outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

OBJECTIVES:

To provide an overview of power plants and the associated energy conversion issues

CONTENTS:

UNIT-I (9)

Coal based thermal power plants, basic Rankine cycle and its modifications, layout of modern coal power plant, super critical boilers, FBC boilers, turbines, condensers, steam andheating rates, subsystems of thermal power plants, fuel and ash handling, draught system, feed water treatment, binary cycles and cogeneration systems.

UNIT-II (9)

Gas turbine and combined cycle power plants, Brayton cycle analysis and optimization, components of gas turbine power plants, combined cycle power plants, Integrated Gasifier based Combined Cycle (IGCC) systems.

UNIT-III (9)

Basics of nuclear energy conversion, Layout and subsystems of nuclear power plants, Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), CANDU Reactor, Pressurized Heavy Water Reactor (PHWR), Fast Breeder Reactors (FBR), gas cooled and liquid metal cooled reactors, safety measures for nuclear power plants.

UNIT-IV **(9)**

Hydroelectric power plants, classification, typical layout and components, principles of wind, tidal, solar PV and solar thermal, geothermal, biogas and fuel cell power systems.

UNIT-V **(9)**

Energy, economic and environmental issues, power tariffs, load distribution parameters, load curve, capital and operating cost of different power plants, pollution control technologies including waste disposal options for coal and nuclear plants.

U18PEME22	**TRIBOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Materials science, Machine design.				
	Course Coordinator Name & Department – Mr. Jose Ananth Vino/Department of Mechanical Engineering				

OBJECTIVES: To understand the theories of friction and wear and to design best bearings .

COURSE OUTCOMES (COs)

CO1	The students will be able to apply theories of friction to various practical situations by analyzing the physics of the process.
CO2	The students will be able to understand the various types of wears and wear mechanism.
CO3	They will understand the various surface measurement techniques and effect of surface texture on Tribological behavior of a surface.
CO4	They will be able to select materials and lubricants to suggest a tribological solution and will be able to design journal bearings
CO5	The students will be able to design a rolling contact bearing.
CO6	The students will be able to understand the recent developments in the field and can offer tribological solutions

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO6	3				1							
3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

Unit 1: Friction, theories of friction, Friction control, Surface texture and measurement, genesisof friction, instabilities and stick-slip motion.

Unit 2: Wear, types of wear, theories of wear, wear prevention.

Unit 3: Tribological properties of bearing materials and lubricants.
Lubrication, Reynolds's equation and its limitations, idealized bearings, infinitely longplane pivoted and fixed show sliders, infinitely long and infinitely short (narrow) journal bearings, lightly loaded infinitely long journal bearing (Petroff's solution), FiniteBearings, Design of hydrodynamic journal bearings

Unit 4: Hydrostatic, squeeze film Circular and rectangular flat plates, variable and alternatingloads, piston pin lubrications, application to journal bearings and design of Journal bearings.

Unit 5: Elasto-hydrodynamic lubrication – pressure viscosity term in Reynolds's equation,Hertz' theory, Ertel-Grubin equation, lubrication of spheres, gear teeth and rolling element bearings, Air lubricated bearings, Tilting pad bearings, design of rolling contact bearings.

U18PEME23	**COMPOSITE MATERIALS AND TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite – Materials Engineering				
	Course Coordinator Name & Department – Dr. C.M.Meenakshi ,Department of Mechanical Engineering				

OBJECTIVES

To understand the mechanical behaviour of composite materials

To get an overview of the methods of manufacturing composite materials

COURSE OUTCOMES (COs)

CO1	Upon completion of this course, the students will able to discover the mechanical behaviour and application of composite materials
CO2	students will beable to understand the fundamentals of composite material strength and its mechanical behavior
CO3	Students will be able to analyze fiber reinforced Laminate design for different combinations of plies with different orientations of the fiber.
CO4	Students will be able to demonstrate the thermo-mechanical behavior and study of residual stresses in Laminates during processing applying Laminate Theories (CLT)
CO5	Students will be able appraise the residual stresses in an isotropic layered structure such as electronic chips.
CO6	Students will be able design composite material with respect to application's mechanicalstrength requirement.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	D	e	f	G	h	I	J	K	L
2	CO1	3			1				2			1	
	CO2	3						3	2			1	1
	CO3			3	2	3		1				1

	CO5				2	2							
	CO6		1	3				3	2				
3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

UNIT I **12**

Definition and applications of composite materials, Fibers- glass, carbon, ceramic and aramid fibers; Matrices- polymer, graphite, ceramic and metal matrices; characteristics of fibers and matrices. Lamina- assumptions, macroscopic viewpoint, generalized Hooke;s law, reduction

of homogeneous orthotropic lamina, isotropic limit case, orthotropic stiffness matrix, commercial material properties, rule of mixtures, transformation matrix, transformed stiffness.

UNIT II **8**

Manufacturing of composite materials-Fiber Reinforced Composites- Fundamentals- bag moulding, compression moulding, pultrusion, filament winding, other manufacturing processes- Metal Matrix composites- Powder Metallurgy- Diffusion Bonding-Melt Stirring-Rheocasting- squeeze casting, , other manufacturing processes

UNIT III **9**

Basic assumptions of laminated anisotropic plates, symmetric laminates, angle ply laminates, cross ply laminates, laminate structural moduli, evaluation of lamina properties, determination of lamina stresses, maximum stress and strain criteria, von Mises Yield criterion for isotropic materials, generalized Hill's criterion for anisotropic materials, Tsai-Hill's criterion for composites, prediction of laminate failure, thermal analysis of composite laminates

UNIT IV **8**

Performance of laminates – Static Mechanical Properties- Test Method and Analysis, Unidirectional Laminate, Cross Ply Laminates and Multidirectional Laminates- Compressive Properties-Flexural Properties-Inter laminar shear strength—Fatigue properties-Impact Properties- Environmental Effect

UNIT V **8**

Failure predictions-design considerations-joint design-codes-design examples.Optimization of laminated composites-Application of FEM for design and analysis of laminated composites-static bending analysis, buckling analysis, free vibrations, natural frequencies.

	Total Contact Hours – 45	3	0	0	3
	Prerequisite –BacisElectrical and Electronics Engineering				
	Course Coordinator Name & Department –R.Hariharan ,Department of Mechanical Engineering				

OBJECTIVE:

- To understand the basic concepts associated with the design and Functioning andapplications of Robots To study about the drives and sensors used in Robots
- To learn about analyzing robot kinematics and robot programming

COURSE OUTCOMES (COs)

CO1	recognize the basic engineering
CO2	demonstrate the design of robotics
CO3	experiment with robot kinematics and robot programming
CO4	To survey recent application of Robots
CO5	Explain about force and torque sensing
CO6	Topredict learrn about material handling

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

UNIT I **9**

Definition of Robot – Laws of Robotics – Basic concepts – Robot Configuration – Types of Robot drives – Basic Robot motions – Point to Point control – Continuous path control – Accuracy and repeatability.

UNIT II **9**

Control system components-Control system analysis–Actuation and feed back– manipulators – Direct kinematic model and inverse kinematic model – Coordinate transformation – Robot dynamic modeling – Types of Robot and end effectors - Tools as end effectors

UNIT III **9**

Range sensing – Proximity sensing – touch sensing – force and torque sensing.Introduction to machine vision – Sensing and digitalizing – Image processing and analysis.

UNIT IV **9**

Methods online/ offline – Show and teach – Teach pendant – lead and teach – Languages Explicit – task level – capabilities and limitation – Artificial intelligence – Knowledge representation – Search techniques.

UNIT V **9**

Applications of robots in machining – Welding – Assembly – Material handling – processing – Loading and un loading – CIM inspection – Hostile and remote environments – Non industrial applications.

U18PEME31	**GAS DYNAMICS AND JET PROPULSION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45				
	Prerequisite – HEAT TRANSFER	**3**	**0**	**0**	**3**
	Course Coordinator Name & Department – Mr. V. Srinivasan,Department of Mechanical Engineering				

OBJECTIVE:

- To impart knowledge to the students on compressible flow through ducts, jet propulsion and space propulsion.
- To understand the basic difference between incompressible and compressible flow.
- To understand the phenomenon of shock waves and its effect on flow. To gain some basic knowledge about jet propulsion and Rocket Propulsion.
- To understand the features of compressible isentropic flows and irreversibilities like shocks.
- To provide a basic knowledge of jet and rocket propulsion technologies.

Course Outcomes

CO1	Will be able to recognize compressible flow through ducts, jet propulsion and space propulsion.
CO2	Will understand the basic difference between incompressible and compressible flow.
CO3	Will be able to predict the phenomenon of shock waves and its effect on flow.
CO4	Will derive the jet propulsion concepts
CO5	To solve the rocket propulsion problems
CO6	To compare the types of rocket engine

4	Approval	47th Academic Council, July 2018											

Objectives:

- To understand the features of compressible isentropic flows and irreversibilities like shocks.
- To provide a basic knowledge of jet and rocket propulsion technologies.

Contents:

UNIT I **9**

Compressible fluid flow-energy and momentum equations, stagnation stages, various regions of flow, reference velocities, effect of Mach number on compressibility. Types of waves, Mach cone, Mach angle.

UNIT II **9**

Flow through variable area ducts-nozzles and diffusers, Mach number variation, stagnation and critical states, area ratio as a function of Mach number.Flow through constant area ducts-

with friction (Fanno flow), with heat transfer (Reyleigh flow), Variation of flow properties. Use of Gas Tables and Charts.

UNIT III **9**

Governing equations, variation of flow parameters across the normal and oblique shocks.PrandtlMeyer relations. Flow in variable area ducts with normal shocks. Use of Tables and Charts.

UNIT IV **9**

Types of jet engines-turboprop, turbojet, ramjet, pulsejet. Aircraft propulsion theory, performance analysis of jet engines, parameters affecting flight performance, thrust augmentation.

UNIT V **9**

Types of rocket engines, propellants, combustion instabilities, rocket propulsion theory, performance of rocket engine, multistage rockets, orbital and escape velocities.

U18PEME32	**DESIGN OF JIGS FIXTURES AND PRESS TOOLS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – MANUFACTURING TECHNOLOGY				
	Course Coordinator Name & Department – R.Hariharan, Department of Mechanical Engineers				

OBJECTIVES

To understand the functions and design principles of Jigs, fixtures and press tools To gain proficiency in the development of required views of the final design.

COURSE OUTCOMES (COs)

CO1	To discover the knowledge on standard components
CO2	Will summarize and the principle and use of standards
CO3	Determine the use and design of fixtures
CO4	Classify the design of press tools
CO5	Develop the new components using CNC programming
CO6	Invent the concept of technical design

Mapping of Course Outcomes with Program outcomes (POs)

UNIT I **12**

Introduction to jigs & Fixtures - Design principles of jigs & fixtures - Locating principles and elements – Standard parts – Clamping devices, Mechanical ,Pneumatic and hydraulic actuation, Clamping force analysis.

UNIT II **12**

Drill bushes - Different types of jigs- plate, latch, channel, box, post, angle plate, angular post, turnover, pot jigs - Automatic drill jigs – Rack & pinion operated and Air operated jig components - Design and development of jigs for the given components.

UNIT III **12**

Types of fixtures - Boring, Lathe, Milling, Broaching fixtures – Grinding, Planning and Shaping fixtures – Assembly, Inspection and Welding fixtures – Modular fixtures – Design and development of fixtures for the given components.

UNIT IV **12**

Press working terminology - Types of Presses and Press Accessories – Computation of capacities and tonnage requirements – Strip layout

UNIT V **12**

Design and development of various types of Cutting, Forming and Drawing dies – Blank development for cylindrical and non cylindrical shells – Compound , Progressive and Combination dies.

	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Manufacturing Processes				
	Course Coordinator Name & Department – Dr. R. J. Golden Renjith Nimal ,Department of Mechanical Engineering				
OBJECTIVES • To learn about various unconventional machining processes, the various process parameters and their influence on performance and their applications					
COURSE OUTCOMES (COs)					

CO1	Upon completion of this course, the students can able to demonstrate different unconventional machining processes and know the influence of difference process parameters on the performance and their applications.
CO2	To understand the need and importance of non traditional machining methods.
CO3	To learn the basic principle, equipment, process variables and mechanics of metal removal in abrasive jet machining and water jet machining.
CO4	To study the fundamentals of tool design, surface finishing and metal removal rate of electro chemical grinding , electro chemical machining and electro chemical honing.
CO5	To understand principles of operation, types of electrodes and process parameters and machine tool selection in EDM and Electric discharge grinding and wire cut process.
CO6	To learn the basics of Electron Beam Machining and comparison of thermal and non thermal processes.

UNITI **7**

Introduction: Need for non-traditional machining methods-Classification of modern machining processes — considerations in process selection. Materials, Conventional vs Unconventional Machining Processes, Applications parameters, Economic considerations, applications and limitations, recent development

UNIT II **9**

Abrasive Jet Machining – Water Jet Machining – Abrasive Water Jet Machining - Ultrasonic Machining.(AJM, WJM, AWJM and USM). Working Principles – equipment used – Process parameters – MRR- Applications.

UNIT III **9**

Electric Discharge Machining (EDM)- working Principle-equipments-Process Parameters-Surface Finish and MRR- electrode / Tool – Power and control Circuits-Tool Wear – Dielectric – Flushing – Wire cut EDM – Applications.

UNIT IV **10**

Chemical machining and Electro-Chemical machining (CHM and ECM)-Etchants – Maskant - techniques of applying maskants - Process Parameters – Surface finish and MRR-Applications. Principles of ECM- equipments-Surface Roughness and MRR Electrical circuit-Process Parameters- ECG and ECH - Applications.

UNIT V **10**

Laser Beam machining and drilling (LBM), plasma Arc machining (PAM) and Electron BeamMachining (EBM). Principles – Equipment –Types - Beam control techniques – Applications.

U18PEME034	**PROCESS PLANNING AND COST ESTIMATION**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	1	0	3
	Prerequisite – MANUFACTURING PROCESSES				
	Course Coordinator Name & Department – Mr.N.Lenin Rakesh ,Department of Mechanical Engineering				

OBJECTIVES

To introduce process planning concepts to make cost estimation for various products

COURSE OUTCOMES (COs)

CO1	Upon completion of this course, the students will be able to make use of the concepts of process planning and cost estimation for various products
CO2	Students will be able to do material evaluation and selection for various products.
CO3	Students will be able to analyze the jigs, fixtures and quality assurance methods
CO4	Describe the estimating procedure and evaluate different costs in the industry
CO5	Students will be able to understand the machine time and calculate for different operations
CO6	Students will be able to estimate forging, welding and foundry costs.

Mapping of Course Outcomes with Program outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO4			1		3					2		
	CO5		2				2			3			2
	CO6	1						3				3	

3	Category	Professional Elective
4	Approval	47th Academic Council, July 2018

UNIT I **9**

Introduction of Process Planning- methods of process planning, drawing interpretation, material evaluation, steps in process selection, production equipment and tooling selection

UNIT II **10**

Process planning activities- process parameter calculation for various production processes, selection of jigs and fixtures, selection of quality assurance methods, documents for process planning, economics of process planning, case studies

UNIT III **10**

Introduction to cost estimation- importance of costing and estimation, methods of costing, elements of cost estimation, types of estimates, estimating procedure, estimation of labor cost, material cost, allocation of overhead charges, calculation of depreciation cost

UNIT IV **8**

Machining time estimation- importance of machine time calculation, machining time for different lathe operations, drilling and boring time calculations, Machining time calculation for Milling, Shaping, Planing and Grinding

UNIT V **8**

Production costs- different production processes for different jobs, estimation of forging cost, estimation of welding cost, estimation of foundry cost, estimation of machining cost

	AUTOMOBILE ENGINEERING	L	T	P	C
U18PEME41	Total Contact Hours –45	3	0	0	3
	Prerequisite – Applied Thermodynamics				
	Course Coordinator Name & Department – Mr. S.Sabarish , Department of Mechanical				

OBJECTIVES

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

COURSE OUTCOMES (COs)

CO1	Will be able to recognize vehicle structures
CO2	Will be able to explain the different types of engines
CO3	Transmission systems will be identified
CO4	Will be able to distinguish the engine auxiliary systems
CO5	Students will learn to derive and measure forces on vehicle structure
CO6	Students elaborate about suspension systems and steering wheels

Mapping of Course Outcomes with Program outcomes (POs)

	CO6	2	3	1					2	2		2	
3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

UNIT-I **9**

Types of automobiles, vehicle construction and layouts, chassis, frame and body, vehicle aerodynamics, IC engines- components, function and materials, variable valve timing (VVT).

UNIT-II **9**

Engine auxiliary systems, electronic injection for SI and CI engines, unit injector system, rotary distributor type and common rail direct injection system, transistor based coil ignition, capacitive discharge ignition systems, turbo chargers (WGT, VGT), engine emission control by 3-way catalytic converter system, Emission norms (Euro & BS).

UNIT-III **9**

Transmission systems, clutch types & construction, gear boxes- manual and automatic gear shift mechanisms, Over drive, transfer box, flywheel, torque converter, propeller shaft, slip joints, universal joints, differential and rear axle, Hotchkiss drive and Torque tube drive.

UNIT-IV **9**

Steering geometry and types of steering gear box, power steering, types of front axle, types of suspension systems, pneumatic and hydraulic braking systems, antilock braking system (ABS), electronic brake force distribution (EBD) and traction control.

UNIT-V **9**

Alternative energy sources, natural gas, LPG, biodiesel, bio-ethanol, gasohol and hydrogen fuels in automobiles, modifications needed, performance, combustion & emission characteristics of alternative fuels in SI and CI engines, Electric and Hybrid vehicles, application of Fuel Cells.

U18PEME42	**MECHANICAL VIBRATIONS**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite – Theory of Machines				
	Course Coordinator Name & Department – Mr. Jose Ananth Vino ,Department of Mechanical Engineering				

OBJECTIVES

The student will be able to understand the sources of vibration and noise in automobiles and make design modifications to reduce the vibration and noise and improve the life of the components

COURSE OUTCOMES (COs)

CO1	Understand the sources of vibration and noise in various appliances.
CO2	Will be able to develop schematic modes for physical systems and formulate governing equations of motion.
CO3	Recognize damping stiffness and inertia in mechanical systems.
CO4	Students will be able to examine rotating and reciprocating systems and evaluate critical speeds
CO5	Analyze and design machine supporting structures, vibration isolators and absorbers
CO6	Student will be able to apply all that has been learnt to improve upon newer techniques of reducing vibrations in machines and structures.

Mapping of Course Outcomes with Program outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO6	3					2	3	2				

3	Category	Professional Elective
4	Approval	47th Academic Council, July 2018

UNIT I **9**

Vibration principle- Equilibrium & Energy methods- Free vibrations-Viscous & coulomb damping- Forced vibration EXCITATION- Transmissibility –Resonance -Characteristics.

UNIT II **9**

Two degrees of freedom –Matrix form – Undamped free vibration – Principal modes – Co-ordinate coupling – Principal co-ordinates – Torsional vibrations – Holzer method – Work &Energy approach.

UNIT III **9**

Transient vibration – Time dependency – Laplace transforms – Step inputs – Pulse inputs – Duhamel's integral – Phase plane method – Shock spectrum.

UNIT IV **9**

Multi degrees of freedom – Equations of motion – Solution –Orthogonality of normal modes – Continuous system – Free & forced vibrations – Vibration analysis by FEM.

UNIT V **9**

Vibration instruments – Vibration absorber –Elastically supported dampers – Seismic instruments –Vibrometers – Pickups – Accelerometers – Mounting instruments – Amplitude & phase distortions.

U18PEME43	**ADVANCED TURBO MACHINES**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite – HEAT TRANSFER				
	Course Coordinator Name & Department – Mr.S. Nakkeeran, Department of Mechanical Engineering				

OBJECTIVES

To develop skilled manpower in the field of turbo machines with the knowledge of

transport processes through the turbo machine passage, analytical, numerical and experimental tools for design, operation, performance evaluation and innovative research in the area of turbo machines"													
COURSE OUTCOMES (COs)													
CO1	Understand the performance evaluation, operation and maintenance of rotodynamic machines.												
CO2	Will be able to recognize and reproduce conceptual design of different components of thermal and hydro turbo machines.												
CO3	Design turbo machineries												
CO4	Apply the principle of machineries												
CO5	Develop axial and radial flow turbines												
CO6	Learn the principles and categorize the application of turbines												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

UNIT I **9**

Energy transfer between fluid and rotor, classification of fluid machinery, dimensionless parameters, specific speed, applications, stage velocity triangles, work and efficiency for compressors and turbines.

UNIT II **9**

Types, stage and design parameters, flow analysis in impeller blades, Volute and diffusers, losses, characteristics curves and selection, fan drives and fan noise.

UNIT III **9**

Construction details, types, impeller flow losses, slip factor, diffuser analysis, losses and performance curves.

UNIT IV **9**

Stage velocity triangles, enthalpy-Entropy diagrams, stage losses and efficiency, work down factor, simple stage, design problems and performance characteristics.

UNIT V **9**

Stage velocity diagrams, reaction stages, losses and coefficients, blade design principles, testing and performance characteristics.

U18PEME44	**TOTAL QUALITY MANAGEMENT**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Professional Courses				
	Course Coordinator Name & Department – Dr. V. Balambica/Department of Mechanical Engineering				

OBJECTIVES

1. Tointroduce the student about the basic terms related to quality.
2. To familiarize the student about the basic principles of TQM.
3. To acquaint the student about the basic statistical tools used in process control.
5. To introduce the student to use various tools used in implementing and checking total quality management.

To familiarize the student about the different quality system used in auditing the quality of a company/industry /organization

COURSE OUTCOMES (COs)

CO1	To introduce to the student about the basic terms related to quality and concepts of quality management
CO2	To illustrate the basic principles of total quality management
CO3	Demonstrate tool utilization for quality improvement.
CO4	Explain the various techniques used to measure quality
CO5	Students will be able to validate a set of ideas on quality improvement.
CO6	Apply various quality systems and auditing on implementation of TQM.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

UNIT I **9**

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – AnalysisTechniques for Quality Costs, Basic concepts of Total Quality Management, HistoricalReview, Principles of TQM, Leadership – Concepts, Role of Senior Management,Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers toTQM Implementation.

UNIT II 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, ServiceQuality, Customer Retention, Employee Involvement – Motivation, Empowerment,Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership –Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development,Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT III **9**

The seven tools of quality, Statistical Fundamentals – Measures of central Tendencyand Dispersion, Population and Sample, Normal Curve, Control Charts for variables andattributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT IV **9**

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality FunctionDeployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality LossFunction, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA –Stages of FMEA.

UNIT V **9**

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System –Elements, Implementation of Quality System, Documentation, Quality Auditing, TS16949, ISO 14000 – Concept, Requirements and Benefits

U18PEME51	**REFRIGERATION AND AIR CONDITIONING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Applied Thermodynamics ,BME				
	Course Coordinator Name & Department – Mr.J.Manikandan,Department of Mechanical Engineering.				

OBJECTIVES

- To familiarize with the terminology associated with refrigeration systems and air conditioning
- To understand basic refrigeration processes
- To understand the basics of psychrometry and practice of applied psychometrics
- To acquire the skills required to model, analyse and design different refrigeration as well as air conditioning processes and components

COURSE OUTCOMES (COs)

CO1	Will recall the basic concepts associated with refrigeration systems and air conditioning
CO2	To understand basic refrigeration processes
CO3	Students are able to examinethe basics of psychrometry
CO4	To acquire the skills required to model, analyse air-conditioning
CO5	Student Evalate the Estimation of cooling load calculations
CO6	Students can able to create own ideason air conditioning equipments and applications

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO6		3										
3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

Use of Psychrometric and Refrigerant tables in the Examination is permitted.

UNIT I **(9)**

Review of thermodynamics, Principle of Refrigeration, Refrigeration methods-Air refrigeration (Theory only)-Bell-Coleman refrigeration, steam jet refrigeration, and Vapour

compression refrigeration-Uses of P-H charts-Cascade refrigeration, Vapour absorption refrigeration, Comparison of performance and COP

UNIT II (**9)**

Refrigerants, properties - Selection of refrigerants. Equipments-compressors-reciprocating, rotary, Condensers-evaporators-Cooling towers – Fans – Ducts

UNIT III (**9)**

Review of fundamental properties of air, Psychrometric processes -By pass factor-Requirement of comfort air-conditioning, Comfort and comfort chart, Factors governing optimum effective temperature.

UNIT IV (**9)**

Types of heat sources-Heat transmission through buildings, solar heating, Internal heat sources (Sensible &latent), outside air and fresh air load, Estimation of total load.

UNIT V **(9)**

Air conditioning equipments-Air filters, humidifiers, dehumidifiers, air washer, Commercial &industrial air conditioning systems, central air conditioning system, Application of refrigeration-Ice plant, Food storage plants,milk chilling plants, cryogenic in medicine& biological use, application of Air conditioning system-Car Industry, Stores and Railway A/C

	COMPUTATIONAL FLUID DYNAMICS	**L**	**T**	**P**	**C**
U18PEME52	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Fluid Mechanics and Machinery				
	Course Coordinator Name & Department – Dr.Ravi,Department of Mechanical Engineering				

OBJECTIVE:

- To impart the knowledge of numerical techniques to the solution of fluid dynamics and heat transfer problems.
- To introduce Governing Equations of viscous fluid flows.
- To create confidence to solve complex problems in the field of fluid flow and heat transfer by using high speed computers
- To enable the students to understand the various discretization methods, solutionprocedures and turbulence modeling.

COURSE OUTCOMES (COs)	
CO1	Analyze various numerical techniques to find solution of fluid dynamics and heat transfer problems.
CO2	To developgoverning equations of viscous fluid flows
CO3	To understand the various discretization methods, solution procedures and turbulence modeling.
CO4	To formulate the calculation of flow field
CO5	To evaluate the performance of turbulence and algebraic models
CO6	To examine the heat conduction of Finite Element Methods

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	D	e	f	g	h	i	j	k	l

	CO2					3			2				
	CO3	2											3
	CO4					3					1		
	CO5	2		3		3							
	CO6	2											
3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

UNIT I **9**

Conservation of chemical species-The energy equation-Momentum equation-time averaged equations for turbulent flow-Turbulence-Kinetic energy equation-The general differential equation-Nature of co-ordination-Independent variable-Choice of co-ordinates-one way and two way coordinates

UNIT II **9**

Nature of numerical methods-Methods of deriving of discretization equations-Taylor series formulation-Variational formulation-Methods of weighted residuals-Control volume formulation

UNIT III **9**

Steady One Dimensional Conduction- Two and three dimensional conduction-Steady one dimensional convection and diffusion-Discretization equations for two dimensional convection and diffusion

UNIT IV **9**

Representation of pressure-gradient and continuity equation-stagged grid-momentum equations-pressure and velocity correction-pressure correction equation.Introduction to Finite Element Method-solution of steady heat conduction by FEM-incompressible flow-simulation by FEM.

UNIT V **9**

One, two equation model-high and low Reynolds number models-Reynolds stress models-Prediction of fluid and heat transfer using standard codes.

U18PEME53	**MECHANICS OF FRACTURE**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Mechanics of solids				
	Course Coordinator Name & Department – Mr.Jose Ananth Vino ,Department of Mechanical Engineering				

OBJECTIVES

The purpose is to give an introduction about fundamental theory in facture mechanics. Knowledge of failure mechanisms and the fracture mechanics is important in many fields of research and industrial applications..

COURSE OUTCOMES (COs)

CO1	The student will understand the different types of fractures and associated causes. .
CO2	The student will develop skills in deriving stress field and energy release rate around the crack tip and crack propagation under cyclic loading.
CO3	Understanding of fracture mechanics and its application.
CO4	Learn about fatigue crack growth and crack failures
CO5	Will learn about fracture failure modes
CO6	Learn fracture repair and analysis

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

UNIT I **9**

Introduction- ductile fracture – brittle fracture. Crack in a structure-Griffith criterion cleavage fracture, , fatigue cracking- Service failure analysis. Elastic crack-Elastic crack tip stress field-Solution to crack problems, Effect of finite size stress intensity factor-Special cases- Irwin plastic zone correction – Actual shape of plastic zone- plane stress- plane strain

UNIT II **9**

Energy release rate- criterion for crack growth- Crack resistance curve-Principles of crack arrest- Crack arrest in practice.

UNIT III **9**

Fatigue crack growth test, stress intensity factor, factors affecting stress intensity factor-variable amplitude service loading, retardation model.

UNIT IV **9**

Elastic plastic fracture concepts- crack tip opening displacement- J using FEM.

UNIT V **9**

Fracture design- selection of materials-Fatigue crack growth rate curve- stress intensity factor range- Use of crack growth law.

UNIT -I **9**

Definition – theory and practice – effective management – Management : Science of Art – Management in India. Development of Management thoughts – Taylor's – Henry Fayol – Hawthrone experiment – Barnard & Social system – Herbert Simon – Peter Drucker – Various approaches – Management thoughts.

UNIT- II **9**

Co-ordination – Functions of management – Managers and environment – External and internal Business Ethics – Planning – Fundamentals – Definitions & Features – Steps in planning – types of planning – Objectives – Concepts and features – Hierarchy of objectives – role – Process of MBO – Policy & Strategy – Decision making process – Individual Vs Group Decisions.

UNIT- III **9**

Organizing – Theory & Approach –Authority & Responsibility – Delegation – Centralization & Decentralization – Line & Staff Relationship – Staffing – Fundamentals – System approach – Manpower Planning – Recruitment & Selection – Training and development – Performance appraisal – Direction – Fundamentals Motivation – Theories of Motivation-Maslow's Hersberg's MaClelland's theory X,Y & Z leadership – Theories and Styles – Communication – Type – Controlling – System and Process.

UNIT- IV **9**

Definition – Organization – Managerial Role and Functions – Organizational Approaches, Individual behaviour – Causes – Environmental effect – Behaviour and performance, perception – Organizational implications, Personality – Contributing factors – Dimension, Motivation – Need Theories – Process Theories – Job satisfaction, Learning and Behaviour – Learning Curves, Work Design and Approaches.

UNIT -V **9**

Groups – Contributing factors –Group Norms, types – Causes – Intergroup relations – Conflict and Resolution – Change Process –Resistance to change.

U18PEME61	**COMBUSTION ENGINEERING**									**L**	**T**	**P**	**C**
	Total Contact Hours – 45									3	0	0	3
	Prerequisite – IC ENGINES												
	Course Coordinator Name & Department – Mr.Manavalan , Department of Mechanical Engineering												
OBJECTIVES To understand and analyze the combustion with emphasis on engineering applications.													
COURSE OUTCOMES (COs)													
CO1	Understand various types of fuels and its ppts												
CO2	Students recalling the basic concept of gaseous fuels												
CO3	Will able to comparegaseous and liquid fuels												
CO4	Students are able to examinethe concept of solid fuels												
CO5	students will be able to explain the fluidized bed combustion												
CO6	students will be able to design and executethe fundamentals in combustion of fuels.												
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	I	j	k	l

2	CO1	3											
	CO2	3		3				1					
	CO3	3		3		2	2			1		1	
	CO4	3		3									
	CO5	3					2		2				
	CO6	3		3									
3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

OBJECTIVES:

To acquire the skills required to model, analyze and design different refrigeration as well as air conditioning processes and components

CONTENTS:

UNIT I **9**

Fuels and combustion, Theoretical and actual combustion processes, Enthalpy of formation and enthalpy of combustion, First law analysis of Reacting systems, Adiabatic flame temperature, Entropy change of reacting systems, Second law analysis of reacting systems, problems

UNIT II **(9)**

Review of types of fuels, Types of flames, Energy balance and furnace efficiency, Burner type, Emissions from gas-fired furnaces, Emissions control, Chamber design, Detonation

UNIT III **9**

Spray combustion in furnace, spray formation and droplet behaviour, Gas turbine operating parameters, combustor design, ignition delay, and detonation of liquid fuel sprays

UNIT IV **9**

Drying of solid fuels, devolatilization of solid fuels, stoker-fired boilers, Refuse and biomass fired boilers, Pulverized coal-burning systems, Pulverized coal combustion, Emission from pulverized coal, Problems

UNIT V **9**

Fluidization fundamentals, combustion in bubbling bed, atmospheric fluidized bed combustion systems, circulating fluidized beds, pressurized fluidized bed combustion, problems.

U18PEME62	**DESIGN OF HEAT EXCHANGERS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – HEAT AND MASS TRANSFER				
	Course Coordinator Name & Department – Mr. S. Karthikeyan/Mechanical				

OBJECTIVES

To learn the sizing of heat exchangers, thermal and mechanical stress analysis for various heat exchange applications.

COURSE OUTCOMES (COs)

CO1	Studentswill be able to define the concepts and working principle of heat exchangers.
CO2	students will be able to explain heatexchanger design.
CO3	students will be able to calculate compact heatexchanger design.
CO4	students will be able to determine the concept of cooling tower.
CO5	students will be able to explain the SHELL type heat exchangers
CO6	students will be able discuss the use of other types of heat exchangers, advantages and disadvantages

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

3	Category	Professional Elective											
4	Approval	47th Academic Council, July 2018											

UNIT I **9**

Thermal And Hydraulic design – Inner pipe – Annulus, Hairpin heat exchanger – Basic inner tube – Finned multi tubes – Parallel and series arrangements – Pressure drop, Constructional features. Heat pipes – Structures – Applications – Basic relations – Performance characteristics – Effect of working fluid and operating temperatures, Wick – Selection of materials – bore size.

UNIT II **9**

Basic components – shell – tube bundles – baffles – type and geometry, design procedure – preliminary estimation of size, pressure drop and Heat transfer calculations – shell and tube sides – Kenn method – Bell – Delaware methods.

UNIT III **9**

Compact Heat Exchangers – types – constructional features, heat transfer and pressure drop calculations – Finned plate and tube.Gasketted plate Heat Exchangers - constructional features plate, pack and flame – Operational characteristics – Flow arrangements, Heat transfer and pressure drop calculations, Performance analysis, Comparison with other types of heat exchangers.

UNIT IV **9**

Shell and tube condensers – Horizontal and vertical types – Design and operational consideration, Plate condensers, Air cooled and direct contact type condenser for refrigeration, Evaporative condensers.Evaporators for refrigeration and air conditioning – Chillers – air coolers – thermal analysis – Shah, Kandhkar and Ghnkor and Winterom Correlations, Standard types.

UNIT V **9**

Cooling towers - Types – Basic relation – Heat balance and heat transfer characteristics and effect of packing – Geometry, Spray design, Selection of pumps, fans, testing, Maintenance, environmental effects, wind load, typical installations.

U18PEME63	**RAPID PROTOTYPING**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite – Manufacturing Technology				
	Course Coordinator Name & Department – Mr. Lenin Rakesh ,Department of Mechanical Engineering				

OBJECTIVES

- To provide knowledge on different types of Rapid Prototyping systems and its applications in various fields.

COURSE OUTCOMES (COs)

CO1	Generating a good understanding of RP history, its development and applications. Expose the students to different types of Rapid prototyping processes, materials used in RP systems and reverse engineering.
CO2	Students will be exposed to different types of Rapid prototyping processes, materials used in RP systems and reverse engineering.
CO3	Students will learn and evaluate steriolithography methods and concepts for improvement.
CO4	Students recognize and learn processes in CAD
CO5	Students gain knowledge to build and analyse prototypes

CO6	Students will be able to apply and process newer techniques and improved methodologies

UNIT I **10**

Introduction - Basic operation –impact of rapid proto typing and tooling on product development- benefits-applications.

UNIT II **10**

Rapid Prototyping Processes: Introduction –Classification-laminated object manufacturing-fused deposition modeling-stereolithography-solid ground curing –selective laser sintering-3D printing

UNIT III **10**

CAD Processes: Introduction –data requirements-solid modeling –surface modeling .geometric processing –interface formats-model preparation-slicing, support structures and machine instructions

UNIT IV **5**

Materials for Rapid Prototyping: Plastics- resins -metals-ceramics selection of materials for suitable processes – advantages-limitations

UNIT V **10**

Rapid Tooling Processes: Introduction - Classification in direct rapid tooling-silicon rubber Moulding-epoxy Moulding-electro forming-vacuum casting-vacuum forming-rapid tools for injection Moulding – direct rapid cooling processes –SLS rapid tool- shape deposition manufacturing- laser deposition lamination-rapid tooling roots

U18PEME064	**PLANT LAYOUT AND MATERIAL HANDLING**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Manufacturing Technology				
	Course Coordinator Name & Department – Mr. G. Sucharitha,Department of Mechanical Engineering				

OBJECTIVES

To equip students with adequate knowledge for running an organization and to understand the integration of material handling systems.

COURSE OUTCOMES (COs)

CO1	Understand the procedures for systematic integration of organization.
CO2	Students will be able to design various layouts for installing the industries are departments
CO3	Students will be able to choose the right material handling system to the right place.
CO4	Students will be able to make the models of buildings and other channels according to utilization.
CO5	Students will be able to analyze the safety, movement of material and man in the plant.
CO6	After completion of this course students able to describe the plant layout, material handling systems and different building utilities.

Mapping of Course Outcomes with Program outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO3	3		3		2	2			1		1	
	CO4	3		3									
	CO5	3					2		2				
	CO6	3		3									
3	Category	Professional Elective											
4	Approval	47th Meeting of Academic Council, July 2018											

UNIT I **8**

Plant Location: Factors to be considered – influence of location on plant layout, selection of plant site, Consideration in facilities planning and layout. Equipments required for plant operation, Capacity, serviceability and flexibility and analysis in selection of equipments, space requirements, and man power requirements.

UNIT II **8**

Plant layout: Need for layout, types of layout, factors influencing product, process. Fixed and combination layout: tools and techniques for developing layout, process chart, flow diagram, string diagram, template and scale models – machine data. Layout planning procedure.Visualization of layout, revision and improving existing layout, balancing of fabrication and assembly lines.

UNIT III **10**

Importance and scope.Principles of material handling. Planning, operating and costing Principles, types of material handling systems, factors influencing their choice. Assembly practices: Manufacturing and assembly, process planning, selective assembly.

UNIT IV **12**

Industrial building and utilities: Centralized electrical, pneumatic water line systems. Types of buildings, lighting, heating, air conditioning and ventilation utilities - planning and maintenance, waste handling, statutory requirements. Packing and storage materials: Importance of Packaging, layout for Packaging – Packaging machinery – wrapping and Packing materials, cushion materials.

UNIT V **7**

Motion analysis, flow analysis, graphic analysis, safety analysis, equipment cost analysis, palletization analysis, analysis of operation, material handling surveys.

U18OEME001	**DESIGN FOR MANUFACTURING AND ASSEMBLY**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite – Manufacturing Technology				
	Course Coordinator Name & Department – Mr. Arun Rejus/Department Mechanical Engineering				
Approval	47th Academic Council, July 2018				

SYLLABUS

Unit 1
Introduction Need Identification and Problem Definition, Concept Generation andEvaluation, Embodiment Design, Selection of Materials and Shapes

Unit 2
Properties of Engineering Materials, Selection of Materials – I, Selection of Materials – II,Case Studies – I, Selection of Shapes, Co-selection of Materials and Shapes, Case Studies – II,

Unit 3:
Selection ofManufacturingProcesses, Review of Manufacturing Processes, Design forCasting, Design for Bulk Deformation Processes, Design for Sheet Metal Forming Processes, Design for Machining, Design for Powder Metallurgy,Design for Polymer Processing, Co-selection of Materials and Processes, Case-Studies – III

Unit 4

Design for Assembly, Review of Assembly Processes, Design for Welding – I, Design forWelding – II, Design for Brazing and Soldering, Design for Adhesive Bonding, Design for Joining of Polymers, Design for Heat Treatment, Case-Studies – IV

Unit 5

Design for Reliability, Failure Mode and Effect Analysis and Quality, Design for Quality,Design for Reliability, Approach to Robust Design, Design for Optimization,

U18OEME002	**INDUSTRIAL SAFETY**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite –				
	Course Coordinator Name & Department – Mrs.G.Sucharitha /Mechanical				
Approval	47th Academic Council, July 2018				

Unit-I: Industrial safety: Accident, causes, types, results and control, mechanical and electricalhazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

Unit-II: Fundamentals of maintenance engineering: Definition and aim of maintenance engineering,Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

Unit-III: Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reductionmethods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

Unit-IV: Fault tracing: Fault tracing-concept and importance, decision treeconcept, need andapplications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic,automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

Unit-V: Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing,cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

U18OEME003	**REFRIGERATION AND CRYOGENICS**	**L**	**T**	**P**	**C**
	Total Contact Hours –45	3	0	0	3
	Prerequisite –				
	Course Coordinator Name & Department – Mr.J.Manikandan,Departmen Mechanical Engineering				
Approval	47th Academic Council, July 2018				

Unit I

Vapour compression refrigeration, actual cycle, second law efficiency,

Unit II

Multistage compression with inter-cooling, Multi-evaporator systems, Cascade systems,

Unit III

Performance characteristics and capacity control of reciprocating and centrifugal compressors, screw compressor and scroll compressor,

Unit IV

Design, selection of evaporators, condensers, control systems, motor selection, Refrigerants, alternative refrigerants, CFC/HCFC phase-out regulations,
Refrigeration applications, food preservation, transport,

Unit V

Introduction to Vapor absorption refrigeration, single effect and double effect systems, Gas liquefaction systems - Linde-Hampson, Linde dual pressure, Claude cycle.

SYLLABUS

UNIT – I FUNDAMENTALS OF DESIGN 9

Product development – marketing design & production – design process – morphology of design – Asimov's models – problem statement – product design specification – concept selection techniques.

UNIT – II PRODUCT STRATEGIES 9

Product strategies – product analysis – standardization, simplification & specialization – creativity – aesthetics – ergonomics – functional design – hierarchy of needs – needs analysis.

UNIT – III ECONOMIC ANALYSIS 9

Customer & competitors – product value – economic analysis – qualitative & quantitative analysis – profit consideration – break even analysis – profit volume charts.

UNIT – IV PRODUCT ARCHITECTURE 9

Product architecture – modularity – product change – product variety – component standardization – performance – manufacturability – establishing the architecture – variety & supply chain – platform planning.

UNIT – V INDUSTRIAL PRACTICES 9

Conventional practices – recent trends – technology & user driven products advertisements – patents – case studies.

LIST OF OPEN ELECTIVES COMMON TO ALL B.Tech PROGRAMMES

ALL THE COURSES WITH L=3, T=0, P=0 & C=3

1. U18OEBA001 Sociology
2. U18OEBA002-Lean Six Sigma
3. U18OEBA003-Cyber Law and Ethics
4. U18OEBA004-Economic Policies in India
5. U18OEBA005-Management Information System
6. Total Engineering Quality Management
7. U18OEBA007-Industrial Psychology
8. U18OEBA008-Entrepreneurship Development and IPR
9. U18OEBA009-Intellectual Property Rights
10. U18OEBA010-Engineering Economics and Cost Analysis
11. U18OEEN001- Soft Skills and Interpersonal Communication
12. U18OEEN002-Indian Writing in English
13. U18OEEN003-Creative Writing
14. U18OEEN004- Proficiency in English and Accent Training
15. U18OEMA001-Cryptography
16. U18OEMA002-Finite Automata Theory / Formal Languages
17. U18OEMA003-Linear Programming
18. U18OECE001 - Metro Systems and Engineering
19. U18OECE002-Pollution Regulations
20 U18OECE003-Road Safety
21. U18OECE004- Infrastructure Development
22. U18OECE005- Project Safety Management
23. U18OECE006- Environment, Health and Safety in Industries
24. U18OEME001-Design for Manufacturing and Assembly
25. U18OEME002Industrial Safety
26. U18OEME003-Refrigeration and Cryogenics
27. U18OEME004- Product Design and Development
28. U18OEAU001-Electric and Hybrid Vehicles
29. U18OEAU002-Intelligent Transportation System
30. U18OEAU003-Vibration and Noise Control
31. U18OEAU004-Automotive Sensors and Applications
32. U18OEMT001-MEMS and Nano Technology
33. U18OEMT002-Non-Destructive Testing
34. U18OEMT003-Bio Mechatronics
35. U18OEMT004-Artificial Intelligence for Robotics
36. U18OEAE001-Industrial Aerodynamics
37. U18OEAE002- Elements of Aeronautics and Astronautics
38. U18OEAE003- Unmanned Aerial Vehicle
39. U18OEAE004- Introduction to Avionics
40. U18OEAE005-Rocket Propulsion

41. U18OEEE001-Green Technologies
42. U18OEEE002-Electrical Safety and Quality Assurance
43. U18OEEE003-Energy Conservation Techniques
44. U18OEEE004-PLC and SCADA for Industrial
45. U18OEEC-001-Communication Systems
46. U18OEEC-002-VLSI circuits
47. U18OEEC-003-Image Processing Techniques
48. U18OEEC-004-Communication Networks
49. U18OEEC-005-An Introduction to DSP
50. U18OEEC-006-Basics of IoT
51. U18OEBM001-Medical Radiation Safety Engineering
52. U18OEBM002-Medical Waste Management
53. U18OEBM003-Quality Control in Healthcare
54. U18OEBM004-Wearable Technology
55. U18OEEI001-Analytical Methods and Instrumentation
56. U18OEEI002-Introduction to process Data Analytics
57. U18OEEI003-Reliability and Safety in Process industries
58. U18OEEI004-Multi sensor data fusion
59. U18OEBT001- Bioprocess Economics & Plant Design
60. U18OEBT002-Brewing technology
61. U18OEBT003-Biomining
62. U18OEBT004-Industrial Safety Engineering
63. U18OEAC001-Geo- informatics for Precision Farming
64. U18OEAC002-Livestock and poultry management
65. U18OEAC003-Extension methodologies and transfer of Agricultural Technologies
66. U18OEAC004-Soil and Water Conservation Engineering
67. U18OEIT001-Block Chain Technology
68. U18OEIT002-Semantic Web
69. U18OEIT003-Entrepreneurship Development
70. U18OEIT004-Ethical Hacking Techniques
71. U18OECS001-Mobile Application Development
72. U18OECS002-System Modelling and Simulation
73. U18OECS003-Web Programming
74. U18OECS004-Virtual Reality
75. U18OECS005- E Commerce
76. U18OEGE001-Metagenomics and Epigenomics
77. U18OEGE002-Molecular Genetics and Genomics
78. U18OEGE003-Principles of Molecular cell biology

TOTAL CREDITS=170

U18HSEN101	**COMMUNICATIVE ENGLISH**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	2	0	2	3
	Prerequisite – School English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations - introducing oneself – exchanging personal information- narrating events, - incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions- parts of speech. Vocabulary development– prefixes- suffixes- articles, prepositions.

UNIT II READING 6

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptions from newspapers including dialogues and conversations also used as short reading texts-- and longer passages - understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building -
The concept of Word Formation

UNIT III LISTENING 6

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes- adverbs- Identifying Common Errors in Writing - Subject-verb agreement - Noun-pronoun agreement

UNIT IV WRITING 6

Writing- letter writing, formal and personal letters- after listening to dialogues or conversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles - Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6

Writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely

SOFTSKILL LABORATORY 30

LIST OF EXPERIMENTS / EXCERCISES

1. Group discussion

2. Making effective presentations
3. Watching interviews & conversations
4. Reading different genres of texts
5. International English Language Testing System (IELTS)
6. Test of English as a Foreign Language (TOEFL)
7. Mock interviews
8. Time management &stress management
9. Role play
10. Listening to lectures, discussions from TV/ Radio.
11. Articulation of sounds - intonation.
12. Creative and critical thinking.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	The student will be able to comprehend the text with clarity
CO2	The capacity to read and listen will improve
CO3	Writing technical report will be learnt properly
CO4	Speaking skills will be acquired
CO5	Overall communication skills will make them employable

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18BSMA101	Engineering Mathematics – I	L	T	P	C
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVES	The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT I DIFFERENTIAL CALCULUS - One Variable (9+3)

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle's Theorem – Mean Value Theorem – Taylor's and Maclaurin's Theorem with remainders.

UNIT II INTEGRAL CALCULUS - One Variable (9+3)

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions- Integration of improper functions - Beta, Gamma functions and their properties.

UNIT III DIFFERENTIAL CALCULUS - Several Variables (9+3)

Partial derivatives –Euler's theorem on Homogeneous functions - directional derivatives – total derivative – Jacobian – Maxima and minima of two variables.

UNIT IV MULTIPLE INTEGRALS - Several Variables (9+3)

Double integrals in Cartesian co-ordinates – Change of order of integrations – Area as a double integral – Triple integrals in Cartesian co-ordinates –Volume as triple integrals – Double integrals in polar co-ordinates – simple problems.

UNIT V MATRICES (9+3)

Characteristic Equations – Eigenvalue and Eigenvectors of the real matrix– Properties–- Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

5. George B. Thomas ,Jr ,Maurice D.Weir, Joel Hass., Thomas' Calculus ,Twelfth Edition Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gama functions.
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.

U18BSPH101	Waves and Optics	L	T	P	C
	Total Contact Hours - 45	**3**	**0**	**0**	**3**
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.					

UNIT 1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONE DIMENSION 9

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT 2 ULTRASONIC WAVES 9

Production of ultrasonic by magnetostriction and piezoelectric methods - acoustic grating – Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT 3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT 4 WAVE OPTICS **9**

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT 5 LASERS **9**

Einstein's theory of matter radiation interaction and A & B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers(Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

Course Outcomes (COs)	
CO1	Understand the basic concept of waves and lights
CO2	Understand the importance of Ultrasonic waves and Non-Destructive Testing
CO3	Understand the propagation of light and geometrical optics
CO4	Understand the optical phenomenon like interference, diffraction and superposition of waves
CO5	Understand the concept of laser and its applications

U18BSCH101	ENGINEERING CHEMISTRY	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY 9

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS 9

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead.

Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel -heat treatment of steel – annealing –hardening – tempering - normalizing – carburizing - nitriding. Non-ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead–acid storage battery –working –uses. Nickel–cadmium battery -working –uses. Solid – state battery: Lithium battery.

UNIT IV FUELS 9

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke – manufacture by Otto-Hoffmann method. Petroleum processing and fractions– cracking – catalytic cracking – types – fixed bed catalytic cracking method- Octane number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNIT V NANOCHEMISTRY 9

Introduction: Nanochemistry: Definition - Classification based on dimensions - Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. NanocomSOsites – sensors and electronic devices.

COURSE OUTCOMES (COs)	
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles, Nanochemistry in biology and medicines.

U18ESCS101	**PROBLEM SOLVING AND PYTHON PROGRAMMING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES	To gain fundamental knowledge of algorithmic problem solving and python programming				

MODULE 1 : ALGORITHMIC PROBLEM SOLVING 9

Introduction to components of a computer system - disks, memory, processor, operating system, compilers – Problems, Solutions, Idea of Algorithm –Representation of Algorithm. Building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Problem Illustrations

MODULE 2: DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two Points.

MODULE 3: CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

MODULE 4: LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list, Processing list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

MODULE 5: FILES, PACKAGES 9

Files and exception: text files, reading and writing files, errors and exceptions, handling exceptions, packages: NumPy, SciPy, Matplotlib, Scikit-learn, Scilab Interface.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	Develop algorithmic solutions to simple computational problems
CO2	Demonstrate programs using simple Python statements and expressions.
CO3	To gain knowledge regarding control flow and functions associated with python
CO4	Use Python data structures – lists, tuples & dictionaries for representing compound data
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems

U18ESME101	**Engineering Graphics & Design (Theory & Lab.)**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice				

Detailed contents

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:
Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM).
(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

MODULE 1: INTRODUCTION TO ENGINEERING DRAWING (9+2)
Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle.

MODULE 2: ORTHOGRAPHIC PROJECTIONS (10+2)
Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP.

MODULE 3: PROJECTIONS OF REGULAR SOLIDS& ISOMETRIC PROJECTIONS (10+3)
Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

MODULE4: SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACE (10+3)
Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane– True shape of sections; Development of lateral surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

MODULE 5: BUILDING DRAWING (9+2)
Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections.

MODULE 6: OVERVIEW OF COMPUTER GRAPHICS (12+3)
Introduction to CAD; Basic commands; Coordinate systems; Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale –Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures; Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views

of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)	
CO1	Students will gain Exposure to engineering communication.
CO2	Students will learn standards of engineering graphics.
CO3	Students will get Exposure to basics of building construction
CO4	Students will get Exposure to computer-aided geometric design
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.

U18BSPH2L1	**WAVE OPTICS AND MECHANICS LABORATORY (Common to B.Tech-Civil, Mech, Mechatronics, Aero, Aerospace & Auto)**	L	T	P	C
		0	0	3	1.5
	Total Contact Hours - 45				
	Prerequisite – **Wave Optics and Mechanics**				
	Course designed by – Department of Physics				
OBJECTIVES: To impart Practical knowledge of Physics to the students					

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

1) Ultrasonic Interferometer
2) Air-wedge Experiment
3) Particle size determination
4) Determination of acceptance angle
5) Determination of Laser Wavelength
6) Spectrometer – Determination of wavelength using grating

List of Experiments for Mechanics

1) Torsional Pendulum – without symmetrical mass
2) Torsional Pendulum – With symmetrical mass
3) Young's Modulus – Non-uniform bending
4) Young's Modulus – Uniform Bending
5) Compound Pendulum
6) Coefficient of viscosity of the given liquid – Poiseuille method

Course Outcome (CO's)													
CO1	Understand the fundamental concept of optics												
CO2	Understand the concept of production of ultrasonic waves												
CO3	Understand the basic concept of Mechanics												
Mapping of Course Outcomes(COs) with Programme Outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	S		S	S				S	W	M

	CO3	S	S	W					S	M	M	M	
3	Category	Basic Sciences (BS)											
4	Approval	47th Meeting of Academic Council held in Aug, 2018											

U18BSCH2L4	**CHEMISTRY LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method

2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8 Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10 Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

1. R. Jeyalakshmi, "Practical Chemistry", Devi Publications 2014.
2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)	
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization as well as estimation of Copper by EDTA method using volumetric analysis.
CO2	Students will understand basic principle of spectrophotometric method
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and Conductometric Precipitation titration.
CO4	Studentswill be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method
CO5	Students will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method

	Prerequisite – NIL				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton‘s method)
3. Exponentiation (Power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Find the most frequent words in a text read from a file
11. Simulate elliptical orbits in Pygame
12. Simulate bouncing ball using Pygame
13. Simulate matrix operations with Scilab
14. Simulate fitting curve with NumPy and Matplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)	
CO1	Write, test, and debug simple Python programs.
CO2	Implement Python programs with conditionals and loops
CO3	Develop Python programs step-wise by defining functions and calling them
CO4	Use Python lists, tuples, dictionaries for representing compound data
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab, NumPy and Matplotlib

	TECHNICAL ENGLISH	**L**	**T**	**P**	**C**
U18HSEN201	Total Contact Periods – 45	2	1	0	3

	Prerequisite – I semester English
	Course Designed by – Department of English
OBJECTIVES	To gain fundamental knowledge of English language and its usage in day to day life.

UNIT I LISTENING 9

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking –Asking for and giving directions- extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNIT II READING 9

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING 9

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNIT IV FORMAL WRITING 9

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNIT V LANGUAGE DEVELOPMENT 9

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

TEXT BOOKS:

1. Fluency in English A Course book for Engineering and Technology. Orient Blackswan, Hyderabad: 2016

4. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges Cengage Learning, USA: 2007

COURSE OUTCOMES (COs)	
CO1	The student will acquire basic proficiency in English

CO2	Reading and listening ability will improve.
CO3	Comprehension techniques will develop.
CO4	writing and speaking skills will be acquired
CO5	Overall communication skills will make them employable.

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18BSMA201	**Engineering Mathematics II (Common to B.Tech – Civil, Mech, Mechatronics, Automobile, Aero, Aerospace, EEE, ECE, BME, CSE & IT)**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – School Level Mathematics				
	Course Designed by Department of Mathematics				
OBJECTIVE	The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables and Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients– Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients- Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces - Irrotational and Solenoidal vector fields – Line Integral - Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without

proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method – Conformal mapping : and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues - Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)

Transforms of elementary functions – Basic properties – Shifting theorem- Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.

REFERENCE BOOKS

1. Venkataraman. M. K, Engineering Mathematics, National Publishing Company, 2000.

4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)	
CO1	The mathematical tools for solution of differential equation that model physical process.
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.

App	47th Academic Council Meeting held in Aug, 2018

U18BSPH201	INTRODUCTION TO MECHANICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				

OBJECTIVES: To impart basic knowledge of mechanics involving 1D, 2D and 3D motions ofa rigid body

UNIT 1 **9**

Forces in Nature; Newton's laws and its completeness in describing particle motion; Solving Newton's equations of motion in polar coordinates; Problems including constraints and friction; Extension to cylindrical and spherical coordinates

UNIT 2 **9**

Potential energy function; F = - Grad V, equipotential surfaces and meaning of gradient; Conservative and non-conservative forces, curl of a force field; Central forces; Conservation of Angular Momentum; Energy equation and energy diagrams; Elliptical and parabolic orbits;

UNIT 3 **9**

Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and lightly-damped oscillators; Forced oscillations and resonance

UNIT 4 **9**

Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion, Kinetic energy of a rotating body

UNIT 5 **9**

Introduction to three-dimensional rigid body motion — only need to highlight the distinction from two-dimensional motion in terms of (a) Angular velocity vector, and its rate of change and (b) Moment of inertia tensor; Three-dimensional motion of a rigid body wherein all points move in a coplanar manner: e.g. Rod executing conical motion with center of mass fixed

Course Outcomes

COURSE OUTCOMES (COs)	
CO1	Understand and solve the various equation of motions in different coordinates
CO2	Understand the conservation of energy and angular momentum
CO3	Understand the concept of harmonic motion in different damped conditions
CO4	Understand the rigid body motion in different criteria
CO5	Understand the rigid body motion in 3D

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

U18BSCH201	**ENVIRONMENTAL SCIENCE**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNIT I -NATURAL RESOURCES 9

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNIT II -ECOSYSTEMS 9

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)- Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozone layer depletion.

UNIT III -BIODIVERSITY AND ITS CONSERVATION 9

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographical classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNIT IV-ENVIRONMENTAL POLLUTION 9

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V- SOCIAL ISSUES AND HUMAN POPULATION 9

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel – oxidizing Agent – Reducing Agent –Toxic Materials – Fuel –Binder- Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes.

Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES (COs)	
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes

U18BSBT101	**BIOLOGY FOR ENGINEERS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector					

UNIT I INTRODUCTION TO LIFE 6

Characteristics of living organisms-Basic classification-cell theory-structure of prokaryotic and eukaryotic cell- Introduction to biomolecules - general classification and important functions of carbohydrates-lipids-proteins-nucleic acids – vitamins

UNIT II BIODIVERSITY 6

Plant System: basic concepts of plant growth-nutrition-photosynthesis-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System -types of microbes-economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM 6

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity- antigens - antibody-immune response.

UNIT IV HUMAN DISEASES 6

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNIT V BIOLOGY AND ITS INDUSTRIAL APPLICATION 6

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines -cloning- bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

TEXT BOOKS:

1. A Text book of Biotechnology, R. C. Dubey, S. Chand Higher Academic Publications, 2013
2. Diseases of the Human Body, Carol D. Tamparo and Marcia A. Lewis, F.A. Davis Company, 2011.
3. Biomedical instrumentation, Technology and applications, R. Khandpur, McGraw Hill Professional, 2004

REFERENCE BOOKS

3. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)	
CO1	To understand the basic concepts of the cell and its structure
CO2	To understand about biodiversity and its conservation
CO3	To know the fundamentals of genetics and the immune system

CO4	To create an awareness about human diseases												
CO5	To give a basic knowledge of the applications of transgenics

U18ESEE101	**BASIC ELECTRICAL & ELECTRONICS ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	**3**	**0**	**0**	**3**
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

MODULE 1 : DC CIRCUITS **12**

Electrical circuit elements, voltage and current sources, Fundamental Relationship of VI for RLC circuit, Ohms Law, Source Transformation ,Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transfer Theorem.

MODULE 2: AC CIRCUITS **9**

Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

MODULE 3: ELECTRICAL MACHINES & TRANSFORMERS **9**

Principles of operation and characteristics of; DC machines, Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer .

MODULE 4: SEMICONDUCTOR DEVICES AND APPLICATIONS **9**

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC

Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

MODULE 5: DIGITAL ELECTRONICS 6

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

TEXT BOOKS:

U18ESME1L2	**Workshop/Manufacturing Practices Laboratory**	**L**	**T**	**P**	**C**
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.				

Lectures & videos: **(15 hours)**

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **(3 lecture)**
- CNC machining, Additive manufacturing **(2 lecture)**
- Fitting operations & power tools **(2 lecture)**
- Carpentry **(2 lecture)**
- Plastic moulding, glass cutting **(2 lecture)**
- Metal casting **(2 lecture)**
- Welding (arc welding & gas welding), brazing **(2 lecture)**

WORKSHOP PRACTICE:

1. Machine shop **(6 hours)**
   a) Facing
   b) Turning
   c) Drilling Practice
2. Fitting shop **(6 hours)**
   a) Fitting Exercises–Preparation of square fitting
   b) Vee–fittingmodels.
3. Carpentry **(9 hours)**
   a) Preparation of Lap joints.
   b) Mortise and Tenon joints.
   c) Cross Half joints.
   d) Dove Tail joints.

4. Welding shop **(Arc welding 6 hrs + gas welding 3 hrs) (9 hours)**
Preparation of butt joints, lap joints and Tee joints

5. Sheet Metal working **(9 hours)**
a) Forming &Bending:
b) Model making–Trays, funnels, etc.
c) Different type of joints

6. Demonstration **(6 Hours)**
Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

5. Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGraw Hill House, 2017.

COURSE OUTCOMES (COs)	
CO1	**COURSE OUTCOMES (COs)**
CO2	Students will gain knowledge of the different manufacturing processes.
CO3	Students will be able to fabricate components with their own hands.
CO4	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.
CO5	Students will be able to produce small devices of their interest.

U18ESEE1L3	**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LABORATORY**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronics Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

1. Verification of Ohms and Kirchoff's Voltage and Current Laws
2. Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
3. Fluorescent lamp wiring
4. Staircase wiring
5. Measurement of energy using single phase energy meter
6. Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging - slip ring arrangement) and single-phase induction machine.
8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops - JK and RS
5. Applications of Operational Amplifier

REFERENCE BOOKS:

1. S. K. Bhattacharya, "Basic Electrical and Electronics Engineeing", Pearson Education India,2011

COURSE OUTCOMES (COs)	
CO1	To handle basic electrical equipment and verify current and voltage law
CO2	To handle basic electrical equipment and verify current and voltage law
CO3	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits
CO4	To understand domestic wiring procedures practically.
CO5	To analyze ac signal parameters using cathode ray oscilloscope and function generator

SEMESTER-III

U18BSMA302	**Partial Differential Equations, Probability and Statistics**	**L**	**T**	**P**	**C**
	Total Contact Periods - 60	**3**	**1**	**0**	**4**
	Prerequisite – Engineering Mathematics I & II				
	Course Designed by : Department of Mathematics				
OBJECTIVE	Grasp the Fourier series expansion for given periodic function in specific intervals and their different forms. Learn techniques of solving the standard types of first order and second order partial differential equations. Learn solving wave and heat equation using Fourier series. Learn basics of probability, Baye's Theorem. Understand the concept of random variable, moment generating functions and their properties; learn standard distributions in discrete and continuous cases. Learn measures of central tendency and correlation and regressions, rank correlation, statistical intervals for single sample and test of hypothesis for a small and large sample				

UNIT I FOURIER SERIES (9+3) Hrs

Dirichlet's conditions – General Fourier Series – Half range Sine and Cosine series – Parseval's Identity – Harmonic Analysis.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS

(9+3) Hrs

Formation – Solutions of standard types of first order equations – Lagrange's linear equations – Linear partial differential equation of second and higher order with constant coefficients.

UNIT III BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS (9+3) Hrs

Classifications second order linear partial differential equations – Solution of one dimensional wave equation – One dimensional heat equation – Steady state solution of two dimensional heat equation – Fourier Series solutions in Cartesian coordinates.

UNIT 1V PROBABILITY DISTRIBUTION (9+3)Hrs

Probability – Axioms of probability – Conditional probability – Baye's theorem – Random variables – Binomial – Poisson – Geometric – Uniform – Exponential and normal distribution and their properties.

UNIT V STATISTICS AND TESTING OF HYPOTHESIS (9+3)Hrs

Measures of central tendency – Moments – Skewness and kurtosis – Correlation and Regression – Rank correlation – Test of significance: Large sample test for single proportion, difference of proportions – Chi Square test for goodness fit and independence of attributes.

COURSE OUTCOMES (COs)	
CO1	Expand given function using the knowledge of Fourier Series and frequently needed practical harmonic analysis that an engineer may have to make from discrete data.
CO2	Solve PDE and higher order with constant coefficients and physically interpret the results.
CO3	Boundary Value Problems and Differential Equations will be knowledgeable about and will be able to analyze solutions to two-point boundary value problems, boundary value problems for partial differential equations.
CO4	Evaluate the probability using addition and multiplication theorem. Apply Baye's Theorem for practical problems to find the probability. Apply the discrete and continuous distribution for solving practical problems. Evaluates the moments of distributions using moment generating functions.

CO5	Learn the basic idea of statistics including measures of central tendency .Identify the appropriate hypothesis testing procedure based on type of outcome variable and number of samples.

UNIT I INTRODUCTION TO MECHANISMS 12

Introduction-Science of mechanisms-Terms and definitions-Planar, Spherical and spatial mechanisms, Mobility-Classification of mechanisms-Indexing mechanisms, reciprocating mechanism etc. Straight line generators- kinematic inversion- Slider crank chain inversions- Four bar chain inversions- Grashof's law.

Determination of velocities and acceleration in mechanisms- Relative motion method (Graphical) for Mechanisms having turning, sliding and rolling pair.

UNIT II SYNTHESIS OF MECHANISMS 16

Classification of kinematics- Synthesis problems- Chebyshev's spacing, Two point synthesis-Freudenstein method- Four bar mechanism and slider crank mechanism.

Types of cams and followers- Follower motions- Uniform, parabolic, SHM, Cycloidal and polynomial-Synthesis of cam profiles for different followers. Cams with specified contours

UNIT III FRICTION 10

Friction-Types-Application-Inclined plane, Screw jack, Clutch, Brakes Bearings, Journal bearing, Flat pivot bearing, multi collar bearings Belt drives.

UNIT IV THEORY OF GEARING 12

Classification of gears, Law of gearing, nomenclature-Forms of teeth, Cycloidal teeth, Involute teeth-Length of path of contact-Length of arc of contact-Contact ratio-Interference and undercutting- Minimum number of teeth to avoid interf
erence- Internal gears- Extended center distance system- Long and short addendum system- Gear trains-Types-Epicyclical gear trains-Automobile differential unit.

UNIT V CONTROL MECHANISMS 10

Governors- Gravity controlled governors-Spring control governors, Hartnell governor, and Hartung governor-Governor characteristics- Governor effort and power.

Gyroscopes-Gyroscopic forces and couple- Forces on bearing due to gyroscopic action-Gyroscopic effects on the movement of aero plans and ships, stability of two wheel drive and four wheel drive, Gyroscopic effects in grinding machines.

COURSE OUTCOMES (COs)	
CO1	Upon completion of this course, the students can able to apply fundamentals of mechanism for the design of new mechanisms and analyse them for optimum design
CO2	Will know the impact of numerical methods in engineering analysis
CO3	Better understanding on the theoretical background of mechanisms
CO4	Will get the confidence in using mechanisms
CO5	Capability of solving engineering problems will increased

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCMT303	**FUNDAMENTALS OF ELECTRONIC CIRCUITS AND DEVICES**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Basic Electronics Engineering				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To understand the basics concepts of semiconductors and the working of semiconductor based circuits				

UNIT I SEMICONDUCTOR THEORY AND SPECIAL DEVICES 9

SEMICONDUCTOR DIODES: Review of intrinsic & extrinsic semiconductors – Theory of PN junction diode – Energy band structure – current equation – space charge and diffusion capacitances – effect of temperature and breakdown mechanism – Zener diode and its characteristics.

SPECIAL DIODES : Tunnel diodes – PIN diode, varactor diode — UJT – Diac and Triac – Laser, CCD, Photodiode, Phototransistor, Photoconductive and Photovoltaic cells – LED, LCD.

UNIT II-TRANSISTOR CONFIGURATIONS 9

Transistor construction and operation - characteristics of CB, CC and CE configurations – Transistor amplifying action – Limits of operation - Transistor biasing: Operating point, load line analysis of fixed bias circuit - Darlington connection.

UNIT III - FEEDBACK AMPLIFIERS AND WAVE SHAPING CIRCUITS 9

Basic concepts of feedback- Four types of negative feedback – Effect of feedback on input resistance, output resistance- Voltage gain and current gain- Advantages of negative feedback- RC wave shaping circuits- Diode clippers and clampers- Voltage multipliers.

UNIT IV OSCILLATORS AND MULTIVIBRATORS 9

Oscillators: Classification of oscillators – Barkhausen criterion,Working of RC phase shift, Wien's bridge, Hartely, colpitts oscillators.

Multivibrators: Astable, monostable and bistable – Analysis of performance parameters of multivibrators ,Schmitt Trigger, Blocking oscillators.

UNIT V RECTIFIERS AND POWER SUPPLIES 9

Single –phase, half-wave and full-wave rectifiers – Bridge rectifiers – Ripple factor, rectification efficiency-Transformer Utilisation Factor and regulation – Performance characteristics of rectifiers with filters – Regulated power supply – Series and shunt type voltage regulators – Switched mode power supplies.

5. S. Salivahanan, N. Suresh kumar and A. Vallavanraj, "Electronic Devices and Circuits",Tata McGraw Hill, 2nd Edition, (2008).

COURSE OUTCOMES (COs)	
CO1	Able to get the knowledge about the working of semiconductors and Special diodes
CO2	Able to get the knowledge about the different configurations of transistors.
CO3	To learn about the concept of amplification and wave shaping circuits.
CO4	Able to get the basic concepts of Oscillators and Multivibrators.
CO5	To understand the working principle of Rectifiers.

U18PCMT304	**MEASUREMENT AND INSTRUMENTATION**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Basic Electrical & Electronics Engineering				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To increase the ability of the students to model and analyze electrical apparatus and their application to power system				

UNIT I INTRODUCTION 9

Functional elements of an instrument – Static and dynamic characteristics – Errors in measurement – Statistical evaluation of measurement data – Standards and calibration.

UNIT II ELECTRICAL AND ELECTRONICS INSTRUMENTS 9

Principle and types of analog and digital voltmeters, ammeters, multimeters – Single and three phase wattmeters and energy meters – Magnetic measurements – Determination of B-H curve

and measurements of iron loss – Instrument transformers – Instruments for measurement of frequency and phase.

UNIT III COMPARISON METHODS OF MEASUREMENTS 9

D.C & A.C potentiometers, D.C & A.C bridges, transformer ratio bridges, self-balancing bridges.Interference & screening – Multiple earth and earth loops – Electrostatic and electromagnetic interference – Grounding techniques.

UNIT IV STORAGE AND DISPLAY DEVICES 9

Magnetic disk and tape – Recorders, digital plotters and printers, CRT display, digital CRO, LED, LCD & dot matrix display – Data Loggers.

UNIT V TRANSDUCERS AND DATA ACQUISITION SYSTEMS 9

Classification of transducers – Selection of transducers – Resistive, capacitive & inductive transducers – Piezoelectric, Hall effect, optical and digital transducers – Elements of data acquisition system – A/D, D/A converters – Smart sensors.

U18ESEC302	DIGITAL ELECTRONICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Basic Electronics Knowledge				
	Course Designed by – Department of Mechatronics Engineering				

OBJECTIVES

- To get a basic understanding of how circuits and systems are designed with digital electronic circuit elements.
- To be able to analyze and design circuits and systems made from digital electronic circuit elements such as gates and flip-flops.
- To master basic design and programming.

UNIT-I NUMBER SYSTEMS AND CODES 9

Review of binary, octal and Hexa decimal representations of numbers and their conversion, Binary arithmetic; conversion algorithms.Weighted binary codes.Non weighted binary codes error-detecting and error-correcting codes-Alphanumeric codes.

UNIT-II BOOLEAN ALGEBRA 9

Introduction to Boolean algebra- The AND, OR and not operations. Laws of Boolean algebraof Boolean expressions. Boolean expressions and logic diagrams.Universal building blocks.Negative logic.

UNIT-III COMBINATIONAL LOGIC9

Truth tables and maps.Sum of products and product of sums; Map reduction hybrid functions.Incompletely specified functions.Multiple- Output minimization. Variable- Entered maps. Tabular minimization.Analysis of logic schematics.Synthesis of combinational functions.

UNIT-III LOGIC FUNCTION RELIZATION WITH MSI CIRCUITS 9

Multiplexers, De-multiplexers,Decoders and code converters. Arithmetic circuits, Adder, Number complements. Subtracting positive binary numbers with adders.Signed number addition and subtraction.

UNIT-IV SYNCHORONOUS SEQUENTIAL CIRCUITS 9

Basic latch circuits, De-bouncing switch. Flip-flops, truth table and excitation table. Shift registers. Asynchronous and synchronous counters. Shift counters.

UNIT-V ASYNCHRONOUS SEQUENTIAL CIRCUITS 9

Analysis and Design of Asynchronous Sequential Circuits , Reduction of State and Flow Tables ,Race-free State Assignment, Hazards.

TEXT BOOKS:

COURSE OUTCOMES (COs)	
CO1	Perform arithmetic operations in any number system.
CO2	Understand the hierarchical memory system and data transfer with in a digital computer.
CO3	Use Boolean simplification techniques to design a combinational hardware circuit.
CO4	Understand the concept of number system.
CO5	Learn the various gates like AND, OR, NOT, XOR.
CO6	Learn the concept of synchronous and asynchronous sequential circuits.

	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Engg Mathematics-I, Engg Mathematics-II, Basic electrical engineering				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To understand the basics concepts of various types of DC and AC machines with its drives				

UNIT I CIRCUITS AND TRANSFORMERS 6

D.C. Voltage, current, power-Ohms law-series, parallel circuits – Kirchoff's laws – mesh analysis – A.C. voltage – sinusoidal waves, phasor representation – power factor – complex power - basic idea of transformers – simple problems.

UNIT II ELECTRICAL MOTORS 12

Constructional details, principle of operation and performance characteristics of D.C. motors, single phase induction motor, three phase induction motor, synchronous motors, universal motors, stepper motors and reluctance motor.

UNIT III SPEED CONTROL AND STARTING 9

Speed control of D.C. motors – three phase induction motors – starting methods of D.C. motor and three phase induction motor – electrical braking – simple problems.

UNIT IV ELECTRICAL DRIVES 9

Type of Electrical Drives – Selection & factors influencing the selection – heating and cooling curves – loading condition and classes of duty – determination of power rating – simple problems.

UNIT V SOLID STATE DRIVES (QUALITATIVE TREATMENT ONLY) 9

Advantages of solid state drives – D.C. motor control using rectifiers and choppers – control of induction motor by V, V/f and slip power recovery scheme using inverters and A.C. power regulators.

	Total Contact Periods – 30	0	0	2	1
	Prerequisite – Engg Mathematics-I, Basic Electrical Lab				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	The ability to conduct testing and experimental procedures on different types of electrical machines.				

LIST OF EXPERIMENTS

1. Load test on D.C. shunt motor.
2. Speed control of D.C. shunt motor.

3. Swinburne's test
4. Load test on three phase induction motor.
5. No load and blocked rotor tests on three-phase induction motor.
6. Load test on single phase induction motor.
7. No load and blocked rotor tests on single phase induction motor.
8. Load test on Synchronous motors
9. Performance characteristics of Stepper motors.
10. Performance characteristics of single phase transformer.

LIST OF EQUIPMENT

(For a batch of 30 students)

S.No	**Equipments**	**Qty**
1.	Shunt motor 5HP	3
2.	Single phase Induction Motor 2HP	2
3.	Three phase induction Motor 5HP	2
4.	Single phase transformer 2KVA	1
5.	Three phase quto transformer	2
6.	Single phase auto transformer	2
7.	3 point starter	3
8.	DPST, TPST	Each 2
9.	DC source 300v, 100A	1
10.	Ammeter (0-5A), (0-10A) MC	Each 2
11.	Ammeter (0-5A), (0-10A) MI	Each 2
12.	Voltmeter (0-300V) MC	3
13.	Voltmeter (0-150V), (0-300V), (0-600V) MI	Each 2
14.	Wattmeter 150/300V, 5/10A UPF	2
15.	Wattmeter 300/600V, 5/10A UPF	2
16.	Wattmeter 150/300V, 5/10A LPF	2
17.	Wattmeter 300/600V, 5/10A LPF	2
18.	Stepper motor 5Kg	1
19.	Synchronous motor 5KW	1
20.	Rheostat 360 ohm/1.2A	3
21.	Rheostat 50 ohm/5A	3
22.	Tachometer	5

COURSE OUTCOMES (COs)	
CO1	Understand the concept of efficiency and the short circuit impedance of a three-phase transformer from no-load test, winding resistance, short circuit test, and load test.
CO2	Understand the effect of unbalanced loading on a three-phase transformer with different connections, and the effects and limitations of each connection..
CO3	Understand the starting and connecting procedures of synchronous generators, and to obtain the 'V' curves of synchronous motors.
CO4	Experimentally obtain the load characteristics of various dc motors and generators

CO5		Experimentally obtain the load characteristics, starting current and starting torque of a squirrel-cage induction motor and to derive circuit parameters from no-load and blocked-rotor tests

18MCAB305	**CULTURAL- LEARNING AN ART FORM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – NIL				
	Course Designed by – AICTE				

Learning an Art Form

Cultivation of arts is an integral part of the development of human beings since the arts are what make us most human, most complete as people. They offer us the experience of wholeness because they touch us at the deepest levels of mind and personality. They come into being not when we move beyond necessity but when we move to a deeper necessity, to the deeper human need to create order, beauty and meaning out of chaos. They are the expressions of deepest human urges, imperatives and aspirations.

While enriching the process of learning through enhanced perceptual and cognitive skills, learning of arts promotes self-esteem, motivation, aesthetic awareness, cultural exposure, creativity, improved emotional expression, as well as social harmony and appreciation of diversity. They promote an understanding and sharing of culture, and equip the learners with social skills that enhance the awareness and respect of others. Each institution will offer a range of introductory courses in different art forms: music, dance, theatre, painting, and other art forms. Care should be taken to give adequate representation to local and regional art forms in which our culture abounds. For example, Banaras has local traditions in vocal music like *Chaiti*, *Hori*, *Kajri* and *Birha*.

An institution in Banaras area can offer courses on these art forms apart from regular classical and semi-classical vocal music forms. Similar local art tradition can be utilized in different cities and regions. This will, in turn, also ensure wider community involvement/interaction with the

institution. Students will be given an option to choose a particular art form, and learn and practice it under an artist -instructor. At the end of the course, a student should be able to demonstrate basic proficiency in that particular art form. Contact hours per week should be 3-4 hours.

Towards the end of the course, the institution can organize a function/program in which all the students publicly demonstrate their skills.

U18MCAB306	**CULTURAL- INTANGIBLE CULTURAL HERITAGEO(Festivals, Food ways, Local Games)**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Designed by –				

Intangible Cultural Heritage (Festivals, Food ways, Local Games)

As part of our rich intangible cultural heritage, foodways, fares and festivals, local games and sports are important sources for discovering the social and cultural values of our people and understanding the inner dynamics of our society, as these are sites where we witness the most significant and intimate representations of our society's self-perception—how our society perceives itself. These traditions have shaped and strengthened our social and cultural identities, and also the notion of community at the local, regional, and national levels. They have played a significant role in the making of our social life, and through them we have constructed for ourselves, individually and collectively, a sense of shared lived past and group identity. They facilitate the transmission of a culture's most deeply held values, from one generation to another and their continuity or discontinuity helps us to understand the changing social structure and culture of a society. For example, each community has its own foodways, and their overall health, well-being and cultural continuity are directly related to their ability to eat traditional foods and continue their traditional food practices. These traditional foods and food practices are deeply intertwined with their cultures and value systems, and play an important role in religious ceremonies and spirituality. Similar is the case with fares and festivals, and local games and sports. These traditions are bound up with rituals, customs, beliefs, and often also with trade, craft and professions. They are not mere superstitious rituals often condemned and denounced as being regressive, stagnant and backward, but repositories of our indigenous knowledge and wisdom which have evolved over centuries, and they still continue to serve social and cultural functions. This knowledge has been the basis for agriculture, food preparation, health care, education, conservation and the wide range of other activities that sustain societies in many parts of the world.

Most of these traditions are either on the verge of extinction or undergoing drastic changes due to globalization, acculturation, migration, questions of identity related to social mobility to confirm

to a higher social order or simply because the context in which these traditions originated or were conceived no longer exist and their effectiveness or need seems no longer relevant. For example, while the agro-ecological and food systems offer some signs of resilience and adaptation, a range of factors are increasingly threatening these systems and peoples' well-being. The knowledge and skills of elders concerning traditional food preparation, and the use of traditional herbs and plants for healing purposes have not been passed on to the next generation and is at risk of being lost and disappearing altogether from reservation life and culture.

The course aims at exposing students to these traditions, and making them aware of the veritable treasure house of indigenous knowledge which can be utilized as resource for realizing a vision of sustainable future.

Each locality/region our Indian sub-continent abounds in a rich variety of food-ways, fares and festivals, games and sports. Students should be asked to identify one of these traditions and study them in detail. For example, the following guidelines can be adopted in the study of food-ways:

To study and document the indigenous knowledge and wisdom of everyday food habits and food items consumed;

To study and document the prevalent social practices and beliefs regarding traditional foods;

To study and document the feasts on religious and social occasions of different communities;

To identify and document the food items consumed by different communities and determine their nutritional values;

To conduct chemical analysis of food ingredients;

To identify and document the kitchen generated health ingredients used by different communities;

To find out the uses of leftover food stuff of different communities;

To develop hygienic food chart for people ailing and suffering from different metabolic disorders; and

To develop suitable communication strategies to effectively disseminate traditional knowledge regarding food habits.

Similarly, in the case of fares and festivals, and games and sports one could study how these traditions create a sense of community bonding and lead to the rules of commensality and social interaction and behavior. Suitable guidelines along the lines of foodways can be developed and adopted for such a study.

At the end of the course, students will be required to submit a detailed project report. Options should be given to the students to make short documentaries and films on these traditions.

SEMESTER -IV

U18BSMA401	**Numerical Methods (Common to B.Tech - Mech, Mechatronics, Automobile, Aero, EEE, EIE, ECE, CSE, IT, Civil & Bio Medical)**	**L**	**T**	**P**	**C**
	Total Contact Periods: 45	**3**	**0**	**0**	**3**
	Prerequisite – Engineering Mathematics I & II				
	Course Designed by : Department of Mathematics				
OBJECTIVES	The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT 1 SOLUTION OF POLYNOMIAL AND TRANSCENDENTAL EQUATIONS **9 Hrs**

Fixed Point Iteration methods - Newton - Raphson method and Regula-Falsi method for single variable - solutions of linear system of equations by Gaussian, Gauss-Jordan, Jacobian and Gauss-Siedel methods.

UNIT 2 INTERPOLATION **9 Hrs**

Finite differences - Relation between finite difference operators- Interpolation using Newton's forward and backward difference formulae, Interpolation with unequal intervals-Newton's Divided difference formula, Lagrange's Interpolation formula.

UNIT 3 NUMERICAL DIFFERNTIATION AND INTEGRATION **9 Hrs**

Numerical Differentiation with interpolation polynomials, Numerical integration by Trapezoidal and Simpson's Both $1/3^{rd}$ and $3/8^{th}$ rules. Double integration using Trapezoidal rule and Simpson rule.

UNIT 4 INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATION **9 Hrs**

Single step methods- Taylor series, Euler and modified Euler methods, Runge Kutta method of fourth order for solving first and second order differential equations, Multiple step methods- Milne and Adam's - Bash forth predictor and corrector methods.

UNIT 5 BOUNDARY VALUE PROBLEMS FOR ORDINARY AND PARTIAL DIFFERENTIAL EQUATION **9 Hrs**

Finite difference - solution of 2^{nd} order ODE - Finite difference solutions for two dimensional Laplace and Poisson equations, Finite difference solutions for one dimensional heat equation both implicit and explicit (Bender-Schmidt and Crank-Nicholson methods), Finite difference explicit method for one dimensional wave equation.

2. Dennis G. Zill and Warren S.Wright. "Advanced Engineering Mathematics", 3rd Edn. Jones & Bartlett Publishers, UK. 1992.
3. P.Kandasamy, K.Thilagavathy, K. Gunavathi - Numerical methods, S.Chand & Company, 2nd Edition 2010.

COURSE OUTCOMES (COs)	
CO1	Students will gain knowledge for solving equations by Newton-Raphson and Regula-Falsi methods and system of linear equations by various methods.
CO2	Students will be able to interpolate the value of a dependent variable in the given data by Newton's forward and backward difference formulae and also unequal intervals.
CO3	Understanding the concept of numerical differentiation and integration using Trapezoidal and Simpson's rules.
CO4	Be exposed Taylor's series and Runge-Kutta methods to solve initial value problems of ODE
CO5	Student will be able to solve two dimensional Laplace, Poisson equations and one dimensional heat and wave equations of PDE.

CO/PO Mapping **S – Strong, M – Medium, W – Weak**

Category	Basic Science (BS)											
Approval	47th Academic Council, July 2018											

U18PCMT402	**DYNAMICS OF MACHINES**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – Engineering Mechanics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the concept of dynamics of machines. To acquaint the student with various techniques involved in dynamics and various new technology in dynamics of machines.				

UNIT I FORCE ANALYSIS OF MECHANISMS 12

Static, Inertia and combined force analysis- Graphical and analytical method- Slider crank mechanism and four bar mechanism. Turning moment diagram and flywheel-Applications in engine, Punching presses.

UNIT II BALANCING 12

Static and dynamic balancing-Balancing of rotating masses- Balancing of several masses in different planes. Primary and secondary unbalanced forces of reciprocating parts-Balancing of in line engines- Firing order- Balancing of 'V' and 'W' engines.

UNIT III FREE VIBRATIONS OF SINGLE DEGREE OF FREEDOM SYSTEM 12

Fundamentals of vibrations-Undamped free vibrations of single d.o.f systems–Derivation & solution of differential equation-Torsional Vibrations-single rotor- Equivalent stiffness of spring combinations-Bifilar, Trifilar suspensions-Compound pendulum-Types of damping-Damped free vibrations of single d.o.f-over, critical, under damped- Damping coefficient - Critical damping coefficient-Logarithmic decrement

UNIT IV FORCED VIBRATIONS OF SINGLE DEGREE OF FREEDOM SYSTEMS 12

Forced vibrations with-Constant harmonic excitation-Rotating & Reciprocating unbalance-Excitation of the support-Energy dissipated by damping-Forced vibrations with coulomb, viscous damping-Vibration Isolation and Transmissibility- Vibration Absorbers

UNIT V CRITICAL SPEEDS AND SHAFTS WITH ROTORS 12

Lateral vibration of beams - Whirling speed of shaft - Shafts with two & three rotors-Geared system. Dunkerly's method for different types of beams & shaft with several loads.

TEXTBOOKS

COURSE OUTCOMES (COs)	
CO1	To learn the concept about force analysis for mechanism.
CO2	To understand the various methods of balancing in different situation.
CO3	To learn the Concept about free vibration of single degree of freedom.
CO4	To study the Concept about forced vibration of single degree of freedom.
CO5	To learn the lateral vibration of beam
CO6	To learn the concept about critical speed of rotating shaft
Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCMT403	**MANUFACTURING TECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite –Nil				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To Understand the various concept of manufacturing technology to produce new product and to acquaint the student with various manufacturing technologies used in production engineering.				

UNIT I FOUNDRY TECHNOLOGY 9

Pattern and Core making – Molding sand – Melting furnaces Cupola and Induction furnaces – Special casting processes – Shell, Investment, Die casting – Defects in casting.

UNIT II FORMING– PROCESSES 9

Hot and Cold Working

Rolling: Introduction – Rolling Mills – Rolling Operations – Production of Seamless Tubing and Pipe.

Forging : Introduction – Related Forging Operations – Drop forging

Extrusion and Drawing: Extrusion Practice – Hot, Cold, Impact and Hydrostatic extrusion. Drawing Process – Defects and Residual Stresses – Drawing Equipment. Sheet metal operations – Blanking, Punching and Piercing.

UNIT III MATERIAL – REMOVAL PROCESSES 9

Lathes and Lathe Operations, Drilling and Drilling Machines, Reaming and Reamers, Tapping and Taps – Tool nomenclature, cutting speed, feed, machining Time calculations.

UNIT IV MATERIAL – REMOVAL PROCESSES 9

Milling Machines and Operations, Planning and Shaping, Broaching, Gear Hobbing and Shaping.

Grinding Process – Abrasives – Finishing Operations – Lapping, Honing Powder coating.

UNIT V PRINCIPLES & APPLICATIONS OF JOINING PROCESSES 9

Gas welding, Basic Arc Welding Processes, Thermit Welding, Electron – Beam Welding, Laser – Beam Welding. Solid State Welding: Cold Welding, Ultrasonic Welding, Friction Welding,

Resistance Welding and Explosive Welding. Principles and applications of Brazing and Soldering.

U18PCMT404	**POWER ELECTRONICS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite –Fundamentals of Electronics Circuits and Devices				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To get an overview of different types of power semi-conductor devices and to understand parameters of controlled rectifiers, inverters, AC voltage controller and cycloconverters.				

UNIT I POWER SEMI CONDUCTOR DEVICES 9

Principle of operation – Characteristics of power diodes, SCR, TRIAC, GTO, Power BJT, Power MOSFET and IGBT – Thyristor protection circuits.

UNIT II PHASE CONTROLLED CONVERTERS 9

Single phase full converters, 3 phase half converter and 3 phase full converter – inverter operation – input power factor – effect of source inductance – Thyristor triggering circuits.

UNIT III DC TO DC CHOPPERS 9

DC Chopper – Principle of operation – step up and step down chopper – Forced commutation – different techniques – voltage, current and load – commutated choppers – step up and step down chopper.

UNIT IV INVERTERS 9

Voltage source inverters – series, parallel and bridge inverters – PWM inverters – current source inverters.

UNIT V AC VOLTAGE CONTROLLERS AND CYCLOCONVERTERS 9

Single phase AC voltage controller – multistage sequence control – step up and step down cycloconverters – three phase to single phase and three phase cycloconverters.

COURSE OUTCOMES (COs)	
CO1	To learn different types of power semi-conductor devices and their characteristics.
CO2	To understand the operation, characteristics and performance parameters of controlled rectifiers
CO3	To study the operation, switching techniques and basic topologies of DC-DC converters.
CO4	To learn the operation of different types of inverters like VSI, CSI, PWM Inverters, Series inverter and parallel inverter.
CO5	To study the operation of AC voltage controller and cycloconverters.
CO6	To study the Principle of operation step up and step down chopper

U18PCMT405	**CONTROL SYSTEMS**	**L**	**T**	**P**	**C**
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – Engg Mathematics-I, Engg Mathematics -II, Basic Electrical & Electronics Engineering				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To provide an introduction to the analysis of linear control systems. This will permit to exploit time domain and frequency domain tools.				

UNIT I SYSTEMS AND THEIR REPRESENTATION 9

Basic elements in control systems – open and closed loop systems Examples – Mathematical model, Translational & Rotational systems – transfer function – block diagram reduction techniques – signal flow graph.

UNIT II TIME RESPONSE 9

Time response – time domain specifications – types of test inputs – I and II order system response – error coefficients – generalized error series – steady state error – P, PI, PD, PID Controller characteristics.

UNIT III FREQUENCY RESPONSE ANALYSIS AND DESIGN 9

Performance specifications – correlation to time domain specifications – Bode plots and polar plots – gain and phase margin – constant M and N circles and Nichols chart – all pass and non-minimum phase systems.

UNIT IV STABILITY OF CONTROL SYSTEMS 9

Characteristic equation – location of roots in s-plane for stability – Routh Hurwitz criterion – root locus techniques – construction – gain margin and phase margin – Nyquist stability criterion.

UNIT V COMPENSATION DESIGN 9

Design concepts – realization of basis compensation – cascade compensation in time domain and frequency domain (simple MATLAB applications to analysis and compensators design problems.)

U18PCMT406	**TRANSDUCER ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Measurement and instrumentation				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To improve the ability to model and analyze transducers.				

UNIT I SCIENCE OF MEASUREMENTS AND CLASSIFICATION OF TRANSDUCERS 9

Units and standards – Calibration methods – Static calibration – Classification of errors :- Limiting error and probable error – Error analysis :– Statistical methods – Odds and uncertainty – Classification of transducers – Selection of transducers.

UNIT II CHARACTERISTICS OF TRANSDUCERS 9

Static characteristics: – Accuracy, precision, resolution, sensitivity, linearity, span and range -

Dynamic characteristics: – Mathematical model of transducer – Zero, I and II order transducers – Response to impulse, step, ramp and sinusoidal inputs.

UNIT III VARIABLE RESISTANCE TRANSDUCERS 9

Principle of operation, construction details, characteristics and applications of potentiometer, strain gauge, resistance thermometer, Thermistor, hot-wire anemometer, piezoresistive sensor and humidity sensor.

UNIT IV VARIABLE INDUCTANCE AND VARIABLE CAPACITANCE TRANSDUCERS 9

Induction potentiometer – Variable reluctance transducers – EI pick up – Principle of operation, construction details, characteristics and applications of LVDT –Capacitive transducer and types – Capacitor microphone – Frequency response.

UNIT V OTHER TRANSDUCERS 9

Piezoelectric transducer – Hall Effect transducer – Magneto elastic sensor- Digital transducers – Smart sensors – Fibre optic sensors- Film sensors-Introduction to MEMS and Nano sensors.

	Total Contact Hours - 45	2	0	0	0
	Prerequisite – Professional Courses				
	Course Coordinator Name & Department:- Department of Management studies				

OBJECTIVES

To know about Indian constitution. To know about central and state government functionalities in India. To know about Indian society.

COURSE OUTCOMES (COs)

CO1	To understand the historical background and fundamental rights
CO2	To understand the structure and functions of governments
CO3	To understand the Indian social structure
CO4	To gain knowledge in Indian federal system
CO5	To gain knowledge Indian social structure
CO6	To gain knowledge the right of women, children and SC&ST

UNIT I **9**

Historical Background – Constituent Assembly of India – Philosophical foundations of the Indian Constitution – Preamble – Fundamental Rights – Directive Principles of State Policy – Fundamental Duties – Citizenship – Constitutional Remedies for citizens.

UNIT II **9**

Union Government – Structures of the Union Government and Functions – President – Vice President – Prime Minister – Cabinet – Parliament – Supreme Court of India – Judicial Review.

UNIT III **9**

State Government – Structure and Functions – Governor – Chief Minister – Cabinet – State Legislature – Judicial System in States – High Courts and other Subordinate Courts.

UNIT IV **9**

Indian Federal System – Center – State Relations – President's Rule – Constitutional Amendments – Constitutional Functionaries - Assessment of working of the Parliamentary System in India.

UNIT V **9**

Society : Nature, Meaning and definition; Indian Social Structure; Castle, Religion, Language in India; Constitutional Remedies for citizens – Political Parties and Pressure Groups; Right of Women, Children and Scheduled Castes and Scheduled Tribes and other Weaker Sections.

U18PCMT4L1	MACHINE DYNAMICS LAB	L	T	P	C
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Nil				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To learn about Governors /CAM, Motorized Gyroscope and Vibrating system Spring mass.				

LIST OF EXPERIMENTS

1. Governors - Determination of sensitivity, effort, etc. for watt, porter, proell, Hartnell governors
2. Cam - Study of jump phenomenon and drawing profile of the cam.
3. Motorized Gyroscope-Verification of law's -Determination of gyroscopic couple.
4. Whirling of shaft-Determination of critical speed of shaft with concentrated loads.
5. Balancing of reciprocating masses.
6. Balancing of rotating masses.
7. Determination of Moment of inertia by oscillation method for connecting rod and flywheel.
8. Vibrating system Spring mass-system-Determination of damping co-efficient of single degree of freedom system.
9. Determination of influence co-efficient for multi degree freedom suspension system.
10. Determination of transmissibility ratio - vibrating table.
11. Determination of tensional frequencies for compound pendulum and flywheel -system with lumped Moment of inertia
12. Transverse vibration –free- Beam. Determination of natural frequency and deflection of beam.

LIST OF EQUIPMENT (for a batch of 30 students)

1. Cam analyzer. - 1 No
2. Motorized gyroscope. - 1 No.
3. Governor apparatus - watt, porter, proell and hartnell governors. - 1 No.
4. Whirling of shaft apparatus. - 1 No.
5. Dynamic balancing machine. - 1 No.
6. Static and dynamic balancing machine. - 1 No.
7. Vibration test facilities apparatus - 1 No.

COURSE OUTCOMES (COs)	
CO1	To learn&Pratices about Governors /CAM
CO2	To Learn &Practice The Experiments Like Gyroscope

CO3	To Learn &Practice The Experiments Like Vibrating System Mass.	
CO4	To Learn &Practice The Experiments Like Determination of Moment of inertia	
CO5	To know the concepts of electrical actuator

U18PCMT4L2	**SENSOR AND INSTRUMENTATION LAB**	**L**	**T**	**P**	**C**
	Total Contact Periods – 30	0	0	2	1
	Prerequisite – Electronic Circuits and Devices - Lab				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the concept of various instrument involved in industry with various practical concepts in instrumentation and control and to introduce the various advanced technology in controlling technique.				

LIST OF EXPERIMENTS

1. PRESSURE MEASUREMENT AND CONTROL
   Pressure measuring devices – Pressure and vacuum gauge calibration.
2. TEMPERATURE MEASUREMENT AND CONTROL
   Temperature measuring devices like platinum resistance thermometer, thermocouple etc
3. SPEED MEASUREMENT AND CONTROL
   Studying the devices and characters and measuring the speed using tachometer, stroboscope, etc.
4. FORCE MEASUREMENT
   Force measuring devices, load cells and proving rings.
5. TORQUE MEASUREMENT
   Torque measurement –using torque measuring devices.
6. POSITION MEASUREMENT
   Position and velocity measurement using encoders,linear scales
7. STRAIN MEASUREMENT
   Study and use of strain – strain gauge indicator.
8. DISPLACEMENT MEASUREMENT
   LVDT-Displacement and velocity measurement using encoders.
9. Analog to Digital Converters

10. Study on the application of data acquisition system for industrial purposes.

COURSE OUTCOMES (COs)	
CO1	To learn the practical experiments about pressure measurement and control
CO2	To understand the practical experiments about force and torque measurement
CO3	To learn the practical experiments about temperature measurement and control
CO4	To learn the practical experiments about speed measurement and control
CO5	To learn the practical experiments about application of data acquisition system for industrial purposes

U18EEMT4L3	**TECHNICAL SEMINAR**	**L**	**T**	**P**	**C**
	Total Contact Hours -15	0	0	2	1
	Prerequisite – Basic English knowledge				
	Course Designed by –Department of Mechatronics				
OBJECTIVES	To improve the communication skills of the students				

During the Seminar session each student is expected to prepare and present a topic on engineering/ technology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present the seminar. A faculty guide is to be allotted and he/she will guide and monitor the progress of the student and maintain attendance also.
Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models. This will enable them to gain confidence in facing the placement interviews.

COURSE OUTCOMES(CO_S)	
CO	To improve the communication skills of the students

	LITERATURE & MEDIA – LITERATURE ,CINEMA& MEDIA	**L**	**T**	**P**	**C**
U18MCAB407					

	Total Contact Hours - 30	0	0	2	0
	Prerequisite –				
	Course Designed by –				

The objective is to inculcate the habit of active (or interactive) consumption of the best content available in literature, films and media, rather than passive consumption. Description

Literature is perhaps as old as history or may be older and it is difficult to think of a fully educated person without any exposure to the best of the world literature (not just the literature of their own country or in their own language). Cinema is more recent and mass media is even more recent, but all these have a vital role in today's society. The problem is that the content available easily to most people (partly due to extensive promotion) caters to the lowest common denominator. Engineering students should be encouraged to read the best of the world literature and watch the best of the world cinema (regardless of their viewpoints). They should also be made aware that news is best collected from different sources, which don't necessarily agree, so that they can understand the true meaning of democracy and also learn to form educated opinions about various topics based on the information from diverse sources. They should learn that being opinionated without being properly informed (say, by relying only on one source of news on TV based on TRPs) is not the right way to be a good citizen. They should get the experience of their opinion being contradicted by the most reliable evidence, so that they realize that there is no shame in changing a wrong opinion in the light of overwhelming evidence. For that, they will also have to learn how to find out the degree of reliability of different sources. One way to achieve this is to conduct workshops where students, aided by invited experts, read news from different sources, watch the best cinema and read or watch different media sources. They can then discuss these with their peers and with the invited experts and learn to talk peacefully with people of different viewpoints, as well as learn to form their own opinions. They should then be encouraged to write about their takeaways from these discussions or their opinions and their reasons for forming those opinions. Such activities can counter the current culture of being 'trolls' on the social media, for example. Instead, we should have citizens who give due respect to their fellow citizens and learn to analyze, discuss and reach conclusions in an agreeable manner, without unnecessary feelings of bitterness and enmity.

Another related exercise could be to read or watch advertisements and then analyze them in terms of the biases they promote (such as the desirability of fair skin) or the deception they indulge in to psychologically compel consumers to buy things they don't really need. Some advertisements even promote the habit of treating fellow human beings with contempt for being different from them (even in terms of possessing the products they are promoting). A well-educated citizen should be less susceptible to such practices in advertisements. Advertisements are just one example. Something similar could be done with all kinds of propaganda material

U18MCAB408	**LITERATURE & MEDIA – GROUP READING OF CLASSICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0

	Prerequisite –
	Course Designed by –

This will make group to read one or two books during a semester.

Process: An hour may be fixed for a small group for a particular classic. Group sitsand each person reads aloud (if possible with proper modulation) taking turns. This if done properly for an hour one may complete 30-40 pages in an hour. A normal classic can be finished in 15 to 20 days. If serious books on philosophy etc. are taken up a discussion can be held after every idea is complete.

SEMESTER-V

U18PCMT501	MICRO CONTROLLER &PLC	**L**	**T**	**P**	**C**
	Total Contact Hours – 60	3	1	0	4
	Prerequisite – Nil				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the Architecture of 8051 and addressing modes. To get the knowledge about 8051 micro controller design, testing design and the applications of the PLC.				

UNIT I INTRODUCTION TO MICROCONTROLLER 12

8051 Architecture: Microcontroller Hardware – I/O Pins, Ports – External memory – Counters and Timers – Serial data I/O – Interrupts –Instruction set of 8051-Addressing modes- Data transfer instructions, Arithmetic and Logical Instructions, Jump and Call Instructions, interrupts.

UNIT II 8051 MICROCONTROLLER DESIGN 12

8051 Microcontroller Design: 8051 Microcontroller Specification 8051 – Microcontroller System Design – Testing the Design, Timing Subroutines, Look up Tables – Serial Data Transmission.

UNIT III INTERFACING AND APPLICATIONS 12 Stepper motor control-Keyboard interfacing-Alpha-Numeric display interfacing Devices –Analog to digital converter interfacing-Digital to analog converter interfacing- Interfacing of Electronic weighing bridge.

UNIT IV INTRODUCTION TO PLC 12 Programmable Logic Controllers: Introduction – Parts of PLC – Principles of operation – PLC sizes – PLC hardware components — PLC programming Simple instructions – Connecting PLC to computer interlocks and alarms -Latching relays PLC ladder diagram, Converting simple relay ladder diagram in to PLC relay ladder diagram.

UNIT V APPLICATIONS OF PLC 12

Timer instructions ON DELAY, OFF DELAY and RETENTIVE Timers, UP COUNTER, DOWN COUNTER and UP DOWN COUNTERS, control instructions – Data manipulating instructions, match instructions; Applications of PLC –case study of Tank level control system - Automatic lubrication of supplier Conveyor belt - Automatic control of warehouse door.

TEXTBOOKS:

1. Kennath J. Ayala.The 8051 Microcontroller Architecture, Programming and Applications, Penram International Publishing (India), 3rd Edition, Mumbai.

1. Microcontroller-Internals, Instructions, Programming & Interfacing by Subrata Ghoshal, Pearson.
2. David Calcutt, Frederick Cowan, and Hassan Parchizadeh," 8051 Microcontroller: An ApplicationsBased Introduction ".
3. FrankD.Petruzella."Programmable Logic Controllers", McGraw–HillBook, 1989.3rd Ed

REFERENCES

COURSE OUTCOMES (COs)	
CO1	To learn the Architecture of 8051 microcontroller.
CO2	To understand the 8051 micro controller design and testing design.
CO3	To learn the 8051 micro controller applications.
CO4	To learn the programmable logic controllers.
CO5	To learn the applications of the PLC.

	CNC TECHNOLOGY	**L**	**T**	**P**	**C**

U18PCMT502	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Engineering Mechanics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the CNC technology for to production of product sand to learn the student with various CNC technology used in production engineering. To introduce the industrial current trends in the production technology				

UNIT I FUNDAMENTALS OF CNC MACHINES 9

Introduction to Computer Numerical Control: CNC Systems – An Overview of Fundamental aspects of machine control, Different types of CNC machines – Advantages and disadvantages of CNC machines.

UNIT II CONSTRUCTIONAL FEATURES OF CNC MACHINES AND RETROFITTING 10

Features of CNC Machines: Structure, Drive Mechanism, gearbox, Main drive, feed drive, Spindle Motors, Axes motors. Timing belts and pulleys, Spindle bearing – Arrangement and installation. Slide ways. Re - circulating ball screws – Backlash measurement and compensation, linear motion guide ways. Tool magazines, ATC, APC, Chip conveyors.Retrofitting of Conventional Machine Tools: Modification to be carried out on conventional machines for retrofitting.

UNIT III CONTROL SYSTEMS, FEED BACK DEVICES AND TOOLING 10

Description of a simple CNC control system.Interpolation systems. Features available in a CNC system – introduction to some widely used CNC control systems. Types of measuring systems in CNC machines – Incremental and absolute rotary encoders, linear scale – resolver – Linear inductosyn – Magnetic Sensors for Spindle Orientation. Qualified and pre-set tooling – Principles of location – Principles of clamping – Work holding devices.

UNIT IV CNC PART PROGRAMMING 9

Part Program Terminology-G and M Codes – Types of interpolation Methods of CNC part programming – Manual part programming – Computer Assisted part programming – APT language – CNC part programming using CAD/CAM-Introduction to Computer Automated Part Programming.

UNIT V ECONOMICS AND MAINTENANCE 7

Factors influencing selection of CNC Machines – Cost of operation of CNC Machines – Practical aspects of introducing CNC machines in industries – Maintenance features of CNC Machines – Preventive Maintenance, Other maintenance requirements.

TEXTBOOKS

4. MIKE MATTSON, "CNC Programming Cengage Learning, 2009.

COURSE OUTCOMES (COs)	
CO1	To introduce the fundamentals of CNC Technology.
CO2	To understand the constructional features and retrofitting of CNC machines.
CO3	To learn the types of controls system, various feedback devices and tooling.
CO4	To practice writing programs using G codes and M Codes.
CO5	To learn the economics and maintenance of CNC installation.

U18HSBA501	**ORGANIZATIONAL BEHAVIOUR**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Management Studies				
OBJECTIVES	To provide an overview of theories and practices in organizational behavior in individual, group and organizational level				

Module I Focus and Purpose 5 Hours

Definition, need and importance of organizational behavior – Nature and scope – Frame work – Organizational behavior models.

Module II Individual Behavior 12 Hours

Personality – types – Factors influencing personality – Theories – Learning – Types of learners – The learning process – Learning theories – Organizational behaviour modification. Misbehaviour – Types – Management Intervention. Emotions - Emotional Labour – Emotional Intelligence – Theories. Attitudes – Characteristics – Components – Formation – Measurement Values. Perceptions – Importance – Factors influencing perception – Interpersonal perception Impression Management. Motivation – Importance – Types – Effects on work behavior.

Module III Group behavior 10 Hours

Organization structure – Formation – Groups in organizations – Influence – Group dynamics – Emergence of informal leaders and working norms – Group decision making techniques – Team building - Interpersonal relations – Communication – Control.

Module IV Leadership and Power 8 Hours

Meaning – Importance – Leadership styles – Theories – Leaders Vs Managers – Sources of power – Power centers – Power and Politics.

Module V Dynamics of Organizational Behaviour 10 Hours

Organizational culture and climate – Factors affecting organizational climate – Importance. Job satisfaction – Determinants – Measurements – Influence on behavior. Organizational change – Importance – Stability Vs Change – Proactive Vs Reaction change – the change process – Resistance to change – Managing change. Stress – Work Stressors – Prevention and Management of stress – Balancing work and Life. Organizational development – Characteristics – objectives –. Organizational effectiveness Developing Gender sensitive workplace

COURSE OUTCOMES (COs)	
CO1	Understanding the concepts of Management. They will know the framework for managing individual and group performance.
CO2	Students will have a better understanding of human behavior in organization.
CO3	In-Department h Understanding about the concepts of Group Behavior
CO4	Understanding the Organization Theory & Approach.
CO5	Students will have a better understanding of organizational behavior

U18PCMT503	**INTEGRATED CIRCUITS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Fundamentals of Electronic Devices and Circuits				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the concept of Integrated Circuits and Various new technology in Integrated Circuits. To acquaint the student with various concepts used in integrated circuits				

UNIT I CHARACTERISTICS OF OPAMP & ITS FUNDAMENTALS 9

Ideal OP-AMP characteristics, DC characteristics, AC characteristics, offset voltage and current: voltage series feedback and shunt feedback amplifiers, differential amplifier; frequency response of OP-AMP; Basic applications of opamp - summer, differentiator and integrator, V/I &I/V converter.

UNIT II APPLICATIONS OF OPAMP 9

Sign Changer, Scale Changer, Phase Shift Circuits, Logarithmic amplifier, Precision rectifier, Instrumentation amplifier, Comparators, multivibrators, Schmitt trigger, waveform generators, clippers, clampers, peak detector, S/H circuit, First and Second order active filters, Low-pass, high-pass and band-pass Butterworth filters

UNIT III ANALOG TO DIGITAL AND DIGITAL TO ANALOG CONVERTERS 9

Analog and Digital Data Conversions, D/A converter – specifications – weighted resistor type, R-2R Ladder type, Voltage Mode and Current-Mode R - 2R Ladder types - switches for D/A converters, high speed sample-and-hold circuits, A/D Converters – specifications – Flash type – Successive Approximation type – Single Slope type – Dual Slope type – A/D Converter using Voltage-to- Time Conversion – Over-sampling A/D Converters.

UNIT IV SPECIAL ICs & VOLTAGE REGULATORS 9

555 Timer circuit - Functional block, characteristics & applications; 566-voltage controlled oscillator circuit, OP-Amp Voltage regulator-Series, Shunt and switching regulator.

UNIT V ANALOG MULTIPLIER AND PLL 9

Analog Multiplier using Emitter Coupled Transistor Pair – Gilbert Multiplier cell – Variable trans conductance technique, analog multiplier ICs and their applications, Operation of the basic PLL, Closed loop analysis, Monolithic PLL IC 565, application of PLL for AM detection, FM detection, FSK modulation and demodulation and Frequency synthesizing.

COURSE OUTCOMES (COs)	
CO1	To learn the characteristics of op-amp & its fundamentals.
CO2	To understand the various application of op-amp.
CO3	To learn the various types of digital to analog and analog to digital converters.
CO4	To learn the concept of Special IC's and Voltage regulator.
CO5	To learn the concept of phase logged loop and function generator.

U18PCMT5L1	MICRO CONTROLLER &PLC LAB	L	T	P	C
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Nil				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the programming concepts in 8051 Microcontroller and interfacing of Electronics Devices to it .				

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

1. Study of Microcontroller Kits.
2. 8051 / 8031 Programming Exercises.
3. Stepper Motor interface.
4. D.C. motor controller interface.
5. Study of interrupt structure of 8051.
6. Interfacing high power devices to microcomputer port lines, LED relays and LCD displays.
7. Linear actuation of hydraulic cylinder with counter and speed control.
8. Hydraulic rotation with timer and speed control.
9. Sequential operation of pneumatic cylinders.
10. Traffic light controller.
11. Speed control of DC motor using PLC.
12. Testing of Relays using PLC.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No	Equipments	Qty
1	Regulated power supply	7
2	Pulse generator	1
3	Function generator	5
4	Cathode ray osilloscope	5
5	8051 MicroController Kit	5
6	stepper Motor	2
7	stepper motor interfacing board	2
8	PLC trainer kit and related software	2
9	Hudraulic cylinder	1
10	Pneumatic cylinder	1
11	LED/LCD interface units	1
12	SCR/Triac/Power MOSFET interface unit	1

COURSE OUTCOMES (COs)	
CO1	To learn the basic programming of 8051 microcontroller.
CO2	To understand the 8051 micro controller interface Programming Exercises.
CO3	To learn the 8051 micro controller applications.
CO4	To learn the ladder programming in PLC

CO5	To learn the sequential operation in pneumatic cylinders

	Total Contact Hours -30	0	0	2	1
	Prerequisite – Basic Mechanical engineering				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To teach part programming in the CNC machines and produce various shapes CNC machine.				

LIST OF EXPERIMENTS

1. Manual part programming using G and M codes for Turning, step turning, Taper turning, thread cutting and radius turning on cylindrical components.
2. Programming and Simulation of machining using the following features.
   a. Linear and Circular interpolation
   b. Pocket milling, slotting, peck drilling and other fixed canned cycles.
3. Given a component drawing to write the manual part programming and execute on CNC Lathe and Milling Machine.

LIST OF EQUIPMENT (for a batch of 30 students)

1. CNC Lathe with Fanuc controller - 1 No.
2. CNC Milling Machine with Fanuc controller- 1 No.
3. Master CAM software - 15 Licenses
4. Computer nodes - 15 Nos

COURSE OUTCOMES (COs)	
CO1	To explain the concept of metrology and measurement and various terms used in the metrology
CO2	To practices on programming and simulation of machining
CO3	To practices on Linear and Circular interpolation

CO4	To practices on Pocket milling, slotting, peck drilling and other fixed canned cycles
CO5

	Course Designed by – AICTE				

Spiritual, Mindfulness and Meditation

The human mind especially among the youth needs to transcend its preoccupation with negative experiences such as fear, anxiety, anger and obsession and to become more comfortable with the experience of compassion, acceptance and forgiveness.

The student's attitude of acceptance towards negativity, aggression and turbulent emotions should be diffused with the practice of mindfulness. Rather than suppressing emotions or by indulging in them, the student be taught to handle such vibes with acceptance and generosity and with the observation of the self.

A mindful state has to be achieved when negative thoughts and experiences are becoming more personalized and do not serve as dictators of subsequent feelings and activities (e.g. suicide attempts, violence etc.). Both concentrative and insight meditation techniques may be practiced for 10-day sessions during every two months. Behavioral techniques of self monitoring should also be practiced to observe the stream of consciousness from the perspective of a vigilant but detached observer.

The students should be trained to practice different models of mindfulness and meditation so as to elicit a state of deep physical and behavioral relaxation. They may work on selectively influencing or changing the symmetry in hemispheric brain activity. Positive addiction, meta - cognitive practices etc. are exercised to make the students experience the universal human capacity through spiritual experiences.

The students may learn to turn-off or bypass the cognitive processing of usual daily pre-occupations and concerns, allowing access to mindful, spiritual and meditative state of self realization.

Activities:

Reading (10 books/ narrations)

Exercises (Mindfulness based Stress Reduction (MBSR) and 10 more) Sessions: multiple 10-day sessions may be organized over a semester.

U18MCAB510	SELF DEVELOPMENT – RELIGION AND INTER - FAITH	L	T	P	C
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Designed by – AICTE				

The objective is to gain knowledge about the beliefs and philosophies of different religions on issues like environment, gender equality, unity, financial equality etc.

The scholars of different religious and philosophical sects should be invited to talk about the issues mentioned above. Efforts should be made to ensure that such talks and discourses should stay clear-off making a critical study on these areas.

Following activities must be included.

Reading of books on religious texts of different faiths by famous authors. (Reading methods may be as suggested under ‘book reading’.)

Organizing lecture on interfaith issues covering philosophies and chronology and contemporary situations world over at a given time.

SEMESTER-VI

U18BSMA601	**Operations Research For Engineers (common to B.Tech - Mech, Mechatronics & Automobile)**	**L**	**T**	**P**	**C**
	Total Contact periods: 45	**3**	**0**	**0**	**3**
	Prerequisite – Engineering Mathematics I & II and statistics				
	Course Designed by Department of Mathematics				
OBJECTIVES	To provide the student with the concept and an understanding of basic concepts in Linear Programming techniques, Duality Principles, Transportation and Assignment problems, Inventory models, PERT/CPM, Queuing and Replacement Models.				

UNIT I LINEAR PROGRAMMING
9 Hrs
Introduction to phases of an Operations Research study– Linear programming – Formulation of the Programming – Graphical method – Simplex method – Dual simplex method-Two phase method.

UNIT II TRANSPORTATION &ASSIGNMENT PROBLEMS
9 Hrs
Transportation models – Vogel's approximation method MODI method – Unbalanced transportation problem – Degeneracy in transportation models **-** Assignment problems – Hungarian method

UNIT III NETWORKS & REPLACEMENT MODELS
9 Hrs Networks – PERT and CPM – Network diagrams – Shortest route – Minimum spanning tree, Replacement models– Individual and Group replacement policy

UNIT IV INVENTORY MODELS 9 Hrs
Inventory models – Deterministic models – Production models – Economic Ordering Quantity Models – Quantity Discount Model – Multi Product Models – Inventory Control Models in practice.

UNIT V QUEUEING MODELS & RESOURCE SCHEDULING
9 Hrs
Queuing theory – Queuing system and structure – Kendal's notation– Poisson arrival and Exponential service time – Characteristic of queuing models – Single channel and multiple models. Resource scheduling – Sequencing of n- jobs through 2 machines and 3 machines.

TEXT BOOKS

1. Gupta and Hira D.S " Operations Research", S. Chand & Co, New Delhi, 2006
2. H. A. Taha, "Operations Research", Prentice Hall of India, 2002, Seventh Edition 2007.

REFERENCE BOOKS

2. T. Veerarajan, “Operations Research”, Published by Orient Black Swan, 2010.

COURSE OUTCOMES (COs)	
CO1	To Explain the basic concepts of optimization and to formulate and solve linear programming problems, Apply duality principle in day to day life style.
CO2	Apply the concepts of Transportation Problem and Assignment Problem, Participate in the class room discussion on Transportation algorithm.
CO3	Explain and demonstrate the basic concepts of PERT- CPM and their application, reproduce the network model.
CO4	Explain the basic concepts of optimization and to formulate and solve inventory problems.
CO5	Explain and apply the concepts of Queueing theory, sequencing problem and their application.

U18PCMT601	**APPLIED HYDRAULICS &PNEUMATICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	3	1	0	4
	Prerequisite – Nil				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To learn about the basic concepts of fluid power systems and various application and its circuits.				

UNIT I FLUID POWER SYSTEMS AND FUNDAMENTALS 12

Introduction: Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, Properties of hydraulic fluids – General types of fluids – Fluid power symbols.Basics of hydraulics – Applications of Pascal’s Law-Laminar and turbulent flow – Reynolds’s number-Darcy’s equation – Losses in pipe, valves and fittings.

UNIT II HYDRAULIC SYSTEM AND COMPONENTS 12

Sources of Hydraulic Power: Pumping theory – Pump classification – Gear pump, Vane Pump, piston pump, construction and working of pumps – pump performance – Variable displacement pumps.
Fluid Power Actuators: Linear hydraulic actuators – Types of hydraulic cylinders – Single acting, Double acting special cylinders like tandem, Rodless, Telescopic. Cushioning mechanism, Construction of double acting cylinder, Rotary actuators. Fluid motors, Gear, Vane and Piston motors.

UNIT III DESIGN OF HYDRAULIC CIRCUITS 12

Construction of Control Components: Directional control valve – 3/2 way valve – 4/2, 4/3 way valve – Shuttle valve – check valve – pressure control valve – pressure reducing valve sequence valve, Flow control valve – Fixed and adjustable, electrical control solenoid valves, Relays, ladder diagram.
Accumulators and Intensifiers: Types of accumulators – Accumulators circuits, sizing of accumulators, intensifier – Applications of Intensifier – Intensifier circuit

UNIT IV PNEUMATIC SYSTEMS & COMPONENTS 12

Pneumatic Components: Properties of air – Compressors – Filter, Regulator, and Lubricator Unit – Air control valves, Quick exhaust valves, Pneumatic actuators, Fluid Power Circuit Design-Speed control circuits, Synchronizing circuit, Electro Pneumatic circuit, Sequential circuit design for simple applications using cascade method.

UNIT V DESIGN OF PNEUMATIC CIRCUITS 12

Servo systems – Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves,Fluidics – Introduction to fluidic devices, Simple circuits,PLC -Introduction, ladder diagrams, PLC applications in fluid power control, Fluid power circuits, failure and trouble shooting.

	Prerequisite – CNC Lab, Finite element Analysis, Computer Aided Machine				
	Course Designed by – Dept of Mechatronics				
OBJECTIVES	To impart knowledge about various software tools in CAD to design and model different products.				

LIST OF EXPERIMENTS

1. Solid modeling using Ideas / Pro Engineering / CATIA software of gives components / products such as (at least 3 components)
2. Analysis of engineering problems using FEA package (at least 3 problems)
3. Exercise in surface machining – Multi Axis Machining and software Development for manufacturing. (at least 3 jobs)
4. Computer assisted part programming using Master Computer Software for various internal and external curved surface machining.

LIST OF EQUIPMENT (FOR A BATCH OF 30 STUDENTS)

1. Any CAD software – 10 licenses
2. Any FEA software – 5 licenses
3. Any CAM software – 10 licenses

COURSE OUTCOMES (COs)	
CO1	To learn to design components like screw jack using Pro E
CO2	To learn to design components like Knuckle joint using Creo software

CO3	To learn to design products using Pro E &CATIA
CO4	To learn to analyze engineering problems using FEA package
CO5	To study about operations like drilling, boring in lathe using Precut software

Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PCMT6L2	**HYDRAULICS &PNEUMATICS LAB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	1
	Prerequisite – Nil				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce design and testing hydraulic and pneumatic circuits. To learn the various control valves like flow, pressure, direction. To practice the simulation using given software.				

LIST OF EXPERIMENTS

1. **Design and testing of hydraulic circuits such as**
   - **ii)** Pressure control
   - **iii)** Flow control
   - **iv)** Direction control
   - **v)** Design of circuit with programmed logic sequence, using an optional PLC in hydraulic Electro hydraulic Trainer.
2. **Design and testing of pneumatic circuits such as**
   - **i)** Pressure control
   - **ii)** Flow control
   - **iii)** Direction control
   - **iv)** Circuits with logic controls
   - **v)** Circuits with timers
   - **vi)** Circuits with multiple cylinder sequences in Pneumatic Electro pneumatic Trainer.
3. Modeling and analysis of basic electrical, hydraulic, and pneumatic systems using **MATLAB/LABVIEW** software.
4. Simulation of basic hydraulic, pneumatic and electrical circuits using Automation studio software.

LIST OF EQUIPMENT(for a Batch of 30 students)

S.No	**Equipments**	*Qty*
	Hydraulic Equipments	
1	Pressure relief valve	4
2	Pressure reducing valves	2
3	Flow control valves	2
4	Pressure switch	1
5	Limit switches	2
6	Linear actuator	1
7	Rotary actuator	1
8	Double solenoid actuated DCV	2
	Single solenoid actuated DCV	1
9	Hydraulic power pack with 2 pumps & 2 pressure relief valve	1
10	PLC	1

S.No	**Pneumatics Equipment**	**Qty**
1	Pneumatic trainer kit with FRL Unit, Single acting cylinder, push buttons.	1
2	Pneumatic trainer kit with FRL unit, Double acting cylinder, manually actuated DCV.	1
3	Pneumatic training kit with FRL unit, Double acting cylinder, pilot actuated DCV.	1
4	Pneumatic trainer kit with FRL unit, Double acting cylinder, Double solenoid actuated DCV, DCV with sensors/ magnetic reed switches.	1
5	PLC with Interface card	1
6	LABVIEW Software& Automation studio software	

COURSE OUTCOMES (COs)	
CO1	To design and test the hydraulic circuits using various valves.
CO2	To design and test the pneumatics circuits using various valves.
CO3	To model and analysis of fluid power system using MATLAB/LABVIEW.
CO4	To simulate basic electric, hydraulic and pneumatic circuits.
CO5	To learn the practical experiments about pneumatics circuits.

UNIT I LISTENING AND SPEAKING SKILLS 6 hours

Conversational skills (formal and informal)- group discussion- making effective presentations using computers, listening/watching interviews conversations, documentaries. Listening to lectures, discussions from TV/ Radio.

UNIT II READING AND WRITING SKILLS **6 hours**

Reading different genres of texts ranging from newspapers to creative writing. Writing job applications- cover letter- resume- emails- letters- memos- reports. Writing abstracts- summaries- interpreting visual texts.

UNIT III ENGLISH FOR NATIONAL AND INTERNATIONAL EXAMINATIONS AND PLACEMENTS 6 hours

International English Language Testing System (IELTS) - Test of English as a Foreign Language (TOEFL) - Civil Service(Language related)- Verbal Ability.

UNIT IV INTERVIEW SKILLS 6 hours

Different types of Interview format- answering questions- offering information- mock interviews-body language(paralinguistic features)- articulation of sounds- intonation.

UNIT V SOFT SKILLS 6 hours

Motivation- emotional intelligence-Multiple intelligences-managing changes-time management-stress management-leadership traits-team work- career planning -intercultural communication- creative and critical thinking

To be totally learner-centric with minimum teacher intervention as the course revolves around practice.

1. Suitable audio/video samples from YouTube to be used for illustrative purposes.
2. GD/Interview/Role Play/Debate could be conducted off the laboratory (in a regular classroom) but learners are to be exposed to telephonic interview and video conferencing.
3. Learners are to be assigned to read/write/listen/view materials outside the classroom as well for graining proficiency and better participation in the class.

U18EEMT6I1	**SUMMER INERNSHIP**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	2	0	2	0
	Prerequisite –				
	Course Designed by –				

Industrial / Practical Training / Internship / Mini Project

The Industrial / Practical Training shall carry 100 marks and shall be evaluated through continuous assessment only. At the end of Industrial / Practical training / internship / Summer Project, the student shall submit a brief report on the training undergone and a certificate from the organization concerned. The evaluation will be made based on this report and a Viva-Voce Examination, conducted internally by a three member Departmental Committee constituted by the Head of the Department. Certificates (issued by the Organization) submitted by the student shall be attached to the mark list and sent to the Controller of Examinations by the Head of the Department.

U18MCAB609	**SOCIAL SERVICES – SOCIAL AWARENESS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite – Nil				
	Course Designed by – AICTE				

Social awareness (Artisans-relates to engg., visit to hospitals, orphanages, policestation, courts, trauma centers, consumer forums)

Human beings live in relationship with their family members and with others in the society. As a society, mankind strives to achieve ordered and organized life through which an environment of cooperation and coexistence is expected. A healthy society creating an environment of fearlessness is a key for the mankind to achieve higher goals because it is society which makes us most human, most complete as people.

Although as a society, our expectation is fearlessness, but due to lack of understanding of our role in a society, we fail to fulfill the expectation. The social awareness activity shall promote an understanding and sharing of issues of societal problem through exposure to variety of artisans and different kind of organizations. It is expected that this exposure will enable the learners to appreciate social issues, problems and challenges.

Each institution will offer a range of introductory activity based courses focusing on local artisans related to engineering so that students are sensitized to appreciate their problems and can take up some of the problems to solve while they do their regular studies. This course shall also include visits to visit to hospitals, orphanages, police station, courts, trauma centers, consumer forums so that they get exposed to different facets of societal problems. Care should be taken to give adequate representation to local and regional organizations and artisans. For example, Banaras has local traditions in *BanarasiSaari*, Toy making, etc and has almost all types of organizations. An institution in Banaras area can offer courses on these artisans. This will, in turn, also ensure wider community involvement/interaction with the institution. At the end of the course/semester, a student should be able to identify a social issue, prepare project report and give presentation on the selected issues. Contact hours per week should be 3 -4 hours. Towards the end of the course, the institution can organize an exhibition in which all the students publicly demonstrate findings of their reports and their future plan of action.

U18MCAB610	**SOCIAL SERVICES – NSS**	**L**	**T**	**P**	**C**

SEMESTER-VII

U18PCMT701	**ROBOTICS &MACHINE VISION SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Applied Hydraulics & Pneumatics, Transducer Engineering				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the basic concepts and components of robotics .To learn the machine vision concepts based on Image Processing Techniques				

UNIT I ROBOTICS INTRODUCTION 9

Robotics – Introduction–Basic Structure– Classification of robot and Robotic systems –laws of robotics – robot motions – work space, precision of movement.

Drives and control systems: Hydraulic systems, power supply – servo valve – sump – hydraulic motor – DC servo motors – stepper motors – operation.

Mechanical Components of Robots: Power transmission systems: Gear transmission. Belt drives, cables, Roller Chains, Link – Road Systems, Rotary to linear motion conversion, Rack and pinion drives, ball bearing screws, speed reducers, Harmonic drives.

UNIT II KINEMATICS OF ROBOT 10

Introduction, Matrix Representation, Homogeneous transformation, forward and inverse Kinematics, Inverse Kinematics Programming, Degeneracy, dexterity, velocity and static forces, velocity transformation force control systems, Basics of Trajectory planning.

UNIT III ROBOT END EFFECTORS 8

Types of end effectors – Mechanical grippers – Types of Gripper mechanisms – Grippers force analysis – Other types of Grippers – Vacuum cups – Magnetic Grippers – Adhesive Grippers – Robot end effector interface.

Sensors: Position sensors – Potentiometers, encoders – LVDT, Velocity sensors, Acceleration Sensors, Force, Pressure and Torque sensors, Touch and Tactile sensors, Proximity, Range and sniff sensors, RCC, VOICE recognition and synthesizers.

UNIT IV MACHINE VISION 9

Introduction – Image processing Vs image analysis, image Acquisition, digital Images – Sampling and Quantization – Image definition, levels of Computation.

Image processing Techniques: Data reduction – Windowing, digital conversion. Segmentation – Thresholding, Connectivity, Noise Reduction, Edge detection, Segmentation, Region growing and Region Splitting, Binary Morphology and grey morphology operations.

UNIT V FEATURE EXTRACTION 9

Geometry of curves – Curve approximation, Texture and texture analysis, Image resolution – Department h and volume, Color processing, Object recognition by features, Department h measurement, specialized lighting techniques. Segmentation using motion – Tracking. Image Data Compression, Real time Image processing, Application of Vision systems.

COURSE OUTCOMES (COs)	
CO1	To introduce the automation, robotics and its components
CO2	To explain the various methods of forward kinematics and reverse kinematics
CO3	To explain the various end effectors and sensors used in robot
CO4	To explain the machine vision technique
CO5	To explain the image processing technique and application of MV

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

U18PCMT702	**DESIGN OF MECHATRONICS SYSTEM**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Control system, Transducer Engineering				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the various Mechatronics system design approaches and its case studies				

UNIT I INTRODUCTION 9

Introduction to Mechatronics system – Key elements – Mechatronics Design process – Types of Design – Traditional and Mechatronics designs – Advanced approaches in Mechatronics - Man machine interface, industrial design and ergonomics, safety.

UNIT II REAL TIME INTERFACING 9

Introduction - Elements of data acquisition and control - Overview of I/O process – Overframing.Selection of interface cards--DAQ card-single channel-multichannal-RS232/422/485communication- IEEE 488 standard interface-GUI card-GPIB-Ethernet switch - Man machine interface

UNIT III CASE STUDIES ON DATA ACQUISITION AND CONTROL 10

Case studies on Data Acquisition: Introduction – Cantilever Beam Force Measurement system– Transducer calibration system for automotive applications – Strain gauge weighing system – Solenoid Force-Displacement calibration system.

Case studies on Data Acquisition and control: Introduction – pH control system – Dc-Icing Temperature Control system – Skip control of a CD player – Auto focus Camera, exposure control.

UNIT IV CASE STUDIES ON DESIGN OF MECHATRONIC PRODUCTS 9

Introduction–Fuzzy based Washing machine – Autofocus Camera, exposure control– Motion control using D.C.Motor & Solenoids – Engine management systems. – Controlling temperature of a hot/cold reservoir using PID- Control of pick and place robot – Part identification and tracking using RFID – Online surface measurement using image processing

UNIT V ADVANCED APPLICATIONS IN MECHATRONICS DESIGN 8

Introduction–Sensors for condition Monitoring – Mechatronic Control in Automated Manufacturing – Artificial intelligence in Mechatronics – Fuzzy Logic Applications in Mechatronics – Microsensors in Mechatronics

OBJECTIVES

Every project work shall have a guide who is the member of the faculty of the institution. The aim of the project work is to deepen comprehension of principles by applying them to a new problem which may be the design and manufacture of a device, a research investigation, a computer or management project or a design problem.

COURSE OUTCOMES (COs)	
CO1	Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion.

CO2	This final report shall be typewritten form as specified in the guidelines.
CO3	The continuous assessment shall be made as prescribed in the regulations.
CO4	The student can able to design the components they required
CO5	Understand the different fabrication processes.
CO6	Will gain confidence to face industrial environment.

	Total Contact Hours - 30	0	0	2	1
	Prerequisite –Microcontroller & PLC Lab, Sensor & Instrumentation Lab				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To impart knowledge on building robots and practice exercises on Robot				

LIST OF EXPERIMENTS

1. Study of different types of robots based on configuration and application.
2. Study of different type of links and joints used in robots
3. Study of components of robots with drive system and end effectors.
4. Determination of maximum and minimum position of links.
5. Verification of transformation (Position and orientation) with respect to gripper and world coordinate system
6. Estimation of accuracy, repeatability and resolution.

7. Robot programming exercises
(Point-to-point and continuous path programming)

LIST OF EQUIPMENT (for a batch of 30 students)

S.No	Name of the Equipment/components	No. of Items
1	Any one type of robot configuration with at least five degree of freedom.	1 set
2	Robot programming software inclusive of computer system.	10 licenses
3	Models of different types of end effectors drive systems Links and Joints.	5 each
4	Models of different configuration robots	5 each

COURSE OUTCOMES (COs)													
CO1	To understand different types of robots based on configuration and application												
CO2	To study of different type of links and joints used in robots												
CO3	To study about various end effectors used in robots												
CO4	To learn about the different types of drive system												
CO5	Verification of transformation (Position and orientation) with respect to gripper and world coordinate system												
Mapping of Course Outcomes(COs) with Programme Outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	Total Contact Hours - 30	0	0	2	1
	Prerequisite –Control System, Instrumentation and control Lab				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	• To Write motion control programs • To design and Configure graphical screens for HMI (Human Machine				

	Interface) in LabVIEW and MATLAB.

LIST OF EXPERIMENTS

1. Programming exercises using loops and charts.
2. Programming exercises using clusters and graphs
3. Programming exercises using case and sequence structures, file input/output, string operations.
4. Creating virtual instrumentation for simple applications
5. Closed loop response of level control loop.
6. Closed loop response of flow control loop.
7. Closed loop response of temperature control loop.
8. Closed loop response of pressure control loop

LIST OF EQUIPMENT (for a batch of 60 students)

1. LAB VIEW Software – 10 licenses
2. MAT LAB Software - 10 licenses

COURSE OUTCOMES (COs)	
CO1	Use different sensors and actuators to control various industrial parameters: temperature, pressure, level and flow.
CO2	Write program for LabVIEW to interface and control various actuators.
CO3	Simulate and create virtual instruments.
CO4	Analyze the findings of experimental observations in both written and oral format.
CO5	Present the findings of experimental observations in both written and oral format.

18MCAB713	**BEHAVIORAL AND INTERPERSONAL SKILLS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite –				
	Course Designed by –				

Behavioral and Interpersonal skills (non-verbal skills / behaviours, non-aggression**)**

Each individual has behavior patterns that are shaped by the context of his or her past. Most often, adapting the behaviour to the changing context of the reality a person lives in becomes difficult which may lead to the reduction in personal effectiveness and natural self-expression. The main focus of this course is to equip the students with useful approaches to help in the deeper understanding of self and help individuals empower themselves to be the source of their own growth and development. The course will help students to learn effective communication skills, Group and team building skills and will help them learn the goal setting process and thus become more effective in achieving their goals.

The broader objective of this course is to make the students aware about the different facets of self and to help them learn skills to strengthen their inner capacities. So that they are able to understand themselves, think and act effectively, to be able to communicate in an effective manner and to learn to lead and to form an effective team. The specific objectives, however, are as following.

To help the students to understand their real self by recognizing differentaspects of their self-concept that will lead to an increased self-confidence.

To train the students for communicating effectively in both formal as well as in informal settings.

To help the students to understand the importance of non-verbal aspects of effective communication.

To help the students to understand Emotion and emotional intelligence, Managing ones' own emotional reservoirs, effective dealing with emotions at work

To facilitate the students in understanding the formation and function of group and team and to help them to learn the skills of a successful leader.

To help the students in understanding and practicing the goal setting process by recognizing the importance of each step involved in goal setting. The activities involved are designed to facilitate their career goal decision making.

The activities to achieve the above objectives can be suggested as follows.

Motivational lectures

Group Discussions/activities

Case Study

Games/Stimulation Exercises

Role-Playing
Mindfulness training.

U18MCAB714	**NATURE - NATURE CLUB**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite –				
	Course Designed by –				

Nature club (bird watching, recognizing plants at institute/at home, recognizinglocal animals, appreciating biodiversity

Impart knowledge and inculcate the habit of taking interest and understanding biodiversity in and around the college campus. The students should be encouraged to take interest in bird watching, recognizing local plants, herbs and local animals. The students should be encouraged to appreciate the difference in the local biodiversity in their hometown, in the place of their study and other places they visit for vacation/breaks etc.

Following activities must be included.

Identify a tree fruit flower peculiar to a place or having origin from the place.

Making high resolution big photographs of small creatures (bees, spiders, ants. mosquitos etc.) especially part of body so that people can recognize (games on recognizing animals/plants).

Videography/ photography/ information collections on specialties/unique features of different types of common creatures.Search and explore patents and rights related to animals, trees etc. Studying miracles of mechanisms of different body systems.

UNIT 1 INTRODUCTION 9

Cell structure – electrode – electrolyte interface, electrode potential, resting and action potential

– electrodes for their measurement, ECG, EEG, EMG – machine description – methods of measurement – three equipment failures and trouble shooting.

UNIT 1I TRANSDUCERS FOR BIO-MEDICAL INSTRUMENTATION 9

Basic transducer principles Types – source of bioelectric potentials – resistive, inductive, capacitive, fiber-optic, photoelectric and chemical transducers – their description and feature applicable for biomedical instrumentation – Bio & Nano sensors & application

UNIT 1II SIGNAL CONDITIONING, RECORDING AND DISPLAY 9

Input isolation, DC amplifier, power amplifier, and differential amplifier – feedback, op-Amp-electrometer amplifier, carrier Amplifier – instrument power supply. Oscillagraphic – galvanometric - X-Y, magnetic recorder, storage oscilloscopes – electron microscope – PMMC writing systems – Telemetry principles – Bio telemetry.

UNIV IV MEDICAL SUPPORT 10

Electrocardiograph measurements – blood pressure measurement: by ultrasonic method – plethysonography – blood flow measurement by electromagnetic flow meter cardiac output measurement by dilution method – phonocardiography – vector cardiography. Heart lung machine – artificial ventilator – Anesthetic machine – Basic ideas of CT scanner – MRI and ultrasonic scanner – Bio-telemetry – laser equipment and application – cardiac pacemaker – DC

– defibrillator patient safety - electrical shock hazards. Centralized patent monitoring system.

UNIV V BIO-MEDICAL DIAGNOSTIC INSTRUMENTATION 8

Introduction – computers in medicine – basis of signal conversion and digital filtering data reduction technique – time and frequency domain technique – ECG Analysis.

U18PRMT8P2	**PROJECT WORK-II**	**L**	**T**	**P**	**C**
	Total Contact Hours –18 periods per week	0	0	18	9
	Prerequisite – Professional Courses				
	Course Designed by – Department of Mechanical Engineering				

OBJECTIVES

Every project work shall have a guide who is the member of the faculty of the institution. The aim of the project work is to deepen comprehension of principles by applying them to a new problem which may be the design and manufacture of a device, a research investigation, a computer or management project or a design problem.

COURSE OUTCOMES (COs)

CO1	Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion.
CO2	This final report shall be typewritten form as specified in the guidelines.
CO3	The continuous assessment shall be made as prescribed in the regulations.
CO4	The student can able to design the components they required
CO5	Understand the different fabrication processes.
CO6	Will gain confidence to face industrial environment.

Mapping of Course Outcomes with Program outcomes (POs)

									√	
4	Approval	47th Academic Council, July 2018								

The objective of this project is to provide opportunity for the students to implement their skills acquired in the previous semesters to undergo learning in research oriented areas, collecting survey and documents on the growing fields in technology

The students as an individual will choose one topic which will be the topic of his project work in the final semester. Every project work shall have a guide who will be the faculty of the institution.

The topic chosen may be related to small machine elements (Example- screw jack, coupling, machine vice, cam and follower, governor etc) attachment to machine tools, tooling (jigs, fixtures etc), small gear box, automotive appliances, agricultural implements, simple heat exchangers, small pumps, hydraulic/pneumatic devices etc.

The student is required to collect literature survey regarding the selected topic to be extended in the next semester. He has to demonstrate its working apart from submitting the project report. The report should contain study material, literature and whatever further deemed important related to his work.

U18PCMT8C1	**COMPREHENSION**	**L**	**T**	**P**	**C**
	Total Contact Hours : Test will be conducted at the end of the semester	0	0	1	1
	Prerequisite – All the courses up to seventh semester				
	Course Designed by – Department of Mechatronics				

OBJECTIVES

- To provide a complete review of Mechatronics topics covered up to seventh semesters, so that a comprehensive understanding is achieved.
- It will also help students to face job interviews, competitive examinations and also to enhance the employment potential.
- To provide overview of all topics covered and to assess the overall knowledge level up to seventh semester.

18MCAB815	**INNOVATION - PROJECT BASED – SC., TECH, SOCIAL, DESIGN & INNOVATION**	**L**	**T**	**P**	**C**
	Total Contact Hours - 30	0	0	2	0
	Prerequisite –				
	Course Designed by –				

Project based – Sc., Tech, Social, Design & Innovation

Many students, when they enter engineering, are full of enthusiasm to understand new areas, to build systems and to experiment and play with them. This enthusiasm is to be tapped and to direct it to exploration and sustained pursuit by the student which may result in development of a working system, a prototype, or a device or material, etc. They are not required or even expected to produce research or an innovation.

Students may be encouraged to take up projects which are aimed at providing solutions to societal problems, reduce drudgery and improving efficiency in rural work, green technologies, utilization of rural and urban waste, sanitation and public health, utilizing non -conventional energy sources, technologies for the benefit of the differently able people and technologies ready to be implemented in the Institute.

Two types of activities may be undertaken under this

Exposure to social problems (which are amenable to technological solutions)

Design & Innovation (to address above problems)

After this students be encouraged to undertake technology projects of social relevance

ELECTIVES

PROFESSIONAL ELECTIVE –I

U18PEMT011	**COMMUNICATION ENGINEERING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Fundamentals of Electronic Circuits and Devices				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To study about the analog and digital communication and also study about the real time application and Satellite communication.				

Unit I Analog Communication 9

AM – Frequency Spectrum – Vector Representation – Power Relations – Generation Of AM – DSB, DSB/SC, SSB, VSB AM Transmitter & Receiver; FM and PM – Frequency Spectrum – Power Relations : NBFM & WBFM, Generation Of FM and DM, Amstrong Method & Reactance Modulations : Fm & Pm Frequency.

Unit II Digital Communication 9

Pulse Modulations – Concepts of Sampling and Sampling theorems, PAM, PWM, PPM, PTM, Quantization and Coding: DCM, DM, Slope Overload Error. ADM, DPCM, OOK SYSTEMS – ASK, FSK, PSK, BSK, QPSK, QAM, MSK, GMSK, Applications Of Data Communication.

Unit III Source Codes, Line Codes & Error Control 9

Primary Communication – Entropy, Properties, BSC, BEC, Source Coding: Shaum, Fao, Huffman Coding: Noiseless Coding Theorum, BW – SNR Trade Off Codes: NRZ, RZ, AMI, HDBP, ABQ, MBnbcodes: Efficiency Of Transmissions, Error Control Codes And Applications: Convolutions & Block Codes.

Unit IV Multiple Access Techniques 9

SS&MA Techniques: FDMA, TDMA, CDMA, SDMA Application In Wire And Wireless Communication: Advantages (Merits):

Unit V Satellite, Optical Fiber – Power line, Scada 9

Orbits: Types Of Satellites: Frequency Used Link Establishment, Ma Techniques Used In Satellite Communication, Earth Station; Aperture Actuators Used In Satellite – Intelsat And Insat: Fibers – Types: Sources, Detectors Used, Digital Filters, Optical Link: Power Line Carrier Communications: Scada.

U18PEMT012	**MECHANICS OF SOLIDS AND FUNDAMENTALS OF FLUIDS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 60	3	0	0	3
	Prerequisite – Engineering Mathematics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To understand the basics concepts of various mechanism in solids and fundamentals about fluids				

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 12

Concept of stress-strain- Hooke's law- Tension- Compression and shear- Stress strain diagram, poisson's relation-Volumetric strain- Elastic constants and their relation- Stress in simple and composite bars subjected to axial loading and temperature- State of stress at a point-Principle plane- Principle stress-Normal and longitudinal stresses on a given plane-Mohr's circle of stresses.

UNIT II TRANSVERSE LOADING ON BEAMS, SHEAR FORCE AND BENDING MOMENT 12

Types of Beams- Transverse loading on beams shear force and Bending moment in beams – Cantilever-Simply supported, overhanging beam subjected to concentrated load and UDL – Maximum bending moment and point of contra flexure-Theory of simple bending and assumption – Derivation of formulae M/I = F/Y = E/R and its applications to engineering – Leaf spring.

UNIT III TORSION, SPRINGS AND COLUMNS 12

Theory of torsion and assumption – Torsion of circular shafts- solid & hollow – strain energy in torsion-Power transmission- Strength and stiffness of shafts- Types of springs- Stiffness stresses and deflection in helical spring- Columns – Buckling and stiffness due to axial loads – Euler, Rankin and Empirical formulae for columns with different conditions.

UNIT IV FLUID FLOW CONCEPTS AND DYNAMICS OF FLUIDS 12

Flow characteristics- Concepts of system and control volume –Continuity equation – Application of control volume to continuity – Energy Equation – Euler's Equation – Bernoulli equation and Momentum Equation – simple problems.

UNIT V DIMENSIONAL ANALYSIS AND FLOW THROUGH CIRCULAR CONDUITS 12

Dimension and units, Buckingham's Π theorem- Boundary layer concepts- Boundary layer thickness-Darcy-Weisbach equation- Friction factor and Moody diagram-Commercial pipes- Minor losses- Flow though pipes in series and in parallel.

COURSE OUTCOMES (COs)	
CO1	To understand the different types of beams and bending moment and shear force
CO2	To learn the power transmission and strain energy and stiffness and buckling
CO3	To learn the flow characteristic fluid continuity, Euler’s equation
CO4	To learn the principles of dimensional analysis
CO5	To learn the various applications of solids and fluids mechanism

U18PEMT013	VIRTUAL INSTRUMENTATION	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Fundamentals of computing and programming, Design of Mechatronics System.				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the Virtual Instrument. To study of LABVIEW software and about image processing				

UNIT I INTRODUCTION TO VIRTUAL INSTRUMENTS 9

Historical perspective and traditional bench-top instruments - General functional description of a digital instrument- Block diagram of a Virtual Instrument – Physical quantities and analog interfaces- Hardware and Software – User Interfaces –Advantages of Virtual Instruments over conventional instruments – Architecture of a Virtual Instruments and its relation to the operating system.

UNIT II LABVIEW GRAPHICAL PROGRAMMING 9

LabVIEW – graphical user interfaces- controls and Indicators – 'G' programming –data types –data flow programming –Editing Debugging and Running a Virtual Instrument –Graphical programming palettes and tools – Front panel objects – Function and Libraries.

UNIT III LABVIEW BASIC PROGRAMMING 9

FOR Loops, WHILE loops, Shift Registers, CASE structure, formula nodes-Sequence structures- Arrays and Clusters- Array operations – Bundle, Unbundle – Bundle/Unbundle by name, graphs and charts – string and file I/O – High level and Low level file I/Os – attribute nodes local and global variables.

UNIT IV BASICS OF DAQ 9

Basics of DAQ Hardware and Software – Concepts of Data Acquisition and terminology – Installing Hardware, Installing drivers -Configuring the Hardware – addressing the hardware in LabVIEW- Digital and Analog I/O function – Buffered I/O – Real time Data Acquisition.

UNIT V COMMUNICATION 9

Simple programs in VI- Advanced concepts in LabVIEW- TCP/IP VI's, Synchronization – other elements of Virtual Instrumentation – Bus extensions – PXI - Computer based instruments - Image acquisition – Motion Control.

U18PEMT014	**PROCESS AUTOMATION**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Control system				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To obtain the mathematical models for first order and higher order real-time systems and also understand the concept of self-regulation and to get adequate knowledge				

	about the characteristics of various controller modes and controller tuning methods

UNIT I INTRODUCTION **9**

Need for process control - Continuous and batch process - Mathematical model of first order level:pressure and thermal processes, interacting and non-interacting systems - Servo and regulator operation - self-regulation

UNIT II CONTROLLER CHARACTERISTICS **9**

Basic control actions - Characteristics of On-Off, proportional, integral and derivative control modes - Composite control modes: P+I, P+D and P+I+D control modes - Selection of control mode for different processes typical control schemes for level, flow, pressure and temperature processes.

UNIT III TUNING OF CONTROLLERS AND MULTI-LOOP CONTROL 9

Optimum controller settings - Evaluation criteria-IAE, ISE and ITAE decay ratio - Tuning of

controllers by process reaction curve method, damped oscillation method Ziegler-Nichol's tuning,feed forward control - ratio control, cascaded control, averaging control, inferential and split rangecontrol.

UNIT IV FINAL CONTROL ELEMENT **9**

Pneumatic and electric actuators - Valve positioner - Control valve characteristics - Type of valves:globe, butterfly, diaphragm, ball valves and control valve sizing cavitation and flashing in controlvalves - Response of control valves - Electric and electro pneumatic valves - Selection of controlvalves

UNIT V SELECTED UNIT OPERATIONS **6**

Distillation column control of top and bottom product compositions reflux ratio. Case study: controlof CSTR, control of heat exchanger, Steam boiler: drum level control and combustion control.

U18PCMT022	DIMENSIONAL METROLOGY	L	T	P	C
	Total Contact Hours -45	3	0	0	3
	Prerequisite – Engineering Physics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce concept of metrology and measurement, measurement systems, metrological equipments.				

UNIT I BASICS OF MEASUREMENT & METROLOGY 9

Measurement & Metrology – Introduction, uses, acts and applications of measurement, codification of measurement – Accuracy, precision and reliability – Evolution of standards – metric systems – fundamental & Practical Criteria – metrological, communication and computational considerations – Rounding of numerical values. Measurements and Tolerances – Geometric Dimensioning and Tolerance – Statistics and metrology – probability and acceptance sampling.

UNIT II MEASUREMENT INSTRUMENTS 9

Measurement with scales and scaled Instruments – steel rule – role of error – calipers – types and applications.Vernier Instruments – Vernier Caliper, Department h gauge, Height gauge – height master – Three elements of measurements. Micrometer Instruments – Principle, Types, applications. Development and use of gauge blocks – Calibration, applications, combining gauge blocks.

UNIT III MEASUREMENT METHODS 9

Measurement by comparison – Dial Indicator – Principle, selection, use and Calibration – Accessories and attachments – constructive use of Error. High – Amplification comparators – Electronic measurement – applications – advantages of multiple scales. Pneumatic measurement – Principles, applications and advantages of pneumatic comparators – Calibration – Role of error, Calibration Procedure.

UNIT IV OPTICAL MEASUREMENT METHODS 9

Optical Flats and Optical alignment – light waves as standards – measurement with optical flats, applications of optical flat measurement – principles of optical metrology – Alignment Telescope – Straightness measurement – Optical squares and squareness measurement – Sight level – Plumbness, optical polygons – Angles, Jig Transit – Planes, Theodolite Angles and planes. Reference planes-Flatness, Perpendicularity and modern reference planes. Angle measurement-Basic geometry function, sign bars and plates and mechanical angle measurements.

UNIT V SURFACE MEASUREMENT METHODS 9

Surface Measurement – surface Evaluation, stylus method, Numerical values for surface Assessment, surface Texture specimens, surface Evaluation, other methods, Roundness measurement. Coordinate measuring machines – types, operational details and metrological features – coordinate systems. Non-contact type measurement – Principles of microscope, applications, optical comparator, profile projector, machine vision systems, Laser measurement.

U18PEMT023	TEXTILE MECHATRONICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Manufacturing Technology				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To study about the basics processes involved in textile technology				

UNIT I INTRODUCTION TO TEXTILE TECHNOLOGY AND SPINNING 9

History of textile technology and its advancements, introduction to textile fibers, overview of

textile manufacturing, Introduction to automation in textile industries.

Spinning process flow chart – Objectives and process variables of textile spinning machineries:Mixing, Blow room, Carding, Draw frame, Combing, Speed frame, Ring frame, rotor spinning.

UNIT II BASICS OF WEAVING 9

Weaving process flowchart – Objectives and process variables in weaving preparatory: Winding,Warping, Sizing and beaming. Objectives and process variables in weaving: drawing in,knotting, denting and weaving.

UNIT –III BASICS OF PROCESSING 9

Objectives and process variables in processing machines: Singeing, Desizing, Scouring,

Bleaching, Mercerizing, Dyeing, Printing, Finishing.

UNIT-IV AUTOMATION IN SPINNING MACHINERY 9

Machinery material flow and its variation controls – Feeders & Stop motions – Auto levelers –Safety switches – Production and quality monitors – Full doff and pre-set length monitors. Data acquisition system for spinning preparatory, ring spinning – rotor spinning.

UNIT-V AUTOMATION IN WEAVING MACHINERY 9

Yarn cleaner controls – Knotter / splicer carriage controls – Warping machine monitors and

controls – sizing machine monitors and controls – Auto reaching / drawing in and knotting

machine monitors and controls – Data acquisition system in weaving preparatory and weaving – humidification systems .CAD / CAM / CIM in spinning, Weaving, Dyeing, Printing, Apparel production – Electronics data interchange - Robotics in textile industries

COURSE OUTCOMES (COs)	
CO1	To know the evolution of textile technology and manufacturing with textile fibers
CO2	To describe various process and machines involved in spinning
CO3	To learn the various process and machines involved in weaving.
CO4	To study the various stages of automation scopes in spinning and weaving.
CO5	To learn the role of computers in automated textile manufacturing

U18PEMT024	**PLANT LAYOUT AND MATERIAL HANDLING**	**L**	**T**	**P**	**C**
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –Manufacturing Technology				
	Course Designed by – Department of Mechanical Engineering				

	OBJECTIVES
	To equip students with adequate knowledge for running an organization and to understand the integration of material handling systems.

	COURSE OUTCOMES (COs)	
CO1		Understand the procedures for systematic integration of organization.
CO2		Will understand various techniques and tools of layout planning.
CO3		Students will be able to get knowledge on industrial layouts.
CO4		Understand material handling systems
CO5		Learn the concepts of industrial building
CO6		Learn the concepts of industrial utilities
	Mapping of Course Outcomes with Program outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low	

UNIT I **8**

Plant Location: Factors to be considered – influence of location on plant layout, selection of plant site, Consideration in facilities planning and layout. Equipments required for plant operation, Capacity, serviceability and flexibility and analysis in selection of equipments, space requirements, and man power requirements.

UNIT II **8**

Plant layout: Need for layout, types of layout, factors influencing product, process. Fixed and combination layout: tools and techniques for developing layout, process chart, flow diagram, string diagram, template and scale models – machine data. Layout planning procedure. Visualization of layout, revision and improving existing layout, balancing of fabrication and assembly lines.

UNIT III **10**

Importance and scope. Principles of material handling. Planning, operating and costing Principles, types of material handling systems, factors influencing their choice. Assembly practices: Manufacturing and assembly, process planning, selective assembly.

UNIT IV **12**

Industrial building and utilities: Centralized electrical, pneumatic water line systems. Types of buildings, lighting, heating, air conditioning and ventilation utilities - planning and maintenance,

waste handling, statutory requirements. Packing and storage materials: Importance of Packaging, layout for Packaging – Packaging machinery – wrapping and Packing materials, cushion materials.

UNIT V **7**

Motion analysis, flow analysis, graphic analysis, safety analysis, equipment cost analysis, palletization analysis, analysis of operation, material handling surveys.

PROFESSIONAL ELECTIVE –III

U18PEMT031	**NEURAL NETWORK & FUZZY LOGIC**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Dept of Mechatronics				
OBJECTIVES	To introduce the neural network, associative memories and fuzzy logic system				

UNIT I INTRODUCTION TO NEURAL NETWORKS 9

Introduction, Humans and Computers, Organization of the Brain, Biological Neuron, Biological and Artificial Neuron Models, Characteristics of ANN, McCulloch-Pitts Model, Historical Developments, Potential Applications of ANN. Essentials of Artificial Neural Networks. Artificial Neuron Model, Operations of Artificial Neuron, Types of Neuron Activation Function, ANN Architectures, Classification Taxonomy of ANN – Connectivity, Learning Strategy . (Supervised, Unsupervised, Reinforcement), Learning Rules.

UNIT II FEED FORWARD NEURAL NETWORKS: 9

Single Layer Feed Forward Neural Networks- Introduction, Perceptron Models: Discrete, Continuous and Multi-Category, Training Algorithms: Discrete and Continuous Perceptron Networks, Limitations of the Perceptron Model. Multilayer Feed forward Neural Networks-Credit Assignment Problem, Generalized Delta Rule, Derivation of Backpropagation (BP) Training, Summary of Backpropagation Algorithm, Kolmogorov Theorem, Learning Difficulties and Improvements.

UNIT III ASSOCIATIVE MEMORIES `9

Paradigms of Associative Memory, Pattern Mathematics, Hebbian Learning, General Concepts of Associative Memory, Bidirectional Associative Memory (BAM) Architecture, BAM Training Algorithms: Storage and Recall Algorithm, BAM Energy Function. Architecture of Hopfield Network: Discrete and Continuous versions, Storage and Recall Algorithm, Stability Analysis.

UNIT IV CLASSICAL & FUZZY SETS 9

Introduction to classical sets - properties, Operations and relations; Fuzzy sets, Membership, Uncertainty, Operations, properties, fuzzy relations, cardinalities, membership functions. Fuzzy Logic System Components.Fuzzification, Membership value assignment, development of rule base and decision making system, Defuzzification to crisp sets, Defuzzification methods.

UNIT V APPLICATIONS 9

Neural network applications: Process identification, control, fault diagnosis. Fuzzy logic applications: Fuzzy logic control and Fuzzy classification.

TEXT BOOKS

1. S. Rajasekharan and G. A. Vijayalakshmipai, "Neural Networks, Fuzzy logic, Genetic algorithms: synthesis and applications", PHI Publication, 2004.

4. Timothy J. Ross, " Fuzzy Logic With Engineering Applications", McGraw-Hill Inc. 1997.3rd Edition.

5.John Yen and Reza Langan, "Fuzzy Logic: Intelligence, Control and Information", Pearson Education,2004.

COURSE OUTCOMES (COs)	
CO1	To learn basics of neural networks.
CO2	To learn about feed forward neural network.
CO3	To learn about associative memories
CO4	To learn about classical and fuzzy sets.
CO5	To learn about application of neural networks and fuzzy logic.

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEMT032	COMPOSITE MATERIALS AND STRUCTURE	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Engineering Mathematics, Engineering Physics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To make the student understand the analysis of composite laminates under different loading conditions and different environmental conditions				

UNIT I MICROMECHANICS 10

Introduction – advantages and application of composite materials – types of reinforcements and matrices – micro mechanics – mechanics of materials approach, elasticity approach- bounding techniques – fiber volume ratio – mass fraction – density of composites. effect of voids in composites.

UNIT II MACROMECHANICS 10

Generalized Hooke's Law – elastic constants for anisotropic, orthotropic and isotropic materials – macro

mechanics – stress-strain relations with respect to natural axis, arbitrary axis – determination of in plane strengths of a lamina – experimental characterization of lamina. failure theories of a lamina. hygrothermal effects on lamina.

UNIT III LAMINATED PLATE THEORY 1**0**

Governing differential equation for a laminate. stress – strain relations for a laminate. different types of laminates. in plane and flexural constants of a laminate. hygrothermal stresses and strains in a laminate. failure analysis of a laminate. impact resistance and interlaminar stresses. netting analysis

UNIT IV FABRICATION PROCESS AND REPAIR METHODS 8

Various open and closed mould processes, manufacture of fibers, importance of repair and different types of repair techniques in composites – autoclave and non-autoclave methods.

UNIT V SANDWICH CONSTRUCTIONS 7

Basic design concepts of sandwich construction – materials used for sandwich construction – failure modes of sandwich panels – bending stress and shear flow in composite beams.

TEXT BOOKS

U18PEMT033	**UNDERWATER ROBOTICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Transducer				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	The course should enable the students to demonstrate knowledge and understanding of Underwater robotic systems in operation and their applications.				

UNIT 1: INTRODUCTION TO UNDERWATER ROBOTICS 8

Robotics in Water - Basics Representation of Underwater Robot - Types and Classification of Underwater Robotics - Differentiating Aerial and Underwater Robotics - why it is called an perfect engineering product - Overview about Environmental Factors affecting object in water

UNIT 2: CONTROL OF THE UNDERWATER ROBOTICS 10

Control System and Types of Control Systems in Underwater Robotics - Sensors Connected with the Underwater Robotics - Introduction to Underwater Manipulators - Applications of Underwater Vehicles APPLICATION DEVELOPMENT - ASSIGNMENT (1 HOUR)

UNIT 3: ENGINEERING CONCEPTS IN UNDERWATER ROBOTICS 8

Introduction to Fluid Dynamics - Studying of FD Model - Computation Fluid Dynamics on Water Bodies Introduction to Hydraulics - Hydraulics Acting on an Object - Hydraulics as Underwater Pressure

Compensator Introduction to Pressure Dynamics - Buoyancy Concept - Studying various Polymers in Buoyancy and Pressure Calculations Introduction to Electrical Power Driven Systems - Studying Different Types - PLC and HMI Interface Systems an Overlook - Electrical Archaeology of Systems ANALYSIS & DEVELOPMENT MODULES - ASSISGNMENT (2 HOURS)

UNIT 4: AUTONOMOUS UNDERWATER SYSTEM 8

Introduction to AUVS - Development of AUV / ROV in Market - Case Study on AUV Control System Basics - Case Study on Subsea Manipulator - Case Study on Technologies Used

UNIT 5: APPLICATIONS OF UNDERWATER ROBOTICS 8

Case Studies and procedure for design of under water robots

TEXTBOOK

2. Steven W. Moore, Harry Bohm, and Vickie, "Underwater Robotics: Science, Design & Fabrication" MATE Center,2013

COURSE OUTCOMES (COs)	
CO1	Select the components for design of underwater robotics.
CO2	Design, configuration and operation of platforms, both autonomous underwater vehicles (AUVs) and Remotely Operated Vehicles (ROVs).
CO3	Use and interpretation of sensor data for control applications
CO4	Know the procedure of Maneuvering simulations of underwater robots.
CO5	Software architectures for maritime robots.

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

2	CO1					H		M					
	CO2	M			M						H		
	CO3						M		H				
	CO4					H					L		
	CO5				M						H		
3	Category	Professional Elective(PE)											
4	Approval	47th Meeting of Academic Council, July, 2018											

U18PEMT034	BUILDING AUTOMATION	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	Provide the student with an advanced knowledge base and understanding of the design, simulation and safety of Building Automation System (BAS).				

UNIT 1 INTRODUCTION **9**

Introduction to Building Automation System, Features, Characteristics, Drawbacks of Building Automation system.Various Systems of Building Automation – Building Management System, Energy Management System, Security System, Safety System, Video Management System.

UNIT 2 BUILDING MANAGEMENT SYSTEM **9**

Introduction, HVAC, Sensors & Transducers – Temperature, Pressure, Level, Flow, RH. Meaning of Analog & Digital Signals, Valves and Actuators, Valve & Actuator Selection, Various Controllers, Concept of Controller IOs, Std Signals, Signal Compatibility between Controller & Field Devices. AHU – Concept, Components, Working Principle.AC Plant Room – Concept, Components, Refrigeration Cycle Working Principle, Chiller Sequencing, AC Plant Sequencing. Feedback Control Loops, Heat – Types, Heat Transfer Principles, Measurement of Heat Transfer. Psychrometry– Concept, ASHRAE Psychrometric Chart, Meaning of Various Terms – DBT, WBT, ST, RH, DPT, Sensible & Latent Cooling & Heating, Numericals. Job IO Summary Calculation, Controller Sizing, AI to DI Conversion, Cable Selection, Earthing – Meaning, Importance, Panel Earthing, EMI & Tackling EMI.Logic Examples, CL Programming.

UNIT 3 ENERGY MANAGEMENT SYSTEM **9**

Concept, Energy Meters, Types, Meter Networking, Monitoring Energy Parameters, Analysis of Power Quality – Instantaneous Power, Active Power, Reactive Power, Power Factor, Voltage, Current. Effect of

Power Quality on Energy Consumption, Energy Reports, Energy Conservation, Importance of Energy Saving.

UNIT 4 SAFETY SYSTEMS **9**

Introduction, Fire –Meaning, Fire Development Stages, Fire Sensors & Detectors, Detector Placement, Detectors Required For Various Applications. Fire Extinguishing Principles, Fire Extinguishers & Its Classification. Fire Alarm System – Controllers, Components, Features, Concept of Fire Loop & Fire Devices, 2-Wire & 4-Wire Loops, Working Principle, System Description, Pre-alarm, Alarm, Trouble, Fault, Differences, Cable Selection, Installation Guidelines Best Installation Practices, Logic Example. NFPA and IS2189 Stds, System Programming.

UNIT 5 INTEGRATED SYSTEMS 9

Introduction, Integration of Building Management System, Energy Management System, Safety System, Security Systems & Video Management, Benefits of Integrated Systems, Challenges, Future Prospects of Integrated Systems

TEXT BOOK

1. Reinhold A. Carlson Robert A. Di Giandomenico, 'Understanding Building Automation Systems: Direct Digital Control, Energy Management, Life Safety, Security Access Control, Lighting, Building', 1 st edition (R.S. Means Company Ltd), (1991)

REFERENCE

1. Smart Buildings by Jim Sinopoli, Butterworth-Heinemann imprint of Elsevier,2nd ed., 2010.
2. Understanding Building Automation Systems (Direct Digital Control, Energy Management, Life Safety, Security, Access Control, Lighting, Building Management Programs) by Reinhold A. Carlson, Robert A. Di Giandomenico, pub.by R.S. Means Company, 1991.
3. Intelligent Building Systems by Albert Ting-Pat So, WaiLok Chan, Kluwer Academic publisher,3rd ed., 2012.
4. Design of Special Hazards and Fire Alarm Systems by Robert Gagnon, Thomson Delmar Learning; 2nd edition, 2007.

6. HVAC Control in the New Millennium by Hordeski, Michael F, Fairmont press, 2001.
7. Process Control- Instrument Engineers Handbook by Bela G. Liptak, Chilton book co.

COURSE OUTCOMES (COs)	
CO1	Select and evaluate the different transducers, actuators, AC, refrigeration systems in modern Buildings
CO2	Identify the importance and techniques of energy conservations in BAS for simple applications
CO3	Design and installation methods of safety sensors for simple application

CO4	Know the procedure for integrated and secure smart building techniques
CO5	Identify and describe the basic mechanical components and controls in an HVAC control system

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

	CO3						M		H				
	CO4					H					L		
	CO5				M						H		
3	Category	Professional Elective(PE)											
4	Approval	47th Meeting of Academic Council, July, 2018											

PROFESSIONAL ELECTIVE-IV

U18PEMT041	**DIGITAL SIGNAL PROCESSING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Engineering Mathematics				
	Course Designed by – Department of Mechatronics Engineering				
OBJECTIVES	To learn the operation of various DSP devices. To understand the Design Algorithm of various filters				

UNIT I CLASSIFICATION OF SIGNALS 9

Characterization and classification of signals – examples of signals – continuous versus discrete – analog versus digital – advantages of digital signal processing compared with analog processing- Sampling of Analog Signals – Aliasing. Linear Time Invariant Systems (LTIS) – Linearity – Time Invariant – Causality – stability – Response of CT – LTI System using Convolution Integral Response of DT – LTI system using convolution SUM – Finding Impulse Response of LTI using Laplace Transform – Z – Transform & its Properties- Finding Impulse Response of DT – LTI system using Z – transform.

UNIT II FAST FOURIER TRANSFORM 9

Fourier series analysis, Spectrum of C.T. signals, Fourier Transform and Laplace Transform in signal analysis. Spectrum of D.T. signals, Discrete Time Fourier Transform (DTFT), Discrete Fourier Transform (DFT) – Introduction to radix – 2 FFT – DIT & DIF radix 2 FFT.

UNIT III FIR FILTER DESIGN 9

FIR Filters: Design of Filters – Frequency selective filters – Linear filtering – Structures for FIR – Design of FIR Filters – using windows – Frequency Sampling – Linear phase FIR Filters.

UNIT IV DIGITAL FILTER DESIGN 9

Review of design of analogue Butter worth and Chebyshev Filters, Frequency transformation in analogue domain – design of IIR digital filters using impulse invariance technique – Design of digital filters using bilinear transform – Pre warping – Frequency transformation in digital domain – Realization using direct, cascade and parallel forms.

UNIT V DSP PROGRAMMING *9*

Effect of Number representation on Quantization – Overflow – Need for scaling – truncation error – coefficient Quantization error – limit cycle oscillations. Multichannel – Multi – dimensional – typical applications of DSP – Introduction to Programmable DSP – Instruction set of TMS 320C50.

TEXT BOOKS

1. Sanjith K. Mitra "Digital Signal Processing", Tata McGraw–Hill, New Delhi, 3rd Edition, 2007.

COURSE OUTCOMES (COs)	
CO1	To learn about Characterization and classification of signals
CO2	To learn about Discrete Fourier Transform (DFT)
CO3	To study about Various design method of FIR Filters
CO4	To study about Various design method of IIR Filters
CO5	To Study about Various Digital Signal Processors
Mapping of Course Outcomes(COs) with Programme Outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEMT042	UNCONVENTIONAL MACHINING PROCESSES	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Manufacturing Technology, Engineering Chemistry				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	The students are trained to demonstrate different unconventional machining processes and know the influence of difference process parameters on the performance and their applications				

UNIT I INTRODUCTION **6**

Unconventional machining Process – Need – classification – Brief overview.

UNIT II MECHANICAL ENERGY BASED PROCESSES **9**

Abrasive Jet Machining – Water Jet Machining – Abrasive Water Jet Machining - Ultrasonic Machining.(AJM, WJM, AWJM and USM). Working Principles – equipment used – Process parameters – MRR- Applications.

UNIT III ELECTRICAL ENERGY BASED PROCESSES **9**

Electric Discharge Machining (EDM)- working Principle-equipments-Process Parameters-Surface Finish and MRR- electrode / Tool – Power and control Circuits-Tool Wear – Dielectric – Flushing – Wire cut EDM – Applications.

UNIT IV CHEMICAL AND ELECTRO-CHEMICAL ENERGY BASED PROCESSES 11

Chemical machining and Electro-Chemical machining (CHM and ECM)-Etchants – Maskant - techniques of applying maskants - Process Parameters – Surface finish and MRR-Applications. Principles of ECM- equipments-Surface Roughness and MRR Electrical circuit-Process Parameters- ECG and ECH - Applications.

UNIT V THERMAL ENERGY BASED PROCESSES 10

Laser Beam machining and drilling (LBM), plasma Arc machining (PAM) and Electron Beam Machining (EBM). Principles – Equipment –Types - Beam control techniques – Applications.

TEXT BOOKS

1. Vijay.K. Jain "Advanced Machining Processes" Allied Publishers Pvt. Ltd., New Delhi, 2007

3. Paul De Garmo, J.T.Black, and Ronald.A.Kohser, "Material and Processes in Manufacturing" Prentice Hall of India Pvt. Ltd., 8thEdition, New Delhi , 2001.

COURSE OUTCOMES (COs)	
CO1	To learn about various unconventional machining processes
CO2	To understand the basic mechanical machining processes
CO3	To understand the basics of electrical discharge machine and related parameters
CO4	To learn the important concepts of chemical machining processes
CO5	To study about the electro chemical machining process and the various parameters associated to it.

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1					H	L	M					

	CO2	H			H						M		
	CO3			M			H		M

U18PEMT043	**COGNITIVE ROBOTICS**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Robotics & Machine Vision System				
	Course Designed by – Dept of Mechatronics				
OBJECTIVES	To understand the cognitive mechanisms adopted by the robot				

UNIT 1: CYBERNETIC VIEW OF ROBOT COGNITION AND PERCEPTION 6

Introduction to the Model of Cognition,Visual Perception,Visual Recognition,Machine Learning,Soft Computing Tools and Robot Cognition

UNIT 2: MAP BUILDING 12

Introduction, Constructing a 2D World Map,Data Structure for Map Building,Explanation of the Algorithm, An Illustration of Procedure Traverse Boundary,An Illustration of Procedure Map Building ,Robot Simulation, Execution of the Map Building Program

UNIT 3: RANDOMIZED PATH PLANNING 9

Introduction, Representation of the Robot's Environment, Review of configuration spaces, Visibility Graphs, Voronoi diagrams, Potential Fields and Cell Decomposition, Planning with moving obstacles, Probabilistic Roadmaps, Rapidly exploring random trees, Execution of the Quad tree-Based Path Planner Program

UNIT 4: SIMULTANEOUS LOCALIZATION AND MAPPING (SLAM) 12

Problem Definition, Mathematical Basis, Example: SLAM in Landmark Worlds, Taxonomy of the SLAM Problem, Extended Kalman filter, Graph-Based Optimization Techniques, Particle Methods Relation of Paradigms

UNIT 5:ROBOT PROGRAMMING PACKAGES 6

Robot Parameter Display, Program for Bot Speak, Program for Sonar Reading Display, Program for Wandering Within the Workspace, Program for Tele-operation, A Complete Program for Autonomous Navigation

TEXT BOOKS:

1.Patnaik, Srikanta, "Robot Cognition and Navigation An Experiment with Mobile Robots",Springer-Verlag Berlin and Heidelberg,2007.

2.Howie Choset, Kevin LynchSeth Hutchinson, George Kantor, Wolfram Burgard, Lydia Kavraki, and Sebastian Thrun, "Principles of Robot Motion-Theory, Algorithms, and Implementation", MIT Press, Cambridge,2005.

2.Margaret E. Jefferies and Wai-Kiang Yeap,"Robotics and Cognitive Approaches to Spatial Mapping", Springer-Verlag Berlin Heidelberg 2008

COURSE OUTCOMES (COs)	
CO1	To learn the basic concepts of cognitive processes.
CO2	To learn about the map building methods.
CO3	To study about the path planning procedure
CO4	To study about the SLAM technique
CO5	To study about the Programming packages

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1	M			H	H	M			H	H	M	H
	CO2					H					H		
	CO3		M		H	H		M		H	H		M
	CO4				M	H				M	H		
	CO5					H					H		

3	Category	Professional Elective(PE)
4	Approval	47th Meeting of Academic Council, July, 2018

U18PEMT044	INDUSTRIAL AUTOMATION	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Applied Hydraulics and Pneumatics, Transducer Engineering				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the basic concepts and components of sensors, switching elements .To learn the automation concepts based on industrial applications				

UNIT I INTRODUCTION-ACTUATORS AND SENSORS 9

Actuators: Types of motion Conversion- Electric Linear actuators-Electric Rotary Actuators- Fluid Power Linear Actuators-Fluid power Rotating Actuators

Sensors: Binary Position Sensors-Pneumatic Position Sensors-Comparison between different position sensors-Point sensors for variables other than position

UNIT II SWITCHING THEORY 10

Binary Elements-variables-basic logic gates-Basic theorems-K Map- Practical examples of switching systems –Timers-counters-Schmitt triggers-encoders-parity detector-binary comparator

UNIT III SEMI FLEXIBLE AUTOMATION 8

Drum Programmers-Programmable Timers and Limit Switches-Card and Tape recorders-Matrix boards-Programmable counters.

UNIT IV FLEXIBLE AUTOMATION 9

PLC construction-Programming PLC- Ladder diagrams for PLC-PLC vs. Relay-PLC applications-Microcomputer architecture-Ramping a step motor-Assembly language Programming.

UNIT V ASSEMBLY AUTOMATION 9

Non Vibratory Feeding and orientation Devices-Vibratory feeding and orienting Devices-Parts Transfer-NC systems-Robot grippers-Robot Sensors-Robot Programming

PROFESSIONAL ELECTIVE-V

	DIGITAL IMAGE PROCESSING	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Robotics & Machine vision system				

U18PEMT051	Course Designed by – Department of Mechatronics
OBJECTIVES	To introduce the basic concepts of Digital Image Processing and various techniques used to resolve the images

UNIT I FUNDAMENTALS 8

What is Digital image processing, Examples (Briefly), Components of Image Processing System, Light and electromagnetic spectrum, Image Sensing and Acquisition, Simple Image Formation Model, Image Sampling and Quantization:- Representing Digital Images, Spatial and Grey level Resolution, Basic Relationship Between Pixels.

UNIT II IMAGE ENHANCEMENT IN SPATIAL DOMAIN 9

Background, some Basic Grey Level Transformation:- Image Negatives, Log negatives, Piecewise – Linear Transformation Functions:- Contrast stretching, Grey level Slicing, Bit Plane Slicing, Histogram processing: - Histogram Equalization, Histogram Specification, Local Enhancement.

UNIT III IMAGE ENHANCEMENT IN FREQUENCY DOMAIN 9

Two dimensional DFT and its Inverse, Filtering the frequency domain, Basics of filtering in frequency domain, smoothing and sharpening filters. Color Image Processing:- Color Fundamentals and Color Models.

UNIT IV IMAGE COMPRESSION 9

Fundamentals, Coding Redundancy, Interpixel Redundancy Psycho-Visual Redundancy, Image Compression Models, Error Free Compression, Variable – Length Coding, Huffman Coding, Arithmetic Coding, Run-length coding, Lossy Compression, Transform coding, JPEG.

UNIT V IMAGE SEGMENTATION 10

Detection of Discontinuous, Edge linking and Boundary Detection:- Local Processing, Thresholding:- Basic Global Thresholding, Region Based Segmentation:- Region Growing, Region Splitting and Merging, Use of Motion In Segmentation.

TEXTBOOKS:

COURSE OUTCOMES (COs)	
CO1	To learn Fundamentals of Digital Images and the ways to represent it
CO2	To learns the various ways of representing image enhancement in spatial domain
CO3	To learn the concept of image enhancement in frequency domain
CO4	To study about the image compression techniques
CO5	To learn the various methods to specify image boundaries

U18PEMT052	Total Contact Hours - 45	3	0	0	3
	Prerequisite –Computer Integrated Manufacturing				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To study about prototyping principles and tools used for prototyping and to learn about the applications of rapid prototyping				

UNIT I INTRODUCTION TO RAPID PROTOTYPING 7

Introduction: Need for time compression in product development, Product development- conceptual design – development- detail design-prototype- tooling.

UNIT II RP SYSTEMS CLASSIFICATIONS 9

Classification of RP systems, Stereo lithography systems- Principle- process parameters-process details-machine details, Applications.

Direct Metal Laser Sintering (DMLS) system - Principle process parameters process details-machine details, Applications.

UNIT III RP SYSTEM MANUFACTURING TECHNIQUES 9

Fusion Deposition Modeling - Principle- process parameters-process details-machine details, Applications.Laminated Object Manufacturing - Principle process parameters process details machine details, Applications.

UNIT IV DESIGN 3-DIMENSIONAL PRINTERS 10

Solid Ground Curing - Principle- process parameters-process details-machine details, Applications.3-Dimensional Printers - Principle- process parameters-process details-machine details, Applications, and other Concept Modelers like Thermo jet printers, Sander's model maker, JP system 5, Object Quadra system.

UNIT V APPLICATIONS OF RP SYSTEMS 10

Laser Engineering Net Shaping (LENS), Ballistic Particle Manufacturing (BPM)-Principle. Introduction to rapid tooling and rapid manufacturing, software for RP- STL files, Magics, Mimics Application of Rapid prototyping in Medical field.

TEXTBOOKS:

1. Pham D.T & Dimov.S.S, Rapid manufacturing, Springer-Verlag, London, 2001
2. **C. K. Chua ,K.F. Leong , C.S. Lim, Rapid Prototyping: Principles and Applications (Book & CD Rom),3rd edition, 16 Dec 2008**

REFERENCES

1. Terry Wohlers, Wohlers Report 2000, Wohlers Assosiates, USA, 2000.
2. M. Adithan ,Rapid Prototyping,2015

COURSE OUTCOMES (COs)	
CO1	To learn the basic concepts of product development
CO2	To learn about the various types of RP systems and their applications
CO3	To study about the different types of RP modeling systems and their applications
CO4	To understand the types of solid curing process and its applications
CO5	To learn about the different types 3-Dimensional Printers and their applications

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l

2	CO1			H			M						
	CO2			H		H				M	H	H	
	CO3		M		H	H		H					
	CO4	M	H			M	H					H	
	CO5	L						H	H	M		H	
3	Category	Professional Elective(PE)											
4	Approval	47th Academic Council, July 2018											

U18PEMT053	**INTERNET OF THINGS FOR MECHATRONICS**	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Problem Solving and Python Programming				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To understand the basics of Internet of Things , To understand different applications of Internet of Things ,To understand the fundamental aspects of IoT.				

UNIT I INTRODUCTION TO INTERNET OF THINGS 9

Definitions and Functional Requirements –Motivation – Architecture - IoT architecture and platforms - IoT Devices vs. Computers - Trends in the Adoption of IoT - Societal Benefits of IoT - IoT Information Security - Embedded Systems.

UNIT II SENSORS IN IOT 10

Sensing methods - Sensors types – Active, Passive sensors – Environmental sensing methods. Sensor Fusion - Evolving Sensor Technologies - Leveraging Sensor Fusion for the IoT - IoT Sensor Manufacturers - IoT Sensor Data Platforms.

UNIT III INTERFACING METHODOLOGIES 8

Basics of Controllers - Interfacing methodologies - Controllers selection – GPIO interfaces – SPI interfaces – I2C interfaces – RTC interfaces – IDE usage – Bootloader – Memory utilization (EEPROM /Flash). Basic programing of controllers – Controllers Expansion boards (breakouts).

UNIT IV HARDWARE & SOFTWARE PLATFORMS **9**

Hardware Platforms - Intel Galileo, Edison, Arduino, Beaglebone Black & Raspberry Pi.
Software Platforms - Intel XDK, Node-RED, VISUINO, Fritzing, 123dCircuits, Scratch

UNIT V APPLICATIONS OF IoT 9

Smart Cities and Smart Homes, Connected Vehicles, Smart Grid, Industrial IoT Industrial IoT, Case Study: Agriculture, Healthcare, Activity Monitoring

TEXT BOOK

1.Mikell P. Groover, Mitchell Weiss, Roger N. Nagel, Nicholas G. Odrey, "Industrial Robotics:Technology, Programming and Applications", McGraw Hill Book Company, 2012

COURSE OUTCOMES (COs)	
CO1	To Introduce The Introduction to Internet of Things
CO2	To Explain the Sensors in IoT
CO3	To explain the Interfacing Methodologies
CO4	To explain the Hardware & Software platforms
CO5	To explain the applications of IoT

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEMT054	**VETRONICS**	**L**	**T**	**P**	**C**
	Total Contact Hours -45	3	0	0	3
	Prerequisite –				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce all types of Vetronics and their applications in Engineering.				

UNIT I FUNDAMENTALS OF VEHICLE ENGINEERING 6

Engine – Types – Modern Engines –Advanced GDI, Turbo-charged engines transmissions, Chassis systems – Need for Avionics in Civil and Military aircraft and Space systems

UNIT II AUTOMOTIVE ENGINE CONTROL, MONITORING AND DIOGNASTICS SYSTEMS 9

Components of Electronic Engine Management– Engine control functions, Engine control modes, Fuel delivery systems, MPFI, Ignition Systems, Diagnostics – Compression ignition Engines – Emission control Management – Hybrid Power Plants – BAS

UNIT III AUTOMOTIVE TRANSMISSION AND SAFETY SYSTEMS 12

Transmission control – Autonomous cruise control – Braking control, ABS – Traction control, ESP, ASR – Suspension control – Steering control – Stability control– Parking Assist Systems– Safety Systems, SRS, Blind Spot Avoidance – Auto transmission electronic control, Telematics, Automatic Navigation, Future Challenges

UNIT IV AIRCRAFT MECHATRONICS 12

Fundamentals - components of an airplane and their functions - motions of a plane – Inertial Navigation – Sensors - Gyroscope- Principles , Gyro equations, Rate Gyros - Rate integration and free Gyro, Vertical and Directional Gyros, Laser Gyroscopes, Accelerometers. Direct reading compass, Types of actuation systems-Linear and non-linear actuation system, modeling of actuation systems, Performance testing

equipments for sensors and actuation systems. measurement and control of Pressure , temperature fuel quantity, rpm, torque, engine vibration and power. Electrical Power requirement for Military and Civil standards. Satellite navigation - GPS -system description - basic principles -position and velocity determination

UNIT V MARINE MECHATRONIC SYSTEMS 6

Basics of Marine Engineering – Marine Propulsion Mechatronics elements in ships, submarines, Variable Buoyancy Systems

TOTAL NO .OF PERIODS: 45

COURSE OUTCOMES (COs)	
CO1	To learn the basics of fundamentals of vehicle engineering
CO2	To study about the automotive engine control, monitoring and diognastics systems
CO3	To learn about the basic automotive transmission and safety systems
CO4	To study about The Aircraft Mechatronics
CO5	To learn about Marine Mechatronics Systems

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

PROFESSIONAL ELECTIVE-VI

U18PEMT061	**EMBEDDED SYSTEM DESIGN**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Electron Devices & Circuits				
	Course Designed by – Dept of Electronics and communication Engineering				
OBJECTIVES	To study embedded hardware and embedded microcomputer systems				

UNIT I REVIEW OF EMBEDDED HARDWARE 9

Gates – Timing diagram – Memory – Microprocessors Buses – Direct Memory Access – Interrupts – Built-in functions on the Microprocessor – Conventions used on Schematic – schematic. Interrupts Microprocessor Architecture – Interrupt basics – Shared data Problem – Interrupt latency.

UNIT II MICROCHIP PIC MICRO CONTROLLER 9

Introduction, CPU Architecture – Registers – Instruction sets addressing modes – Loop timing – Timers – Interrupts, Interrupt timing, I/O Expansion, I^2C Bus Operation Serial EEPROM, Analog to Digital converter, UART – Baud Rate – Data Handling – Initialization, special features- Serial Programming – Parallel Slave Port.

UNIT III EMBEDDED MICROCOMPUTER SYSTEMS 9

Motorola MC68H11 Family Architecture, Registers, Addressing modes Programs, Interfacing methods parallel I/O interface, parallel port interfaces, Memory Interfacing, High Speed I/O Interfacing, Interrupts – Interrupt service routine – Features of interrupts – Interrupt vector and Priority, Timing Generation and Measurements, Input capture, Output compare, frequency Measurement, Serial I/O devices RS 232, RS485.

UNIT IV SOFTWARE DEVELOPMENT 9

Round Robin, Round robin with Interrupts, function – Queue – Scheduling Architecture, Algorithms. Introduction to – Assembler – Compiler – Cross Compilers and Integrated Development Environment (IDE) Object Oriented Interfacing, Recursion, Debugging strategies, Simulators.

UNIT V REAL TIME OPERATING SYSTEMS 9

Task and Task States, Tasks and Data, Semaphores and Shared Data Operating System services – Message Queues – Timer function – Events – Memory Management, Interrupt Routines in an RTOS environment, Basic design using RTOS.

COURSE OUTCOMES (COs)	
CO1	To learn review of embedded hardware
CO2	To learn about microchip PIC micro controller
CO3	To learn embedded microcomputer systems
CO4	To learn about software development
CO5	To understand the real time operating systems

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18PEMT062	TOTAL QUALITY MANAGEMENT	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Professional Courses				
	Course Designed by – Dept of Mechanical Engineering				

OBJECTIVES

1. To introduce to the student about the basic terms related to quality and concepts of quality management
2. To familiarize the student about the basic principles of total quality management
3. To acquaint the student with the basic statistical tools used in process control
4. To introduce to the student about the various tools used in implementing and checking total quality management
5. To familiarize the student about the different quality systems used in auditing the quality of a company/industry/organization

UNIT I **9**

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – AnalysisTechniques for Quality Costs, Basic concepts of Total Quality Management, HistoricalReview, Principles of TQM, Leadership – Concepts, Role of Senior Management,Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers toTQM Implementation.

UNIT II 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, ServiceQuality, Customer Retention, Employee Involvement – Motivation, Empowerment,Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership –Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development,Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT III **9**

The seven tools of quality, Statistical Fundamentals – Measures of central Tendencyand Dispersion, Population and Sample, Normal Curve, Control Charts for variables andattributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT IV **9**

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality FunctionDeployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality LossFunction, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA –Stages of FMEA.

UNIT V **9**

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System –Elements, Implementation of Quality System, Documentation, Quality Auditing, TS16949, ISO 14000 – Concept, Requirements and Benefits

TEXT BOOKS:

1. Dale H.Besterfiled, et al., "Total Quality Management", Pearson Education, Inc.2003. (Indian reprint 2004). ISBN 81-297-0260-6.

REFERENCE BOOKS:

5. Zeiri. "Total Quality Management for Engineers", Wood Head Publishers, 1991.
6. freecomputerbooks.com/**Total-Quality-Management**-and-Six-Sigma.htm

COURSE OUTCOMES (COs)	
CO1	By understanding about various quality terms, it will be helpful for the student to maintain quality in his/her organization
CO2	The student will be able to formulate new plans/procedures to be implemented to achieve the desired quality status by knowing about the various principles of quality management
CO3	The student will be able to analyze the periodical data in quality control using statistical

	tools
CO4	The total quality management tools will help the student to understand the procedures in measuring the quality of the organization/process and will also enable him/her to identify the parameters that are improving/depriving the quality
CO5	By knowing about the quality ISO systems, the student will be maintain processes/documentation properly so that the quality maintained by his/her organization gets recognized

U18PEMT063	MICRO ELECTRONICS AND NANO ELECTRONICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Electronics Engineering & Basics Physics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the various concepts about the micro electronics and nano electronics				

UNIT-I SEMICONDUCTOR PHYSICS 9

Introduction to semiconductor physics: Review of quantum mechanics, electrons in periodic lattices, E-k diagrams, Quasi-particles in semiconductors, electrons, holes and phonons. Boltzmann transport equation and solution in the presence of low electric and magnetic fields - mobility and diffusivity; carrier statistics; continuity equation, poisson's equation and their solution; high field effects: velocity saturation, hot carriers, avalanche breakdown, punch through and kirk effects.

UNIT-II SEMICONDUCTOR JUNCTIONS 9

Semiconductor junctions: Schottky, homo- and hetero-junction band diagrams and I-V characteristics, small signal switching models; two terminal and surface states devices based on semiconductor junctions. Bipolar transistor working, its charge control, and gummel poon model, structure of graded base, graded emitter transistor, hetro junction transistor.

UNIT-III MOS STRUCTURES 9

MOS structures: Semiconductor surfaces; the ideal and non ideal MOS capacitor band diagrams and CVs; Effects of oxide charges, defects and interface states; characterization of MOS capacitors: HF and LF CVs, avalanche injection; high field effects and breakdown. Long & short channel effects.

NANOELECTRONICS

UNIT-IV MOSFET 9

Shrink-down approaches: Introduction, CMOS scaling, the nanoscale MOSFET, finfets, vertical. MOSFETs, limits to scaling, system integration limits (interconnect issues etc.), resonant tunneling transistors, single electron transistors, new storage, optoelectronic, and spintronics devices.

UNIT-V CARBON NANOTUBE ELECTRONS 9

Atoms-up approaches: Molecular electronics involving single molecules as electronic devices, transport in molecular structures, molecular systems as alternatives to conventional electronics, molecular interconnects; Carbon nanotube electronics, bandstructure& transport, devices, mems applications.

TEXTBOOKS:

7. C.Dupas, P.Houdy, M.Lahmani, Nanoscience: "Nanotechnologies and Nanophysics", Springer-Verlag Berlin Heidelberg, 2007.

COURSE OUTCOMES (COs)	
CO1	To introduce the semiconductor physics and quantum electronics
CO2	To explain the different types of junctions
CO3	To explain the MOS structure
CO4	To introduce and explain the nano electronics and its structure
CO5	To understand the concept of various application of micro electronics& Nano electronics

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

4	Approval	47th Meeting of Academic Council, July, 2018											

U18PEMT064	**COMPUTER INTEGRATED MANUFACTURING**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – CNC Technology, Manufacturing Technology				
	Course Designed by – Dept of Mechatronics				
OBJECTIVES	To understand the various concepts of CAD,CAM and Computer Integrated Manufacturing				

UNIT I INTRODUCTION TO CAD AND ITS ELEMENTS 9

Principles of Computer hardware, Software and Operating System, application Programs, Data Handling and File Structures, Computer aid in Phases of design- Development of Design Database using CAD Systems- Conceptual Design Process Analysis Optimization- Detailed Design and Documentation.

UNIT II ELEMENTS OF CAD SYSTEMS AND DESIGN USING COMPUTERS 9

Elements of CAD Systems, Introduction to Graphic Hardware, Software, Details of 2D Software Packages-Layering, Drawing Primitives, Display Techniques, Editing, utilities, Scaling, Dimensioning, 3D Visualization, Geometric Modeling-Wireframe and Solid models.

UNIT III DESIGN USING COMPUTERS 9

Design of Gears, Couplings, Flywheels, Shafts Connecting Rods etc. Software for Vibration Problems Stress Analysis, Kinematic Analysis, Dynamic Analysis.

UNIT IV COMPUTER AIDED MANUFACTURING 9

Numerical Control- Modes- NC Elements- NC Machine Tools- CNC Machines- CNC Hardware Basics- CNC Tooling- CNC Machine Tools and Control System- Part Programming- Manual and Computer Aided- Turning Center Programming- Advanced Part Programming- Direct Numerical Control- Adaptive Control- Computer Aided Part Programming, APT, Introduction to Robotics, Group Technology, Computer Aided Process Planning, FMS.

UNIT V COMPUTER INTEGRATED MANUFACTURING 9

CIM as a Concept and a Technology- CASA/SME Model of CIM-Benefits- Communication Matrix in CIM- Fundamentals of Computer Communication n CIM, CIM Data Transmission Method, Serial , parallel, asynchronous, modulation, Demodulation, Simplex and Duplex- Types of Communications in CIM- Point to Point, Star and Multiplexing- CIM for Batch Production- Group Technology – FMS- Process Control in CIM- Characteristics of Manufacturing Process Data- Continuous, Analog, Discrete Binary and Pulse Data- ADC/DC Multiplexers, Process Monitoring Through Computer- Types of Computer Process Control- Preplanned, Direct Digital Control (DDC)- Regular Control and Feed Forward Control, Requirements of Control Programming Interrupt, Real Time Clock Input.

3. Chris McMahon and Jimmy Browne, CAD/CAM, Pearson Education, 2001.2nd Edition.

COURSE OUTCOMES (COs)	
CO1	To introduce the CAD and its element.
CO2	To explain the elements of cad systems and design using computers.
CO3	To explain the various component design using computer.
CO4	To explain the computer aided manufacturing.
CO5	To explain the computer integrated manufacturing.

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)
(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

OPEN ELECTIVES

U18OEMT001	**MEMS & NANOTECHNOLOGY**	**L**	**T**	**P**	**C**
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Basic Electronics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce the various concepts about the micro electronics mechanical system and Nano technology				

UNIT I INTRODUCTION TO MICRO SENSORS 9

Introduction: Historical background development of microelectronics, evolution of micro sensors, MEMS, emergence of micro machines.

Micro sensors: Introduction, thermal sensors, mechanical sensors, flow sensors and Introduction to SAW devices

UNIT II MEMS MANUFACTURING TECHNIQUES 9

MEMS materials and processing: Overview, metals, semiconductors, ceramic, polymeric and composite materials.

Microstereolithography: Introduction, Scanning Method, Projection Method, Applications. LIGA Process: Introduction, Basic Process and Application.

UNIT III MEMS FABRICATION TECHNIQUES 9

Micro System Fabrication Processes: Photolithography, Chemical Vapor Deposition, Etching, Bulk and Surface Micro Manufacturing

UNIT IV INTRODUCTION TO NANOTECHNOLOGY 9

Introduction to Nanotechnology: The nanoscale. Consequences of the nanoscale for technology and society. - Technologies for the Nanoscale, Top-down versus bottom-up assembly. Visualisation, manipulation and characterisation at the nanoscale, Proximal probe technologies. Self-assembly.

UNIT V NANOSCALE MANUFACTURING 9

Nanoscale Manufacturing: Nanomanipulation, Nanolithography - An introduction to tribology and its industrial applications - Nanoscale Materials and Structure, Nanocomposites, Safety issues with nanoscale powders - Applications, Applications in energy, informatics, medicine, etc

TEXTBOOKS:

5. S.Datta,Electron Transport in Mesoscopic Systems, Cambridge University Press, 1995.

COURSE OUTCOMES (COs)	
CO1	To introduce various micro sensors and emergence of micro machines.
CO2	To study about various materials for micro and Nano fabrication
CO3	To know various micro fabrication methods.
CO4	To understand the concept of Nano scale and technology
CO5	To learn Nano scale manufacturing

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

U18OEMT002	**NON-DESTRUCTIVETESTING**	**L**	**T**	**P**	**C**
	Total Contact Hours -45	3	0	0	3
	Prerequisite –Basic Electronics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To introduce all types of NDT and their applications in Engineering.				

UNIT I NON-DESTRUCTIVE TESTING: AN INTRODUCTION, VISUAL INSPECTION & LIQUID PENETRANT TESTING 6

Introduction to various non-destructive methods, Comparison of Destructive and Non destructive Tests, Visual Inspection, Optical aids used for visual inspection, Applications.
Physical principles, procedure for penetrant testing, Penetrant testing materials, Penetrant testing methods-water washable, Post – Emulsification methods, Applications

UNIT II EDDY CURRENT TESTING & ACOUSTIC EMISSION 10

Principles, Instrumentation for ECT, Absolute, differential probes, Techniques – High sensitivity techniques, Multi frequency, Phased array ECT, Applications. Principle of AET, Instrumentation, Applications - testing of metal pressure vessels, Fatigue crack detection in aerospace structures.

UNIT III MAGNETIC PARTICLE TESTING & THERMOGRAPHY 10

Principle of MPT, procedure used for testing a component, Equipment used for MPT, Magnetizing techniques, Applications. Principle of Thermography, Infrared Radiometry, Active thermography measurements, Applications – Imaging entrapped water under an epoxy coating, Detection of carbon fiber contaminants.

UNIT IV ULTRASONIC TESTING 10

Principle, Ultrasonic transducers, Ultrasonic Flaw detection Equipment, Modes of display A- scan, B-Scan, C- Scan, Applications, Inspection Methods - Normal Incident Pulse-Echo Inspection, Normal Incident Through-transmission Testing, Angle Beam Pulse-Echo testing, TOFD Technique, Applications

of Normal Beam Inspection in detecting fatigue cracks, Inclusions, Slag, Porosity and Intergranular cracks - Codes, standards, specification and procedures and case studies in ultrasonics test.

UNIT V RADIOGRAPHY 9

Principle of Radiography, x-ray and gamma ray sources- safety procedures and standards, Effect of radiation on Film, Radiographic imaging, Inspection Techniques – Single wall single image, Double wall Penetration, Multiwall Penetration technique, Real Time Radiography - Codes, standards, specification and procedures and case studies in Radiography test. Case studies on defects in cast, rolled, extruded, welded and heat treated components - Comparison and selection of various NDT techniques

COURSE OUTCOMES (COs)	
CO1	To learn the basics of various non-destructive methods
CO2	To study about the Eddy Current Testing & Acoustic Emission
CO3	To learn about the basic Magnetic Particle Testing & Thermography
CO4	To study about The Ultrasonic Testing
CO5	To learn about t111.8485he Radiography

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1				M	H							H
	CO2	M			M	H							
	CO3				M	H							M

	CO4				M	H							
	CO5				M	H							
3	Category	Open Elective(OE)											
4	Approval	47th Meeting of Academic Council, July, 2018											

	BIO-MECHATRONICS	**L**	**T**	**P**	**C**
U18OEMT003	Total Contact Hours -45	3	0	0	3
	Prerequisite –Basic Electronics, Sensors Basics				
	Course Designed by – Department of Mechatronics				
OBJECTIVES	To know the principle, design and applications of various flow measurement assisted device for the human functional system				

UNIT I BIO MECHANICS AND SIGNAL PROCESSING 9

Cardiovascular biomechanics, Musculoskeletal and orthopedic biomechanics, human ergonomic, Rehabilitation. Bio-medical signals, Signal acquisition and signal processing-Isolation barriers, Bio-Image processing

UNIT II BIO SENSORS AND ACTUATORS 9

Introduction to Bio mechatronics, Electrodes - Types, - Measurement of blood pressure - Blood Gas analyzers: pH of blood, Smart actuators for biological applications

UNIT III MEDICAL MEASUREMENTS 9

Heart rate-Heart Sound-Pulmonary Function Measurements –Spirometer-Finger tip oximeter-ESR,GSR Measurements

UNIT IV SENSORY ASSIST DEVICES 9

Hearing aids-implants-Optical Prosthetics,Visual Neuroprosthesis-Sonar based Systems,Respiratory aids,Tactile devices for visually challenged

UNIT V ACTIVE AND PASSIVE PROSTHETIC LIMBS 9

Introduction to prosthetics, Passive Prosthetics-Walking Dynamics, Knee and Foot Prothesis, Active Prosthesis-Control of Prostheic arms and hands, Leg Mechanisms, Ankel-Foot Mechanisms, Prosthesis Suspension

TEXTBOOKS

1. Graham M. Brooker, "Introduction to Bio-Mechatronics", Sci Tech Publishing, 2012.

REFERENCES

COURSE OUTCOMES (COs)	
CO1	To understand the basics of bio mechanics
CO2	To have adequate knowledge on sensors and actuator
CO3	To study about the medical instruments
CO4	To learn about the sensory assist devices
CO5	To know the concepts of active and passive prosthetic limbs

Mapping of Course Outcomes(COs) with Programme Outcomes (POs)

(H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1				M	H		M					
	CO2	M			M	H				H			
	CO3				M	H		M					
	CO4				M	H	H		L				
	CO5				M	H							
3	Category	Open Elective(OE)											
4	Approval	47th Meeting of Academic Council, July, 2018											

U18OEMT004	ARTIFICIAL INTELLIGENCE FOR ROBOTICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Robotic and Machine Vision				
	Course Designed by – Department of Mechatronics Engineering				
OBJECTIVES	To introduce the various concepts about the Artificial Intelligence				

UNIT I INTRODUCTION **9**

Intelligent Agents – Agents and environments - Good behavior – The nature of environments – structure of agents - Problem Solving - problem solving agents – example problems – searching for solutions – uniformed search strategies - avoiding repeated states – searching with partial information.

UNIT II PRINCIPLES OF DECISION-MAKING **9**

Crisp and Fuzzy Logic-Decision Trees-Case-based Reasoning-Bayesian Belief Networks-Path Planning-Voronoi Diagrams

UNIT III SEARCHING TECHNIQUES **9**

Motion Planning-Compute Cost-Optimal Path-First Search Program-Expansion Grid-Dynamic Programming-Computing Value-Optimal Policy-Constraint satisfaction problems (CSP) – Backtracking search and Local search for CSP – Structure of problems - Adversarial Search – Games – Optimal decisions in games – Alpha – Beta Pruning – imperfect real-time decision

UNIT IV NEURAL NETWORKS AND EXPERT SYSTEMS **9**

Evaluation and Search-Genetic Algorithms-Simulated Annealing-Particle Swarm Optimization-Neural Networks-Static Networks-Associative Networks-Cerebellar Model Articulation Controller-Expert Systems-Production Systems-Forward Chaining-Backward Chaining

UNIT V SLAM (Simultaneous Localization and Mapping) **9**

Localization-Planning-Fun with Parameters-SLAM-Graph SLAM-Implementing Constraints-Adding Landmarks-Matrix Modification-Untouched Fields-Landmark Position-Confident Measurements-Implementing SLAM

TOTAL: 45

TEXT BOOKS

1. Stuart Russell, Peter Norvig, “Artificial Intelligence – A Modern Approach”, 2nd Edition, Pearson Education / Prentice Hall of India, 2004.

2. Donald A.Waterman, ‘A Guide to Expert Systems’, Pearson Education.

Reference Books

2. Elaine Rich and Kevin Knight, “Artificial Intelligence”, 2nd Edition, Tata McGraw-Hill, 2003.

3. George F. Luger, "Artificial Intelligence-Structures And Strategies For Complex Problem Solving", Pearson Education / PHI, 2002**.**

4. Janakiraman, K. Sarukesi, 'Foundations of Artificial Intelligence and Expert Systems', Macmillan Series in Computer Science.

5. W. Patterson, 'Introduction to Artificial Intelligence and Expert Systems', Prentice Hall of India, 2003

COURSE OUTCOMES (COs)													
CO1	To learn pattern recognition												
CO2	To learn about game playing												
CO3	To learn knowledge representation												
CO4	To learn about knowledge representation using other logic												
CO5	To learn structural representation of knowledge												
Mapping of Course Outcomes(COs) with Programme Outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low													
1	COs/POs	a	b	c	d	e	f	g	h	i	j	k	l
2	CO1		M			H							
	CO2				M	H	L				M		
	CO3				M	H							
	CO4				M	H	M	H			M		
	CO5				M	H							
3	Category	Open Elective(OE)											
4	Approval	47th Meeting of Academic Council, July, 2018
