[Affiliated to BIHER Chennai - TN]

Ref. No. 47/SLIMS/ 2019

Date: 02.12.2019

To

Dr. M.V. Thayumana Sundaram,
Founder, New Medical Centre,
No: 470, MG Road,
Pondicherry – 605 001.

Dear Sir,

Sub: Request for Training for Final MBBS – Reg.

As a part of the curriculum for MBBS Course, Sri Lakshmi Narayana Institute of Medical Sciences & Hospital (BIHER) Puducherry, final year students have to undergo internship training program. Students are willing to undergo one month internship training program at your esteemed Orthopaedics care and management hospital.

Hence I kindly request you to grant permission to do the program at your New Medical Centre - Multispeciality Hospital in Pondicherry from Dec 16th 2019 to Jan 15th 2020, 25 students will do internship program. Kindly do the needful.

I am looking forward for your positive reply in this regard.

Thanking You

With regards

Prof.K.BALACHANDRANATHAN,M.S
(General surgeon)

DEAN
Sri Lakshmi Narayana Institute of Medical Sciences,
Pondicherry.

Sir/ Madam,

Sub: Reg- Req for Ortho Emergency Management Training – Reg

With reference to your Letter dated 01.12.2019 regarding internship program for 1 month, we Permit your SLIMS Students to our New Medical Centre, Pondicherry from Dec 16th 2019 – Jan 15 2020.

Thanking You,

With regards,

HOSPITAL

nmc
Service is Our Lifeline

Department of Cardiology

The stress associated with all the aspects of modern life, social, professional and emotional, coupled with the lifestyle choices that we make, all work together to create conditions where the strain on the heart increases and the possibility of cardiac problems rises significantly. Heart disease is one of the leading causes of death for both men and women. Cardiovascular disease, as it is also known, refers to any medical condition that affects the heart or the blood vessels, or both. The most common heart diseases are:

- Coronary artery disease – This is the hardening or narrowing of the coronary artery.
- Cardiomyopathy – Here the heart muscles get damaged due to disease.
- Valvular heart disease – It is a disease that affects the valves of the heart.
- Angina – This is reduced blood flow to the heart resulting in chest pain.
- Congenital heart disease - It is an inherited or genetic heart disorder.
- Rheumatic heart disease – This is damage to the heart caused by rheumatic fever.
- Cerebrovascular heart disease – It is a disease that reduces the blood supply to the brain.
- Heart attacks – This is damage to the heart resulting from the stoppage of blood supply.

The causes and symptoms of cardiovascular diseases are many and varied and delays in diagnosing the problem exacerbate it. The thought of a heart attack or other heart condition is frightening, but if the condition is diagnosed early and the right treatment is available, the chances of recovery increase significantly and patients will be able to enjoy the quality of life they deserve. Regular check-ups and tests are key to the early diagnosis of an incipient cardiac condition. In such cases, treatment may require only medication. If the condition is a serious one, early treatment with cutting edge equipment and procedures maximize the recovery potential. At NMC, patients will find the best cardiologists, state-of-the-art medical equipment and procedures to ensure early diagnosis of cardiac conditions and the best treatment options.

Among the services we offer are:

- Implantable cardioverter defibrillator (ICD)
- Cardiac resynchronization therapy (CRT)
- Left ventricular assist device (LVAD)
- Surgical procedures for heart failure
- Surgical procedures to treat a range of cardiac conditions

Chest Medicine and Pulmonology

The heart and lungs are the critical organs that are contained in the chest. Any disorder of either can have serious, even fatal, consequences. Medical conditions of the heart are dealt with by the cardiology department at NMC. Diseases of the respiratory system are diagnosed and treated by the chest & pulmonology department. Various factors can lead to chest problems including lifestyle choices, illness and disease, injury, smoking, exposure to toxic substances and so on. Lung diseases are a major cause of premature fatalities across the world. Because coughs, colds and lung congestion are such common occurrences, they are often ignored or not given the

serious care they may demand. While many minor pulmonary problems may be treated with over-the-counter medications, others could be serious and if undiagnosed and untreated could result in life-threatening conditions. Here too, the early diagnosis, evaluation by expert pulmonologists and the use of the latest and best medical equipment and procedures available at NMC provide patients with the best chances of a quick and early recovery. The common chest/pulmonary disorders include asthma, chronic obstructive pulmonary disease (COPD), pneumonia, lung cancer, benign and malignant pleural diseases, obstructive sleep apnea, tuberculosis, interstitial lung disease (lung fibrosis), sarcoidosis, pneumoconiosis/occupational lung diseases, unexplained cough and unexplained breathlessness.

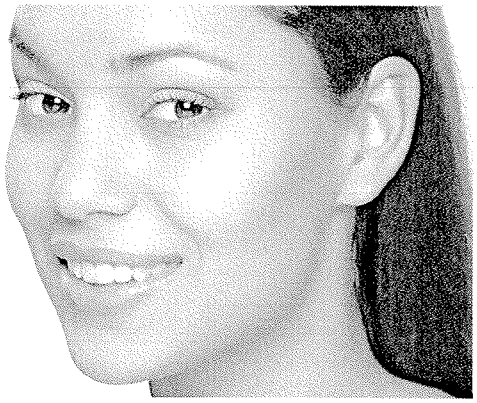
At the chest & pulmonology department at NMC, patients will find the best medical specialists, treatment options and care – the 3 factors that combine to produce the best recovery prognosis. The earlier a respiratory disorder is diagnosed, the sooner the treatment can start. The earlier the treatment, the faster and more effective it is.

Among the services and procedures that we offer are:

- Diagnostic Tapping
- Therapeutic Tapping
- Bronchoscopy
- Intra costeal Tube Drainage (ICDT)
- Other cutting-edge diagnosis and treatment procedures and processes

Dermatology

Skin conditions are often treated as purely cosmetic issues and the possible seriousness is often underplayed. A clear and blemish-free skin is important to the individual, both in terms of social interaction as well as professional functioning. Skin conditions may also cause psychological problems, making a person feel insecure about his or her appearance and thereby affect the quality of life. This is equally true of both young people as well as those of more advanced age.



Blemishes, rashes, discoloration etc. may be only localized problems that can be treated with simple medication. However, they could also be the symptoms of more serious problems that could affect the overall health of the patient and may have life-threatening implications. NMC's dermatology department is equipped to conduct examinations that may be required to determine the nature of a problem and then provide a detailed diagnosis and treatment plan.

We offer, among other specializations:

- ✓ Consultation of various ailments.
- ✓ Diathermy
- ✓ Cauterization

Emergency Medicine

The one certainty of life is that the unexpected can happen at any time. A person may be fit and active one moment and in need of life-saving medical treatment the next. The cause could be an accident-related injury or it may be the sudden development of a medical condition. Even with the best of preventive health care, a sudden critical illness can strike even the seemingly healthy. It is at times like these that emergency medical care is essential. The mission of an emergency medicine department is to evaluate, manage and stabilize a severe medical condition so that specialized care and treatment can be provided. When a medical emergency strikes, the patient may not be able to act on his or her own to obtain the required care. Family and friends who are present when the situation arises often take time to locate the best place to transport the patient for the required care. These delays may, and usually do, have a negative impact on the already fragile health of the patient. At NMC, we have a fully equipped emergency medicine department with state-of-the-art equipment and doctors who are specialists in treating patients who need emergency care. A medical emergency can be of any type and of any cause. When it arises, there is often little background information available and little time for a detailed diagnosis to be done. At NMC, the emergency medicine department is prepared for this and has the tools and skills to provide the best care and stabilize the patient for the specialized care and treatment that will be required for a recovery to be achieved.

The emergency services available include:

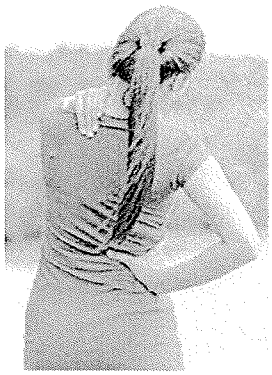
- ❖ Triage
- ❖ Resuscitation area
- ❖ Major trauma/Medical areas
- ❖ Major operating room
- ❖ Minor procedure rooms
- ❖ Consultation rooms
- ❖ Patient waiting area
- ❖ Observation units
- ❖ Injection room
- ❖ 24-hour pharmacy

Orthopaedics and Spine

Bone and joint problems are becoming increasingly common in all strata of society. Among younger people, the reasons for this include sedentary habits, over or incorrect exercise to compensate for these habits and other lifestyle issues. The increase in longevity means that the natural degeneration of bone and muscle with age is becoming more acute and widespread. Injury, among both the young and the old, is another reason for orthopaedic problems. Minor aches and pains are common at all ages. If the pain doesn't subside in a short while, or if it increases or causes mobility issues, then it may be a sign of a more serious orthopaedic

condition. An examination and diagnosis by an orthopaedic specialist to determine the cause of the problem should be done without delay. Typically, the earlier a problem is detected and treated, the greater the chances of a successful recovery. The advanced orthopaedic care available at NMC coupled with the highly qualified medical staff mean that the treatment needed to recover from even serious problems in advanced stages is now possible.

Back problems too are on the rise among all age groups. Back pain ranges from a nagging discomfort to severe pain that limits mobility and affects quality of life. In most cases, mild pain can be treated with rest and mild medication. However, if the pain does not subside or is severe, it may be the sign of a spine disorder caused by an undiagnosed medical condition or injury. Spine problems may be related to the vertebrae or the spinal cord that connects the brain to the rest of the body. At NMC, we know that spine problems are not just painful, they can be serious medical conditions that limit mobility and affect quality of life. Our orthopaedics & spine department has the leading specialists in this field and the latest equipment and procedures to ensure an accurate diagnosis of the problem followed by the best course of treatment.



Among the orthopaedic and spine services we offer are:

- ✓ Trauma Care
- ✓ Geriatric Patient care of Joints and Osteoporosis
- ✓ Spine Management
- ✓ Arthritis Care
- ✓ Spinal Rehabilitation

Treatment for various spine disorders including degenerative disc disease, herniated disc, spinal stenosis, spondylosis, etc

Oncologists

Cancer is among the most dreaded of all medical disorders. However, advances in medicine and treatment techniques in recent years mean that the various types of cancer are now treatable and those with the disease can recover and lead normal lives. Oncology is the field of medicine that deals with and treats the various types of cancer. Hippocrates, the Greek physician who is the father of modern medicine coined the term cancer to describe tumours in the body and the term 'oncos' is ancient Greek for swelling. Oncology is thus the diagnosis, treatment and researching of cancer. The specialty is divided into two parts.

Medical oncology relates to the diagnosis and treatment of cancer using the various modern diagnostic techniques and treatment options available including immunotherapy, chemotherapy, hormone therapy, radiation, surgery and others. Because cancer treatment often involves other medical specializations, medical oncology requires coordination with other doctors who may be involved in the patient's care.

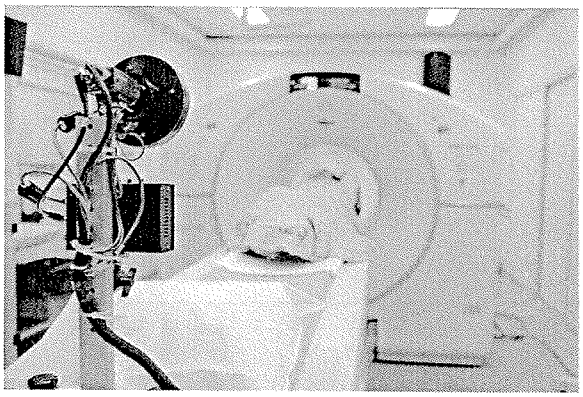
Surgical oncology involves a range of surgery-based cancer treatment options including performing biopsies, tumours removal and related surgical procedures. Surgical oncology is a highly specialized surgical field requiring highly focused and specially trained surgeons.

At NMC we understand the trauma - physical, mental and emotional - that cancer patients and their loved ones go through and every effort is made to care for all of them. Our patients are examined, diagnosed and treated by leading doctors and surgeons in the field of oncology. Our objective is to ensure that patients receive the best possible care, whether it is medical or surgical; our world-class medical resources are focused on curing the patient so that he or she may return to a life of well-being.

Among the services we offer are:

- Chemotherapy
- Radiation therapy
- Immunotherapy
- Hormone therapy
- Targeted drug therapy
- Bone marrow transplant
- Surgical tumor removal and other procedures

Radiology



Radiology plays a pivotal role in the detection and diagnosis of illness. A radiologist is far more than a person who operates an X-Ray machine or other imaging equipment used to examine the internal organs of the body. He or she is a highly trained and qualified specialist who must be able to interpret the information provided by the X-ray and use this to either make a diagnosis of the problem or, alternatively, pass on the data to another specialist who will then make the diagnosis. Radiology is extremely technology-dependent with more advanced equipment and tools constantly being developed. At NMC's radiology department the highly skilled and experienced radiologists are able to use the latest equipment to obtain the most accurate information on the patient's medical problem which then results in a complete diagnosis. Once this is done, the treatment, which will be done in one of our specialized departments, can begin.

The services of NMC's radiology department include:

1. Ultra sound
   General abdomen and Pelvis
   Pelvis & Transvaginal Study
   Kidney and Urinary Bladder
   Folicular study
   Pediatric abdomen and pelvis
2. Pregnancy
   Dating scan or early first trimester scan
   First trimester screening or Nuchal translucency scan
   Second trimester scan
