SHORT TERM COURSE ON AUDIOLOGY

COURSE OUTLINE:

It reviews latest concepts in signal processing, programming skills, evoked potentials, SSD, electro-acoustic programming, and management of those with challenging etiologies and special needs.

This Course includes hands on Advanced Programming Practicum. Each week participants watch (anytime) a pre-recorded lecture, access a monitored discussion board and complete a short assessment before the interactive online web class. The hands-on practicum highlights case studies and practical applications led by distinguished researchers and clinicians in the field. Previous experience programming cochlear implants will maximize gain from this course. A certificate is awarded to those who successfully complete the training program.

COURSE OUTCOME:

- This course in Audiology is very beneficial as it opens many jobs in different areas.
 - The students will gain a high level of clinical skill in all areas of hearing and balance diagnosis and excellent decision making skills.
 - Students will be able to motivate patients to follow rehabilitation programs and the ability to analyze and deal with complex situations.
-

COURSE OBJECTIVES:

- The course aims to produce skilled and efficient manpower to work effectively With the persons having communication disorders.
- Offer you a broad and thorough education in the identification, assessment, rehabilitation and management of adults and children with audiological and vestibular dysfunction, with a critical and evaluative understanding of the underlying scientific, medical, public health and disability knowledge base;
- Develop your practical knowledge and skills related to core clinical procedures;
- Develop your research and critical skills by undertaking a piece of original research and presenting your findings via a research dissertation.
